nearly entire, glabrous, lustrous dark green above; petioles 5-10 mm. long: fls. about 8 mm. across, in glabrous racemes 5-12 cm. long: fr. conic-ovoid, about 8 mm. long, black-purple. H.A.4:41(c). Gn.50:313. S.L.2:316(h). M.D.1911:253(h). (*Padus* L. Mill., *Laurocerasus officinalis* Roem.) S. E. Eu., Asia Minor. Intr. 1576. Zone VI-VII. Handsome evergreen shrub with large lvs.—*P. L. angustifolia* (Loud.) K. Koch. Lvs. narrow-oblong to lanceolate, 6-12 cm. long.—*P. L. caucásica* (Kirchn.) Jaeg., var. Of upright slender habit: lvs. to 18 cm. long and 7-8 cm. wide. G.C.III.5:621.—*P. L. cólchica* Jaeg., var. Of spreading habit, with short brs.: lvs. thinner, to 18 cm. long and about 5 cm. wide. G.C.III.5:621.—*P. L. magnoliaefolia* Bean, var. Lvs. to 25 cm. long and 7-10 cm. wide. G.C.78:249(h).—*P. L. parvifolia* Bean, var. Lvs. 3-4 cm. long and 1 cm. wide. G.C.III.5:620 (as var. *angustifolia*).—*P. L. schipkaensis* Spaeth. Shrubby: lvs. 5-12 cm. long and 2-3.5 cm. wide, nearly entire: racemes 6-8 cm. long. R.H.1905:409(h). M.G.17:281(h).—*P. L. sérbica* Pancic, var. Similar to the last, but of more upright habit and with obovate rugose lvs.—*P. L. Zabeliana* Spaeth. Similar to the preceding, but lvs. narrower. G.W.5:177(h). G.C.78:251(h); 98:282(h). Cult. 1898. This and the 2 preceding vars. are the hardiest forms and fairly hardy in Zone V.

47. **OSMARÓNIA** Greene. Deciduous shrubs: winter-buds stalked, with few imbricate scales: lvs. alternate, short-petioled, entire, with deciduous small stipules: fls. polygamo-dioecious, greenish white, in short racemes; pedicels with 2 bractlets; calyx-tube campanulate, with short triangular lobes; petals spatulate-oblong; stamens 15, 10 inserted with the petals, 5 below; carpels 5, style not exceeding the calyx-tube: fr. consisting of 1-5 oblong drupes with thin flesh and smooth stone. (Probably from Greek *osme*, odor, and *aronia*, in reference to its fragrant fls.) Syn.: *Nuttallia* Torr. & Gr., not Barton. One or possibly more species in W. N. Am.

*O. cerasifórmis* (Torr. & Gr.) Greene. Shrub to 5 m. with usually numerous upright stems: brts. glabrous, green: lvs. oblong-lanceolate, 7-10 cm. long, acute at ends, grayish green and pubescent or glabrous beneath; petioles 5-10 mm. long: fls. fragrant, 8-10 mm. across, in short peduncled 5-10-fld. glabrous racemes, with the lvs.: fr. 1-1.5 cm. long, bluish black, bloomy. Fls. IV-V; fr. VII-VIII. L.I.t.9. G.C.43:266,267; 77:147. Gn.34:78. B.S.2:102(fr). (*N. c.* Torr. & Gr.) B. C. to Calif. Intr. 1848. Zone (V). Chiefly valued for its early fragrant fls. and the bright green lvs.

48. **PRINSEPIA** Royle. Deciduous shrubs with axillary spines; brs. with lamellate pith; winter-buds small, with few pubescent scales, enclosed by the stipules: lvs. alternate, mostly fascicled, petioled, entire or serrulate; stipules small, lanceolate, persistent: fls. 1-4 in the axils of last year's brts., or in axillary racemes; calyx-tube cup-shaped, with broad and short lobes imbricate in bud; petals 5, spreading, suborbicular, clawed; stamens 10 or many, with short filaments; ovary 1-celled, style inserted near base; stigma capitate; ovules 2: fr. a drupe with slightly sculptured stone. (Named for James Prinsep; 1800-1840.) Syn.: *Plagiospermum* Oliv. Three or four species in E. Asia to N. W. China and Himal.—Fr. edible and gathered in their native countries.

Fls. yellow: lvs. obovate-lanceolate to lanceolate.....1. *P. sinensis*  
Fls. white: lvs. linear-oblong to narrow-oblong.....2. *P. uniflora*

1. *P. sinensis* (Oliv.) Oliv. Shrub to 2 m. or taller; brs. light gray-brown; spines 6-10 mm. long: lvs. slender-petioled, ovate-lanceolate to lanceolate, 5-8 cm. long, long-acuminate, entire or sparingly serrulate, finely ciliate,

otherwise glabrous, bright green: fls. fascicled, 1-4, about 1.5 cm. across; pedicels about 1 cm. long; stamens 10: fr. subglobose or ovoid, 1.5 cm. long, purple, juicy; stone ovoid, compressed. Fls. III-IV; fr. VIII. M.D.1903:1,t(c). I.T.5:t.182. H.I.16:1526. R.H.1907:418,419. B.S.2:224. S.L.268(h). (*Plagiospermum sinense* Oliv.) Manch. Cult. 1896. Zone IV. Valued for its early appearing bright green lvs.; fls. not conspicuous.

2. *P. uniflora* Batal. Shrub to 1.5 m.; brs. light gray; spines 6-10 mm. long; lvs. short-petioled, linear-oblong to narrow-oblong, 2.5-6 cm. long, acutish or obtuse, entire or remotely serrulate, dark green above, paler beneath, glabrous: fls. fascicled, 1-3, about 1.5 cm. across; pedicels 3-5 mm. long; stamens 10: fr. globose, 1-1.5 cm. across, dark purplish red, bloomy; stone ovoid, compressed. Fl. IV-V; fr. VIII. U. S. Inv. 41:t.4. N. W. China. Intr. 1911. Zone V.

The Himalayan *P. utilis* Royle differs chiefly in its longer spines, elliptic to oblong-lanceolate lvs. and racemose white fls. with many stamens. Royle, III. Bot. Himal. t.38,f.1. Cult. 1919. Zone VII?

#### Fam. 40. LEGUMINOSAE B. Juss. PEA FAMILY

Herbs, shrubs or trees, often twining or climbing, deciduous or evergreen: lvs. alternate, compound, rarely simple, stipulate: fls. regular or irregular, usually bisexual; sepals 5, more or less connate, usually unequal; petals 5, rarely fewer, usually papilionaceous, or nearly equal or unequal; stamens 10 or numerous, rarely 5; all united or 9 united and 1 free or all free; carpels 1, rarely 2-15, superior; ovary 1-celled, unequilateral; ovules 1 to many, affixed to a single parietal placenta: fr. a legume, sometimes indehiscent or follicular or fleshy, often jointed between the seeds and sometimes filled with pulp; seed exalbuminous.—About 430 genera and 7000 species, distributed over both hemispheres, most abundant in the tropics.

**Fls. not papilionaceous:** lvs. pinnate or bipinnate.

A. Stamens numerous, much longer than corolla; petals valvate; fls. in long-peduncled heads: lvs. bipinnate.....1. *Albizia*

AA. Stamens 6-10, shorter than corolla; petals imbricate.

B. Fls. greenish or whitish: trees.

C. Fls. in lateral spike-like racemes; calyx-tube short: lvs. pinnate or bipinnate; lfts. crenulate, 2-6 cm. long.....3. *Gleditsia*

CC. Fls. in terminal loose panicles; calyx-tube tubular: lvs. bipinnate; lfts. entire, 6-8 cm. long.....4. *Gymnocladus*

EE. Fls. bright yellow: lvs. bipinnate; climbing shrub, prickly.....5. *Caesalpinia*

**Fls. papilionaceous.**

A. Lvs. simple (occasionally 3 on young brts. in No. 11).

B. Lvs. reniform, large: fls. pink, rarely white, before the lvs.: tree.....2. *Cercis*

BB. Lvs. narrow, small, sometimes wanting: fls. usually yellow: shrubs.

C. Calyx 1-lipped, deeply split above: fls. yellow: lvs. usually wanting....12. *Spartium*

CC. Calyx 2-lipped: fls. yellow or white.

D. Calyx divided to the middle.

E. Seed without callous appendage at base: brs. often spiny.....13. *Genista*

EE. Seed with callous appendage: spineless shrubs.....18. *Cytisus*

DD. Calyx divided to the base: very spiny leafless shrubs.....19. *Ulex*

CCC. Calyx with teeth of nearly equal length: infl. few-fl.: spiny shrubs.

D. Fls. terminal, blue: fr. glandular-pubescent: nearly leafless shrub....11. *Erinacea*

DD. Fls. axillary: fr. glabrous.

E. Fls. yellow: brts. and lvs. pubescent.....22. *Anthyllis*

EE. Fls. red: brts. and lvs. glabrous or nearly so.....36. *Alhagi*

AA. Lvs. ternate or digitate (see also AAA.)

B. Lvs. digitate.

C. Fls. yellow, in terminal racemes: lfts. 7-11.....10. *Lupinus*

CC. Fls. white or pink, in lateral heads: lfts. 4-5.....23. *Dorycnium*

BB. Lvs. ternate.

C. Fls. yellow.

D. Calyx toothed; unarmed trees or shrubs.

E. Stamens free: stipules connate: lfts. 5-10 cm. long, stout shrub.

9. *Piptanthus*

# LEGUMINOSAE

- EE. Stamens connate to the middle or higher: stipules free or wanting.
  - F. Lvs. and brts. opposite: small shrubs.....13. *Genista*
  - FF. Lvs. and brts. alternate.
    - G. Ovary and fr. densely glandular: lfts. small, 8-18 mm. long: much-branched shrub .....17. *Adenocarpus*
    - GG. Ovary and fr. not glandular.
      - H. Calyx 2-lipped, with very unequal teeth.
        - I. Lfts. 2-3 cm. long: large shrubs or trees; pod tardily dehiscent.
        - J. Racemes short, upright; the 2 upper calyx-lobes distinct.
          - 14. *Petteria*
          - JJ. Racemes usually pendulous; the two upper calyx-lobes partly connate .....15. *Laburnum*
          - II. Lfts. less than 2.5 cm. long (see also *Laburnum caramanicum*):
            - ffs. in racemes, heads or axillary.
            - J. Seeds with appendage; petals all free: spineless.....18. *Cytisus*
            - JJ. Seed without appendage; lower petals at base adnate to staminal tube: brs. often spiny.....13. *Genista*
            - HH. Calyx with nearly equal teeth; pod spirally twisted or falcate; middle lft. distinctly stalked.....21. *Medicago*
            - DD. Calyx truncate, without teeth: ffs. fascicled or solitary: lfts. 1.5 cm. or less long: spiny shrubs.....16. *Calycotome*
  - CC. Fls. not yellow.
    - D. Upright shrubs.
      - E. Stipules subulate or wanting.
        - F. Pods several-seeded.
          - G. Lfts. serrulate: ffs. pink: pod inflated.....20. *Ononis*
          - GG. Lfts. entire: pod not inflated.
            - H. Pod dehiscent into 2 valves.....18. *Cytisus*
            - HH. Pod articulate, breaking apart at maturity: lfts. with stipels.
              - 37. *Desmodium*
      - FF. Pod 1-seeded: lfts. without stipels.
        - G. Pedicels usually 2 in the axils of persistent bracts, not articulate.
          - 38. *Lespedeza*
          - GG. Pedicels usually solitary in the axils of usually deciduous bracts, articulate below the calyx.....39. *Campylotropis*
    - EE. Stipules leafy: ffs. in stalked heads, white or pink.....23. *Dorycnium*
    - DD. Twining shrub: lfts. to 16 cm. long: ffs. in dense racemes, violet....40. *Pueraria*
  - AAA. Lvs. pinnate.
    - B. Lvs. odd-pinnate.
      - C. Fls. not yellow.
        - D. Corolla incomplete, only standard present: ffs. small, in dense upright paniced racemes .....25. *Amorpha*
        - DD. Corolla complete.
          - E. Fls. in panicles, usually white or whitish.
            - F. Pod flat, not articulate: lfts. 5-12 cm. long.
              - G. Winter-buds free, scaly: lfts. opposite or nearly so: ffs. in dense upright paniced racemes .....6. *Maackia*
              - GG. Winter-buds enclosed in the petiole, minute; lfts. alternate: ffs. in upright or pendulous paniced racemes.....7. *Cladrastis*
            - FF. Pod terete, articulate: ffs. in upright panicles: lfts. 1-3.5 cm. long.8. *Sophora*
        - EE. Fls. in simple racemes.
          - F. Racemes terminal, or lateral on last year's brs., pendulous: climbing shrubs.
            - 26. *Wisteria*
          - FF. Racemes axillary: upright trees or shrubs.
            - G. Pods not articulate: stipules subulate.
              - H. Brts. terete, leafy.
                - I. Pod compressed, winged on the upper suture; ffs. 1.5-2.5 cm. long; trees or shrubs, often prickly.....27. *Robinia*
                - II. Pod terete, not winged: ffs. 0.6-2 cm. long: shrubs or subshrubs, unarmed .....24. *Indigofera*
              - HH. Brts. compressed, winged, leafless: ffs. in small clusters.
                - 28. *Carmichaelia*
            - GG. Pod articulate, separating into the joints: stipules conspicuous, scarious.
              - 35. *Hedysarum*
      - CC. Fls. yellow.
        - D. Pod inflated: lfts. 7-13.....29. *Colutea*
        - DD. Pod not inflated.
          - E. Lfts. 11-27: decumbent, glandular-pubescent shrub.....32. *Calophaca*
          - EE. Lfts. 5-9: glandless shrubs.....34. *Coronilla*
    - BB. Lvs. abruptly pinnate; rachis often spinescent.
      - C. Pod 1-celled: stipules subulate.
        - D. Fls. lilac in 2-3-fld. racemes: pod stipitate, inflated, obovate to oblong.
          - 30. *Halimodendron*
          - DD. Fls. yellow or whitish, solitary or fascicled: pod sessile, linear.....31. *Caragana*
          - CC. Pod 2-celled or incompletely 2-celled: low shrubs with spinescent rachis: lfts. 12-22.
            - 33. *Astragalus*

Subfam. I. MIMOSOIDEAE Taub. Trees and shrubs, rarely herbs, with usually bipinnate lvs.: fls. actinomorphic; petals valvate; stamens 5 to many. (*Mimosaceae* Reichenb.)

1. **ALBÍZZIA** Durazz. Deciduous trees or shrubs: lvs. bipinnate; lfts. usually small and numerous: fls. in axillary peduncled spikes or globular heads; calyx tubular or campanulate, 5-toothed; corolla small, the segments connate more than  $\frac{1}{2}$ ; stamens numerous, more or less connate at base, exserted; pod large, strap-shaped, without pulp. (After F. degli Albizzi, an Italian nobleman.)—About 25 species in trop. and subtrop. Asia, Afr. and Austr.; one in Mex.

**A. Julibrissin** Durazz. Tree to 12 m., with broad spreading head; brts. glabrous, angular: lvs. with 10–25 pinnae, each with 40–60 lfts.; lfts. falcate, oblong, very oblique, about 6 mm. long, ciliate and sometimes pubescent on midrib beneath: fls. light pink, in slender-peduncled heads crowded at the upper end of brts.: pod flat, to 15 cm. long. Fl.vi–viii; fr.ix–xi. S.I.1:t.51(c). (*Acacia j.* Willd., *A. nemu* Willd.) Persia to C. China. Intr. 1745. Zone VII. —**A. J. rosea** (Carr.) Mouillef. Dwarfier and harder than the type: fls. bright pink. R.H.1870:490,t(c). F.St.2199(c). G.C.100:351. N.H.18:70(h). Zone (V).

Closely related species: **A. Kalkora** Prain. Lvs. with 4–12 pinnae, each with 10–28 lfts.; lfts. oblong, 2–3.5 cm. long, very short-stalked, the midrib nearer but not close to the upper margin. (*A. Lebbek* Hemsl., not Benth.) C. and E. China to India. Intr. 1907. Zone VII?

Subfam. II. CAESALPINIOIDEAE Taub. Trees or shrubs, rarely herbs: lvs. simple to bipinnate: fls. nearly regular or imperfectly papilionaceous; calyx with usually free segments; petals 5, rarely fewer, imbricate, the upper petal inside; stamens 10, rarely fewer, usually free. (*Cassieae* Link.)

2. **CERCIS** L. REDBUD. Deciduous shrubs or trees; brts. glabrous; winter-buds several, superposed, small, with several outer scales: lvs. simple, entire, palminerved, petioled, with small caducous stipules: fls. fascicled or racemose, before or with the leaves, papilionaceous; calyx broad-campanulate with short obtuse teeth; petals unequal, the 3 upper smaller; stamens 10, free; ovary stipitate: pod flat, narrow-oblong, thin, narrowly winged on the ventral suture; seeds several, flattened. (*Kerkis*, its ancient Greek name.) Seven species in N. Am. and from S. Eu. to E. Asia.—Planted for their early showy fls.

A. Lvs. rounded or emarginate at apex: fls. fascicled.....1. *C. Siliquastrum*  
AA. Lvs. abruptly short-acuminate.

B. Fls. fascicled.

C. Lvs. cordate with broad open sinus, without transparent margin, dull beneath when

young; fls. less than 1.5 cm. long.....2. *C. canadensis*

CC. Lvs. deeply cordate, with transparent cartilaginous margin, lustrous beneath when

young; fls. more than 1.5 cm. long.....3. *C. chinensis*

BS. Fls. racemose: lvs. truncate or subcordate, pubescent beneath.....4. *C. racemosa*

1. **C. Siliquastrum** L. JUDAS-TREE. Tree to 10 m.: lvs. suborbicular, 7–12 cm. across; deeply cordate, glabrous: fls. 3–6, rose-purple, 1.8–2 cm. long: pod 7–10 cm. long. Fl.v–v; fr.x. B.M.1138(c). Gn.44:379;52:5. G.C.52:6 (h). S. Eu., W. Asia. Cult. since ancient times. Zone VI?—**C. S. alba** West., var. Fls. white. (*C. S. f. albida* Schneid.) Cult. since the 16th century.

Related species: **C. reniformis** Engelm. Small tree to 12 m.: lvs. broad-ovate to reniform, 5–8 cm. across, often longer than broad, obtuse to emarginate, glabrous or pubescent below: fls. 1–1.5 cm. long, slender-stalked, occasionally racemose: pod 5–10 cm. long and to 1.5 cm. wide. S.S.3:t.135. (*C. texensis* Sarg.) Tex., N. Mex. Intr. 1801. Zone VII?—**C. occidentalis** Torr. Shrub: lvs. reniform, 3.5–7 cm. across, broader than long, emarginate, glabrous: fls. 1–1.5 cm. long, usually short-stalked: pod 5–8 cm. long and to 2 cm. wide. U. S. Explor. Exp. 1838–42, 17:t.3. Calif. Cult. 1886. Zone VII?

2. *C. canadensis* L. Tree to 12 m., with broad round head: lvs. broad-ovate to suborbicular, 7-12 cm. long, usually cordate at base, pubescent to glabrous beneath: fls. 4-8, rosy-pink, 1-1.2 cm. long; pedicels 5-12 mm. long: pod 6-8 cm. long. Fl.v-v; fr.ix-x. G.O.t.92(c). S.S.3:t.133,134. B.C.2:720. Gg.6:290(h). S.L.121(h). M.G.14:434-5(h). N. J. to n. Fla., w. to Mo. and Tex. and n. Mex. Cult. 1641. Zone IV. Often planted for its early conspicuous fls.—*C. c. pubescens* Pursh, var. Lvs. more or less pubescent. The type of the species.—*C. c. glabrifolia* Fern., f. Lvs. glabrous beneath.—*C. c. alba* Rehd., f. Fls. white. Mo. Bot. Gard. Bull. 10:110,t. Orig. before 1903.—*C. c. plena* Sudw. Fls. with some stamens changed to petals. Mo. Bot. Gard. Bull. 23:t.11. Orig. before 1894.

3. *C. chinensis* Bge. Tree to 15 m.; in cult. usually shrubby: lvs. sub-orbicular, 7-12 cm. long, deeply cordate, glabrous, lustrous above, subcoriaceous at maturity: fls. 5-8, rosy-purple, 1.5-1.8 cm. long; pedicels 6-15 mm. long: pod 7-12 cm. long, narrow. Fl.v; fr.x. F.St.849(c). M.M.2:139. G.F. 6:476(h). B.C.2:721. (*C. japonica* Planch.) C. China. Intr. before 1850. Zone VI. Very handsome in bloom.

4. *C. racemosa* Oliv. Tree to 10 m.: lvs. broad-ovate, 6-10 cm. long, subcordate or truncate, pubescent beneath: fls. rosy-pink, 1.2 cm. long, slender-stalked, in pendulous racemes 4-10 cm. long: pod 6-10 cm. long. Fl.v; fr.x. H.I.t.1894. C. China. Intr. 1907. Zone VII.

3. **GLEDITSIA** L. HONEY-LOCUST. Deciduous trees, usually armed with stout often branched spines; winter-buds usually minute, 3-4 superposed, the upper ones larger and scaly, the lower ones covered by the base of the petiole: lvs. alternate, often fasciated, abruptly pinnate or bipinnate usually on the same tree; lfts. irregularly and slightly crenate; stipules minute: fls. polygamous, in racemes or rarely in panicles; calyx-lobes and petals 3-5; petals nearly equal, not much longer than calyx-lobes; stamens 6-10; style short, with large terminal stigma: pod compressed, usually large, tardily dehiscent or indehiscent, 1-many-seeded; seeds flattened, suborbicular. (After Johann Gottlieb Gleditsch, director of Bot. Garden at Berlin; 1714-1786.) Syn.: *Gleditschia* Scop. About 12 species in N. Am., C. and E. Asia, trop. Afr. and S. Am.—Ornamental trees usually armed with branched spines; the spreading brs. forming a loose head; fls. in May and June; fr. in autumn and remaining on the tree a long time.

a. Pod many-seeded, 8-40 cm. long.

b. Spines compressed, at least at base: walls of pod papery or leathery; pod flat, usually twisted, not dotted.

c. Lfts. usually acute, to 3.5 cm. long, usually more than 20 in pinnate lvs.: ovary pubescent ..... 1. *G. triacanthos*

cc. Lfts. obtuse or emarginate, 2-6 cm. long, usually less than 20: ovary glabrous or pubescent only on margin.

d. Lvs. with 16-20 lfts. 2-4.5 cm. long, often bipinnate: brts. glabrous. 2. *G. japonica*

nn. Lvs. with 8-16 lfts. 3-6 cm. long, rarely bipinnate: young brts. pubescent. 3. *G. Delavayi*

BB. Spines terete; pods straight or falcate, not twisted, convex, with thick woody walls dotted with minute pits: lvs. very rarely bipinnate.

c. Lfts. 6-12: pedicels about 1 cm. long ..... 4. *G. macrocarantha*

cc. Lfts. 8-16: pedicels 2-4 mm. long ..... 5. *G. sinensis*

AA. Pod 1-3-seeded, 2.5-8 cm. long.

B. Lfts. entire, pubescent beneath: pod 2-3-seeded ..... 6. *G. heterophylla*

BB. Lfts. crenulate, glabrous beneath: pod 1-2-seeded ..... 7. *G. aquatica*

1. *G. triacanthos* L. HONEY-LOCUST (SWEET LOCUST, THREE-THORNED ACACIA). Tree to 45 m., usually with stout simple or branched spines 6-10 cm. long on trunk and brs.: lvs. 14-20 cm. long; rachis pubescent all around, grooved; pinnate lvs. with 20-30 oblong-lanceolate lfts. 2-3.5 cm. long, re-

motely crenate-serrulate, pubescent on the midrib beneath; bipinnate lvs. with 8-14 pinnae, the lfts. 8-20 mm. long; fls. very short-stalked, in narrow racemes 5-7 cm. long; pod 30-45 cm. long, falcate and twisted at length. Fl.vi; fr.x-xii. S.S.3:t.125,126. Gn.32:304. H.H.288,289(b). F.L.6:201,t(h). Am. For. 23:91(h). Pa. to Neb., Tex. and Miss. Intr. about 1700. Zone IV. Often planted; the large branched thorns make the tree conspicuous in winter.—*G. t. inermis* Willd., var. Unarmed or nearly so and of more slender habit. (*G. t.* var. *laevis* K. Koch.)—*G. t. elegantissima* (Grosdemange) Rehd., var. Unarmed and of dense bushy habit; lfts. smaller. R.H.1905:513. Orig. about 1880.—*G. t. Bujoti* (Neum.) Rehd., var. Brts. slender, pendulous; lfts. narrower. (*G. B.* Neum., *G. B. pendula* Hort.) Orig. before 1845.—*G. t. nana* (Loud.) Henry, var. Small compact shrub or tree, with rather short and broad dark green lfts. (*G. sinensis* var. *n.* Loud., *G. jerox* var. *n.* Rehd.) Cult. 1838.

*G. t.* × *aquatica* = *G. texana* Sarg. Pod straight, 10-12 cm. long. S.S.13:t.627. Tex. Intr. 1900. Zone VII?

2. *G. japonica* Miq. Tree to 20 or 25 m.; thorns somewhat compressed, 5-10 cm. long, often branched; young brts. purplish; lvs. 25-30 cm. long; pinnate lvs. with 16-20 ovate to oblong or nearly lanceolate lfts. 2-4, rarely to 6 cm. long, entire or remotely crenulate, lustrous above, pubescent on midrib beneath or glabrous; bipinnate lvs. with 2-12 pinnae, lfts. 1-2.5 cm. long; rachis pubescent on edge of groove; fls. short-stalked, in slender racemes; pod 25-30 cm. long, twisted and bullate; seeds near the middle. Fl. vi-vii; fr.x-xi. S.I.1:t.51(c). G.F.6:165. B.C.3:1347. (*G. horrida* Mak., not Willd.) Japan, China. Intr. about 1800? Zone V.

Closely related species: *G. férox* Desf. A tree with very stout compressed spines; lvs. often bipinnate; lfts. 16-30, oblong-ovate to ovate-lanceolate, 1.5-3.5 cm. long, crenate. ?China. Intr. about 1800.—*G. cáspica* Desf. Tree to 12 m.; very spiny; young brts. green; lvs. pinnate with 12-20 ovate to elliptic crenulate lfts. 2-5 cm. long, or bipinnate with 6-8 pinnae; rachis and petiolules pubescent; pod curved, about 20 cm. long, thin. (*G. horrida* var. *c.* Schneid.) S.H. 2:f.61-o.7d. S.L.185(h). Transcauc., N. Persia. Intr. 1822. Zone VI?

3. *G. Delavayi* Franch. Tree to 10 m.; young brts. puberulous; spines compressed at base, to 25 cm. long; lvs. pinnate with 8-16 obliquely ovate to ovate-oblong emarginate or obtuse lfts. 3-6 cm. long, the lower ones much smaller than the upper ones, slightly crenate or nearly entire, dark green and lustrous above, the midrib slightly impressed above and pubescent, usually slightly pubescent beneath and scarcely reticulate; on young plants much smaller and often bipinnate; fls. in slender puberulous racemes; ovary glabrous; pod 15-35 or sometimes to 50 cm. long, twisted, with leathery walls. S.H.2:f.6g-h,7b. S. W. China. Intr. 1900. Zone VII.

4. *G. macracantha* Desf. Tree to 15 m., with large spines; brts. glabrous; lvs. simply pinnate; lfts. 6-12, ovate-oblong, rarely obovate, 5-7.5 cm. long, the lower ones smaller and ovate-lanceolate, crenulate, glabrous, except pubescent on the midrib above and less densely so beneath, strongly reticulate; rachis pubescent on edge of groove; fls. in pubescent simple racemes; pedicels slender, about 1 cm. long; ovary pubescent on the margin; pod 15-30 cm. long, 2.5-3.5 cm. broad, slightly convex. C.C.183. C. China. Cult. 1800. Zone VI.

5. *G. sinensis* Lam. Tree to 15 m., with stout conical often branched spines; brts. glabrous; lvs. pinnate, 12-18 cm. long; lfts. 8-14, rarely to 18, ovate to oblong-ovate, 3-8 cm. long, obtuse or acutish, mucronulate, crenulate, dull yellowish green above, reticulate beneath and slightly pubescent on midrib, more densely above; rachis pubescent on edge of groove and pet-

iolules pubescent; fls. in slender puberulous racemes; pedicels 3-5 mm. long; ovary glabrous, pubescent on the margin: pod nearly straight, 12-25 cm. long and 2-3 cm. broad, convex. S.H.2:f.6b-c,7c-c<sup>1</sup>. U. S. Im. 40,t.4(h). (*G. horrida* Willd.) E. China. Intr. 1774. Zone VI.

6. *G. heterophylla* Bge. Shrub or small tree; spines slender, simple or trifid, to 3.5 cm. long; young brts. pubescent: lvs. pinnate, with 10-18 oblique-oblong, rarely obovate-oblong lfts. 1-3 cm. long, obtuse, entire, pubescent beneath and grayish green, or bipinnate with 3-4 pairs of pinnae each with 12-20 lfts. 5-10 mm. long; rachis puberulous: fls. subsessile in pubescent spikes sometimes panicled, the fls. in dense clusters: pod long-stipitate, obliquely elliptic to elliptic-oblong, 3.5-5.5 cm. long, thin, glabrous; seeds orbicular-oval, 8-9 mm. long, brown. S.H.2:f.7g(l). N. E. China. Intr. 1907. Zone V.

7. *G. aquatica* Marsh. WATER LOCUST. (SWAMP L.) Tree to 20 m.; spiny: pinnate lvs. with 12-18 ovate-oblong lfts. 2-3 cm. long, usually rounded or emarginate, slightly crenulate and often entire below the middle, glabrous except few hairs on the petiolules; bipinnate lvs. with 6-8 pinnae; petioles pubescent on the edges of the groove: fls. in racemes 7-10 cm. long; pedicels short; ovary glabrous; pod 2.5-5 cm. long, long-stipitate, thin. S.S.3:t.127, 128. H.H.290,291(b). (*G. inermis* Mill., not L., *G. monosperma* Walt.) S. C. and Ky. to Fla. and Tex. Intr. 1723. Zone VI?

*G. a. × triacanthos*; see under No. 1.

4. **GYMNÓCLADUS** L. Deciduous trees, unarmed, with stout brs.; winter-buds small, several superposed, indistinctly scaly; terminal bud wanting: lvs. bipinnate; lfts. entire; stipules small, deciduous: fls. in terminal panicles, dioecious or polygamous, regular; calyx tubular, 5-lobed; petals 5, oblong, slightly longer than sepals; stamens 10; ovary with 4-8 ovules; style short; pod broad-oblong, thick, flat, pulpy; seeds large, flattened. (Greek *klados*, branch, and *gymnos*, naked, referring to the stout brs. destitute of twigs.) Two species in N. Am. and China.

*G. dioicus* (L.) K. Koch. KENTUCKY COFFEE-TREE. Tree to 30 m.; brts. pubescent at first: lvs. 15-35 cm. long, with 3-7 pairs of pinnae, the lowest usually reduced to simple lfts., the upper with 6-14 lfts.; lfts. ovate or elliptic-ovate, 5-8 cm. long, acute, rounded or cuneate at base, pubescent beneath when young, short-stalked; petioles 4-6 cm. long; pistillate infl. to 25 cm. long, staminate much smaller and denser: fls. about 1.2 cm. long, long-stalked, greenish white, pubescent: pod oblong, 15-25 cm. long, thick, brown; seeds suborbicular, 2-2.5 cm. long. Fl.vi; fr.x(-iv). S.S.3:t.123,124. H.H. 286,287(b). B.C.3:1420. R.H.1897:491. Gn.M.34:138(h). (*G. canadensis* Lam.) N. Y. and Pa. to Minn., Neb., Okl. and Tenn. Intr. before 1748. Zone IV. Lvs. large, pink when unfolding, turning clear yellow in fall; the conspicuous pods persist during the winter.

The related *G. chinensis* Baill. has oblong obtuse smaller lfts. pubescent on both sides: fr. 7-10 cm. long; thicker: fls. lilac-purple, before the lvs. C.C.181. S.H.2:f.9i-n. C. China. Intr. 1907. Zone VII?

5. **CAESALPINIA** L. Trees or shrubs, sometimes climbing, armed or unarmed: lvs. bipinnate, stipulate: fls. in racemes often forming terminal panicles; calyx with short tube and 5 imbricate lobes, the lowest one larger; petals 5, clawed, nearly equal; stamens 10, curved: ovary sessile with few ovules and a slender style: pod ovate to lanceolate, usually compressed, often indehiscent. (After Andreas Caesalpini, Italian botanist; 1519-1603.) About 40 species in trop. and sub trop. regions.

**C. japonica** Sieb. & Zucc. Deciduous spreading shrub with long and slender brs. armed with stout recurved prickles: lvs. with 6-16 pinnae, each with 10-20 lfts. oblong, 1.5-2 cm. long, obtuse, pubescent below; rachis prickly: fls. canary-yellow, slender-stalked, in panicles to 30 cm. long; stamens red. Fl.vi; fr.ix. B.M.8207(c). G.C.42:43. R.H.1912:60,t.(c). Gn.40:588,t.(c);76:411. Japan. Cult. 1887. Zone VII?

Subfam. III. PAPILIONATAE Taub. Fls. papilionaceous; the upper petal (standard) enclosing the others in bud; rarely only the standard present. (*Papilionaceae* L., *Fabaceae* Reichenb.)

Tribe 1. SOPHOREAE Taub. Lvs. pinnate; stipules sometimes wanting; stamens free or slightly connate; petals of keel free, rarely connate.

**6. MAACKIA** Rupr. & Maxim. Deciduous tree; winter-buds with several imbricate scales: lvs. odd-pinnate; lfts. opposite or nearly so, entire, short-stalked; fls. white, in dense upright racemes, usually several forming terminal panicles; calyx campanulate, 5-toothed; stamens 10, connate at base; pod linear-oblong, dehiscent, compressed, 1-5-seeded. (For Richard Maack, Russian naturalist; 1825-86.) Six species in E. Asia.

**M. amurensis** Rupr. Tree to 15 m.: lfts. 7-11, elliptic to oblong-ovate, 5-8 cm. long, short-acuminate, rounded at base, glabrous: fls. about 8 mm. long, in usually paniced racemes 10-20 cm. long; pod 3.5-5 cm. long. Fl. vii-viii; fr.ix-x. B.M.6551(c). M.K.t.58(c). Gn.33:444. B.S.2:64. (*Cladrastis* a. K. Koch.) Manch. Intr. 1864. Zone IV.—**M. a. Buërgeri** (Maxim.) Schneid., var. lfts. pubescent beneath, obtusish. S.I.1:t.50(c). (*Cladrastis* a. var. *floribunda* Shiras.) Japan. Intr. 1892.

Closely related species: **M. chinensis** Takeda. Tree to 23 m.; lfts. 11-13, ovate to elliptic, 2-6 cm. long, obtuse, pubescent beneath: fls. 1 cm. long. (*M. hupehensis* Takeda.) C. China. Intr. 1908. Zone V.—**M. Fauriei** (Lévl.) Takeda. Tree to 8 m.: lfts. 9-17, elliptic-ovate to oblong, 3-5.5 cm. long, glabrous at maturity: fls. 1 cm. long; pod 3-4.5 cm. long. Not. Bot. Gard. Edinb. 8:t.27,f. 39-43. (*Cladrastis* F. Lévl.) Korea. Intr. 1917. Zone V?—**M. Tashiroi** (Yatabe) Mak. Shrub: lfts. 11-15, elliptic-ovate, 2-4 cm. long, slightly pubescent beneath: fls. 7 mm. long; pod 2-3.5 cm. long. Bot. Mag. Tokyo 6:t.10. Japan, Liuku Is. Intr. 1919. Zone V?

**7. CLADRÁSTIS** Raf. Deciduous trees; winter-buds naked, several superposed covered by the base of the petiole: lvs. odd-pinnate; lfts. 7-15, alternate, short-stalked, entire, rather large: fls. white, rarely pinkish, in usually paniced racemes; calyx campanulate, 5-toothed; stamens 10, nearly free: pod narrow-oblong, dehiscent, compressed, 3-6-seeded; valves thin. (Greek *klados*, branch, and *thraustos*, fragile, alluding to the brittle brs.) Four species in N. Am. and E. Asia.

A. Lvs. without stipels: pod not winged.

B. Panicles drooping: lfts. 7-11 ..... 1. *C. lutea*

BB. Panicles upright: lfts. 9-13 ..... 2. *C. sinensis*

AA. Lvs. with stipels: pod winged ..... 3. *C. platycarpa*

**1. C. lutea** (Michx.) K. Koch. YELLOW-WOOD. Tree to 15, rarely to 20 m. high, with smooth bark and yellow wood: lfts. 7-11, elliptic or ovate, 7-10 cm. long, abruptly short-acuminate, broad-cuneate, glabrous, bright green: fls. white, 2.5-3 cm. long, fragrant, in panicles 25-40 cm. long; pod 7-8 cm. long. Fl.vi; fr.viii-ix. B.M.7767(c). S.S.3:t.119,120. G.F.1:92(h). G.C.42:186(h),187. Gg.2:401;5:98(h). (*C. tinctoria* Raf., *Virgilia* l. Michx.) N. C. to Ky. and Tenn. Intr. 1812. Zone III. With fragrant showy white fls. in pendulous panicles; lvs. turning yellow in fall.

**2. C. sinensis** Hemsl. Tree to 25 m.: lfts. 9-13, oblong to oblong-lanceolate, 5-10 cm. long, obtuse or acutish, usually rounded at base, grayish green

beneath and brownish pubescent chiefly near the midrib; petioles and rachis pubescent: fls. white or pinkish, 1.2 cm. long, in much-branched panicles 12-30 cm. long; ovary finely pubescent: pod 4-6.5 cm. long, glabrous or nearly so. Fl.vii; fr.ix. B.M.9043(c). G.C.74:70. H.B.2:439. K.B.1913:164, t(h). Fls.vi-vii. W. and C. China. Intr. 1901. Zone V.

Related species: *C. Wilsonii* Takeda. Tree to 15 m.: lfts. 7-9, rarely 11, elliptic-ovate to ovate-oblong, 6-12 cm. long, broad-cuneate to rounded at base, nearly glabrous: fls. 1.5-2 cm. long, in panicles 12-18 cm. long; ovary pubescent: pod very shortly stipitate, pubescent. C. China. Intr. 1907. Zone VI?

3. *C. platycarpa* (Maxim.) Mak. Tree to 20 m.: lfts. 7-15, ovate to elliptic-lanceolate, 5-10 cm. long, acuminate, broad-cuneate to rounded at base, slightly pubescent above chiefly on the veins, green beneath, slightly reticulate and appressed-pilose; petioles 2-2.5 cm. long: fls. 1-1.5 cm. long, in upright panicles about 15 cm. long; standard white with yellow spot at base; pod winged all around, 3-7 cm. long, 1-3-seeded. S.I.2:t.32(c). (*Sophora p.* Maxim., *Platysprion platycarpum* (Maxim.) Mak.) Japan. Intr. 1919. Zone V.

8. *SÓPHORA* L. Deciduous or evergreen trees or shrubs, rarely herbaceous; winter-buds small, indistinctly scaly: lvs. odd-pinnate: lfts. opposite, usually small, 7-many; stipules small: fls. in racemes or panicles, calyx with 5 short teeth; standard orbicular to oblong-obovate; stamens 10, free or connate only at base; pod stipitate, terete, rarely compressed, constricted between the seeds, indehiscent or tardily dehiscent, few to many-seeded. (Sophira, Arabian name of a tree with pea-shaped fls.) Including *Styphnolobium* Schott and *Goebelia* Bge. About 20 species in Asia and N. Am.

A. Fls. in large terminal panicles, yellowish white or slightly pinkish; lfts. acute.

AA. Fls. in racemes: lfts. obtusish or emarginate.

BB. Lfts. about 3 cm. long: racemes axillary: unarmed small tree.....2. *S. affinis*  
BB. Lfts. about 1 cm. long; racemes terminal: spinescent shrub.....3. *S. viciifolia*

1. *S. japonica* L. JAPAN PAGODA-TREE. Tree to 25 m., with spreading brs. forming a round head; young brts. glabrous or nearly so, green: lvs. 15-25 cm. long; lfts. 7-17, stalked, ovate to lance-ovate, 2.5-5 cm. long, acute, broad-cuneate to rounded at base, dark green and lustrous above, glaucous beneath and closely appressed-pubescent: fls. 1-1.5 cm. long, in terminal loose panicles 15-30 cm. long; pod stipitate, 5-8 cm. long, terete, glabrous, 1-6-seeded. Fls.viii-ix; fr.x. S.I.1:t.50(c). N.D.3:t.21(c). Gn.24:210,214(h). M.G.13:183(h). F.E.12:1174(h). B.S.2:250(h). (*Styphnolobium japonicum* Schott.) China, Korea. Intr. 1747. Zone IV. Sometimes used as an avenue tree: late-flowering, and lvs. remaining green late into the fall.—*S. j. pendula* Loud., var. A picturesque form with tortuous limbs and pendulous brs. R.H. 1876:194,195(h). Gn.24:202,203(h);89:184(h). G.C.28:479(h). F.E.14:1430, t.43(h). Gn.M.29:167(h).—*S. j. columnaris* Schwer. Of narrow pyramidal habit.—*S. j. violacea* Carr. Lfts. 15-17, appressed-pubescent beneath: fls. appearing very late, the wings and keel tinged purplish. (*S. violacea* Hort., not Thwait.) Intr. 1858.—*S. j. pubescens* (Tausch) Bosse, var. Lfts. ovate-oblong to lance-ovate, usually rounded or truncate at base, to 8 cm. long, soft-pubescent beneath: wings and keel of the fl. often tinged purplish. M.D. 1922:t.20(h). (*S. p.* Tausch, *S. Korolkowii* Hort., *S. sinensis* Hort., *S. tomentosa* Hort., not L.) Cult. 1830.

2. *S. affinis* Torr. & Gray. Round-headed tree to 6 m.: lvs. 10-20 cm. long; lfts. 13-19, elliptic, 2-4 cm. long, obtusish to emarginate, mucronate, broad-cuneate, glabrous or with scattered hairs beneath and conspicuously

veined: fls. white, tinged with pink, 1-1.5 cm. long, in slender racemes 5-15 cm. long: pods 3-8 cm. long, pubescent, black. Fl.vi. S.S.3:t.122. Ark. and Tex. Intr. 1890. Zone VII?

3. *S. viciifolia* Hance. Shrub to 2.5 m., with spreading spinescent brs. and pubescent brts.: lvs. 2-6 cm. long; lfts. 13-19, elliptic to elliptic-oblong, 6-10 mm. long, obtuse and mucronulate, silky-pubescent beneath or nearly glabrous: fls. bluish violet to whitish, 1.6-2 cm. long, in 6-12-fl. racemes terminal on short brts.; calyx pubescent, shortly 5-toothed, violet; standard spatulate-obovate, reflexed: pod 5-6 cm. long, 1-4-seeded, long-beaked, nearly glabrous. Fls.vi; fr.ix-x. B.M.7883(c). G.C.36:3. Gn.78:469;88:107 (h). A.F.29:155. B.S.2:522. (*S. Davidii* Kom., *S. Moorcroftiana* var. *Davidii* Franch.) W. China. Intr. 1897. Zone V. Graceful free-flowering shrub adapted for sandy soil and dry situations.

Related species: *S. Wilsonii* Craib. Shrub to 2 m.: lfts. 13-19, oblong, 2-4.5 cm. long, obtuse, ferruginous-pubescent beneath: fls. pale yellow, 1.5-2 cm. long, in axillary dense racemes to 7 cm. long: pod ellipsoid, 2-3 cm. long without stipe. W. China. Intr. 1908. Zone VI?

Tribe 2. *PODALYRIAE* Taub. Lvs. usually ternate; stamens free; petals of keel free or slightly connate.

9. *PIPTANTHUS* Don. Deciduous or half-evergreen shrubs: lvs. 3-foliolate; stipules connate; lfts. entire, sessile: fls. yellow, in terminal upright bracted racemes; calyx campanulate, 5-toothed, with lanceolate equal teeth, deciduous; petals long-clawed, wings obovate; keel obovate-oblong, connate on back; standard orbicular, erect; stamens free: ovary linear, 6-10-ovuled; pod linear, flattened, stipitate. (Greek *piptos*, to fall, and *anthos*, flower; petals, stamens and teeth of calyx drop soon.) Six species in the Himal., Mongol. and S. W. China.—Ornamental shrubs with showy yellow fls.

*P. cóncolor* Harrow. Shrub to 2 m.; young brts. white-pubescent, soon glabrous: lvs. ovate-lanceolate to lance-oblong, 5-12 cm. long, acuminate, cuneate, slightly pubescent when young, soon glabrous, green on both sides; petiole 1.5-2.5 cm. long; fls. about 2.5 cm. long, in dense racemes 5-8 cm. long; calyx silky-villous: pod 8-12 cm. long; glabrous. Fl.iv-v. W. China. Intr. 1908. Zone VII?—*P. c. yunnanénsis* Stapf, subsp. Brts. glabrous or slightly hairy when young, soon glabrous: lvs. usually glaucous beneath: fls. somewhat larger. B.M.9234(c). (*P. bicolor* Craib.) S. W. China. Intr. 1919. Zone VII?

Closely related species: *P. tomentosus* Franch. Young brts. tomentose: lfts. ovate to ovate-lanceolate, tomentose, finally nearly glabrous above: pod tomentose, 5-8 cm. long. S. W. China. Cult. 1933.—*P. laburnifolius* (D. Don) Stapf. Shrub to 3 m.: lfts. lanceolate, 8-14 cm. long, silky when young, finally glabrate, glaucous beneath: fls. about 3 cm. long; calyx brown-pubescent; pod 8-12 cm. long, slightly pubescent. S.B.3:t.264(c). H.U.1:260,t(c). G.C.43:178. R.H. 1914:9. (*P. nepalensis* Sweet.) Himal. Intr. 1821. Zone VII?

Tribe 3. *GENISTEAE* Taub. Lvs. ternate, simple or wanting, rarely digitate; petals of keel free or slightly connate on back; stamens usually all  $\frac{1}{2}$  to  $\frac{3}{4}$  connate: pod dehiscent or sometimes indehiscent.

10. *LUPINUS* L. LUPINE. Herbs, rarely shrubby: lvs. digitate, rarely simple; lfts. 5-15: fls. usually in terminal spikes; calyx deeply 2-lipped, the lower lip 3-toothed or entire; standard erect, broad-ovate, with strongly reflexed sides; wings united at apex and enclosing the keel; stamens connate: pod compressed, dehiscent, with several seeds, usually silky-villous. (Ancient Latin name, derived from *lupus*, wolf.) About 300 species chiefly in W. N. Amer., few in E. N. Am., S. Am. and the Mediterranean region.

**L. arboreus** Sims. TREE L. Upright shrub to 3 m.; brts. silky: lfts. 7-11, oblanceolate, about 3 cm. long, mucronulate, glabrous above, silky beneath; petioles 2-3 cm. long; fls. sulphur-yellow, fragrant, sometimes tinged bluish, in loose racemes to 25 cm. long; pedicels about 8 mm. long; calyx deeply 2-lipped with entire or slightly bifid lips: pods to 8 cm. long, pubescent, 8-12-seeded. Fls.vii-ix. B.M.682(c). B.R.1595(c). Gn.30:289(h);47:398(h), t(c). Calif. Cult. 1800. Zone VII. Several color forms are in cult.

**11. ERINACEA** Boiss. Deciduous shrub, with rigid, very spiny pubescent brs.: lvs. simple or ternate, pubescent: fls. 1-3, axillary toward the end of the brts.; calyx tubular, with 5 short teeth, inflated after flowering; petals narrow, long-clawed; claws of wing and keel adnate to the staminal tube; standard ovate, slightly auriculate at base: pod oblong, dehiscent, glandular-hairy, 4-6-seeded. (From Latin *erinaceus*, hedgehog, alluding to the spiny nature of the plant.) One species.

**E. pungens** Boiss. Dense shrub to 0.3 m.: lvs. present only at ends of young brts.: lfts. oblong-ovate to spatulate, about 1 cm. long: fls. 1-3, violet-blue; 2-2.5 cm. long; corolla about  $\frac{1}{2}$  longer than calyx: pod about 2 cm. long. Fls.v-vi. B.M.676(c). L.C.318(c). G.C.76:89,t(h). Gn.62:127(h); 64:399(h). S. W. Eu., N. W. Afr. Intr. 1759. Zone VI? Suited for sunny places in rockeries; likes limestone soil.

**12. SPARTIUM** L. Upright shrub with slender, leafless or nearly leafless brs.: lvs. simple, entire, estipulate: fls. in loose terminal racemes; calyx split above, hence 1-lipped, with 5 minute teeth; standard large, obovate, recurved; wings shorter than the acuminate, incurved keel; claws of wings and keel adnate to staminal tube; stigma decurrent on inside of style: pod linear, many-seeded. (From *spartos*, the ancient Greek name of the plant.) One species.

**S. juncum** L. SPANISH BROOM. Shrub to 3.5 m., with slender terete grooved rush-like brs.: lvs. oblanceolate to linear, 1-2.5 cm. long, bluish green, sparingly hairy or nearly glabrous: fls. bright yellow, about 2.5 cm. long, fragrant: pod linear, pubescent, 5-10 cm. long. Fls.v-ix; in Calif. almost the whole year. B.M.85(c). B.R.1974. Gn.44:57. B.S.2:523. (*Spartanthus juncus* Lk.) Mediterr. region and Canary Isls. Intr. 1548. Zone VII. Almost leafless shrub producing masses of golden yellow fls.—**S. j. ochroleucum** Sprenger. Fls. whitish.—**S. j. plenum** West., var. Fls. double. Orig. before 1746.

**13. GENISTA** L. Deciduous or half-evergreen, sometimes nearly leafless shrubs spiny or unarmed; brts. usually green, striped: lvs. alternate, rarely opposite, simple or sometimes 3-foliate, entire; stipules small or wanting: fls. in terminal racemes or heads, rarely axillary, usually yellow, rarely white; calyx 2-lipped, the upper lip deeply 2-parted; standard ovate; keel obtuse; claws of wings and keel adnate to the staminal tube; style incurved, rarely involute, with capitate, rarely slightly decurrent stigma: pod linear-oblong, rarely subglobose or ovate, with convex, rarely flat valves, 1-many-seeded. (Ancient Latin name.) About 100 species in Eu., N. Afr. and W. Asia.

a. Brts. striped, terete.

b. Lvs. 3-foliate or partly so.

c. Lvs. and brts. opposite or whorled: fls. in heads.

d. Brts. rigid, spiny.....1. *G. horrida*

db. Brts. not spiny.....2. *G. radiata*

cc. Lvs. alternate: fls. in racemes.....3. *G. nyssana*

- BB. Lvs. simple, alternate.  
 C. Brts. spiny.  
   D. Infl. racemose.  
     E. Brts. pilose or villous: bracts of infl. subulate.....4. *G. germanica*  
     EE. Brts. glabrous: bracts of infl. foliaceous.....5. *G. anglica*  
 DD. Infl. capitate .....6. *G. hispanica*  
 CC. Brts. unarmed.  
   D. Fls. 1-few on axillary short brts.  
     E. Lvs. acute: fls. forming racemes to 20 cm. long at end of brs.: upright shrub.  
       7. *G. cinerea*  
     EE. Lvs. obtuse: racemes short; procumbent shrub.....9. *G. pilosa*  
 DD. Fls. in many-fld. terminal racemes: lvs. usually glabrous or nearly so beneath.  
     8. *G. tinctoria*  
 AA. Brts. triangular or 2-winged: procumbent shrubs.  
   B. Brts. triangular, glabrous.....10. *G. januensis*  
   BB. Brts. 2-winged, pubescent.....11. *G. sagittalis*

1. *G. hórrida* DC. Densely branched shrub to 0.3 m., with rigid spiny brts. silky when young: lfts. linear, about 8 mm. long, folded, pubescent: fls. 1-3; keel pubescent; bracts ovate: fr. rhombic-lanceolate, pubescent. Fls. VI-VIII. G.C.53:140(h). Gn.87:620(h). S. W. Eu. Intr. 1821. Zone VII.

2. *G. radiata* (L.) Scop. Much-branched shrub to 0.8 m.; brts. pubescent or glabrescent: lfts. linear-lanceolate, 1-1.5 cm. long, glabrous above, pubescent beneath, caducous: fls. in 3-10-fld. heads; calyx campanulate; bracts ovate: pod elliptic, pubescent, 1-2-seeded. Fls. V-VII. B.M.2260(c). R.I.22:t.2083(c). F.D.23:t.2318(c). S.L.183(h). (*Cytisus radiatus* W. Koch, *Enantiosparton radiatum* K. Koch.) S. E. Eu. Intr. before 1758. Zone (V).

3. *G. nyssana* Petrovich. Shrub to 0.6 m.; brts. villous: lfts. elliptic-lanceolate, 2-3.5 cm. long, villous: fls. in terminal leafy racemes to 20 cm. long; bractlets subulate; teeth of calyx of equal length; keel and standard silky outside: pod rhombic, about 1 cm. long, villous. Fl. VI-VII. I.T.5:t.197. Serbia, Albania. Intr. 1899. Zone VI?

4. *G. germánica* L. Upright or ascending spiny shrub to 0.6 m.; brts. villous, the flowering ones not spiny: lvs. elliptic-oblong, 1-2 cm. long, deep green, ciliate and villous beneath: fls. rather small, in racemes 3-5 cm. long; bracts subulate, half as long as pedicels; keel and standard silky outside; pod elliptic, 8-10 mm. long, few-seeded, villous. Fls. V-VII. R.I.22:t.2086f-i-i. D.F.23:t.2302(c). C. and S. Eu. Cult. 1588. Zone V.—*G. g. inermis* Koch, var. Spineless or nearly so.

Closely related species: *G. silvestris* Scop. Brts. appressed-pubescent, the flowering ones spiny: lvs. linear to narrow-lanceolate, 1-1.5 cm. long, pubescent beneath: racemes to 10 cm. long; bracts longer than pedicels; calyx with subulate lobes: pod ovoid, usually 1-seeded. R.I.22:t.2084(c). F.D.23:t.2304(c). S. E. Eu. Intr. 1818. Zone VI?—*G. s. pungens* Vis., var. More spiny. B.M. 8075(c). R.I.22:t.2085,f.3. Gn.88:201(h). (*G. dalmatica* Bartl.) Intr. 1893. Zone VII?

5. *G. anglica* L. Glabrous spiny shrub to 0.8 m., sometimes procumbent: lvs. elliptic to linear-oblong, 6-8 mm. long, bluish green: racemes few-fld., with leafy bracts longer than the pedicels; pod elliptic-oblong, about 1 cm. long, several-seeded. R.I.22:t.2086,f.3-5(c). D.F.23:t.2303(c). S.E.3:t.326(c). C. and W. Eu. Cult. 1789. Zone V.—*G. a. subinermis* Legrand, subvar. Nearly or quite spineless.

6. *G. hispanica* L. Densely branched shrub to 0.3 m., with numerous thin spines: lvs. ovate-lanceolate, to 1 cm. long, pubescent: fls. in 2-12-fld. heads: calyx pubescent, divided about ½ into lance-ovate teeth: pod rhombic, hirsute. B.M.8528(c). R.H.1888:36,t(c). Gn.87:621(h). M.G.22:388(h). S.L. 183(h). Spain to N. Italy. Intr. 1759. Zone VI.

7. *G. cinerea* (Vill.) DC. Shrub to 0.9 m.; brts. grooved, pubescent when young; sparingly leafy: lvs. lanceolate, 6-8 mm. long, acute, pubescent on

both sides: fls. 1-3, subsessile or very short-stalked, on axillary leafy brts. forming at end of last season's brs.: racemes to 20 cm. long; bractlets lanceolate, caducous; calyx pubescent; keel pubescent: pod to 1.8 cm. long, silky, 2-5-seeded. Fl. iv-vii. B.M.8086(c). R.I.22:t.2092,f.1-2(c). Gn.83:400;86:564(h). S. Eu., N. Afr. Intr. before 1850. Zone VII?

8. *G. tinctoria* L. DYER'S GREENWEED. Upright or ascending shrub to 1 m., with slender little-branched shoots; brts. striped, glabrous or pubescent when young: lvs. elliptic-oblong to oblong-lanceolate, 1-2.5 cm. long, nearly glabrous, ciliate, bright green: racemes many-fl'd., sometimes branched; corolla glabrous: pods narrow-oblong, compressed, glabrous or slightly pubescent, 6-10-seeded. Fls. vi-viii. R.I.22:t.2088,f.1-2(c). F.D.23:t.2299(c). S.E.3:t.328(c). B.C.3:1322. (*G. sibirica* Hort., *G. polygalaeifolia* Hort., not DC.) Eu., W. Asia; sometimes naturalized in the E. States. Cult. 1789. Zone II.—*G. t. plena* Rehd., var. With double fls. R.H.1899:573. G.W.16:137(h). (*G. sibirica* fl. pleno Pépin.) Orig. before 1853.—*G. t. hirsuta* DC., var. More branched; brts. and lvs. pubescent; ovary pubescent: pod usually glabrate. (*G. pubescens* Lang.)—*G. t. anxantica* (Ten.) Fiori. Dwarf and quite glabrous: lvs. narrow-elliptic. S.L.55(h). S.B.II.266(c). (*G. a. Ten.*) Italy. Intr. 1818.—*G. t. virgata* (Willd.) Koch, var. More vigorous and more branched, to 2 m.; quite glabrous; pod 3-6-seeded. R.I.22:t.2088,f.3(c). F.D.23:t.2300(c). (*G. t. var. elatior* Schultz, var. *elongata* Rouy, *G. elata* Wender., *G. virgata* Willd., *G. elatior* W. Koch.) Cult. 1790.—*G. t. alpéstris* Bertol., var. Low, with slender procumbent brts.: lvs. narrow: ovary glabrous or pubescent: pod glabrous or glabrate. S. Eu.—*G. t. humilior* (Bertol.) Schneid., var. Similar to the preceding, but pod silky-villous. R.I.22:t.2088,f.4(c). (*G. t. var. mantica* Reichenb., *G. mantica* Pollini.) Italy. Intr. 1816.

Closely related species: *G. ovata* Waldst. & Kit. Ascending or upright shrub, to 0.6 m.; brts. villous: lvs. ovate to lanceolate, villous; pod villous, rarely glabrate. G.O.t.59(c). R.I.22:t.2089,f.3-4(c). L.B.482(c). D.F.23:t.2301(c). (*G. tinctoria* var. *o.* Schultz.) S. France to Rumania. Intr. 1819. Zone V.—*G. lydia* Boiss. Low prostrate shrub with ascending brts.; glabrous: lvs. lanceolate, 5-10 mm. long: fls. in short, usually few-fl'd. racemes; calyx 2-lipped to the middle, lips with lanceolate lobes. Balk., W. Asia. Intr. 1927. Zone VII?

9. *G. pilosa* L. Prostrate shrub with rooting knotty stems and short angled ascending brts.: lvs. obovate to oblong, 6-15 mm. long, obtusish, cuneate, appressed-pubescent beneath, dark green and nearly glabrous above: fls. 1-3, axillary, forming short racemes; calyx silky; keel and standard pubescent outside: pod linear, to 2.5 cm. long, silky, 5-8-seeded. Fls. v-vii. S.E.3:t.327(c). Gn.87:562(h). S.L.184(h). Eu. Cult. 1789. Zone V.

Related species: *G. sericea* Wulf. Prostrate with ascending slender appressed-pilose brts.: lvs. linear- to elliptic-lanceolate, 8-18 mm. long, acute to obtusish, pubescent beneath: fls. in 2-5-fl'd. racemes; pedicels 3-5 mm. long, villous; standard and keel silky: pod oblong, 3-6-seeded. S.H.2:f.21d-g. Italy to Greece. Intr. 1923. Zone VII?

10. *G. januénsis* Viv. Low, with procumbent stems and ascending triangular slightly winged glabrous brts. 5-20 cm. long: lvs. lance-ovate to lanceolate, to 2 cm. long, with transparent margin; stipules spinescent: fls. in short racemes; bracts longer than pedicels: pod oblong, glabrous, 3-8-seeded. Fl. v-vi. R.I.22:t.2091(c). F.D.23:t.2298(c). L.B.1135(c). (*G. triangularis* Willd., *G. scariosa* Viv., *G. triquetra* Waldst. & Kit.) Italy, S. E. Eu. Cult. 1826. Zone VII?

11. *G. sagittalis* L. Low Shrub with procumbent stems and ascending or erect broadly 2-winged villous brts. to 0.3 m. high: lvs. ovate to oblong, about 2 cm. long, villous: fls. in short, 6-8-fl'd. terminal racemes; corolla

glabrous except the pubescent keel; pod linear-oblong, 1-2 cm. long, silky, 3-6-seeded. Fl.vi; fr.viii. R.I.22:t.2081(c). F.D.23:t.2320(c). (*Cytisus* s. Koch.) C. and S. Eu. Cult. 1588. Zone IV.

14. **PETTERIA** Presl. Deciduous upright shrub; winter-buds naked, silky: lvs. petioled, 3-foliolate; lfts. entire, subsessile, stipulate: fls. yellow, in terminal upright racemes; calyx tubular, shortly 2-lipped, upper lip split to base, lower lip 3-toothed; claws of wings and keel adnate to staminal tube; ovary sessile, pubescent: pod linear-oblong, flat, dehiscent, with several seeds. (Named for Franz Petter, Dalmatian botanist; died 1853.) One species.

**P. ramentacea** (Sieber) Presl. Shrub to 2 m.; brts. glabrous, green: lfts. narrow-elliptic to obovate-oblong, 2-6 cm. long, usually obtuse, glabrous, ciliate, dark green above, lighter beneath; petiole 2-4 cm. long: fls. fragrant, short-pedicel, in dense racemes 3-7 cm. long; calyx silky; keel silky: pod to 4.5 cm. long, sparingly silky or glabrate. Fls.v-vi. R.I.22:t.2070(c). F.D. 23:t.2307(c). B.R.29:40(c). (*Cytisus ramentaceus* Sieber, *Laburnum ramentaceum* K. Koch, *Genista* r. Briq.) Istria to Albania. Intr. 1838. Zone (V).

15. **LABURNUM** Med. Deciduous trees or shrubs: winter-buds globose-ovoid, with 2-3 outer scales: lvs. alternate, 3-foliolate, petioled, estipulate; lfts. subsessile: fls. yellow, slender-pedicel, in terminal usually pendulous racemes; calyx 2-lipped with obtuse short lips; petals all free; stamens 10, connate; ovary stipitate: pod linear, compressed, tardily dehiscent, with thickened slightly winged margin; seeds several, without appendage. (Ancient Latin name.) Three species in S. Eu. and W. Asia.—Ornamental trees or shrubs; the first two species with very showy pendulous racemes of golden yellow fls.

- A. Racemes pendulous: lfts. elliptic to oblong, 2-8 cm. long.  
 B. Brts., lvs. beneath and pod appressed-pubescent.....1. *L. anagyroides*  
 BB. Brts., lvs. and pod glabrous or nearly so.....2. *L. alpinum*  
 AA. Racemes upright: lfts. obovate, 5-15 mm. long.....3. *L. caramanicum*

1. **L. anagyroides** Med. GOLDEN-CHAIN. Large shrub or tree to 7 m.; brts. appressed-pubescent, grayish green: lfts. elliptic to elliptic-oblong or elliptic-obovate, 3-8 cm. long, usually obtuse and mucronulate, broad-cuneate, grayish green and silky-pubescent beneath when young; petioles 2-6 cm. long: fls. about 2 cm. long, in silky-pubescent racemes to 30 cm. long; pedicels usually shorter than fls.: pod about 5 cm. long, with thick keel, appressed-pubescent; seeds black. Fls.v-vi. F.D.23:t.2305(c). G.C.36: 318. Gn.79:246(h);88:15(h). R.H.1912:446a. (*L. vulgare* Bercht. & Prsl., *Cytisus Laburnum* L.—BEAN-TREE.) S. Eu. Cult. 1560. Zone (V).—**L. a. aureum** (Vanh.) Rehd., f. Lvs. yellow. F.S.21:t.2242-3(c). G.Z.20:129,t(c). (*L. a. f. chrysophyllum* (Dipp.) Schneid.) Orig. before 1875.—**L. a. bullatum** (Jacques) Schneid., f. Lfts. curled and bullate. (*L. vulgare involutum* Hort.) Orig. before 1847.—**L. a. quercifolium** (Loud.) Schneid., f. Lfts. sinuately lobed. Gn.34:30. S.H.2:f.25c<sup>1</sup>. Orig. before 1838.—**L. a. sessilifolium** (Kirchn.) Schneid., f. Lvs. crowded, subsessile. Orig. before 1847.—**L. a. pendulum** (Bosse) Rehd., var. Brs. pendulous. Gn.25:522(h). G.M.45:317. Orig. before 1840.—**L. a. autumnale** (Kirchn.) Rehd., var. Blooming a second time in autumn. (*L. vulgare* var. *bifera* Lav., var. *semperflorens* Nichols.)—**L. a. Alschingeri** (Vis.) Schneid., var. Lfts. more silky and more bluish gray beneath; racemes shorter, often nearly upright; lower lip of calyx longer than upper one. R.I.32:t.2066,f.1,2(c). S.H.2:f.25d-e,26a-b<sup>1</sup>. S. Eu. Intr. 1840.—**L. a. Carlièri** (Kirchn.) Schneid., var. Lfts. smaller and

narrower, obovate to narrow-oblongate on same br.: fls. in slender racemes; calyx slightly pubescent; ovary glabrous. Orig. before 1864.

*L. a.* × *alpinum* = *L. Waterèri* Dipp. lfts. beneath and racemes sparingly pubescent; racemes long and slender: pod with narrow wing, sparingly appressed-pubescent, few-seeded, rarely developed. G.24:355. G.M.45:313. Gs.2:109(h). (*L. Parksi* Hort., *L. Vossii* Hort.) Orig. before 1864. Zone V.—*L. a.* + *Cytisus purpureus* = *Laburnocytisus Adami*; see below.

2. *L. alpinum* Bercht. & Prsl. SCOTCH LABURNUM. Shrub or tree to 10 m.; brts. glabrous or hirsute when young, green: lfts. usually elliptic-oblong, 4–7 cm. long, acute or acutish, ciliate, light green and glabrous or sparingly pilose beneath: fls. less than 2 cm. long, in slender glabrous or sparingly pilose racemes to 40 cm. long; pedicels about as long as fls.: pod thin, with the upper suture winged, glabrous; seed brown. Fl.vi. F.D.23:t.2366(c). B.M.176(c), as *Cytisus Laburnum*. Gn.34:30;88:16(h). R.H.1912:446b. B.S.2:2,t(h). (*Cytisus alpinus* Mill.) Mts. of S. Eu. Cult. 1596. Zone IV. Of more upright stiffer growth than No. 1, with slenderer racemes flowering about two weeks later; hardier.—*L. a. autumnale* Bean, var. Blooms a second time in fall. (*L. a.* var. *biferum* Arb. Kew.)—*L. a. pendulum* (Loud.) Kirchn., f. Brs. pendulous.

3. *L. caramanicum* (Boiss. & Heldr.) Benth. & Hook. Upright shrub to 2 m.; glabrous; brts. terete: lfts. obovate, 5–15 mm. long, mucronulate, grayish green; petioles 3–10 mm. long: fls. about 1.5 cm. long, in terminal slender racemes 5–15 cm. long; pedicels 5–8 mm. long, with small bractlets in the middle; pod winged on the upper suture, 5–7, glabrous. Fl.viii. B.M.7898(c). R.H.1861:410. G.C.48:454. B.S.2:2. (*Podocytisus caramanicus* Boiss. & Heldr., *Cytisus c.* Lav.) Greece, Asia Minor. Cult. 1861. Zone VII?

+ **LABURNOCYTISUS** Schneid. (*Cytisus* + *Laburnum*). Known only in the following form: *L. Adami* (Poit.) Schneid. (*Laburnum anagyroides* + *C. purpureus*.) Habit similar to *L. anagyroides*: lfts. smaller, nearly glabrous; racemes smaller, nodding; fls. usually dull purplish; often developing brs. like true *L. anagyroides*, less often like *C. purpureus*. B.R.1965(c). B.H.21:16–18(c). G.C.36:219;50:162. M.O.t.10. (*Laburnum* A. Kirchn., *Cytisus* A. Poit., *C. Laburnum* var. *purpurascens* Loud.) Orig. about 1826. Zone V. One of the graft-hybrids of the kind termed chimaeras; an interesting plant, but of little ornamental value.

16. **CALYCOTOME** Lk. Deciduous low spiny shrubs; brts. often opposite: lvs. 3-foliolate, petioled, estipulate; lfts. sessile, small: fls. solitary or fascicled; calyx turbinate, truncate, colored; standard upright; keel obtuse, curved, shorter than standard; filaments connate; ovary sessile; stigma capitate: pod linear-oblong; thickened or 2-winged on upper suture, dehiscent, several-seeded. (Greek *kalyx* and *tome*, cut or section; the upper part of the calyx separates before the flower opens.)—Five species in the Mediterr. region.

*C. spinosa* (L.) Lk. Shrub to 1.5 m.; brts. glabrous: lfts. obovate-oblong or obovate, to 1.2 cm. long, obtuse, cuneate, sparingly pubescent beneath; petioles 3–6 mm. long: fls. 1–4, about 1 cm. long; bracts 3-lobed: pod 2–3 cm. long, glabrous. Fl.iii–vii. R.I.22:t.2067(c). B.R.32:55(c). S. Eu. Cult. 1846. Zone VII. Excellent for low hedges.

Closely related species: *C. villosa* (Poir.) Lk. Young brts. and lfts. beneath silky; calyx, pedicels and pod silky-villous: fls. 3–15. R.I.22:t.2067(c). E.N. III.3:f.109a–c. S. Eu., N. Afr. Cult. 1893. Zone VII?

17. **ADENOCÁRPUS** DC. Deciduous or half-evergreen shrubs or small trees, more or less pubescent: lvs. 3-foliate, small; stipules caducous: fls. yellow, in terminal racemes; calyx 2-lipped, the 2 upper lobes distinct, the 3 lower ones more or less connate; standard orbicular, spreading; keel strongly incurved, nearly as long as standard; pod sessile, linear or oblong, compressed, viscid-glandular, many-seeded. (Greek *aden*, gland, and *karpós*, fruit; in reference to the glandular pod.) About 10 species in the Mediterr. region and on the high mts. of trop. Afr.

**A. decórticans** Boiss. Divaricately branched shrub or small tree to 8 m.; bark exfoliating; brts. tomentose: lvs. very crowded; lfts. linear, 8-18 mm. long, with usually involute margin, pubescent; petiole 6-12 mm. long: fls. golden-yellow, in short dense upright racemes 3-6 cm. long; calyx villous, its segments nearly equal; pod 3.5-5 cm. long. Fl.vi. R.H.1883:156,t(c). G.C.II.25:725. Gn.30:498. Spain. Cult. 1879. Zone VII.

The related *A. complicátus* (DC.) Gren. & Godr. is a dense shrub to 1 m.; brts. glabrescent: lfts. obovate to oblong-lanceolate, pubescent beneath: fls. in elongated racemes; calyx pubescent, usually glandular; middle segment of lower lip longer than the lateral ones, usually much exceeding the upper lip. Fl.vii-viii. R.I.22:t.2055,f.1(c). B.M.1387(c). (*A. divaricatus* Sweet, *A. parvifolius* DC.) S. Eu. Cult. 1780. Zone VII.

18. **CÝTISUS** L. Deciduous or evergreen shrubs, rarely small trees; unarmed, rarely with spinescent brts.: lvs. 3-foliate, rarely 1-foliate, sometimes minute or nearly wanting; stipules minute or wanting: fls. yellow or white, rarely purple, axillary or in terminal racemes or heads; calyx 2-lipped with short teeth, the upper 2 connate or free; petals all free; keel obtuse or slightly acuminate; stamens connate; ovary sessile, rarely stipitate; style incurved, with capitate or oblique stigma; pod linear to oblong, flattened, dehiscent, 2-many-seeded; seed with callous appendage. (*Kytisos*, Greek name for a kind of clover.) About 50 species chiefly in the Mediterr. region extending to C. Eu. and Canary Isls. Ornamental shrubs grown for their usually profusely produced fls.

A. Calyx campanulate, as long or slightly longer than wide: brts. grooved or angled.

B. Fls. axillary along the brs.

C. Style longer than keel, spirally incurved: fls. 2-2.5 cm. long, usually solitary.

Sect. 1. *SAROTHAMNUS* Benth.

1. *C. scoparius*

CC. Style shorter than keel, slightly curved: fls. smaller.

D. Habit procumbent; leafy shrubs: fls. yellow.

E. Lvs. simple .....Sect. 2. *COROTHAMNUS* Nym.

EE. Lvs. 3-foliate .....Sect. 3. *TRIANTHOCYTISUS* Griseb.

F. Lfts. less than 1 cm. long, like the calyx and pod villous. (Lvs. simple in *X*

*C. Beanii*.) .....3. *C. Ardoinii*

FF. Lfts. usually more than 1 cm. long, like the brts. and calyx sparingly

appressed-pubescent .....4. *C. emeriflorus*

DD. Habit upright; almost leafless shrubs; lvs. often partly 1-foliate.

Sect. 4. *SPARTOTHAMNUS* Webb & Berth.

E. Fls. white: brts. slender, arching .....5. *C. multiflorus*

EE. Fls. yellow: brts. short, stiff .....6. *C. purgans*

BB. Fls. in terminal racemes .....Sect. 5. *PHYLLOCYTISUS* Koch.

C. Lvs. of flowering brts. sessile; glabrous shrub, racemes 4-12-fld. ....7. *C. sessilifolius*

CC. Lvs. all petioled: brts., lfts. beneath, calyx and pod appressed-pubescent.

8. *C. nigricans*

AA. Calyx tubular, much longer than wide: lvs. always 3-foliate: brts. terete, not striped.

Sect. 6. *TUBOCYTISUS* DC.

B. Fls. yellow or white: pubescent shrubs.

C. Fls. in terminal heads with bracts at base, appearing in summer, only occasionally

producing axillary fls. in spring; standard silky-pubescent outside.

D. Fls. yellow.

E. Brts. and petioles villous .....9. *C. supinus*

EE. Brts. and petioles appressed-pubescent .....10. *C. austriacus*

DD. Fls. white or whitish .....11. *C. albus*

- cc. Fls. axillary along the brs.; standard glabrous or slightly pubescent outside.  
 d. Brts. and calyx with more or less spreading hairs; lvs. pubescent above.  
 e. Pubescence of brts. of villous spreading hairs: pod villous.....12. *C. hirsutus*  
 ee. Pubescence of brts. of partly appressed and partly spreading hairs: pods  
 appressed silky-villous .....13. *C. elongatus*  
 dd. Brts., calyx and pod appressed-silky: lfts. glabrous above.....14. *C. ratisbonensis*  
 BB. Fls. purple, rarely white: glabrescent procumbent shrub.....15. *C. purpureus*

1. *C. scoparius* (L.) Lk. SCOTCH BROOM. Upright shrub with slender green brs. pubescent when young; lfts. obovate to oblanceolate, 8-15 mm. long, sparingly appressed-pubescent, the upper lvs. often reduced to 1 lft.: fls. usually 1-2, bright yellow; standard orbicular, 2 cm. across; pedicels and calyx nearly glabrous: pod narrow-oblong, 3.5-5 cm. long, glabrescent, villous on the margins. Fl.v-vi. R.I.22:2082(c). F.D.23:2294(c). G.25:169. M.D. 1916:t.64(h);1917:t.7(h). (*Sarothamnus* s. Wimm., *Spartium scoparium* L.) C. and S. Eu. Long cult. and occasionally naturalized in the E. States, also on Vancouver. Zone V. Showy with its large yellow fls.—*C. s. albus* G. Don, var. Fls. yellowish white or nearly white. Orig. before 1830.—*C. s. sulphureus* Goldring. "MOONLIGHT BROOM." Dwarfier and more compact, with pale sulphur-yellow fls. Gn.61:299;65:375. G.M.44:580. (*C. s. f. ochroleucus* Zab., *C. s. pallidus* Hort.)—*C. s. Andreanus* (Puissant) Dipp., var. Fls. yellow with crimson wings. R.H.1886:373,t.(c). Gn.42:188,t.(c). Gt.40:t.1342(c). R.B.19:129,t.(c). Intr. about 1870.—*C. s. plenus* Rehd., f. Fls. double. (*C. s. var. fl. pleno* Loud.) Cult. 1838.—*C. s. prostratus* (C. Bailey) A. B. Jacks., var. With prostrate brs. or pendulous when grafted high. Gn.11:433(h). G.C.105:387(h). (*Sarothamnus* s. var. *prostratus* C. Bailey, *C. s. var. pendulus* Nichols. *C. grandiflorus* Hort., *Genista prostrata* Hort., not Lam.) *C. s. var. Andreanus* × *multiflorus*; see under No. 5.

2. *C. decumbens* (Durande) Spach. Prostrate shrub to 0.2 m.; brs. often rooting; brts. 5-angled, sparingly villous: lvs. sessile, oblong-obovate, 8-20 mm. long, pilose beneath, less so above: fls. 1-3, bright yellow, 1-1.5 cm. long: calyx sparingly pilose; standard obovate: pod 2-2.5 cm. long, pubescent, 3-4-seeded. Fl.v-vi. B.M.8230(c). L.B.718(c). M.G.50:278(h). (*Genista d. Willd.*) S. Eu. Intr. 1775. Zone V.

Closely related species: *C. procumbens* (Waldst. & Kit.) Spreng. Taller, to 80 cm.; brts., pedicels and lvs. beneath appressed-pubescent. (*C. Kitaibelii* Vis., in part.) S. E. Eu. Intr. ?—*C. diffusus* (Willd.) Vis. Ascending to 25 cm.; brts. soon glabrous: lvs. oblong-lanceolate, glabrous, ciliate when young: calyx glabrous: pod glabrous or sparingly hairy. R.I.22:2080,f.I,II(c). (*Genista humifusa* Jacq., not L.) S. Eu. Intr. ?

3. *C. Ardoinii* Fournier. Low decumbent shrub, to 0.2 m. high; brts. slightly grooved, villous; lfts. obovate to oblong, about 8 mm. long, villous; petioles about 6 mm. long: fls. 1-3, golden-yellow; calyx villous; standard suborbicular: pod 2-2.5 cm. long, villous, usually 2-seeded. Fl.v-v. Mogridge, Fl. Mentone, t.58(c). S.H.2:f.28h,30a-e. S. E. France. Intr. 1866. Zone VII.

*C. A. × multiflorus* = *C. kewensis* Bean. Procumbent, to 0.3 m. high; lvs. sometimes simple; lfts. linear-oblong, pubescent: fls. creamy white or pale sulphur-yellow. Fl.v. Gn.73:228(h);86:244(h);87:93(h). G.W.16:610. G.M.51:355. Orig. 1891.—*C. A. × purgans* = *C. Bealii* Nichols. Semi-prostrate, to 0.4 m. high; brts. pubescent when young; lvs. simple, linear, about 1 cm. long, pubescent fls. 1-3, deep golden yellow. B.S.1:457. G.30:207. Orig. 1900. Zone V.

4. *C. emeriflorus* Reichb. Spreading low shrub, rarely to 1 m.; brs. angular, appressed-pubescent; lfts. elliptic-oblong or obovate, 1-2 cm. long, obtuse, sparingly hairy beneath; petiole 1-2.5 cm. long: fls. 1-4, yellow, about 1.2 cm. long; pedicels about as long, pubescent: pod 2.5-3.5 cm. long, glabrous; seed with very small appendage. Fl.v-vi. B.M.8201(c). B.S.2:588.

(*Cytisus glabrescens* Sart., not Schrank.) Switzerl., N. Italy. Cult. 1890. Zone V.

5. *C. multiflorus* (Ait.) Sweet. WHITE SPANISH BROOM. Shrub occasionally to 3 m., with upright slender grooved brts. pubescent when young; lvs. short-petioled, 3-foliate on the lower part of the brts., simple above; lfts. oblong-obovate to linear-oblong, about 1 cm. long or less, sparingly silky-pubescent: fls. 1-3, white, about 1 cm. long, profusely produced; pedicels about 1 cm. long: pod about 2.5 cm. long, appressed-pubescent, 2-6-seeded. Fl.v-vi. Gn.64:251(h);89:311(h). G.W.5:111. G.M.49:579(h). (*C. albus* (Lam.) Link, not Hacq., *C. Linkii* Janka, *Spartium multiflorum* Ait.) Spain, N. Afr. Intr. 1752. Zone (V).—*C. m. incarnatus* (Sweet) Aschers. & Graebn. Fls. slightly blushed. L.B.1052(c).—*C. m. durus* (Simon-Louis) Aschers. & Graebn. A hardier race. (*C. albus durus* Simon-Louis.) Orig. before 1870.

*C. m.* × *purgans* = *C. praecox* Bean. Lvs. usually simple, short-stalked, oblanceolate to linear-spatulate, 8-20 mm. long, silky-pubescent: fls. 1-2, yellowish white or sulphur-yellow, about 1 cm. long, of unpleasant odor. G.C.29:41(h). Gn.69:318(h). M.G.18:265(h). Orig. about 1867. Zone VI? Very floriferous and handsome.—*C. p. albus* Th. Smith. Dwarfier and more pendulous: fls. white. Gn.75:192.—*C. p. luteus* Th. Smith. Dwarf: fls. yellow.—*C. m.* × *scoparius Andreanus* = *C. Dallimorei* Rolfe. Shrub similar to *C. scoparius*: lvs. usually 3-foliate, pubescent: fls. 1-2, about 1.5 cm. long, yellow suffused with pink, the wings crimson; calyx brown, slightly pubescent; pedicels about 6 mm. long, pubescent. B.M.8482(c). G.C.51:198. Gn.74:291. (*Cytothamnus D. Schneid.*) Orig. 1900. Zone VI.—*C. m.* × *Ardoinii*; see under No. 3

6. *C. purgans* (L.) Spach. Dense shrub to 1 m., with upright stiff grooved brs. pubescent when young: lvs. usually simple, soon falling, sessile, oblanceolate, 6-12 mm. long, silky-pubescent: fls. 1-2, yellow, about 1 cm. long, fragrant; pedicels half as long, pubescent: pod 2-2.5 cm. long, pubescent, 3-5-seeded. Fl.v-vii. B.M.7618(c). L.B.1117(c). Gn.86:243(h). (*Genista p.* L.) Spain, S. France, N. Afr. Cult. 1750. Zone (V).

*C. p.* × *Ardoinii*; see under No. 3.—*C. p.* × *multiflorus*; see under No. 5.

7. *C. sessilifolius* L. Upright shrub to 2 m., glabrous; brts. angled: lvs. nearly sessile on flowering brts., with petioles up to 2 cm. long on leafy shoots; lfts. obovate or elliptic to oblong-obovate, 8-20 mm. long, usually rounded at apex, bright green: fls. bright yellow, about 1.2 cm. long, short-stalked in 4-12-fld. racemes terminal on short brts.: pod about 3 cm. long, glabrous. Fl.vi. B.M.255(c). R.I.22:2072(c). F.D.23:2309(c). B.S.1:463. (*Lembotropis s. K. Koch.*) S. Eu., N. Afr. Cult. 1600. Zone VI.—*C. s. leucanthus* Dipp., f. Fls. yellowish white. (*C. Lobelii* Tausch.) Cult. 1864.

8. *C. nigricans* L. Upright shrub to 2 m.; brts. terete, appressed-pubescent; lfts. obovate to oblong-obovate, 1-3 cm. long, acutish, slightly appressed-pubescent beneath; petioles 6-20 mm. long: fls. yellow, about 1 cm. long, slender-stalked, in terminal racemes 8-30 cm. long; pedicels 4-8 mm. long, pubescent: pod about 3 cm. long, pubescent. Fl.vi-vii. B.M.8479(c). R.I.22:2071(c). F.D.23:2308(c). B.S.1:460. C. and S. Eu. Intr. 1730. Zone V.—*C. n. elongatus* Willd., var. Blooming again in fall at the end of the fruiting brs. R.H.1891:149. (*C. n. longespiciatus* Hort., *C. n. Carlieri* Hort.) Cult. 1800.

9. *C. supinus* L. Shrub to 1 m., upright or sometimes procumbent; brts. terete, villous: lfts. obovate or elliptic to oblong-obovate, 1.5-2.5 cm. long, sparingly appressed-pubescent above, villous beneath; petioles about 1 cm. long, villous: fls. yellow, brownish when fading, 2-2.5 cm. long, in terminal heads with bracts at base; occasionally developing in spring axillary fls.:

standard silky outside; pod about 3 cm. long, villous. Fl.vi-viii. R.I.22:2075(c). F.D.23:2313(c). (*C. capitatus* Scop.) C. and S. Eu. Intr. 1755. Zone V.

10. *C. austriacus* L. Shrub to 1 m., similar to the preceding; brts., petioles and lvs. appressed-silky or sometimes brts. with slightly spreading hairs: lfts. elliptic-oblong to lanceolate, 1.5-3 cm. long, appressed-pubescent on both sides: fls. bright yellow, always capitate; standard silky outside; calyx villous: pod appressed-pubescent. Fl.vii-viii. R.I.22:2078,f.1-2(c). F.D.23:12 var. Slenderer shrub: lfts. smaller, linear-oblong, slightly pubescent above: (c). S. E. Eu., Cauc. Intr. 1741. Zone V.—*C. a. Heuffèlii* (Griseb.) Schneid., pod more silky. R.I.22:2078,f.3(c). (*C. H.* Griseb., *C. supinus* var. *H. Briq.*) Hungary. Cult. 1918.—*C. a. virescens* Neilr., var. Upright; brts. with appressed hairs above, spreading toward base: lfts. obovate to oblanceolate: pod villous. S. E. Eur. Cult. 1925.

11. *C. albus* Hacq. Spreading shrub to 0.3 m.; brts. with appressed or slightly spreading pubescence: lfts. obovate to oblong, 1-2 cm. long, acutish or obtusish, sparingly pubescent above or nearly glabrous, appressed-pubescent beneath: fls. white or yellowish white, nearly 2 cm. long, 3-10 in a terminal head; calyx appressed-villous; standard silky outside: pod 2-2.5 cm. long, appressed-villous. Fl.vi-vii(-x). B.M.1438(c). R.I.22:2078, f.4(c). (*C. leucanthus* Waldst. & Kit., *C. leucanthus* var. *schipkaensis* Dipp.) S. E. Eu. Intr. 1806. Zone V.—*C. a. pallidus* (DC.) Rehd., var. Fls. pale yellow. (*C. leucanthus* var. *p.* DC.)

Closely related species: *C. Rochèlii* Griseb. & Schenk. Shrub to 1 m.; brts., calyx, and pod villous: lfts. oblong-lanceolate, to 3 cm. long: fls. pale yellow with brownish spots; standard pubescent outside. (*C. leucanthus* var. *obscurus* Roch.) Hungary. Cult. 1878.

12. *C. hirsutus* L. Shrub to 0.6 m.; brts. villous: lfts. obovate or elliptic to obovate-oblong, 1-2 cm. long, acute to obtuse, villous beneath, slightly so or nearly glabrous above: fls. yellow, about 2.5 cm. long, in axillary clusters of 2-4; standard stained with brown in centre; calyx villous: pod about 3 cm. long, villous. Fl.v-vi. B.M.6819(c, but lfts. not serrate). F.D.23:2315 (c). (*C. falcatus* Waldst. & Kit.) S. E. Eu. Cult. 1739. Zone V.—*C. h. hirsutissimus* (K. Koch) Boiss., var. More vigorous upright form; brts. more densely villous; lfts. more pubescent above. (*C. h.* K. Koch.) S. E. Eu.

*C. h.* × *purpureus*; see under No. 15.—*C. h.* × *ratisbonensis*; see under No. 13.

Closely related species: *C. ciliatus* Wahl. Lfts. nearly glabrous or glabrous above; pods pubescent only at the sutures. S. E. Eu. Intr. 1817.

13. *C. elongatus* Waldst. & Kit. Shrub to 1.5 m.; brts. with a more appressed tomentum mixed with longer spreading hairs: lfts. obovate to oblong-elliptic, to 2.5 cm. long, more or less appressed-pubescent on both sides: fls. 2-5; standard with reddish brown marks; calyx mostly with spreading and fewer appressed hairs: pod appressed silky-villous. R.I.22:2073(c). B.R.1191(c). (*C. ratisbonensis* var. *e.* K. Koch, *C. hirsutus* subsp. *e.* Briq., *C. multiflorus* Lindl.) C. to S. E. Eu. Intr. 1804. Zone V.—Hybrids between *C. hirsutus* and *C. ratisbonensis* = *C. cæsius* Beck, are very difficult to distinguish from this species.

Closely related species: *C. leiocarpus* Kern. Ascending shrub to 0.3 m.; brts. glabrescent: lfts. elliptic or obovate, glabrous above, glabrescent beneath; calyx glabrescent: pod glabrous. Hungary. Cult. 1902.

14. *C. ratisbonensis* Schaeff. Shrub to 2 m.; brts. appressed silky-pubescent: lfts. oblong-obovate to elliptic-oblong, 1.5-3.5 cm. long, glabrous above, appressed-silky beneath, ciliate: fls. 2-4, bright yellow, 2.5-3 cm. long; calyx

appressed-silky: pod densely appressed-pubescent. Fl.v-vr. R.I.22:2074.f. 1-3(c). F.D.23:2314(c). (*C. hirsutus* subsp. *r.* Briq.) *C. Eu.* to *W. Siberia* and *Caucasus*. Intr. about 1800. Zone V.—*C. r. biflorus* (L'Hérit.) Zab., f. Of more upright habit; lfts. lanceolate-oblong to lanceolate: fls. paler: fr. more silky. B.R.308(c). S. E. *Eu.* Intr. 1760. Zone V.

*C. r. × hirsutus*; see under No. 13.

15. *C. purpureus* Scop. Procumbent shrub with ascending brs., to 0.5 m.; glabrous or nearly so: lfts. obovate-elliptic to obovate-oblong, 6-25 mm. long, dark green above, often slightly ciliate; petioles to 2.5 cm. long: fls. 1-3, about 2 cm. long, purple; calyx sparingly pubescent: pod 2.5-3.5 cm. long, glabrous. Fl.v-vr. R.I.22:2072(c). F.D.23:2316(c). B.M.1176(c). G.C. 36:217;50:163. Gn.21:421. B.S.1:462,t(h). S. *Austria*, N. *Italy*. Intr. 1792. Zone V.—*C. p. albus* Kirchn., f. Fls. white. Gn.21:421. G.6:433. Orig. before 1838.—*C. p. albo-cárneus* Kirchn., f. Fls. pale pink. S.L.145(h). (*C. p. roseus* Hort., *C. p. carneus* Hort.) Orig. before 1840.—*C. p. atropurpureus* Jaeg., var. Fls. dark purple.—*C. p. erectus* Kirchn., f. Habit upright. Orig. before 1840.—*C. p. elongatus* André. With long and slender brts. and violet-purple fls. (*C. p. f. pendulus* Dipp.) Sometimes grafted high on *Laburnum*. Cult. 1872.

*C. p. × hirsutus* = *C. versicolor* Dipp. Upright or spreading shrub to 1 m.; similar to *C. purpureus*; brts. sparingly villous; lfts. glabrous above, sparingly villous beneath; petioles 1-1.5 cm. long, sparingly villous: fls. light purple and yellowish, usually the standard whitish, keel light purple and wings yellowish; calyx villous: pod more or less villous. S.L.146(h). Orig. before 1860. Zone V.—*C. v. Hillieri* (Hillier) Rehd., f. Fls. yellow, flushed pale bronze, changing to buff-pink. (? *C. v. × hirsutus hirsutissimus*.)

19. *ULEX* L. GORSE (FURZE). Spiny dense shrubs; brts. grooved, ending like all their ramifications in sharp spines: lvs. reduced to a spiny petiole, only on seedlings and occasionally on vigorous shoots developed and 3-foliate; stipules wanting: fls. 1-2, axillary, often forming terminal racemes, yellow; calyx 2-lipped to base, membranous, colored, persistent; standard ovate, wings and keel obtuse; stigma capitate: pod small, dehiscent, few-seeded; seed with appendage. (Ancient Latin name.) About 20 species in *W. Eu.*

A. Petals  $1\frac{1}{2}$  as long as calyx; calyx villous: fls. in spring.....1. *U. europæus*

AA. Petals about as long or little longer than calyx; calyx minutely silky; fls. in autumn.

B. Standard about 1.2 cm. long; wing longer than keel; spines stout.....2. *U. Gallii*

BB. Standard 8-10 mm. long; wing shorter than keel; spines short and thin....3. *U. nanus*

1. *U. europæus* L. Dense, much-branched rigid and very spiny shrub, to 1, rarely to 2 m. tall; axillary brts. stout with the spiny tip 2-3 cm. long: young brts. hairy; petioles linear lanceolate, 6-12 mm. long: fls. solitary, golden-yellow; pedicels hairy, about 6 mm. long; bracts ovate; standard 1.5 cm. or more long: pod about 1.5 cm. long, exceeding the calyx. Fl.iv-vi, sometimes again in autumn. R.I.22:2068(c). S.E.3:t.323(c). G.H.t.123(c). G.W.17:286. S.L.371(h). *C.* and *W. Eu.*; naturalized in the middle Atlantic States and on Vancouver. Long cult. Zone VI.—*U. e. plenus* Schneid., f. With double fls. Gn.63:441,89:172(h). G.M.52:393. (*U. e. var. fl. pleno* Loud.) Orig. about 1828.—*U. e. strictus* (Mackay) Webb, var. Of upright columnar habit; fls. but sparingly. (*U. fastigiatus* Hort., *U. hibernicus* Hort.) Intr. about 1815.

2. *U. Gallii* Planch. (? *U. europæus × nanus*). Shrub to 0.5 m., similar to the preceding; spiny tip of axillary brts. not exceeding 1.5 cm.; brts. hairy: fls. bright yellow; calyx minutely silky; wings curved, longer than

keel: pod about 1 cm., scarcely exerted. Fl.viii-ix. F.S.5:441(h). Ann. Sci. Nat. III.11,t.9. W. Eu. Intr. after 1850. Zone VII.

3. *U. nanus* Symons. Dwarf shrub, sometimes procumbent, to 0.6 m. tall; spiny tip of lateral brts. usually not more than 5 mm. long; brts. hairy, with thin and very dense ramifications: fls. golden-yellow; wings straight and shorter than keel; calyx puberulous: pod about 1 cm. long, enclosed in the calyx. Fl.viii-ix. R.I.22:2068(c). S.E.3:t.325. B.S.2:610. W. Eu. Cult. 1789. Zone VII.

Related species: *U. parviflorus* Pourr. To 1 m.; brts. nearly glabrous, axillary spines often simple, straight: fls. orange-yellow; standard 5-8 mm. long. R.I.22:t.2068(c). S.H.2:f.351. S. W. Eu. Cult. 1904. Zone VII.—*U. p. provincialis* (Lois.) Aschers. & Graebn., prol., is a slenderer form (*U. p. Lois.*).

Tribe 4. TRIFOLIÆ TAUB. Lvs. 3-foliolate; lfts. denticulate: stamens all connate and the upper stamen partly or quite free; petals of keel free or slightly connate on back: pod usually dehiscent.

20. *ONONIS* L. Herbs or deciduous shrubs, pubescent and often glandular: lvs. 3-foliolate, rarely pinnate; lfts. denticulate; stipules adnate to petiole, conspicuous: fls. purple to white or yellow, axillary, 1-3, often racemose or paniculate at end of brts.; calyx deeply 5-parted; standard large, suborbicular; keel usually rostrate, incurved; stamens all connate; ovary stipitate, 2-many-ovuled; style incurved with capitate or oblique stigma; pod usually swollen. (Ancient Greek name.) More than 70 species, chiefly Mediterranean, extending to N. Eu. and to the Canary Isls.

*O. fruticosa* L. Shrub to 0.6 m.; brts. soon glabrous: lfts. sessile, oblong-ovate to oblanceolate, to 2.5 cm. long, glabrous, grayish green; stipules 2-4-toothed: fls. light rose or whitish with red veins, 1.5-2 cm. long, 2-3 on slender peduncles forming glandular-pubescent terminal panicles; calyx glandular-pubescent, reddish; pod 2-2.5 cm. long, hairy. Fl.vi-viii. R.I.22:t.53(c). B.M. 317(c). G.C.47:420. S.L.241(h). S. Eu., N. Afr. Intr. before 1680. Zone VI.

The following species differ in their orbicular lfts., the middle one distinctly stalked: *O. aragonensis* Asso. Shrub to 0.3 m.; lfts. about 1 cm. long, glabrous: fls. yellow, about 1 cm. long, short-stalked, 1-2 axillary in terminal racemes 6-14 cm. long; pod about 6 mm. long, glandular-hairy. B.S.2:108. Spain, Algeria. Intr. 1816. Zone VII?—*O. rotundifolia* L. Subshrub to 0.5 m.; brts. glandular-villous: lfts. 1-3.5 cm. long, slightly glandular-villous: fls. bright rose, about 2 cm. long, 2-4 in axillary peduncled clusters forming terminal leafy panicles: pod to 3 cm. long, very hairy. R.I.22:t.54(c). F.D.23:t.2330(c). B.M. 335(c). S. Eu. Cult. 1600. Zone V.

21. *MEDICAGO* L. Herbs or rarely deciduous shrubs: lvs. 3-foliolate; lfts. usually denticulate; stipules adnate to petiole: fls. yellow or violet, in axillary heads or racemes; calyx short, with nearly equal teeth; standard obovate or oblong; wings longer than the obtuse keel; ovary sessile or short-stipitate; stigma terminal, oblique: pod spirally twisted or curved, indehiscent, several-, rarely 1-seeded. (From the country Media.) About 50 species in C. and S. Eu., W. Asia and Afr.

*M. cretacea* Bieb. Ascending subshrub to 0.25 m.; brts. sparingly appressed-pubescent: lfts. broad-obovate, scarcely more than 8 mm. long, rounded and mucronate at apex, entire or nearly so, pubescent on both sides: fls. about 7 mm. long, yellow, in many-fld. subcapitate racemes on peduncles shorter than the lvs.; calyx villous: pod falcate, compressed, to 1 cm. long, appressed-pubescent or glabrescent. Fl.v-vi. Marschall von Bieberstein, Cent. Pl. Ross. t.76. S.L.236(h). Crimea. Cult. 1908. Zone VI?

Tribe 5. *LOTEAE* TAUB. Lvs. pinnate or digitate; lfts. entire: filaments all or only 5 dilated at apex; otherwise like the preceding tribe.

22. **ANTHYLLIS** L. Herbs or evergreen or deciduous shrubs: lvs. 3-foliate or odd-pinnate, rarely 1-foliate; stipules wanting or minute: fls. yellow, white or purple, in axillary heads or clusters; calyx tubular, often inflated after anthesis, with nearly equal teeth, or the 2 upper ones longer and partly connate; standard ovate; wings ovate, longer than the obtuse or apiculate keel, usually adnate to the staminal tube; stamens at first all connate, the upper stamens becoming partly or wholly free; ovary usually stipitate; stigma terminal: pod ovate to linear, enclosed in the calyx or slightly exserted, 1 or few-seeded, indehiscent or tardily 2-valved. (Ancient Greek name.) More than 20 species in the Mediterr. region.

**A. Hermánniae** L. Deciduous densely branched shrub, to 0.5 m., with tortuous spinescent brs. pubescent when young: lfts. usually 1, oblanceolate, 1-2.5 cm. long, obtuse, silky-pubescent on both sides: fls. orange-yellow, about 8 mm. long, 3-5 in axillary short-stalked clusters; calyx appressed-pubescent: pod oblong, glabrous, 5 mm. long. Fl.vi-vii. B.M.2576(c). S.F. t.683(c). Corsica to Asia Minor. Intr. about 1700. Zone VII. Low shrub suited for sunny rockeries.—**A. H. Aspálathi** Rouy, var. Less pubescent, more spiny; infl. 1-3-fld. (*Aspalathus cretica* L.) Cult. 1910.

23. **DORYCNIUM** Adans. Herbs or subshrubs: lvs. 3-foliate or apparently digitate; the stipules leaf-like and sometimes not different from the lfts.; lfts. entire: fls. white or pink, small, in axillary peduncled umbels or heads, sometimes crowded at end of brts.; calyx with 5 subequal teeth or slightly 2-lipped; standard oblong-ovate; wings oblong-obovate, connate at apex; keel obtusish, incurved; upper stamen free; ovary sessile, 2-many-ovuled; style incurved with capitate stigma: pod oblong to linear, terete, dehiscent. (Ancient Greek name of a poisonous plant.) About 12 species in the Mediterr. region and on the Canary Isls.

**D. suffruticosum** Vill. Ascending subshrub, to 0.4 m.; stems slender, appressed pubescent when young: lvs. sessile; lfts. including the similar stipules 5, oblanceolate, those on upper part of the brts. linear, 8-20 mm. long, silky-pubescent, grayish green: fls. pinkish white, about 6 mm. long, subsessile, in 10-12-fld. heads on axillary slender stalks 3-6 cm. long at end of stems; calyx silky pubescent: pod subglobose, 1-seeded, about 3 mm. long. Fl.vi-rx. R.I.22:t.137,f.4,5(c). F.D.23:t.2409(c). S. Eu. Intr. before 1650. Zone V.—**D. s. sericeum** (Neir.) Beck, var. Lower, procumbent at base: lfts. broader, the upper ones not different: pedicels more than ½ as long as calyx; standard 5-7 mm. long. (*D. germanicum* Rouy.) Switzerl. to Balkan Pen.

Related species: **D. réctum** (L.) Ser. Subshrub to 1 m., villous or glabrescent: lfts. obovate, 1.5-2 cm. long; petiole to 1 cm. long; stipules about as long: standard about 4-5 mm. long; pod cylindric, glabrous. Mediterr. reg. Cult. 1800.—**D. hirsútum** (L.) Ser. Stems hirsute; lfts. obovate to oblong, 2-2.5 cm. long, hirsute beneath; stipules elliptic-ovate, much longer than the very short petiole: fls. white, about 1.5 cm. long, in 6-10-fld. heads; peduncle hirsute: pod about 8 mm. long, usually 4-seeded. R.I.22:t.134,f.1-3(c). S.F.8:t.759(c). S. Eu. Intr. 1680. Zone V.

Tribe 6. **GALEGEAE** Taub. Lvs. 3-foliate or pinnate; the upper stamen usually free; filaments not dilated at apex; otherwise like the preceding tribe.

24. **INDIGÓFERA** L. Deciduous shrubs, subshrubs or herbs, more or less clothed with 2-armed appressed hairs and sometimes also with simple hairs: lvs. usually odd-pinnate, rarely 3-foliate or 1-foliate; lfts. usually opposite, short-petioluled, entire, sometimes stipellate; stipules usually small,

subulate, adnate at base to petiole: fls. usually pink to purple, in axillary racemes; bracts caducous; calyx small, oblique, with 5 nearly equal teeth or the lowest one longer; standard orbicular to oblong; wings oblong, slightly adhering to keel which has a swelling or spur on either side; ovary sessile or nearly so; anthers with apiculate connective: pod subglobose to linear-oblong, terete or angular, rarely compressed, dehiscent, inside with thin partitions. ("Indigo-bearing"; some species yield indigo.) About 300 species in trop. and subtrop. regions of both hemispheres.—Several species are very ornamental shrubs; even if killed back in colder climates to the ground, young shoots springing from the base flower and fruit the same season.

## A. Lfts. 5-13.

## B. Lfts. glabrous above.

C. Lfts. elliptic-ovate to lance-ovate, acute to obtuse.....1. *I. incarnata*CC. Lfts. broad-oval to oblong, rounded or emarginate at apex.....2. *I. hebeptala*

## BB. Lfts. pubescent on both sides.

C. Fls. 1.5-2 cm. long; peduncle longer than petiole.....3. *I. Kirilowi*

CC. Fls. 6-8 mm. long; keel and wings caducous.

D. Peduncle about as long as petiole.....4. *I. Potaninii*DD. Peduncle much shorter than petiole.....5. *I. amblyantha*

## AA. Lfts. 13-27.

B. Lfts. 13-21, 1-1.5 cm. long: racemes upright.....6. *I. Gerardiana*BB. Lfts. 21-27, 2-3.5 cm. long: racemes pendulous.....7. *I. pendula*

1. *I. incarnata* (Willd.) Nakai. Shrub to 0.5 m.; brts. reddish brown, terete, glabrous: lfts. 7-13, elliptic to ovate-lanceolate, 2.5-7 cm. long, acutish or obtuse, mucronate, dark green above, pale beneath and sparingly appressed-pubescent: fls. pink, 1.5-2 cm. long, in slender racemes with the peduncle 10-20 cm. long; peduncle much longer than petiole; pedicels about 6 mm. long; calyx glabrous, with triangular lobes; standard oblong, white, pale crimson toward base, wings pink: pod glabrous. Fl.vii-viii. B.M.5063(c). B.R.32:22(c). P.M.16:290(c). (*I. decora* Lindl.) China, Japan. Intr. 1846. Zone VII?; usually killed back in winter.—*I. i. alba* (Sarg.) Rehd., f. Fls. white. G.F.7:375. B.C.3:1645. Intr. about 1878. Zone (V).

Related species: *I. Fortunei* Craib. Lvs. oval or ovate to broad-oblong, 2-4 cm. long, reticulate beneath and sparingly appressed-pubescent, finally nearly glabrous: fls. to 12 mm. long, white; anthers pilose at apex. (*I. reticulata* Koehne, not Franch., *I. venulosa* Hemsl., not Champ.) China. Intr. before 1890. Zone VI?

2. *I. hebeptala* Benth. Shrub to 1 m. or taller; stems pubescent when young, soon glabrous: lfts. 7-9(5-11), broad-ovate to oblong, 2.5-6 cm. long, rounded or emarginate at apex, sparingly appressed-pubescent beneath: fls. 1-1.5 cm. long, in rather dense racemes 8-20 cm. long, on the upper part of the shoot; peduncle about as long as petiole; standard crimson, pubescent outside, wings and keel rose-colored; calyx with short triangular teeth, pilose: pod 3-5 cm. long, linear-oblong, 8-10-seeded. Fl.viii-ix. B.M.8208(c). I.T. 6:t.219. M.O.t.11. Himal. Cult. 1881. Zone VII.

3. *I. Kirilowi* Maxim. Shrub to 1 m. or taller; brts. slightly angular, slightly pubescent when young, soon glabrous: lfts. 7-11, suborbicular to obovate or elliptic, 1-3 cm. long, mucronate, broad-cuneate or rounded at base, rounded at apex, bright green above, sparingly appressed-pubescent on both sides: fls. rose-colored, about 2 cm. long, in rather dense racemes to 12 cm. long, about as long as leaf; peduncle about twice as long as petiole; calyx 3 mm. long, with unequal lanceolate teeth, slightly pubescent: pod linear-oblong, 3-5.5 cm. long. Fl.vi. B.M.8580(c). B.C.3:1646. M.G.27:271(h). N. China, Korea. Intr. 1899. Zone IV.—*I. K. coreana* Craib, var. Racemes nearly twice as long as lvs.; calyx 4 mm. long, with narrower teeth. Korea. Intr. ?

4. *I. Potaninii* Craib. Upright shrub to 1.5 m. or taller; brts. densely appressed-pubescent at first, soon glabrescent: lfts. 5-9, elliptic-oblong to oblong or obovate-oblong, 1-3 cm. long, rounded and mucronate at apex, cuneate or broadly cuneate at base, grayish green beneath, appressed-pubescent; stipules minute; petiole 1.5-2.5 cm. long: fls. lilac-pink, about 8 mm. long, in racemes 5-12 cm. long; calyx short, the lowest tooth somewhat longer than tube; pedicels 1-2 mm. long: pod up to 3.5 cm. long, glabrate. Fl.vi-vii. N. W. China. Cult. 1925. Zone V?

Related species: *I. Souliei* Craib. Lfts. oval to elliptic-oblong, 1-2 cm. long: fls. nearly 1 cm. long, in stalked racemes to 15 cm. long; pedicels 3-4 mm. long: pod about 2 cm. long, glabrous. W. China. Intr. 1910. Zone VI?

5. *I. amblyantha* Craib. Shrub to 2 m.; brts. angled, appressed-pubescent with whitish hairs: lfts. 7-11, elliptic to oblong-elliptic, 1-3.5 cm. long, rounded and mucronate at apex, broad-cuneate, bright green above, glaucescent beneath, appressed-pubescent; petiole 3-4 cm. long: fls. pale lilac-purple, 6-7 mm. long, in dense racemes 6-10 cm. long, shorter than lf.; standard obovate; calyx appressed-pubescent: pod linear-oblong, 3.5-5 cm. long, pubescent. Fl.vii-x. China. Intr. 1908. Zone V.—*I. a. Purdomii* Rehd., var. Fls. larger, lilac-purple, standard 8 mm. long, 6 mm. wide, flat. N. China. Intr. 1911.

Related species: *I. pseudotinctoria* Matsum. Shrub to 2 m.: lfts. 5-11, elliptic-obovate or elliptic to elliptic-oblong, 6-25 mm. long, obtuse and mucronate, glaucescent beneath; petiole 1-3 cm. long: fls. pink or light red, in dense racemes 4-12 cm. long; standard oblong-obovate, 5-6 mm. long; pod 2-3.5 cm. long, slightly appressed-pubescent. Fl.vii-x. Japan, E. and C. China. Intr. 1908. Zone V.

6. *I. Gerardi* Bak. Much-branched shrub to 1 m. or taller; brts. slightly ribbed, appressed-pubescent: lfts. 13-21, oval or obovate to oblong-oblancoate, 1-1.5 cm. long, rounded or emarginate and mucronulate at apex, appressed-pubescent on both sides: fls. about 1 cm. long, rosy-purple, short-stalked, in rather dense racemes 7-15 cm. long; teeth of calyx equal, lanceolate; standard pubescent outside: pod deflexed at maturity, 3-5 cm. long, 6-10 seeded. Fl.vii-ix. B.R.28:57(c). (*I. dosua* Lindl., not D. Don.) Himal. Cult. 1840. Zone VI?; usually killed back in winter.

7. *I. pendula* Franch. Shrub to 3 m.; young brts. appressed-puberulous and lenticellate: lvs. to 25 cm. long; lfts. 21-27, elliptic-oblong, 2-3.5 cm. long, rounded at ends, punctulate above, appressed-pubescent beneath, thin: fls. rosy-purple, 1.3 cm. long, in pendulous peduncled racemes to 45 cm. long; calyx appressed-pubescent; standard elliptic-oblong, silky outside: pod 5 cm. long, sparingly strigillose. Fl.viii-ix. B.M.8745(c). W. China. Intr. 1914. Zone VII?; killed back in winter.

Related species: *I. stachyodes* Lindl. Brts., lf.-rachis and racemes brownish villous: lfts. 25-45, oblong, 1-2 cm. long, mucronate, densely pubescent on both sides: racemes upright, dense, 10-25 cm. long, with long subulate pilose bracts; corolla about 1 cm. long, purple: pod 2.5-3 cm. long, villous. B.R.29:14(c). E. Himal., W. China. Cult. 1840. Zone VII?

25. **AMORPHA** L. Deciduous shrubs or subshrubs, rarely herbs: lvs. odd-pinnate; lfts. small, entire; stipules subulate, caducous: fls. small, bluish violet or whitish or dark purple, in dense terminal often paniced spikes; bracts subulate, caducous; calyx short-campanulate, with 5 equal or unequal teeth, usually gland-dotted; wings and keel wanting; ovary sessile, 2-ovuled: pod short, usually 1-seeded, indehiscent, usually gland-dotted; seed glossy. (Greek *amorphos*, deformed; alluding to the incomplete corolla.) About 15 closely related species in N. Am., s. to Mex.

- A. Lowest pair of lfts. close to the stem: low shrubs, usually less than 1 m.  
 B. Plant pubescent.  
 c. Calyx-lobes subulate-lanceolate, subequal, nearly as long as tube....1. *A. canescens*  
 cc. Calyx-lobes about half as long as tube, the upper ones triangular....2. *A. herbacea*  
 BB. Plant glabrous or nearly so: calyx-lobes subequal, about half as long as tube.3. *A. nana*  
 AA. Lowest pair of lfts. 1 cm. or more from the stem: taller shrubs, 1-3 m.  
 B. Pod nearly straight on back: plant glabrous or nearly so: lfts. 9-19: calyx-lobes very short, rounded .....4. *A. glabra*  
 BB. Pod curved on back: plant more or less pubescent: at least the lower calyx-lobes acute.  
 5. *A. fruticosa*

1. *A. canescens* Nutt. LEAD-PLANT. Subshrub to 1 m.; brts. angled, densely grayish pubescent: lvs. spreading, curved, 5-12 cm. long; lfts. 15-45, elliptic to oblong-lanceolate, 7-20 mm. long, acute or obtuse, rounded at base, densely grayish villous on both sides: fls. blue, in dense, short-peduncled clustered spikes 3-15 cm. long; calyx villous; standard cuneate-obovate, 5 mm. long; pod with straight back, 4 mm. long, villous. Fl.vi-vii. B.M. 6618(c). M.M.5:t.6(c). B.B.2:366. Mich. and Sask. to Ind., Tex. and N. Mex. Intr. 1812. Zone II.—*A. c. glabrata* Gray, var. Brts. and lvs. sparsely pubescent or glabrate. Mo. to Okl. and Tex. Cult. 1883. Zone V.

2. *A. herbacea* Walt. Shrub to 1.5 m.; brts. grooved, finely grayish pubescent: lvs. spreading, 4-16 cm. long; lfts. 11-37, elliptic to oblong, 1-2.5 cm. long, rounded at ends, finely grayish pubescent on both sides, black-dotted and reticulate beneath: fls. white to violet-purple, in finely pubescent clustered racemes 10-30 cm. long; calyx villous, the 2 upper lobes triangular, the lower ones subulate; standard cuneate-obovate, 4-5 mm. long; pod with nearly straight back, 4-5 mm. long, puberulous, with conspicuous dark glands. Fl.vi-vii. L.B.689(c). S.H.2:f.42a-b,43b-c. (*A. pubescens* Willd., *A. pumila* Michx.) N. C. to Fla. Cult. 1820. Zone VI?

3. *A. nana* Nutt. Shrub to 1 m.; brts. glabrous: lvs. 3-10 cm. long, crowded; lfts. 13-19, elliptic to oblong, 5-1.2 cm. long, rounded or emarginate and mucronate at apex, cuneate or rounded at base, glabrous, punctate beneath: fls. purple, in usually solitary racemes, 5-10 cm. long; calyx glabrous, lobes half as long as tube; standard cuneate-obovate, 4 mm. long; pod straight on back, 5 mm. long, conspicuously glandular. Fl.v-vi. B.B.2:f.2505. Clements, Rocky Mts. Fl.t.29,f.4. S.H.2:f.42h-k,43a. (*A. microphylla* Pursh.) Man. and Sask. to Iowa and N. Mex. Intr. 1811. Zone II.

Related species: *A. brachycarpa* E. J. Palm. Shrub to 1 m.; lfts. 21-45, rounded or subcordate at base: infl. paniculate, 10-25 cm. long; fls. bluish purple; lower calyx-lobes about as long as tube. J.A.12:194-5,i.6,t.36. Mo. Intr. 1920. Zone V.

4. *A. glabra* Poir. Glabrous shrub to 2 m.; brts. purplish, sometimes slightly hairy; lvs. 7-16 cm. long; lfts. 9-19, oval to elliptic-ovate, 2-5 cm. long, rounded or emarginate at apex, rounded or subcordate at base: fls. purple, in usually clustered racemes 6-15 cm. long; calyx with ciliate undulately toothed margin; standard suborbicular, cuneate, 7 mm. long; pod nearly straight on back, 7-8 mm. long, with few small glands. Fl.v-vi. S.H. 2:f.44d,45a-b. (*A. montana* Boynt.) N. C. and Tenn. to Ga. and Ala. Cult. 1800. Zone V.

Related species: *A. cyanostachya* M. A. Curtis. Shrub to 2 m.: lfts. 11-25, oval, 1-2.5 cm. long, rounded at ends, conspicuously glandular-punctate beneath: fls. blue, in usually solitary racemes 5-15 cm. long; standard obovate; pod conspicuously gland-dotted. S.H.2:f.42s-u,43e-é,44e. (*A. glabra* Boynt., not Poir., *A. caroliniana* Rydb., not Croom.) N. C. to Fla. Cult. 1848. Zone VI?

5. *A. fruticosa* L. Shrub to 4 m.; brts. sparingly pilose, becoming glabrate: lfts. 11-25, oval or elliptic, 1.5-4 cm. long, rounded at ends, mucronate, finely pubescent or glabrate: fls. purple-blue in clustered spikes 7-15 cm.

long; calyx sparingly pilose or glabrate, its lobes much shorter than tube; standard orbicular-obovate, about 6 mm. long: pod curved, 7-9 mm. long. Fl.v-vi. B.R.427(c). B.B.2:f.2504. Conn. to Minn., s. to La. and Fla. Intr. 1724. Zone IV.—*A. f. albiflora* Sheldon, f. Fls. white.—*A. f. coerulea* Loud., var. Fls. pale blue.—*A. f. pendula* (Carr.) Dipp. Brs. pendulous or recurved. Cult. 1870.—*A. f. crispa* Kirchn., f. Lfts. with curled margin.—*A. f. humilis* (Tausch) Schneid., var. A low form often dying back to the ground. Cult. 1838.—The following are geographical vars.: *A. f. tennesseensis* (Shuttlew.) E. J. Palm., var. Lfts. 21-35, narrow-oblong, usually 1-2 cm. long, sparingly pubescent: standard 4.5 mm. long: pod nearly straight or slightly curved. J.A.12:194-5.f.20b. (*A. t.* Shuttlew.) N. C. to Fla., w. to Kans. and Tex. Cult. 1848.—*A. f. angustifolia* Pursh, var. Brts. appressed-pubescent: lfts. elliptic or obovate to oblong, narrowed at base, appressed-pubescent: pod strongly curved. B.M.2112(c, as *A. nana*); S.B.1:t.241(c). (*A. fragrans* Sweet, *A. a.* Boynton.) Wisc. to Sask. s. to Kans. and N. Mex. Cult. 1819. Zone II.—*A. f. emarginata* Pursh, var. Lfts. broader, oval or ovate, obtuse or emarginate at apex. J.A.12:195.f.20d(l). (*A. e.* Sweet.) Ill. to Ark. and Miss. Cult. 1827.

Related species: *A. croceo-lanata* Wats. Shrub to 3 m.; brts. villous: lfts. 13-23, oblong or ovate-oblong, 2.5-6 cm. long, rounded at ends, tawny tomentose at first, villous beneath at maturity: calyx villous. W.D.2:139(c), J.A.12:194-5.f.17. (*A. fruticosa* var. *c.* Mouillef.) Ky. to Fla., w. to Mo. and La. Intr. 1812. Zone V.—*A. virgata* Small. Shrub to 2 m.: lfts. 9-19, oblong-ovate to oblong, rounded at ends or slightly emarginate at apex, firm and with revolute margin at maturity, slightly pubescent beneath: calyx glabrous at maturity, lobes very short, the upper obtuse. J.A.12:194-5.f.16. Ga. to Fla. w. to Okl. and Miss. Intr. 1923. Zone V.—*A. paniculata* Torr. & Gr. Brts. tomentose: lfts. 15-19, oval to oblong, 3-8 cm. long, tomentose beneath: calyx pubescent, lobes lanceolate, half as long as tube: pod pubescent and glandular. A.J.12:194-5.f.14. Ark. to Tex. Intr. 1926. Zone V.

**26. WISTERIA** Nutt. **WISTARIA**. Deciduous twining shrubs; winter-buds subglobose or ovoid, with about 3 outer scales: lvs. alternate, odd-pinnate; lfts. petiolulate, alternate, stipellate, 9-19; stipules caducous: fls. blue to purplish or white, in pendulous racemes; calyx campanulate, shortly 5-toothed, the lower teeth often longer; standard large, reflexed, usually with 2 callosities at base; wings falcate, auriculate at base; keel obtuse, mucronate; the upper stamen free; style incurved, with terminal subglobose stigma: pod stipitate, elongated, flattened, with several seeds, usually slightly constricted between them, tardily dehiscent. (After Caspar Wistar, Prof. of Anatomy, University of Pennsylvania; 1761-1818.) Syn.: *Wisteria* Spreng., *Kraunhia* Raf., *Diplonix* Raf., *Braddeia* Adans. Nine species in N. Am. and E. Asia.—Ornamental twining shrubs planted for their flowers produced in great profusion in spring.

- a. Standard with distinct callosities at base: fls. 1.5-2.5 cm. long, in racemes on short lateral brts.
  - b. Pod velvety; pedicels 1-3 cm. long.
    - c. Lfts. 13-19, nearly glabrous at maturity.....1. *W. floribunda* cc. Lfts. 7-13.
      - d. Lfts. nearly glabrous at maturity.....2. *W. sinensis*
        - dp. Lfts. pubescent on both sides: fls. white.....3. *W. venusta*
    - bb. Pods glabrous; pedicels 6-10 mm. long: lfts. 9-13.
      - c. Racemes dense, 4-10 cm. long, glandless or slightly glandular; calyx-lobes much shorter than the broad tube.....4. *W. frutescens*
      - cc. Racemes elongated, 20-30 cm. long, glandular; calyx-lobes nearly as long as the narrow-campanulate tube .....5. *W. macrostachya*
  - aa. Standard without callosities at base and not auricled: fls. white, 1-1.3 cm. long, in axillary racemes .....6. *W. japonica*

1. *W. floribunda* (Willd.) DC. JAPANESE *W.* Tall climber, to 8 m. or more: lfts. 13-19, ovate-elliptic to ovate-oblong, 4-8 cm. long, acuminate, rounded at base, rarely broad-cuneate, appressed-pubescent when young, soon nearly glabrous: fls. violet or violet-blue, 1.5-2 cm. long, in slender racemes, 20-50 cm. long, with the fls. opening gradually from base to apex, fragrant; pedicels 1.2-2.5 cm. long, slightly pubescent; standard broad-oval, auriculate; calyx pubescent, the two upper teeth very short and broad: pod 10-15 cm. long, narrowed toward the base. Fl.v-vi, sometimes later in season with shorter racemes (*W. brachybotrys* S. & Z.). S.I.2:t.32(c). S.Z.1:t.45(c). F.S.9:t.880(c). (*W. polystachya* K. Koch, *Kraunhia* fl. Taub., *K. sinensis* var. fl. Mak., *W. grandiflora* Hort.) Japan. Intr. 1830. Zone IV. Very ornamental vine; hardier than the following species.—*W. f. variegata* (Nichols.) Rehd. & Wils., f. Lvs. variegated.—*W. f. alba* (Carr.) Rehd. & Wils., f. Fls. white; racemes to 60 cm. long. R.H.1891:421. B.S.2:682,t(h).—*W. f. rosea* (Bean) Rehd. & Wils., f. Fls. pale pink, tips of keel and wings purple. M.G.16:329(h).—*W. f. violaceo-plena* (Schneid.) Rehd. & Wils., f. With violet double fls. R.H.1887:564,t(c). F.P.1882:t.557(c). Gn.17:105. M.G.16:328.—*W. f. macrobotrys* (Neubert) Rehd. & Wils., f. Lfts. to 10 cm. long: racemes to 1 m., sometimes to 1.5 m. long. F.S.19:t.2002(c). S.Z.1:t.44(c). G.C.69:149. B.S.2:683. Gn.79:293(h);83:115(h). M.G.18:133(h). (*W. multiyuga* Vanh.)

*W. f. × sinensis* = *W. formosa* Rehd. Lfts. 9-15: racemes about 25 cm. long; fls. about 2 cm. long; pedicels 1-1.5 cm. long; lower calyx-lobes long-acuminate: pod usually 1-seeded. Orig. 1905. All fls. of one raceme open at nearly the same time.

2. *W. sinensis* (Sims) Sweet. CHINESE *W.* Lfts. 7-13, ovate-oblong to ovate-lanceolate, 5-8 cm. long, abruptly acuminate, usually broad-cuneate at base, ciliate, densely appressed-pubescent at first, glabrate at maturity: fls. blue-violet, about 2.5 cm. long, slightly fragrant, in rather dense racemes, 15-30 cm. long; pedicels 1-2 cm., rarely to 2.5 cm. long, short-villous; calyx pubescent; all fls. of one raceme opening at nearly the same time: pod 10-15 cm. long, densely velutinous, 1-3-seeded. Fl.v-vi. B.M.2083(c). B.R.650(c). L.B.773(c). B.C.5:t.119(h). (*W. chinensis* DC., *Kraunhia sinensis* Mak., *Glycine* s. Sims.) China. Intr. 1816. Zone (V). Like the preceding species an ornamental vine, but tenderer.—*W. s. alba* Lindl. Fls. white. I.H.5:t.166(c). Intr. 1846.

3. *W. venusta* Rehd. & Wils. Young brts. pubescent: lfts. 9-13, ovate or elliptic-oblong to oblong-lanceolate, 6-10 cm. long, short-acuminate, rounded to subcordate, silky-pubescent on both sides, more densely beneath: fls. white, 2-2.5 cm. long, in pendulous pubescent racemes 10-15 cm. long; pedicels villous, usually 2.5-3 cm. long; 3 lower calyx-teeth subulate; standard auricled at base; keel truncate at apex: pod 15-20 cm. long, densely velutinous, compressed. Fl.vi-vii. B.M.8811(c). (*W. brachybotrys* var. *alba* Wm. Mill.) Cult. in Japan; introd. before 1900. Zone V.—*W. v. plena* Rehd. & Wils., f. With double white fls. (*W. chinensis* var. *alba plena* Bean.) Cult. 1914.—*W. v. violacea* Rehd., f. Fls. violet. Japan. The wild form; not yet introd.

Closely related species: *W. villosa* Rehd. Brts. villous: lvs. loosely villous finally glabrous above, with persistent grayish white villous hairs beneath: keel emarginate at apex. N. E. China. Intr. 1916. Zone V.

4. *W. frutescens* (L.) Poir. To 12 m. long: young brts. glabrous or nearly so: lfts. 9-15, elliptic-ovate to oblong or oblong-lanceolate, 2-5 cm. long, acute to obtusish or slightly acuminate, cuneate to rounded at base, glabrous above,

sparingly appressed-pubescent beneath: fls. lilac-purple, 1.5-1.8 cm. long, in dense villous racemes 4-10 cm. long; bracts abruptly pointed; pedicels villous; calyx appressed-pubescent, with very short teeth; standard auricled at base; wings with a slender and a short auricle on either side: pod 5-10 cm. long, compressed. Fl.vi-viii. B.M.2103(c). N.D.3:t.55(c). B.B.2:374. (*W. speciosa* Nutt., *Kraunhia* fr. Greene, *Bradleia* fr. Britt.) Va. to Fla. and Tex. Intr. 1724. Zone V.—*W. f. nivea* Lescuyer. Fls. white (*W. f. alba* Th. Moore.) Cult. 1854.

5. *W. macrostachya* Nutt. Slender twiner to 8 m.; young brts. sparingly villous, soon glabrous: lfts. usually 9, ovate or elliptic-ovate to lance-elliptic, 3-7 cm. long, acuminate, rounded or subcordate at base, pubescent while young, later only sparingly so beneath: fls. lilac-purple in rather dense racemes 15-35 cm. long; bracts oblong-lanceolate, acuminate; pedicels glandular-pubescent; calyx with the lower teeth at least half as long as tube; standard not prominently auricled; wings with subulate spur about as long as claw: pod 7-12 cm. long, somewhat torulose. Fl.vi-vii. R.H.1862:12,t(c, as *W. fr. Bachousiana*). H.F.1855:t.19(c). F.S.11:t.1151(c). (*W. frutescens* var. *m.* Torr. & Gray, *Kraunhia m.* Small, *Bradleia m.* Small, *W. fr. var. magnifica* Herincq.) Mo. to Tenn. and Tex. Cult. 1855. Zone V or VI.—*W. m. albolicina* (Dipp.) Rehd., f. With lighter colored lilac pinkish fls.

6. *W. japónica* Sieb. & Zucc. Slender twining shrub: brts. glabrous: lfts. 9-13, ovate to ovate-lanceolate, 3-6 cm. long, obtusely acuminate, rounded or subcordate at base, glabrous and lustrous green: fls. white, about 1.2 cm. long, in slender axillary, often branching racemes 15-30 cm. long; calyx glabrous except the ciliate margin, 5 mm. long: pod 8-10 cm. long, glabrous, 6-7-seeded. Fl.vii-viii. S.Z.1:t.43(c). D.L.3:698. S.H.2:f.46a-e,47a. (*Milletia j.* Gray, *Kraunhia j.* Taub.) Japan. Intr. 1878. Zone VII?—Less showy than the preceding species.

27. **ROBINIA** L. Deciduous trees or shrubs; winter-buds naked, small, hidden by the base of petiole before leaf-fall, terminal bud wanting; brts. usually with stipular spines: lvs. odd-pinnate; lfts. opposite, petioluled, stipellate: fls. white to pink or pale purple, slender-stalked in pendulous racemes; calyx campanulate, 5-toothed and slightly 2-lipped; standard suborbicular, reflexed; wings curved; keel incurved, its petals united below; upper stamen free or partly free: pod oblong or linear-oblong, flat, 2-valved, with several seeds. (After Jean Robin (1550-1629) and Vespasien R. (1579-1600), herbalists to the king of France.) About 20 species in N. Am. and Mex.—Ornamental trees and shrubs planted chiefly for their showy, often fragrant fls.

A. Brts. glabrous or pubescent.

B. Pod smooth: brts. glabrate: fls. white (pink in one var.); brts. with stipular spines, glabrous or glabrescent.....1. *R. Pseudoacacia*

BB. Pod hispid or glandular (except in *R. neo-mexicana* under No. 8).

C. Brts. glabrous or minutely pubescent at first.

D. Brts. without stipular spines; peduncles glabrous.....2. *R. Boyntonii*

DD. Brts. with stipular spines; peduncles sparingly glandular-hairy: lfts. glabrous.

3. *R. Kelseyi*

CC. Brts. tomentose when young; peduncles and lfts. beneath grayish pubescent.

4. *R. Elliottii*

AA. Peduncles and brts. more or less hispid, glandular or viscid: pod hispid; fls. pink to purple.

B. Peduncles and brts. hispid or the latter sometimes glabrous: lfts. 7-15.

C. Brts. and lf.-rachis pubescent and hispid.....5. *R. longiloba*

CC. Brts. lf.-rachis and peduncles merely hispid.

D. Lfts. suborbicular to oval, rounded at apex, glabrous.....6. *R. hispida*

DD. Lfts. elliptic-ovate to oblong-ovate, acute to obtusish, slightly pubescent beneath.

7. *R. fertilis*

BB. Peduncles and brts. glandular-pubescent or viscid: lfts. 13-25.

C. Rachis of leaf pubescent, glandless, or nearly so: brs. with stipular spines.

8. *R. luxurians*

cc. Rachis of lf. glandular or viscid.

d. Brts., peduncles and petioles puberulous and stipitate-glandular. 9. *R. Hartwigii*

nn. Brts., peduncles and petioles glandular-viscid. 10. *R. viscosa*

1. *R. Pseudoacacia* L. BLACK LOCUST. Tree to 25 m. with deeply furrowed brown bark; brts. glabrous or slightly pubescent at first: lfts. 7-19, elliptic or ovate, 2.5-4.5 cm. long, rounded or truncate and mucronate at apex, glabrous beneath or slightly pubescent when young: fls. white, very fragrant, 1.5-2 cm. long, in dense racemes 10-20 cm. long; standard with yellow spot at base: pod linear-oblong, 5-10 cm. long, smooth, 3-10-seeded. Fl.vi; fr.ix. H.W.3:104(h),t.58(c). S.S.3:t.112,113. F.E.32:393(h). Gn.61:60(h). R.H. 1919:280,t(h). (FALSE ACACIA, YELLOW LOCUST.) Pa. to Ga., w. to Iowa, Mo. and Okla.; naturalized elsewhere in N. Am. and also in Eu. Intr. about 1635. Zone III. Often planted as an ornamental tree chiefly for its fragrant fls., and the many garden forms for their various ornamental qualities; also used for shelter plantations and for afforestation purposes on dry sandy soil.—*R. P. aurea* Kirchn., f. Lvs. yellow.—*R. P. purpurea* Schneid., var. Young lvs. purple.—*R. P. coluteoides* Neum. Lfts. smaller, oblong-obovate, rounded at apex, cuneate; very floriferous. G.C.64:219. Orig. before 1857.—*R. P. amorphifolia* Link, var. Lfts. narrow, oblong. Orig. before 1820.—*R. P. microphylla* Loud., var. Lfts. small and narrow. G.W.2:219. (*R. P. angustifolia* Hort., *R. P. elegantissima* Hort.) Orig. before 1838.—*R. P. myrtifolia* (K. Koch) Schneid., var. Lfts. 11-19, oval or broadly oval, 1-1.5 cm. long, rounded or slightly emarginate at apex. S.H.2:f.51f(1). Orig. about 1850.—*R. P. crispa* DC., var. Lfts. with undulate and curled margin. Orig. before 1825.—*R. P. linearis* Kirchn., f. Lfts. linear: of spreading slender habit.—*R. P. dissecta* Mottet. Lfts. linear or broader and dissected: of compact habit with short brs.—*R. P. unifoliola* Talou. Lvs. with one large lft. or occasionally with 2-7. R.H.1860:630,631. (*R. P. monophylla* Carr., *R. P.* var. *heterophylla* Bean.) Orig. 1858.—*R. P. erecta* Rehd., f. Of columnar habit; lvs. with one or few large lfts. (*R. P. monophylla fastigiata* Dieck.) Orig. about 1880.—*R. P. depéndens* Rehd. Of pendulous habit; lvs. with one or few large lfts. (*R. P. monophylla pendula* Dieck.) Orig. about 1880.—*R. P. inermis* DC. Brs. unarmed. (*R. spectabilis* Dum.-Cours., *R. inermis* Mirbel.) Orig. before 1804.—*R. P. umbraculifera* (DC.) DC., var. Brs. forming a dense subglobose head, unarmed; rarely flowering. M.G.18:630(h). (*R. inermis* Dum.-Cours.) Orig. before 1810. Much used in Europe grafted high for formal plantations and as an avenue tree for narrow streets.—*R. P. Rehdérii* Kirchn., f. A low subglobose form, usually grown on its own roots. G.W. 2:217(h). N.V.12:74,t(h). Orig. 1842.—*R. P. Bessoniana* Kirchn., f. Similar to *R. P. umbraculifera*, but with slenderer brs. forming a less dense head of more ovoid outline. S.L.314(h). Orig. before 1864.—*R. P. tortuosa* DC. A slow-growing form with short twisted brs., sometimes pendulous at the tips. G.W.2:218(h). S.L.314(h). Orig. before 1810.—*R. P. Rozynskyana* Spaeth. Lvs. 25-40 cm. long, pendulous; lfts. 15-21, oblong, 3-6 cm. long: racemes long: fls. large. Gs.7:153(h). Cult. 1920.—*R. P. pendula* Loud., var. With somewhat pendulous brs. Orig. before 1820.—*R. P. Ulriciana* Hartwig. With slenderer, more decidedly pendulous brs. Orig. before 1890.—*R. P. pyramidalis* Pepin. A columnar form with unarmed, erect brs. Gt. 6:190(h). I.H.6:20(h). B.H.14:27(h). Gn.83:193(h). G.C.41:151(h). (*R. P. fastigiata* Lem., not Neum.) Orig. before 1850.—*R. P. stricta* Link, var. A pyramidal form with ascending brs. Orig. before 1820.—*R. P. sem-*

*perflorans* Carr. Flowering during the whole summer. R.H.1875:191. Orig. before 1875.—*R. P. Decaisneana* Carr. Fls. light rose-colored. R.H.1863:151,t(c). F.S.19:2027(c). Gn.9:36,t(c);34:174. Orig. before 1860.

*R. P.* × ? *hispida* = *R. Margarétta* Ashe. Shrub; lfts. pubescent beneath; fls. light pink, about 2 cm. long; rachis, pedicels and calyx pubescent and slightly glandular; pod roughened. S. C. Cult. 1920. Zone VI?—*R. P.* × *Kelseyi*; see under No. 3.—*R. P.* × *luzuriens*; see under No. 8.—*R. P.* × *viscosa*; see under No. 10.

2. *R. Boyntónii* Ashe. Shrub to 3 m.; brts. unarmed, glabrous or minutely pubescent; lfts. 7-13, elliptic to oblong, 1.5-2.5 cm. long, obtuse, soon glabrous; rachis slightly pubescent; fls. pink or rose-purple with white, about 2 cm. long, in rather loose, 8-10-fld. racemes; calyx-lobes ovate, shorter than tube; pod glandular-hispid. Fl.v-vi. (*R. hispida rosea* Hort.) N. C. and Tenn. to Ga. and Ala. Intr. 1914. Zone V.

Related species: *R. nana* Ell. Shrub to 30 cm.; brts. minutely pubescent or nearly glabrous, unarmed, rarely with few short spines; lfts. 7-11, elliptic or elliptic-ovate, acutish or obtuse, glabrous; fls. 3-5; calyx-lobes caudate-acuminate, longer than the sparingly pubescent tube; peduncle slightly glandular-hispid. S. C. Cult. 1925. Zone V.

3. *R. Kelseyi* Hutchins. Shrub to 3 m.; brts. glabrous, with slender prickles; lfts. 9-11, oblong-lanceolate, 2-3.5 cm. long, acute, glabrous; fls. rose-colored, 2-2.5 cm. long, in 5-8-fld. racemes; rachis and pedicels sparingly glandular-hairy; calyx finely pubescent, often with glandular hairs, lobes longer than tube; pod oblong, 3.5-5 cm. long; densely covered with purple glandular hairs. Fl.v-vi. B.M.8213(c). Add.1:t.3(c). G.C.44:427(h);47:391;58:72;61:237(h). M.D.25:101. R.H.1919:339(h). N. C. Intr. 1901. Zone V. Handsome and graceful shrub.

*R. K.* × *Pseudoacacia* = *R. Slavínii* Rehd. Lfts. broader, acutish to obtuse; fls. rosy pink; rachis slightly villous, not glandular; pod roughened by minute tubercles. Orig. 1915.

4. *R. Ellióttii* Ashe. Shrub to 1.5 m.; stems virgate with short brs. near summit; brts. with short spines, densely grayish pubescent when young; lfts. 11-15, elliptic, 1.5-2.5 cm. long, grayish pubescent beneath; fls. rose-purple or purple and white, 2-2.3 cm. long, in 5-10-fld. racemes; peduncles, pedicels and calyx grayish pubescent, lobes shorter than tube; pod linear, hispid. Fl.v-vi. (*R. hispida* var. *rosea* Ell.) N. C. to Ga. Intr. about 1901. Zone VI?

5. *R. longiloba* Ashe. Shrub to 60 cm.; brts. loosely villous and more or less hispid, vigorous shoots sometimes with stipular spines; lfts. 7-17, oval, 3.5-5 cm. long, obtuse at ends, mucronate, silky-pubescent beneath, becoming glabrate; rachis slightly pubescent; infl. 7-21-fld., glandular-hispid, corolla rose or purple, about 2 cm. long; calyx puberulous and glandular-hispid; lobes ovate, long-acuminate, longer than tube. N. and S. C. Cult. 1908. Zone V.

Related species: *R. Ashei* Schallert. Shrub to 3 m., similar to the preceding; racemes longer, 18-32-fld.; fls. rose-purple; calyx-lobes 8-10 mm. long. S. C. Cult. 1934.—*R. speciosa* Ashe. Shrub to 2 m.; brts. densely whitish pubescent and bristly; lf.-rachis densely puberulous, not bristly; lfts. ovate to oval, acute to obtuse; villous beneath, later glabrate; fls. rose, 2-2.5 cm. long, rachis densely puberulous and hispid; calyx-lobes ovate, acuminate, shorter than tube. N. C. Cult. 1925.—*R. pallida* Ashe. Shrub to 20 cm.; brts. densely puberulous, sparingly bristly like the lf.-rachis; lfts. 9-15, ovate to oblong-ovate, usually acute, glabrous or slightly pubescent beneath; fls. pale rose, 5-9; calyx-teeth ovate, shorter than tube. N. C. Cult. 1925.

6. *R. hispida* L. Shrub to 1 m., stoloniferous; stems, brts. and peduncles and often petioles hispid; lfts. 7-13, suborbicular to broad-oblong, 2-3.5 cm. long, obtuse and mucronulate, glabrous or nearly so; fls. rose-colored or pale

purple, 2.5 cm. long, in 3-5-fld. hispid racemes: pod 5-8 cm. long, glandular-hispid, rarely developed. Fl.v-vi. Nederl. Fl. & Pom. t.49(c). F.R.2:57. B.C.5:2968. G.4:499. Va. and Ky. to Ga. and Ala. Intr. 1758. Zone V. With large rosy fls.; sometimes grafted high as standard.—*R. h. macrophylla* DC., var. Brts. and petioles nearly destitute of bristles; lfts. and fls. somewhat larger. Gn.77:268. G.M.45:512.

Related species: *R. pauciflora* Ashe. Shrub to 40 cm.; brts. hispid: lfts. 7-11, ovate or oval, rounded at ends, glabrous: fls. pale bluish purple, 1-4, on slender sparingly hispid peduncles. Tenn. Intr. ?

7. *R. fértilis* Ashe. Shrub to 2 m., stoloniferous; stems, brts., peduncles and petioles hispid; lfts. 9-15, elliptic to oblong-ovate or oblong, 2-5 cm. long, acute to obtusish, mucronate, slightly pubescent beneath when young: fls. rosy-pink, 2-2.5 cm. long; pedicels 5-8 mm. long, like the calyx densely hispid; calyx-lobes lanceolate, about half as long as tube: pod 5-7 cm. long, densely hispid. Fl.vi. (*R. hispida* var. *f.* Clausen.) N. C. to Ga. Cult. 1900. Zone V. Similar to No. 6, but with smaller fls. and freely fruiting.

8. *R. luxurians* (Dieck) Schneid. Shrub or small tree, to 10 m.; brts. with stipular spines, glandular-pubescent when young: lfts. 15-21, elliptic-oblong or oval, 2-3.5 cm. long, rounded and mucronate or acutish silky-pubescent beneath, at least while young; petioles villous: fls. pale rose-colored or nearly white, about 2 cm. long, in dense, many-fld. racemes; peduncles and pedicels glandular-pubescent; calyx-lobes triangular, upper lip with short acute teeth; pod 6-10 cm. long, glandular-hispid. Fl.vi-viii. B.M.7726(c). S.S.3: t.114. Gt.41:t.1385(c). R.H.1895:112,t(c). S.L.313(h). For. & Irrig. 13:89 (h). (*R. neo-mexicana* var. *l.* Dieck, *R. neo-mexicana* Auth., not Gray.) Colo. to N. Mex., Ariz. and Utah. Intr. 1881. Zone IV.

*R. l.* × *Pseudoacacia* = *R. Holdtii* Beiss. Tree: lfts. 3.5-5 cm. long, rather dark and firm: fls. light pink to rose-colored, in less dense racemes: pod with scattered stalked glands. (*R. coloradensis* Dode.) Orig. about 1890.—*R. H. britzensis* Spaeth. Fls. whitish. Orig. before 1900.

Related species: *R. neo-mexicana* Gray. Shrub to 2 m.; brts. and lf-rachis grayish puberulous: lfts. 9-15, elliptic to elliptic-lanceolate, 1-4 cm. long, obtuse to acutish, strigulose on both sides: infl. pubescent and glandular-hispid: pod sparingly pilose, not glandular, reticulate. N. Mex. Intr. 1921. Zone V.

9. *R. Hartwigii* Koehne. Shrub to 4 m.; brts., petioles and peduncles densely stipitate-glandular and puberulous: lfts. 13-23, elliptic to lanceolate, 2-3.5 cm. long, mucronate, loosely pubescent above and grayish pubescent beneath: fls. whitish to rosy purple, about 2 cm. long, in rather dense racemes without the peduncle 5-7 cm. long; calyx pubescent and stipitate-glandular; pod oblong, 5-9 cm. long, glandular-bristly and pubescent. Fl.vi. N. C. to Ala. Cult. 1904. Zone V.

10. *R. viscosa* Vent. Tree to 12 m.; the dark red-brown brts. and usually the petioles and peduncles densely glandular-viscid; stipular spines small or wanting: lfts. 13-25, ovate, 2.5-4 cm. long, obtuse or acute, broad-cuneate at base, pubescent beneath or sometimes glabrous: fls. about 2 cm. long, pink with yellow blotch on standard, in 6-16-fld. racemes 5-8 cm. long; calyx dark red, pubescent: pod narrow-oblong, 5-8 cm. long, sparingly glandular-hispid. Fl.v-vi. B.M.560(c). R.I.22:t.143r-n(c). S.S.3:t.115. B.S.2:413. (*R. glutinosa* Sims.) N. C. to Ala. Intr. 1791. Zone III.

*R. v.* × *Pseudoacacia* = *R. ambigua* Poir. Tree: brts. only slightly viscid, with small spines; lfts. 13-21: fls. light pink. (*R. dubia* Foucault, *R. intermedia* Soul.-Bod.) R.I.22:t.144(c). Add.19:t.624(c). Gn.89:717(h). Orig. before 1812.—*R. a. bella-rosea* (Nichols.) Rehd., var. Brts. more viscid: fls. larger and of deeper color. (*R. bella-rosea* Nichols., *R. viscosa* var. *b.* (Nichols.) Voss.) Orig. before 1880.

28. **CARMICHAELIA** R. Br. Upright or prostrate shrubs with rush-like or flattened brs.; lvs. of 1-5 lfts., deciduous, often absent: fls. small, in lateral racemes, rarely solitary; calyx campanulate or cup-shaped, 5-toothed; standard orbicular, reflexed, contracted into a short claw; wings curved, auricled at base; keel incurved, obtuse; upper stamen free; style glabrous; pod narrow oblong, rarely nearly orbicular; the face of the valves separating from the thick edges; seeds 1-12, reniform or oblong. (After Dugald Carmichael; 1772-1827.) About 18 species in New Zealand.

**C. australis** R. Br. Upright shrub to 4 m., glabrous, usually leafless; brts. flattened, 3-6 mm. broad, notched: lvs. only on young plants, with 1-5 obcordate lfts. 6-12 mm. long: fls. in short, 3-12-fld. racemes, pale purplish, about 4 mm. long; standard broader than long, emarginate: pod elliptic, flat, about 1 cm. long, beaked; seeds 1-4, red, usually spotted black. Fl.vi-vii. B.R.11:912(c). E.N.III.3:278. N. Zeal. Cult. 1826. Zone VII?

29. **COLUTEA** L. BLADDER-SENNA. Deciduous unarmed or rarely spiny shrubs; winter-buds small, globose-ovoid, with 2-4 outer scales; brs. with fibrous or flaky bark: lvs. odd-pinnate, with rather small entire lfts.; stipules small: fls. yellow to brownish red, in axillary long-peduncled few-fld. racemes; calyx campanulate, with 5 subequal teeth or the two upper ones shorter; standards suborbicular with two swellings above the claw; petals of keel with partly connate claws; upper stamen free; ovary stipitate; style incurved, bearded near apex, with the stigma below the apex: pod inflated, with papery walls, indehiscent, sometimes open at apex. (*Koloutea*, ancient Greek name of a leguminous tree.) About 10 species from S. Eu. to W. Himal.

A. Pod closed at apex: lfts. 1.5-3 cm. long.

B. Fls. yellow.

C. Wings as long or shorter than keel ..... 1. *C. arborescens*

CC. Wings longer than keel ..... 2. *C. cilicica*

BB. Fls. more or less reddish or brownish ..... 3. *C. media*

AA. Pod and ovary open at apex: lfts. usually small, thickish with obscure veins.

B. Fls. yellow ..... 4. *C. gracilis*

BB. Fls. reddish orange to orange-brown ..... 5. *C. orientalis*

1. **C. arborescens** L. Shrub to 4 m.; young brts. pubescent: lfts. 9-13, elliptic to obovate, 1.5-3 cm. long, usually emarginate and mucronate, bright green above, slightly pubescent and paler beneath, membranous, with fairly distinct venation: fls. about 2 cm. long, bright yellow; standard with red markings, in 6-8-fld. racemes; peduncle 2-4 cm. long; pedicels about 1 cm. long; ovary thinly pubescent: fr. glabrescent, greenish or slightly reddish near base, 6-8 cm. long. Fl.v-vii; fr.vii-x. B.M.81(c). S.O.2:t.117(c). R.I. 22:t.141(c). E.N.III.3:282. B.C.2:834. S. Eu., N. Afr. Intr. 1570. Zone V.—**C. a. crispa** Kirchn., f. Slow growing form, the lvs. with undulate margin.—**C. a. bullata** Rehd., f. Dwarf and compact: lfts. 5-7, obovate or nearly orbicular and somewhat bullate, 8-15 mm. long.

*C. a. × orientalis*; see No. 3.

Closely related species: **C. brevialata** Lange. Lower; lfts. usually 11, smaller: fls. 1.2-1.5 cm. long, in 2-6-fld. racemes; wings much shorter than keel and standard. S.H.2:f.53k-m, 54a. S. France. Cult. 1860.

2. **C. cilicica** Boiss. Shrub similar to the preceding: lfts. usually 11, oval or obovate, 1-2 cm. long, rounded or truncate and mucronate at apex, slightly hairy beneath, bluish green: fls. yellow, in 3-5-fld. racemes; wings longer than keel. Fl.vi-vii. G.C.III.16:155. S.H.2:f.54h-k, 55a-e. (*C. longialata* Koehne, *C. melanocalyx* Hort.) Asia Minor. Cult. 1892. Zone V.

Related species: **C. melanocalyx** Boiss. Lfts. 7-11, broad-elliptic, emarginate, more pubescent beneath: fls. smaller; calyx densely dark brown-pubescent, with broader triangular teeth; wings slightly longer than keel; pod about

5 cm. long. S.H.2:f.54l-m,55f-i. Asia Minor. Cult. 1905. Zone V or VI.—*C. istria* Mill. Shrub to 2 m.: lfts. 9–13, sometimes to 19, about 1 cm. long; fls. orange-yellow, about 2 cm. long, in 1–4-fld. racemes. S.O.2:t.120(c). S.H.2:f.53e-i,54p. (*C. halepica* Lam., *C. Pocockii* Ait.) Asia Minor. Intr. 1752. Zone VII?

3. *C. media* Willd. (*C. arborescens* × *orientalis*). Similar to *C. arborescens*: lfts., 11–13, obovate, 1.5–2.5 cm. long, pubescent beneath, bluish green; fls. brownish red or deep orange, 1.5 cm. long; pod 6–7 cm. long, usually closed at apex, tinged purple. L.D.8:524(c). S.O.2:t.118(c). R.I.22:t.140(c). Orig. before 1790. Zone V. Often cult. as *C. orientalis*.

4. *C. gracilis* Freyn & Sint. Shrub to 3 m.; young brts. pubescent: lfts. 7–9, obovate, 4–8 mm. long, appressed-pubescent beneath; fls. yellow, 1.2–1.5 cm. long, in 1–4-fld. racemes; wing about as long as keel; keel not rostrate; calyx pubescent with dark hairs; ovary pubescent: pod 3–4 cm. long. S.H.2:f.56i-k,57a-e. Transcaspi. Cult. 1911. Zone VI?

Related species: *C. persica* Boiss. Young brts. glabrous: lfts. 7–13, obovate or broad-obovate, 8–15 mm. long, nearly glabrous beneath, thickish: fls. 2 cm. long; calyx sparingly pubescent; ovary usually glabrous. S.H.2:f.55o-q,56g-h. Kurdistan, Persia. Cult. 1902.—*C. p. Böhsei* Boiss., var. Lvs. and fls. somewhat larger: pod with scattered appressed hairs. Cult. 1925.—*C. nepalensis* Sims. Young brts. nearly glabrous: lfts. 9–13, oval, 6–12 mm. long, rounded at apex; pubescent above: fls. about 2 cm. long, in 3–4-fld. drooping racemes; keel rostrate. B.M.2622(c). B.R.1727(c). Afghan. to Nepal. Cult. 1822. Zone VII?

5. *C. orientalis* Mill. Shrub to 2 m.; young brts. pubescent: lfts. 7–11, broad-obovate, 8–15 mm. long, rounded or emarginate at apex, cuneate, glabrous above, slightly pubescent beneath when young, glaucous, thickish: fls. reddish brown, 1.5 cm. long, in 2–5-fld. racemes; standard with yellow blotch; wings shorter than keel; calyx slightly pubescent: pod 3–3.5 cm. long, usually suffused with violet-purple. Fl.vi-ix. (*C. cruenta* Ait.) S.O.2:t.119(c). R.I.22:t.142(c). S.L.134(h). Cauc. to Turkest. Intr. 1710. Zone V. Conspicuous by its pale glaucous foliage.

*C. o. × arborescens*; see No. 3.

30. **HALIMODÉNDRON** Fisch. Deciduous shrub; winter-buds ovoid with several outer scales; lvs. abruptly pinnate, with 2 or 4 sessile lfts. and a persistent usually spinescent rachis; stipules subulate, spinescent: fls. pale purple or lilac, in lateral slender-stalked, 2–3-fld. racemes; calyx cup-shaped with 5 short teeth; petals of nearly equal length; standard orbicular, with reflexed sides; keel obtuse, curved; upper stamen free; ovary stipitate, with many ovules; style curved with small terminal stigma: pod obovoid to oblong, inflated, with leathery thick walls, abruptly short-rostrate. (Greek *halimos*, maritime, and *dendron*, tree; referring to its habitat on saline soil.) One species.

*H. halodéndron* (L.) Voss. SALT-TREE. Shrub to 2 m., with spreading spiny brs. silky pubescent when young; lfts. oblanceolate, 1.5–3.5 cm. long, rounded or mucronate at apex, cuneate, grayish or bluish green, minutely silky or sometimes glabrous: fls. 1.5–1.8 cm. long; calyx pubescent, persistent: fr. 1.5–2.5 cm. long, brownish yellow. Fl.vi-vii. B.M.1016(c). G.O.t.69(c). S.O.1:t.35(c). (*H. argenteum* Fisch.) Transcauc. to Turkest. and Altai. Intr. 1779. Zone II. Handsome and graceful in bloom.—*H. h. purpureum* Schneid., f. Fls. rosy purple. (*H. speciosum* Carr.) R.H.1876:30,t(c). Orig. before 1876.

31. **CARAGANA** Lam. Deciduous shrubs; winter-buds ovoid, with several outer scales; lvs. often fascicled, abruptly pinnate, with 2–18 small entire

lfts.; rachis often persistent and spiny; stipules small, deciduous or persistent and spiny: fls. yellow, rarely whitish or pinkish, solitary or fascicled; calyx tubular or campanulate with nearly equal teeth, the 2 upper usually smaller; standard upright, with recurved sides, like the wings with long claws; keel straight; upper stamen free; ovary subsessile, rarely stipitate; style straight or slightly curved, with small terminal stigma: pod linear, terete or inflated, usually pointed; seed obliquely ellipsoid or subglobose. (Caragan, the Mongolian name of the plant.) More than 50 species from s. Russia to China and Manchuria and Himal. Monograph by Komarov in Act. Hort. Petrop. 29:179-388, 16 pl. (1908) cited below as A.H.P.—Planted as ornamental shrubs chiefly for their profusely produced bright yellow fls.

- A. Lfts. 6-13, or partly 4 on same plant.  
 B. Rachis of lf. deciduous.  
 C. Lfts. 12-18, 3-8 mm. long.....1. *C. microphylla*  
 CC. Lfts. 8-14.  
 D. Spiny stipules much shorter than petioles; lfts. 1-2.5 cm. long; rachis 3.5-8 cm. long .....2. *C. arborescens*  
 DD. Spiny stipules usually about half as long as petiole; rachis 1-3 cm. long; lfts. 6-12 mm. long .....3. *C. decorticans*  
 BB. Rachis of lf. persistent, spiny.  
 C. Fls. 3-4 on a common peduncle; lfts. 10-14; stipules spinescent.....4. *C. brevispina*  
 CC. Fls. solitary.  
 D. Stipules membranous; fls. whitish or pale yellow; pedicels articulate at base.  
 E. Lfts. 8-18 mm. long; auricles of wing as long as claw; brs. very thick, covered with crowded lf.-bases and spines.....5. *C. jubata*  
 EE. Lfts. 4-6 mm. long; auricles of wings much shorter than claw; brs. slender.  
 6. *C. Gerardiana*  
 DD. Stipules spinescent; fls. bright yellow; wings with short or without auricles; pedicels articulate near the middle.  
 E. Lvs. pinnate with 4-6 lfts.; spiny rachis short.....7. *C. Maximowicziana*  
 EE. Lvs. dimorphic, pinnate and nearly digitate on same branch; spiny rachis 2-6 cm. long .....8. *C. spinosa*  
 AA. Lfts. always 2 or 4.  
 B. Lfts. in 2 remote pairs, obovate; stipules spinescent.....9. *C. Chamlagu*  
 BB. Lfts. 2-4, close together, almost digitate.  
 C. Lvs. stalked; lfts. 1.5-3 cm. long, usually obovate, obtuse.....10. *C. frutez*  
 CC. Lvs. nearly sessile; lfts. 5-10 mm. long, narrow, acute.....11. *C. pygmaea*

1. *C. microphylla* Lam. Shrub to 3 m., with long spreading brs.; young brts. finely silky: lfts. 12-18, oval to obovate, 3-8 mm. long, rounded or emarginate at apex, silky-pubescent at first, grayish green: fls. 1-2, yellow, about 2 cm. long; pedicels 1.5-2.5 cm. long; calyx finely pubescent, tubular with short teeth: pod 2.5-3 cm. long. Fl.v-vi. L.B.1064(c). Gt.10:t.366. B.C. 2:660. (*C. Altagana* Poir.) Siberia, N. China. Intr. 1789. Zone III. Graceful shrub.—*C. m. megalantha* Schneid., var. Lfts. orbicular-obovate, to 1.2 cm. long, or elliptic and to 1.5 cm. long, less pubescent, bright green: fls. about 3 cm. long, pod 3-4 cm. long.

*C. m.* × *arborescens*; see under No. 2.

2. *C. arborescens* Lam. PEA-TREE. Shrub or small tree to 6 m., of upright habit; young brts. pubescent: lfts. 8-12, obovate to elliptic-oblong, 1-2.5 cm. long, rounded at apex and mucronate, pubescent when young, later glabrescent, bright green: fls. 1-4, fascicled, yellow, 1.5-2 cm. long, on pedicels 1.5-2.5 cm. long; calyx with very short teeth: pod 3.5-5 cm. long. Fl.v. G.O.t.67(c). S.O.1:t.33(c). N.D.2:t.19(c). Siberia, Manch. Intr. 1752. Zone II. Much grown for hedges and shelter plantations in the N. W.—*C. a. Lorbérgii* Koehne, f. Lfts. linear, 2-2.5 cm. long; standard and wings narrower. Orig. before 1906. Remarkable and graceful form.—*C. a. pendula* Carr. With stiffly pendent brs.; usually grafted high. M.G.12:425(h). F.E. 91.4:19(h). Orig. 1854.—*C. a. nana* Jaeg., var. Dwarf stunted shrub with contorted brs. Orig. before 1875.

*C. a.* × *microphylla* = *C. sophoraefolia* Tausch. Lfts. usually 12, elliptic to oblong, 8–15 mm. long, cuneate, mucronate; pods about 2 cm. long. (*C. cuneifolia* Dipp., *C. arborescens* var. *c.* Schneid.) Orig. before 1816.

Related species: *C. fruticosa* (Pall.) Steud. Shrub to 2 m.: lfts. 8–14, oblong to obovate, 1.5–2.5 cm. long, cuneate at base, rounded or acute at apex; stipules herbaceous or slightly spiny; fls. solitary, larger, on longer puberulous peduncles; calyx puberulous, with very short teeth: pod 2–3 cm. long; seeds brown. (*C. arborescens* var. *f.* Dipp., *C. Redowskii* DC.) Amurl., Korea. Cult. 1817.

3. *C. decorticans* Hemsl. Shrub or small tree; bark greenish; stipules spiny, brown, 3–8 mm. long; rachis spiny-pointed; lfts. 6–12, elliptic to obovate, 6–15 mm. long, spiny-mucronate, appressed-puberulous, reticulate: fls. 2.5 cm. long, on slender pedicels to 2 cm. long; calyx campanulate, with triangular spiny-aristate teeth; wings with a spur-like auricle: pod 3–4 cm. long. Fl.vi. H.I.1725. A.H.P.29:t.14A. S.H.2:f.590-q<sup>1</sup>.62a. Afghan. Intr. 1879. Zone V.

Related species: *C. Boisii* Schneid. Shrub to 2 m.; stipules spiny, to 1 cm. long; lfts. 10–12, obovate to narrow-obovate, 4–18 mm. long, dark green above, light grayish green and slightly pubescent beneath, of firm texture: calyx-teeth not spiny; ovary pubescent. A.H.P.29:t.15B. V.F.57. S.L.2:131(h). (*C. microphylla* var. *crasse-aculeata* Bois.) W. China. Intr. 1895. Zone V.—*C. pekinensis* Komar. Shrub to 2 m.; stipules spiny, 5–10 mm. long; lfts. 6–12, obovate or elliptic to elliptic-oblong, 8–12 mm. long, mucronulate, grayish pubescent on both sides: calyx tubular, villous, teeth short, not spiny: pod silky-puberulous. N. E. China. A.H.P.29:t.15C. Intr. 1923. Zone V.

4. *C. brevispina* Royle. Shrub to 2.5 m.; young brts. puberulous: lfts. 10–14, elliptic-oblong to oblong, 8–25 mm. long, rounded at apex, silky when young, nearly glabrous at maturity; rachis 3–7 cm. long, persistent, spiny; stipules spiny, about 6 mm. long; fls. yellow, nearly 2 cm. long, 2–4 on a common peduncle; pedicels with long subulate bractlets; calyx villous, with deltoid, long-acuminate teeth: pod about 5 cm. long, villous inside and slightly so outside. Fl.vi. P.F.2:148. (*C. triflora* Lindl.) N. W. Himal. Intr. before 1850. Zone VII?

Related species: *C. sukiensis* Schneid. Lfts. 10–14, linear-lanceolate, about 8 mm. long, acute at ends, with prominent lateral nerves and long silky hairs beneath; rachis about 3 cm. long, spiny; stipules membranous: fls. solitary, about 2.5 cm. long; peduncles 3–6 mm. long; pod about 1.5 cm. long, slightly pubescent. N. W. Himal. Intr. 1919. Zone VI?

5. *C. jubata* (Pall.) Poir. Shrub to 1 or occasionally 5 m. tall, with few upright, sparingly branched stems; brs. thick, densely covered with crowded spines and stipules and shaggy tomentum; stipules scarious with setaceous apex: lfts. 8–14, oblong, 6–18 mm. long, villous, with narrow-triangular teeth; ovary villous: pod about 2 cm. long, hairy. Fl.iv–v. Gt.10:t.331. F.S.19:t. 2013(c). L.B.522(c). S.L.113(h). E. Siberia to W. China and Turkestan. Intr. 1796. Zone II. Grown for its odd and curious appearance.

6. *C. Gerardiana* Royle. Compact, much-branched shrub to 1 m.; brts. densely pubescent when young, close-jointed; stipules scarious; rachis spiny, to 5 cm. long; lfts. 8–12, obovate to oblong-oblancheolate, 5–10 mm. long, mucronate, silky-pubescent: fls. solitary, 2–2.5 cm. long, pale yellow, short-stalked; calyx cylindric, about 1 cm. long, pubescent, with deltoid, cuspidate lobes; wings with short auricle: pod villous, 2–3 cm. long. Fl.iv–v. Jacquemont, Voy. Bot. t.43. A.H.P.29:t.13b. S.L.114(h). (*C. spinosissima* Benth.) N. W. Himal. Intr. before 1870. Zone VI. Remarkable for its long spines and the thick tomentum of its brts.

Related species: *C. Franchetiana* Komar. Shrub to 3 m.; spiny rachises stout, remote: lfts. 8–10, narrow-obovate to lanceolate, glabrescent above; peduncle with 3 bractlets; calyx with triangular-lanceolate lobes nearly as long as tube; wings with a slender auricle as long as claw and on the upper side with

a slender tooth: pod pubescent, 3-4 cm. long. A.H.P. 29:t.13a. S. W. China. Intr. 1914. Zone VI?—*C. oreophila* W. W. Sm. Lfts. usually 16, oblong or oblong-obovate, 5-7 mm. long, silky-villous: corolla nearly 2 cm. long, wings with a slender auricle: pod about 2 cm. long. W. China. Intr. 1914. Zone VI?—*C. tibetica* (Maxim.) Komar. Prostrate shrub with ascending brs. to 25 cm. high: lvs. crowded; rachis 2-3 cm. long; lfts. 6-12, linear-oblong, 5-10 mm. long, acute, silky-pilose: fls. about 2.5 cm. long, pale yellow, wings with short auricle, standard emarginate; calyx-teeth short. A.H.P. 29:t.10. (*C. tragacanthoides* var. *t.* Maxim.) W. China. Cult. 1927. Zone V?

7. *C. Maximowicziana* Komar. Densely branched spreading shrub to 1.5 m. with slender red-brown glabrous or at first slightly pubescent brts.: stipules deltoid, spinescent; rachis spiny, short; lfts. 4-6, oblong-lanceolate, 5-10 mm. long, spinulose-mucronate, bright green: fls. short-stalked, yellow, 2-2.5 cm. long; calyx cylindric, glabrous, with very short teeth; standard narrow-obovate; wings without auricle; ovary pilose only on ventral suture. Fl.v-vi. A.H.P. 29:t.11B. W. China. Intr. 1910. Zone II. Shrub with bright green foliage and fairly large fls.

Related species: *C. tragacanthoides* (Pall.) Poir. Low upright or prostrate shrub, with pubescent spiny brs.; stipules short, spinescent; rachis spiny, to 3 cm. long: lfts. 4-10, obovate to oblanceolate, 8-15 mm. long, cuneate, appressed-pubescent: fls. 2.5-3 cm. long; calyx broad-cylindric or campanulate, pubescent, with triangular spinulose teeth; wings auriculate: pod 2.5-3 cm. long, twice as long as calyx, shaggy pubescent. Pallas, Spec. Astrag. t.86. S.H.2:f.62f,63a-b. N. W. China to Altai and N. W. Him. Intr. 1816. Zone V.

8. *C. spinosa* (L.) DC. Shrub to 2 m. or sometimes prostrate, with long spiny brs. pubescent when young; stipules scarious or sometimes with spinescent apex; rachis silky when young, spiny, 2.5 cm. long, spreading: lfts. 4-8, oblong-obovate to linear-lanceolate, 8-15 mm. long, rounded or short acuminate, cuneate, slightly silky when young, later glabrate; lvs. of spurs with 4 digitate lfts.: fls. usually solitary, short-stalked, 2-2.5 cm. long; calyx cylindric, glabrescent, with short deltoid teeth; wings linear-oblong, scarcely auricled: pod linear-oblong, about 2 cm. long, glabrous. Fl.v-vi. N.D.2:t.20(c). S.O.1:t.36(c). S.H.2:f.60a,63f-p. (*C. jerox* Lam., *C. spinosissima* Lam., *C. tragacanthoides* Hort., partly.) Siberia. Intr. 1775. Zone II.—*C. s. foliosa* Komar., var. Lfts. crowded, longer; rachis partly persistent.

9. *C. Chamla* Lam. Bushy shrub to 1.5 m., with upright and spreading brs.: brts. angled, slender, glabrate; stipules usually spinescent, 8 mm. long; rachis persistent, spiny or caducous: lfts. 4, obovate to cuneate-obovate, 1-3.5 cm. long, rounded or emarginate, dark green and lustrous above, glabrous, chartaceous at maturity and finely reticulate: fls. solitary, 2.5-3 cm. long, reddish yellow; pedicels about 1 cm. long, articulate about the middle; calyx campanulate; standard narrow-obovate; pod 3-3.5 cm. long, slightly compressed, glabrous. Fl.v-vi. N.D.2:t.21(c). G.O.t.30(c). A.H.P. 29:t.5B. S.L.114(h). N. China: Intr. 1773. Zone II.

10. *C. frutex* (L.) K. Koch. Upright shrub to 3 m., glabrous; brts. slender, yellowish: lfts. 4, obovate to oblong-obovate, 1.5-2.5 cm. long, rounded or emarginate, cuneate, membranous, dull green: fls. 1-3, bright yellow, 2-2.5 cm. long, on pedicels nearly as long as fls., articulate about the middle; calyx campanulate: pod cylindric, 3-3.5 cm. long, glabrous. Fl.v-vi. S.O. 1:t.34(c). S.B.3:t.227(c). B.C.2:660. (*C. frutescens* DC.) S. Russia to Turkest. and Siber. Intr. 1752. Zone II.—*C. f. macrantha* Rehd., var. Lfts. larger, to 2.8 cm. long; fls. 2.5-3 cm. long; rachis caducous; calyx broader. S.H.2:f.64w-y. (*C. frutescens* var. *grandiflora* Rehd., not Reg.)—*C. f. latifolia* (DC.) Schneid., f. Lfts. to 3.2 cm. long and to 1.4 cm. broad; rachis caducous. Gt.10:t.348. S.H.2:f.64t-v. (*C. frutescens obtusifolia* Hort.)

11. *C. pygmaea* DC. Upright or sometimes prostrate shrub, to 1 m., with slender virgate brs., glabrous: stipules spiny, short: rachis deciduous or persistent, 5-8 mm. long: lvs. subsessile; lfts. 4, linear-oblongate, 8-15 mm. long, acuminate and spiny pointed: fls. solitary, about 2 cm. long; yellow, on stalks about 1 cm. long and articulate above the middle; calyx narrow-campanulate, with triangular teeth; auricle of wings very short: pod 2-3 cm. long, cylindric, glabrous. Fl.v-vi. B.R.1021(c). S.O.1:t.37(c). S.L.53(h). N. W. China and Siberia. Intr. 1751. Zone III.

Related species: *C. aurantiaca* Koehne. Very similar to the preceding; rachis persistent, about 5 mm. long; fls. 1.5-2 cm. long, orange-yellow; calyx slightly broader than long; auricle of wing at least half as long as claw. B.S. 1:289. (*C. arenaria* Dipp., *C. pygmaea aurantiaca erecta* Hort.) Siberia to Afghan. and Turkest. Cult. 1830, again intr. 1887. Zone V.—*C. grandiflora* DC. Shrub to 1 m.; rachis persistent, 4-7 mm. long; lfts. oblong-obovate, rounded or short-acuminate and spiny-pointed, glabrous or puberulous: fls. 2.5-2.8 cm. long, on pedicels articulate below the middle; calyx tubular, saccate at base. S.H.2:t.64e-h. (*C. pygmaea* var. *g. K. Koch.*) S. Russia and Cauc. to Turkest. and Song. Intr. 1823. Zone II.—*C. brevifolia* Komar. Shrub to 1.5 m.: lf.-rachis and stipules spiny; lfts. narrow-obovate to obovate-lanceolate, 2-6 mm. long, acute: fls. 1.5-1.8 cm. long; pedicels to 5 mm. long; calyx often bloomy, with deltoid spinulose lobes. A.H.P.29:t.17. N. W. China, Kashmir. Intr. 1925. Zone V.—*C. densa* Komar. Shrub to 2.5 m.: lf.-rachis and stipules spiny; lfts. linear-oblongate or lanceolate, 8-16 mm. long: fls. about 2 cm. long; pedicel about 5 mm. long, puberulous; calyx tubular, the deltoid teeth much shorter than tube. A.H.P.29:t.7. Intr. 1926. Zone V.

32. *CALOPHACA* Fisch. Deciduous low shrubs or herbs: lvs. odd-pinnate with small entire lfts.; stipules scarious (in our species) or herbaceous, adnate to the petiole: fls. axillary, racemose (or 1-3 in sect. *CHESNEYA* Taub.); calyx tubular with 5 nearly equal teeth or the 2 upper somewhat connate; standard upright, with reflexed margin and slightly auriculate base; wings oblong, free, as long as the obtuse or emarginate keel; upper stamen free; ovary sessile, many-ovuled: pod cylindric. (Greek *kalos*, beautiful, and *phaca*, lentil.) About 10 species from S. Russia to India.

*C. wolgatica* (L.) Fisch. Shrub to 1 m., often procumbent; young brts. glandular-pubescent: lvs. 5-8 cm. long; lfts. 11-17, orbicular to broad-elliptic, 8-15 mm. long, rounded at ends, mucronate, pubescent beneath: fls. bright yellow, 2-2.3 cm. long, in 4-6-fld. axillary peduncled and glandular-pubescent racemes; pedicels about 3 mm. long; calyx-teeth lanceolate: pod 2-3 cm. long, glandular-pubescent, 1-2-seeded. Fl.vi-vii. B.C.2:636. S. Russia to Turkest. Intr. 1756. Zone III. Prefers sunny positions in well drained soil.

Closely related species: *C. grandiflora* Regel. Lfts. 17-25: fls. 2.5-2.8 cm. long, in 10-16-fld. racemes: pod to 5 cm. long, less pubescent. Gt.35:t.1231(c). Turkest. Intr. about 1880. Zone V.—To sect. *CHESNEYA* belongs *C. crassicaulis* (Bak.) Komar. Suffrutescent, with thick short upright stems densely clothed with old lf.-rachises; stipules herbaceous; lfts. 21-25, linear-oblong, 4-6 mm. long, pubescent: fls. solitary, yellow to red, about 2 cm. long; pedicel about 1 cm. long; calyx very oblique, densely villous; standard pubescent outside. Himal., W. China. Intr. 1932. Zone VI?

33. *ASTRÁGALUS* L. Herbs or small shrubs: lvs. odd-pinnate or abruptly pinnate, rarely digitate, the shrubby species often with persistent spiny rachis; stipules free, adnate to petiole or connate and opposite to the leaf: fls. whitish, yellowish, purple or violet, in axillary racemes or heads; calyx tubular to campanulate with subequal teeth; standard upright; wings oblong, adhering to the obtuse or acutish keel, their claws often adnate to the staminal tube; upper stamen usually free: ovary sessile or stipitate,

usually many-ovuled; style slender, straight or slightly curved with terminal small stigma: pod usually more or less completely 2-celled by a longitudinal septum, or inflated and not or incompletely 2-celled. (Latin name of some species of this genus, originally from the Greek, meaning ankle-bone.) About 1500 species in the n. hemisphere, chiefly in the temp. regions; our species are low shrubs or subshrubs with the rachis of the abruptly pinnate lvs. persistent and spiny.—Adapted for sunny rockeries and well drained positions; some species yield tragacanth, a gum used in medicine.

**A. massiliensis** Lam. Shrub to 0.3 m.; brts. gray-tomentose, spiny; stipules small, adnate at base to petiole; lvs. very crowded: lfts. 12-22, oblong, 4-7 mm. long, obtuse or truncate, silky-pubescent: fls. white, about 1.5 cm. long, in axillary 3-8-fld. heads; calyx tubular, villous, with short lanceolate, obtuse teeth: pod oblong, about 1 cm. long, exceeding the calyx, 2-celled, 4-seeded. Fl.v-vi. S.L.52(h). (*A. Tragacantha* L. in part.) S. Eu. Cult. 1783. Zone VI?

Another species of the sect. **CERCIDOTHRIX** which has 2-armed hairs is **A. angustifolius** Lam. Low dense spiny shrub: lfts. 18-20, oblong to linear-oblong, about 5 mm. long, appressed-pubescent: fls. white, keel violet at apex, in few-fld. heads; calyx campanulate, with 2 bracts at base; pod longer than calyx, appressed-pubescent. R.I.22:t.166(c). S.F.8:t.734(c). S.L.93(h). Greece, Asia Minor. Cult. 1910.—The following 2 species have simple hairs and small 1-seeded pods, not exceeding the calyx; the first belongs to the sect. **CALYCOPHYSA**, the second to sect. **TRAGACANTHA**: **A. sempervirens** Lam. Procumbent subshrub, spiny; stipules connate, sheathing: lfts. 12-20, oblong-obovate to linear-oblong, about 8 mm. long, loosely villous: fls. white to pinkish, in 3-8-fld. heads; calyx densely white-villous. R.I.22:t.166(c). S.F.735(c). S.L.92(h). S.H.2:f.64a-d. (*A. aristatus* L'Herit.) S. Eu. Cult. 1914.—**A. drusorum** Boiss. Upright shrub to 0.5 m., spiny; lfts. 16-20 ovate-oblong, 6-8 mm. long, obtuse and spiny-mucronate, sparingly appressed-pubescent: fls. in 2-3-fld. axillary heads forming ovate-oblong to cylindric spikes to 7 cm. long. Asia Minor. Cult. 1910.

**Tribe 7. HEDYSAREAE** Taub. Lvs. 3-foliolate or pinnate; upper stamen usually free: pod not dehiscent, usually jointed and separating at maturity into 1-seeded segments, or 1-seeded.

**34. CORONILLA** L. Herbs or small deciduous or half-evergreen shrubs, usually glabrous: lvs. odd-pinnate; lfts. opposite, entire; stipules small or foliaceous: fls. yellow (in our species), white or pink, in axillary peduncled umbels; calyx campanulate, with short subequal teeth; petals with rather long claws; standard suborbicular; keel incurved, rostrate; ovary sessile, many-ovuled; style incurved, with small capitate stigma; pod terete or 4-angled, separating into oblong or cylindric segments. (Diminutive of Latin *corona*, crown; referring to the arrangement of the fls.) About 20 species in Eu. and the Mediterr. region, mostly herbaceous.—The following species are ornamental shrubs valued for their continuous blooming all summer.

**C. Emerus** L. **SCORPION SENNA**. Shrub to 3 m., usually lower; brts., green, striate, pubescent only when young; lfts. 7-9, obovate, 1-2, rarely 3 cm. long, rounded or truncate at apex, cuneate, grayish green, slightly pubescent when young: fls. yellow, 1.5-2 cm. long, 2-3 on a slender stalk 2-5 cm. long; standard with a reddish brown line on back; pod about 5 cm. long, slender, terete. Fl.v-x. B.M.445(c). R.I.22:t.182(c) B.C.2:855. S.H. 2:f.66a-k. Gng.5:36. C. and S. Eu. Intr. before 1600. Zone V.

Closely related species: **C. emeroides** Boiss. Lfts. usually 7, sometimes 5: fls. 1.5-1.8 cm. long, 4-7 in each umbel: pod 5-7 cm. long. R.I.22:t.182(c). S.H. 2:f.66,l. (*C. Emerus* var. *e. Wohlf.*) S. E. Eu. Cult. 1880. Zone VI.—*C. juncea* L., *C. glauca* L., *C. scorpioides* W. Koch and *C. valentina* L. are in cult., but probably not hardy within our area.

35. **HEDÝSARUM** L. Perennial herbs or shrubs: lvs. odd-pinnate; lfts. opposite, without stipels; stipules scarious: fls. white to purple in axillary racemes; calyx campanulate, with subequal teeth; standard obovate, scarcely clawed; wings shorter than standard, clawed, auriculate; keel truncate at apex, usually straight; upper stamen free; ovary sessile; style filiform, incurved at apex, with small terminal stigma: pod flattened, jointed, separating at maturity into suborbicular or square segments. (Ancient Greek name.) About 70 species, mostly herbaceous, in temp. regions of the n. hemisphere.

**H. multijugum** Maxim. Shrub to 1.5 m., of sparse habit; young brts. finely pubescent, zigzag in growth: lfts. 21-41, ovate or obovate to oblong, 6-15 mm. long, obtuse or retuse, appressed pubescent beneath like the rachis: fls. rosy magenta, 1.5-2 cm. long, short-pediceled, in upright long-stalked racemes 15-25 cm. long; calyx split on one side; standard greenish yellow at base: pod 1-2-seeded, tuberculate, its segments suborbicular. Fl. vi-ix. Mongolia.—Only the following var. in cult: **H. m. apiculatum** Sprague, var. Lfts. 17-27, apiculate, glabrous above. Fl. vi-ix. B.M.8091(c). Gt.31:t.1122(c). Gn.53:408,t(c). G.C.III.18:8(h),9. S.L.191(h). Intr. about 1880. Zone III. Graceful shrub valuable for its late fls.

36. **ALHĀGI** Desv. Deciduous spiny shrubs: lvs. small, simple, entire; stipules small: fls. red, in axillary few-fl'd. racemes with rigid spiny rachis, toward the end of brs.; calyx campanulate, with 5 subequal teeth; standard obovate, as long as the curved wings and the obtuse incurved keel; upper stamen free; style slender, incurved, with small terminal stigma: pod linear, torulose, not separating into segments. (Its Arabic name.) Three species from Greece and Egypt to the foot of the Himal.

**A. Pseudalhagi** (Bieb.) Desv. Low spiny shrub, glabrous or nearly so: lvs. oblong, obtuse, 1.5-3 cm. long; fls. about 8 mm. long. Fl. vii-viii. (*A. camelorum* Fisch., *A. kirghisorum* Schrenk.) S. Russia to Himal. Cult. 1878. Zone VI? Of no ornamental value; occasionally grown in bot. gardens; for sunny rockery.—*A. maurorum* Med. (E.N.III.3:312) and *A. graecorum* Boiss. are similar, but probably tenderer.

37. **DESMÓDIUM** Desv. Herbs or shrubs: lvs. odd-pinnate, with 3-5, rarely 1, usually large stipellate lfts., stipulate: fls. small, mostly purple, in axillary or terminal racemes or panicles; calyx turbinate or campanulate, more or less 2-lipped; standard oblong to orbicular; wings adhering to the keel; upper stamen free at base, adnate toward the middle; style incurved, with small terminal stigma: pod lobed or jointed, usually separating into segments at maturity. (From Greek, *desmos*, chain; referring to the jointed pod.) About 150 species in N. and S. Am., E. and S. Asia, S. Afr., Austral., chiefly in the tropics.

**D. tiliaefolium** (Don) G. Don. Upright shrub to 2 m.; brts. appressed-pubescent: lfts. 3, the terminal broad-obovate or rhombic-ovate, usually broad-cuneate, 5-10 cm. long, long-stalked, the lateral broad-ovate, smaller, short-stalked, slightly pubescent above and more densely pubescent beneath or nearly glabrous; petioles 3-7 cm. long; stipules deciduous: fls. pale lilac to dark pink, about 1.2 cm. long, in terminal large panicles; pedicels slender, 5-7 mm. long; calyx with broad and short teeth; keel shorter than wings: pod 5-7 cm. long, 6-9-seeded, appressed-pilose. Fl. viii-x. B.M.2867(c). R.H. 1902:458(h),459. S.H.2:f.68a-f. Himal. Cult. 1883. Zone VII? Ornamental shrub valued for its late fls.

Related species: *D. spicatum* Rehd. Lfts. short-pubescent on both sides; terminal lft. orbicular-obovate, 3-4 cm. long, abruptly mucronate at apex, the lateral ones orbicular-ovate, smaller; petioles 1-3 cm. long; stipules persistent; fls. rosy-lilac to rose-carmine in many-fld. spikes to 10 cm. long, sometimes with smaller ones at base; fr. curved, to 5 cm. long, usually 5-seeded, appressed-pubescent. Fl.ix-x. B.M.8805(c). (*D. cinerascens* Hutchins., not Franch., nor Gray.) S. W. China. Intr. 1896. Zone VII.—*D. floribundum* G. Don. Shrub to 1.5 m.; lfts. dark green and glabrous above, gray, appressed-pilose and reticulate beneath, the terminal one elliptic or rhombic-elliptic, 5-7.5 cm. long, obtuse and mucronulate, narrowed toward the abruptly rounded base, the lateral ones smaller, rounded at base; petiole 1.5-3.5 cm. long, slightly pilose; fls. rosy-purple, in large terminal panicles; calyx-teeth ovate to lance-ovate; pod 1-2 cm. long, 3-5 seeded, appressed-pilose. Fl.xi. B.M. 2960(c). B.R.967(c). (*D. dubium* Lindl.) Himal., China. Intr. 1823 and again from China 1908. Zone VII.

38. **LESPÉDEZA** Michx. Herbs or deciduous shrubs or subshrubs; winter-buds with several outer scales: lvs. 3-foliolate, rarely 1-foliolate; lfts. entire, without stipels; stipules subulate, deciduous; fls. usually purple to pink or white to yellowish, in axillary racemes or heads, sometimes partly apetalous; pedicels not articulate, usually 2 in the axils of persistent bracts; calyx with short, subequal teeth; petals clawed; standard obovate to oblong; wings oblong, free or slightly adhering to keel; keel obtuse, incurved; upper stamen free, rarely adhering; style incurved, with small terminal stigma; pod short, ovate or elliptic, compressed, rarely subglobose, often reticulate, 1-seeded, not dehiscent. (The name is a misspelling, intended for Cespedez, a Spanish governor of Florida who aided Michaux.) More than 50 species in N. Am., Asia and Australia.

- A. Lfts. 2-5 cm. long; petioles 1.5-3.5 cm.; fls. usually in slender racemes.  
 B. Racemes slender-stalked: lfts. obtuse.  
 C. Suffrutescent: calyx-teeth longer than tube: lfts. obtuse. .... 1. *L. Thunbergii*  
 CC. Shrubby: calyx-teeth as long or shorter than tube: lfts. acute to obtuse. 2. *L. bicolor*  
 BB. Racemes short-stalked or subsessile. .... 3. *L. Maximowiczii*  
 AA. Lfts. 1-2 cm. long, linear-oblancoolate: fls. yellowish, in heads. .... 4. *L. cuneata*

1. *L. Thunbergii* (DC.) Nakai. Shrub to 2 m.; young brts. grooved, pubescent at first: lfts. 3, elliptic to elliptic-oblong, 3-5 cm. long, acute to obtusish, appressed-pubescent beneath, the middle one long-stalked; petiole appressed-pubescent: fls. rosy-purple, 1.2 cm. long, in racemes 8-20 cm. long, forming terminal panicles 60-80 cm. long; calyx-teeth lanceolate; standard apiculate; pod elliptic, 6-8 mm. long, silky. Fl.ix-x. B.M.6602(c). R.H. 1873:210,t(c). F.S.18:t.1888(c). G.F.5:115. B.C.4:1845. S.L.211(h). (*L. Sieboldii* Miq., *L. racemosa* Dipp., *L. formosa* Koehne in part, *Desmodium penduliflorum* Oudem.) China, Japan. Intr. 1837. Zone (V). Valued for its late profuse fls.

Closely related species: *L. japonica* Bailey. Subshrub with upright stems; lfts. obtuse to emarginate: racemes 3-12 cm. long; fls. white; standard obtuse; ovary pilose. (*L. j.* var. *albiflora* Nakai, *L. formosa* var. *albiflora* Schindl.) Jap. Cult. 1900. Zone (V).—*L. j. intermedia* (Nakai) Nakai, var. Fls. rosy-purple. Probably not in cult.

2. *L. bicolor* Turcz. Shrub to 3 m.; brts. angular, sparingly pubescent at first: lfts. 3, broad-oval to obovate, 2-5 cm. long, rounded at apex and bristle-tipped, dark green above, grayish green beneath and sparingly appressed-pubescent, the middle one long-stalked; petiole glabrous or sparingly hairy: fls. about 1 cm. long, rosy-purple, in axillary racemes with the slender stalk 4-8 cm. long, forming loose and large panicles at the end of the brs.; calyx silky, with ovate to triangular-lanceolate teeth; pod broad-elliptic, rostrate, 6-8 mm. long, slightly appressed-pubescent. Fl.viii-ix. G.F.5:114. B.C.4: 1844. S.H.2:f.70f,71a-d. N. China to Manch. and Japan. Intr. 1856. Zone IV. Handsome shrub, valuable for its late fls.

3. *L. Maximowiczii* Schneid. Shrub to 4 m.; brts. terete, pubescent when young; lfts. elliptic-ovate to ovate, 2.5-5 cm. long, acuminate or acute, rounded or broad-cuneate at base, pale and silky-pubescent beneath; petiole 1-2.5 cm. long, silky-pilose; fls. purple, 8-10 mm. long, in slender racemes 3-8 cm. long, with fls. to the base; calyx-lobes aristate, longer than tube; pedicels 1 mm. long or less; pod elliptic-lanceolate, acuminate, 1-1.5 cm. long. Fl. VII-IX; fr. IX-X. Nakai, Lespedeza, 34. (*L. Buergeri* var. *praecox* Nakai, *L. Fribeana* Schindl.) Korea. Intr. 1917. Zone V.

Related species: *L. Buergeri* Miq. Shrub to 6 m.: lvs. elliptic-ovate to ovate-oblong, acute to obtuse; fls. purple-lilac, in axillary racemes 4-10 cm. long, bracted to near base; calyx-lobes lanceolate or ovate, acute, about as long as tube; pedicels 1-3 mm. long. Nakai, Lespedeza, 30. S.H.2:f.70k. Jap. Intr. 1894. Zone V.—*L. cyrtobotrya* Miq. Shrub to 5 m.: lfts. elliptic to obovate, obtuse to emarginate, appressed-pubescent and glaucescent beneath; petioles on flowering brts. short; racemes dense, shorter than lvs.; fls. purple; calyx-lobes acuminate. Nakai, Lespedeza, 43, 45. S.H.2:f.70h (1). Jap., Korea. Intr. 1899. Zone V.—*L. Delavayi* Franch. Shrub to 2 m.: lfts. broad-elliptic, rounded at apex, silky white-tomentose beneath; fls. deep violet, changing to dark purple, in large terminal panicles; calyx densely silky. R.H.1890:216. M.O.146. S. W. China. Cult. 1890. Zone VII?

4. *L. cuneata* G. Don. Subshrub to 1 m. with virgate brs.: lfts. 3, subsessile, linear-oblancheolate, 1-2 cm. long, cuneate, truncate or emarginate, silky-pubescent beneath; petiole 5-15 mm. long; fls. whitish, subsessile, 6 mm. long, in dense clusters shorter than the lvs.; calyx deeply divided into linear-lanceolate teeth,  $\frac{2}{3}$  as long as corolla; pod broad-oval, 1.5-2 mm. long. Fl. VIII-IX. S.H.2:f.70l, 71k-m. (*L. sericea* Miq., not Benth., *L. juncea* var. *cuneata* Bean.) China, Korea, Japan, Formosa, Himal. Intr. 1892. Zone V. Of little ornamental value.

39. *CAMPYLÓTROPIS* Bge. Deciduous shrubs: lvs. 3-foliolate; the terminal lfts. slender-stalked; fls. usually purple, in axillary racemes crowded into panicles at the end of the brs.; pedicels slender, solitary in the axils of deciduous or persistent bracts, articulate below the calyx; calyx campanulate, 5-parted, the 2 upper teeth connate; keel curved, rostrate; otherwise much like *Lespedeza*. (Greek *kampylos*, curved, and *tropis*, keel; referring to the curved keel.) About 40 species in E. and S. Asia.

*C. macrocarpa* (Bge.) Rehd. Shrub to 1 m.; brts. subterete, silky, pubescent when young; lfts. elliptic to oblong, 2-5 cm. long, obtuse to emarginate, glabrous above, silky-pubescent below; petioles 1.5-3.5 cm. long; fls. purple, about 1 cm. long, in rather dense racemes to 8 cm. long; pedicels 5-7 mm. long; bracts deciduous; calyx-teeth acute, shorter than tube; pod elliptic, 1.2-1.5 cm. long. Fl. VIII-IX. S.H.2:f.69h-1, 70a. (*C. chinensis* Bge., *Lespedeza macrocarpa* Bge.) N. and C. China. Cult. 1871. Zone V. Similar to *Lespedeza Thunbergii*.

Related species: *C. Falconeri* Schindl. Brts. striate, appressed-pubescent; lfts. obovate, 1-4 cm. long, obtuse or emarginate, pubescent beneath; fls. purple, in dense racemes, 5-20 cm. long; pedicels 2-5 mm. long; bracts persistent; pod 7-9 mm. long, densely silky-pubescent. B.R.32:28 (c). (*Oxyrhaphis macrostyla* Lindl., not Wall., *Lespedeza dubia* Schindl., *L. eriocarpa* Bak., partly.) N. W. Himal. Intr. 1837 and 1920. Zone VII?

Tribe 8. PHASEOLEAE Taub. Lfts. 3, with stipels: rachis of infl. usually thickened at the insertion of the fls.: pod 2-valved, dehiscent.

40. *PUERARIA* DC. Twining herbs or shrubs: lvs. 3-foliolate, with large stipellate sometimes lobed lfts., stipulate; fls. blue-purple or violet in long and dense axillary racemes; bracts and bractlets small, caducous; calyx campanulate, with unequal lobes, the 2 upper ones more or less connate;

standard orbicular or obovate, auricled, clawed; wings oblong, usually adhering to the keel in the middle; upper stamen free at base, adnate at the middle, rarely free; ovary sessile, many-ovuled; style incurved, with small terminal stigma: pod elongated, compressed or terete, 2-valved. (M. N. Puerari, botanist of Geneva; 1765-1845.) More than 10 species in trop. Asia, Japan, and Guinea.

**P. Thunbergiana** (Sieb. & Zucc.) Benth. KUDZU-VINE. High climbing vine with fleshy tuberous root; brts. striped, appressed-pilose; lfts. entire or slightly lobed, the middle one rhombic-ovate, to 18 cm. long, the lateral ones obliquely ovate, smaller, appressed-pubescent, sometimes glabrescent above, ciliate; petioles 10-20 cm. long, pubescent; fls. violet-purple, 1.5 cm. long, in dense upright pubescent racemes to 25 cm. long; stamens usually all connate: pod oblong-linear, 4-9 cm. long and 6-8 mm. broad, hirsute. Fl.vii-viii. Gt. 45:t.1429(c). G.F.6:505. A.G.13:387;21:505. R.H.1891:31. Gn.61:161. G.W. 5:605. (*P. hirsuta* Schneid., not Kurz, *Pachyrhizus Thunbergianus* S. & Z.) China, Japan. Cult. 1885. Zone VI?; stems usually winter-killed, but grows again from the root. Cult. for ornament as a fast growing large-leaved vine, also as a fibre plant; the root yields starch.

#### Fam. 41. ZYGOPHYLLACEAE Lindl. CALTROP FAMILY

Shrubs, rarely trees, or subshrubs, rarely annual herbs: lvs. opposite, rarely alternate, usually abruptly pinnate, rarely odd-pinnate or simple, stipulate: fls. perfect, regular, usually in terminal circinate infl.; sepals 5, rarely 4, imbricate, rarely valvate, sometimes wanting; stamens 10 or 8, rarely 15, obdiplostemonous, often with stipular appendages; anthers affixed in the middle; ovary superior, 4-5-, rarely 2-12-celled, often with disk at base; ovules 1-several, pendulous; style and stigma 1: fr. a caps., rarely a berry or drupe or splitting into carpels.—About 21 genera with 150 species.

A. Lvs. opposite, pinnate: fr. a capsule.....1. *Zygophyllum*  
 AA. Lvs. alternate, simple: fr. a drupe.....2. *Nitraria*

1. **ZYGOPHYLLUM** L. Low, usually prostrate shrubs or subshrubs, rarely annuals, with fleshy stems and lvs.: lvs. abruptly pinnate, with usually 1 pair of lfts.: fls. solitary or 2, white, yellow or red, 4-5-merous; petals clawed; stamens usually with appendages at base; disk angled and fleshy: fr. a 2-5-angled caps., sometimes winged; cells with 1-several seeds; seeds with thin albumen and oblong cotyledons. (Greek *zygos*, yoke, and *phyllon*, leaf; referring to the paired lfts.) About 60 species, chiefly in the desert regions of the Old World.

**Z. xanthoxylum** (Bge.) Maxim. Shrub to 1.5 m., often spinescent; brts. glabrous: lfts. 2, linear, about 2 cm. long, fleshy, grayish green: fls. 4-merous; petals cuneate-oblong; stamens longer than petals: fr. 2-3-winged, about 2.5 cm. long and nearly as broad, indehiscent. Linnaea, 17:1,t. D.L.2:358. (*Sarcocyzgium* x. Bge.) Mongolia. Intr. ? Zone IV? Possibly cult. in some botanical garden; inhabits saline deserts and is difficult to grow.—*Z. Fabago* L., sometimes cult., is herbaceous.

2. **NITRÀRIA** L. Deciduous shrubs with usually spiny brs.: lvs. spatulate, fleshy, entire or crenate, stipulate: fls. small, yellowish green in terminal loose circinate infl.; sepals 5, imbricate, connate at base, persistent; petals valvate, concave; stamens 15-10, without appendages; ovary 3-celled; stigmas 3; each cell with 1 ovule: drupe with thin exocarp and bony endocarp,

1-seeded. (Name referring to the fact that the plant yields soda.) Four species in S. Russia, C. Asia and E. Siberia, N. Afr., Austr.

**N. Schöberi** L. Low spiny shrub with appressed-silky brts.: lvs. fascicled, oblong-spatulate, 2-3 cm. long, entire, finely silky; stipules deciduous: fls. about 8 mm. across; sepals triangular, short; petals oblong: fr. conic-oblong, 8-10 mm. long. E.N.III.4:91. S.H.2:f.73a-k. S. Russia to E. Siberia and Baluch. Cult. 1819. Zone IV?—Of only botanical interest and rarely cult. in botanical gardens; inhabits saline deserts.

#### Fam. 42. RUTACEAE Juss. RUE FAMILY

Shrubs, trees or herbs; lvs. alternate, rarely opposite, simple or compound, usually with pellucid dots, estipulate: fls. usually perfect and usually regular, 4-5-merous; sepals often cohering, imbricate; petals imbricate or valvate, sometimes wanting; stamens 8-10, rarely 15 or more, inserted at base of a ring-like or cup-like crenate or dentate disk; ovary superior, often raised on a prolongation of the floral axis; carpels 4-5, rarely 1-3, connate or sometimes free at base and united by the styles or stigmas; carpels usually 2-ovuled; styles or stigmas connate: fr. a caps. or berry, or separating into several dehiscent or drupe-like fruitlets, rarely winged.—About 120 genera with about 1000 species, mostly in trop. countries, but extending into the temp. regions of Eurasia and America.

- A. Lvs. compound.
  - B. Lvs. pinnate.
    - C. Lvs. alternate.
      - D. Lvs. odd-pinnate; brs. prickly: fr. of dehiscent follicles.....1. *Zanthoxylum*
      - DD. Lvs. doubly pinnately dissected; small subshrubs: fr. a dehiscent capsule..5. *Ruta*
    - C. Lvs. opposite, odd-pinnate: trees.
      - D. Winter-buds free in the axils of the lvs.: fr. of dehiscent follicles.....2. *Erodia*
      - DD. Winter-buds enclosed in base of petiole: fr. a drupe.....7. *Phellodendron*
  - BB. Lvs. 3-foliolate.
    - C. Lvs. opposite, evergreen: fls. conspicuous, white: fr. dehiscent.....4. *Choisya*
    - CC. Lvs. alternate: deciduous.
      - D. Brs. unarmed: fls. greenish-white in corymbs: fr. a winged samara.....6. *Ptelea*
      - DD. Brs. spiny, bright green: fls. white, before the lvs.: fr. a large berry....9. *Poncirus*
- AA. Lvs. simple.
  - B. Lvs. deciduous: fls. small, greenish, in racemes or solitary: fr. a dehiscent capsule.
    - 3. *Oriza*
  - BB. Lvs. evergreen: fls. white, in dense terminal panicles: fr. a small red or black drupe.
    - 8. *Skimmia*

**1. ZANTHÓXYLUM** L. Deciduous or evergreen aromatic trees or shrubs, sometimes scandent, usually prickly, the prickles mostly in infrastipular pairs; winter-buds small, superposed, with indistinct scales: lvs. alternate, odd-pinnate, rarely 3-foliolate; lfts. opposite, sessile or subsessile, entire or serrate, with pellucid dots: fls. small, dioecious or polygamous, in panicles or rarely fascicled, 3-8-merous; perianth simple or consisting of sepals and petals; filaments subulate; staminate fls. with rudimentary carpels; carpels in pistillate fls. 5-1, usually distinctly stipitate, 2-ovuled; styles distinct or connate, with capitate stigma: mature carpels with a thin exocarp separating from the endocarp, 2-valved, each with 1 shiny black subglobose or ellipsoid albuminous seed. (Greek *xanthos*, yellow, and *xylon*, wood.) Syn.: *Xanthoxylum* Gmel. About 150 species in trop. and subtrop. regions in both hemispheres; few in temp. regions.

- A. Fls. before the lvs. in axillary fascicles: lfts. 5-11, pubescent beneath....1. *Z. americanum*
- AA. Fls. after the lvs. in corymbs at end of lateral or rarely terminal brts.: lfts. glabrous or nearly glabrous beneath.
  - B. Lf.-rachis broadly winged: lfts. 3-5, 3-12 cm. long.....2. *Z. alatum*
  - BB. Lf.-rachis not or slightly winged.
    - C. Lfts. subsessile; prickles straight: fr. not beaked.
    - D. Prickles stout with much flattened broad base: lfts. 7-11, 1.5-5 cm. long.
      - 3. *Z. simulans*

md. Prickles slender: lfts. 11-21, not more than 3 cm. long.

- e. Prickles in pairs: fls. with simple perianth.....4. *Z. piperitum*  
 ss. Prickles solitary: fls. with sepals and petals.....5. *Z. schinifolium*  
 cc. Lfts. petioluled, 7-13, 3-7 cm. long; prickles mostly recurved.....6. *Z. stenophyllum*

Subgen I. EUZANTHOXYLUM Endl. Fls. with simple perianth.

1. *Z. americanum* Mill. PRICKLY ASH (Toothache-tree). Shrub or small tree, to 8 m.; young brts. pubescent, with prickles about 1 cm. or less long: lfts. 5-11, ovate or elliptic, 3-6 cm. long, acuminate, entire or crenulate, dark green above, lighter and pubescent beneath, particularly on the midrib: fls. before the lvs., small, yellowish green, in axillary clusters on last year's brts.; pedicels of pistillate fls. 1-6 mm. long, of staminate shorter: fr. blackish, about 5 mm. long; seeds black. Fl. iv-v; fr. viii. M.A.1:33(c). E.N.III.4:f. 65A-G. B.B.2:444. S.H.2:f.74a-i. (*Z. frazineum* Willd.) Que. to Neb. and Va. Intr. about 1740. Zone III.

2. *Z. alatum* Roxb. var. *planispinum* (Sieb. & Zucc.) Rehd. & Wils. Shrub to 4 m.; brts. glabrous; prickles with broad flattened base to 2 cm. long: lfts. 3-5, ovate to ovate-lanceolate, 3-12 cm. long, the terminal one the largest, acuminate, finely serrulate, glabrous; rachis and petioles broadly winged: fls. yellowish, in small panicles 3-4 cm. long; carpels about 5 mm. long, red, warty; seeds lustrous black. Fl. vi; fr. ix. B.M.8754(c). S.I.2:t. 34(c). R.H.1913:17(h). G.35:213. (*Z. pl.* Sieb. & Zucc.) China, Korea, Jap. Cult. 1880. Zone VI. The typical form from the Himal. differs chiefly in its 5-11 lfts.

3. *Z. simulans* Hance. Spreading shrub to 3 m. or small tree to 7 m.: brts. slightly pubescent or glabrous; the stout prickles 6-20 mm. long with a very broad and flattened base to 1.5 cm. wide: lfts. 7-11, ovate to ovate-oblong, 1.5-5 cm. long, the terminal one usually stalked, crenate-serrulate, glabrous; rachis and often the midrib of the lfts. beneath prickly: fls. in sessile corymbs or short panicles 4-6 cm. broad: fr. reddish. Fl. vi-vii; fr. ix-x. D.L.2:348(l). S.H.2:f.74k-m. (*X. Bungei* Hance 1875, not 1866.) N. and C. China. Intr. 1869. Zone V. Handsome shrub with lustrous foliage.

4. *Z. piperitum* (L.) DC. Shrub or small tree; brts. pubescent when young; prickles rather slender, to 1 cm. long, in infrastipular pairs: lfts. 11-19, ovate to oblong-ovate, 1-3.5 cm. long, the terminal one subsessile, emarginate, cuneate, remotely toothed with a conspicuous gland at the base of each tooth, glabrous; rachis pubescent above, often with a few prickles: fls. greenish, in small corymbs 1.5-3 cm. across; style slender: fr. reddish, gland-dotted; seeds black. Fl. vi; fr. ix. S.I.1:t.52(c). E.N.III.4:f.65r-L. S.H.2:f. 74n-s. N. China, Korea, Japan. Cult. 1877. Zone VI?

Related species: *Z. Piaszkii* Maxim. Shrub to 3 m.: lfts. 7-15, ovate or obovate to oblong, 8-25 mm. long, slightly crenulate or nearly entire; rachis glabrous: fls. in small corymbs; style short: fr. reddish, warty. W. China. Intr. 1897. Zone V or VI.

Subgen II. FAGARA (L.) G. Don. Fls. with sepals and petals. (*Fagara* L.)

5. *Z. schinifolium* Sieb. & Zucc. Shrub or small tree; brts. glabrous, with a solitary prickle to 1.2 cm. long at each node: lfts. 13-21, elliptic-lanceolate to lanceolate, 1.5-3.5 cm. long, emarginate at apex, crenate-serrulate, glabrous; rachis prickly: fls. greenish in terminal short-stalked corymbs 5-10 cm. across: fr. greenish or brownish, about 4 mm. long; seeds blue-black. Fl. vi; fr. ix-x. Ad.1.0:t.326(c). S.I.2:t.33(c). S.H.2:f.75a-c. (*Fagara schinifolia* Engl.) Jap., Korea, E. China. Cult. 1877. Zone V. Graceful shrub with neat foliage and rather conspicuous fruit in fall.

6. *Z. stenophyllum* Hemsl. Scandent shrub to 3 m.; brts. glabrous, with small curved or straight prickles: lfts. 7-13, ovate-oblong to lanceolate, 3.5-7

cm. long, acuminate, cuneate, denticulate, glabrous; rachis usually with slender hooked prickles: fls. in terminal loose corymbs 5-9 cm. across; stamens exserted: fr. reddish, beaked; seeds black. Fls.vi. (*Fagara stenophylla* Engl.) W. China. Intr. 1908. Zone VII?

2. **EVODIA** Forst. Deciduous or evergreen trees or shrubs; winter-buds naked: lvs. opposite, petioled, simple or pinnate with entire or nearly entire punctate lfts.: fls. unisexual, usually 4-merous, sometimes 5-merous, small, in terminal or axillary panicles or corymbs; sepals imbricate; petals valvate or slightly imbricate; stamens 4-5, at the base of a cupular disk; carpels 4-5, nearly free or connate, 2-ovuled; style cylindric: fr. of 4-5 2-valved pods, 1-2-seeded; seeds ellipsoid or subglobose; albumen with straight embryo. (Greek *euodia*, pleasant odor.) About 50 species in E. and S. Asia, Austr. and Polynesia.—Sometimes planted as ornamental trees.

- A. Lfts. 5-11, glabrous beneath or pubescent only along the midrib: fr. beaked at apex.  
 B. Lfts. subsessile or short-stalked, with long villous hairs along the midrib and sometimes along the veins and green beneath: beak of fr. short.....1. *E. Daniellii*  
 BB. Lfts. distinctly stalked, glabrous or with short hairs along the base of the midrib and glaucous or pale beneath: beak of fr. long.....2. *E. hupehensis*  
 AA. Lfts. 7-15, pubescent beneath: fr. rounded at apex.....3. *E. officinalis*

1. **E. Daniellii** (Benn.) Hemsl. Small tree: brts. pubescent at first, red-brown with large pale lenticles the second year: lfts. 7-11, ovate to oblong-ovate, 5-10 cm. long, acuminate with an obtusish point, rounded at base, sometimes broad-cuneate or subcordate, finely crenulate, light green beneath; petiole 3-6 cm. long: fls. 3-4 mm. long, whitish, in puberulous corymbs 10-16 cm. across, stalks of the lower brs. 3-9 cm. long: pods about 8 mm. long, slightly puberulous or nearly glabrous with a short usually hooked beak; seeds ellipsoid, 3.5 mm. long, lustrous brownish black or black. Fl.vi; fr.ix. H.B.1923:61. (*Zanthoxylum* D. Benn.) N. China, Korea. Intr. 1905. Zone V.

2. **E. hupehensis** Dode. Tree to 20 m.; brts. glabrous, purple-brown, lenticellate: lfts. 7-9, rarely 5, ovate to oblong-ovate, 6-12 cm. long, acuminate, oblique and usually rounded at base, rarely cuneate, entire or slightly crenulate, pale beneath and glabrous, except slightly pilose along the midrib: fls. whitish, in broad-pyramidal puberulous corymbs 8-16 cm. across; petals 3-4 mm. long: pods reddish brown, without the slender recurved beak 5 mm. long, glandular, short-pilose or glabrous; seeds ellipsoid, lustrous, black. Fl. vi-vii; fr.ix-x. R.H.1924:81. G.C.78:429. C. China. Intr. 1907. Zone V.

Closely related species: **E. Henryi** Dode. Tree to 8 m.; brts. pubescent at first: lfts. 5-9, oblong-ovate to lance-ovate, rounded or narrowed at base, crenulate: corymbs 5-6 cm. across; pods pubescent, 5-6 mm. long. C. China. Intr. 1907. Zone V.—A species with beaked fr. and pubescent lfts. is *E. velutina* Rehd. & Wils. Tree to 12 m.; brts. velutinous: lfts. 7-11, oblong-ovate to lance-oblong, 6-10 cm. long, nearly rounded at base, soft-pubescent on both sides: infl. broad-paniculate, to 16 cm. broad: pods 4-5 mm. long, with short beak. W. China. Intr. 1908. Zone VI?—A species with obtuse fr. and glabrous lfts. is *E. glauca* Miq. Tree to 15 m.: lfts. usually 7, rarely to 11, ovate-lanceolate, long-acuminate, broad-cuneate at base, obscurely crenulate, glaucous and glabrous beneath except pilose along midrib near base: corymbs 15-20 cm. broad: pods 4-5 mm. long, reticulate on back. S.I.2:t.34.f.1-9 (c. as *E. meliaefolia*). Useful Pl. Jap. 2:t.538. Jap., E. and C. China. Cult. 1915. Zone VII?

3. **E. officinalis** Dode. Shrub or small tree to 5 m.; brts. pubescent while young: lfts. 7-15, short-stalked, ovate or elliptic-ovate, rarely oblong, 5-8 cm. long, acuminate or short-acuminate, cuneate to broad-cuneate, rarely nearly rounded at base, glabrous above except on midrib or sparingly hairy when young, pubescent beneath: infl. a pubescent corymb 6-11 cm. broad;

Pods reddish, warty, rounded at apex, 5-6 mm. long; seeds suborbicular, 4 mm. long, shining steel-blue. Fl.vii; fr.x-xi. C. and W. China. Intr. 1907. Zone VI?

Closely related species: *E. Bodiniëri* Dode. Bush to 3 m.: lfts. 5-11, elliptic-ovate to narrow-oblong, 4-10 cm. long, short and obtusely acuminate, cuneate, glabrous above, pubescent at least on the midrib beneath: infl. loose, 6-13 cm. across, pubescent. C. and W. China. Intr. 1910. Zone VI?

3. **ORIXA** Thunb. Deciduous shrub; winter-buds small, with imbricate scales: lvs. alternate, entire, short-petioled, with pellucid dots: fls. dioecious, greenish, small, 4-merous, on last year's brts.; sepals ovate, connate below; petals elliptic, imbricate in bud; staminate fls. in racemes, with a 4-lobed disk and 4 stamens shorter than petals; pistillate fls. solitary with 4 small sterile stamens and 4 carpels united at apex by the short style with 4-lobed stigma: fr. of 4 compressed, 2-valved carpels, cohering only at base, each with a subglobose black albuminous seed; embryo slightly curved with broad cotyledons. (Japanese name.) One species.

*O. japonica* Thunb. Shrub to 3 m., with spreading brs. pubescent when young: lvs. obovate to oblong, 5-12 cm. long, obtusely pointed, entire or finely crenulate, bright green above, pubescent on the veins at least when young; petiole about 1 cm. long: fls. about 6 mm. across; fr. almost 8 mm. high, 1.8 mm. across, greenish brown. Fl.iv-v. I.T.3:t.101. Gt. 35:t.1232(c). E.N.III.4:f.67r-z. B.C.4:2407. S.L.242(h). (*Celastrus japonica* K. Koch, *Evodia ramiflora* Gray.) Japan. Cult. 1870. Zone V. Shrub with bright green lvs. of pungent odor when bruised.

4. **CHOÏSYA** Kunth. Evergreen shrub, aromatic: lvs. opposite, 3-foliate; lfts. entire, subsessile, with pellucid dots: fls. white, rather large, perfect, 5-merous, in terminal and axillary slender-stalked 3-6-fld. cymes clustered at the end of the brts.; sepals ovate, thin, deciduous; petals about 4 times as long as sepals, imbricate, finally spreading; stamens 10, much shorter than petals, with flattened, lanceolate filaments, inserted at base of the thick gynophore; carpels 5, connate at base, each with 2 ovules; style with 5-lobed stigma: fr. of 5 2-lobed carpels, with the endocarp separating. (Named for J. D. Choisy, Swiss botanist; 1799-1859.) One species.

*C. ternata* Kunth. MEXICAN ORANGE. Shrub to 3 m. forming a round bush; young brts. pubescent: lfts. 3, rarely 2 or 4, obovate-oblong to oblong, 3-7 cm. long, obtuse, cuneate, leathery, glabrous; petiole 1-5 cm. long, pubescent: fls. 2.5-3 cm. across, fragrant; petals oblong-obovate. Fl.(iv)v-vi. R.H.1869:332,t(c). Gt.25:t.876(c). Gn.12:232,t(c);86:948(h). G.C.41:382. B.S.1:341. J.L.40:f.3(h). (*C. grandiflora* Reg.) Mexico. Intr. 1866. Zone VI? Ornamental shrub with fragrant white fls. in spring.

5. **RÛTA** L. RUE. Herbs or subshrubs, glandular-punctate and aromatic: lvs. alternate, simple, 3-foliate or pinnately compound: fls. perfect, regular, 4-5-merous, yellow, in terminal cymes or corymbs; sepals connate at base, persistent; petals oblong-obovate, concave with denticulate or fringed margin, imbricate in bud; stamens 8-10; disk large, very deeply 4-5-lobed; style with small stigma; fr. a 4-5-lobed capsule with many-seeded cells, dehiscent or indehiscent; seeds angular, albuminous; embryo slightly curved. (Ancient Latin name of the plant.) About 40 species. Mediterr. region and Canary Is. to E. Siberia.

*R. graveolens* L. RUE (HERB OF GRACE). Evergreen subshrub to 1 m., glabrous: lvs. bipinnately dissected, 6-12 cm. long, with obovate-oblong to

obovate lobes, bluish green, of strong odor: fls. dull yellow, nearly 2 cm. across, in terminal large and loose cymes; petals very concave, with fringed margin. Fl.vi-ix. F.D.21:t.2088(c). R.L.5:t.157(c). H.A.6:t.8(c). S. Eu. Cult. since ancient times and naturalized elsewhere in Eu. and occasionally in N. Am. Zone V.—*R. g. variegata* West., var. Lvs. variegated with white. —An old medicinal plant of no ornamental value. There are several closely related species in cult., but these are even less woody.

A closely related genus is *Boenninghausenia* Meissn. differing chiefly in the smaller whitish fls., stipitate ovary and carpels being connate only at base. The only species is *B. albiflora* (Hook.) Heynhold. Glabrous slender subshrub to 0.5 m.: lvs. up to thrice pinnate; lfts. broad-obovate to oval, 4–15 mm. long, obtuse: fls. in loose leafy panicles, white, 6–8 mm. long; carpels about 4 mm. long. Fl.viii-ix. E.N.III.4:130, f.B-F. Himal. to E. Asia. Cult. 1885. Zone VI? —Rarely cult.

6. **PTELEA** L. Deciduous shrubs or small trees, aromatic; buds superposed, small, pubescent, the terminal one wanting: lvs. alternate, petioled, 3-foliolate, rarely 4–5-foliolate; lfts. subsessile, entire or crenulate, punctate with pellucid dots: fls. small, greenish white, polygamous, 4–5-merous, in corymbs terminal on short lateral brts.; petals oblong, short-pubescent outside, 3–4 times longer than the sepals, both imbricate; stamens 4–5, shorter than petals, in the staminate fls. inserted at the base of a short gynophore bearing a sterile ovary, the filaments villous below; pistillate fls. with 4–5 small staminodes and with a compressed 2-, rarely 3-celled ovary; each cell with 2 ovules; style short: fr. a compressed usually broadly winged and suborbicular, 2-seeded indehiscent samara, rarely 3-celled and 3-winged; seed compressed with thin albumen; embryo straight with oblong cotyledons. (Greek name of the Elm tree; transferred to this plant on account of the similarity of the fruit.) About 7–10 variable species in N. Am. and Mex.

*P. trifoliata* L. HOP-TREE (WAFER-ASH). Shrub or small round-headed tree to 8 m.; young brts. sparingly pubescent, red-brown the second year: lfts. ovate to elliptic-oblong, 6–12 cm. long, narrowed at ends, sometimes acuminate, the lateral ones oblique at base, smaller, entire or obscurely crenulate, dark green and lustrous above, pale and usually glabrous below: fls. about 1 cm. across, in corymbs 4–8 cm. broad: fr. suborbicular, 1.8–2.5 cm. across, emarginate at apex. Fl.vi: fr.viii-ix. S.O.2:t.76(c). G.O.t.74(c). M.A.1:t.34(c). S.S.1:t.33,34. G.C.III.16:375. Ont. and N. Y. to Fla., w. to Minn.; sometimes escaped from cult. elsewhere. Intr. 1724. Zone IV. Grown for its handsome foliage and the attractive light-colored fr.—*P. t. aurea* Behnisch ex Hartwig, var. Lvs. yellow. A.F.14:1231(h). Orig. before 1886.—*P. t. pentaphylla* (Muenchh.) DC., var. Lfts. 3–5, narrower. (*P. t. heterophylla* Kirchn., f.)—*P. t. fastigiata* Bean, var. Brs. upright, forming a pyramidal bush.—*P. t. pubescens* Pursh, var. Lfts. pubescent beneath, dull green above: brts. petioles and inf. glabrous or nearly so. Occurs with the type.—*P. t. mollis* Torr. & Gr., var. Young brts., inf. and lfts. beneath densely pubescent or tomentose. (*P. mollis* M. A. Curtis, *P. tomentosa* Raf., *P. t. glauca* Kirchn., *P. t. var. Deamiana* Nieuwl.) Texas to N. C. and Ill.

Related species: *P. Baldwinii* Torr. Shrubby; brts. brown: lfts. 3–6 cm. long, narrowly elliptic-ovate, or oblong-obovate, pubescent beneath: fls. larger, in smaller corymbs; fr. 1–1.5 cm. across, apiculate. (*P. angustifolia* Benth., *P. trifoliata* var. *angustifolia* Jones.) Calif. Intr. about 1893. Zone VII?—*P. polyadenia* Greene. Brts. dark brown, puberulous or tomentulose; lfts. elliptic-ovate, 3–6 cm. long, obtusish or acutish, crenate, bright green, short-villous beneath, subcoriaceous, strongly gland-dotted. Ariz., N. Mex., Okla. and Tex. Intr. 1916. Zone VI?—*P. nitens* Greene. Brts. light yellowish brown, glabrate: lfts. rhombic-lanceolate, 3–5 cm. long, acute or acuminate, slightly cren-

ate, glabrous or slightly pubescent along the midrib beneath, light green, strongly gland-dotted, chartaceous: fr. about 1.5 cm. across. Colo., Okla. Cult. 1912. Zone V.—*P. lutescens* Greene. Brts. white and lustrous, glabrous; lfts. lanceolate, 3–6 cm. long, serrulate, densely and minutely gland-dotted: fr. about 2 cm. across. Ariz. Cult. 1918. Zone VI?

7. **PHELLODENDRON** Rupr. Deciduous trees, aromatic; buds small, naked, pubescent, enclosed by the base of the petiole: lvs. opposite, odd-pinnate, with 5–13 opposite crenulate lfts. punctate with pellucid dots: fls. dioecious, small, yellowish green, in terminal panicles or corymbs; petals 5–8, several times longer than the 5–8 lance-ovate sepals; staminate fls. with 5–6 stamens longer than petals and with a rudimentary pistil; anthers large, ovate, 2-lobed at base; pistillate fls. with 5–6 small staminodes and a 5-celled ovary on a short gynophore; style short and thick with a 5-lobed stigma: fr. a black, subglobose drupe with 5 small, 1-seeded stones; seed with thin albumen; embryo straight, with oblong flat cotyledons. (Greek *phellos*, cork, and *dendron*, tree; referring to the corky bark of the type species.) Eight or 9 species in E. Asia.—Ornamental trees grown for their handsome foliage turning yellow in autumn; the fls. appear in June and the fr. ripens in Sept. and Oct.

- A. Lvs. glabrous beneath or with few hairs along the midrib, glaucous or glaucescent.
- B. Bark thick, corky; lfts. ciliate.....1. *P. amurense*
- BB. Bark thin: lfts. not or slightly ciliate.....2. *P. sachalinense*
- AA. Lfts. pubescent beneath, at least on the veins, pale green or grayish green.
- B. Infl. rather loose, about as broad as high: ovary glabrous.
- C. Bark thick, corky: lfts. broadly cuneate at base.....3. *P. Lavallei*
- CC. Bark thin: lfts. truncate or subcordate at base.....4. *P. japonicum*
- BB. Infl. compact, higher than broad: ovary pubescent: lfts. oblong-lanceolate.
- 5. *P. chinense*

1. *P. amurense* Rupr. AMUR CORK-TREE. Tree to 15 m. with wide-spreading brs.; bark light gray, corky, deeply fissured; mature brts. orange-yellow or yellowish gray: lfts. 5–13, ovate to lance-ovate, 5–10 cm. long, long-acuminate, rounded or narrowed at base, dark green and lustrous above, glabrous beneath or with a few hairs along the base of the midrib: fls. about 6 mm. long in puberulous panicles 6–8 cm. high: fr. about 1 cm. across, of strong turpentine-like odor when bruised. S.I.2:t.33(c). S.T.1:t.93. K.D. 348. Gs.2:37(b). H.B.3:466(h). S.L.252(h). N. China, Manch. Intr. about 1856. Zone III. Conspicuous in winter with its light gray thick and deeply fissured bark.

*P. a. × japonicum*. Raised in 1902 in the Botanic Garden at Lund (see M.D.1912:363).

Closely related species: *P. piriforme* E. Wolf. Lfts. more oblique and not rounded at base: sepals scarcely exceeding the base of the ovary; stigma not or little broader than style: fr. pyriform. D.M.1925:216(l). Orig. unknown. Cult. 1891.

2. *P. sachalinense* (Fr. Schmidt) Sarg. Tree to 15 m.; bark of trunk dark brown, slightly fissured and finally broken into thin plates; mature brts. reddish brown: lfts. 7–11, ovate to ovate-oblong, 6–12 cm. long, acuminate, cuneate or rounded at base, dull green above and glabrous or nearly so beneath: panicle nearly glabrous, 6–8 cm. high: fr. about 1 cm. across. K.M. t.59(c). S.T.1:t.94. G.C.62:186. (*P. amurense* var. s. Fr. Schmidt.) Saghal., Korea, N. Japan and W. China. Intr. 1877. Zone III. This species is the hardiest and most satisfactory in cult.

3. *P. Lavallei* Dode. Tree to 10 or occasionally to 15 m.: bark corky; mature brts. purplish brown: lf.-rachis puberulous or pubescent; lfts. 5–13, elliptic-ovate to lance-oblong, 5–10 cm. long, acuminate, cuneate, dull yellowish green above, pubescent beneath when young, at maturity often only

on the veins: infl. puberulous, 6–8 cm. broad: fr. about 8 mm. across. B.M. 8945(c). I.T.5:t.171 (as *P. amurense*). (*P. amurense* var. *L.* Sprague.) C. Japan. Intr. 1862. Zone V.

4. *P. japonicum* Maxim. Tree to 10 m., with dark brown thin and slightly fissured bark; mature brts. reddish brown: lf.-rachis densely villous or tomentose; lfts. 9–13, ovate to ovate-oblong, 6–10 cm. long, acuminate, truncate or subcordate at the very oblique base, dull green above, villous beneath, more densely on the veins: infl. hoary-tomentose, 5–7 cm. across: fr. about 1 cm. across. S.T.1:t.95. C. Japan. Intr. 1863. Zone IV.

5. *P. chinense* Schneid. Tree to 10 m.: bark dark grayish brown, thin, slightly fissured; mature brts. purplish brown: lfts. 7–13, oblong-ovate to lance-oblong, the margins nearly parallel, 7–14 cm. long, acuminate, rounded or broad-cuneate at base, dark yellowish green above, villous beneath: infl. densely pubescent, compact, paniculate, 5–6 cm. long: fr. about 1 cm. across. Fr.ix-iii. S.H.2:f.79c-d. S.L.253(h). C. China. Intr. 1907. Zone V.—*P. c. glabritisculum* Schneid., var. Lfts. pubescent only on the veins beneath. (*P. sinense* Dode.) C. and W. China. Intr. 1907. Zone V.

8. *SKIMMIA* Thunb. Evergreen glabrous shrubs; buds with few outer scales, the terminal one lanceolate: lvs. alternate, short-petioled, entire, dotted with pellucid glands: fls. white, small, 4–5-merous, in terminal panicles, perfect or polygamous; the staminate fls. in larger panicles and fragrant; petals oblong, valvate or slightly imbricate, 3–4 times longer than the imbricate sepals; staminate fls. with 4–5 stamens slightly shorter than petals and with sterile carpels united only at base; filaments filiform; anthers ovate, 2-lobed at base; pistillate fls. with 4–5 staminodes and 2–5 connate carpels, each with 1 pendulous ovule; style short, thick, with 2–5-lobed stigma; fr. an ovoid or obovoid or subglobose drupe with 2–4 1-seeded stones; seed with fleshy albumen; embryo straight with oblong flat cotyledons. (Japanese name Skimmi, meaning a harmful fruit.) Nine species in Himal. and E. Asia.—Ornamental shrubs grown for their handsome evergreen foliage and the bright red berries and also for their fragrant staminate fls.

- A. Lvs. generally oblong-obovate, obtusely pointed: fls. usually 4-merous, polygamous: fr. subglobose ..... 1. *S. japonica*  
 AA. Lvs. generally oblong-lanceolate, acuminate: fls. usually 5-merous and perfect: fr. obovoid ..... 2. *S. reevesiana*

1. *S. japonica* Thunb. Dense shrub to 1.5 m., but usually lower, glabrous except the puberulous infl.: lvs. crowded at end of brts., elliptic-oblong to oblong-obovate, 7–12 cm. long, bright or yellowish green above, yellowish green beneath: fls. usually dioecious, yellowish white, about 8 mm. across in panicles 5–8 cm. long: fr. globose or depressed-globose, 8 mm. across, bright red. Fl.iv-v; fr.x(-v). B.M.8038(c). G.C.III.5:521,524. Gn.87:562(h). R.H. 1869:259; 1880:56. G.W.5:261(h). (*S. oblata* T. Moore, *S. fragrans* and *S. fragrantissima* Hort.) The two last synonyms are used for the staminate form. Japan. Cult. 1838. Zone VII?—*S. j. macrophylla* Mast., var. A staminate form with larger lvs.

*S. j. × reevesiana* = *S. Foremanii* Knight. Lvs. lanceolate or oblanceolate, yellowish green; petiole reddish: subglobose and obovoid scarlet frs. on the same panicle. G.C.III.5:553. Gn.61:160:67:57. (*S. intermedia* Rehd., not Carr.) Orig. before 1881.—*S. F. Rogersii* (Mast.) Rehd., var. Lvs. deep green: petiole greenish: fls. perfect; fr. depressed-globose, crimson. Orig. before 1878.

2. *S. reevesiana* Fort. Shrub to 0.5 m., similar to the preceding: lvs. lanceolate or oblong-lanceolate, 3–10 cm. long, acuminate, cuneate, dark green above, light green beneath: fls. usually perfect, white, in oblong-ovoid

panicles 5-8 cm. long; fr. obovoid, dull crimson-red. Fl. IV-VI; fr. X(-V). B.M. 4719(c). Gn. 7:183; 8:519. G.C. III. 5:525. R.H. 1869:259; 1880:56. (*S. japonica* Lindl., not Thunb., *S. Fortunei* Mast.) China. Intr. 1849. Zone VII? This species being hermaphrodite fruits more freely and is hardier.—*S. R. rubella* (Carr.) Rehd., f. Peduncles, pedicels and fl.-buds reddish; staminate form. R.H. 1874:311, t(c); 1885:189. (*S. Fortunei* f. *rubella* Voss, ?*S. intermedia* Carr.) Intr. 1865.—*S. R. variegata* (Nichols.) Rehd., f. Lvs. bordered with white. (*S. Fortunei* var. *argentea* Mast.) Orig. about 1875.

Related species: *S. Lauréola* Sieb. & Zucc. Shrub to 1.5 m.; lvs. oblong-obovate to lanceolate or oblanceolate, 8-16 cm. long, of heavy aromatic odor when bruised; fls. dioecious, in short dense panicles; fr. globose-ellipsoid, red. Wallich, Pl. As. Rar. 3:t. 245(c). Himal. Cult. 1868. Zone VII.

**9. PONCIRUS** Raf. Deciduous shrub or small tree with spiny green compressed brts.; buds small, subglobose, with few scales, glabrous; lvs. 3-foliolate; lfts. sessile with pellucid dots; petiole winged; fls. white, axillary, subsessile on last year's brts., before the lvs.; petals 5, oblong-obovate, imbricate in bud, spreading, much longer than the triangular sepals; stamens 8-10, free; ovary 6-8-celled, pubescent; cells with several ovules in 2 rows; style short and thick; fr. a large yellow berry with numerous seeds; seeds exalbuminous; embryo with large planconvex cotyledons. (French poncire, a kind of Citrus.) One species.

*P. trifoliata* (L.) Raf. Shrub or small tree to 7 m., glabrous; spines stout, 1-4, occasionally to 7 cm. long; terminal lft. obovate to elliptic, 2.5-6 cm. long, obtuse or emarginate, cuneate, crenulate, subcoriaceous, the lateral ones similar, but smaller and usually elliptic-ovate, very oblique at the base; petiole 8-25 mm. long; fls. 3.5-5 cm. across; fr. globose, 3.5-5 cm. across, yellow, tomentulose, fragrant; seeds oblong, 1-1.3 cm. long. Fl. IV-V; fr. IX-X. B.M. 6513(c). Ad. 15:510(c). B.A. 1932:47. G.C. III. 14:265; 27:269. R.H. 1886:533. Gn. 46:272, t(c); 86:583(h). N.D. 1914:278(h). (*Citrus t. L.*, *C. triptera* Carr., *Pseudaegle sepiaria* Miq., *Ps. trifoliata* Mak.) N. China, Korea, cult. in Japan. Intr. about 1850. Zone (V) VI.

There are hybrids of *P. t.* with several species and forms of *Citrus* of which those with *C. sinensis* Osbeck, the Common Orange, are the best known and called Citranges (B.C. 2:778), also with *Fortunella japonica* Swingle, the Kumquat.

#### Fam. 43. SIMAROUBACEAE DC. QUASSIA FAMILY.

Shrubs or trees with usually bitter bark; lvs. alternate, rarely opposite, pinnate, rarely simple, without pellucid dots; fls. perfect or unisexual, regular, usually small, in panicles or spikes; sepals 3-5, more or less connate, imbricate or valvate; petals 3-5, rarely wanting; stamens usually twice as many as petals, obdiplostemonous; ovary superior, usually surrounded by a prominent disk, consisting of 2-5 carpels, free at base and united by the styles or stigmas, or wholly connate; each carpel 1- or several-ovuled; fr. drupe-like, rarely a berry or samara; seed with thin albumen or without; embryo with thick planconvex or flat cotyledons.—About 28 genera with 150 species chiefly in the tropics, few extending into the temp. regions.

A. Infl. axillary; fr. a drupe; lfts. 7-15.....1. *Picrasma*  
 Aa. Infl. terminal; fr. a samara; lfts. 13-41.....2. *Ailanthus*

**1. PICRÁSMA** Bl. Deciduous trees; buds naked, pubescent, the lateral ones flattened; lvs. alternate, odd-pinnate, estipulate, crowded at end of brts.; fls. polygamous, small, in axillary peduncled loose cymes; petals 4-5,

oblong, valvate or nearly so, exceeding the ovate imbricate persistent sepals; stamens 4-5, inserted at base of the 4-5-lobed disk, longer than petals, with ovate anthers; carpels 5-2, free, but united by the slender style 5-2-parted at apex into slender stigmas: fr. of 5-1 obovoid or subglobose drupelets with thin sarcocarp; seed exalbuminous with thick planconvex cotyledons. (Greek *picrazein*, to cause a bitter taste; alluding to the bitter bark.) About 8 species in trop. and subtrop. regions.

**P. quassioides** (D. Don) Benn. Shrub or tree to 10 m.; brs. with reddish-brown bark marked with conspicuous yellow lenticels; lvs. 25-35 cm. long; lfts. 9-15, subsessile, ovate to oblong-ovate, 4-10 cm. long, acuminate, broad-cuneate or nearly rounded at the oblique base, crenate-serrate, lustrous above, light green and glabrous beneath except on the midrib when young: fls. greenish, about 8 mm. across, in slender-peduncled loose corymbs 8-15 cm. across: fr. globose-ovoid, 6-7 mm. long, red, supported by the persistent calyx. Fl.v-vi; fr.ix. S.I.1:t.53(c). M.K.t.60(c). S.H.2:f.82f-m.83a. (*P. ailanthoides* Planch., *P. japonica* Gray.) N. China and Korea to Himal. and Japan. Intr. 1890. Zone (V). Lvs. turning orange and scarlet in fall; bark very bitter.

**2. AILANTHUS** Desf. Deciduous trees; buds suborbicular, with 2-4 scales, the terminal one wanting: lvs. alternate, odd-pinnate; lfts. 13-41, near the base usually with a few large teeth bearing each a large gland beneath: fls. small, polygamous, in large terminal panicles; petals 5-6, oblong, valvate in bud, several times longer than the partly connate sepals; stamens 10, inserted at base of the 10-lobed disk; staminate fls. without rudimentary pistil; carpels 5-6, more or less connate or free below; stigmas elongated, spreading: fr. consisting of 1-6 free oblong samaras with the compressed seed in the middle; seed with thin albumen; embryo with obovate or sub-orbicular cotyledons. (*Ailanto*, the native name for *A. moluccana*, meaning tree of heaven.) Syn. *Pongelion* Adans. Eight or 9 species in E. and S. Asia and N. Austr.

A. Brts. and petioles glabrous or puberulous: lfts. usually glabrous beneath. 1. *A. altissima*  
AA. Brts. pubescent and at least on young trees prickly: lfts. pubescent beneath.

2. *A. vilmoriniana*

1. **A. altissima** (Mill.) Swingle. TREE OF HEAVEN. Tree to 20 m.; bark smooth with pale stripes; young brts. minutely pubescent, becoming dull yellowish brown: lvs. 45-60 cm. long; lfts. 13-25, stalked, lance-ovate, 7-12 cm. long, usually truncate at base, finely ciliate, with 2-4 coarse teeth near base, glabrous and glaucescent beneath, sometimes pubescent on young plants: fls. 7-8 mm. across, in panicles 10-20 cm. long; samaras 3-4 cm. long, light reddish brown. Fl.vi-vii; fr.ix-x. M.A.1:t.35(c). G.C.78:207. Gn.24: 63,65(h);32:330. B.C.1:241. M.D.1901:324(h). (*A. glandulosa* Desf., *A. cacodendron* Schinz & Thell., *A. japonica* Hort.) China; naturalized in the E. States. Intr. 1751, into Am. 1784. Zone IV. Grown for the handsome foliage and also, particularly *A. a. erythrocarpa*, for the conspicuous fr. in fall; the staminate fls. exhale a disagreeable odor.—**A. a. erythrocarpa** (Carr.) Rehd., var. Lvs. darker green above and more glaucous beneath: fr. bright red. (*A. glandulosa* f. *rubra* Dipp.) Orig. before 1867.—**A. a. pendulifolia** (Carr.) Rehd., var. Lvs. very large, drooping. R.H.1906:545(h). (*A. glandulosa pendulifolia* Carr.) Orig. before 1900.—**A. a. sutchuenensis** (Dode) Rehd. & Wils., var. Young brts. glabrous, reddish-brown, lustrous; petioles purplish; lfts. not ciliate, cuneate at base, at least in older plants: fr. about 5 cm. long. B.D.1907:192,193b. W. China. Intr. about 1895.

Closely related species *A. Giráldii* Dode. Young brts. puberulous, brown or brownish; petioles purplish, finely pubescent: lvs. 50–90 cm. long; lfts. 33–41, close-set, lanceolate, 10–15 cm. long, long-acuminate, undulate, with 14–15 pairs of veins, pale green and loosely pubescent beneath; panicle 20–30 cm. long; fr. about 6 cm. long. B.D.1907:191, 193A, 197B. W. China. Intr. about 1897. Zone V.—*A. G. Duclouxii* Dode, var. Brts. light orange; petiole green; lfts. sparingly pilose beneath, more densely on the veins. Cult. 1914.

2. *A. Vilmoriniæ* Dode. Tree to 16 m.: lvs. 50–90 cm. long; lfts. 17–35, lance-oblong, 10–15 cm. long, acuminate, with 2–4 coarse teeth near base, glabrous or pubescent above, glaucescent and pubescent beneath; petiole often red and sometimes prickly; panicle to 30 cm. long; fr. about 5 cm. long. R.H.1904:445. Gn.75:632(h). B.D.1907:193c. (*A. glandulosa* var. *spinosa* Bois.) W. China. Intr. 1897. Zone VI? Similar to *A. altissima* but not quite as hardy.

#### Fam. 44. MELIACEAE Vent. MAHOGANY FAMILY

Trees or shrubs, rarely subshrubs or herbs: lvs. alternate, very rarely opposite, pinnate, rarely simple, estipulate: fls. perfect, rarely unisexual, regular, in usually axillary panicles; sepals 4–5, usually partly connate, imbricate; petals 4–5, rarely 3–10, valvate, imbricate or convolute, distinct or sometimes connate at base; stamens usually twice as many as petals, usually more or less connate into a tube below, rarely free; ovary superior, surrounded at the base by a disk, 2–5-celled, rarely 1- or 10–20-celled, each cell with 1 or 2, rarely several ovules: fr. a caps., drupe or berry; seeds winged or not winged, albuminous or exalbuminous.—About 40 genera with 600 species in subtrop. and trop. regions, very few in temp. regions.

A. Lvs. odd-pinnate; lfts. 11–23; fls. small, whitish: fr. a caps. .... 1. *Cedrela*  
 AA. Lvs. twice-pinnate; fls. pale lilac, nearly 2 cm. across: fr. a drupe. .... 2. *Melia*

1. *CÉDRELA* L. Deciduous or evergreen trees; buds subglobose, with several outer scales: lvs. alternate, usually abruptly pinnate, rarely odd-pinnate; fls. small, whitish or greenish, perfect, in large terminal or axillary panicles; calyx short, 4–5-parted; petals 4–5, keeled inside and adnate with the keel to the gynophore or disk; stamens 4–6, inserted at apex of gynophore, shorter than petals, with subulate filaments; ovary 5-celled, on an elongated or short gynophore; style slightly exceeding the stamens, with capitate stigma; caps. with many winged seeds. (From *Cedrus*; the wood resembles that of the Cedar.) Including *Toona* Roem. About 18 species in trop. Am., S. E. Asia to Australia.

*C. sinénsis* Juss. Tree to 16 m., with shredding bark; brts. puberulous when young: lvs. long-petioled, 25–50 cm. long; lfts. 10–22, short-stalked, oblong to lance-oblong, 8–15 cm. long, acuminate, remotely and slightly serrate or nearly entire, light green beneath and pubescent on the veins or finally nearly glabrous: fls. white, fragrant, campanulate, about 5 mm. long, in pendulous panicles about 30 cm. long; 5 subulate staminodes alternating with the stamens; ovary glabrous, on a short gynophore: caps. obovoid, woody about 2.5 cm. long; seeds winged above. Fl.vi; fr.ix. R.H.1891:574. S.H.2:f.83b, 84l-q. M.O.90. Gng.4:1(h). M.D.1902:495(h). G.C.72:138(h). (*Toona* s. Roem.) China. Intr. 1862. Zone V. Similar to *Ailanthus* but easily distinguished by the absence of the large gland-bearing teeth at the base of the lfts.

2. *MÈLIA* L. Deciduous or half-evergreen trees or shrubs; buds small, roundish with few outer scales, sometimes superposed: lvs. alternate, doubly

pinnate, with entire or serrate lfts.: fls. conspicuous, perfect, in axillary panicles; calyx 5-6-parted, small, imbricate; petals 5-6, free, imbricate in bud; filaments connate into a slender tube, with 10-12 lobes at the apex and bearing 10-12 anthers between the lobes on the inside; ovary on a short disk, 5-8-celled, with a long cylindric style; each cell with 2 ovules: fr. a drupe, with fleshy outer coat. (Ancient Greek name of the Ash.) About 10 species in S. Asia and Austral.

**M. Azédarach** L. CHINA-TREE (CHINABERRY-TREE). Tree to 15 m. with furrowed bark: lvs. 25-80 cm. long; lfts. ovate to elliptic, 2-5 cm. long, acute, sharply serrate or lobed, light green, glabrous, or puberulous on veins and rachis when young: fls. lilac, nearly 2 cm. across, in loose panicles 10-20 cm. long; petals oblanceolate or narrow-oblong, spreading; ovary 5-celled; fr. subglobose, yellow, about 1.5 cm. across. Fl.iv-v; fr.ix-x. B.M.1066(c). S.I. 2:t.35(c). E.N.III.4:f.160A-L. (*M. japonica* Don.) Himal. Cult. since the 16th century; naturalized in all trop. and subtrop. countries. Zone VII.—**M. A. umbraculiformis** Berckmans. TEXAS UMBRELLA-TREE. Brs. crowded, upright-spreading, forming a flattened head; lfts. narrower. G.F.7:95(h). F.E. 26:187(h). M.M.8:73(h). B.C.4:2024(h). (*M. A. umbraculifera* Hort.) Orig. before 1860.

#### Fam. 45. POLYGALACEAE Reichenb. MILKWORT FAMILY

Herbs, shrubs or small trees: lvs. usually alternate, simple, entire: fls. perfect, irregular; sepals 5, imbricate; the 2 inner ones larger and often petaloid; petals usually 3, rarely 5; stamens usually 8, the filaments connate into a tube or free; ovary superior, 2-celled; cells usually 1-ovuled: fr. a caps. nut or drupe.—About 10 genera with 500 species.

**POLYGALA** L. MILKWORT. Herbs, subshrubs or shrubs, rarely trees: lvs. alternate, rarely opposite, without, or with reduced stipules: fls. usually in racemes, variously colored; sepals unequal; the 2 inner ones usually petaloid, wing-like; the lower petal clawed and adnate at base to the staminal tube; the 2 lateral petals usually wanting; stamens 8, very rarely fewer, connate into a tube, slit down to base and open on back; ovary 2-celled; cells 1-ovuled; style straight or curved: fr. a loculicidal caps. with 2 seeds; seeds usually ovoid or subglobose, usually with aril and usually albuminous. (Greek *polys*, much and *gala*, milk; some species were formerly believed to increase the flow of milk.) About 450 species in both hemispheres, mostly herbaceous, the ligneous species chiefly subtrop.

**P. Chamaebuxus** L. Evergreen dwarf subshrub to 25 cm. high, creeping, with green glabrous or nearly glabrous brts.: lvs. alternate, lanceolate to elliptic or obovate, 1-2.5 cm. long, acutish, cuneate, dull green, coriaceous, glabrous: fls. 1 or 2, axillary or terminal, about 1.2 cm. long; the wings usually creamy white, the keel yellow or reddish near apex, 4-lobed at the dilated apex: caps. flat, suborbicular. Fl.iv-vi. B.M.3161(c). R.I.18:t.150. F.D.16:t.1524(c). (*Chamaebuxus alpestris* Spach.) C. Eu. Cult. 1658. Zone V.—**P. Ch. grandiflora** Gaud., var. Fls. with purple or sometimes pink wings and yellowish keel. Gn.13:36,t(c);30:148,t(c). R.I.18:t.150(c). F.D.16:t.1524(c). (*P. Ch. var. purpurea* Neir., var. *rhodoptera* A. Benn.)

Closely related species: **P. Vayrèdeae** Costa. Subshrub to 10 cm.: lvs. narrow-lanceolate to linear, 2-2.5 cm. long; fls. 11-12 mm. long, rosy-purple; keel yellowish at apex. B.M.9009(c). (*Chamaebuxus* V. Willk.) Pyrenees. Cult. 1923. Zone VI?

## Fam. 46. EUPHORBIACEAE Jaume St. Hil. SPURGE FAMILY

Herbs, shrubs or trees, often with milky juice, very variable in habit: lvs. usually alternate, mostly stipulate: fls. unisexual, usually small, regular, rarely irregular; sepals and petals present, or the latter, rarely both, wanting, usually free; sepals valvate or imbricate; staminate fls. usually with intrastaminal disk and with 1 to many stamens; pistillate fls. with hypogynous disk; ovary usually 3-celled, rarely 1- or 2- or 4-20-celled; ovules 1 or 2 in each cell, pendulous: fr. usually capsular, separating into 3 parts, leaving a central column, rarely indehiscent and berry- or drupe-like; seeds albuminous. Incl. *Dapniphyllaceae* Muell. Arg.—More than 280 genera with about 8000 species mainly in the tropics, few ligneous species in temp. regions.

- A. Fr. capsular, dehiscent: lvs. deciduous: fls. solitary or fascicled.  
 B. Fls. with petals and epipetalous disk-glands; styles 3, 2-cleft.....1. *Andrachne*  
 BB. Fls. apetalous.  
   C. Stamens 5, filaments free; styles 3, 2-cleft; disk present: caps. 3-celled.2. *Securinega*  
   CC. Stamens 3, connate, styles undivided, connate, and caps. 5-8-celled (in our species).  
     3. *Glochidion*  
 AA. Fr. a drupe; lvs. evergreen: fls. racemose.....4. *Daphniphyllum*

1. **ANDRÁCHNE L.** Low shrubs or subshrubs or perennial herbs; buds ovoid, with several outer ciliate scales: lvs. alternate, usually entire, with small stipules: fls. monoecious or incompletely dioecious, small, light yellowish green, 5-6-merous, the staminate in axillary clusters, the pistillate solitary; petals smaller than sepals, with epipetalous disk-glands; stamens not exceeding the sepals; the pistillate sometimes without petals; ovary 3-celled; styles 3, 2-cleft or 2-parted: fr. subglobose or depressed, separating into 3 2-valved carpels, 6-seeded. (Ancient Greek name.) Ten or 12 species in N. Am., Asia and Mal. Archip., Afr.—Occasionally grown in botanical collections.

**A. phyllanthoides** (Nutt.) Muell. Arg. Upright shrub to 1 m., glabrous except the puberulous angled brts.: lvs. elliptic or obovate, 8-20 mm. long, obtuse or emarginate, often mucronulate at apex, rounded or broad-cuneate at base; petioles 1-2 cm. long; fls. 5-6 mm. across, on slender stalks 5-20 mm. long; sepals oblong-obovate; petals of staminate fls. narrow-obovate, little shorter than sepals, 3-4-toothed, of pistillate fls. shorter, obovate, entire: fr. subglobose, about 8 mm. across, with the enlarged persistent sepals at base. Fl.vii-ix; fr.ix-x. (*A. Roemeriana* Muell. Arg.) Mo. and Tex. Intr. 1899. Zone V.

Related species: *A. colchica* Fisch. & Mey. Dense shrub with slender brts. to 1 m., glabrous: lvs. ovate, 6-15 mm. long, obtuse, rounded at base; petals filiform, much shorter than sepals: fr. subglobose, about 5 mm. across. S.L.86 h). Asia Minor. Intr. before 1900. Zone V.—*A. cordifolia* (Dcne.) Muell. Arg. Shrub to 1 m.: lvs. ovate to oblong, 2-5 cm. long, rounded, rarely cordate at base, soft-pubescent beneath; petals spatulate; caps. depressed-globose, about 6 mm. thick. Klotzsch & Garcke, Bot. Ergeb. Reise Prinz Wald. t.24. Himal. Intr. before 1910. Zone VI?

2. **SECURÍNEGA** Juss. Deciduous shrubs; buds ovoid, with several outer scales: lvs. alternate, short-petioled, entire, stipulate; fls. dioecious or monoecious, small, greenish white, apetalous, axillary, the staminate fascicled, the pistillate 1 or several; sepals 5; stamens usually 5, longer than sepals, inserted at the base of an intrastaminal lobed disk entire in the pistillate fls.; ovary 3-celled; styles 3, 2-lobed; fr. a dehiscent subglobose caps. with persistent calyx at base, 3-6-seeded; embryo straight. (From Latin *securis*, hatchet, and *negare*, to refuse; referring to the hard wood of some

species.) About 10 species in temp. and subtemp. regions of C. and S. Am., Asia, S. Eu. and Afr.—Sometimes planted for their bright green lvs.

*S. suffruticosa* (Pall.) Rehd. Shrub to 2 m., with slender spreading greenish brs., glabrous: lvs. short-stalked, elliptic or ovate to lance-ovate, 3–6 cm. long, acute or obtuse, cuneate, bright or yellowish green; petioles 2–4 mm. long; staminate fls. short-pedicelled, about 3 mm. across, in 5–10-fl. clusters; pistillate solitary; caps. subglobose, about 5 mm. across, greenish, on slender stalks 1–1.5 cm. long. Fl.vii–viii; fr.ix–x. K.D.352. S.H.2:f.86a–i. J.C.20,3:t.1a. S.L.340(h). (*S. ramiflora* Muell. Arg., *S. frueggeoides* Muell. Arg., *S. japonica* Miq., in part.) N. E. Asia to C. China. Intr. 1783. Zone V.

3. *GLOCHÍDION* Forst. Deciduous or evergreen trees or shrubs, rarely perennial: lvs. alternate, entire, stipulate: fls. monoecious or dioecious, in axillary clusters; sepals 3–6; disk usually wanting; staminate fls. without rudimentary ovary; stamens 3–8, connate or free; ovary 3–15-celled; styles connate or free, short and thick, rarely 2-fid: fr. a dehiscent caps. (Name from Greek *glochis*, point; referring to the pointed anthers.) About 280 species in trop. and subtemp. Asia and Polynesia.

*G. pūberum* (L.) Hutchins. Deciduous shrub to 1.5 m.; brts. short-pilose to nearly glabrous: lvs. elliptic-obovate to elliptic- or narrow-oblong, 3–8 cm. long, acute, sometimes obtusish, broad-cuneate, dull green above, glaucescent and short-pilose on veins and veinlets beneath; petiole 1–2 mm. long: fls. monoecious, in axillary clusters, staminate on slender glabrous stalks 3–6 mm. long; sepals 6, 3 mm. long, linear-oblong, longer than the 3 connate anthers; pistillate short-stalked, smaller, the 6 sepals about as long as the tomentose ovary; styles connate into a short annular disk: caps. depressed-globose, furrowed, 12–16 mm. across, 5–8-celled, slightly pubescent, impressed at apex: seeds reddish brown. Fl.vi–ix; fr.viii–x. E. China, n. to Kiangsu and Szechuan. Intr. 1922. Zone VI?

4. *DAPHNIPHYLLUM* Bl. Evergreen shrubs or small trees, glabrous; buds with several outer imbricate scales: lvs. alternate, petioled, entire, estipulate; fls. dioecious, small, apetalous, in axillary racemes; calyx small, 3–8-parted; stamens 5–18, with short filaments and large anthers; ovary 2-celled and 4-ovuled; styles 2, short, recurved: fr. a small oblong, usually 1-seeded drupe; seeds with copious albumen and very small straight embryo at apex of seed. (Greek *daphne*, laurel, and *phyllon*, leaf; referring to the shape of the lvs.) About 25 species in E. Asia.

*D. macrópodum* Miq. Shrub or small tree, occasionally to 15 m. tall, of compact habit; brts. rather stout, green, glaucous and often reddish when young: lvs. oblong, 8–20 cm. long, acuminate, cuneate, dark green above, bluish white or sometimes green below, with 12–17 pairs of veins; petiole 3–4 cm. long, often red like the midrib; fls. pale green, in short racemes, about 2.5 cm. long: fr. oblong, about 1 cm. long, black. Fl.v–vi; fr.x–xi. S.I.1:t.54(c). E.P.IV.147a:10. Gn.48:259(h). S.L.154(h). Gs.2:7(h). (*D. glaucescens* Hort., not Bl.) Japan, Korea, China. Intr. 1879. Zone VII. Grown for its large handsome foliage.—*D. m. variegatum* Bean., var. Lvs. with broad irregular creamy white margin.

Closely related species: *D. humile* Maxim. Shrub to 1.5 m.: lvs. elliptic to obovate-oblong, 6–12 cm. long, acute, glaucescent beneath, with 11–14 pairs of veins; petiole 1.5–2 cm. long. S.H.2:87g(1). (*D. macropodum* var. *h.* K. Rosenth., *D. jesoense* Hort.) N. Japan. Intr. 1879. Zone VI?

## Fam. 47. BUXACEAE Dum. BOX FAMILY

Evergreen shrubs or small trees: lvs. opposite or alternate, estipulate: fls. monoecious, small, apetalous, without hypogynous disk; calyx 4-parted or in the pistillate fls. 4-12-parted or wanting; stamens 4, opposite the sepals or numerous; anthers basifix; ovary superior, 3-celled, rarely 2-4-celled; ovules 2, collateral, rarely 1, pendulous: fr. a dehiscent caps. or fleshy; seeds albuminous.—Six genera with about 40 species in trop. and subtrop. regions, few in temp. countries.

- A. Lvs. alternate, usually 3-nerved.  
 B. Lvs. entire: infl. subcapitate; styles short.....1. *Sarcococca*  
 BB. Lvs. dentate: infl. a spike; styles elongated: decumbent subshrubs.....2. *Pachysandra*  
 AA. Lvs. opposite, entire, penninerved: fr. capsular.....3. *Buxus*

1. **SARCOCÓCCA** Lindl. Evergreen glabrous shrubs; buds with several outer imbricate green scales: lvs. alternate, petioled, entire, usually penninerved, coriaceous: fls. whitish, apetalous in short axillary racemes or heads, with the pistillate fls. at base; sepals 4-6; staminate fls. with 4-6 stamens; pistillate fls. with a 2-3-celled ovary and with 2-3 erect or recurved styles; fr. drupe-like, subglobose to ellipsoid, coriaceous or fleshy, 1-2-seeded. (Name from Greek *sarkos*, flesh, and *kokkos*, berry; referring to the fleshy fr.) Five or 6 species from C. and W. China to Mal. Archipelago.—Ornamental shrubs, grown for their handsome evergreen foliage.

- A. Lvs. ovate to elliptic-ovate: fr. dark scarlet.....1. *S. ruscifolia*  
 AA. Lvs. oblong-lanceolate to lanceolate: fr. black.....2. *S. Hookeriana*

1. **S. ruscifolia** Stapf. Shrub to 2 m.; brts. puberulous when young: lvs. ovate or elliptic-ovate, 3-5 cm. long, acuminate, rounded or broad-cuneate at base, dark green and lustrous above, obscurely penninerved; petiole 3-5 mm. long: fls. white, fragrant, in few-, usually 4-fld. racemes: fr. subglobose, about 6 mm. across, dark scarlet. Fl. IX-II; fr. IX-XI. B.M.9045(c). Gn. 83: 73, 127. C. and W. China. Intr. 1901. Zone VII?—*S. r. chinensis* Rehd. & Wils., var. Lvs. elliptic-ovate to lance-elliptic, 3.5-6 cm. long, cuneate. W. China. Intr. ?

2. **S. Hookeriana** Baill. Shrub to 2 m.; brts. puberulous when young: lvs. lance-oblong to narrow-lanceolate, 3-8 cm. long, acuminate, cuneate; petiole 6-8 mm. long; styles 3: fr. subglobose, 6 mm. across, black. Fl. X-III; fr. IX-XI. Gn. 25:359. (*S. pruniformis* var. *Hookeriana* Hook.) W. Himal., Afghan. Cult. 1884. Zone VII?—*S. H. digyna* Franch., var. Styles 2. W. China. Intr. 1908.—*S. H. humilis* Rehd. & Wils., var. Shrub 0.3-1.5 m.: lvs. lanceolate to lance-oblong, 3-5 cm. long; midrib more prominent above; stamens less exerted; styles 2-3. B.M.9449(c). Gs. 20:52. (*S. h.* Stapf.) W. China. Intr. about 1907. Zone (V).

Related species: *S. saligna* (Don) Muell. Arg. Brts. glabrous: lvs. lance-oblong or oblong-ovate, 5-12 cm. long, caudate-acuminate, 3-nerved at base: fr. ovoid, about 1 cm. long, purple. B.R.1012(c). I.T.3:t.90. (*S. pruniformis* Lindl.) Himal. Intr. 1820. Zone VII?

2. **PACHYSÁNDRA** Michx. Evergreen or half-evergreen procumbent and ascending subshrubs with fleshy stems: lvs. alternate, dentate, 3-nerved at base: fls. white, in upright spikes, pistillate at base; staminate fls. with 4 sepals and 4 stamens and a rudimentary pistil; filaments thick, much longer than sepals, white; pistillate with 4 or more sepals; ovary 2-3-celled; cells 2-ovuled; styles 2-3, spreading: fr. a 2-3-horned caps. or drupe. (Name from the Greek *pachys*, thick, and *aner*, *andros*, man; alluding to the thick filaments.) About 5 species in E. Asia and in E. N. Am.

**P. terminàlis** Sieb. & Zucc. Evergreen; ascending to 25 cm., stoloniferous, glabrous: lvs. obovate to ovate, 5–10 cm. long, cuneate, acutish, coarsely dentate, dark green and lustrous above, petiole 1–3 cm. long, fl.-spike terminal, 3–5 cm. long: fr. whitish, ovoid, about 1 cm. long, 2–3-horned, berry-like. Fl.v. K.D.355. Gs.7:44. H.B.3:92(h). Japan. Intr. 1882. Zone V. Ornamental low evergreen plant; useful as ground cover.—**P. t. variegata** Manning. Lvs. variegated with white.

Related species: **P. axillàris** Franch. Puberulous or nearly glabrous: lvs. ovate to oblong-ovate, 5–12 cm. long, rounded at base, rarely broad-cuneate, coarsely dentate: fls. white, in short axillary clusters or spikes, 1–2 cm. long: fr. yellowish, 3-horned. Franch., Pl. Delavay. t.26. Cult. 1934. Zone VII?—**P. procumbens** Michx. Half-evergreen; slightly pubescent: lvs. elliptic to obovate; spikes white or pinkish, to 12 cm. long, axillary at the base of the stem. B.M.1964(c). B.R.33(c). G.C.55:335. B.C.5:2426. W. Va. to Fla. Intr. 1800. Zone VI.

**3. BUXUS L.** Box. Evergreen shrubs or trees; buds with several outer scales: lvs. opposite, short-petioled, penninerved, entire, coriaceous, usually glabrous: fls. apetalous, in axillary or terminal clusters consisting usually of a terminal pistillate fl. and several staminate fls., the latter with 4 sepals and 4 stamens much longer than the sepals; pistillate fls. with 6 sepals and a 3-celled ovary with 3 short styles: fr. a subglobose or obovoid, 3-horned caps., separating into 3 2-horned valves, each with 2 lustrous seeds. (Ancient Latin name.) About 30 species in C. Eu., the Mediterr. region, in E. Asia and in the W. Indies and C. Am.

A. Lvs. elliptic to lance-oblong, broadest about or below the middle: brts. usually slightly pubescent ..... 1. *B. sempervirens*  
AA. Lvs. obovate to oblong-obovate, broadest above the middle: brts. usually glabrous.

2. *B. microphylla*

**1. B. sempervirens L.** Much-branched, dense shrub or tree to 6 or sometimes to 10 m.; brts. quadrangular, puberulous: lvs. elliptic or ovate to oblong, 1–3 cm. long, obtuse or emarginate at apex, dark green above, light or yellowish green beneath and lustrous on both sides: fls. in axillary clusters; staminate fls. sessile; the rudimentary pistil half as long as calyx; fr. about 8 mm. long. Fl.iv–v. R.I.5:t.153(c). F.D.20:t.2051(c). H.W.3:29. F.E.18:t.81(h). Gn.55:62(h). M.D.1920:t.9,10(h). S. Eu., N. Afr., W. Asia. Cult. since ancient times. Zone (V), VI. Ornamental shrub, much planted for its handsome evergreen foliage.—**B. s. arboréscens** L., var. Tall shrub or small tree: lvs. usually elliptic. The typical form.—**B. s. pyramidàta** (Carr.) Hartw. & Ruempl., var. Of upright pyramidal habit: lvs. generally ovate-oblong, 2–2.5 cm. long, slightly emarginate, dark glossy green. (*B. s. var. pyramidalis* Bean.)—**B. s. pèndula** Dallimore. Arborescent; brs. slender, pendulous: lvs. oblong-ovate, about 2 cm. long, obtuse.—**B. s. angustifolia** (Mill.) West., var. Arborescent: lvs. oblong, 2.5–3.5 cm. long. (*B. s. f. longifolia* Kirchn., *B. s. salicifolia* Hort.) S.H.2:f.90t.—**B. s. prostràta** Bean, var. Vigorous shrub with horizontally spreading brs.: lvs. mostly ovate-oblong to oblong, 2–3 cm. long, obtuse.—**B. s. handswórtlii** (K. Koch) Dallimore. Vigorous shrub with upright brs.: lvs. broad-oval to ovate, usually emarginate, dark green. (*B. s. var. handsworthiensis* Henry) G.W.33:152(h).—**B. s. rotundifolia** Baill., var. Lvs. orbicular-obovate to broad-ovate or -oval, to 2.5 cm. long, and 1.5 cm. broad, rounded and emarginate, usually broad-cuneate at base. (*B. s. latifolia* Hort. in part.)—**B. s. bullàta** Kirchn., f. Lvs. broad-oval to obovate, bullate, to 3.5 cm. long and 2 cm. broad, emarginate, dark green. G.W.33:151. (*B. s. latifolia* b. Dallimore, *B. s. var. latifolia* Bean, *B. s. latifolia macrophylla* Hort.)—**B. s. glaùca** Kirchn., f. Lvs. oval

to ovate-oblong, 2-2.5 cm. long, obtuse, dull bluish green. G.W.33:151. (*B. s. macrophylla* gl. Hort.)—*B. s. argenteo-variegata* West., var. Lvs. oval to elliptic-oblong, 1.5-2.5 cm. long, variegated with white. (*B. s. var. argentea* Loud.)—*B. s. aureo-variegata* West., var. Similar to the preceding, variegated with yellow. (*B. s. var. aurea* Loud.)—*B. s. marginata* Loud., var. Lvs. edged yellow.—*B. s. suffruticosa* L., var. EDGING BOX. Low shrub, rarely exceeding 1 m.: lvs. oval to obovate, 1-2 cm. long, slightly emarginate: infl. usually only terminal. R.I.5:t.153(c). Known for centuries and much used for edgings of flower beds.—*B. s. myrtifolia* (Lam.) Loud., var. Low shrub: lvs. oval or rhombic-ovate to narrow-oblong, 6-18 mm. long, 4-8 mm. wide, obtuse to acute. D.H.1:t.23f.3(c). S.H.2:f.90u. (?*B. s. var. leptophylla* Veillard, *B. s. angustifolia* Kirchn., not West.)—*B. s. rosmarinifolia* (Madiot) Baill. Low shrub: lvs. linear-oblong, 8-15 mm. long, 3-6 mm. wide, margin revolute, obtuse to acute. (*B. s. f. thymifolia* Kirchn.)

Related species: *B. Wallichiana* Baill. Shrub to 3 m.; brts. pubescent: lvs. linear-lanceolate, 3-6 cm. long, acute or obtusish, less glossy; petiole and midrib beneath puberulous. S.H.2:f.90h-i. Himal. Cult. 1880. Zone VII?—*B. balearica* Lam. Shrub or small tree to 20 m.; brts. slightly hairy at first, soon glabrous: lvs. broad-oval to ovate-oblong, 3-4.5 cm. long, emarginate, rarely minutely and abruptly pointed, leathery: staminate fls. stalked, with the rudimentary pistil 4 times shorter than sepals. D.H.1:t.23f.1(c). Dallimore, Holly, 230,t.(h). Balearic Isls., Spain, Sardinia. Intr. 1780. Zone VII?

2. *B. microphylla* Sieb. & Zucc. Compact shrub to 1 m. or sometimes prostrate, glabrous; stems sharply quadrangular: lvs. obovate to lance-obovate, 8-25 mm. long, rounded or emarginate, cuneate, fl.-clusters mostly terminal; staminate fls. with a rudimentary pistil about as long as calyx. Fl.v. K.D.355. J.C.20;3:t.6f.C. S.H.2:f.90m-n(l). Japan. Intr. about 1860. Zone V or VI.—*B. m. japonica* (Muell. Arg.) Rehd. & Wils., var. Shrub to 2 m., with spreading brs.: lvs. obovate or orbicular-obovate, 1-3 cm. long, rounded or emarginate, cuneate, light green; petiole glabrous: fl.-clusters axillary. J.C.20;3:t.6f.c. S.H.2:f.89v-x,90o-p. (*B. j.* Muell. Arg., *B. semper-virens* var. *j.* Mak., *B. obcordata* Hort.) Japan. Intr. about 1860. Zone V.—*B. m. koreana* Nakai, var. Upright shrub to 0.6 m.; young brts. and petiole short-pilose: lvs. obovate or elliptic to oblong-elliptic, 6-15 mm. long, emarginate, pubescent on midrib above: fls. axillary and terminal. Korea. Intr. 1919. Zone IV.—*B. m. sinica* Rehd. & Wils., var. Brts. and the lower scales of winter-buds short-pilose: lvs. orbicular or obovate to elliptic-lanceolate, 8-35 mm. long, usually emarginate; petiole and midrib beneath toward the base puberulous. Kanehira, Formos. Trees, 476. China. Intr. about 1900. Zone VI? (*B. Harlandii* var. *platyphylla* Schneid.)—This species with var. *japonica* and var. *koreana* is the hardest of the Boxes.

#### Fam. 48. EMPETRACEAE Dum. CROWBERRY FAMILY

Evergreen, small, ericoid shrubs: lvs. alternate, crowded, linear, deeply furrowed beneath, estipulate: fls. polygamous or dioecious, small, regular, apetalous; sepals 2-3, imbricate or sometimes wanting and replaced by bractlets, disk wanting; stamens 2-3: ovary superior, 2-9-celled; cells 2-ovuled; style 2-9-parted with laciniate or toothed stigmas: fr. drupaceous; seeds ascending, with the micropyle turned toward the outside, albuminous. Three genera with about 7 species in arctic and temp. regions of the n. hemisphere; in Am. s. to the Andes.

- A. Fls. in terminal heads: fr. dry: small upright shrubs.....1. *Corema*  
 1A. Fls. solitary, axillary: fr. berry-like: procumbent shrubs.....2. *Empetrum*

1. **CORÈMA** Don. Evergreen upright shrubs; buds small, globose, with several outer scales: lvs. linear, often whorled: fls. dioecious, 3-merous, in terminal heads, each in the axil of a scale-like bract and with 5 or 6 imbricated bractlets at base, without calyx; stamens 3, rarely 4; style slender, with 3, rarely 4-5 narrow, often toothed stigmas: fr. a small drupe, with usually 3 nutlets. (Name from Greek *korema*, broom; referring to the bushy aspect of the plant.) Syn.: *Oakesia* Tuckerm., *Tuckermannia* Klotzsch. One species in E. N. Am. and one in W. Eu.

**C. Conrădii** (Torr.) Loud. Shrub 15-60 cm. tall, nearly glabrous: lvs. linear, 3-6 mm. long, obtuse, often in threes; staminate fls. with long exserted purple filaments and brown anthers: fr. very small, dry. Fls. iv-v. H.I.531. Mem. Am. Acad. II.3:t.1. Nfd. to N. J. Cult. 1885. Zone III. Rarely cult.; attractive in spring with its purple staminate fls.

Related species: **C. album** (L.) D. Don. Shrub to 60 cm.; brts. pubescent: lvs. linear, 6-10 mm. long, dark green: fls. inconspicuous; fr. white, berry-like, 6 mm. across, in clusters. S.H.2:f.92a-f. Portugal, Spain, Azores. Intr. 1774. Zone VII.

2. **EMPETRUM** L. CROWBERRY. Evergreen procumbent shrubs; buds small, globose, with few outer ciliate scales; lvs. linear-oblong, obtuse, crowded, thick: fls. dioecious or monoecious, axillary, with scale-like bracts at base; sepals 3, somewhat petaloid; stamens 3, with slender filaments; style very short, with 6-9 toothed stigmas: fr. a berry-like drupe with 6-9 nutlets. (Ancient Greek name, meaning "on rocks.") Five species in the arctic zone and extending on the higher mts. to the temp. regions, in Am. to antarctic S. Am.

**E. nigrum** L. Procumbent shrub ascending to 25 cm.; brts. glandular when young: lvs. linear to linear-oblong, 4-6 mm. long, glandular on margin when young, spreading and soon reflexed: fls. purplish; anthers pinkish: fr. black, about 5 mm. across. Fl. iv-v; fr. viii-ix. R.I.5:t.158(c). F.D.21:t.2108(c). S.E.8:t.1251(c). B.B.2:479. S.H.2:f.92g-o. (*E. scoticum* Hook.) N. Eu., N. Asia, in N. Am. s. to N. Y., Mich. and N. Calif. Intr. before 1700. Zone II. Ornamental shrub adapted for rockeries forming dense evergreen patches.—**E. n. purpureum** (Raf.) DC., var. F. purple. E. Can. Intr. ?—**E. n. leucocarpum** L. M. Neuman, f. Fr. white.

Closely related species: **E. atropurpureum** Fern. & Wieg.: lvs. linear-oblong, loosely divergent, on the margin white-tomentose as are the brts.: fr. red to purplish black, 5-7 mm. across. (*E. nigrum* var. *purpureum* auth., not DC., *E. n. tomentosum* Dipp., *E. rubrum* var. *a.* Good.) Gulf St. Lawrence to Me. and N. H. Cult. 1890. Zone II.—**E. Eamesii** Fern. & Wieg. Lvs. linear-oblong, 3-4 mm. long, ascending, becoming slightly divergent, white-tomentose on the margin as are the brts.: fr. pink or light red, becoming translucent, 4-5 mm. across. (*E. nigrum* var. *purpureum* auth., not DC., *E. rubrum* subsp. *E.* Good.) S. Lab., Nfd. and Que. Intr. 1925. Zone II.

#### Fam. 49. CORIARIACEAE Lem. CORIARIA FAMILY

Shrubs or herbs with angular glabrous brts.: lvs. opposite or whorled, ovate to lanceolate, entire, estipulate: fls. perfect or polygamous, regular, small, greenish, axillary or in racemes; sepals 5, imbricate; petals 5, smaller, enlarging, becoming fleshy and enclosing the fr.; stamens 10, with short filaments: ovary superior, of 5-10 separate carpels; each with one pendulous ovule; styles free, filiform, papillose throughout: fr. berry-like; the indehiscent 1-seeded dry fruitlets enclosed by the fleshy petals; seed compressed, albuminous. One genus.

**CORIARIA** L. Characters of the family. (Name from Latin *coriarius*, pertaining to leather; referring to the use of the plant for tanning.)

- A. Infl. lateral on last year's brts.: lvs. 3-nerved glabrous.....1. *C. japonica*  
 AA. Infl. terminal, 10-20 cm. long: lvs. 5-9-nerved.....2. *C. terminalis*

1. *C. japonica* Gray. Shrub usually to 1, rarely to 3 m.: lvs. subsessile, ovate to lance-ovate, 3-10 cm. long, acuminate, 3-nerved, bright green: fls. small, greenish or reddish in racemes 2-3 together and 3-6 cm. long; staminate racemes shorter, drooping: fr. depressed-globose, about 5 mm. across; first bright red, changing to violet-black. Fl.v; fr.viii-ix. B.M.7509(c). G.F. 10:343. B.C.2:846. S.L.135(h).—Japan. Intr. 1892. Zone (V). Shrub with bright green lvs. and conspicuous fr. in fall.

Closely related species: *C. sinica* Maxim. Shrub to 6 m.: lvs. elliptic or broad-elliptic, 3-7 cm. long, abruptly short-pointed: fr. black. S.H.2:f.94e(1). S.L.135(h). C. and W. China. Intr. about 1895. Zone VI? or VII.—*C. myrtifolia* L. Shrub to 3 m.: lvs. ovate, 2.5-6 cm. long, acute, grayish green: fls. greenish, in racemes about 2.5 cm. long: fr. black, about 6 mm. across. R.I.5:t.160(c). E.N.III.4:f.81. S.H.2:f.93. S. Eu., N. W. Afr. Intr. 1629. Zone VII.

2. *C. terminalis* Hemsl. Herbaceous or suffrutescent to 1 m.; brts. scabrid when young: lvs. subsessile, broad-ovate to lance-ovate, 2.5-7 cm. long, abruptly acuminate: fls. greenish in terminal racemes 12-22 cm. long: fr. black. Fl.vi; fr.viii. H.I.2220. Sikkim to W. China. Intr. 1908. Zone VII?—*C. t. xanthocarpa* Rehd. & Wils., var. Fr. yellow. B.M.8525(c). R.H.1907: 160,t(c). M.D.1897:1,t(c),62(h). G.C.34:282. Sikkim. Cult. 1895. Zone VI.—Particularly the var. is ornamental with its long spikes of yellow translucent berries.

#### Fam. 50. ANACARDIACEAE Lindl. CASHEW FAMILY

Deciduous or evergreen trees or shrubs with resinous bark: lvs. alternate, very rarely opposite, simple or compound, estipulate or very rarely stipulate: fls. perfect or unisexual, regular, small, in panicles, perigynous, epigynous or hypogynous; sepals 3-5; petals 3-5, usually imbricate, or wanting; stamens 5 or 10, rarely more, inserted with the petals at the edge of an annular disk; carpels 1 or 3-5, free or united, 1-ovuled; ovules anatropous; styles 1-5: fr. a drupe or nut, rarely dehiscent; seeds usually exalbuminous or with very thin albumen; embryo curved.—About 60 genera with 400 species chiefly in the trop. and subtrop. zones of both hemispheres.

- A. Fls. apetalous: lvs. abruptly pinnate with 10-12 entire lfts.....1. *Pistacia*  
 AA. Fls. with petals.

- B. Lvs. simple, obtuse: fruiting panicle with long plumose sterile pedicels.....2. *Cotinus*  
 BB. Lvs. odd-pinnate or ternate; fruiting panicle without plumose pedicels.....3. *Rhus*

1. **PISTÁCIA** L. Evergreen or deciduous trees or shrubs; buds with several outer scales: lvs. alternate, simple, ternate or pinnate: fls. dioecious, apetalous or naked, in lateral panicles; staminate fls. with 2 bractlets at base and 1-2 sepals and with 3-5 stamens with short filaments; pistillate fls. with 2 bractlets, 2-5 sepals and a superior subglobose or ovoid, 1-ovuled ovary; style short, 3-parted: fr. a dry, obliquely ovoid drupe; seed compressed; embryo with plan-convex cotyledons. (Ancient Greek name *pistake*, Latin *pistacia*.) Eight species in the Mediterr. reg., Mex., Tex. and E. Asia.

*P. chinénsis* Bge. Deciduous tree to 25 m.; brts. puberulous: lvs. abruptly pinnate; lfts. 10-12, short-stalked, lanceolate, 5-9 cm. long, acuminate, oblique, puberulous when young, soon glabrous or nearly so; petiole puberulous: fls. small, the staminate ones in dense panicles 5-8 cm. long, pistillate fls. in longer and looser panicles: fr. globose-obovoid, 5-6 mm. across, com-

pressed, red, finally purple, in much-compound panicles 15-24 cm. long. Fl. iv; fr. x-xi. C.C.218. K.B.1910:393,t(h). M.G.27:25(h). U.S.Im.109:t(h); 117:t(h). China. Intr. about 1890. Zone VII? Lvs. turning crimson in fall; sometimes planted as shade-tree in the S.; also used as stock for the pistachio.

2. **CÓTINUS** Adans. Deciduous shrubs or trees with yellow wood and a strong-smelling juice: lvs. alternate, slender-petioled, entire; buds with several imbricate dark red-brown scales: fls. polygamous or dioecious, yellowish, in large and loose terminal panicles; petals 5, oblong, twice as long as the lance-ovate sepals; stamens shorter than petals; ovary superior with 3 short lateral styles: the fruiting panicles with the pedicels of the numerous sterile fls. lengthened and plumose: fr. a small, dry, obliquely obovoid drupe; embryo with flat cotyledons. (Ancient Greek name of the wild olive.)—One species in N. Am. and one from S. Eu. to C. China.

A. Lvs. abruptly contracted at base, generally oval, glabrous.....1. *C. Coggygia*  
 A. Lvs. cuneate, generally obovate, silky-pubescent beneath when young....2. *C. americana*

1. **C. Coggygia** Scop. SMOKE-TREE. Shrub of round bushy habit, to 5 m., often broader than high: lvs. oval to obovate, 3-8 cm. long, rounded or slightly emarginate at apex, glabrous; petiole 1-4 cm. long: fls. about 3 mm. across, polygamous: fruiting panicle 15-20 cm. long with numerous sterile pedicels furnished with long spreading purplish or greenish hairs and with few kidney-shaped reticulate frs. 3-4 mm. across. Fl.vi-vii; fr.viii-ix. F.D.21:t.2174(c). B.C.2:864. G.C.29:92,t(h);72:247(h). Gn.78:606(h). S.L. t.6(hc). (*Rhus Cotinus* L., *C. coccygea* K. Koch.) S. Eur. to C. China and Himal. Cult. 1656. Zone V. Planted for the filmy effect of the plumose fruiting panicles and the yellow and purple autumn tints of the lvs.—**C. C. purpureus** (Dupuy-Jamin) Rehd., var. Panicle with intensely purple hairs; young lvs. purplish. (*C. C. atropurpurea* Dipp.) Cult. 1870.—**C. C. pendulus** (Burvenich) Dipp. Brs. pendulous. R.B.11:257(h). Cult. before 1885.

2. **C. americana** Nutt. Upright shrub or small tree to 10 or 12 m.: lvs. obovate to elliptic-obovate, 6-12 cm. long, rounded at apex, silky-pubescent beneath when young; petiole 1.5-3.5 cm. long: fls. dioecious: fruiting panicle 10-15 cm. long, with rather inconspicuous pale purplish or brownish hairs on the sterile pedicels and sparingly produced frs. about 3 mm. across. Fl.vi-vii; fr.viii-ix. N.S.2:t.81(c). S.S.3:t.98,99. Gn.89:642(h). (*C. cotinoides* (Nutt.) Brit., *Rhus cotinoides* Nutt., *R. americana* Nutt.) Ala. to E. Tenn. and W. Tex. Intr. 1832. Zone V. Chiefly grown for its brilliant scarlet and orange fall coloring; the fruiting panicles are not showy.

3. **RHUS** L. SUMAC. Deciduous or evergreen shrubs, sometimes climbing, or trees; buds small, roundish, naked: lvs. alternate, odd-pinnate, 3-foliolate or simple: fls. small, dioecious or polygamous, in axillary or terminal panicles; petals 5, imbricate, longer than the 5-parted imbricate calyx; stamens 5, inserted below a brownish disk: ovary superior with 1 ovule and 3 terminal styles usually free: fr. a globose or compressed drupe with thin exocarp, resinous mesocarp and bony or crustaceous endocarp; embryo with flat cotyledons. (Ancient Greek name.) Including *Schmaltzia* Desv. and *Toxicodendron* Mill. About 150 species in subtrop. and temp. regions of both hemispheres.

A. Lvs. pinnate.

B. Infl. terminal: fr. red, hairy.

C. Fruiting panicle upright: lfts. serrate (usually entire in No. 4).

D. Rachis terete or winged below the terminal lfts. in No. 3.

E. Lfts. glabrous beneath or pubescent on the veins, glaucous.

- f. Brts. glabrous, glaucous: infl. finely pubescent.....1. *R. glabra*  
 ff. Brts. and infl. densely pilose.....2. *R. typhina*  
 ee. Lfts. densely brownish pubescent beneath: low shrub to 1 m....3. *R. Michauxii*  
 dd. Rachis winged (not or slightly so in var. of No. 5).  
 e. Lfts. entire or with few teeth toward the apex, 9-21.....4. *R. copallina*  
 ee. Lfts. coarsely serrate, usually rounded at base, 7-13.....5. *R. chinensis*  
 cc. Fruiting panicles pendulous: lfts. entire, only in young plants sometimes serrate;  
 rachis not or slightly winged only on the upper part.  
 d. Brts. puberulous: lfts. 7-13, subsessile or sessile, pubescent on veins beneath.  
 dd. Brts. glabrous: lfts. 5-9, nearly glabrous, distinctly stalked.....6. *R. punjabensis*  
 bb. Infl. axillary: lfts. entire; lvs. crowded at end of brts.: fr. whitish.  
 c. Frs. hispid: lfts. pubescent beneath, 13-17, 4-10 cm. long.....7. *R. Potanini*  
 cc. Fr. glabrous: lfts. 7-15.  
 d. Lfts. pubescent beneath at least on the veins, usually rounded at base: brts.  
 pubescent at least when young.  
 e. Lfts. to 16 cm. long and to 7 cm. broad, not closely veined, the distance between  
 the veins more than 5 mm.....8. *R. trichocarpa*  
 ee. Lfts. to 12 cm. long and to 4 cm. broad, closely veined, the veins 5 mm. or less  
 distant .....9. *R. verniciflua*  
 dd. Lvs. glabrous and glaucous beneath, sometimes pubescent when young, cuneate at  
 base; brts. and petioles glabrous.....10. *R. sylvestris*  
 aa. Lvs. ternate.  
 b. Fls. in loose axillary panicles: fr. glabrous, white: lfts. 3-16 cm. long, usually glabrous.  
 12. *R. radicans*  
 bb. Fls. in short and dense paniced spikes, catkin-like before opening: fr. red, pubescent:  
 lfts. 1.5-7 cm. long.  
 c. Lfts. pubescent, 2.5-7 cm. long, crenate-serrate.....13. *R. aromatica*  
 cc. Lfts. glabrate, 1.5-2.5 cm. long, with few rounded teeth or lobed.....14. *R. trilobata*  
 Sect. 1. SUMAC DC. Fls. in terminal panicles, polygamous: frs. densely  
 pubescent, red: lvs. pinnate.

1. *R. glabra* L. SMOOTH S. Shrub to 3 or sometimes to 5 m.; brts. glabrous and glaucous: lfts. 11-31, lance-oblong, 5-12 cm. long, acuminate, serrate, glaucous beneath: fls. greenish, in dense panicles 10-25 cm. long, puberulous: fr. scarlet, viscid-pubescent, in dense panicles. Fl.vii-viii; fr. viii-ix(-iv). Em.572,t(c). M.A.1:36(c). F.E.30:681(h). M.D.1906:t.9(h). S.L.310(h). (*Schmaltzia* g. Small.) Me. to B. C., s. to Fla. and Ariz. Cult. 1620. Zone II. Chiefly valued for the bright red autumnal foliage and the scarlet fruiting panicles.—*R. g. laciniata* Carr. Lfts. pinnately dissected. F.E.31:875(h). Gn.54:507(h). R.H.1863:7(h). Cult. 1863. Zone VI.

2. *R. typhina* L. STAGHORN S. Shrub or small tree to 10 m.; brts. densely velvety-hairy: lfts. 11-13, lance-oblong, 5-12 cm. long, acuminate, serrate, glaucous beneath, pubescent when young: fls. greenish, in dense hairy panicles 10-20 cm. long: fr. crimson, densely hairy. Fl.vi-vii; fr.viii-ix(-iv). Em. 571,t. S.S.3:102,103. Gn.54:505(h). G.F.2:343(h). M.D.1906:t.8(h). (*R. hirta* Sudw., *Schmaltzia* h. Small.) Que. to Ont., s. to Ga., Ind. and Iowa. Cult. 1629. Zone III. Grown for its lvs. turning early in fall to brilliant scarlet and orange and for the crimson fruit-clusters.—*R. t. laciniata* Wood. Lfts. and bracts deeply and lacinate toothed and infl., sometimes partly transformed into contorted bracts. Cult. ?—*R. t. dissécta* Rehd., f. Lfts. pinnately dissected. M.G.15.211(h). G.M.53:827(h). R.H.1907:10,11(h). S.L.308(h). (*R. t. laciniata* Manning, not Wood.) Cult. 1898.

*R. t. × glabra* = *R. hybrida* Rehd. Intermediate between the parents. Occasionally found wild. Intr. 1923.

3. *R. Michauxii* Sarg. Low stoloniferous shrub to 1 m.; stems densely hairy: lfts. 9-15, ovate to oblong-ovate, 5-10 cm. long, acuminate, coarsely serrate, pubescent above, densely brownish pubescent beneath; rachis winged below the terminal lfts.: fls. greenish yellow in panicles 10-20 cm. long: fr. compressed scarlet, densely hairy, in dense panicles. Fl.vi-vii; fr.viii-ix. G.F.8:405. (*Schmaltzia* M. Small, *R. pumila* Michx., not Meerb.) N. C. to Ga. Intr. 1806. Zone V.

4. *R. copallina* L. SHINING S. Shrub or small tree, occasionally to 10 m.; brts. reddish, puberulous: lfts. 9–21, oblong-ovate to lance-ovate, 4–10 cm. long, usually acute, entire or sometimes with a few teeth near the apex, glabrous and lustrous above, usually pubescent beneath; rachis winged, pubescent: fls. greenish, in dense panicles: fr. hairy, crimson. Fl.vii–viii; fr. ix–x. S.S.3:t.104,105. K.S.81. (*Schmaltzia* c. Small.) Me. and Ont. to Minn., s. to Fla. and Tex. Cult. 1688. Zone IV. Planted for its lustrous lvs. changing to reddish purple in fall and for the crimson fr.-clusters.

Related species: *R. coriaria* L. Shrub or small tree; brts. pilose: lfts. 9–15, ovate to elliptic or elliptic-oblong, 2.5–5 cm. long, acute or obtuse, coarsely dentate, pilose beneath, less so or nearly glabrous above; rachis narrowly winged at least near apex: fr. hairy, crimson, in dense narrow panicles. N.D. 2:46(c). F.D.21:t.2174(c). H.W.3:33. S. Eu., W. Asia. Cult. 1648. Zone (V).

5. *R. chinensis* Mill. Large shrub or small tree to 8 m., with broad round head: brts. yellowish, glabrous: lfts. 7–13, subsessile, ovate to ovate-oblong, 6–12 cm. long, acute or short-acuminate, coarsely crenate-serrate, brownish pubescent beneath; rachis and often the petiole conspicuously winged, pubescent: fls. creamy-white, in broad panicles 15–25 cm. long: fr. subglobose, orange-red, densely pubescent. Fl.viii–ix; fr.x. S.I.1:t.58(c). M.K.t.62(c). B.C.5:2953. M.G.14:166(h). S.L.310(h). (*R. javanica* Thunb., not L., *R. semialata* Murr., *R. semialata* var. *Osbeckii* DC.) China, Japan. Cult. 1784. Zone V. Valued for its large creamy white fl.-clusters late in summer.—*R. ch. Roxburghii* (DC.) Rehd., var. Rachis not or slightly winged. Himal. Intr. ? Zone VII?

6. *R. punjabensis* Stew. var. *sinica* (Diels) Rehd. & Wils. Tree to 12 m.; brts. short-pubescent: lfts. 7–11, sessile, ovate-oblong to oblong, 8–12 cm. long, acuminate, rounded to subcordate at the base, entire, pubescent on the veins beneath; upper part of rachis narrowly winged, or on young plants sometimes winged the whole length and lfts. up to 17: fls. whitish in pubescent panicles 12–20 cm. long, with spreading brs.; anthers purple: fr. suborbicular, 4–5 mm. across, red, densely hairy, in drooping panicles. Fls. vi–vii; fr.ix–x. (*R. sinica* Diels, *R. coriarioides* Dipp.) C. and W. China. Cult. 1890. Zone (V). With large pendulous panicles of red fr.

7. *R. Potanini* Maxim. Tree to 8 m.; brts. glabrous or minutely pubescent: lfts. 7–9, subsessile or short-stalked, oblong-ovate to oblong-lanceolate, 6–12 cm. long, acuminate, broad-cuneate or rounded at base, entire or on young plants sometimes coarsely toothed, slightly pubescent on the veins beneath or nearly glabrous; rachis terete or sometimes slightly winged between the upper lfts.: fls. whitish, in puberulous panicles 10–20 cm. long; anthers yellowish: fr. dark red, densely hairy, in pendulous panicles. Fl. v–vi; fr.ix. M.D.1910:103. G.M.51:419;52:721. (*R. sinica* Koehne, not Diels, *R. Henryi* Diels.) C. and W. China. Cult. 1902. Zone (V). Similar to the preceding.

Sect. 2. TOXICODENDRON Gray. Fls. in axillary panicles, polygamous: fr. whitish to brownish, glabrous or hispid: lvs. pinnate or ternate.

8. *R. trichocarpa* Miq. Tree to 8 m.; young brts. pubescent: lfts. 13–17, short-stalked, ovate to oblong, 4–10 cm. long, acuminate, rounded at base, pubescent beneath and sometimes above, with 10–16 pairs of veins; rachis terete, pubescent: fls. in axillary slender puberulous panicles with the stalk 6–15 cm. long: fr. slightly compressed, hispid, about 6 mm. across, yellowish, the hispid exocarp soon separating and falling off, exposing the white mesocarp. Fls.vi; fr.viii. M.K.t.61(c). G.F.10:384. Japan, China. Intr. 1890.

Zone V. Lvs. changing to orange and scarlet in fall; petioles of young lvs. bright red.

9. *R. verniciflua* Stokes. VARNISH-TREE. Tree to 20 m.; brts. pubescent when young, later glabrous and light yellowish gray or gray, lenticellate: lfts. ovate to oblong-ovate, stalked, 7-20 cm. long and 3-7 cm. broad, acuminate, rounded to broad-cuneate at base, entire, pubescent beneath when young, at maturity at least along the midrib, with 8-16 pairs of veins; rachis terete: fls. yellowish white, in loose drooping panicles 15-25 cm. long: fr. compressed, broader than high, 6-8 mm. across, straw-yellow. Fl.vi; fr.ix. S.I.1:t.57(c). I.T.6:t.201. Gn.34:158;54:507. G.W.1:95(h),97. M.D.21:t.12(h). S.L.307(h). (*R. vernicifera* DC., *R. vernix* Thunb., not L.—LACQUER-TREE.) Japan, China, Himal. Cult. 1874. Zone V. Planted for its large lvs. and the conspicuous pendulous fruiting panicles; in Japan and China it yields the famous varnish or lacquer of Japan; the oil expressed from the fr. is used for candle-making. The tree is poisonous.

10. *R. sylvestris* Sieb. & Zucc. Tree to 10 m.; brts. short-pilose: lfts. 7-13, short-stalked, ovate to ovate-oblong, 4-10 cm. long, acuminate, rounded to broad-cuneate at base, pubescent above or nearly glabrous, pubescent beneath, or at least densely rarely slightly on the veins, with 18-25 pairs of conspicuous veins; petiole usually short-pilose: fls. in loose panicles 8-18 cm. long, with spreading brs., usually brownish pubescent: fr. brownish yellow, broader than high and very oblique, about 1 cm. across. Fl.vi; fr.ix-x. S.I.1:58(c). S.H.2:f.99x-x<sup>4</sup>,100a. China, Japan, Korea. Intr. 1881. Zone VI. Lvs. turning deep red or scarlet in fall.

11. *R. vernix* L. POISON S. Shrub or small tree to 7 m.; brts. glabrous, glaucous at first, gray at maturity: lfts. 7-13, short-stalked, elliptic to elliptic-oblong, 4-10 cm. long, acuminate, cuneate, entire, slightly pubescent at first, becoming quite glabrous, with 8-12 pairs of veins; petioles glabrous: fls. greenish yellow, in slender panicles 8-20 cm. long: fr. subglobose, compressed, 5-6 mm. across, light yellowish gray. Fl.vi-vii; fr.ix. Em.575,t(c). M.A.1:t.37(c). S.S.3:t.107,108. (*R. venenata* DC.) R. I. and Ont. to Minn., s. to Fla. and La. Cult. 1713. Zone IV. Lvs. orange and scarlet in fall, but highly poisonous to the touch.

Related species: *R. succedanea* L. WAX-TREE. Tree to 10 m.: lfts. 9-15, elliptic-oblong to oblong-lanceolate, 6-12 cm. long, long-acuminate, lustrous above, grayish green or glaucescent beneath, glabrous, with 12-20 pairs of veins: fr. 7-9 mm. across. S.I.1:57(c). S.H.2:f.99y-z<sup>2</sup>,100b. China, Japan, Himal. Cult. 1863. Zone VII?—*R. Delavayi* Franch. Glabrous shrub: lfts. 5-7, elliptic, 3-5 cm. long, light green beneath: infl. 5-8 cm. long. S.H.2:f.100c(1).—*R. D. quinquejuga* Rehd. & Wils., var. Lfts. 5-11, slightly pubescent when young. W. China. Intr. 1908. Zone VII?

12. *R. radicans* L. POISON IVY. Suberect, scrambling over walls and fences or high climbing by aerial rootlets; brts. sparingly pubescent or glabrate: lfts. 3, ovate or rhombic, 3-12 cm. long, acute or short-acuminate, entire or sparingly and coarsely dentate or sinuate, glabrous and lustrous above, more or less pubescent beneath, the lateral ones short-stalked, the terminal one on a stalk 1-3 cm. long; petiole 5-10 cm. long: fls. greenish white, in panicles 3-6 cm. long: fr. subglobose, 5-6 mm. across, whitish or yellowish, glabrous or short-pilose. Fl.vi-vii; fr.x(-iii). B.M.1806(c). M.A.1:t.38(c). Em.577,t(c). F.D.21:t.2175(c). S.L.306(h). (*R. Toxicodendron* auth., not L., *Toxicodendron vulgare* Mill.—POISON OAK.) N. S. to Fla., w. to Minn., Neb. and Ark. Cult. 1640. Zone III. Very showy in autumn with the brilliant scarlet and orange tints of its foliage. Lvs. poisonous to

the touch.—**R. r. Rydbergii** (Small) Rehd., var. Shrubby, less than 1 m. high: lfts. sinuate-dentate, thickish, nearly glabrous or pubescent on veins beneath. Tex. to Mont. Intr. 1918. Zone V.

Related species, all poisonous, are: **R. Toxicodendron** L. Upright to 0.5 m.: lfts. broadly rhombic-ovate, 3-7-lobed, pubescent beneath, rather firm: fr. pubescent at first, papillose at maturity. (*R. quercifolia* Robins. & Fern.) N. C. to Fla. and Tex. Cult. 1937. Zone V.—**R. diversiloba** Torr. & Gray. Upright shrub or sometimes climbing: lfts. ovate-elliptic or obovate, 3-7 cm. long, usually obtuse, coarsely crenate-serrate or 3-lobed. B.R.31:38(c). Zoe,1:t.4. S.H. 2:f.98d,99q. B. C. to Calif. Cult. 1845. Zone VI?—**R. orientalis** (Greene) Schneid. Climbing or shrubby: brts. pubescent when young: lfts. dull green above, always entire, glabrous beneath except axillary tufts of hairs: fr. hispid. (*R. Toxicodendron* var. *hispida* Engl., *Ampelopsis japonica* Hort., ? *R. ambigua* Dipp.) Japan, China. Intr. about 1865. Zone V.

Sect. 3. **LOBADIUM** DC. Fls. in short, solitary or clustered spikes, catkin-like before opening, polygamo-dioecious, before the lvs.: fr. red, pubescent: lvs. ternate.

13. **R. aromática** Ait. FRAGRANT S. Usually prostrate shrub to 1 m., with ascending or diffuse brs., aromatically fragrant; brts. pubescent: lfts. 3, subsessile, ovate, 2.5-7 cm. long, acute or acuminate, crenate-serrate, pubescent, the terminal one cuneate and often obovate, the lateral ones oblique and rounded at base: fls. yellowish, in solitary or clustered spikes 5-20 mm. long, forming short panicles at the end of the brts.: fr. subglobose, about 6 mm. across, red, hairy. Fls. III-IV; fr. VII. M.A.1:t.39(c). B.B.2:482. K.S. 89. (*R. canadensis* Marsh., not Mill., *Schmaltzia a.* Desv.) Vt. and Ont. to Minn., s. to Fla. and La. Intr. 1759. Zone III. Conspicuous in early spring with its yellow fls.; lvs. turning orange and scarlet in fall.—**R. a. serotina** (Greene) Rehd., var. Upright shrub to 2 m.; lfts. acutish or obtuse, with few obtuse teeth or slightly lobed, pubescent beneath: fls. later, with the lvs. Ind. to Okla. Cult. 1929. Zone V.—**R. a. illinoensis** (Greene) Rehd., var. Upright shrub to 2 m.; lfts. obtuse or rounded at apex, with few rounded teeth, pubescent above, more densely beneath. Mo. to Ill. Intr. 1936. Zone V.

14. **R. trilobata** Nutt. ILL-SCENTED S. Upright or ascending shrub to 1, rarely 2 m., ill-scented: brts. pubescent: lfts. 3, sessile or subsessile, elliptic or obovate, 1.5-2.5 cm. long, cuneate, with few rounded teeth, the terminal one usually 3-lobed, the lateral ones usually cuneate, slightly pubescent when young, soon glabrate: fls. and frs. similar to those of the preceding species, except fls. greenish and frs. slightly smaller. Fls. III-IV; fr. VII. B.B.2:483. K.S.91. (*R. canadensis* var. *t.* Gray, *Schmaltzia t.* Small.) Ill. to Wash., Calif. and Tex. Intr. 1877. Zone V. Fls. less conspicuous than those of *R. aromatica* and habit more upright.

#### Fam. 51. CYRILLACEAE Lindl. CYRILLA FAMILY

Shrubs or small trees: lvs. alternate, entire, estipulate: fls. perfect, regular, small, in racemes; sepals 5, imbricate, often enlarged in fr.; petals 5, imbricate; stamens 5 or 10, hypogynous, with dilated filaments; ovary superior, 2-4-celled, each cell with 1-4 pendulous ovules; style short, with 2-4 stigmas: fr. dehiscent or indehiscent and angled or winged; seeds albuminous with small straight embryo. Three genera in N. and S. Am.

- A. Racemes axillary; stamens 5: fr. ovoid.....1. *Cyrilla*  
 AA. Racemes terminal; stamens 10: fr. 3-4-winged.....2. *Cliftonia*

1. **CYRILLA** L. Deciduous to evergreen shrub or small tree; buds small, with several loose pointed scales: lvs. short-petioled, glabrous: fls. white, in narrow slender axillary racemes; petals 5, lance-oblong, about twice

as long as sepals; stamens 5, shorter than petals; ovary usually 2-celled, each cell with usually 2 ovules: fr. a 2-celled loculicidally dehiscent capsule; seeds elongated, acuminate. (After Domenico Cirillo, professor of medicine at Naples; 1734-1799.) One species.

**C. racemiflora** L. LEATHERWOOD. Shrub or tree to 10 m., glabrous: lvs. oblong or oblanceolate, 4-8 cm. long, usually obtuse, cuneate, lustrous above, reticulate beneath, bright green: fls. white, 4-5 mm. broad, in slender racemes 8-15 cm. long, pendulous in fr.; fr. about 2 mm. long. Fl.vi-vii; fr.viii-ix. B.M.2456(c). S.S.2:t.51. G.C.30:198. E.N.III.5:f.112a-c. Va. to Fla., also W. Ind. and E. S. Am. Intr. 1767. Zone V. With graceful racemes of white fls. and bright green lvs. turning orange and scarlet late in fall in the hardier deciduous form.

**2. CLIFTONIA** Banks. Evergreen shrub or small tree, glabrous; buds ovoid, with about 2 scales: lvs. short-petioled: fls. in terminal racemes; petals 5, rarely 6-8, obovate, much longer than sepals; stamens 10, shorter than petals; ovary superior, 3-4-celled, each cell with 1 pendulous ovule; stigma 3-4-lobed, subsessile: fr. ovoid, indehiscent 3-4-winged. (After Dr. Francis Clifton, an English physician; d. 1736.) One species.

**C. monophylla** (Lam.) Sarg. BUCKWHEAT-TREE. Shrub or tree, occasionally to 15 m.; lvs. lance-oblong, 3-5 cm. long, obtuse, cuneate, dark green above: fls. white or pinkish, about 8 mm. across, fragrant, in racemes 3-6. long: fr. about 6 mm. long. Fl.iii-iv; fr.viii-ix. B.M.1625(c). S.S.2:t.52. (*C. ligustrina* Spreng., *C. nitida* Gaertn.) Ga. to Fla. and La. Intr. about 1806. Zone VII. With fragrant early fls. and attractive buckwheat-like fr.

## Fam. 52. AQUIFOLIACEAE DC. HOLLY FAMILY

Tree or shrubs: lvs. alternate, simple, often evergreen; stipules minute, caducous: fls. regular, dioecious or polygamous, small, axillary; sepals 3-6, more or less connate; petals 4-5, rarely more, imbricate; stamens 4-5; disk wanting; ovary superior, 3-many-celled, each cell with 1-2 pendulous ovules; stigma subsessile, lobed: fr. a berry-like drupe; seed with a very small embryo at the apex of the copious albumen.—Three genera with more than 300 species in the temp. and trop. regions of both hemispheres.

- A. Petals broad, cohering at base; sepals persistent.....1. *Ilex*  
 AA. Petals linear, free; sepals minute, deciduous: lvs. entire, deciduous: fr. slender-stalked.  
 2. *Nemopanthus*

**1. ILEX** L. HOLLY. Evergreen or deciduous shrubs or trees; buds small, ovoid, with about 3 outer scales: lvs. petioled, entire or serrate, often spiny: fls. dioecious or occasionally polygamous, axillary, solitary or fascicled or in cymes, usually 4-merous or 5-8-merous; fr. a berry-like drupe, with 2-8 bony 1-seeded nutlets. (Ancient Latin name of *Quercus Ilex*.) About 300 species in the temp. and trop. regions of both hemispheres.

### Lvs. evergreen.

- A. Fls. and frs. axillary on last year's brts., usually clustered.  
 B. Lvs. with spiny usually coarse teeth or occasionally entire, but with spiny apex.  
 c. Fls. and frs. stalked: lvs. 3-11 cm. long: brts. usually glabrous.  
 d. Lvs. ovate or elliptic to lanceolate.....1. *Aquifolium*  
 dd. Lvs. rectangular-oblong and 3-pointed at apex.....2. *I. cornuta*  
 cc. Fls. and frs. subsessile: brts. puberulous.  
 d. Lvs. 1.5-4 cm. long, with few strong teeth: fr. 4-seeded.....3. *I. Pernyi*  
 dd. Lvs. 5-10 cm. long, spinose-serrate: fr. usually 2-seeded.....4. *I. dipyrrena*  
 BB. Lvs. serrate, crenate or entire and obtusely pointed.  
 c. Lvs. entire, 5-8 cm. long.....5. *I. integra*  
 cc. Lvs. serrate or crenate.  
 d. Lvs. smooth above, 6-18 cm. long.....6. *I. Fargesii*  
 dd. Lvs. rugose above, 2-5 cm. long.....7. *I. rugosa*

- AA. Fls. and frs. solitary or in solitary peduncled infl. axillary on the young brts.
- B. Fr. red.
- C. Lvs. coarsely spiny-toothed.....8. *I. opaca*
- CC. Lvs. entire; fr. long-peduncled.....9. *I. pedunculosa*
- CCC. Lvs. crenate or serrulate, 1.5-3 cm. long.....10. *I. yunnanensis*
- BB. Fr. black.
- C. Lvs. with few obtuse teeth near apex or entire; fls. 5-8-merous.....11. *I. glabra*
- CC. Lvs. serrate or crenate, very rarely with only few teeth near apex; fls. 4-merous.
12. *I. crenata*
- Lvs. deciduous.
- A. Nutlets smooth on back; lvs. and frs. never fascicled on short spurs.
- B. Fr. on slender peduncles 1-3.5 cm. long, pendulous; lvs. acuminate.....13. *I. geniculata*
- BB. Fr. short-stalked.
- C. Fls. 4-5-merous; fr. 4-5 mm. across.....14. *I. serrata*
- CC. Fls. 5-8-merous; fr. 6-8 mm. across.
- D. Lvs. pubescent at least on the veins beneath, dull above; all fls. short-stalked.
15. *I. verticillata*
- DD. Lvs. glabrous or nearly so beneath, lustrous above; staminate fls. long-stalked.
16. *I. laevigata*
- AA. Nutlets ribbed on back.
- B. Fr. on a stalk 7-10 mm. long; staminate infl. several-fld.; lvs. acutish, reticulate beneath.....17. *I. dubia*
- BB. Fr. short-stalked; staminate infl. 1-fld.; lvs. and frs. often fascicled on short spurs.
- C. Lvs. obtusely serrate, usually broadest above the middle and obtuse, 3-7 cm. long.
18. *I. decidua*
- CC. Lvs. sharply serrate, acute or acuminate, 4-12 cm. long.....19. *I. montana*

Subgen. I. AQUIFOLIUM Gray. Lvs. evergreen. (Subgen. *Euclea* Loes.)

Sect. I. AQUIFOLIUM Maxim. Fls. or infls. fascicled, rarely solitary, in the axils of lvs. on last year's brts.

1. *I. Aquifolium* L. ENGLISH H. Tree to 15 or occasionally to 25 m., with short spreading brs. forming usually a dense pyramidal or oblong head; young brts. glabrous or minutely puberulous: lvs. short-petioled, ovate or elliptic to oblong-ovate, 3-7 cm. long, margin wavy with large triangular spiny teeth, on old trees partly or mostly entire, lustrous, glabrous: fls. white, fragrant, short-stalked; fr. globose, 7-10 mm. across, bright red, on stalks 4-8 mm. long, usually clustered. Fl.v-vi; fr.ix(-iii). F.D.21:t.2178(c). S.E.2:t.316(c). Gng.4:83(h). S.L.198(h). M.D.1919:t.5,6(h). E.H.7:t.377(h). W. and S. Eu., N. Afr., W. Asia to China. Cult. since ancient times. Zone VI. Much planted for its handsome lustrous lvs., dense habit and the bright red fr. remaining on the tree during the winter. A very large number of garden forms with green or variegated lvs. are in cult., particularly in England. (For an account of these forms see T. Moore in G.C.II.2,4,5, and 6; also D.H.62-117 and E.H.7:1704-15.)—*I. A. heterophylla* Ait., var. Lvs. elliptic or elliptic-ovate, about 6 cm. long, entire or partly with few teeth. G.C.II.2:519.—*I. A. férox* Ait., var. HEDGEHOG H. Lvs. with short teeth and numerous small spines on the upper convex surface. (*I. A. var. echinata* DC.) There are also variegated forms.—*I. A. pendula* Loud., var. With pendulous brs. D.H.62:t(h). Gn.85:164(h);87:17(h). G.M.41:81(h).—*I. A. bacciflora* West., var. With yellow fr. (*I. A. var. flava* Sweet, var. *xanthocarpa* K. Koch, *I. chrysocarpa* Wender.) Gn.87:439;88:857.—*I. A. chinensis* Loes., var. Lvs. ovate-oblong to lance-ovate, 7-11 cm. long, spinose-dentate: fr. smaller on very short stalks. D.H.130,t.f.2. C. China. Intr. 1901.

*I. A. × Perado* = *I. altaclarensis* Dallim. Lvs. elliptic, 6-10 cm. long, thinner, with more numerous and more regular teeth and rather plane margin. G.C.34:322(h). Gn.88:856(h). D.H.141,t.frontisp.(h). Here belong *I. A.* [vars.] *belgica*, *Hendersoni*, *Hodginsii*, *Lawsoniana*, *Mundyi*, *nobilis*, *Shepherdii* Dallim. and *I. camelliaefolia* (K. Koch) Henry, *I. Wilsoni* Henry, not Loes. Cf. D.H.139-143. Cult. 1838.—*I. A. × latifolia* = *I. Koehneana* Loes. Lvs. elliptic or ovate, 10-16 cm. long, densely spinose-dentate. Cult. 1900.—*I. A. × dipyrena* = *I. Beanii* Rehd. Lvs. larger and narrower, dull green above. (*I. dipyrena* var. *elliptica* Dallim., *I. elliptica* Bean, not H.B.K.) Cult. 1900.

Related species: *I. Perado* Ait. with *I. platyphylla* (Webb) Loes. differs chiefly in the larger lvs. to 20 cm. long, decurrent into a margined petiole,

reticulate beneath. Canary Isls., Azores, Madeira, s. Spain. Not hardy within our area.—*I. P. × I. Aquifolium*; see under No. 1.

2. *I. cornuta* Lindl. Shrub to 3 m., with spreading brs. forming a broad dense bush: brts. glabrous: lvs. short-stalked, oblong-rectangular, 3.5–10 cm. long, with 3 strong almost equal spines at the broad apex and 1 or 2 strong spines on each side at base, or on older plants rounded at base, dark green and lustrous above: fr. globose, 8–10 mm. across, bright red, on stalks 8–15 mm. long, clustered. Fl.iv–v; fr.ix. B.M.5059(c). G.C.1850:311. F.S.7:216;9:t.895 (c). U. S. Im. 205:t.331,332(h). E. China. Intr. 1846. Zone VII. With lustrous lvs. of unusual shape.—*I. c. Burfordii* (S. R. Howell) DeFrance, var. Lvs. elliptic or obovate, spiny-pointed, broad-cuneate, entire or with one pair of spiny teeth near apex. N.H.13:193. Cult. 1895.

3. *I. Pényi* Franch. Shrub or sometimes tree to 10 m.; young brts. minutely pubescent: lvs. crowded, rhombic or quadrangular-ovate, 1.5–3 cm. long, with 1–3 spines on each side, the upper pair the largest, but shorter than the terminal spine, dark glossy green above, glabrous; petiole 2 mm. long, puberulous; fls. pale yellow, in dense sessile clusters: fr. subsessile, globose-ovoid, 6–8 mm. long, red, clustered. Fl.v; fr.viii. H.I.16:1539. G.C.45:75. R.B.35:24(h). S.L.200(h). C. and W. China. Intr. 1900. Zone VI. Of compact habit with handsome glossy lvs.—*I. P. Veitchii* (Veitch) Bean, var. Lvs. larger and broader, 3.5–5 cm. long, with 4–5 rigid spines on each side. D.H.130,t.f.4. Intr. 1900.

Closely related species: *I. ciliospinosa* Loes. Shrub to 4 m.; young brts. densely short-villous: lvs. ovate, 2.5–4 cm. long, spinose-serrate with small aristate teeth pointing forward. M.D.1919:t.2A,B. (*I. bioritsensis* var. c. Comber.) C. and W. China. Intr. 1908. Zone VII?

4. *I. dipyræna* Wall. Tree to 12 m.; young brts. puberulous, angular: lvs. elliptic-ovate to oblong, 5–10 cm. long, acuminate, cuneate, remotely spiny-dentate, or on old trees partly entire, dull green above; petiole 3–6 mm. long: fls. very short-stalked; staminate peduncles usually 1-fl.: fr. subsessile, globose-ovoid, about 8 mm. long, red, with usually 2 stones. Fl.iv–v; fr.x–xii. Wallich, Pl. As. Rar. 3:t.292(c). Brandis, For. Fl.t.15. S.H.2:105r-s\*,108c. S.L.199(h). D.H.124,t(h). (*I. Wallichiana* Hort.) Himal. Intr. 1840. Zone VII.—*I. d. paucispinosa* Loes., var. Lvs. ovate to ovate-oblong, 5–7 cm. long, with only 3–5 teeth on each side. W. China. Intr. 1901?

*I. d. × Aquifolium*; see under No. 1.

5. *I. integra* Thunb. Shrub or tree to 12 m.; brts. glabrous, angled: lvs. slender-stalked, elliptic or elliptic-oblong or oblong-obovate, 5–10 cm. long, at the apex contracted into a short obtuse point, cuneate, entire, very rarely with a few teeth, dark green and lustrous above; petiole 8–15 mm. long: fls. fasciated: fr. subglobose, about 1 cm. across, red, on stalks 5–8 mm. long, fasciated or solitary. Fl.iii–iv; fr.viii–ix. S.I.1:t.60(c). G.C.69:15. Japan. Intr. 1864. Zone VII.—*I. l. leucoclada* Maxim., var. Mature brts. pale yellow: lvs. thinner, to 14 cm. long, sometimes slightly serrulate, with acutish point. (*I. l. Mak.*) C. Japan. Intr. 1915. Zone (V).

6. *I. Fargesii* Franch. Shrub or tree to 6 m.; brts. glabrous: lvs. oblong-lanceolate to oblanceolate or linear-lanceolate, 6–12 cm. long, long-acuminate, cuneate, serrulate above the middle, dull green above; petiole 8–12 mm. long: staminate fls. short-stalked, in dense clusters: frs. globose, 6–8 mm. across, red, usually clustered, on stalks 2–6 mm. long. Fl.v–vi; fr.ix–x. D.H. 130,t.f.1. W. China. Intr. 1900. Zone VI. Easily distinguished from the other species by its long and narrow lvs.

Related species: *I. Franchetiana* Loes. Lvs. elliptic-obovate to lance-oblong or oblanceolate, 4-10 cm. long, abruptly acuminate, usually broad-cuneate, denticulate: frs. short-stalked, in dense clusters. W. China. Intr. 1907. Zone VII?—*I. corallina* Franch. Tree to 7 m.: lvs. lance-oblong to lanceolate, 6-14 cm. long, sharply serrate or serrulate, acuminate, lustrous above; petiole 4-8 mm. long: frs. 3-4 mm. across, clustered, subsessile. C. and W. China. Intr. about 1900. Zone VII?—*I. latifolia* Thunb. Tree to 20 m.: lvs. elliptic to oblong-lanceolate, 8-18 cm. long, acuminate, serrate, lustrous: petiole 1-2 cm. long: frs. about 8 mm. across, short-stalked, in dense clusters. B.M.5597(c). P.F.3:f.240. S.I.1:t.62(c). Japan. Intr. 1840. Zone VII.—*I. l. × Aquifolium*; see under No. 1.

7. *I. rugosa* Fr. Schmidt. Low spreading, sometimes prostrate shrub; brts. glabrous, angled: lvs. ovate-oblong to lanceolate, 1.5-5 cm. long, obtusish or acute, rounded to broadly cuneate at base, remotely crenate-serrate, dark green, lustrous and rugose above; petiole 2-3 mm. long; staminate fls. several, short-stalked, pistillate 1 or 2: fr. about 6 mm. across, red, on stalks 2-4 mm. long. Fl.v-vi; fr.viii-ix. Mém. Acad. Sci. St. Pétersb. VII.12,2:t.3. Japan, Saghal. Intr. 1895. Zone III.

Here may be mentioned *I. vomitoria* Ait. YAUPON. Tree to 8 m.; young brts. puberulous: lvs. short-stalked, elliptic to ovate-oblong, 1-3, rarely to 5 cm. long, obtusish, crenate, glabrous: frs. 5-6 mm. across, short-stalked, usually clustered. S.S.1:t.48. B.B.2:487. C.L.13:498(h). (*I. Cassine* Walt., not *I. caroliniana* Loes., not Mill.) Va. to Fla., w. to Ark. and Tex. Intr. 1700. Zone VII.

Sect. 2. LIOPRINUS Loes. Fls. or infl. solitary, in the axils of the lvs. on young brts. or at the base of the young brts.

8. *I. opaca* Ait. AMERICAN HOLLY. Tree with spreading brs. forming a narrow pyramidal head, to 15 m.; young brts. finely puberulous: lvs. elliptic to elliptic-lanceolate, 5-10 cm. long, with large remote spiny teeth, rarely nearly entire, dull green above, yellowish green beneath; petiole 6-12 mm. long; staminate fls. in 3-9-fld. stalked cymes: fr. globose, 8-10 mm. across, red, usually solitary. Fl.vi; fr.x(-iv). Em.385,t(c). S.S.1:t.45. Gng.4:276, 277(h). Gn.M.4:237(h);33:232(h). Am. For. 31:726(h);37:725. (*I. quercifolia* Meerb.) Mass. to Fla., w. to Mo. and Tex. Intr. 1744. Zone V. Not as handsome as *I. Aquifolium* but hardier; the berried brs. much used for Christmas decorations.—*I. o. subintegra* Weatherby, f. Lvs. entire or nearly so.—*I. o. xanthocarpa* Rehd., f. Fr. yellow. Intr. 1901.

*I. o. × Cassine* = *I. attenuata* Ashe. Lvs. elliptic to oblong-obovate, 4-8 cm. long, spiny-pointed and with 1-4 spreading spiny teeth on each side, pale below and sparingly short-pilose on midrib: infl. pubescent: fr. about 6 mm. across, solitary or in threes on a short stalk. (*I. Topeli* Hort.) Fla., with the parents. Cult. 1931. Zone VII?

9. *I. pedunculosa* Miq. Shrub or small tree to 10 m., glabrous: lvs. ovate or elliptic, 3-7 cm. long, rounded or broad-cuneate at base, acuminate, entire, lustrous green above; petiole 0.6-1.5 cm. long: fls. in slender-peduncled cymes: fr. subglobose, 6 mm. across, bright red, on slender pedicels 1-2 cm. long, solitary or several on a slender peduncle 2-4 cm. long. Fl.vi; fr.x. S.I. 1:t.61(c). Nat. Nurseryman, 34:127. N.H.18:71. (*I. fujisanensis* Sakato.) Japan. Intr. 1892. Zone (V). One of the hardiest evergreen Hollies.—*I. p. continentalis* Loes., var. Lvs. 8-12 cm. long, thicker, often remotely appressed-serrulate above the middle: sepals ciliate. C. China. Intr. 1901. Zone VII.

Related species: *I. rotunda* Thunb. Tree to 12 m., glabrous: lvs. elliptic to oblong, 4-11 cm. long, acute to short-acuminate, broad-cuneate at base, entire; petioles 1-2.5 cm. long: fr. 5-6 mm. across, in umbels; pedicels 3-8 mm.; peduncle 6-12 mm. long. S.I.1:t.60(c). F.S.7:216. G.C.1850:311. P.F.1:f.28. Japan, Korea. Intr. about 1850. Zone VII.—*I. venulosa* Hook. f. Shrub or tree, glabrous: lvs. elliptic-ovate to oblong-ovate, 10-18 cm. long, caudate-acuminate,

broad-cuneate to rounded at base, entire, reticulate beneath; petiole 1.5–2.5 cm. long; fr. globose, 2.5–3 mm. across, red, in dense stalked umbels. Himal. to W. China. Cult. 1934. Zone VII.—*I. Cassine* L. DAHOON. Shrub or tree to 12 m.; brts. usually pubescent: lvs. oblong to oblanceolate, rarely obovate, 4–10 cm. long, obtuse or acute, entire or with few appressed teeth near apex, finely pubescent beneath: fls. in peduncled cymes: fr. red, 6–8 mm. across. S.S.1:t.46. B.B.2:487. S.M.670. (*I. Dahoon* Walt.) Va. to Fla. and La. Intr. 1726. Zone VII.

10. *I. yunnanensis* Franch. Shrub to 4 m.; brts. densely short-villous: lvs. short-stalked, ovate to oblong-ovate, 1.5–3 cm. long, acute, crenate-serrate or serrulate, lustrous above, pubescent below when young, at least on the midrib, reddish brown when young: staminate fls. several, on slender peduncles: pistillate solitary: fr. globose, 6 mm. across, red, on a slender stalk 4–8 mm. long. M.D.1919:t.1g-L. Fl.vi; fr.ix. W. China. Intr. 1901. Zone VII? Similar to *I. crenata*, but fr. red.—*I. y. gentilis* Loes., var. Lvs. and often the brts. glabrous or nearly so. Intr. 1910. Zone (V).

Related species: *I. Sugeroki* Maxim. Dense shrub to 2 m.; brts. finely pubescent: lvs. elliptic, 2–4 cm. long, acute or acutish, cuneate, serrate or crenate-serrate above the middle, glabrous; petioles short, puberulous: staminate fls. usually 3 on a peduncle 8–10 mm. long; fr. solitary, about 7 mm. across, on a stalk 1–2 cm. long (to 4 cm. in *I. S. f. longipedunculata* Maxim.). Mém. Acad. Sci. St. Pétersb. VII.29,3:t.1,f.7. S.L.2:t.38 (as *I. crenata*; frs. should be red). Japan. Intr. 1914. Zone V?—*I. purpurea* Hassk. Tree to 13 m., glabrous: lvs. narrow-elliptic to elliptic-oblong or obovate-oblong, 6–12 cm. long, acuminate, cuneate at base, rarely rounded, crenate or crenate-serrulate; petiole 5–15 mm. long; fr. ellipsoid, 6–10 mm. long, red, slender-pedicelled, 1–3, rarely 7, on a peduncle 5–12 mm. long. N.H.14:330. Japan, China. Cult. 1900. Zone VII.—*I. micrococca* Maxim. Shrub or tree to 15 m., glabrous: lvs. elliptic-ovate to ovate-oblong, 8–16 cm. long, chartaceous, long-acuminate, rounded at base, appressed-serrulate, veins beneath elevated; petiole 1.5–2.5 cm. long; fr. globose, 3 mm. across, red, many in dense cymes 1–2 cm. across. Japan, China. Cult. 1934. Zone VII?

11. *I. glabra* (L.) Gray. INKBERY. Evergreen or half-evergreen shrub to 2.5 m., with upright brs., puberulous when young: lvs. obovate to oblanceolate, 2–5 cm. long, acute or obtusish, cuneate, with few obtuse teeth near apex or entire, dark green and lustrous above, glabrous; petiole 3–6 mm. long; staminate fls. several on a slender stalk, pistillate, often solitary, 5–8-merous: fr. globose, 6 mm. across, short-stalked, black. Fl.vi; fr.ix(–v). L.B.450(c). B.B.2:487. (*Prinos glaber* L.—WINTERBERRY.) N. S. to Fla., w. to Mo. Intr. 1759. Zone III. With dark green lustrous lvs.

Another black-fruited species is *I. szechwanensis* Loes. Shrub to 4 m.: lvs. elliptic-ovate to oblong-lanceolate, 3–6 cm. long, crenately or finely serrulate, lustrous: fls. 4–6-merous, solitary or the staminate sometimes 2–3-fld., at base of the young brts. and also on the old brts.: fr. 6–8 mm. across, on a stalk 4–8 mm. long. C. China. Intr. 1907. Zone VII.

12. *I. crenata* Thunb. Much-branched shrub, rarely small tree to 7 m.; young brts. minutely puberulous, terete: lvs. crowded, short-stalked, elliptic or obovate to oblong-lanceolate, 1.5–3 cm. long, acute, cuneate or broad-cuneate, crenate-serrulate or serrulate, lustrous dark green above, glabrous: fls. 4-merous, staminate in 3–7-fld. cymes, pistillate solitary: fr. globose, 6 mm. across, black, on a stalk 4–6 mm. long. Fl.v–vi; fr. x. M.D.1919:t.1a-F. Gg.6:165(h). Gn.M.5:273(h). S.L.201(h). (*I. Fortunei* Hort.) Japan. Intr. 1864. Zone VI. With small dark green lvs. and small black fr.—*I. c. latifolia* Goldring. Lvs. elliptic or obovate. D.H.118,t.f.6. (*I. c. var. typica* Loes., *I. c. major* Hort., *I. c. elliptica* Hort.) The typical form.—*I. c. convéxa* Mak., var. Upright slender-branched shrub: lvs. oval or oval-obovate to oblong-oval, bullate, convex above, concave below. (*I. c. f. bullata* Rehd.) Intr. 1919. Zone V.—*I. c. luteo-variegata* Reg., var. Lvs. spotted yellow. (*I. c.*

*aureo-variegata* Goldring, *I. c. variegata* Nichols.)—*I. c. longifolia* Goldring. Lvs. elliptic-oblong to lanceolate.—*I. c. microphylla* Maxim., var. Lvs. elliptic to oblong, 8–14 mm. long. Zone (V).—*I. c. Héleri* (Craig) Rehd., f. Dwarf compact shrub: lvs. oval, 6–12 mm. long, obtusish and mucronulate, with few minute teeth. (*I. H. Craig*.) Cult. 1936. Zone (V).—*I. c. nummularia* Yatabe, var. Dwarf compact shrub: lvs. very crowded, broad-ovate to orbicular, 4–15 mm. long, with few small teeth near apex or entire: fr.-stalk about 2 mm. long. D.H.118,t.f.5. (*I. c. Mariesii* Dallim.) Intr. 1879.

Subgen. II. PRINOS Gray. Lvs. deciduous: fls. solitary in the axils of the lvs. or fascicled, together with the lvs.: fr. red. (*Prinos* L.)

Sect. 1. EUPRINUS Loes. Nutlets smooth on back: frs. 4–8 mm. across: lvs. and fls. never fascicled.

13. *I. geniculata* Maxim. Slender-branched shrub; brts. glabrous: lvs. ovate to elliptic-ovate, 3–5 cm. long, acuminate, rounded at base, sharply serrate, slightly pubescent on midrib beneath: fls. long-stalked; staminate infl. 3–7-fld.: fr. globose, 5 mm. across, red, on a filiform pendulous stalk 1.5–3.5 cm. long. Fls. v-vi; fr.viii. Mém. Acad. Sci. St. Pétersb. VII.29,3:t.f.10. G.C.74:235. H.B.1:77. Japan. Intr. 1894. Zone V. Ornamental shrub, very attractive and distinct with its red berries on slender pendulous stalks; the lvs. turn yellow in autumn.

14. *I. serrata* Thunb. Shrub to 5 m.; young brts. puberulous: lvs. elliptic or ovate, 2–5 cm. long, acute or acuminate, serrulate, dull green above, pubescent beneath: fls. short-stalked, 4–5-merous: fr. globose, red, 4–5 mm. across. Fl.vi; fr.x. S.I.1:t.61(c). S.T.1:t.15. (*I. Sieboldii* Miq., *I. serrata* var. *S.* Rehd.) Japan. Intr. 1866. Zone V. Similar to *I. verticillata*, but smaller in every part; fr. less persistent.—*I. s. xanthocarpa* Rehd., f. Fr. yellow (*I. s. fr. luteo* Hort.)—*I. s. leucocarpa* Bean, var. Fr. white. (*I. s. fr. albo* Hort.)—*I. s. argutidens* (Miq.) Rehd., var. Lvs. glabrous beneath, the teeth more remote and less fine; petioles shorter: fls. usually 4-merous. Add.3:t.106(c). (*I. a.* Miq.) Intr. 1892.

15. *I. verticillata* (L.) Gray. BLACK-ALDER. Shrub to 3 m., with spreading brs.: lvs. elliptic or obovate to oblanceolate or oblong-lanceolate, 3.5–7 cm. long, acute or acuminate, cuneate, serrate or doubly serrate, usually pubescent beneath, at least on the veins: all fls. short-stalked; staminate infl. 2–10-fld.: fr. globose, bright red, about 6 mm. across, often in pairs. Fl.vi-vii; fr.x(-i). B.M.8832(c). Add.3:t.116(c). Em.388,t(c). G.C.68:201. FE.24:779(h). (*Prinos verticillatus* L.) Can. to Fla., w. to Wis. and Mo. Intr. 1736. Zone III. Valued for its bright red berries persisting a long time on the brs.; the lvs. turn black or brown after frost.—*I. v. chrysocarpa* Robins., f. Fr. yellow. Intr. 1885.—*I. v. tenuifolia* (Torr.) S. Wats., var. Lvs. usually obovate, thinner, larger, pellucid-puncticulate under the lens: fr. usually solitary. B.B.3:489. (*I. bronxensis* Brit.)—*I. v. padifolia* (Willd.) Torr. & Gr., var. Lvs. 5–12 cm. long, tomentulose beneath. Cult. 1920.—*I. v. fastigiata* (Bickn.) Fern., var. Dense shrub with ascending brs.; lvs. usually oblong-lanceolate, 2–4 cm. long, acuminate, cuneate, glabrous or loosely pubescent on veins beneath. E. Can. to Mass. Intr. ?—*I. v. cyclophylla* Robins., var. Lvs. suborbicular, small, finely pubescent on veins beneath, crowded at end of brts. Ill. Cult. 1934.

16. *I. laevigata* (Dum.-Cours.) Gray. WINTERBERRY. Shrub to 2, rarely 3 m., with upright brs. glabrous when young: lvs. lance-ovate to lanceolate, 3–6 cm. long, acuminate, cuneate, appressed-serrulate, lustrous and bright green above, glabrous or slightly pubescent on the veins beneath; staminate

fls. 1-2 on slender stalks 8-18 mm. long; sepals not ciliate: fr. depressed-globose, 7-8 mm. across, orange-red, solitary, its stalk 2-5 mm. long. Fl.v-vi; fr.ix(-i). Gt.55:t.1551.f.3(c). G.F.4:221. B.C.3:1640. S.L.201(h). Me. to Pa. and Va. Intr. 1812. Zone IV. Planted for its orange-red fr.; the lvs. turn yellow in fall.—I. 1. *Hervéyi* Robins., f. Fr. yellow. Intr. ?

Sect. 2. *PRINOIDES* Gray. Nutlets ribbed or striate on back; fr. 8-12 mm. across: fls. and lvs. often fascicled on short spurs.

17. *I. dubia* (G. Don) B. S. P. Shrub to 2 m.; young brts. slightly pubescent: lvs. elliptic-oblong to oblong, 3.5-7 cm. long, acutish, rounded to broad-cuneate at base, obscurely serrulate, pubescent and reticulate beneath: fls. slender-stalked, at base of brts. below the lvs.; staminate infl. 6-9-fld.: fr. globose, 8-10 mm. across, scarlet, solitary on a stalk 7-10 mm. long. Fl.vi; fr.x-xi. G.F.2:41. B.C.3:1639. (*I. Amelanchier* M. A. Curt.) Va. to La. Intr. 1830. Zone (V).

Related species: *I. longipes* Chapm. Lvs. elliptic to broadly elliptic or elliptic-obovate, 3-5 cm. long, acute or obtusish, remotely crenate-serrulate, glabrous or pubescent when young; staminate fls. solitary: fr. 8-10 mm. long on a stalk 1-2 cm. long. N. C. and Tenn. to Ga. and Ala. Intr. 1906. Zone V.

18. *I. decidua* Walt. Shrub or small tree to 10 m., with light gray spreading brs.; brts. glabrous: lvs. partly fascicled, obovate to obovate-oblong, 3.5-7 cm. long, usually obtusish, cuneate, obtusely serrate, dark green and lustrous above and with impressed veins, pale and pubescent on the midrib beneath, thickish; staminate fls. on slender stalks about 1 cm. long; calyx-lobes obtuse: fr. globose, 7-8 mm. across, orange to scarlet. Fl.v; fr.ix-x(-iv). S.S.1:t.49. G.C.II.14:689. S.H.2:f.105y-z<sup>1</sup>; 109g-h. (*I. prinoides* Ait., *Prinos deciduus* DC.) Va. to Fla., w. to Tex. Intr. 1760. Zone V.

19. *I. montana* Gray. Shrub or slender tree to 12 m.; brts. glabrous: lvs. ovate or elliptic-ovate to lanceolate, 6-16 cm. long, acute or acuminate, cuneate, rarely rounded at base, sharply serrate, glabrous or sparingly pubescent on the veins beneath; petiole 1-1.5 cm. long; staminate fls. on stalks 3-8 mm. long; calyx-lobes acute or acutish, ciliate: fr. about 1 cm. across, orange-red, on stalks 2-6 mm. long. Fl.vi; fr.ix(-iv). S.S.1:t.50. B.B.2:488. S.M.674. (*I. monticola* Gray, *I. dubia* var. *monticola* Loes.) N. Y. to S. C., w. to Ala. Cult. 1870. Zone V.—*I. m. mollis* (Gray) Fern., var. Lvs. broad-ovate to ovate-lanceolate, 4-12 cm. long, soft-pubescent beneath. (*I. dubia* var. *m.* Loes.) Mass. to Ga. Cult. ?—*I. m. Beadlei* (Ashe) Fern., var. Lvs. ovate to elliptic-oblong, scarcely acuminate, 4-9 cm. long, densely pubescent. N. C. and Tenn. to Ga. and Ala. Cult. 1906. Zone VI?—*I. m. macropoda* (Miq.) Fern., var. Lvs. ovate to elliptic, more coarsely serrate, pubescent beneath, chiefly on the veins; petioles to 2 cm. long. S.I.1:t.59(c). (*I. macropoda* Miq., *I. dubia* var. *macropoda* Loes.) Japan. Intr. 1894.

Related species: *I. macrocarpa* Oliv. Tree to 10 m.; glabrous: lvs. elliptic to lance-oblong, 6-12 cm. long, serrulate: fls. about 1 cm. across, 5-7-merous: fr. about 1.5 cm. across, black. H.I.18:1787. C. China. Intr. 1908. Zone VII?

2. **NEMOPANTHUS** Raf. Deciduous slender-branched shrub, glabrous or nearly so; buds ovoid, small, with about 3 outer scales: lvs. alternate, slender-petioled, entire or slightly toothed; stipules small, caducous: fls. polygamo-dioecious, small, whitish, on slender axillary peduncles, the staminate 1-4-fld., the pistillate 1-fld.; sepals 4-5; petals linear, 4-5; stamens free, with slender filaments: fr. a drupe with 4-5 bony nutlets. (Greek *nema*, thread, and *anthos*, flower; referring to the filiform pedicels.) Syn. *Nemopantes* DC., *Ilicioides* Dum.-Cours. One species.

**N. mucronatus** (L.) Trel. MOUNTAIN HOLLY. Shrub to 3 m.; young brts. purplish, older ones ashy-gray: lvs. elliptic to oblong, 2.5–3.5 cm. long, mucronate, entire or sometimes slightly toothed, grayish green beneath; petiole 6–12 mm. long: fls. 4–5 mm. across; pedicels 1–2, in fr. to 3 cm. long: fr. subglobose, 6–8 mm. across, dull red. Fl.v–vi; fr.viii–ix. S.T.3:t.81. B.B.2:490. (*N. canadensis* DC., *N. fascicularis* Raf.) N. S. to Ont., Wis. and Va. Intr. 1802. Zone III. With attractive red frs. in summer; lvs. turning yellow in fall.

Fam. 53. CELASTRACEAE Lindl. STAFF-TREE FAMILY

Shrubs or trees often climbing: lvs. alternate or opposite, simple; stipules small: fls. perfect or unisexual, regular, small, usually greenish, in axillary or terminal cymes or sometimes solitary; sepals and petals 4–5, imbricated; stamens 5, rarely 10; disk present; ovary superior, 2–5-celled, each cell with 1–2 ovules; style short or nearly wanting, with 2–5-lobed stigma: a dehiscent caps., rarely a drupe or samara; seed albuminous, usually arillate; embryo with broad, flat, usually green cotyledons and short radicle.—About 40 genera with 375 species distributed through both hemispheres except the arctic zone.

- A. Fr. a dehiscent capsule.
- B. Fr. of 3–5 carpels.
  - c. Caps. 4–5-celled, usually lobed: lvs. opposite, rarely alternate and linear; upright or climbing by rootlets.....1. *Euonymus*
  - cc. Capsule 3-celled, subglobose: lvs. alternate, broad; twining shrubs.....2. *Celastrus*
- BB. Fr. usually of 1 carpel: low shrubs with small lvs. 5–40 mm. long.
  - c. Lvs. opposite, persistent; unarmed shrubs.....3. *Pachistima*
  - cc. Lvs. alternate, deciduous, entire; stamens 10: spiny shrub.....4. *Forsellesia*
- AA. Fr. indehiscent, 3-winged: fls. in large terminal panicles: lvs. alternate, large.
  - 5. *Tripterygium*

**1. EUONYMUS L. SPINDLE-TREE.** Deciduous or evergreen shrubs or small trees, sometimes creeping or climbing by rootlets; brts. usually 4-angled; buds usually conspicuous with imbricate scales: lvs. opposite, petioled, rarely alternate or whorled, usually glabrous: fls. 4–5-merous, usually perfect, in axillary cymes; stamens short, inserted on the disk; ovary connate with the disk: fr. a 4–5-celled, or occasionally 2–3-celled caps., usually lobed and sometimes winged; each cell with 1–2 seeds enclosed in a fleshy usually orange aril; seed white to red or black. (*Euonymos*, its ancient Greek name.) Syn.: *Euonymus* L. About 120 species in N. and C. Am., Eu. and Asia, also in Australia.—Ornamental shrubs chiefly planted for their attractive fr.

Lvs. deciduous (half-evergreen in a var. of No. 12 and in No. 4).

- A. Lvs. usually alternate or whorled, linear, entire or nearly entire: fr. 4-lobed....1. *E. nana*
- AA. Lvs. opposite.
  - B. Fr. divided nearly to the base into 4 separate pods, sometimes reduced to 1–3; brts. usually with broad corky wings (see also *E. phellomana* under No. 6).....2. *E. alata*
  - BB. Fr. at most deeply lobed.
    - c. Winter-buds small, conic, scarcely exceeding 5 mm. in length: fr. 4-lobed with obtuse lobes or 5-lobed and warty.
    - D. Anthers yellow.
      - E. Brts. densely warty; seed black, not wholly covered by the aril...3. *E. verrucosa*
    - EE. Brts. smooth.
      - F. Caps. tuberculate, depressed-globose: fls. 5-merous.
        - G. Lvs. lance-ovate to lance-oblong, half-evergreen: upright shrub.
          - 4. *E. americana*
        - GG. Lvs. obovate, deciduous: procumbent shrub.....5. *E. obovata*
      - FF. Caps. smooth, 4-lobed.
        - G. Fls. greenish.
          - H. Fls. 3–5, on a peduncle 2–3.5 cm. long: lvs. 2–3 cm. long...6. *E. europaea*
          - HH. Fls. 1–3, subsessile: lvs. 0.3–2 cm. long.....7. *E. nanoides*
          - GG. Fls. purple; infl. slender-stalked: lvs. 1.5–2 cm. long....8. *E. Przewalskii*

- DD. Anthers purple; fls. 4-merous (5-merous in *E. occidentalis*, see under No. 9).  
 E. Fls. purple; lvs. pubescent beneath.....9. *E. atropurpurea*  
 EE. Fls. yellowish or whitish; lvs. glabrous or only pubescent on midrib beneath.  
 F. Petioles  $\frac{1}{2}$  to  $\frac{3}{4}$  as long as lf.; lvs. acute or gradually acuminate.  
 G. Lvs. oblong to ovate-oblong, broadest at or below the middle.  
 H. Lvs. serrulate, 1.5-3 cm. broad, gradually narrowed at base; aril closed.  
 HH. Lvs. crenate-serrulate, 2-5 cm. broad, broad-cuneate to rounded at base; aril open at apex.  
 I. Filaments very short; peduncles 1.5-3.5 cm. long.....11. *E. hians*  
 II. Filaments 1-2 mm. long; peduncles 5-25 mm. long.....12. *E. lanceifolia*  
 GG. Lvs. generally obovate or obovate-oblong, to 6 cm. broad.....13. *E. yedoensis*  
 FF. Petiole usually  $\frac{1}{2}$  to  $\frac{3}{4}$  as long as lf.; lvs. abruptly long-acuminate.  
 14. *E. Bungeana*  
 CC. Winter-buds elongated, pointed, 6-10 mm. long (shorter in No. 18); fr. 5-merous or 4-merous and winged.  
 D. Fls. 4-merous; fr. winged.....15. *E. sanguinea*  
 DD. Fls. 5-merous.  
 E. Fr. winged or angled.  
 F. Petioles grooved above; fr. distinctly winged.....16. *E. latifolia*  
 FF. Petioles flat; fr. angled.....17. *E. planipes*  
 EE. Fr. globose, with 5 slender ribs.....18. *E. oxyphylla*  
 Lvs. persistent (half-evergreen in No. 19); fls. 4-merous.  
 A. Lvs. serrate or crenate, petioled.  
 B. Fr. subglobose, smooth.  
 C. Lvs. rather thin, half-evergreen; cymes loose, 5-7 cm. across, in August.  
 19. *E. kiautschovica*  
 CC. Lvs. thick, persistent; cymes rather dense.  
 D. Upright shrub or small tree; lvs. usually obovate and obtuse, lustrous above.  
 20. *E. japonica*  
 DD. Low procumbent or climbing shrub; lvs. usually dull green above.....21. *E. Fortunei*  
 BB. Fr. spiny; lvs. lanceolate, 7-14 cm. long.....22. *E. planipes*  
 BBB. Fr. angled or winged.  
 C. Lvs. remotely crenate-serrate; fr. 4-angled.....23. *E. Sargentiana*  
 CC. Lvs. sharply serrate; fr. 4-winged.....24. *E. pendula*  
 AA. Lvs. sinuate-dentate with spiny teeth, sessile; fr. 4-lobed.....25. *E. Aquifolium*  
 1. *E. nana* Bieb. Low usually procumbent shrub with ascending brs., to 1 m. high, glabrous; brts. angled; lvs. alternate, whorled or occasionally opposite, linear to linear-oblong, 1.5-3.5 cm. long, obtuse or acutish, entire or remotely denticulate and revolute; fls. about 4 mm. across, brownish purple, 1-3 on a slender stalk 1.5-3 cm. long; fr. 4-lobed, pink; seed brown, not wholly covered by the orange aril. Fls.v-vi; fr.viii. B.M.9308(c). S.H.2:f. 110h-g. (*E. linifolia* and *E. rosmarinifolia* Hort.) Cauc. to W. China. Intr. 1830. Zone II. Adapted for covering rocky slopes; sometimes grafted high on *E. europaea*, forming a small pendulous tree.—*E. n. turkestanica* Dieck, f. Upright and more vigorous; lvs. narrow- to linear-oblong, 4-7 cm. long, 5-10 mm. broad, not revolute. (*E. n. Koopmannii* Beiss.) Garten-Zeit.2:112,t. Cult. 1883.  
 2. *E. alata* (Thunb.) Sieb. WINGED S. Shrub to 3 m.; the stiff spreading brs. usually with 2 or 4 broad corky wings; lvs. short-stalked, elliptic to obovate, 3-5 cm. long, acute at the ends, finely and sharply serrate, dark green; fls. yellowish, about 6 mm. across, usually 3 in a short-stalked cyme; fr. of normally 4, but often 1-3 ovoid purplish pods 6-8 mm. long; seed brown, with orange-red aril. Fl.v-vi; fr.ix-x. S.I.1:t.63(c). F.E.32:54(h). (*E. striata* Loes.) N. E. Asia to C. China. Intr. about 1860. Zone III. Showy in fall with its numerous brightly colored fr. and crimson or rosy scarlet lvs.; conspicuous in winter with its broadly winged brs.—*E. a. compacta* J. W. Adams. Compact subglobose shrub; brs. narrowly winged. Cult. 1926.—*E. a. aptera* Reg., var. Brs. not or slightly winged; habit laxer; fls. 3-5. (*E. a. var. subtriflora* Franch. & Sav.)—*E. a. aperta* Loes., var. Seed black with the aril split at apex. C. and W. China. Intr. 1910.  
 3. *E. verrucosa* Scop. Upright shrub to 2 m.; brts. densely warty; lvs. short-stalked, ovate to lance-ovate, 3-6 cm. long, acuminate, crenate-serru-

late: fls. brownish, about 6 mm. across, in usually 3-fld. cymes on a peduncle 2-3 cm. long: fr. deeply 4-lobed, about 6 mm. across, yellowish red; seed black, not wholly covered by the orange aril. Fl.v-vi; fr.viii. R.I.6:t.310f. 5135(c). F.D.21:t.2180(c). H.W.3:55. S. Eu., W. Asia. Intr. 1763. Zone III.

Related species: *E. pauciflora* Maxim. Shrub to 2 m.; brs. warty: lvs. subsessile, elliptic or elliptic-obovate, 3-6 cm. long, acuminate, minutely serrulate, pubescent beneath: fls. purple, 1-2, rarely 3, on slender peduncles half as long as lf.: fr. obconical, 4-lobed with angled lobes, red, seed black, enclosed about  $\frac{1}{2}$  by the red aril. N. E. Asia. Cult. 1934. Zone IV.

4. *E. americana* L. STRAWBERRY-BUSH. Upright shrub to 2.5 m., glabrous: lvs. lance-ovate to lanceolate, 3-8 cm. long, acuminate, cuneate, crenate-serrate, dark green; fls. reddish green, about 8 mm. across, 1-3 on a slender stalk 1-2 cm. long; petals clawed: fr. 3-5-lobed, about 1.5 cm. across, pink, covered with prickly warts; aril scarlet. Fl.vi; fr.ix-x. L.B.1322(c). M.B.G. 2:t.41(c). B.B.2:491. N. Y. to Fla., w. to Tex. Intr. 1697. Zone VI.—*E. a. angustifolia* (Pursh) Wood, var. Lvs. lanceolate to linear-lanceolate, half-evergreen farther south. (*E. angustifolia* Pursh.)

5. *E. obovata* Nutt. Procumbent shrub with rooting stems and ascending brs. to 0.3 m. high: lvs. obovate or elliptic-obovate, 3-6 cm. long, cuneate, acute to obtusish, crenate-serrate, light green and dull above: fls. greenish purple, 6 mm. across, 1-3 on a stalk 1.5-3 cm. long; petals without distinct claw: fr. usually 3-lobed, about 1.5 cm. across, crimson, warty; aril scarlet. Fl.v; fr.viii-ix. Gr.G.2:t.171. G.F.9:385. B.C.2:1186. (*E. americana* var. o. Torr. & Gr., *E. pendula* Hort., not Wall.) Can. to Ind. and Ky. Intr. 1820. Zone III. Ornamental shrub sometimes used as a ground-cover.

6. *E. europaea* L. EUROPEAN S. Upright shrub or small tree to 7 m.: lvs. elliptic-ovate to lance-oblong, 3-8 cm. long, acuminate, cuneate, crenate-serrate; petiole 6-12 mm. long: fls. yellowish green, about 1 cm. across, usually 3-5 on a stalk 2-3.5 cm. long: fr. red to pink, 4-lobed, about 1.5 cm. across; seed white: aril orange. Fl.v; fr.ix-x. R.I.6:t.309(c). F.D.21:t.2179 (c). H.W.3:53. B.B.2:492. Gn.84:626. (*E. vulgaris* Mill.) Eu. to W. Asia; sometimes escaped in the E. States. Long cult. Zone III. Ornamental in fr., particularly the forms with bright red fr. There are also forms with variegated lvs.—*E. e. aldenhamensis* Gibbs. Fr. bright pink, on long pendulous peduncles.—*E. e. atropurpurea* Mouillef., var. With rather narrow purplish lvs. (*E. e. purpurea* Bean.)—*E. e. atrorubens* Rehd., var. Fr. crimson. (*E. e. var. fr. atropurpureo* Hort.)—*E. e. alba* West., var. Fr. whitish. (*E. e. var. leucocarpa* DC., *E. e. fr. albo* Hort.)—*E. e. nana* Loud., var. Dwarf dense, upright form with elliptic to lance-elliptic lvs. 2-3 cm. long. Tenderer than the type.—*E. e. internèdia* Gaud., var. Lvs. ovate to broad-elliptic, rounded or nearly so at base, large, dark green: fr. bright red. (*E. e. var. macrophylla* Schleich., *E. e. var. ovata* Dipp.) R.I.6:t.309(c).—*E. e. angustifolia* K. F. Schultz, var. Lvs. narrow-lanceolate: infl. 2-4-fld.; fr. smaller.

Related species: *E. bulgarica* Velen. Brts. sometimes with corky wings: lvs. elliptic to elliptic-oblong, 4-8 cm. long, closely serrulate, short-acuminate to obtusish, short-pilose on the veins beneath: fls. and fr. as in No. 6. S. E. Eur. Cult. 1903. Zone V.—*E. velutina* Fisch. & Mey. Shrub; brts. densely tomentulose: lvs. elliptic-oblong to oblong-obovate, 3-7 cm. long, pubescent beneath: infl. puberulous, short: fr. puberulous. Fedtch., Fl. Aziat. Ross. 5:22. W. Asia. Intr.?—*E. phellomana* Loes. Shrub to 5 m., glabrous: brts. 4-angled with corky wings: lvs. oblong-ovate to oblong-lanceolate, 6-10 cm. long, acuminate, cuneate, crenate-serrate: fls. in usually 7-fld. cymes; peduncles 5-10 mm. long: fr. 4-lobed, pink; seed dark brown or nearly black; aril red, open at apex. B.J.29:t.5d-e. N. and W. China. Intr. 1928. Zone V?—*E. Hamiltoniana* Wall. Small tree: lvs. lance-oblong, 6-10 cm. long, irregularly serrulate: fr. turbinate, 4-lobed, pink. Brandis. For. Fl. 1.16. Himal. Intr. 1825, but probably not now in cult. Zone VII?

7. *E. nanoides* Loes. & Rehd. Shrub to 1 m.; brts. sharply 4-angled or narrowly winged, puberulous at first: lvs. short-petioled, narrow- to linear-lanceolate, 0.8-2 cm. long, acutish to obtuse, cuneate, midrib, veins and petioles minutely scabrid: fls. 1-3, subsessile, greenish, about 3 mm. across: filaments very short: frs. 1 or 2, on short stalks, depressed-globose, 1 cm. across, lobed to about the middle, lobes rounded, usually only 2 carpels fertile; seeds dark purple, the orange aril open near apex. W. China. Intr. 1926. Zone V?

Related species: *E. orésbia* W. W. Sm. Shrub to 2 m., glabrous: brts. narrowly winged: lvs. oblanceolate or lanceolate, rarely oblong, 1.5-2 cm. long, obtusish, serrulate: infl. 1-3-fld.: fr. on a stalk 3-10 mm. long, turbinate, with angled lobes; seed as in No. 7. W. China. Cult. 1934. Zone VI?

8. *E. Przewalskii* Maxim. Much-branched shrub to 2 m., glabrous; brts. angled, later often slightly corky winged: lvs. lanceolate to oblong-lanceolate, 1.5-3 cm. long, acuminate, crenate-serrulate: fls. dark purple, in slender 3-5-fld. cymes longer than the lf.; pedicels about 1 cm., peduncle 1.5-2.5 cm. long: fr. pinkish or yellowish, slightly lobed; aril orange, half as long as the black seed. N. w. China, E. Tibet. Cult. 1934. Zone V.

Related species: *E. Semenovii* Reg. & Herd. Small shrub: lvs. lanceolate, 2-4.5 cm. long, thickish, crenate-serrulate; infl. slender-stalked, 3- to several-fld.; aril partly open near apex; seed purplish green. Fedtch., Fl. Aziat. Ross. 5:21. Turkest. Cult. 1910. Zone V.

9. *E. atropurpurea* Jacq. BURNING-BUSH. Shrub or small tree to 8 m.: lvs. elliptic or ovate-elliptic, 4-12 cm. long, acuminate, serrulate, pubescent beneath; petiole 1-2 cm. long: fls. purple, about 1 cm. across, 7-15 on a slender stalk 2-4.5 cm. long: fr. deeply 4-lobed, 1.5 cm. across, crimson; seed brown, with scarlet aril. Fl.v-vi; fr.x. S.S.2:t.53. M.A.1:t.42(c). B.B.2:491. N. Y. to Fla., w. to Minn., Neb., Okla. and Tex. Intr. 1756. Zone IV. Lvs. turning pale yellow in fall.

Related species: *E. occidentalis* Nutt. Shrub to 5 m.; winter-buds to 8 mm. long: lvs. ovate to elliptic-lanceolate, glabrous: fls. 5-merous, 1.4 cm. across, purple, 1-4. S.H.2:f.115g-h(1). Ore. to Calif. Cult. 1894. Zone VI?

10. *E. Maackii* Rupr. Large shrub or small tree, glabrous; brts. subterete: lvs. elliptic-oblong to lance-oblong, 5-8 cm. long, acuminate, gradually narrowed at base, serrulate; petiole 5-8 mm. long: fls. yellowish, about 1 cm. across, in small cymes 1.5-2 cm. across on a stalk 1-1.5 cm. long: fr. pink, 4-lobed, about 8 mm. across; seed red with orange aril sometimes slightly split at apex. Fl.vi; fr.x. M.D.1910:106,f.2,107,f.b. China Jour. 23:178,f.5,6. (*E. Hamiltoniana* Dipp., not Wall.) N. China to Korea. Cult. 1880. Zone IV.

11. *E. hians* Koehne. Large shrub: lvs. ovate-oblong, 6-12 cm. long, short-acuminate, broad-cuneate or nearly rounded at base, serrulate; petiole 6-12 mm. long: fls. yellowish white, about 8 mm. across, usually in 6- or 7-fld. cymes 1.5-3 cm. across on a stalk 1.5-3.5 cm. long; stamens with very short filaments: fr. turbinate, deeply 4-lobed, about 8 mm. across; aril blood-red, split at apex and disclosing the white seed. Fl.v; fr.ix. S.I.2:t.39(c, as *E. europaea*). M.K.t.65(c). M.D.1910:106,f.5,107,f.E. S.H.2:f.115n,116a-e. Japan. Intr. about 1865. Zone V.

Related species: *E. semiexserta* Koehne. Close to No. 11: lvs. oblong to lance-oblong, usually narrower, crenate-serrulate: fr. whitish pink; aril orange, much split and disclosing nearly  $\frac{1}{2}$  of the blood-red seed. M.D.1910:106,f.4;107,f.D. S.H.2:f.604c,605m-p. Japan. Cult. 1895.—*E. nikoensis* Nakai. Tree: lvs. oblong, 9-12 cm. long, acuminate, serrulate, short-pilose or papillose on midrib and veins beneath: infl. 4-7-fld. on peduncle 1.5-2.5 cm. long: fr. 4-angled, bright red; aril orange, open at apex; seed green. Japan. Cult. 1930. Zone V.

12. *E. lanceifolia* Loes. Shrub or tree to 10 m.: lvs. elliptic-oblong, to lance-oblong, 8-14 cm. long, acute or acuminate, broad-cuneate, crenate-serrulate, firm at maturity and slightly reticulate beneath and often scabrid-pubescent on the midrib; petioles 4-8 mm. long; fls. 1.2-1.5 cm. across, in usually 7-15-fld. cymes on stalks 5-25 mm. long; filaments longer than anthers, 1-2 mm. long; fr. 4-lobed, pale pink; aril orange, split at apex; seed crimson. Fl.v-vi; fr.x. C. and W. China. Intr. 1900 or 1904. Zone V.

13. *E. yedoensis* Koehne. Large shrub: lvs. obovate to obovate-oblong, sometimes elliptic, 6-12 cm. long and 3.5-6 cm. broad, abruptly acuminate, broad-cuneate, crenate-serrulate; petiole 6-12 mm. long; cyme many-fld., rather dense, on a stalk 1-2 cm. long; filaments somewhat longer or sometimes shorter than the anthers: fr. deeply 4-lobed, about 1 cm. across, pinkish; aril orange, usually closed or with small opening. Fl.vi; fr.ix. Gt.53: 31. S.T.1:t.62. M.D.1910:106,f.3,107,f.C. F.E.31:125(h). Japan, Korea. Intr. about 1865. Zone IV.—*E. y. calocarpa* Koehne, f. Fr. bright crimson.—*E. y. Koehneana* Loes., var. Lvs. short-pubescent on the midrib and on the veins below. C. China. Intr. 1907.

14. *E. Bungeana* Maxim. Shrub or small tree to 6 m., with slender brs.; brts. subterete: lvs. elliptic-ovate to elliptic-lanceolate, 5-10 cm. long, long-acuminate, broad-cuneate at base, serrulate; petiole 8-25 mm. long; fls. yellowish in 3-7-fld. cymes on stalks 1-2 cm. long; fr. deeply 4-lobed, about 1 cm. across, yellowish to pinkish white; filaments about as long as anthers; seeds white or pinkish with orange aril usually open at apex. Fl.vi; fr.x. B.M.8656c). S.T.1:t.63. M.D.1910:106,f.1,107,f.A. M.G.14:569. N. China, Manch. Intr. 1883. Zone IV. Tree of loose habit and with profuse pinkish fr. remaining on the brs. long after the lvs. have fallen; the var. *semipersistens* valued for its half-evergreen foliage.—*E. B. pendula* Rehd., f. With long and slender pendulous brs.: petioles to 3.5 cm. long. Cult. 1902.—*E. B. semipersistens* (Rehd.) Schneid. Lvs. elliptic, half-evergreen and persisting until mid-winter or severe frost: fr. turbinate, pink, sparingly produced. S.H.2:f. 115l(l). (*E. s.* Sprague.)

Related species: *E. Sieboldiana* Bl. Lvs. slender-petioled, elliptic to elliptic-oblong; fr. obovoid, not lobed, but strongly 4-ribbed. M.D.1906:62,f.1c; 1910: 106,f.6. S.H.2:f.116f-g. Japan. Not in cult., often confused with other species.

15. *E. sanguinea* Loes. Shrub or small tree to 7 m.; terminal winter-bud 6-14 mm. long; brts. nearly terete: lvs. broad-elliptic or ovate to oblong-ovate, 4-10 cm. long, acute or acuminate, broad-cuneate or nearly rounded at base, densely fimbriate-serrulate, dull green above, paler beneath and finely reticulate, reddish when unfolding; petiole 5-10 mm. long; fls. 4- or occasionally 5-merous, purplish, in loose 3-15-fld. cymes 7-10 cm. wide on a slender stalk 3-5 cm. long; fr. slightly lobed, winged, about 2.5 cm. broad, red; wings 6-8 mm. long; aril orange covering the black seed. Fl.v; fr.ix. B.J.29:t.5a-b. C. and W. China. Intr. 1900. Zone V. With handsome foliage and attractive fruit.—*E. s. brevipedunculata* Loes., var. Peduncles only about 2 cm. long.—*E. s. camptoneura* Loes., var. Lvs. somewhat narrower, with curved veins (straight in the type.)

Related species: *E. Monbelgii* W. W. Sm. Close to No. 15: shrub to 8 m.: lvs. ovate to oblong, closely serrate with incurved teeth; fls. green, in large slender-stalked cymes; fr. with triangular wings 3-5 mm. long, Yunnan. Intr. 1926. Zone VII?—*E. fimbriata* Wall. Lvs. elliptic to oblong-obovate, 4-10 cm. long, abruptly acuminate, finely and doubly fimbriate-serrulate, thickish at maturity; fls. small, in cymes 1.5-2.5 cm. across; fr. with long, pointed wings. Himal. Cult. 1920. Zone VII?—*E. macroptera* Rupr. Lvs. obovate to obovate-oblong, 8-12 cm. long, cuneate; cymes many-fld.: fr. with 4 narrow wings 1-1.8

cm. long. I.T.6:t.233. S.H.2:f.115p,114g. M.I.1:t.38. China Jour. 23:178,f.3,4. (*E. ussuriensis* Maxim.) N. E. Asia, Japan. Cult. 1906. Zone V.

16. *E. latifolia* Scop. Shrub or small tree to 7 m.; terminal winter-buds 1-1.5 cm. long: lvs. obovate-oblong or elliptic, 6-12 cm. long, short-acuminate, broad-cuneate, crenate-serrulate; petiole about 6 mm. long: fls. greenish, about 1 cm. across, in 7-15-fld. cymes on a stalk 5-6 cm. long: fr. 5-, rarely 4-winged, nearly 2 cm. across, bright red, pendulous; aril orange, seed white. Fl.v-vi; fr.ix. R.I.6:t.310,f.5136(c). F.D.21:t.2181(c). B.M.2384(c). Gn.39:213. Gt.53:30. H.W.3:54. S. Eu., W. Asia. Intr. 1730. Zone V. With handsome lvs. and large bright-colored fr.

17. *E. sachalinensis* (Fr. Schmidt) Maxim. Shrub to 4 m.: lvs. obovate, 8-12 cm. long, short-acuminate, cuneate, crenate-serrulate; petiole 5-10 mm. long, flat, not grooved above: fls. in many-fld. loose cymes on slender peduncles 3-7 cm. long: fr. 5-angled, but scarcely winged, broadly conical at apex, about 18 mm. across. Fl.v; fr.ix. M.D.1906:62,f.1a. Gt.53:29. S.L.176. M.G. 33:9(h),10. (*E. planipes* Koehne.) N. E. Asia. Intr. 1892. Zone V. With large lvs.; fr. handsome, profusely produced.

18. *E. oxyphylla* Miq. Shrub or small tree; upper winter-buds 5-6 mm. long: lvs. ovate to ovate-oblong, 4-8 cm. long, acuminate, rounded or broad-cuneate, serrulate with incurved mucronate teeth, bright green, slightly reticulate beneath; petiole 3-6 mm. long: fls. greenish, suffused with brown, 8-9 mm. across, in loose many-fld. cymes on a peduncle 4-5.5 cm. long; anthers subsessile: fr. subglobose, with 5 or sometimes 4 ribs, about 1 cm. across, dark red, pendulous; aril red. Fl.v; fr.x. S.I.1:t.64(c). M.K.t.64(c). M.D.1906:63. Japan. Intr. 1892. Zone V.

Related species: *E. nipponica* Maxim. Shrub to 1.5 m.: lvs. elliptic-ovate to obovate-oblong, 3-5.5 cm. long, up to 2.5 cm. broad, remotely serrulate: infl. 3-5-fld.; peduncle 3-4 cm. long: fr. smaller. S.H.2:f.112z. Japan. Cult. 1903. Zone V?

19. *E. kiautschowica* Loes. Half-evergreen or nearly evergreen spreading shrub to 3 m., lower brs. sometimes prostrate and rooting: lvs. broad-elliptic or obovate to oblong-obovate or elliptic-oblong, 5-8 cm. long, acute or obtusish, cuneate, crenate-serrulate, subcoriaceous with obsolete veins beneath; petiole 4-8 mm. long: fls. greenish white, in loose, many-fld. slender-peduncled cymes 5-7 cm. across: fr. globose, about 1 cm. across, pinkish; seed pinkish brown, covered by the orange-red aril. Fl.viii-ix; fr.x-xi. Add.4:t. 158(c). S.T.1:t.64. (*E. patens* Rehd., *E. k.* var. *p.* Loes., *E. Sieboldiana* Hort., not Bl.) E. and C. China. Intr. about 1860. Zone VI. Valued for its late attractive fr.

Related species: *E. pygmaea* W. W. Sm. Close to No. 19: shrub to 0.7 m., glabrous: lvs. chartaceous, elliptic to oblong-elliptic, 4-8 cm. long, obtusely short-acuminate or obtuse, crenate-serrulate: infl. loose, 3-7-fld.; fr. subglobose; peduncle 2-4 cm. long; pedicels about 1 cm. W. China. Cult. 1934. Zone VII? —*E. grandiflora* Wall. Shrub to 4 m.: lvs. obovate to obovate-oblong, 4-10 cm. long, acute or obtusish to short-acuminate; crenate-serrulate: fls. about 2 cm. across, whitish, in loose 5-9-fld. cymes: fr. 4-angled, yellowish; seed black; aril scarlet. Wallich, Pl. As. Rar. 3:t.254(c). S.H.2:f.112u,114k. Himal., China. Intr. 1824. Zone VII? —*E. g. salicifolia* Stapf, f. Lvs. narrow to oblong-lanceolate, acute to acuminate. B.M.9183(c). W. China. Cult. 1922.

20. *E. japonica* L. Evergreen upright shrub or small tree to 5 or occasionally 8 m.; brts. slightly quadrangular: lvs. obovate to narrow-elliptic, 3-7 cm. long, acute to obtuse, cuneate, obtusely serrate, lustrous and dark green above; petiole 6-12 mm. long: fls. greenish white, in 5-12-fld. rather dense cymes on a peduncle 2-5 cm. long: fr. depressed-globose, about 8 mm. across, pinkish, aril orange. Fl.vi-vii; fr.x. S.I.2:t.39(c). B.R.30:6(c). S.H.

2:f.111k-p. S. Japan. Intr. 1804. Zone VII. Planted chiefly for its lustrous evergreen lvs. and its compact upright habit.—*E. j. macrophylla* Reg. Lvs. elliptic, 5–7.5 cm. long. (*E. j. robusta* Hort.)—*E. j. microphylla* Jaeg. Lvs. narrow-oblong to lance-oblong, 1–2.5 cm. long.—*E. j. argenteo-variegata* Reg., var. Lvs. edged and marked white.—*S. j. albo-marginata* T. Moore. Lvs. with a rather narrow white margin.—*E. j. aureo-variegata* Reg., var. Lvs. blotched yellow. Lowe, Beautif. Lfd. Pl.t.49(c).—*E. j. aureo-marginata* Nichols. Lvs. edged yellow. F.E.16:436;29:815(h).—*E. j. viridi-variegata* Rehd., var. Lvs. large, bright green, variegated with green and yellow in the middle. (“Duc d’Anjou.”)—*E. j. pyramidata* Carr. Of strictly upright columnar and very compact habit: lvs. crowded, broad-elliptic. (*E. j. columnaris* Carr., *E. j. pyramidalis* Hort.) Another columnar form, but less compact and with narrow-elliptic lvs. is *E. j. fastigiata* Carr. R.H.1883:449(h).

21. *E. Fortunei* (Turcz.) Hand.-Mazz. Shrub climbing with rootlets, or trailing and rooting; brts. subterete, minutely warty: lvs. elliptic or elliptic-ovate, rarely elliptic-obovate, 2.5–6 cm. long, acute or short-acuminate, broad-cuneate, serrulate, veins above slightly raised, distinctly veined beneath: infl., fls. and frs. similar to those of No. 20; secondary axes not exceeding 6 mm. Fl.vi–vii; fr.x. J.A.19:t.218. (*E. jap.* var. *acuta* Rehd., *E. radicans* var. *acuta* Rehd.) China. Intr. 1907. Zone V. The hardiest of the evergreen Euonymus, suitable as ground-cover and for covering walls and tree-trunks; *E. F. Carrierei* and *vegeta* are usually shrubby and bear attractive frs.—*E. F. colorata* (Rehd.) Rehd., f. Lvs. changing in fall to dark purple above and lighter purple beneath. (*E. rad.* f. *c.* Rehd.) Intr. 1914.—*E. F. radicans* (Miq.) Rehd., var. Trailing or climbing: Lvs. ovate or broad-elliptic to elliptic, 1–3 cm. long, acute or obtusish, more distinctly serrate, of thicker texture, veins obsolete. G.C.II.20:793. R.H.1885:295. M.D.1906:219. B.C. 2:1188,1187(h). (*E. r.* Miq., *E. jap.* var. *r.* Miq., *E. j.* var. *viridis* Reg.) Japan, s. Korea. Intr. about 1865.—*E. F. reticulata* (Reg.) Rehd., f. Like the 3 following a form of the preceding var. Lvs. variegated with white along the veins. G.W.1:475. A.G.19:37. (*E. rad.* f. *r.* Schneid., *E. rad.* var. *picta* Rehd.)—*E. F. gracilis* (Reg.) Rehd., f. Lvs. variegated and margined with white or yellow or with pink on the margin. R.H.1876:354;1878:135. (*E. rad.* var. *argenteo-marginata* Rehd., *E. rad. pictus* J. Makoy, *E. rad.* var. *roseo-marginata* Rehd., *E. jap.* var. *tricolor* Reg.) A group of variable and inconstant forms.—*E. F. minima* (Simon-Louis) Rehd., f. Low, usually creeping shrub: lvs. 0.6–1.5 cm. long; sterile. Gs.11:221(h). (*E. rad. minimus* Simon-Louis), *E. rad.* var. *kewensis* Bean.) The form *kewensis* has generally smaller lvs. than *minima*. Intr. 1893.—*E. F. Carrierei* (Vauvel) Rehd., f. Spreading shrub or somewhat climbing if supported: lvs. elliptic to elliptic-oblong, 3–5 cm. long, acutish, lustrous: fruiting freely. H.B.2:554(h). S.L.176(h). Sometimes producing brs. with the lvs. margined white: “Silver Queen.” Cult. 1881.—*E. F. végeta* (Rehd.) Rehd., var. Spreading shrub to 1.5 m. or climbing if supported: lvs. broad-elliptic to nearly suborbicular, 2.5–4 cm. long, acute or obtusish, crenate-serrate, dull green, thickish: fruiting freely. S.T.1:t.65. M.G.23:13. M.D.1927:t.48(h). W.A.96,t(h). (*E. rad.* var. *v.* Rehd.) Japan. Intr. 1876.

22. *E. Wilsónii* Sprague. Shrub to 6 m., climbing: lvs. lanceolate, 6–14 cm. long, acuminate, cuneate, shallowly serrate, conspicuously veined beneath; petiole 6–12 mm. long: fls. yellowish in many-fld. loose cymes 4–8 cm. across on a stalk 3–5 cm. long: fr. 4-lobed clothed with spines about 5 mm.

long, nearly 2 cm. across; aril yellow. Fl.vi; fr.x-xi. G.C.72:49. W. China. Intr. 1904. Zone VII?

Related species: *E. echinata* Wall. Prostrate: lvs. elliptic-ovate to lance-oblong, 4-7 cm. long, acuminate, cuneate, serrate: cymes small, usually 3-7-fld. on a stalk 1-1.5 cm. long: fr. subglobose, about 8 mm. across. B.M.2767(c). Himal. Cult. 1827. Zone VII.

23. *E. Sargentiana* Loes. & Rehd. Shrub to 4 m., with slender brts.: lvs. obovate to oblong-obovate, 6-9 cm. long, abruptly acuminate, cuneate, remotely crenate-serrate, dull grayish green above; petiole 8-10 mm. long: fr. 4-angled, not or scarcely lobed, oblong-obovoid, 1.5 cm. long, attenuate at base, yellowish, borne in a loose cyme on a stalk about 3 cm. long. Fr.x. W. China. Intr. 1908. Zone VII?

24. *E. péndula* Wall. Small tree with pendulous brs.: lvs. oblong-lanceolate, 7-14 cm. long, acuminate, broad-cuneate, sharply spinose-serrulate, lustrous above; petiole 5-10 mm. long: fls. 1.2 cm. across, in many-fld. cymes: fr. with 4 tapering wings. P.F.2:55. F.S.7:71. (*E. fimbriata* Hort., not Wall.) Himal. Cult. 1851. Zone VII? With large and lustrous lvs.

25. *E. Aquifolium* Loes. & Rehd. Shrub to 3 m.; brts. quadrangular: lvs. subsessile, ovate to ovate-oblong, 4-7 cm. long, spiny sinuate-dentate, dull green above: fr. usually solitary, depressed-globose, 4-lobed, 1.2-1.5 cm. across, greenish; seed purple, only partly enclosed by the orange aril. Fr. x-xi. W. China. Intr. 1908. Zone VII? Remarkable for its holly-like lvs., of slow growth in cult.

Related species: *E. ilicifolia* Franch. Shrub; mature brts. terete; lvs. short-petioled, elliptic or elliptic-obovate, cuneate, spiny-dentate: frs. subglobose in a slender-stalked cyme. W. China. Cult. 1934. Zone VII?

2. CELASTRUS L. STAFF-TREE. Deciduous, rarely evergreen shrubs usually climbing; brs. with solid or lamellate pith, or hollow; buds with several imbricate scales: lvs. alternate, petioled, serrate or crenate; stipules small: fls. polygamo-dioecious, small, greenish or whitish, 5-merous, in axillary cymes or terminal panicles; calyx 5-parted; petals oblong-ovate; disk entire or crenate; stamens short; ovary superior; style short, with 3-lobed stigma: fr. a caps., usually yellow, dehiscent into 3 valves, each containing 1 or 2 seeds enclosed in a fleshy crimson aril. (*Kelastros*, ancient Greek name of an evergreen tree, probably *Phillyrea*.) More than 30 species in E. and S. Asia, Australia and Am.—Ornamental twining shrubs chiefly grown for their handsome yellow fr. opening at maturity and disclosing the crimson seeds.

A. Fls. in a terminal panicle.

B. Brts. terete with solid pith: lvs. 5-10 cm. long.....1. *C. scandens*

BB. Brts. angular with lamellate pith: lvs. 10-18 cm. long.....2. *C. angulata*

AA. Fls. in axillary cymes often partly crowded into panicles.

B. Lvs. glaucous beneath: fls. partly in panicles.....3. *C. hypoleuca*

BB. Lvs. green beneath.

C. Stipules deciduous: lvs. 5-12 cm. long.

D. Cymes partly forming terminal panicles: lvs. rugose, reticulate beneath: pith lamellate.....4. *C. rugosa*

DD. Cymes all axillary, sometimes crowded on short leafless lateral brts.

E. Brs. with lamellate pith.....5. *C. Loeseneri*

EE. Brs. with solid pith.....6. *C. orbiculata*

CC. Stipules persistent, spinescent, hooked: lvs. 2-6 cm. long, slender-petioled.

7. *C. flagellaris*

1. *C. scandens* L. WAXWORK (AMERICAN BITTERSWEET). Climbing to 7 m.; pith solid, white: lvs. ovate to oblong-ovate, 5-10 cm. long, acuminate, broad-cuneate at base, serrulate, glabrous; petiole 5-20 mm. long: fls. in panicles 5-10 cm. long: fr. subglobose, about 8 mm. across, yellow, with crim-

son seeds. Fl.vi; fr.x(-xii). S.O.3:t.140(c). Em.545(c). Gr.G.2:t.170. G.F. 5:569. B.C.2:701. Gg.5:119. Gn.33:393(h). (FALSE BITTERSWEET, CLIMBING B., SHRUBBY B.) Can. to S. Dak. and N. Mex. Intr. 1736. Zone II.

Related species: *C. depedens* Wall. Brs. with conspicuous lenticels and with brown, partly evanescent pith: lvs. oblong, abruptly acuminate, 8-12 cm. long, crenate-serrulate, lustrous above; petiole 5-10 mm. long; panicle 8-16 cm. long. Himal. to Burma and S. W. China. Cult. 1934. Zone VII?

2. *C. angulata* Maxim. Climbing to 7 m.; brts. angular, finely lenticellate; pith lamellate: lvs. broad-ovate to nearly orbicular, 10-18 cm. long and 8-14 cm. broad, abruptly short-acuminate, crenate-serrate, glabrous: petiole 1-2.5 cm. long; panicle 10-15 cm. long; fr. subglobose, about 1 cm. across, on thick short pedicels; aril orange-red. Fl.vi; fr.x-xi. H.I.23:2206. S.H. 2:f.117c,118i-k. (*C. latifolius* Hemsl.) Intr. 1900. Zone VII. Remarkable for its large lvs.

3. *C. hypoleuca* Warb. Climbing to 5 m.; brs. with brown evanescent pith; young brts. bloomy: lvs. elliptic to oblong-elliptic, 6-14 cm. long, short-acuminate, remotely serrulate, dark green above, bluish white beneath; petiole 1-1.5 cm. long; terminal panicle 6-12 cm. long, loose, in fr. to 20 cm. long; fr. about 8 mm. across, on slender pedicels 8-15 mm. long. Fl.vi; fr.x. H.I.19:1899. S.H.2:f.117f,118m-q. (*C. hypoglaucus* Hemsl.) C. China. Intr. 1900. Zone VII.

Related species: *C. glaucophylla* Rehd. & Wils. Brs. dark purplish brown, with lamellate pith: lvs. elliptic to obovate, 5-10 cm. long, acute or abruptly acuminate, remotely crenate-serrate, dull bluish green above, glaucous beneath: fls. axillary and in terminal racemes to 6 cm. long. W. China. Intr. 1908. Zone VII?

4. *C. rugosa* Rehd. & Wils. Climbing to 6 m.; brts. striate or angular; pith lamellate: lvs. elliptic-ovate or elliptic to elliptic-oblong, 5-13 cm. long, short-acuminate, broad-cuneate or rounded at base, crenate-serrate or crenate-dentate, rugose above, reticulate at maturity beneath, glabrous or puberulous on the veins; petiole 1-1.5 cm. long; fls. partly axillary, partly in a terminal raceme 3-4.5 cm. long, in fr. to 7 cm. long; fr. 8-10 mm. across, orange-yellow, on pedicels 5-8 mm. long. Fl.vi; fr.x. W. China. Intr. 1908. Zone VI?

Related species: *C. Vanioti* (Lévl.) Rehd. Brs. dark red-brown, hollow: lvs. elliptic to elliptic-oblong, 6-10 cm. long, crenate-serrate, scabrid-puberulous on the veins beneath: fls. axillary and in terminal racemes to 12 cm. long; aril dark brown. (*C. spiciformis* Rehd. & Wils.) C. China. Not in cult.—*C. V. laevis* (Rehd. & Wils.) Rehd., var. Lvs. usually narrower, sometimes ovate-lanceolate, glabrous and often slightly glaucescent beneath. W. China. Intr. 1908. Zone VII?

5. *C. Loeseneri* Rehd. & Wils. Climbing to 6 m., glabrous; brts. reddish brown, slightly lenticellate; pith lamellate: lvs. elliptic or elliptic-ovate to elliptic-lanceolate, 5-11 cm. long, acuminate, rounded or broad-cuneate, crenate-serrate, dark green above, pale beneath, thickish; petiole 6-15 mm. long; fls. in short-stalked or subsessile axillary cymes, often forming racemes to 5 cm. long terminating short lateral brts.: fr. yellow; aril red. G.C.90:196, t(c). C. China. Intr. 1907. Zone V.

Related species: *C. Rosthorniana* Loes. Brs. with lamellate pith: lvs. narrow-elliptic to elliptic-oblong, 4-8 cm. long, acuminate, cuneate, remotely serrate or serrulate, smooth above, with obsolete veinlets beneath, yellowish green, thickish at maturity; petiole 4-8 mm. long; cymes subsessile or short-stalked. C. and W. China. Intr. 1908. Zone VI?—*C. Hookeri* Prain. Brs. hollow or sparingly lamellate; young brts. rufous-puberulous, later white-lenticellate: lvs. elliptic or obovate to elliptic-oblong, 7-10 cm. long, on shoots longer, oblong, long-acuminate, crenate-serrulate, scabrid-puberulous on the veins beneath: fls. in short cymes: fr. orange. S. China, Himal. Intr. 1908. Zone VII?

6. *C. orbiculata* Thunb. ORIENTAL BITTERSWEET. Climbing to 12 m.; brts. terete; pith solid, white; lvs. suborbicular to obovate or oblong-obovate, 5-10 cm. long, acute or abruptly acuminate, cuneate, crenate-serrate; petioles 3-2.5 cm. long; fls. in small axillary cymes; the peduncles about as long as the pedicels: fr. orange-yellow, about 8 mm. across; aril scarlet. Fl.vi; fr.x (-xii). B.M.7599(c). G.F.3:550. B.C.2:701. G.C.III.23:29;43:242. Gng.5:119. M.G.17:306. (*C. articulatus* Thunb.) Japan, China. Intr. 1860. Zone IV. Very conspicuous with its brightly colored fr., particularly after the lvs. have fallen.—*C. o. punctata* (Thunb.) Mak., var. Less vigorous: lvs. smaller, elliptic-ovate to elliptic-oblong. (*C. p.* Thunb.) S.H.2:f.117k-1(l).

Related species: *C. gemmata* Loes. Winter-buds conic-ovate, 8-12 mm. long; lvs. elliptic, 5-11 cm. long, abruptly acuminate, broad-cuneate or nearly rounded at base, serrulate or crenate-serrulate, lustrous above and finely reticulate beneath, chartaceous; cymes short-peduncled: fr. 1-1.2 cm. across. B.J.29:t.5f-h. C. and W. China. Intr. 1907. Zone V.

7. *C. flagellaris* Rupr. Climbing to 8 m.; brs. hollow; brts. with short hooked stipular spines; lvs. broad-elliptic or ovate, 2-5.5 cm. long, abruptly acuminate, broad-cuneate, finely serrulate; petiole 1-3 cm. long; fls. 1-3 in axillary sessile cymes; fr. subglobose, 5-8 mm. across, greenish yellow, with orange-red aril, on pedicels 5-10 mm. long. Fl.vi; fr.x. Ruprecht, Decas Pl. Amur. t.4. S.H.2:f.117a-b(1). N. E. Asia. Cult. 1905. Zone IV.

3. **PACHYSTIMA** Raf. Low evergreen shrubs; brts. quadrangular, verruculose; buds ovoid with about 2 pairs of outer scales; lvs. short-petioled, opposite, small, serrulate or entire; stipules minute, deciduous; fls. perfect, green or reddish, small, in few-fl. axillary cymes; sepals 4, broad; petals 4, obovate; stamens 4, with short filaments, on the edge of a broad disk; ovary incompletely 2-celled, immersed in the disk; style short, with capitate obscurely 2-lobed stigma: fr. a leathery caps., opening by 2 valves, 1-2-seeded; seed with lacerated thin aril. (Greek *pachys*, thick, and *stigma*.) Syn.: *Pachystima* Endl., *Pachystigma* Meisn., *Oreophila* Nutt.) Two species in N. Am.—Ornamental low evergreen shrubs adapted for the rock garden, borders of evergreen shrubberies or as undergrowth in open woods; the first prefers half-shady, the second open situations.

A. Lvs. elliptic to oblong-obovate; pedicels short.....1. *P. Myrsinites*  
 AA. Lvs. generally narrow-oblong; pedicels slender.....2. *P. Canbyi*

1. *P. Myrsinites* Raf. Spreading shrub to 0.5 m., with rather stiff brs.: lvs. broad-elliptic to oblong-obovate, 1-3 cm. long, slightly revolute and serrulate or nearly entire; fls. short-stalked: fr. about 8 mm. long, whitish. Fl.v-viii; fr.vii-viii. C.R.215:f.1. S.H.2:f.119a-e. B. C. to Calif. and N. Mex. Cult. 1879. Zone V.

2. *P. Canbyi* Gray. Dwarf shrub with decumbent stem and rooting brs. ascending to 25 cm.: lvs. linear- or narrow-oblong, 6-25 mm. long, revolute and usually serrulate above the middle: fls. about 5 mm. across on pedicels 3-6 mm. long; fr. 4 mm. long. Fl.iv-v. M.N.1:t.44(c). H.B.3:485(h). Mts. of Va. and W. Va. Cult. 1880. Zone IV.

4. **FORSELLESIA** Greene. Deciduous, low, much branched shrubs with spinescent brts.: lvs. alternate, small; stipules small; fls. fascicled, white, small; sepals 4-5, short; petals 4-5, narrow; stamens 10 or 5-8, inserted on the edge of the disk; ovary superior, 1-celled, with 2 ovules; fr. a leathery ovoid-oblong pod dehiscent along the ventral suture; seed smooth, with a small 2-lobed aril. (Greek *glosse*, tongue, and *petalon*; referring to the narrow petals.) Syn.: *Glossopetalon* Gray, not Schreb. About 6 species in N. Am.

**G. meionándra** (Koehne) Heller. Shrub to 75 m.; brts. light yellowish gray; lvs. cuneate-oblong to oblanceolate, 6-15 mm. long, grayish green; petals 5, spatulate-oblong, 5-6 mm. long; stamens 5-7. Gt.43:239. (*Glossopetalum meionandrum* Koehne.) Colo. Intr. about 1892. Zone V?

**5. TRIPTERYGIUM** Hook. f. Deciduous glabrous shrubs: winter-buds broadly conical with about 2 pairs of outer scales: lvs. alternate, petioled, large; stipules subulate, caducous: fls. polygamous, white, small, in large terminal panicles; calyx 5-lobed; petals 5; stamens 5, inserted at the edge of the cupular disk; ovary superior, 3-angled, incompletely 3-celled, with short style; each cell with 2 upright ovules: fr. a 3-winged 1-seeded nutlet. (Greek *tri*, three, and *pteryx*, *pterygos*, wing; in reference to the 3-winged fr.) Three species in E. Asia.

**T. Regéii** Sprague & Tak. Sarmentose shrub to 2 m. or climbing high into trees; brts. warty, reddish brown: lvs. broad-elliptic to ovate, 6-15 cm. long, acuminate, broad-cuneate or rounded at base, crenate-serrate, light green, glabrous except puberulous on the midrib beneath when young; petiole 1-2 cm. long; fls. yellowish white, about 8 mm. across, in a terminal panicle leafy at the base, to 20 cm. long; petals orbicular-obovate: fr. 1.5 cm. long, greenish white. Fl.vii-viii; fr.ix-x. Gt.18:612. N.F.1:16. A.B.1927:58;1936:64. S.H.2:f.606. (*T. Wilfordii* Reg., not Hook f.) Manch., Korea, Japan. Intr. 1905. Zone IV. Valued for its large lvs. and the large panicles of whitish fls.

#### Fam. 54. STAPHYLEACEAE DC. BLADDERNUT FAMILY

Trees or shrubs: lvs. opposite or alternate, odd-pinnate, stipulate and stipellate: fls. perfect, rarely polygamous, regular, in axillary or terminal panicles; sepals and petals 5, imbricate; stamens 5, inserted at the edge of the disk; ovary usually 3-, rarely 1-celled; styles free or connate, with capitate stigma; ovules usually several or many at the inner angle of the cell: fr. a caps. with leathery or fleshy walls, dehiscent or indehiscent; seeds 1-few in each cell, with bony or crustaceous testa, albuminous; embryo large, with plano-convex cotyledons.—Five genera with about 25 species chiefly in the n. temp. zone.

- A. Lvs. opposite: fr. dehiscent with several seeds: fls. perfect.  
 B. Fr. an inflated caps.: lfts. 3-7, the lateral ones sessile.....1. *Staphylea*.  
 BB. Fr. a fleshy pod: lfts. 7-11, stalked.....2. *Euscaphis*.  
 AA. Lvs. alternate: lfts. 5-9, stalked, usually subcordate: fr. berry-like, 1-seeded..3. *Tapiscia*

**1. STAPHYLÈA** L. BLADDERNUT. Deciduous shrubs or small trees; brts. with smooth striped bark; buds ovoid with 2 or 4 outer scales: lvs. opposite, 3-7-foliolate: lfts. serrulate; stipules deciduous: fls. in terminal panicles; sepals and petals usually of about equal length, whitish or pinkish, upright; stamens about as long as petals; carpels 2-3, usually connate below; styles 2-3, free or connate at apex; ovules many: fr. a caps., inflated and membranous and usually 2-3-lobed; seeds few, globose obovoid, with bony lustrous testa and without aril. (Greek *staphyle*, grape; referring to the shape of the infl.) Eleven species in the temp. regions of the n. hemisphere.—Ornamental shrubs cult. for the handsome bright green foliage and the white or whitish fls.

- A. Lfts. 5-7, occasionally 3: ovary and style glabrous.  
 B. Infl. raceme-like, pendulous, oblong: fl.-buds subglobose or obovoid: lfts. 5-7.  
 BB. Infl. broad, paniculate: fl.-buds oblong-obovoid; sepals spreading: lfts. on flowering brts. usually 3.....1. *S. pinnata*.  
 .....2. *S. colchica*

## A4. Lfts. 3.

B. Middle lft. on a slender stalk 1.5-4 cm. long; panicles stalked.

C. Fls. before the lvs.: fr. not lobed.....3. *S. holocarpa*

CC. Fls. after the lvs.: fr. 2-3-lobed.

D. Lfts. elliptic to ovate, pubescent beneath: stamens not exceeding the petals.

DD. Lfts. broad-elliptic to suborbicular, glabrous: stamens longer than petals. 4. *S. trifolia*BB. Middle lft. short-stalked: panicle sessile: fr. 2-lobed, compressed.....5. *S. Bolanderi*6. *S. Bumalda*

1. *S. pinnata* L. Upright shrub to 5 m.: lfts. 5-7, ovate-oblong, 5-10 cm. long, acuminate, sharply serrulate, glabrous and glaucescent beneath: fls. about 1 cm. long, in panicles 5-12 cm. long, on peduncles about 5 cm. long; sepals ovate, whitish, greenish at base, reddish at apex, upright; petals oblong: fr. subglobose, much inflated, 2-3-lobed, 2.5-3 cm. long; seeds brownish yellow, about 1 cm. long. Fl.v-vi; fr.ix-x. R.I.5:t.161,f.4823(c). F.D. 21:t.2182(c). G.H.t.36(c). H.W.3:52. Gn.34:280. C. and S. Eu. Cult. 1596. Zone V.

2. *S. cölchica* Stev. Upright shrub to 4 m.: lfts. usually 5, on flowering brts. 3, ovate-oblong, 5-8 cm. long, acuminate, sharply serrate, glabrous and lustrous beneath: fls. 1.2-1.5 cm. long, in panicles 5-10 cm. long and about as broad, upright and peduncled; sepals spreading, narrow-oblong, yellowish white; petals linear-spatulate, white; filaments glabrous: fr. obovoid, 2-3-lobed, much inflated, 4-8 cm. long; seeds about 8 mm. long. Fl.v-vi; fr.ix-x. B.M.7383(c). R.H.1870:257. G.C.III.10:161;59:320(h). Gt.24:837. Gn.76:171. Cauc. Intr. 1850. Zone VI.—*S. c. Kochiana* Medwed., var. Filaments pubescent. (*S. c. var. lasiandra* Dipp.)—*S. c. laxiflora* Baas-Beck., var. Lfts. usually 3: inf. longer and slenderer, pendulous; filaments pubescent at base; styles usually 2, spreading at apex. M.D.1921:127.—*S. c. Coulombieri* (André) Zab., var. Of more vigorous growth; lvs. larger; lfts. long-acuminate; stamens glabrous: fr. 6-10 cm. long with spreading lobes. B.S.2:549. Cult. 1872.

*S. c. × pinnata* = *S. elegans* Zab. Lfts. usually 5: panicles very large and nodding. Cult. 1871.—*S. c. Hessei* Zab., var. Fls. pinkish.

3. *S. holocarpa* Hemsl. Shrub or tree to 10 m.: lfts. 3, elliptic to oblong, 3-10 cm. long, acute to short-acuminate, serrulate, nearly glabrous: fls. white or pinkish, 1 cm. long, in pendulous slender-stalked panicles 3-10 cm. long, axillary on last year's brts.; ovary pubescent: fr. pear-shaped or ellipsoid, 3.5-5 cm. long, abruptly acuminate or sometimes lobed; seeds light grayish brown, lustrous, 6 mm. long. Fl.iv-v; fr.ix. B.M.9074(c). S.H.2:f.120c. C. China. Intr. 1908. Zone V.—*S. h. rosea* Rehd. & Wils., var. Lfts. whitish-tomentulose beneath when young, later villous along the midrib: fls. pink, slightly larger. Intr. 1908.

4. *S. trifolia* L. Upright shrub to 5 m.: lfts. elliptic to ovate, 3.5-8 cm. long, acuminate, sharply and unequally serrulate, pubescent beneath, sometimes glabrate at maturity: fls. about 8 mm. long, in nodding panicles or umbel-like racemes; sepals greenish white; petals white, somewhat longer than sepals, style exserted; filaments pubescent below the middle; ovary pubescent: fr. usually 3-lobed, 3-4 cm. long; seeds yellowish, 5 mm. long. Fl.v; fr.ix. N.D.6:t.12(c). Gr.G.2:t.172. Gt.37:529. B.C.6:3227. (*S. trifoliata* West.) Que. to Ont. and Minn., s. to Ga. and Mo. Cult. 1640. Zone III.—*S. t. pauciflora* Zab., var. Low and suckering: lfts. smaller and broader, becoming glabrous: fls. in short, 3-8-fld. racemes. Cult. 1888.

Related species: *S. emodi* Wall. Lfts. elliptic to oblong, 5-14 cm. long, finely serrulate, pubescent or nearly glabrous beneath: fls. 12 mm. long in long-peduncled pendulous panicles: fr. 5-8 cm. long. Gt.37:528(1). S.H.2:f.120b(1). Himal. Cult. 1890. Zone VII.

5. *S. Boländeri* Gray. Shrub: lfts. 3, broad-elliptic or suborbicular, 5-7 cm. long, acute, sharply serrulate, glabrous: fls. in 9-15-fld. nodding panicles, with subverticillate pedicels; stamens and style exserted; filaments glabrous: fr. inflated, 5-6 cm. long, 3-lobed with long-aristate lobes; seed 6 mm. long. Fl.iv-v; fr.viii. G.F.2:545. R.H.1910:305. B.C.6:3228. S.L.354. Calif. Intr. 1879. Zone (V)

6. *S. Bumalda* DC. Shrub to 2 m. with slender spreading brs.: lfts. 3, elliptic or elliptic-ovate, 3.5-6 cm. long, short-acuminate, cuneate, serrulate with mucronate teeth, light green, glabrous except puberulous on veins beneath; middle lft. on a stalk to 1 cm. long: fls. about 8 mm. long, in loose erect panicles 5-7 cm. long; sepals yellowish white, little shorter than the white petals; fr. usually 2-lobed, 1.5-2.5 cm. long, flattened; seed yellowish, lustrous, 5 mm. long. Fl.vi; fr.ix-x. S.Z.1:t.95. I.S.2:t.85. N.F.6:f.97. Japan. Intr. 1812. Zone IV.

2. *EUSCAPHIS* Sieb. & Zucc. Deciduous shrub or small tree, glabrous; buds with 2 outer scales: lvs. opposite, odd-pinnate, stipulate; lfts. serrulate; petiolulate, stipellate: fls. perfect, in terminal upright panicles; sepals, petals and stamens 5, of nearly equal length; ovary 2-3-celled, with 2 or 3 styles often connate at apex, surrounded at base by an annular disk: fr. consisting of 1-3 spreading leathery dehiscent pods, each with 1-3 seeds covered by a thin fleshy aril. (Greek *eu*, good, and *scaphis*, vessel; referring to the color and shape of the dehiscent pod.) One species.

*E. japonica* (Thunb.) Kanitz. Shrub to 3 m.: lfts. 7-11, lance-ovate, 4-8 cm. long, acuminate, rounded to broad-cuneate, appressed-serrulate: fls. yellowish green, about 5 mm. across, in broad many-fld. long-peduncled panicles 5-12 cm. across: pods 1-1.3 mm. long, reddish, apiculate; seeds suborbicular, 5-6 mm. across, steel-blue. Fl.v-vi; fr.viii-ix. S.Z.1:t.67(c). S.I.t.70 (c). S.H.2:f.121e-i,122d. (*E. staphyleoides* Sieb. & Zucc.) Japan and C. China. Cult. 1890. Zone VII. Planted chiefly for its handsome foliage and attractive fr.

3. *TAPISCIA* Oliv. Deciduous tree; buds with 2 or 3 outer pointed scales: lvs. alternate, odd-pinnate: lfts. short-petioluled, serrate, stipellate; stipules caducous: fls. very small, yellow, andro-dioecious, in axillary panicles; the staminate composed of long slender spikes with densely clustered fls.; the fertile ones much shorter with stouter brs. and with the fls. solitary in the axils of bracts; calyx tubular-campanulate, 5-lobed; stamens 5, exserted; ovary superior with slender style exceeding the stamens; staminate fls. smaller and shorter with rudimentary ovary; fr. a 1-seeded ovoid drupe with thin fleshy epicarp. (Anagram of *Pistacia*.) One species.

*T. sinensis* Oliv. Tree to 10 m., rarely to 25 m.; lfts. 5-9, ovate, 6-12 cm. long, acuminate, rounded to cordate at base, sharply serrate, glaucous beneath, glabrous; petiolules 3-10 mm. long: pistillate panicles 5-8, staminate 10-20 cm. long; pistillate fls. 2.5, staminate 1.5 mm. long, fragrant: fr. ovoid, 6-7 mm. long, black. Fl.vii; fr.ix. H.I.20:1928. S.H.2:f.607. K.B.1909:356 (h). C. China. Intr. 1908. Zone VII. With large handsome lvs. turning yellow in fall, and fragrant fls.

#### Fam. 55. ACERACEAE Lindl. MAPLE FAMILY

Trees or shrubs: lvs. opposite, simple or compound, estipulate: fls. bisexual or unisexual, mostly andro-polygamous, or andro-monoecious or dioecious, regular, small, in terminal or lateral racemes or panicles, sepals 4-5,

imbricate, rarely connate, petals 4-5, imbricate or wanting; disk usually flat, intrastaminal or extrastaminal, rarely wanting; stamens 4-10, usually 8; ovary superior, 2-celled and 2-lobed, much flattened contrary to the partition; style with 2 stigmas; ovules 2 in each cell: fr. flat, winged, splitting into two 1-seeded samaras; seed exalbuminous, with thin testa; embryo with flat, folded or rolled cotyledons.—Two genera with about 115 species chiefly in the temp. regions of the n. hemisphere.

- A. Samara winged all around, with the seed near the middle: lvs. pinnate, 7-15-foliolate.  
 1. *Dipteronia*  
 AA. Samara winged only on one side: lvs. simple or 3-7-foliolate.....2. *Acer*

1. **DIPTERONIA** Oliv. Deciduous trees; winter-buds small, naked, densely pubescent: lvs. opposite, odd pinnate; lfts. serrate: fls. andro-monoecious, in large upright terminal panicles; sepals 5, longer than the short broad petals; staminate fls. with usually 8 stamens, an extrastaminal disk and a rudimentary ovary; filaments slender; fertile fls. with a 2-celled compressed ovary: fr. consisting of 2 compressed nutlets connate only at base and winged all around. (Greek *dis*, twice, and *pteron*, wing; referring to the winged carpels of the fr.) Two species in China.

**D. sinénsis** Oliv. Tree to 10 m.: lvs. 20-30 cm. long; lfts. usually 9-13, short-stalked, the upper ones subsessile, oblong-ovate to lance-oblong, the lowest pair sometimes 3-parted or 3-foliolate, 4-10 cm. long, long-acuminate, broad-cuneate, coarsely serrate, glabrous or sparingly pubescent beneath when young; panicle glabrous, 15-30 cm. long: fls. whitish, about 2.5 mm. across, slender-pedicelled: each samara broad-obovate or nearly orbicular, 2-2.5 cm. broad, light brown. Fl.vi: fr.ix. H.I.19:1898. S.I.1:t.36. J.L.28:f.18. G.C.72:139. Gn.89:449. C. China. Intr. 1900. Zone VI. With handsome large lvs. and peculiar fr.

2. **ÁCER** L. MAPLE. Deciduous, rarely evergreen trees, rarely shrubs; winter-buds with imbricate or with 2 outer scales: lvs. opposite, petioled, simple and usually palmately lobed or 3-7-foliolate: fls. usually andro-monoecious or dioecious, 5-merous, rarely 4-merous, in racemes, panicles or corymbs; sepals sometimes connate; petals sometimes wanting; disk usually annular and large, rarely lobed or wanting; stamens 4-10, usually 8; styles or stigmas 2: fr. consisting of 2 long-winged compressed samaras (keys). (The ancient Latin name of the tree.) Including *Negundo* Ludw., *Rulac* Adans. and *Crula* Nieuwl. About 115 species in N. Am., Asia, Eu. and N. Afr.—Ornamental trees chiefly planted for their handsome foliage usually assuming brilliant colors in autumn; some with attractive fls. or frs.

I. Lvs. simple (occasionally 3-foliolate in No. 33).

Inf. terminal on short leafy brts. (in Nos. 45-46 the staminate from lateral leafless buds).

a. Inf. corymbose or paniculate, andro-monoecious; disk extrastaminal.

b. Lvs. palmately lobed or simple and doubly serrate.

c. Lobes of lvs. entire or coarsely dentate; winter-buds with imbricate scales.

d. Inf. corymbose.

e. Sepals and petals distinct.

f. Lobes of lvs. acuminate: fr. with flattened nutlets and leathery, scarcely veined walls.

g. Bark of mature brts. gray or grayish brown, slightly fissured and lenticellate.

h. Lobes of lvs. coarsely toothed.

i. Lvs. glabrous and lustrous beneath; lobes finely pointed.

1. *A. platanoides*

ii. Lvs. pubescent beneath; lobes bluntly pointed.....2. *A. Miyabei*

xx. Lobes of lvs. entire or rarely with few teeth.

i. Lvs. truncate at base: wings of fr. about as long as nutlet.

3. *A. truncatum*

ii. Lvs. usually subcordate at base; wings about twice as long as nutlet.

4. *A. Mono*

- gg. Bark of brts. smooth and lustrous for several years: lobes of lvs. entire or with few teeth.  
 h. Infl. peduncled: lvs. glabrous beneath.  
 i. Lvs. usually 3-5-lobed with broad and short lobes: fr. with upright incurved wings ..... 5. *A. Mayrri*  
 ii. Lvs. 5-7-lobed, rarely 3-lobed: fr. with spreading wings.  
 6. *A. cappadocicum*  
 HH. Infl. sessile or subsessile: lvs. pubescent beneath, 3-lobed. 7. *A. longipes*  
 FF. Lobes of lvs. obtusish or acutish: fr. with convex strongly veined nutlets.  
 g. Lvs. 2-8 cm. across, usually 3-lobed.  
 H. Wings of fr. parallel or spreading at right angles: lvs. chartaceous, glabrous.  
 i. Lvs. often without lobes, green beneath..... 8. *A. orientale*  
 ii. Lvs. 3-lobed, glaucous beneath..... 9. *A. monspessulanum*  
 HH. Wings of fr. horizontally spreading: lvs. 3-5-lobed, pubescent and light green beneath; lobes usually dentate..... 10. *A. campestre*  
 gg. Lvs. 6-14 cm. across, usually 5-lobed, lobes irregularly dentate: infl. pendulous.  
 H. Lvs. shallowly lobed with broad-ovate lobes, pubescent beneath.  
 11. *A. Opalus*  
 HH. Lvs. deeply lobed, lobes angular with parallel margins, glabrous or nearly so beneath..... 12. *A. hyrcanum*  
 EE. Sepals connate; petals wanting: fls. corymbose with slender pendulous pedicels.  
 F. Lvs. glaucous or pale beneath or green and glabrous.  
 g. Lvs. usually glabrous and sometimes green beneath, rarely villous, lobes entire or with few coarse teeth: corymb subsessile..... 13. *A. saccharum*  
 gg. Lvs. pubescent beneath, the lobes distinctly lobulate: corymb short-stalked ..... 14. *A. grandidentatum*  
 FF. Lvs. green and pubescent beneath, rarely glabrous.  
 g. Lvs. pilose-pubescent beneath, 8-14 cm. across, the basal sinus often closed: bark dark and furrowed..... 15. *A. nigrum*  
 gg. Lvs. soft-pubescent beneath, rarely glabrous, 5-8 cm. across; the basal sinus open: bark gray..... 16. *A. leucoderme*  
 DD. Infl. paniculate: fr. with convex strongly veined nutlets.  
 E. Panicles pendulous.  
 F. Fr. hispid: lvs. 20-30 cm. long, deeply lobed..... 17. *A. macrophyllum*  
 FF. Fr. glabrous: lvs. 10-15 cm. long..... 18. *A. Pseudoplatanus*  
 EE. Panicles upright.  
 F. Lvs. 5-lobed, large.  
 g. Middle lobe divided nearly to base..... 19. *A. Heldreichii*  
 gg. Middle lobe reaching to the middle or little beyond.  
 H. Lobes longer than broad; lvs. glaucescent beneath..... 20. *A. Trautvetteri*  
 HH. Lobes about as long as broad; lvs. green beneath..... 21. *A. velutinum*  
 FF. Lvs. 3-lobed, often mixed with undivided ones, 5-8 cm. long.  
 22. *A. Buergerianum*  
 CC. Lobes of lvs. or lvs. serrate or doubly serrate: nutlets of fr. convex and strongly veined.  
 D. Winter-buds with imbricate scales: lvs. undivided or 3-lobed, doubly serrate.  
 E. Lvs. lustrous dark green, usually with 2 lobes near base..... 23. *A. Ginnala*  
 EE. Lvs. dull and rather light green, not lobed..... 24. *A. tataricum*  
 DD. Winter-buds with only 1 pair of outer valvate scales.  
 E. Fls. in panicles.  
 F. Panicles narrow, spike-like, upright: lvs. 3-7-lobed, doubly serrate.  
 g. Lvs. 3- or rarely 5-lobed, pubescent beneath..... 25. *A. spicatum*  
 gg. Lvs. 5-7-lobed, glabrous or pubescent beneath..... 26. *A. caudatum*  
 FF. Panicle short, only little longer than broad: lvs. 5-lobed, serrulate.  
 g. Lobes irregular and sparingly serrulate..... 27. *A. sinense*  
 gg. Lobes finely and sharply serrulate..... 28. *A. Oliverianum*  
 EE. Fls. in few-fl. corymbs.  
 F. Lvs. 5-11-lobed, green beneath.  
 g. Petioles and peduncles glabrous: ovary glabrous; sepals purplish.  
 H. Lvs. divided to about the middle into 7-9 lobes: petals white; sepals purple ..... 29. *A. circinatum*  
 HH. Lvs. divided to beyond the middle into 5-9 lobes; petals purplish.  
 30. *A. palmatum*  
 GG. Petioles and peduncles pubescent, at least while young: ovary villous.  
 H. Fls. yellowish; anthers scabrid: lvs. subcordate or cordate with 7-9 doubly serrate lobes..... 31. *A. Sieboldianum*  
 HH. Fls. purple; anthers smooth: lvs. deeply cordate with 7-9 incisely serrate lobes ..... 32. *A. japonicum*  
 FF. Lvs. 3-lobed or 3-foliate, pale and glaucescent beneath, glabrous.  
 33. *A. glabrum*  
 BB. Lvs. undivided, entire or serrulate: infl. paniculate. (See also Nos. 11 and 24 and *A. catalpifolium* under No. 7.)  
 c. Lvs. oblong, rounded at base, entire..... 34. *A. oblongum*  
 CC. Lvs. ovate, cordate at base, serrulate..... 35. *A. distylum*

- AA. Infl. racemose, with fls. of one kind; disk intrastaminal.  
 B. Lvs. oblong, doubly serrate with about 20 pairs of veins: fls. apetalous; winter-buds with many imbricate scales.....36. *A. carpinifolium*  
 BB. Lvs. lobed or undivided with about 10 pairs of veins or less: winter-buds with 2 outer valvate scales.  
 C. Sepals and petals 5; racemes of both sexes on leafy brts.  
 D. Lvs. oblong-ovate, undivided or with 2 lobes near base: brts. striped white.  
 E. Lvs. not lobed, crenate-serrate.....37. *A. Davidi*  
 EE. Lvs. with 2 lobes near base, the middle lobe elongated.....38. *A. crataegifolium*  
 DD. Lvs. 5-7-lobed or 3-lobed at apex.  
 E. Lvs. 3-lobed above the middle, broad-obovate or ovate: brs. striped.  
 F. Lvs. ferrugineous-pubescent beneath when young.  
 G. Young brts. not bloomy: young lvs. brownish villous beneath, the primary veins glabrescent.....39. *A. pennsylvanicum*  
 GG. Young brts. bloomy: young lvs. densely rufous-pubescent on the veins beneath .....40. *A. rufo-nervae*  
 FF. Lvs. glabrous beneath.  
 G. Pedicels slender, about 1 cm. long: lvs. reddish when unfolding.  
 GG. Pedicels short: young lvs. bright green.....42. *A. tegmentosum*  
 EE. Lvs. 5-7-lobed.  
 F. Lvs. rufous-pubescent on the veins beneath at least when young.  
 FF. Lvs. glabrous beneath.....43. *A. Tschonoskii*  
 CC. Sepals and petals 4; staminate fls. clustered, from leafless lateral buds.  
 F. Lvs. 5-lobed, roundish-ovate.....44. *A. micranthum*  
 FF. Lvs. undivided or slightly lobed, ovate to oblong-ovate.....46. *A. tetramerum*  
*Infl. from lateral leafless buds: fls. andro-monoecious or dioecious: winter-buds with imbricate scales.*  
 A. Fls. racemose or the staminate corymbose, with the lvs.: disk intrastaminal.  
 B. Sepals more or less connate, petals wanting in the staminate fl.: lvs. 5-lobed.  
 BB. Sepals and petals distinct; fls. of both sexes racemose: lvs. 3-lobed.....47. *A. diabolicum*  
 AA. Fls. fascicled, before the lvs.: winter-buds with 2 outer scales connate at base.  
 B. Lvs. 3-5-lobed with unequally or crenately serrate lobes: fls. slender-stalked; ovary glabrous .....48. *A. Francheti*  
 BB. Lvs. 5-lobed with deeply serrate or lobulate lobes: fls. short-stalked, apetalous; ovary pubescent .....49. *A. rubrum*  
 BB. Lvs. 5-lobed with deeply serrate or lobulate lobes: fls. short-stalked, apetalous; ovary pubescent .....50. *A. saccharinum*

## II. Lvs. 3-7-foliate

- A. Fls. in terminal corymbs, after the lvs.; disk large, extrastaminal: winter-buds with many imbricate scales: lfts. 3.  
 B. Petioles, lfts. beneath and corymbs pilose.  
 C. Lfts. elliptic-oblong, sparingly serrate, 5-12 cm. long; bark close.....51. *A. nikoense*  
 CC. Lfts. elliptic, coarsely dentate, 2-5 cm. long; bark flaky.....52. *A. griseum*  
 BB. Petioles, lfts. and corymbs glabrous: lfts. lance-oblong.....53. *A. manshuricum*  
 AA. Fls., at least the pistillate ones, in long racemes; disk small or wanting: winter-buds with 2 outer valvate scales.  
 B. Petals present: fls. of both sexes in racemes, sometimes leafy at base: lfts. 3.  
 C. Petioles and lfts. beneath pubescent, rarely glabrous: fls. 5-merous; pedicels short.  
 CC. Petioles and lfts. glabrous: fls. 4-merous; pedicels long and slender.....54. *A. Henryi*  
 BB. Petals wanting: pistillate fls. in pendulous racemes, staminate ones corymbose, before the lvs.: lfts. 3-7.....55. *A. cissifolium*  
 BB. Petals wanting: pistillate fls. in pendulous racemes, staminate ones corymbose, before the lvs.: lfts. 3-7.....56. *A. Negundo*

Sect. I. PLATANOIDEA Pax. Fls. andro-polygamous, corymbose (broad-paniculate in No. 2); staminate fls. perigynous; stamens inserted on the middle of the disk: fr. with much flattened nutlets and leathery scarcely veined walls: lvs. 3-5 lobed with coarsely sinuate-dentate or entire lobes, rarely entire; leaf-stalk with milky juice: winter-buds with imbricate scales.

1. *A. platanoides* L. NORWAY M. Tree to 30 m.; glabrous: lvs. 5-lobed, 10-18 cm. across, lobes acuminate, remotely dentate with pointed teeth, bright green and lustrous beneath, bearded in the axils of the veins: fls. greenish yellow, 8 mm. across in erect many-fl. stalked corymbs: fr. pendulous, with nearly horizontally spreading wings, 3.5-5 cm. long, including the flattened nutlet. Fl. iv-v; fr. ix-x. R.I.5:t.164(c). F.D.16:t.1526(c). H.W. 3:t.45(c). E.N.III.5:264. E.H.3:t.186-188(h). Eu., Cauc. Long cult. Zone III. Ornamental tree valued for its dense regular habit; the bright green lvs. appearing early and turn bright yellow in fall; often planted as street tree.—*A. p. variegatum* West., var. Lvs. with large white blotches. (*A. p. albo-variegatum* Hayne.) Cult. 1770.—*A. p. rubrum* Herd., var. Lvs. green-

ish red when unfolding, turning dark red in late summer. Gt.16:t.545(c). B.H.18:39,t(c). (*A. p.* var. *Reitenbachii* Nichols.) Cult. 1867.—*A. p.* *Schwédleri* Nichols., var. Lvs. bright red when young, changing to dark green. R.B.32:197,f.6(c). Cult. 1870.—*A. p.* *Stóllii* Spaeth. Lvs. large, usually 3-lobed, with entire lobes, purple when unfolding. Gt.42:585. S.H. 2:f.155f.—*A. p.* *laciniatum* Ait., var. *EAGLE CLAW M.* Of upright columnar habit: lvs. cuneate, irregularly lobed, the lobes curved downward, clawlike. S.O.1:t.5(c). Gt.42:584. Cult. 1789.—*A. p.* *palmatifidum* Tausch, var. Lvs. palmately divided nearly to the base, the divisions deeply lobed, dark green. Gt.42:584. (*A. p.* *dissectum* Jacques.)—*A. p.* *Lorbergii* Van Houtte. Lvs. palmately divided like the former, but tips ascending from plane of lf., light green. Gt.42:584. (*A. p.* var. *palmatum* Bean.)—*A. p.* *columnare* Carr. Of columnar habit with upright brs.: lvs. smaller, less deeply lobed. Orig. about 1855.—*A. p.* *erectum* Slavin, f. Narrow-pyramidal tree with short ascending brs.: lvs. larger, dark green.—*A. p.* *globosum* Nichols., var. Forming a dense globose head. M.G.18:189(h). G.W.5:14(h). S.L.74(h).

*A. p.* × *Lobellii* = *A. Diéckii* Pax. Similar to *A. p.*, but lobes entire. S.H.2: f.152a. D.H.2:45(1). (*A. platanoides* var. *integrilobum* Zab.)

2. *A. Miyabei* Maxim. Tree to 12 m.; brs. with slightly corky bark, pubescent when young: lvs. 5-lobed, 10–15 cm. across, deeply cordate, lobes obtusely acuminate, obtusely lobulate or dentate, pale green and pubescent beneath, pubescent above when young; petioles puberulous; fls. greenish yellow, in slender-stalked 10–15-fld. pyramidal corymbs: wings of fr. horizontally spreading with the flattened velutinous nutlet 4–5 cm. long. Fl.v; fr.ix. S.I. 2:t.45(c). M.K.73(c). G.F.6:143. J.C.32,1:t.31. J.H.29:f.80(h). Japan. Intr. 1892. Zone V. Tree of rather open habit.

3. *A. truncatum* Bge. Small tree to 8 m., glabrous: lvs. deeply 5-lobed, 6–10 cm. across, truncate at base, lobes acuminate, setosely pointed, entire or the middle lobe sometimes 3-lobed; bright green: fls. greenish yellow, about 1 cm. across, slender-stalked, in erect corymbs 6–8 cm. across: wings of fr. spreading at a right or an obtuse angle, with the compressed nearly smooth nutlet about 3 cm. long, the broad wing about as long as nutlet. Fl.v; fr.ix. S.T.1:t.76. S.H.2:f.150ad(l). N. China. Intr. 1881. Zone V. Small round-headed tree with graceful foliage purplish when unfolding.

4. *A. Mono* Maxim. Tree to 20 m.; brts. glabrous, becoming yellowish to light gray and slightly fissured the second year: lvs. 5–7-lobed, occasionally 3-lobed, 8–15 cm. across, cordate to subcordate or nearly truncate with ovate-triangular acuminate entire lobes, green and glabrous beneath except axillary tufts of hairs: fls. greenish yellow, in corymbs 4–6 cm. across: wings of fr. spreading about 1½ times as long as the compressed nutlet and with the nutlet 2–3 cm. long. Fl. iv–v; fr.ix. C.C.229. N.K.1:t.12,f.1–4. M.K.t.71(c). (*A. pictum* var. *Mono* Pax, *A. pictum* var. *parviflorum* Schneid.) China, Manch., Korea. Intr. 1880. Zone V. Handsome round-headed tree with bright green lvs.—*A. M. connivens* (Nichols.) Rehd., f. Fr. with upright, often connivent wings. S.I.1:t.65,f.1–12(c). J.C.32,1:t.32,f.1–5. Japan. Intr. 1865.—*A. M. marmoratum* (Nichols.) Rehd., f. Lvs. densely dotted and blotched white. (*A. pictum* var. *m.* Nichols., *A. pictum* Thunb. of 1784, not 1783.) Cult. 1881.—*A. M. dissectum* (Pax) Honda, var. Lvs. 5-lobed, divided beyond the middle into oblong, long-acuminate lobes, the middle one usually slightly contracted at base, glabrous. J.C.32,1:62,f.9a. (*A. pictum* var. *d.* Wesm. ex Pax.) Cult. 1907.—*A. M. tricuspis* (Rehd.) Rehd., var. Lvs. smaller, 3-lobed, the smallest ones sometimes quite entire and ovate. E.P.

IV,163:53. (*A. pictum* f. t. Rehd., *A. tenellum* Pax.) C. China. Intr. 1901.—*A. M. ambiguum* (Pax) Rehd., var. Lvs. pilose beneath, fls. unknown. D.H.2:458. N.K.1:t.12,f.5. (*A. a. Dipp.*, not Heer, *A. pictum* var. *a.* Pax, *A. M.* var. *Paxii* Honda.) Orig. unknown. Cult. 1892.

Related species: *A. Okamotoanum* Nakai. Close to *A. Mono*: brts. becoming reddish brown, later grayish brown, not fissured: lvs. 7-lobed: fr. with the wings connivent or spreading at a right angle; key 3.5–4.5 cm. long. (*A. Okamotoi* Nakai, in part.) Korea. Intr. 1917. Zone V.—*A. fulvescens* Rehd. Similar to *A. Mono*: lvs. usually 3-lobed, 5–10 cm. across, yellowish or fulvous pubescent beneath, chiefly on the veins: keys 3 cm. long. C. China. Intr. 1908. Zone V.

5. *A. Mayrii* Schwerin. Tree to 25 m.; brts. glabrous and usually bloomy when young, smooth and lustrous, yellowish or red-brown the second year: lvs. 3–5-lobed, 8–15 cm. across, truncate or rounded at base, with short, entire broad-ovate and abruptly acuminate lobes sometimes very short and almost reduced to a narrow acumen, green and glabrous and reticulate beneath: fls. greenish white, in corymbs 4–6 cm. across: wings of fr. upright and incurved or slightly spreading,  $1\frac{1}{2}$  or 2 times as long as the compressed nutlet and with it 2.5–4 cm. long. Fl.v–v; fr.ix. M.K.t.72(c). Mayr, Wald- & Parkb. 440. S.H.2:f.150A,g. (*A. pictum* var. *M.* Henry.) Japan. Intr. 1916. Zone V.

6. *A. cappadocicum* Gleditsch. Tree to 20 m.; brts. sometimes bloomy when young, lustrous and green the second year: lvs. 5–7-lobed, usually cordate at base, 8–14 cm. across, lobes triangular-ovate, long-acuminate, entire, green and finely reticulate beneath and glabrous except axillary tufts of hairs; petiole to 10, occasionally to 20 cm. long: fls. pale yellow, small, in glabrous corymbs: wings of fr. spreading at a wide angle, 2–4 times as long as the compressed nutlet, with it 3–5 cm. long. Fl.v–vi; fr.ix. D.H.2:456(l). Gt.1887:433(l). S.H.2:f.150A,h,f.151h–k. (*A. laetum* C. A. Mey., *A. pictum calchicum* Hort.) Cauc. and W. Asia to Him. Intr. 1838. Zone V or VI.—*A. c. rubrum* (Kirchn.) Rehd., f. Lvs. blood-red when unfolding, becoming green. (*A. laetum rubrum* Kirchn., *A. laetum* f. *horticola* Pax.) Intr. 1838.—*A. c. tricolor* (Carr.) Rehd., f. Lvs. blood-red and sprinkled with rosy pink when young. R.B.12:217,t(c).—*A. c. sinicum* Rehd., var. Lvs. usually 5-lobed, subcordate to truncate at base, 6–10 cm. across; wings about 2 times as long as nutlet. S.H.2:f.150Ai(l). J.L.29:f.101(l) (as *A. laetum* var. *cultratum*). China. Intr. 1901. Zone V.—*A. c. tricaudatum* Rehd., f. A form of the preceding var. with smaller 3-lobed lvs. J.H.29:f.100(h),102(l). S.H.2:f.150A,k(l). Intr. 1901.

Related species: *A. Lobelii* Ten. Tree to 20 m. with ascending brs.; young brts. bloomy: lvs. usually 5-lobed, 10–16 cm. across, lobes long-acuminate, usually pointing forward, dark green above, slightly paler beneath: fls. small; calyx outside and pedicels pilose: wings of fr. spreading at a wide angle, about  $1\frac{1}{2}$  times as long as nutlet, with it 2.5–3 cm. long. D.H.2:453. S.H.2:f.152f–g,153g–h. R.H.1915:524(h). Italy. Cult. 1838. Zone VII?—*A. L. × platanoides*; see under No. 1.—*A. L. × campestre*; see under No. 10.

7. *A. longipes* Rehd. Tree to 10 m.; young brts. glabrous green, bark remaining smooth: lvs. 3-, rarely 5-lobed, 10–16 cm. across, with long-acuminate entire lobes, occasionally mixed with undivided ovate lvs., light green and soft-pubescent beneath: fls. in glabrous short-peduncled or nearly sessile loose corymbs about 10 cm. across: wings of fr. spreading at a right angle, about twice as long as nutlet, with it 2.5–3 cm. long. Fl.v–vi; fr.ix. S.H.2:f.152c(l). W. China. Intr. 1900. Zone VI? Lvs. purplish when unfolding.

Related species: *A. amplum* Rehd. Lvs. 5-lobed, occasionally 3-lobed, 10–18 cm. across, with broad-ovate, abruptly acuminate lobes, glabrous: infl. subsessile, loose, 12–15 cm. across; wings spreading at a wide angle. C. China.

Cult. 1937. Zone V?—*A. catalpifolium* Rehd. Lvs. ovate to ovate-oblong, 10–20 cm. long, undivided or with 2 short rounded lobes near base, abruptly acuminate, light green and glabrous and finely reticulate beneath: corymbs large and loose, sessile: wings of fr. spreading at a very wide angle, about 3 times as long as nutlet, with it 4–5 cm. long. W. China. Intr. 1910. Zone VII?

Sect. II. CAMPESTRIA Pax. Fls. andro-polygamous, on slender often pendulous pedicels, in corymbs; staminate fls. perigynous; stamens inserted near inner margin of disk; nutlet convex with thick strongly veined walls: lvs. 3–5-lobed, with entire or coarsely dentate, rarely crenulate, obtusish lobes, rarely undivided; petiole with milky juice in No. 10: winter-buds with several imbricate scales.

8. *A. orientale* L. Deciduous or half-evergreen shrub or small tree to 5, rarely 12 m.; brts. glabrous: lvs. ovate or sometimes 3-lobed, 2–5 cm. long, obtuse or acutish, entire or slightly crenulate-denticulate, bright green and glabrous beneath, coriaceous; petiole 3–10 mm. long: fls. in few-fld. upright glabrous corymbs about 2 cm. long: wings of fr. parallel or spreading at a right angle, with the nutlet 1–1.5 cm. long. S.F.4:t.361(c). E.P.IV.163:64. S.H.2:f.159k-o. (*A. creticum* L., *A. sempervirens* L., *A. heterophyllum* Willd.) E. Mediterr. region. Intr. 1756. Zone VII?

Related species: *A. syriacum* Boiss. & Gaillardot. Shrub or small tree, glabrous: lvs. 3-lobed, 4–7 cm. long, sometimes ovate and without lobes, middle lobe triangular, spinulose-denticulate to nearly entire, reticulate and green beneath; inf. few-fld.; keys 2–2.5 cm. long; wings diverging at an acute angle. S.H.2:f. 158e, 159g-i. Syria, Cyprus. Cult. 1903. Zone VII?—*A. cinerascens* Boiss. Young brts. pubescent: lvs. 3-lobed, sometimes with 2 additional basal lobes, 2–6 cm. long, with acutish or obtuse, entire or crenulate lobes, pubescent beneath: fr. with upright wings. M.D.1898:47,t. S.H.2:f.158f, 159e-f. W. Asia. Cult. 1896. Zone VII?

9. *A. monspessulanum* L. Shrub or round-headed tree to 8 or 12 m.; brts. glabrous: lvs. 3-lobed, 3–8 cm. across, lobes triangular-ovate, entire or sparingly denticulate, lustrous above, glaucescent and reticulate beneath and glabrous except axillary tufts of hairs, subcoriaceous: fls. greenish yellow, slender-pedicelled and soon drooping, in several-fld. glabrous corymbs; ovary pubescent: fr. reddish; wings upright and often overlapping or slightly spreading, with the nutlet 2–2.5 cm. long. Fl.v; fr.ix. S.O.1:t.14(c). R.I. 5:t.162(c). F.D.16:t.1528(c). H.W.3:46. E.H.3:t.190(h). G.W.8:195(h). (*A. trilobatum* Lam.) S. Eu., W. Asia. Intr. 1739. Zone V. Much planted as a street and shade tree in the N. E. States; of dense regular habit and with bright green lvs. turning yellow or orange and scarlet in fall; yields maple sugar.—*A. s. conicum* Fern., f. Tree with ascending brs. forming a dense conical head. Rh.36:238(h).—*A. s. monumentale* (Temple) Rehd. Of columnar habit with ascending brs. and short brts. H.B.1:269(h). G.C.A. 38:7(h). Cult. 1900.—*A. s. glaucum* (Schmidt) Pax, f. Lvs. glaucous beneath. (*A. saccharinum* var. *glaucum* Schmidt.)—*A. s. Schneekii* Rehd., var. Lvs. densely villous on the veins beneath, petioles villous, rarely glabrous. Ind., Ill., Mo. Intr. 1919.—*A. s. Rugéii* (Pax) Rehd., var. Lvs. usually 3-lobed, generally broader than long, with entire lobes, glaucous or sometimes pale green beneath, subcoriaceous. (*A. R. Pax.*) S.S.2:t.91(as var. *nigrum*). Intr. 1903.

14. *A. grandidentatum* Nutt. Tree to 12 m., with dark brown scaly bark; brts. glabrous: lvs. 3-5-lobed, with broad shallow sinuses, 5-8 cm. across, subcordate, lobes acute or obtuse, lobulate, rarely entire, glaucescent and pubescent beneath especially on the veins; petiole stout, 3-5 cm. long: fls. on slender drooping villous pedicels in several-fld. short-stalked corymbs: calyx often persistent under the fr.: wings spreading, often rose-colored in midsummer, with the nutlet 2.5-3.5 cm. long. Fl.iv; fr.ix. N.S.2:t.69(c). S.S.2:t.92. D.H.2:440. (*A. saccharum* g. Sudw.) Wyo. to Utah, N. Mex. and n. Mex. Intr. 1882. Zone V.

Related species: *A. floridanum* Pax. Bark of young trees pale and smooth: lvs. 3-5-lobed, truncate or subcordate, with entire or slightly lobulate acute or obtuse lobes, glaucescent and pubescent beneath: fls. in many-fld. nearly sessile corymbs: fr. sparingly villous while young with spreading or sometimes erect wings with the nutlet 2.5-3 cm. long. Va. to Fla. and E. Tex. S.S.2:t.91. G.F. 4:148. (*A. saccharum* f. Sudw.) Intr. ? Zone VII?

15. *A. nigrum* Michx. f. BLACK M. Tree to 40 m., with black deeply furrowed bark; brts. pilose at first, soon glabrous: lvs. 3-lobed, occasionally 5-lobed, 10-14 cm. wide, deeply cordate with usually closed sinus, lobes acute, entire or obtusely toothed, the sides of the blade drooping, dull green above, yellowish green and pilose beneath; petioles usually pubescent, 8-12 cm. long: fls. yellowish green, on pendulous hairy pedicels in nearly sessile many-fld. corymbs: fr. glabrous; wings nearly upright or diverging, with the nutlet 3-4 cm. long. Fl.iv; fr.ix. M.S.1:t.43(c). S.S.13:t.625. H.H.326,327(b). B.C. 1:203. (*A. saccharum* var. *n.* Brit., *A. saccharinum* var. *n.* Loud.) Que. and N. E. to N. Y., W. Va. and Ky., w. to S. Dak., Iowa and Mo. Intr. 1812. Zone III. Not much planted; with duller lvs. turning yellow in fall.

16. *A. leucoderme* Small. Tree to 8, rarely to 12 m., with light gray or grayish brown bark: lvs. 3-5-lobed, 5-8 cm. across, truncate or subcordate, with acuminate sinuate-dentate lobes, dark yellow green above, lighter and soft-pubescent beneath: fls. yellow, about 4 mm. long, on slender glabrous

pedicels in nearly sessile corymbs; fr. villous, finally glabrous; wings wide-spreading, with the nutlet 1.5-2 cm. long. Fl.iv; fr.ix. (*A. saccharum* var. *l.* Sarg.) S.S.13:t.624. N. C. to Ga. and La. Cult. 1900. Zone V. Sometimes planted as a street tree in the S.; the lvs. turn scarlet in fall.

Sect. IV. SPICATA Pax. Fls. andro-polygamous, in panicles sometimes broad and nearly corymbiform, hypogynous; stamens inside of the thick disk: fr. with convex, strongly veined nutlets: winter-buds with imbricate scales or with only 2 outer scales: lvs. 3-7-lobed, rarely undivided and serrate, the lobes lobulate to serrate.

17. *A. macrophyllum* Pursh. OREGON M. Tree to 30 m.; brts. stout, glabrous: lvs. deeply 3-5-lobed or -cleft, 20-30 cm. across, cordate, the middle lobe mostly 3-lobed, the others lobulate, dark green and lustrous above, pale green and pubescent beneath when young, subcoriaceous; petiole 25-30 cm. long: fls. yellow, fragrant, in narrow pendulous glabrous panicles 10-12 cm. long: nutlets of the fr. with yellow stiff hairs; wings spreading at a right angle or nearly upright, about 3 cm. long. Fl.v; fr.ix. NS.2:t.67(c). S.S.2:t.86.87. F.E.14:t.44(h). Gn.M.2:107(h). Alaska to Cal. Intr. 1812. Zone VI. —Remarkable for its large lvs. turning bright orange in fall.

18. *A. pseudoplatanus* L. SYCAMORE M. Tree to 30 m.; brts. glabrous: lvs. 5-lobed, 8-16 cm. across, cordate, lobes ovate, coarsely crenate-serrate, dark green and glabrous above, glaucescent beneath and usually glabrous or pubescent on the veins: fls. yellowish green, in pendulous narrow panicles with the stalk 6-12 cm. long: fr. glabrous; wings spreading at an acute or right angle, with the nutlet 3-5 cm. long. Fl.v; fr.viii-ix. R.I.5:t.164(c). H.W.3:39,40(h),t.44(c). E.H.3:t.179-183(h). F.E.15:t.47(h). Eu., W. Asia. Cult. for centuries. Zone V. Large tree of vigorous growth, with spreading head; thrives in exposed situations and near the seashore.—*A. P. variegatum* West., var. Lvs. variegated with white, reddish when young. S.O.1:t.2(c). (*A. P. albo-variegatum* Hayne.) Cult. 1730.—*A. P. flavo-variegatum* Hayne. Lvs. marked with yellow. (*A. P. var. aureo-variegatum* Jacques.) Cult. 1822.—*A. P. corstorphinense* Schwer., f. Lvs. bright yellow when young. G.F.6:205(h). Cult. 1600.—*A. P. Worleii* Rosenthal. Lvs. deep yellow, orange-yellow when young, petiole reddish.—*A. P. Leopöldii* Lem., var. Lvs. dark rosy pink while young and variegated with yellowish pink. I.H.11:t.411(c).—*A. P. purpureum* Loud., var. Lvs. purple beneath. (*A. P. f. purpurascens* Pax, *A. P. atropurpureum* Spaeth.) Orig. 1828.—*A. P. erythrocarpum* Carr. Lvs. smaller and more lustrous; fr. bright red. R.H.1864:171,t(c). M.D.1905:1,t(c). Gn.76:540.—*A. P. euchlōrum* Spaeth. Lvs. large, dark green above: fr. large, samara to 6 cm. long.—*A. P. tomentosum* Tausch, var. Lvs. pubescent beneath, more coarsely toothed, subcoriaceous; wings of fr. to 2 cm. broad, rounded at apex. (*A. P. var. villosum* Parl.) S. Eu.

*A. p. × monspessulanum* = *A. coriaceum* Tausch. Lvs. 3-lobed, 5-8 cm. across, subcordate, lobes crenate-denticulate, lustrous above, glabrous beneath: fls. in loose corymbs; samaras 2.5 cm. long; wings diverging at an acute angle. S.O.1:t.15(c). D.L.2:433. S.H.2:f.130e. (*A. creticum* Schmidt, not L., *A. polymorphum* Spach, *A. parvifolium* Tausch.) Orig. unknown, cult. 1790.—The following are probably of the same parentage: *A. hybridum* Spach. Lvs. 3-lobed, sometimes with 2 small basal lobes, 5-10 cm. across, the lobes pointing forward, acute, denticulate, dull green above, pubescent on the veins beneath: fls. in panicles 8-12 cm. long; samaras 2-2.5 cm. long, wings nearly parallel. D.L.2:422. S.H.2:f.130d. (*A. monspessulanum* × *opalus* Pax.)—*A. Durèttii* Pax. Lvs. 3-lobed, often with 2 small basal lobes, 5-10 cm. across, lobes triangular, irregularly toothed, pubescent on the veins beneath: fls. in corymbs. S.H.2:f.130a(1). (*A. Pseudopl. × obtusatum* Pax.)—*A. rotundifolium* Schwer. Lvs. 3-lobed, with rounded obscurely denticulate or nearly entire lobes, glabrous beneath. M.D.

1894:47 (1). S.H.2:f.161c (1). (*A. Pseudopl.* × *obtusatum* Pax, *A. barbatum* Booth, not Michx.) Cult. 1889.—Doubtful hybrids of *A. Pseudoplatanus* are: *A. sericeum* Schwer. Lvs. 5-lobed, lobes doubly serrate, pubescent beneath. M.D.1894:47 (1). S.H.2:f.130b.—*A. ramosum* Schwer. Lvs. 3-lobed with doubly serrate lobes, glabrous. M.D.1894:47 (1). (?*A. Pseudopl.* × *campestre* Schwer.)

19. *A. Heldreichii* Orph. Tree of medium height; brts. dark red-brown: lvs. 5-lobed, 8-12 cm. across, lobes oblong, coarsely toothed or lobulate, the middle one divided nearly to the base, the lateral ones halfway, dark green and lustrous above, glaucous beneath and slightly villous along the veins or nearly glabrous at maturity: fls. yellow, in upright ovoid long-stalked panicles: fr. glabrous, wings spreading at an obtuse angle, with the nutlet 3.5-5 cm. long. Fl.v; fr.rx. Gt.34:t.1185. G.C.II.16:141 (1). D.H.2:430. S.E. Eu. Intr. 1879. Zone V. Remarkable for its deeply divided lvs.—*A. H. purpuratum* Schwer. Lvs. red beneath.

20. *A. Trautvetteri* Medwed. Tree to 15 m.; brts. glabrous, dark red-brown at maturity: lvs. deeply 5-lobed, 10-16 cm. across, cordate, lobes ovate-oblong, acuminate, lobulate and irregularly dentate, lustrous dark green above, glaucous beneath, villous along the veins beneath when young, glabrous and finely reticulate at maturity: fls. in upright long-stalked pyramidal panicles: fr. pubescent when young, wings nearly parallel, with the nutlet 4-5 cm. long. Fl.v; fr.rx. B.M.6697(c, as *A. insigne*). Gt.40:264-266. E.H.3:t.206,f.19. G.C.II.16:75. Cauc. Intr. 1866. Zone V.

21. *A. velutinum* Boiss. Large tree; winter-buds pointed, with 8-10 outer scales; lvs. 5-lobed, 12-18 cm. across, subcordate, lobes ovate, coarsely and irregularly crenate-serrate, bright green above, glaucescent beneath and villous-pubescent; fls. in erect ovoid panicles 8-10 cm. wide: fr. puberulous at maturity; keys 3-4.5 cm. long; wings spreading at a right or obtuse angle. Fl.v; fr.rx-x. G.C.III.10:189. (*A. insigne* var. *velutinum* Boiss.) Cauc., N. Persia. Cult. 1873. Zone VI. Remarkable for its large lvs., particularly var. *VanVolxémii*.—*A. v. VanVolxémii* (Mast.) Rehd., var. Lvs. to 30 cm. broad, cordate at base, with more acutely serrate lobes, glaucous beneath and pubescent in the axils and along the veins: wings of fr. spreading nearly horizontally. G.C.III.10:9,11. D.L.2:432. R.H.1914:225,227,f.68,70(h). (*A. insigne* f. *perckense* Schwer., *A. V. Mast.*)—*A. v. glabrëscens* (Boiss. & Buhse) Rehd., var. Lvs. glaucous and glabrous beneath: fr. pubescent only when young. Gt.30:120. R.H.1914:225,226,f.67,69(h). M.D.1932:t.13(h).—*A. v. Wolfii* (Schwer.) Rehd., f. A form of the preceding var. with the lvs. red beneath.

22. *A. Buergerianum* Miq. Small tree; brts. glabrous; lvs. 3-lobed, 3.5-8 cm. across, 3-nerved at base and rounded or broad-cuneate, lobes triangular, acute and pointing forward, entire or slightly and irregularly serrate, dark green above, pale green or glaucescent beneath and pubescent while young, soon glabrous; petiole about as long as blade: fls. small in a broad-pyramidal pubescent panicle: fr. glabrous; wings parallel and connivent, with the nutlet 2-2.5 cm. long. Fl.v; fr.rx. S.Z.2:t.143. J.C.32,1:t.17. S.H.2:f.126b-c,127a-d. (*A. trifidum* Hook. & Arn., not Thunb.) E. China, Japan. Cult. 1890. Zone VI.—*A. B. trinërve* (Dipp.) Rehd., var. Lvs. deeply 3-lobed with oblong-ovate irregularly and doubly serrate lobes, the lateral ones spreading and shorter. D.L.2:429 (1) (*A. t. Dipp.*) Cult. 1890. Probably a juvenile form.

23. *A. Ginnala* Maxim. Shrub or small tree to 7 m.; brts. glabrous, slender: lvs. 3-lobed, 4-8 cm. long, 3-6 cm. wide, rarely undivided and ovate-oblong, subcordate or truncate, the middle lobe usually ovate-oblong, much longer than the lateral ones, doubly serrate, dark green and lustrous above,

light green beneath, glabrous; petiole 1.5-4 cm. long; fls. yellowish white, fragrant, in long-peduncled panicle: fr. glabrous, wings nearly parallel, with the nutlet about 2.5 cm. long. Fl.v; fr.ix. M.K.t.67(c). G.W.12:18,t(c). N.K.1:t.2. Gt.1877:308. B.C.1:201. F.E.17:t.72(h). (*A. tataricum* var. *g.* Maxim., *A. tataricum* var. *aidzuense* Franch.) C. and N. China, Manch., Japan. Intr. about 1860. Zone II. Fr. usually red and conspicuous during the summer; the lvs. turn bright red in fall.—*A. G. Semenovii* (Reg. & Herd.) Pax, var. Shrubby: lvs. smaller, deeply 3- or nearly 5-lobed, with narrower lobes: fr. with more divergent wings. Bull. Soc. Nat. Mosc. 39:t. 12. (*A. S. Reg. & Herd.*) Turkest. Cult. 1880. Zone IV.

24. *A. tatáricum* L. TATARIAN M. Shrub or small tree to 10 m.; brts. glabrous: lvs. broad-ovate to ovate-oblong, 5-10 cm. long, rounded to cordate at base, acuminate, irregularly doubly serrate, bright green and glabrous above, pubescent on the veins beneath when young, finally nearly glabrous; petiole 1.5-5 cm. long; fls. greenish white, in upright glabrous long-peduncled panicles: wings of the glabrous fr. nearly parallel, with the nutlet 2-3 cm. long. Fl.v; fr.ix. S.O.1:t.9(c). R.I.5:t.162(c). S.W.3:43. G.O.t.47(c). S. E. Eu., W. Asia. Intr. 1759. Zone IV. With attractive red fr. in late summer and bright green lvs. turning yellow in fall.—*A. t. rubrum* Schwer., f. Lvs. coloring blood-red in fall.

*A. t.* × *monspessulanum* = *A. pusillum* Schwer. Shrub: lvs. oblong-ovate, 2-4 cm. long, with 2 lobes at base, obtusely doubly serrulate, glabrous. M.D. 1894:47 (l). (*A. Boscii* K. Koch, not Spach.) Cult. 1870.—*A. t.* × *pennsylvanicum* = *A. Boscii* Spach. Lvs. broad-obovate, 8-10 cm. long, 3-lobed near apex, with broad-triangular serrulate lobes, glabrescent. D.L.2:420. S.H.2:f.130c(l). Orig. before 1834.

25. *A. spicátum* Lam. MOUNTAIN M. Shrub or small tree, rarely to 10 m.; young brts. grayish pubescent: lvs. 3-lobed or sometimes slightly 5-lobed, 6-12 cm. long, cordate, lobes ovate, acuminate, coarsely and irregularly serrate, yellowish green above, pubescent beneath: fls. small, greenish yellow, in upright pubescent narrow spikes 8-14 cm. long; ovary pubescent: fr. nearly glabrous at maturity, wings divergent at an acute or nearly right angle, with the nutlet about 1.5 cm. long. Fl.vi; fr.ix. M.S.1:t.47(c). Em.567,t. S.S.2:t. 82,83. H.H.328,329(b). Am. For. 28:15,18. (*A. montanum* Ait.) Lab. to Sask., s. to n. Ga. and Iowa. Intr. 1750. Zone II. With light green lvs. turning orange and scarlet in fall; the fr. sometimes bright red in summer.

26. *A. caudátum* Wall. Large tree: lvs 5-7-lobed, 8-14 cm. across, cordate, lobes ovate, long-acuminate, incisely serrate, brownish pubescent on the veins beneath: fls. small, in upright cylindric spikes, 12-15 cm. long: fr. small, the wings spreading at a right angle. Wallich, Pl. As. Rar. 2:t.132(c). D.L.2:424. (*A. pictum himalayense* Hort.) Himal. Cult. 1910. Zone VI?—*A. c. ukurunduense* (Trautv. & Mey.) Rehd., var. Small tree; brts. and petioles pubescent while young: lvs. glabrous above, pubescent beneath, sometimes only along the veins, lobes coarsely serrate; spikes pubescent: fr. with nearly upright wings. S.T.1:t.82. G.C.II.15:172. N.K.1:t.1. M.K.t.66(c). (*A. u.* Trautv. & Mey., *A. spicatum* var. *u.* Maxim., *A. vitifolium* Hort.) Japan, Manch. Cult. 1880. Zone V.—*A. c. multiserrátum* (Maxim.) Rehd., var. Tree to 10 m.; similar to the preceding var., but lvs. glabrous or nearly so beneath. S.H.2:f. 131d(l). (*A. m.* Maxim., *A. erosum* Pax, *A. ukurunduense* var. *m.* Schneid.) C. China. Intr. 1907. Zone V or VI?

Related species: *A. erianthum* Schwer. Small tree: lvs. 5-lobed, lobes broad, unequally and simply serrate, nearly glabrous beneath except conspicuous axillary tufts of white hairs: fls. with densely villous disk. S.T.1:t.80. China. Intr. 1910? Zone VI?—*A. nipponicum* Hara. Tree: lvs. 3-5-lobed, 10-15 cm.

across, lobes broad-ovate, acute, doubly serrate, pubescent beneath when young, bright green: fls. in narrow puberulous panicles 10–20 cm. long; wings of fr. spreading at an obtuse angle or sometimes ascending. S.I.2:t.42(c). J.C.32, 1:t.1. M.D.1912:359. (*A. parviflorum* Franch. & Sav., not Ehrh., *A. crassipes* Pax, not Heer, *A. brevilibum* Rehd.) Japan. Cult. 1900. Zone (V).

27. *A. sinense* Pax. Tree to 10 m.; brts. glabrous: lvs. 5-lobed, 8–14 cm. across, cordate and sometimes truncate, lobes ovate, acuminate, sparingly appressed-serrate, dark lustrous green above, glaucescent beneath and glabrous, chartaceous; petiole 3–5 cm. long, usually reddish: fls. greenish white, in pyramidal panicles 5–10 cm. long: wings of fr. spreading at an obtuse angle, with the nutlet about 3 cm. long. Fl.v; fr.ix. S.T.1:t.78. J.H.29:f.88(1), f.99 and f.103(h), probably a juvenile form. C. China. Intr. 1901. Zone VI? Tree with handsome dark green lvs. reddish when unfolding.—*A. s. cóncolor* Pax, var. Lvs. green beneath; fr. with horizontally spreading wings.

Related species: *A. Wilsoni* Rehd. Lvs. 3-lobed, sometimes with small basal lobes, 7–10 cm. across, lobes oblong-ovate to oblong, caudate-acuminate, entire or sparingly serrate, light green beneath and glabrous: wings of fr. spreading at a right angle. S.T.1:t.79. S.H.2:f.126e, 133a-d. C. China. Intr. 1907. Zone VI?

28. *A. Oliverianum* Pax. Tree to 10 m.; brts. glabrous: lvs. 5-lobed, 6–10 cm. across, truncate or subcordate, lobes ovate, caudate-acuminate, finely serrate, the middle lobe with 5–8 pairs of lateral veins, finely reticulate, glabrous and lustrous beneath: fls. whitish, small, in long-stalked glabrous nearly corymbose panicles; keys 2.5–3 cm. long, with nearly horizontally spreading wings. Fls.v; fr.ix. S.T.1:t.77. S.H.2:f.131e, 133r-u. C. China. Intr. 1901. Zone VI? Handsome Maple resembling somewhat *A. palmatum*.

Related species: *A. flabellatum* Rehd. Lvs. 7-, rarely 5-lobed, 8–12 cm. across, deeply cordate, lobes sharply serrate, bearded in the axils of the lateral veins and villous along the primary veins: infl. paniculate. S.T.1:t.81. S.H.2:f.131f, 133v-y. (*A. robustum* Schneid., not Pax.) C. China. Intr. ?—*A. Campbellii* Hook. f. & Thoms. Lvs. 5–7-lobed, 12–15 cm. wide, rounded or subcordate at base, lobes ovate to ovate-oblong, caudate-acuminate, serrate at least near apex, middle lobe with 10–16 conspicuous pairs of lateral veins, slightly pubescent on veins beneath: infl. paniculate. S.H.2:f.131a, 133n-q. E. Himal., S. W. China. Cult. 1934. Zone VII?

Sect. V. *PALMATA* Pax. Fls. andro-polygamous, in few-fld. corymbs. hypogynous, usually red; stamens inside of the thick disk: fr. with small convex strongly veined nutlets: lvs. 5–11-lobed, with serrate lobes: winter-buds with 2 or 4 outer scales.

29. *A. circinatum* Pursh. VINE M. Shrub or small tree to 12 m.; brts. glabrous, slender: lvs. 7–9-lobed, 6–12 cm. across, cordate, lobes acute, irregularly and doubly serrate, bright green, puberulous beneath when young, becoming glabrous; petioles 2.5–3.5 cm. long, stout: fls. about 1.2 cm. across in glabrous, 6–20-fld. corymbs; sepals purple; petals smaller, white: wings of fr. spreading almost horizontally, with the nutlet 3.5 cm. long. Fl.iv–v; fr.ix. N.S.2:t.68(c). S.S.2:t.87. B.S.1:138. D.L.2:463. B. C. to Calif. Intr. 1826. Zone V. Usually a wide-spreading shrub with bright green lvs. turning red and orange in fall, attractive in spring with its purple and white fls. and later with the young red frs.

30. *A. palmatum* Thunb. JAPANESE M. Shrub or small tree to 8 m.; brts. glabrous, slender: lvs. deeply 5–9-lobed or parted, 5–10 cm. across, subcordate, lobes lance-ovate or lance-oblong, acuminate, doubly serrate, glabrous and bright green beneath; petioles glabrous, slender, 1.5–4.5 cm. long: fls. purple, 6–8 mm. across, in small glabrous corymbs; anthers smooth: wings of fr. spreading at an obtuse angle and incurved above, with the glabrous nutlet about 1 cm. long. Fl.vi; fr.ix. S.Z.2:t.145, 146(c). S.I.1:t.68(c). J.H.

29:f.82(h). Gn.86:501(h). (*A. polymorphum* S. & Z.) Korea, Japan. Intr. 1820. Zone V. Graceful shrub or small tree of which numerous forms varying in shape and coloration of the lvs. are cult.; the lvs. of the green forms turn bright red in autumn. The numerous forms may be divided into the following groups:

*A. p. palmatum* (Thunb.) Rehd., var. Lvs. deeply 5-lobed, sometimes 7- or 9-lobed, lobes oblong-lanceolate, coarsely and doubly serrate or incisely serrate. (*A. palmatum* Thunb., *A. polymorphum* var. *palmatum* K. Koch, *A. palmatum* var. *Thunbergii* Pax.)—Here belong the following forms: *A. p. atropurpureum* (Vanh.) Schwer., f. Lvs. deep purple. F.S.12:t.1273(c). J.H.29:f.83(h). F.E.14:t.42(h); 32:767(h). (*A. p. nigrum* Hort.)—*A. p. sanguineum* Lem. Lvs. lighter purplish red. I.H.14:t.526(c).—*A. p. aureum* Nichols. Lvs. yellow, becoming golden yellow.—*A. p. versicolor* (Vanh.) Schwer., f. Lvs. bright green with large white spots. F.S.14:t.1498(c).—*A. p. roseo-marginatum* (Vanh.) Nichols. Lvs. small, deeply cut, with narrow pink margin. F.S.15:t.1566(c). I.H.28:t.430(c).

*A. p. heptalobum* Rehd., var. Lvs. larger, mostly 7-lobed, with ovate-oblong equally and more finely doubly serrate lobes broadest about the middle. Gt.42:680. J.C.32:1:t.28. J.H.29:f.84(h). (*A. p.* var. *septemlobum* K. Koch, in part.)—Here belong: *A. p. rubrum* Schwer., f. Lvs. large, deep red when young, turning later nearly green.—*A. p. reticulatum* André. Lvs. greenish yellow with green margin and dark green veins. I.H.17:t.18(c).

*A. p. linearilobum* Miq., var. Lvs. divided nearly to the base, lobes linear, remotely serrate or nearly entire. Gt.42:681. S.Z.2:t.146,f.1(c).—*A. p. atrolineare* Schwer., f. Lvs. dark red. (*A. p.* var. *linearilobum atropurpureum* Nichols.)

*A. p. dissectum* (Thunb.) Maxim., var. Lvs. divided to the base into 5-9 pinnatifid lobes. S.Z.1:t.146,f.2-4. F.S.21:t.2156(c). G.C.31:46,suppl. J.H.29:f.85(h). (*A. dissectum* Thunb., *A. p.* var. *multifidum* K. Koch, *A. polymorphum palmatifidum* Vanh.)—*A. p. ornatum* (Carr.) André. A form of the preceding var. with deep red lvs. R.H.1867:391(c). R.B.32:197,t.f.1(c). I.H.17:t.46(c). F.E.15:t.49(h).

*A. p. sessilifolium* Maxim., var. Lvs. deeply cut, on very short petioles. G.C.II.16:137.

Related species: *A. Shirasawanum* Koidz. Lvs. usually 11-lobed, cordate: sepals purple; petals white; ovary pubescent: wings spreading at a very obtuse angle. J.C.32:1:t.22. Japan. Intr. 1876. Zone V.—*A. robustum* Pax. Small tree: lvs. 7-9-lobed, 7-10 cm. across, cordate, with ovate acuminate sharply serrate lobes: wings of fr. nearly horizontally spreading. C. China. Intr. 1907. Zone VI?

31. *A. Sieboldianum* Miq. Shrub or small tree: brts., petioles and peduncles pubescent when young: lvs. 7-9 lobed, 5-8 cm. across, cordate to nearly truncate, with ovate-oblong acuminate sharply serrate lobes, pubescent on the veins beneath: fls. small, yellowish, on long nodding pubescent peduncles; ovary pubescent; pedicels and sepals outside pubescent: fr. glabrous or slightly pubescent, wings spreading at an obtuse angle, with the nutlet 1.5-2 cm. long. Fl.v; fr.ix. S.I.2:t.45(c). G.C.II.16:591. D.L.2:459. J.C.32:1:t.21. (*A. japonicum* var. *S.* Franch. & Sav.) Japan. Cult. 1880. Zone V.—*A. S. microphyllum* Maxim., var. Lvs. smaller, 5-6 cm. broad.

32. *A. japonicum* Thunb. Shrub or small tree; young brts. glabrous: lvs. 7-11-lobed, 8-14 cm. across, cordate, with ovate acuminate doubly serrate lobes, light green, with silky hairs when young, soon glabrous or nearly glabrous except on the veins beneath; petiole 2-4 cm. long, pubescent at

least when young: fls. purple, 1-1.5 cm. across, in long-stalked nodding slightly silky or glabrous corymbs; sepals purple; petals purplish, shorter: fr. pubescent when young, finally glabrous, wings spreading at an obtuse angle or nearly horizontal, with the nutlet 2-2.5 cm. long. Fl.v; fr.ix. S.Z.2:t.44(c). S.I.1:t.66(c). M.K.t.68(c). B.C.1:200. J.H.29:f.78(h). Japan. Intr. 1864. Zone (V). Handsome Maple with bright green lvs. turning crimson in fall. —*A. j. aureum* Schwer., f. Lvs. yellow. —*A. j. microphyllum* Veitch. Lvs. smaller. J.H.29:f.79(h). —*A. j. aconitifolium* Meeh. Lvs. deeply divided, sometimes nearly to the base, into 9-11 pinnatisect lobes. A.G.1888:140. J.C.32,1:t.25 f.7. J.H.29:f.77(h). (*A. j. Parsonii* Veitch, *A. j. laciniatum* Vanh., *A. j. filicifolium* Hesse.)

Closely related species: *A. pseudo-sieboldianum* Komar. Lvs. 9-11-lobed, cordate, with lance-oblong doubly serrate lobes: infl. pubescent at first, soon glabrous; fls. purple; pedicels glabrous; sepals ciliate: fr. glabrous. N.K.1:t.4. J.C.26,1:t.10. (*A. circumlobatum* var. *p.* Pax, *A. Sieboldianum* var. *mandshuricum* Maxim., *A. nudicarpum* Nakai, *A. Okamotoi* Nakai, in part.) Manch. to Korea. Cult. 1903. Zone V.

Sect. VI. GLABRA Pax. Fls. andro-polygamous or andro-dioecious, perigynous; stamens shorter than petals: fr. with convex nutlets: lvs. 3-5-lobed or 3-foliolate: winter-buds with 2 or 4 outer scales.

33. *A. glábrum* Torr. Thurb or small tree to 8 m., quite glabrous: lvs. 3-5-lobed or 3-parted, 7-12 cm. across, subcordate to broad-cuneate, with doubly serrate acute lobes usually rhombic in outline, dark lustrous green above, paler or glaucescent beneath, thin; petioles slender, red or reddish: fls. greenish yellow, 6 mm. across, in 6-15-fld. racemose corymbs: wings of fr. nearly upright or slightly spreading, samaras about 2 cm. long, often rose-colored during the summer. Fl.v; fr.ix. S.S.2:t.89. Mont. and S. Dak. to Calif. and N. Mex. Intr. 1882. Zone V. Lvs. turning bright yellow in fall. —*A. g. rhodocárpum* Schwer. Fr. bright red until fully ripe. Intr. about 1910. —*A. g. tripartitum* (Nutt.) Pax, var. Lvs. smaller, usually 3-foliolate. S.H.2:f.150c(1). (*A. g. f. trisecta* Sarg.) Intr. 1882. —*A. g. Douglassii* (Hook.) Dipp., var. Lvs. 3-lobed, subcordate, lobes short-acuminate, often lobulate, the terminal one broad-ovate from a broad base, with acuminate teeth: fr. to 2.5 cm. long, with broader wings. London Jour. Bot. 6:t.6. S.M.683. (*A. D.* Hook.) Alaska to Ore. and Wyo. Intr. 1902. Zone V.

Sect. VII. INTEGRIFOLIA Pax. Fls. andro-polygamous, hypogynous, in panicles: fr. with convex nutlets: lvs. not lobed, or very rarely and chiefly on young plants with 2 lobes near the base: winter-buds with many or only 2 or 4 outer scales.

34. *A. oblóngum* Wall. Deciduous or half-evergreen tree to 8 or sometimes to 15 m.; brts. glabrous; buds with many scales: lvs. oblong or oblong-ovate, 5-12 cm. long, rounded or broad-cuneate at base and 3-nerved, obtusely acuminate, entire or on young trees 3-lobed and toothed, reticulate and glaucous beneath, glabrous, subcoriaceous; petiole 1.5-4 cm. long: fls. small, greenish, in short pubescent panicles: fr. glabrous; wings spreading at a right angle or nearly horizontal, with the nutlet about 2.5 cm. long. Fl.v-v; fr.ix. Jacquemont, Voy. Inde, 4:t.34. J.C.32,1:t.29. C.C.231. J.H. 29:f.95 (juvenile form). Himal., C. and W. China. Intr. 1901 from China. Zone VII. —*A. o. cóncolor* Pax, var. Lvs. green beneath. China.

Related species but lvs. not 3-nerved at base: *A. Fargèsi* Rehd. Tree to 10 m.: lvs. lance-oblong, 5-8 cm. long, cuneate, light green beneath, not reticulate, glabrous; young lvs. and infl. red: fr. red, wings spreading at a right or obtuse angle. J.H.29:f.91. (*A. laevigatum* var. *F.* Veitch.) China. Intr. 1902. Zone VII? —*A. laevigatum* Wall. Tree: lvs. oblong, 6-15 cm. long, cuneate, nearly entire, strongly reticulate, green beneath; wings of fr. spreading at an obtuse

angle or nearly horizontal, with the oblong nutlet 3-4 cm. long. Wallich, Pl. As. Bar. 2:t.104(c). Himal., China. Intr. 1907. Zone VII.

35. *A. distylum* Sieb. & Zucc. Deciduous tree to 15 m.; brts. puberulous when young; winter-buds with 2 outer scales: lvs. ovate, 10-16 cm. long, deeply cordate, acuminate, serrulate, green and lustrous beneath, glabrous: petiole 2-6 cm. long, puberulous when young: fls. yellowish, in panicles 5-6 cm. long on stalks of nearly equal length; styles divided to base: fr. in upright panicles; wings spreading at an acute angle, with the nutlet 2.5-3 cm. long. Fl.vi; fr.ix. S.I.2:t.41(c). J.C.32,1:t.2. G.C.II.15:499. J.H.29:f.76(h). Japan. Intr. 1879 to 1881. Zone VII?

Related species: *A. Schwerinii* Pax. Lvs. ovate, cordate, slightly lobulate and denticulate, 10-16 cm. long, glaucescent beneath. S.H.2:f.141a-b. Orig. unknown. Zone VI?

Sect. VIII. *INDIVISA* Pax. Fls. andro-monoecious or andro-dioecious, apetalous, 4-merous, hypogynous, racemose; stamens 5-8, inserted outside the disk; styles 2-parted: fr. with compressed elliptic-oblong nutlet: lvs. undivided, oblong, doubly serrate, penninerved: winter-buds with many imbricate scales. (*Carpinifolia* Koidz.)

36. *A. carpinifolium* Sieb. & Zucc. HORNBEAM M. Tree to 10 m.; brts. glabrous: lvs. ovate-oblong, 8-12 cm. long, subcordate to truncate, long-acuminate, doubly serrate, pubescent on the veins beneath when young, finally glabrous or nearly so; petiole 1-1.5 cm. long: fls. greenish, about 1 cm. across, on slender pedicels in short glabrous racemes: fr. glabrous, on pedicels 2-3 cm. long, wings spreading at a right or obtuse angle, incurved at apex, with the nutlet about 3 cm. long. Fl.v; fr.ix. S.Z.2:142(c). J.C.32,1:t.3. G.C.II.15:564. J.H.29:f.75(h). Japan. Intr. 1881. Zone V. Distinct Maple with bright green lvs. turning bright brownish yellow in fall.

Sect. IX. *MACRANTHA* Pax. Fls. monoecious or dioecious, hypogynous, racemose; stamens inserted outside of the disk; style deeply 2-lobed: fr. with flattened not strongly veined nutlets: lvs. undivided or 3-5-lobed, serrate or doubly serrate; winter-buds with 2 outer valvate scales, stalked; bark of brts. remaining smooth for several years and striped white.

37. *A. Davidi* Franch. Tree to 15 m.; brts. glabrous, striate: lvs. ovate to ovate-oblong, 8-16 cm. long, acuminate, subcordate or rounded at base and not prominently 3- or 5-nerved, unequally crenate-serrulate, green beneath and rufous-villous on the veins while young, finally glabrous or nearly so; petiole 1.5-5 cm. long: fls. yellowish in slender glabrous pendulous racemes 6-9 cm. long, the staminate ones shorter: fr. on pedicels 2-3 mm. long; wings spreading nearly horizontally, with the nutlet 2.5-3 cm. long. Fl.v; fr.ix. S.T.1:t.83. I.S.1:t.35. G.C.72:119(b). J.H.29:f.86(h),90. C. China. Intr. 1879 and 1902. Zone V. Distinct Maple with the lvs. turning yellow and purple in fall; the lustrous brs. striped white are conspicuous in winter.

Related species: *A. Hoökeri* Miq. Lvs. oblong-ovate, 10-14 cm. long, cordate and 5-nerved at base, abruptly caudate-acuminate; sharply serrate, glabrous; petiole 4-7 cm. long: fl. on slender pedicels 4-7 mm. long. D.L.2:408 (juvenile state). E. Himal. Cult. 1892. Zone VII?—*A. sikkimensis* Miq. Lvs. ovate to ovate-oblong, 10-14 cm. long, abruptly acuminate, subcordate and 3-nerved at base, entire or serrulate, glabrous; petiole 2-5 cm. long: racemes in fr. to 15 cm. long; pedicels 1-2 mm. long. E. Himal. and S. W. China. Cult. 1880. Zone VII.

38. *A. crataegifolium* S. & Z. Small tree to 10 m.; brts. purplish, glabrous: lvs. oblong-ovate, 5-8 cm. long, acuminate, subcordate to truncate, usually with 2 or 4 short lobes near base, unequally serrate, bluish green and glabrous; petiole 1.5-2 cm. long: fls. yellowish white, in erect 5-8-fld. glabrous racemes 3-5 cm. long: fr. glabrous on pedicels about 6 mm. long; wings spreading nearly horizontally, with the nutlet 2-2.5 cm. long. Fl.v; fr.ix.

S.Z.2:147(c). S.I.1:t.67(c). J.C.32,1:t.3. D.L.2:417. Japan. Intr. 1879. Zone (V).—*A. c. Veitchii* Nichols., var. Lvs. variegated with white or pink.

Related species: *A. Veitchii* Schwer. Brts. greenish: lvs. ovate-oblong, 7–10 cm. long, slightly lobulate greenish beneath; petiole 2–5 cm. long. Orig. unknown. S.H.2:f.144g,145a-b. (?*A. crataegifolium* × *pennsylvanicum* Pax.) Cult. 1890.—*A. laxiflorum* Pax. Tree to 15 m.: lvs. oblong-ovate, 6–10 cm. long, long-acuminate, cordate, with 2 or 4 short lobes near base, sharply serrate, green and glabrous beneath; racemes slender, pendulous; wings of fr. usually spreading at a right angle. E.P.IV.163:35. W. China. Intr. 1908. Zone VI?

39. *A. pennsylvanicum* L. Moosewood. Small tree, rarely to 12 m.; brts. green, smooth, becoming conspicuously striped with white lines: lvs. roundish-obovate, 3-lobed at apex, 12–18 cm. long, subcordate, the lobes pointing forward, acuminate, serrulate, ferrugineous-pubescent beneath when young; petiole 2–7 cm. long, rufous-pubescent when young: fls. yellow, about 6 mm. across, in pendulous glabrous racemes 10–15 cm. long: fr. on pedicels 1–1.5 cm. long; wings spreading at a wide angle, with the nutlet about 2 cm. long. Fl.v-vr; fr.ix. M.S.2:t.45(c). Em.566,t. S.S.2:t.84,85. H.H.330,331(b). Am. For. 20:505;28:15,17. (*A. striatum* Lam.—*STRIPED M.*) Que. to Wis., s. to n. Ga. Intr. 1755. Zone III. The large bright green lvs. turn clear yellow in fall; the striped brs. conspicuous in winter.—*A. p. erythroides* Spæth. Brs. bright red in winter. Cult. 1904.

*A. p.* × *tataricum*; see under No. 24.

40. *A. rufinerve* Sieb. & Zucc. Tree to 12 m.; brts. glaucous when young: lvs. 3-lobed, 6–12 cm. long, rounded at base, the lateral lobes somewhat spreading, sometimes with 2 very small basal lobes, unequally doubly serrate, dark green above, veins beneath rufous-pubescent when young like the 2–6 cm. long petiole: fls. in upright ferrugineous-pubescent racemes: fr. pubescent at first, finally glabrous, on pedicels about 5 mm. long; wings spreading at an obtuse angle, with the nutlet about 2 cm. long. Fl.v; fr.ix. S.Z.2:t. 148(c). S.I.1:t.67(c). J.C.32,1:t.9. D.L.2:415. Gs.2:36(b). Japan. Intr. 1879. Zone V. With large dark green lvs. turning crimson in fall.—*A. r. albobimbatum* Hook., var. Lvs. with a broad margin of white dots. B.M.5793(c). R.B.4:49,t.(c). Cult. 1869.

Related species: *A. Grösseri* Pax. Lvs. 3-lobed with triangular-ovate acuminate middle lobe and short acute spreading lateral lobes, at first toward the base beneath and on petiole rufous-pubescent, soon glabrous: fr. in long pendulous racemes; pedicels 3–6 mm. long; keys about 2 cm. long with horizontal, slightly curved wings. C. China.—*A. G. Hirsii* (Rehd.) Rehd., var. Lvs. above the middle with long-acuminate lateral lobes about half as long as middle lobe. I.S.3:t.147. J.A.14:221. (*A. H.* Rehd.) C. China. Intr. 1923. Zone V?

41. *A. capillipes* Maxim. Tree to 12 m.; brts. smooth, striped: lvs. 3-lobed, 6–12 cm. long, subcordate or rounded at base, lobes acuminate, the lateral ones much shorter, spreading outward, doubly serrate, dark green above, bright green and glabrous beneath, usually with reddish veins; petiole 3–5 cm. long, usually red: fls. greenish white, about 8 mm. across, on slender pedicels 8–15 mm. long, in glabrous drooping racemes 7–10 cm. long: wings spreading at a wide angle or nearly horizontal, with the nutlet 1.5–2 cm. long. Fl.v; fr.ix. S.T.1:t.16. J.C.32,1:t.10. S.H.2:f.163f-g,164a-b. Gn.85:81 (b). Japan. Intr. 1892. Zone V. Lvs. bright green, red when unfolding, turning deep crimson in fall.

42. *A. tegmentosum* Maxim. Tree: brs. striped: lvs. 3-lobed, sometimes with 2 small basal lobes, 7–16 cm. long and nearly as wide, cordate or subcordate, lobes acuminate; the lateral ones much smaller and somewhat spreading, doubly serrulate, glabrous beneath, light green when unfolding;

petiole 3-8 cm. long: fls. in slender pendulous racemes about 8 cm. long: fr. on short pedicels 3-8 mm. long; wings spreading at a wide angle or nearly horizontal, with the nutlets about 3 cm. long. Fl.v; fr.ix. N.K.1:t.13. G.C. II.15:75(l). S.H.2:f.163d-e,164f. Manch., Korea. Intr. 1892. Zone IV.

43. *A. Tschonóskii* Maxim. Small tree to 6 m.: lvs. orbicular-ovate, 5-, rarely 7-lobed, 5-10 cm. across, cordate, the lobes ovate, sharply and doubly serrate with acuminate teeth and lobulate, rufous-pubescent along the veins beneath when young; petiole 2-4 cm. long: raceme slender, 6-10-fld., glabrous: fr. on slender pedicels, 1-1.5 cm. long, wings spreading at a right or obtuse angle, incurved, with the nutlet 2.5-3 cm. long. Fl.v; fr.ix. S.I.2:t.43(c). S.T.1:t.17. N.K.1:t.14. Japan. Intr. 1892. Zone V. Graceful shrubby tree; the lvs. turning bright yellow in fall.—*A. T. rúripes* Komar., var. Lvs. with longer caudate-acuminate lobes; petioles and young brts. red: wings of fr. more spreading. N.K.1:t.14. N. Korea, Manch. Intr. 1917.

Closely related species: *A. Maximowiczii* Pax. Lvs. 3-5-lobed, 5-8 cm. long, lobes acuminate, the middle lobe elongated and caudate-acuminate, doubly serrate, glaucescent and glabrous beneath: fr. on slender pedicels 5-10 mm. long; wings spreading at a wide angle. S.T.1:t.84. M.I.1:t.10. (*A. urophyllum* Maxim.) C. China. Intr. ?

44. *A. micránthum* Sieb. & Zucc. Shrub or small tree: lvs. 5- or sometimes 7-lobed, 5-8 cm. wide, cordate, the lobes ovate, long-acuminate, incisedly and doubly serrate, glabrous beneath; petiole 2-4 cm. long: fls. small, greenish white, in slender racemes 3-7 cm. long; fr. glabrous, on pedicels 2-6 mm. long; wings spreading at a wide angle or nearly horizontal, with the nutlet 1.5-2 cm. long. Fl.v; fr.ix. S.Z.2:t.141(c). S.I.2:t.44(c). J.C.32,1:t.12. Japan. Intr. 1879. Zone V. Graceful shrubby tree.

Sect. X. *ARGUTA* Rehd. Fls. dioecious, 4-merous, the pistillate ones in racemes terminal on 2-leaved brts., the staminate from leafless lateral buds; stamens 4; disk 4-lobed, intrastaminal: fr. with convex strongly veined nutlets: lvs. serrate or doubly serrate, 3-5-lobed or undivided; winter-buds with 2 outer scales.

45. *A. argútum* Maxim. Small tree to 8 m.; brts. pubescent: lvs. broad-ovate, 5- or rarely 7-lobed, 5-8 cm. across, lobes ovate, long-acuminate and sharply serrate, pale green beneath and grayish pubescent chiefly on the veins; petiole 2-6 cm. long, pubescent when young: fls. greenish yellow, the pistillate ones in slender many-fld. racemes 4-5 cm. long: fr. on pedicels 1-2 cm. long; wings horizontal, with the nutlets 1.5-2 cm. long. Fl.iv-v; fr.ix. S.I.1:t.69(c). S.T.1:t.66. J.C.32,1:t.14. D.L.2:413(l). Japan. Intr. about 1879. Zone V. Graceful small tree.

Related species: *A. barbinerve* Maxim. Lvs. 5-lobed, coarsely doubly serrate, pubescent beneath when young, at maturity only on the veins; petiole 4-9 cm. long: pistillate racemes usually 7-fld.: fr. on pedicels about 2 cm. long; wings spreading at an obtuse angle, with the nutlet about 3.5 cm. long. S.T.1:t.86. N.K.1:t.15. Manch., Korea. Intr. about 1890. Zone IV.—*A. acuminátum* Wall. Lvs. 3-lobed, 6-11 cm. long, with long-acuminate doubly serrate lobes, glabrous and bright green beneath: wings of fr. spreading at a right angle. G.C.II.15:364(as *A. laevigatum*). (*A. caudatum* Nichols., not Wall.) Himal. Intr. 1845. Zone VII?

46. *A. tetrámerum* Pax. Slender tree to 10 m.; brs. glabrous: lvs. ovate to oblong-ovate, 5-8 cm. long, acuminate, truncate or rounded and usually 3-nerved at base, unequally incisedly serrate or sometimes lobulate, light green and slightly pubescent beneath or nearly glabrous; petiole 1.5-5 cm. long: fls. yellow; stamens sometimes 6; pistillate fls. in elongated racemes: fr. glabrous, on stalks 1-2.5 cm. long; wings spreading at an acute angle, with the nutlet 2.5-3.5 cm. long. Fl.iv; fr.ix. S.T.1:t.85. S.H.2:f.169c-c<sup>1</sup>,170h-k.

C. and W. China. Intr. 1901. Zone V.—*A. t. lobulatum* Rehd., var. Lvs. distinctly lobulate, nearly glabrous. J.H.29:f.93(h).97. Intr. 1901.—*A. t. tilifolium* Rehd., var. Lvs. ovate, cordate and 5-nerved at base, doubly serrate, not lobulate, pubescent beneath. W. China. Intr. 1910.—*A. t. betulifolium* (Maxim.) Rehd., var. Lvs. ovate to ovate-oblong, not or very slightly lobed, glabrous or glabrescent beneath, rounded or sometimes broad-cuneate at base. N. W. China. Intr. 1927.

Sect. XI. *LITHOCARPA* Pax. Fls. dioecious, 5-merous, perigynous, in corymbs or racemes from lateral leafless buds; stamens 8; styles divided to the base: fr. with convex nutlets strongly keeled and veined; embryo with twice conduplicate and incumbent cotyledons: lvs. 3-5-lobed, coarsely dentate: winter-buds with many imbricate scales.

47. *A. diabolicum* K. Koch. Tree to 10 m.; young brts. pilose, becoming glabrous: lvs. 5-lobed, 10-16 cm. across, with broad-ovate short-acuminate coarsely and remotely dentate lobes, appressed-pilose on both sides when young, at maturity only sparingly so beneath, more densely on the veins: petiole 4-10 cm. long, pubescent toward the apex: fls. yellow, the staminate fasciated, on pendulous pilose pedicels; sepals more or less connate; petals wanting; stamens exserted, inserted in the middle of the disk; pistillate fls. in few-fl. racemes; sepals and petals distinct, of equal length: fr. on pedicels 1-2, sometimes to 5 cm. long; wings upright or spreading, with the thick bristly nutlets 3-4 cm. long. Fl.iv-v; fr.ix-x. S.T.1:t.67. J.C.32,1:t.33. G.C. II.15:532. Japan. Cult. 1880. Zone V. Round-topped tree with rather large lvs.; the variety with conspicuous red fls. and red young fr.—*A. d. purascens* (Franch. & Sav.) Rehd., var. Fls. purplish: lvs. reddish when unfolding: fr. purple when young. S.I.1:t.65(c). (*A. p.* Franch. & Sav.) Japan. Cult. 1878.

48. *A. Francheti* Pax. Tree to 6 m.; brts. glabrous: lvs. 3-lobed or sometimes with 2 small basal lobes, 8-12 cm. long and nearly as wide, subcordate, the lobes pointing forward, triangular-ovate, short-acuminate, irregularly and remotely toothed, bright green, at maturity pubescent beneath or nearly glabrous; petiole 5-10 cm. long, pubescent above: fls. yellowish green, in pubescent racemes; sepals and petals of nearly equal length; disk intrastaminal: fr. on rather stout pedicels, 1-2 cm. long; wings spreading at a right angle or nearly upright, with the thick sparingly appressed-pilose nutlet about 5 cm. long. Fl.iv-v; fr.ix. S.T.1:t.87. C. China. Intr. 1901. Zone VI? Similar to the preceding species.

Related species: *A. villosum* Wall. Lvs. 3-5-lobed, 14-20 cm. across, coarsely serrate, tomentose beneath: fr. in long pendulous racemes, often branched at base; wings nearly upright. Wallich, Pl. As. Rar. 2:t.105(c). P.F.2:148.f. 211(i). D.L.2:412(i). (*A. sterculiaceum* Wall.) Himal. Intr. before 1850. Zone VII?—*A. pilosum* Maxim. Lvs. 3-lobed, 4-10 cm. across, with coarsely toothed or nearly entire acuminate lobes, the middle one much longer and its margins below the middle nearly parallel, the lateral spreading, glaucescent beneath and pilose on the veins; petiole slender, red: infl. few-fl., fascicle-like. Bull. Acad. Sci. St. Pétersb. 27:t.27,f.1-5. S.H.2:f.169e. N. W. China. Intr. 1911. Zone V.

Sect. XII. *RUBRA* Pax. Fls. andro-dioecious or andro-monoecious, in fascicles from lateral leafless buds long before the lvs.: staminate fls. hypogynous, with 5-8 exserted stamens; petals present or wanting; disk lobed or wanting: fr. with convex reticulate nutlet: lvs. 3-5-lobed, serrate or coarsely dentate: winter-buds with few imbricate scales.

49. *A. rubrum* L. RED M. (SCARLET or SWAMP M.). Tree to 40 m.; brts. glabrous: lvs. 3-5-lobed, 6-10 cm. long, subcordate, with triangular-ovate, short-acuminate unequally crenate-serrate lobes, dark green and lustrous above, glaucous beneath and usually pubescent on the veins; petiole 5-10 cm.

long, often red: fls. slender-stalked, red, rarely yellowish, with petals: fr. glabrous, on pendulous stalks, 6-10 cm. long; wings spreading at a narrow angle, with the nutlet 1.5-2 cm. long, usually bright red when young. Fl. III-IV; fr. V-VI. M.S.2:t.41(c). Em.551,t(c). S.S.2:94. H.H.334,335(b). G.C.II.1:173. E.H.3:t.177,191(h). F.L.6:137,t(h). Nfd. to Fla., w. to Minn., Iowa, Okl. and Tex. Cult. 1656. Zone III. Conspicuous in early spring with its red fls. and later with its red fr.: lvs. turning bright scarlet and yellow in fall.—*A. r. columnare* Rehd., var. Of upright columnar habit. Gn.M.31:382. G.F.7:65(h, as Sugar M.).—*A. r. globosum* Rehd., var. Of dwarf compact habit; fls. bright scarlet.—*A. r. pallidiflorum* Pax, var. Fls. yellowish.—*A. r. trilobum* K. Koch, var. Lvs. smaller, 3-lobed near apex, rounded or sometimes broad-cuneate at base, usually pubescent beneath. S.S.13:t.626. (*A. r.* var. *tridens* Wood, *A. microphyllum* Pax, *A. semiorbiculatum* Pax.)—*A. r. tomentosum* (Desf.) K. Koch, var. Lvs. 5-lobed, pubescent or nearly tomentose beneath: fls. bright red. (*A. t.* Desf., *A. rubrum* var. *fulgens* Hort.)—*A. r. Drummóndi* (Hook. & Arn.) Sarg., var. Lvs. 5-lobed, 8-14 cm. across, white-tomentose beneath when young, remaining pubescent: fr. bright scarlet; wings with the nutlet 3-3.5 cm. long. N.S.2:t.70(c). S.S.2:t.95. (*A. D.* Hook. & Arn.) Ind. to Tenn., Mo. and La. Intr. 1886. Zone VII?

Closely related species: *A. pycnanthum* K. Koch. Lvs. 3-lobed, 5-9 cm. long, rounded to subcordate, lobes triangular, sometimes very short, obtusely acuminate, doubly obtuse-serrate, glaucous and glabrous beneath: fr. with upright wings. J.C.32,1:t.16. (*A. rubrum* Mak., not L.) Japan. Intr. 1915. Zone V.

50. *A. saccharinum* L. SILVER-M. Tree to 40 m.: lvs. deeply 5-lobed to 5-cleft, 8-14 cm. across, with deeply and doubly serrate acuminate lobes, the middle one often 3-lobed, bright green above, silvery white beneath and pubescent when young; petiole 8-12 cm. long: fls. short-stalked, greenish, apetalous: fr. pubescent when young, on pendulous pedicels 3-5 cm. long; wings divergent and falcate, with the elliptic-oblong nutlet 3.5-6 cm. long. Fl. II-III; fr. V-VI. M.S.1:t.40(c). Em.556,t(c). S.S.2:t.93. G.C.II.1:37. F.S. 29:983(h); 32:443(h). F.L.5:168,t(h). G.W.18:294(h). Gs.3:3(h). (*A. dasy-carpum* Ehrh., *A. eriocarpum* Michx.) Que. to Fla., w. to Minn., Neb., Kans., Okla. Intr. 1725. Zone III. Wide-spreading tree with slender often pendulous brs.; the lvs. turning clear yellow in fall.—*A. s. laciniatum* (Carr.) Pax, var. Lvs. deeply cleft with dissected narrow lobes: brs. pendulous. S.H.2:f. 148e. H.G.35:71. M.G.18:628(h). Here belong "Skinner M." and Wier M." (*A. s. f. Wieri* Pax.)—*A. s. tripartitum* (Schwer.) Pax, f. Lvs. divided nearly to the base into 3 broad lobulate lobes. S.H.2:f.148b(l).—*A. s. lutescens* (Spaeth) Pax, f. Lvs. yellow, bronze-colored when unfolding. Gart.-Zeit. 2:513,t.f.5(c).—*A. s. pendulum* (Nichols.) Pax, f. Brs. pendulous.—*A. s. pyramidale* (Spaeth) Pax, f. Brs. upright, forming a narrow-pyramidal head. F.E.67,no.26:19(h).

Sect. XIII. TRIFOLIATA PAX. Fls. andro-dioecious, hypogynous, in terminal few-fl. corymbs on leafy brts.; stamens 8; disk thick, extrastaminal: lvs. 3-foliolate; winter-buds with many imbricate scales.

51. *A. nikoense* Maxim. NIKKO M. Tree to 15 m.; brts. with pilose pubescence persistent until the 2d year: lfts. ovate to elliptic-oblong, 5-12 cm. long, the middle one short-stalked, the lateral ones subsessile, acute, obtusely dentate or nearly entire, villous-pubescent beneath; petiole densely pilose, 2-4 cm. long: fls. yellow, in usually 3-fl. short-stalked nodding, densely pubescent cymes; stamens exserted: fr. with upright wings curved inward or spreading at a right angle, with the thick densely pubescent nutlet 3-5 cm. long. Fl.v; fr.ix. S.I.1:t.68(c). G.F.6:155. G.C.72:321. Gt.41:149. R.H.

1912:126,127. Gs.3:237,t(c). J.H.29:f.81(h). Japan, C. China. Intr. 1881. Zone V. Lvs. turning brilliant red or purple in fall.

Related species: *A. triflorum* Komar. Tree to 8 m.; brts. soon glabrous: lfts. oblong-ovate to oblong-lanceolate, 4-8 cm. long, entire or with 1-3 coarse teeth, glaucous beneath and glabrous except pilose along midrib; petiole 3-6 cm. long, sparingly pilose; infl. 3-fld., pubescent: wings nearly straight, spreading at an obtuse angle, with the densely pubescent thick nutlet 3.5-4 cm. long. N.K. 1:t.11. Manch., Korea. Intr. 1923.

52. *A. griseum* (Franch.) Pax. PAPERBARK M. Tree to 8 m., with cinnamon-brown bark separating in thin papery flakes; young brts. pubescent, becoming glabrous: lfts. elliptic to ovate-oblong, 3-6 cm. long, acute, the middle one short-stalked, coarsely toothed with large bluntish teeth, the lateral ones subsessile, oblique at base, lobulate on the outer margin: fls. in few-fld. short-peduncled pubescent cymes: fr. pendulous, the wings spreading at an acute or nearly right angle, with the thick tomentose nutlet about 3 cm. long. Fl.v; fr.ix. R.H.1912:127. G.C.72:251. Gn.86:543(h);88:816;89:20(h). (*A. nikoense* var. *g.* Franch.) W. China. Intr. 1901. Zone V. Remarkable for its flaky bark resembling that of the River Birch.

53. *A. mandshuricum* Maxim. MANCHURIAN M. Shrub or small tree to 10 m.; brts. glabrous: lfts. oblong to oblong-lanceolate, 5-10 cm. long, acuminate, the middle one slender-stalked, the lateral ones short-stalked, obtusely serrate, dark green above, glaucous beneath and pubescent on the midrib, otherwise glabrous; petiole glabrous, 6-10 cm. long, red: fls. greenish yellow, in 3-5-fld. cymes: fr. glabrous; wings spreading at a right or obtuse angle, with the thick reticulate nutlets 3-3.5 cm. long. Fl.v; fr.ix. N.K.1:t.10. S.H.2:f.139d,140r. Manch., Korea. Cult. 1904. Zone IV. The red petioles forming a pleasing contrast to the dark green lvs.

Sect. XIV. *NEGUNDO* (Boehmer) K. Koch. Fls. dioecious, in lateral racemes from leafless or occasionally leafy buds, or the staminate ones clustered, 4- or 5-merous, with petals or without; stamens 4-6; disk wanting: lvs. 3-7-foliolate: winter-buds with 2 outer scales. (*Negundo* Ludwig ex Boehmer.)

54. *A. Henryi* Pax. Small tree to 10 m.; brts. slightly pubescent when young, soon glabrous: lfts. 3, stalked, elliptic, 6-10 cm. long, acuminate, cuneate, remotely dentate, pubescent, rarely nearly glabrous beneath; petiole 5-10 cm. long: fls. nearly sessile, in slender pendulous racemes, sometimes with small lvs. at base: fr. glabrous, in pendulous racemes with the peduncle 10-20 cm. long; wings upright or slightly spreading, with the thick nutlet 2-2.5 cm. long. Fl.iv; fr.ix. H.I.19:1896. I.S.1:t.34. G.C.77:193. J.H.29:f.93(h),96(as *A. sutchuenense*). C. China. Intr. 1903. Zone V.

55. *A. cissifolium* (Sieb. & Zucc.) K. Koch. Small tree to 10 m.; young brts. pubescent: lfts. 3, stalked, ovate or obovate to elliptic, 5-8 cm. long, acuminate, coarsely and unequally serrate, sparingly ciliate, light green and glabrous or nearly so beneath; petiole 5-8 cm. long, glabrous: fls. small, on pedicels 3-6 mm. long, in slender pubescent racemes 5-10 cm. long: fr. glabrous, in pendulous racemes; wings spreading at an acute angle, with the thick nutlet 2.5 cm. long. Fl.iv; fr.ix. S.I.2:t.41(c). M.K.t.70(c). J.C.321:t.15. S.H.2:f.139f,140b-d. (*Negundo* c. Sieb. & Zucc.) Japan. Intr. 1875. Zone (V). Graceful round-headed tree; the lvs. turning red and yellow in fall.

56. *A. Negundo* L. BOX-ELDER. Tree to 20 m.; brts. glabrous: lvs. pinnate; lfts. 3-5, rarely 7 or 9, ovate to lance-oblong, 5-10 cm. long, acuminate, coarsely serrate or the terminal one 3-lobed, bright green, lighter green below and slightly pubescent or nearly glabrous; petiole 5-8 cm. long: fls. yellowish green, before the lvs.; the staminate ones corymbose, on slender

pendulous pubescent stalks 2-3.5 cm. long; the pistillate ones slender-pediceled, in pendulous racemes: fr. glabrous; wings diverging at an acute angle and usually incurved, with the thick nutlet 2.5-3.5 cm. long. FL.III-IV; fr.IX. S.O.1:t.12(c). M.S.1:t.46(c). F.D.16:1528a(c). S.S.2:t.96. G.G.2:t.175. (*Negundo fraxinifolium* Nutt., *N. aceroides* Moench, *Rulac N. Hitchc.*) The typical form from N. Eng. and Ont. to Minn., Neb., Kans., Tex. and Fla. Cult. 1688. Zone II. One of the hardiest Maples and drought resisting, much planted in the Northwest for shelter-belts. Several of the varieties are favorite ornamental trees; of rapid growth when young.—**A. N. variegatum** Jacques. Lvs. with broad white margin. F.S.17:t.1781(hc). M.D.1896:t.2,f.4(c). Gn.68:402(h). (*A. N. var. argenteo-variegatum* Wesm.) One of the most conspicuous of all variegated hardy trees.—**A. N. aureo-variegatum** Wesm., var. Lvs. spotted golden yellow.—**A. N. aureo-marginatum** Schwer., f. Lvs. margined yellow. R.B.32:197,t,f.5(c).—**A. N. auratum** Spaeth. Lvs. yellow. R.B.32:197,t,f.3(c). (*A. N. odessanum* H. Rothe, *A. N. californicum aureum* Hort.)—**A. N. pseudo-californicum** Schwer., var. Brts. green, bloomy; of vigorous growth. (*A. californicum* Hort., not Dietr., *Negundo californicum* Kirchn., not Torr. & Gr.)—**A. N. violaceum** (Kirchn.) Jaeg., var. Brts. purplish or violet with glaucous bloom: lfts. 3-11, usually 5-7, usually pubescent beneath; of vigorous growth. Chiefly in the northwestern part of the range of the species. (*A. californicum* Hort.)—**A. N. interius** (Brit.) Sarg., var. Brts. with short pale pubescence, rarely nearly glabrous: lfts. 3, slender-stalked, glabrous beneath or villous in the midrib. B.T.655. (*A. interior* Brit.) Alb. and Sask. to Ariz. and N. Mex. Intr. 1914.—**A. N. californicum** (Torr. & Gr.) Wesm., subsp. Brts. and winter-buds hoary-tomentose: lfts. 3, coarsely serrate or nearly entire, pubescent above, tomentose beneath when young, later densely pubescent: fr. puberulous or glabrous, the nutlet not constricted at base. N.S.2:t.72(c). S.S.2:t.97. (*A. c. Dietr.*, *Negundo c.* Torr. & Gr.) Calif. Cult. 1865. Zone III?—**A. N. texanum** Pax, var. Brts. pale-tomentose: lvs. 3-foliolate, tomentose beneath when young, later nearly glabrous: fr. puberulous, constricted into a short stipe. S. Ohio and w. N. C., w. to Kansas and Tex. Intr. 1922. Zone V.

## Fam 56. HIPPOCASTANACEAE DC. HORSE-CHESTNUT FAMILY

Trees or shrubs: lvs. opposite, digitately 3-9-foliolate or pinnate, estipulate: fls. andro-polygamous, irregular, in terminal panicles; sepals 4-5, distinct or connate, imbricate: petals 4 or 5, unequal, clawed; stamens 5-9, distinct; disk extrastaminal; ovary superior, 3-celled, with 2 ovules in each cell; style and stigma 1: fr. usually 1-celled, dehiscent, 3-valved, usually 1-seeded; seeds very large, with a large hilum, exalbuminous. Three genera with more than 25 species in the temp. regions of the n. hemisphere, in Am. s. to n. S. Am.—Besides *Aesculus* the Chinese genus *Bretschneidera* may be hardy in the southern part of our area, but is not yet in cult.

**ÆSCULUS** L. HORSE-CHESTNUT, BUCKEYE. Deciduous trees or shrubs: winter-buds large, with several pairs of outer scales: lvs. long-petioled, digitately 5-9-foliolate, serrate: fls. in upright many-fld. panicles; calyx campanulate to tubular, 4-5-toothed; petals 4-5, with long claws. (Ancient Latin name of an Oak or mast-bearing tree.) About 25 species in N. Am., S. E. Eu. and E. Asia to India.—Ornamental trees chiefly grown for their showy fls. and also for their handsome large foliage.

- A. Winter-buds resinous; claws of petals not longer than calyx; stamens exerted.  
 B. Lfts. sessile (short-stalked in No. 2); petals 5. Sect. I. HIPPOCASTANUM K. Koch.  
 C. Lfts. obtusely double-serrate, green beneath; fr. subglobose.  
 D. Fls. white, spotted red; fr. echinate. .... 1. *A. Hippocastanum*  
 DD. Fls. flesh-colored to scarlet; fr. with few small prickles. .... 2. *A. carnea*  
 CC. Lfts. nearly equally crenate-serrate, glaucescent beneath; fls. yellowish white; fr. broadly pear-shaped, warty. .... 3. *A. turbinata*  
 BB. Lfts. stalked; petals 4; calyx 2-lipped; fr. pear-shaped, smooth.  
 Sect. II. CALOTHYRSUS K. Koch.  
 C. Corolla about 1 cm. long, white. .... 4. *A. Wilsonii*  
 CC. Corolla about 2.5 cm. long, white to pink; lvs. glabrous. .... 5. *A. californica*  
 AA. Winter-buds not resinous; claws mostly longer than the 5-toothed calyx.  
 B. Fls. yellow to scarlet; stamens shorter to slightly longer than the 4 petals; lfts. petioled. .... Sect. III. PAVIA K. Koch.  
 C. Petals villous at the margin (or interspersed with glands in some hybrid forms); calyx campanulate. .... Ser. I. OCTANDRAE Sarg.  
 D. Petals without glands on the margin.  
 E. Fr. prickly; fls. yellow; petals of nearly equal length, shorter than stamens. .... 6. *A. glabra*  
 EE. Fr. without prickles; fls. yellow or red; petals of unequal length, longer than stamens at least the upper ones.  
 F. Pedicels and calyx glandular-villous; fls. usually yellow; large tree. .... 7. *A. octandra*  
 FF. Pedicels and calyx not glandular; fls. usually red and yellow; small tree or shrub. .... 8. *A. neglecta*  
 DD. Petals with hairs and glands on the margin. .... 9. *A. hybrida*  
 CC. Petals glandular on the margin; calyx tubular; fls. red or red and yellow; fr. without prickles. .... Ser. 2. EUPAVIAE Sarg.  
 D. Lvs. glabrous or only pubescent on the midrib beneath. .... 10. *A. Pavia*  
 DD. Lvs. tomentose or densely pubescent beneath.  
 E. Lfts. usually oblong-obovate, tomentose beneath; seed light yellowish brown. .... 11. *A. discolor*  
 EE. Lfts. usually lanceolate or oblanceolate, hoary pubescent beneath; seed dark chestnut-brown. .... 12. *A. splendens*  
 BB. Fls. white, small; stamens more than twice as long as the 4-5 petals.  
 Sect. IV. MACROTHYRSUS K. Koch.  
 13. *A. parviflora*

1. *A. Hippocastanum* L. COMMON H. Tree to 25 m.; brts. usually glabrous; lfts. 5-7, cuneate-obovate, 10-25 cm. long, acuminate, obtusely double-serrate, rusty floccose-tomentose near base beneath when young; fls. white, tinged with red, about 2 cm. across, in panicles 20-30 cm. long; fr. echinate, about 6 cm. across, with 1 or 2 seeds. Fl.v-vi; fr.viii-ix. F.D.21:2117(c). H.W.3:36,37(h).t.47(c). E.H.2:t.63-65(h). F.E.13:t.13(h). Am. For. 19:145, t.(h); 21:862(h). Balkan Pen. Intr. 1576. Zone III. One of the most showy flowering trees and often planted as shade and street tree.—A. H. Baumannii Schneid., f. Fl. double, white. I.H.2:50. H.B.7:311. A.G.32:271(h).—A. H. Memmingeri (K. Koch) Rehd., var. Lvs. sprinkled with white.—A. H. luteo-variegata West., var. Lvs. variegated with yellow.—A. H. albo-variegata West., var. Lvs. variegated with white.—A. H. laciniata Jacques, var. Lfts. narrow, deeply and irregularly incised. (A. H. dissecta Hort., A. H. heterophylla Hort., A. H. asplenifolia Hort.)—A. H. pyramidalis Henry, var. Of compact narrow-pyramidal habit.—A. H. umbraculifera Jaeg., var. With a compact round head. M.G.1903:188(h).—A. H. pendula Puvilland. With pendulous brs. E.H.2:t.64(h). R.H.1921:281(h).

2.  $\times$  *A. carnea* Hayne (*A. Hippocastanum*  $\times$  *Pavia*). RED H. Tree to 15 or 25 m.; buds slightly viscid; brts. glabrous; lfts. usually 5, subsessile or short-stalked, cuneate-obovate, 8-15 cm. long, dark green and somewhat lustrous above, nearly glabrous beneath; fls. flesh-colored to deep red, in panicles 12-20 cm. long; petals glandular and villous on the margin; fr. subglobose, 3-4 cm. across, slightly prickly. Fl.v-vi; fr.ix. G.O.t.22(c). L.D.6:t.357(c). B.R.1056(c). F.S.t.2229-30(c). M.A.t.64(h). F.E.23:607(h). (*A. rubicunda* Loisel., *A. intermedia* André.) Orig. before 1818. Zone III. Round-headed tree, often planted; the lvs. are of darker color and firmer texture and resist drought better than those of the preceding species.—A. c.

*péndula* Henry, var. With pendulous brs.—*A. c. Briottii* (Carr.) Nichols. With bright scarlet fls. R.H.1878:370,t(c). (*A. rubicunda Briottii* Carr.) Orig. 1858.—*A. c. plantierensis* (André) Rehd., var. Lfts. usually 7, to 20 cm. long, bluntly serrate: fls. whitish, suffused with pink and fading to pink: fr. prickly. (*A. p. André*.) Orig. before 1894.

3. *A. turbinata* Bl. JAPANESE H. Tree to 30 m.: lfts. 5-7, cuneate-obovate, 20-35 cm. long, acuminate, nearly equally crenate-serrate, glaucescent beneath and glabrous except axillary tufts of hairs or pubescent on the veins; petiole glabrous or pubescent: fls. about 1.5 cm. across, yellowish white, with a red spot, in a panicle 15-25 cm. long: fr. broadly pear-shaped, about 5 cm. across, warty; seed brown, about 3 cm. across, with a large hilum covering nearly  $\frac{1}{2}$  of the seed. Fl.vi; fr.ix. B.M.8713(c). M.K.t.74(c). G.C.III.5:717;31:187. E.H.2:t.66(h). Japan. Intr. before 1880. Zone V. Fls. less showy than those of *A. Hippocastanum*, but lvs. larger.—*A. t. pubescens* Rehd., var. Lvs. more or less villous-pubescent beneath. Cult. 1911.

4. *A. Wilsónii* Rehd. Tree to 25 m.; brts. densely pubescent: lfts. 5-7, oblong-obovate or oblong-oblancoolate, 10-22 cm. long, acuminate, rounded or broad-cuneate, closely serrulate, densely grayish pubescent beneath when young, glabrescent at maturity: fls. 1.2-1.5 cm. long, white, the upper petals with a yellow spot, in cylindric panicles 15-30 cm. long: fr. ovoid or obovoid, apiculate, with thin walls; seed 3-3.5 cm. across, the hilum occupying about  $\frac{1}{2}$  or less of it. Fl.v-vi; fr.ix. C.C.234. S.H.2:f.171f.173b-c. U. S. Inv. 53:t. 3(h). (*A. chinensis* Diels, not Bge.) C. and W. China. Intr. 1908. Zone VI or VII. With long cylindric spikes of white fls.

Closely related species: *A. chinensis* Bge. Brts. glabrous: lfts. shorter-stalked, cuneate, glabrous beneath, except sparingly hairy on the veins: fls. about 1 cm. long: fr. subglobose, somewhat depressed, with thick walls; seed 2-2.5 cm. across, the hilum occupying about  $\frac{1}{2}$  of it. I.S.t.86. G.C.52:346, 347(h). N. China. Cult. 1877, intr. again 1882 and 1912. Zone V.

5. *A. californica* Nutt. CALIFORNIAN B. Tree to 12 m.: lfts. 5, sometimes 7, elliptic-oblong to lance-oblong, 8-14 cm. long, acuminate, narrowed or rounded at base, sharply serrate, glabrous; petiolules 1-2.5 cm. long: fls. white to rose-colored, fragrant, about 2.5 cm. long, in dense rather narrow panicles 8-20 cm. long; stamens long-exserted; petals of equal length: fr. obovoid, 5-7 cm. long. Fl.lv-viii; fr.viii-ix. B.M.5077(c). S.S.2:t.71,72. G.C.31:186. Gn.49:490,492(h). G.M.55:577(h). (*Pavia c. Hartw.*) Calif. Intr. 1855. Zone VII?

Related species: *A. indica* Colebr. Tree to 20 m.: lfts. 5-9, short-stalked, obovate-lanceolate, 15-25 cm. long, finely serrate: fls. white, marked red and yellow, the lower part of the unequal petals tinged rose. B.M.5117(c). B.S. 1:171. G.C.33:139,t;36:206,t(h);72:19. R.H.1917:248. Himal. Intr. 1851. Zone VII?

6. *A. glabra* Willd. OHIO B. Small tree to 10 m.: lfts. 5, elliptic to obovate, 8-12 cm. long, acuminate, cuneate, finely serrate, pubescent beneath when young, nearly glabrous at maturity: fls. pale greenish yellow, 2-3 cm. long, in panicles 10-15 cm. long; petals of nearly equal length, their claws as long as calyx; stamens exserted: fr. obovoid, 3-5 cm. long, echinate. Fl.v; fr.ix. B.R.24:51(c). S.S.2:t.67,68. F.E.29:773(h). Am. For. 24:155. (*A. ohioensis* DC., *Pavia g.* Spach.) Pa. to Neb., Kansas and Ala. Cult. 1809. Zone III. Related species: *A. glaucescens* Sarg. Shrub to 10 m. Lfts. larger, glabrous and glaucescent beneath: fls. larger; fr. smaller. S.T.2:t.196. Ga. Intr. 1914. Zone V.

8. *A. neglecta* Lindl. Tree to 20 m.: lfts. 5, oblong-obovate, 10–16 cm. long, long-acuminate, simply or sometimes irregularly doubly serrulate, light yellowish green beneath and glabrous except axillary tufts of hairs, rarely without; petiolules 3–8 mm. long, puberulous above; petiole puberulous above, at least near apex: panicles 10–15 cm. long; calyx narrow-campanulate, puberulous: petals very unequal, pale yellow, marked with red veins toward the base; stamens villous below the middle: fr. globose, 2.5–3 cm. across, usually 1-seeded. Fl.v-vi; fr.ix. B.R.1009(c). H.B.1:209. N. C. Cult. 1826. Zone V. Large shrub or tree with large panicles of showy fls., particularly the vars.—*A. n. georgiana* (Sarg.) Sarg., var. Usually shrubby: panicle broader and denser; calyx often nearly tubular; petals yellow and red, sometimes entirely bright yellow or red. S.T.2:t.197. S.M.706. (*A. g.* Sarg.) N. C. to Fla. and Ala. Intr. 1905.—*A. n. lanceolata* (Sarg.) Sarg., var. Lfts. lanceolate or nearly oblanceolate: fls. bright red. S.M.707. Ga. Intr. 1917.—*A. n. pubescens* (Sarg.) Sarg., var. Lfts. pubescent beneath: fls. yellow and red. N. C. to Ga. and Ala. Intr. 1905.—*A. n. tomentosa* Sarg., var. Lfts. tomentose or densely villous beneath: fls. bright red. (*A. Michauxii* Hort., *A. discolor* Hort., not Pursh.) S. C. Cult. 1880.

*A. n.* × *Pavia*; see under No. 9.—*A. n.* × *discolor*; see under No. 9.

A related species or hybrid of unknown origin is *A. woerlitzensis* Koehne. Tree: lfts. oblong-obovate, 10–16 cm. long, yellowish green beneath, sparingly hairy along the midrib and bearded in the axils of the veins, with 17–20 pairs of veins: fls. red, in panicles 10–12 cm. long; calyx tubular; the lateral petals with an oblong-obovate blade cuneate at base. Cult. 1910.—*A. w. Ellwangeri* Rehd., var. Lfts. 12–18 cm. long, slightly pubescent beneath while young, with 20–27 pairs of veins: fls. darker red; calyx narrower, not widened above the middle. (*A. Pavia* var. *Whitleyi* Ellw. & Barry, not Hort. Angl., *A. Pavia atrosanguinea* Hort.) Cult. 1901.

9. × *A. hybrida* DC. (*A. octandra* × *Pavia*.) HYBRID B. Tree: lfts. 5, oblong-obovate or oblong-elliptic, 10–15 cm. long, acuminate, minutely

crenate-serrate, pubescent beneath along the midrib and veins: fls. yellow and reddish in panicles 10–16 cm. long; pedicels and calyx stipitate-glandular; stamens shorter than petals, villous toward the base: fr. subglobose. Fl. v–vi; fr. ix. W.D.2:164(c, as *A. Pavia*). (*A. versicolor* Wender., *A. Lyoni* Hort., *A. discolor* Hort., not Pursh, *A. flava* var. *purpurascens* Gray, *Pavia* h. DC.) Orig. before 1815. Zone V.—Several forms of this hybrid are in cult. varying in color of the fls. from yellow slightly tinged pink to nearly red.

Other hybrids between species of the Octandrae and Eupaviae with the petals villous and glandular on the margin are the following of which the first three have the fr. slightly tuberculate and the lvs. in the first and 2d hybrid glabrous and in the 3d pubescent beneath, while the 4th has a smooth fr. and glabrous lvs. and the 5th a smooth fr. and the lvs. pubescent beneath.—*A. arnoldiana* Sarg. (*A. glabra* × *hybrida*). Lfts. elliptic, finely, often doubly serrate, pubescent only along the midrib beneath; calyx campanulate, yellow; petals yellow, the upper marked with red; stamens as long or slightly longer than petals: fr. with scattered short prickles or tubercles. Orig. about 1900.—*A. Büshii* Schneid. (*A. glabra* × *discolor*). Tree: brts. and petioles puberulous: lfts. finely and bluntly serrate, pubescent beneath; calyx red; petals yellow and pink; stamens longer than petals: fr. slightly tuberculate. Ark., Miss. Intr. 1901.—*A. mississippiensis* Sarg. (*A. glabra* × *Pavia*). Lfts. elliptic to oblong-ovate, finely and often doubly serrate, glabrous except axillary tufts of hairs beneath: fls. dark red and yellow; calyx narrow-campanulate; stamens usually longer than petals: fr. slightly tuberculate. Miss. Intr. 1913.—*A. Dupontii* Sarg. (*A. neglecta* × *Pavia*). Lfts. oblong-ovate to elliptic, acutely serrate, light green beneath and glabrous except axillary tufts of hairs, with 18–25 pairs of veins: calyx narrow-campanulate, red; petals yellow or slightly tinged with red; stamens shorter than petals. Orig. after 1820.—*A. D. Hessei* Sarg., var. (*A. n. georgiana* × *Pavia*). Lfts. elliptic or elliptic-ovate; panicles compact; petals yellow, tinged with red. Cult. 1909.—*A. mutabilis* (Spach) Schelle (*A. discolor mollis* × *neglecta georgiana*). Lfts. elliptic-oblong, pale and villous beneath: panicles 12–15 cm. long; calyx narrow-campanulate to tubular, red; petals red and yellow. (*Pavia* m. Spach.) Cult. 1834.—*A. m. Harbisonii* (Sarg.) Rehd., var. Lfts. sparingly villous beneath while young and glaucescent: fls. bright red, in panicles 15–20 cm. long; calyx tubular. (*A. H.* Sarg.) Intr. 1905.—*A. m. induta* Sarg., var. (*A. discolor mollis* × *neglecta*). Lvs. densely villous and glaucescent beneath. (*A. rosea nana* Hesse.) Cult. 1904.—*A. m. penduliflora* Sarg., var. Lfts. oblong-lanceolate, pale green and soft-pubescent beneath: panicles loose, slightly pendulous, 14–16 cm. long; calyx tubular, reddish; petals yellow. (*A. humilis* × *tutea* Spæth.) Cult. 1902.

10. *A. Pavia* L. Red B. Shrub or tree to 6, rarely to 12 m.: lfts. 5, short-stalked, oblong-ovate or narrow-elliptic, 8–14 cm. long, acuminate, irregularly and often doubly serrate, glabrous or slightly pubescent beneath: fls. bright red, in loose panicles 10–16 cm. long; calyx tubular, dark red; petals very dissimilar, connivent; stamens usually 8, nearly as long as petals; fr. subglobose or obovoid. Fl. vi; fr. ix. L.B.1257(c). S.T.2:t.199. G.C.100:2(h). (*Pavia rubra* Poir., *P. Michauxii* Spach.) Va. to Fla. and La. Intr. 1711. Zone V. With bright red but comparatively small fls.—*A. P. atrosanguinea* Kirchn. Fls. dark red.—*A. P. humilis* (Lindl.) Mouillef., var. Low, sometimes prostrate shrub; lfts. slightly pubescent beneath on veins and veinlets: fls. red, in small panicles. B.R.1018(c). (*A. h.* Lindl., *A. Pavia* var. *nana* Dipp., *Pavia rubra* var. *h.* Loud.) Cult. 1826.

*A. P.* × *Hippocastanum*; see No. 2.—*A. P.* × *octandra*; see No. 9.—*A. P.* × *glabra*; see under No. 9.—*A. P.* × *neglecta*; see under No. 9.

11. *A. discolor* Pursh. Shrub or small tree to 10 m.; lfts. 5, short-stalked, elliptic to oblong-ovate, 8–18 cm. long, acuminate, finely crenate-serrate, dark green and lustrous above, whitish tomentose or tomentulose beneath; fls. yellow and red, about 3 cm. long, in narrow pubescent panicles 15–20 cm. long; calyx tubular, red, or yellow tinged with red; petals yellow flushed red, very unequal, connivent, shorter than stamens: fr. usually obovoid, 3.5–6

cm. long; seeds usually 2, light yellow-brown. Fl.v-vi; fr.ix. B.R.310(c). S.S.13:622. (*A. Pavia* var. *d.* Torr. & Gr., *A. octandra* var. *hybrida* Sarg.) Ga. to Mo. and Tex. Intr. about 1812. Zone V. With large panicles of brightly colored fls.—*A. d. mollis* (Raf.) Sarg., var. Fls. bright red. (*A. m.* Raf., *A. austrina* Small.) N. C. to Fla. and Tex. Intr. 1905.—*A. d. Koehnei* Rehd., var. Low shrub; fls. red and yellow. (*A. humilis* Koehne, not Lindl., *A. Pavia* var. *humilis* Voss, partly.) Cult. 1893.—*A. d. flavescens* Sarg., var. Fls. yellow. Tex. Intr. ?

*A. d.* × *neglecta*; see under No. 9.

12. *A. splendens* Sarg. Shrub to 4 m.: lfts. 5, lanceolate to oblanceolate, 8-14 cm. long, acuminate, finely and often doubly crenate-serrulate, densely hoary-pubescent beneath, rufous-pubescent in autumn: fls. 3.5-4 cm. long, in panicles 10-20 cm. long; calyx tubular, 7-8 mm. in diam., bright red; petals scarlet, very unequal; stamens longer or shorter than petals: fr. subglobose to short-obovoid; seeds dark chestnut-brown. Fl.v; fr.ix. S.T.2:t. 200. Ala. to Miss. and La. Intr. 1911. Zone VI? Apparently the handsomest of all Buckeyes.

13. *A. parviflora* Walt. Spreading shrub to 4 m.: lfts. 5-7, nearly sessile, elliptic to oblong-obovate, 8-20 cm. long, acuminate, crenate-serrulate, grayish pubescent beneath: fls. white, about 1 cm. long; stamens usually 7, pinkish white, 3-4 cm. long, in long cylindric panicles 20-30 cm. long: fr. obovoid, 2.5-4 cm. long; seed chestnut-brown. Fl.vii-viii; fr.x. B.M.2118(c). Add.2:t.63(c). G.C.31:189;64:33(h). Gn.63:299;79:436(h). Gn.M.9:76(h). B.S.1:173(h). (*A. macrostachya* Michx., *Pavia alba* Poir.) S. C. to Ala. and Fla. Intr. 1785. Zone IV. Valued for its late showy fls.; excellent as a lawn shrub.—*A. p. serotina* Rehd., var. Lfts. sparsely pubescent or glabrescent and glaucescent beneath: fls. 2 or 3 weeks later. Ala. Intr. 1919.

## Fam. 57. SAPINDACEAE Juss. SOAPBERRY FAMILY

Trees or shrubs, rarely herbs: lvs. alternate or sometimes opposite, usually abruptly pinnate or odd-pinnate, sometimes bipinnate or 3-foliolate, estipulate: fls. unisexual or apparently polygamous, regular or irregular, small, rarely conspicuous, usually in panicles; sepals 4-5, imbricate, rarely valvate; petals 4-5, sometimes wanting, usually with scales or hairs inside near base; disk well developed, extrastaminal; stamens usually 8 or 10 in 2 whorls, rarely 7 or 6, more or less united at base; ovary superior, mostly 3-celled and deeply 3-lobed; cells usually 1-ovuled; style 1: fr. a caps., berry, drupe, nut or winged fr.; seeds exalbuminous. About 120 genera with more than 1000 species mostly in trop. regions, only few species extending into the temp. zone.

A. Lfts. entire: fls. small, regular, in large panicles: fr. berry-like.....1. *Sapindus*  
AA. Lfts. serrate: fls. irregular, conspicuous: fr. capsular.

B. Lvs. twice pinnate or lfts. incised and lobed: fls. yellow, in large panicles after the lvs.  
2. *Koeleruteria*

BB. Lvs. simply pinnate: lfts. serrate: fls. before the lvs.

C. Lfts. 9-17: fls. white, in dense racemes.....3. *Xanthoceras*

CC. Lfts. 5-7, large: fls. rose-colored, in cymes.....4. *Ungnadia*

1. *SAPINDUS* L. SOAPBERRY. Deciduous or evergreen trees or shrubs; winter-buds with few outer pubescent scales: lvs. alternate, abruptly pinnate (simple in one species); lfts. entire, rarely serrate: fls. small, regular, polygamo-dioecious, in ample terminal or axillary panicles; sepals and petals 4-5, the latter with 1 or 2 scales above the claw, or without; disk annular; stamens 8-10; usually only 1 carpel developing into a drupe; seed usually

globose. (Name contracted from *Sapo indicus*, Indian Soap.) About 15 species in the Tropics, few extending into temp. regions.

**S. Drummóndii** Hook. & Arn. WILD CHINA-TREE. Deciduous tree to 15 m., with scaly red-brown bark; young brts. pubescent: lfts. 8-18, short-stalked, obliquely lanceolate, 4-7 cm. long, acuminate, glabrous above, pubescent beneath; rachis marginless: fls. yellowish white, about 5 mm. across, in loose pubescent panicles 15-25 cm. long; sepals acute, ciliate, shorter than the obovate petals pubescent inside; filaments villous: fr. subglobose, 1-1.5 cm. across, yellow with semitranslucent flesh, finally black. Fl.v-vi; fr.ix-x. S.S.2:t.76,77. B.B.2:500. S. Mo., Kans., N. Mex. and Ariz. to La., Tex. and n. Mex. Cult. 1900. Zone (V). Interesting as the hardiest species of this trop. genus.

Related species: **S. Mukoróssi** Gaertn. Evergreen tree: lfts. 8-13, oblong-ovate to oblong-lanceolate, 8-15 cm. long, glabrous and reticulate beneath; rachis with narrow margin: fr. to 2.5 cm. across, yellow or orange-brown, slightly keeled. S.I.1:t.71(c). C.C.236. E. Asia, Himal. Cult. 1877. Zone VII? —**S. M. carinatus** Radlk., var. Fr. strongly keeled, fleshier. R.H.1895:304,305. Am. For. 23:686. (*S. utilis* Trabut.)

**2. KOELREUTÈRIA** Laxm. Deciduous trees; winter-buds small, with 2 outer scales: lvs. alternate, odd-pinnate or bipinnate: lfts. serrate: fls. yellow, irregular, in large terminal panicles; calyx deeply and unequally 5-lobed; petals 4, lanceolate, turned upward, clawed, blade cordate at base and with 2 upturned appendages; disk crenate on the upper margin; stamens 8, sometimes less, with long filaments; style 3-fid at apex, shorter than stamens: fr. a bladdery, loculicidal caps. with papery walls and 3 roundish black seeds. (After Joseph G. Koelreuter, professor of natural history at Karlsruhe; 1733-1806.) Four species in E. Asia.

**K. paniculata** Laxm. CHINA-TREE. Tree to 10 m.: lvs. pinnate or sometimes partly bipinnate, to 35 cm. long: lfts. 7-15, ovate to ovate-oblong, 3-8 cm. long, coarsely and irregularly crenate-serrate, at base often incisely lobed, glabrous above, pubescent on the veins beneath or nearly glabrous: fls. yellow, about 1 cm. wide, in broad loose panicles to 35 cm. long: fr. oblong-ovoid, gradually narrowed toward the mucronate apex, 4-5 cm. long. Fl.vii-viii; fr.ix-x. S.O.4:t.181(c). B.R.330(c). Add.5:t.191(c). G.C.III.2:561. Gng. 2:353(h). J.L.27:875(h). (*K. japonica* Sieb.—PRIDE OF INDIA, GOLDENRAIN-TREE, VARNISH-TREE.) China, Korea, Japan. Intr. 1763. Zone V. Chiefly valued for its conspicuous panicles of yellow fls. appearing in summer.—**K. p. fastigiata** Bean, var. A form of narrow columnar habit. Orig. 1888.—**K. p. apiculata** (Rehd. & Wils.) Rehd., var. Lvs. bipinnate, rarely pinnate with partly pinnatifid lfts., pubescent beneath: sepals orbicular or broad-oval, erose: fr. abruptly mucronate at the rounded apex. G.C.78:307. (*K. a.* Rehd. & Wils.) C. China. Intr. 1900.

Related species: **K. bipinnata** Franch. Lvs. bipinnate, with ovate to ovate-oblong, equally serrate lfts. 4-10 cm. long. R.H.1888:393. Gn.34:305. D.L.2:392. W. China. Intr. about 1900. Zone VII?

**3. XANTHÓCERAS** Bge. Deciduous shrub or tree; winter-buds ovoid, with several outer scales: lvs. alternate, odd-pinnate; lfts. sessile, narrow, usually opposite, serrate: fls. polygamous, regular, in racemes, the upper fls. of the terminal raceme fertile, the lower ones and those of the lateral racemes sterile, or rarely a few fertile at the apex of the latter; sepals 5, oblong, imbricate; petals obovate, clawed, large; disk thin, 5-lobed, each lobe on its back with an upright horn-like appendage half as long as stamens; stamens 8, half as long as petals; ovary with short thick style: fr. a loculicidally 3-valved

caps. with thick walls; each cell with several globose, dark brown seeds. (Greek *xanthos*, yellow, and *keras*, horn; alluding to the yellow horn-like processes of the disk.) One species in China.

**X. sorbifolium** Bge. Shrub or tree to 8 m., with rather stout upright brs., glabrous: lvs. 14–30 cm. long; lfts. 9–17, narrow-elliptic to lanceolate, 3–5 cm. long, sharply serrate, dark green above, lighter beneath: fls. slender-stalked, about 2 cm. across, in racemes 15–25 cm. long; petals thin, white, with a blotch at base changing from yellow to red: fr. green, 4–6 cm. across; seed about 1 cm. thick. Fl. iv–v; fr. viii–ix. B.M.6923(c). Gn.8:524,t(c);71:298(h). G.C.76:77,78(h). G.F.6:285(h). S.L.389(h). Gn.M.32:43(h). N. China. Intr. 1866. Zone V. With showy white fls. in spring and handsome lustrous lvs. remaining green until late in fall.

**4. UNGNADIA** Endl. Slender shrub or small tree; winter-buds with many imbricate scales: lvs. alternate, odd-pinnate: lfts. serrate, the lateral ones sessile, the terminal stalked: fls. polygamous, irregular, in lateral fascicles or corymbs, before the lvs.; calyx campanulate, 5-lobed; petals 4 or 5, subequal, clawed, the claws villous and at the apex with a crest of fleshy hairs; disk unilateral, tongue-shaped; stamens 7–10, unequal, exserted; ovary stipitate: fr. a loculicidally 3–4-valved leathery caps.; cells usually 1-seeded. (After Baron Ungnad who introduced the Horse-chestnut to C. Eu.) One species.

**U. speciosa** Endl. MEXICAN BUCKEYE. Shrub or tree to 10 m.; brts. pubescent: lfts. 5–9, oblong-ovate to ovate-lanceolate, 8–12 cm. long, acuminate, crenulate-serrate, lustrous dark green above, light green beneath, tomentose when unfolding becoming glabrescent: fls. rose-colored, about 2.5 cm. across, in pubescent fascicles on stalks 3–5 cm. long: fr. broad-pyriform, about 5 cm. across; seeds about 1.5 cm. thick. Fl. iv–v; fr. x. F.S.10:t.1059(c). H.F.1865:231,t(c). Gr.G.2:t.178,179. S.S.2:t.73. Tex. to n. Mex. Intr. 1848. Zone VII.

#### Fam. 58. SABIACEAE Bl. SABIA FAMILY

Trees or shrubs, sometimes climbing: lvs. alternate, odd-pinnate or simple, estipulate: fls. perfect or polygamous, in axillary or terminal cymes or panicles; sepals 5, rarely 3 or 4, free or connate at base, imbricate, unequal; petals 5, rarely 4, imbricate, the inner 2 often much smaller; stamens 5, opposite the petals, all fertile or the 3 outer sterile and changed to staminodes; ovary superior, usually with disk at base, usually 2-, rarely 3-celled, each cell with 2 or 1 ovule: fr. 1-celled, rarely 2-celled, indehiscent; seed solitary, exalbuminous; embryo with folded cotyledons and large curved hypocotyl.—Four genera with about 70 species in trop. Asia and Am.; few species extending into temp. regions of E. Asia.

- A. All stamens fertile; fls. in axillary cymes: lvs. simple: climbing shrubs.....1. *Sabia*  
 AA. Only 2 stamens fertile: fls. in terminal panicles: lvs. simple or pinnate: upright shrubs or trees .....2. *Meliosma*

**1. SABIA** Colebr. Deciduous or evergreen climbing shrubs; winter-buds small, with pointed persistent scales: lvs. simple, entire: fls. perfect, rarely polygamous, usually whitish or greenish, in axillary corymbs or solitary; calyx deeply 5- or 4-parted, with imbricate segments; petals 5, rarely 4, nearly opposite the sepals, much longer than sepals; stamens 5 or 4, with subulate filaments and small roundish anthers; ovary with a 5-pointed disk at base; style subulate: fr. 1- or 2-seeded and deeply 2-lobed, with the style at base; exocarp slightly fleshy, mesocarp woody and reticulate. (From its Bengal name, *Sabja-lat.*) About 20 species in E. and S. Asia and Mal.

**S. Schumanniana** Diels. Scandent shrub to 3 m.; brts. slender, glabrous, green or yellowish: lvs. oblong-lanceolate or oblong, rarely elliptic, 2–10 cm. long, acuminate, broad-cuneate or nearly rounded at base, scarious and usually crenate-erose at margin, bright green above, lighter green beneath, with 5–8 pairs of ascending veins; petiole 4–10 mm. long: fls. campanulate, greenish, 6 mm. long, in 1–3-fld. cymes on slender peduncles 2.5–4 cm. long; pedicels 3–8 mm. long; petals elliptic-obovate; stamens about as long as petals: fr. reniform, 6–7 mm. across, blue, strongly reticulate. Fl.v; fr.r. C. and W. China. Intr. 1908. Zone (V)?

Related species: *S. latifolia* Rehd. & Wils. Brts. pubescent, soon glabrous: lvs. elliptic to elliptic-oblong, 5–12 cm. long, short-acuminate, pubescent at first, at length only on the veins beneath: fls. in usually 3-fld. cymes on peduncles 1–2.5 cm. long, greenish yellow passing into reddish brown. B.M.8859(c). W. China. Intr. 1908. Zone VII?

**2. MELIÓ SMA** Bl. Deciduous or evergreen trees or shrubs; winter-buds naked: lvs. simple and with numerous straight veins or odd-pinnate with opposite lfts., serrate or entire: fls. perfect, rarely polygamous, in terminal and axillary panicles; sepals 5, rarely 4, subequal, imbricate, petals 5, very unequal, the outer 3 rounded, imbricate, the inner 2 much smaller, often bifid or scale-like and often adnate to the fertile stamens; stamens 5, the outer sterile and reduced to cup-shaped staminodes; the inner ones fertile, their anthers surrounded at base by the cup-shaped apex of the short filaments: ovary 2-, rarely 3-celled, at base surrounded by a disk; style subulate, short: fr. a subglobose to oblong, small, usually 1-seeded drupe, black or red. (Name from Greek, *meli*, honey, and *osma*, odor; referring to the fragrant fls.) About 50 species, mostly in trop. E. and S. Asia, also in trop. Amer.

A. Lvs. simple, toothed ..... 1. *M. cuneifolia*  
 A. Lvs. odd-pinnate ..... 2. *M. Veitchiorum*

**1. M. cuneifolia** Franch. Shrub or small tree to 6 m.; young brts. slightly pubescent: lvs. obovate, 8–16 cm. long, acute or abruptly acuminate, narrow-cuneate and decurrent, sinuately toothed, glabrous above, light green and pubescent on the veins beneath and with axillary tufts of hairs, with 20–25 pairs of straight veins; petiole 8–15 mm. long: fls. yellowish white, 6 mm. across, in upright loose panicles with spreading brs., about 15–25 cm. long and nearly as wide; bracts minute, caducous: fr. black, about 6 mm. across. Fl.vii; fr.r. B.M.8357(c). B.S.2:78. G.C.59:279(h). Gs.8:154(h). W. China. Intr. 1901. Zone VII? With large panicles of fragrant whitish fls.

Related species: *M. myriantha* Sieb. & Zucc. Lvs. elliptic-obovate to oblong-obovate, 10–20 cm. long, short-acuminate, broad-cuneate or sometimes rounded at base, with 24–30 pairs of veins and without axillary tufts of hairs: fls. greenish yellow, smaller, in panicles with ascending brs., 15–20 cm. long; bracts persistent: fr. red. S.I.2:t.46(c). G.C.31:30. Japan. Intr. 1879. Zone VII?  
 —*M. tenuis* Maxim. Lvs. 5–10 cm. long, glabrous beneath except axillary tufts of hairs and sometimes pubescent on the veins, with 10–15 pairs of veins: infl. without the slender stalk 8–15 cm. long; bracts caducous: fr. black. Japan. Intr. 1915.—*M. pendens* Rehd. & Wils. Shrub to 5 m.: lvs. elliptic-obovate, 6–15 cm. long, sparingly hairy above, pilose on midrib and veins beneath, without axillary tufts, with 12–20 pairs of veins: panicles pendulous, 12–20 cm. long with the brts. partly reflexed; bracts caducous; fls. fragrant. C. China. Intr. 1907. Zone VII?—*M. dillenifolia* (Wight & Arn.) Walp. Tree to 6 m.; brts. pubescent: lvs. obovate to oblanceolate, 12–30 cm. long, aristate-serrulate, slightly rough above, pubescent beneath: panicle 20–30 cm. long; bracts deciduous. Himal. Cult. 1924. Zone VII?

**2. M. Veitchiorum** Hemsl. Tree to 15 m., with stout upright brs.; young brts. hairy, soon glabrous, like the infl. with conspicuous lenticels: lvs. 40–80 cm. long; lfts. 9–11, ovate to ovate-oblong or oblong, 8–16 cm. long, obtuse or

short-acuminate, entire, rarely remotely crenate-serrate, glabrous except the pubescent midrib beneath: fls. yellow, 5 mm. across, in drooping panicles 20–40 cm. long: fr. black, subglobose, 6–8 mm. across. Fl.v; fr.ix. K.B.1910: 175(h). B.S.3:230,t(h). C. China. Intr. 1901. Zone VI? With large drooping panicles of fragrant yellowish fls.

Related species: *M. Beaniana* Rehd. & Wils. Young brts. brownish tomentose: lvs. 15–30 cm. long; lfts. 5–13, ovate to elliptic-lanceolate, 6–15 cm. long, acuminate, usually cuneate, glabrous beneath except axillary tufts of hairs: fls. creamy white, in very numerous fulvous-pubescent lateral panicles before the lvs., 10–16 cm. long. C. China. Intr. 1908. Zone VI.—*M. Oldhami* Miq. Tree to 20 m.: lfts. 7–13, elliptic- or ovate-oblong to lance-oblong, 4–10 cm. long, acuminate, usually cuneate, remotely serrate or serrulate, glabrous or nearly so beneath: inf. terminal, to 20 cm. long and about as broad, glabrous: fr. 5–6 mm. across. G.C.86:345(h). B.S.3:231,t(h). (*M. sinensis* Nakai.) China, Korea. Intr. 1900. Zone VII?

Fam. 59. RHAMNACEAE Lindl. BUCKTHORN FAMILY

Trees or shrubs, often spiny, sometimes climbing, rarely herbs: lvs. alternate, rarely opposite, simple, usually stipulate: fls. regular, bisexual or unisexual, small, usually greenish or whitish, in cymes, fascicles or panicles; sepals 5, rarely 4, valvate; petals 5 or 4, sometimes wanting; stamens 5 or 4, opposite the petals; receptacle cup-shaped, lined by the usually well-developed intrastaminal disk; ovary 2–3-celled, rarely 1- or 4-celled, superior or inferior; cells 1-, rarely 2-ovuled; styles 2–4, more or less connate: fr. drupaceous, winged or capsular; seeds usually with scanty albumen, sometimes without; embryo with usually broad, flat cotyledons and small radicle.—About 45 genera and more than 550 species.

- a. Stipules changed to spines: lvs. 3-nerved at base.
  - b. Fr. dry, winged.....1. *Paliurus*
  - bb. Fr. fleshy, drupaceous.....2. *Zizyphus*
- aa. Stipules not spiny.
  - b. Lvs. present, usually fairly large: brs. unarmed or with spinescent brts.
    - c. Fr. with a single, 1–2-celled stone, drupaceous; brs. not spiny.
      - d. Brs. twining: lvs. entire: fls. in terminal panicles or spikes.....3. *Berchemia*
      - dd. Brs. not twining: lvs. serrulate: fls. in peduncled terminal and lateral cymes.
        - 4. *Rhamnella*
    - cc. Fr. with several, usually 3, stones.
      - d. Fls. sessile or subsessile, in clusters forming spikes or panicles: lvs. opposite or nearly opposite: brs. often spiny.....5. *Sageretia*
      - dd. Fls. pedicelled, usually in axillary clusters or cymes.
        - e. Fr. indehiscent, fleshy or leathery.
          - f. Infl. not becoming fleshy: lvs. penninerved: fls. greenish.....6. *Rhamnus*
          - ff. Infl. a large peduncled cyme, its brs. becoming fleshy: lvs. 3-nerved at base, to 16 cm. long.....7. *Hovenia*
        - ee. Fr. separating at maturity into 3 dehiscent nutlets: lvs. 3-nerved: fls. white, pink or blue.....8. *Ceanothus*
    - bb. Lvs. small or wanting: brs. with decussate stout spines: fls. campanulate or tubular, in fascicles or solitary.
      - c. Lvs. usually persistent: stipules connected by 2 distinct lines.....9. *Discaria*
      - cc. Lvs. usually deciduous; stipules not connected.....10. *Colletia*

1. *PALIURUS* Mill. Deciduous trees or shrubs, sometimes decumbent; stipules usually spiny; winter-buds small, with 2 or 3 outer scales: lvs. alternate, 2-ranked, 3-nerved at base, entire or serrate: fls. perfect, small, 5-merous, in axillary or sometimes terminal cymes; ovary 2–3-celled, united with the receptacle: fr. woody, 2–3-celled, with leathery exocarp, depressed-subglobose and above the middle surrounded by a broad horizontal wing; cells 1-seeded. (Ancient Greek name.) Six species from S. Eu. to E. Asia.

*P. spina*-Christi Mill. CHRIST-THORN. Spreading spiny shrub or small tree to 6 m.; young brts. pubescent; one of the stipular spines straight, the other hooked or recurved: lvs. ovate, 2–3.5 cm. long, obtuse, rounded and usually oblique at base, minutely serrulate or entire, dark green above, gla-

brous or slightly pubescent on the veins beneath; petioles 4-12 mm. long: fls. greenish yellow in short-peduncled umbel-like cymes; fr. brownish yellow, 2-2.5 cm. across, glabrous. Fl.vi-viii; fr.x-xii. B.M.1893(c).2535(c). G.C. 50:377. E.N.III.5:402. G.W.4:318. (*P. australis* Gaertn., *P. aculeatus* Lam.) S. Eu. to Himal. and N. China. Cult. 1597. Zone VII. Sometimes grown for its legendary interest, as it is believed to be the tree from which the Crown of Thorns was made; the curious fr. has the aspect of a low-crowned, wide-brimmed hat; the dark green lvs. and the numerous yellow fls. are attractive.

Related species: *P. Hemsleyanus* Rehd. Tree to 15 m., sometimes unarmed: lvs. 4-10 cm. long, glabrous: fr. 2.5-3.5 cm. broad. (*P. orientalis* Hemsl., in part.) C. China. Intr. 1907. Zone VII?

**2. ZIZYPHUS** Mill. Deciduous or evergreen shrubs or trees; winter-buds small, with 2 or few outer scales: lvs. alternate, short-petioled, 3-5-nerved from the base, serrate or entire; stipules usually spiny: fls. usually yellow, small, 5-merous, perfect, in axillary cymes; ovary 2-4-, usually 2-celled; style usually 2-parted; fr. a subglobose to oblong drupe. (*Zizyphon*, ancient Greek name of *Z. Jujuba*.) About 40 species in trop. and subtrop. regions of both hemispheres.

**Z. Jujuba** Mill. COMMON JUJUBE. Shrub or small tree to 10 m.; glabrous; one spine slender, to 3 cm. long, the other decurved; brts. often fascicled and resembling pinnate lvs.: lvs. oblong-ovate to ovate-lanceolate, rarely ovate, 2-6 cm. long, acutish or obtuse, oblique and 3-nerved at base, crenate-serrulate, glabrous, firm; petiole 1-5 mm. long: fls. yellow, 2-3, axillary, short-stalked: fr. dark red or finally almost black, ovoid to oblong, 1.5-2.5 cm. long, short-stalked. Fl.iv-v; fr.ix-x. N.D.3:t.16(c). E.N.III.5:403g-h. F.E. 19:395,t.96(h). U.S. Im.47:t(h). N.K.9:t.2. (*Z. vulgaris* Lam., *Z. sativa* Gaertn.) S. E. Eu. to S. and E. Asia; nat. in Ala. Intr. about 1640. Zone (V), VII.—The frs. are edible and the tree is cult. in the Mediterr. reg.—**Z. J. inermis** (Bge.) Rehd., var. Brs. unarmed. N.K.9:t.3. (*Z. vulgaris* var. *i.* Bge.)

The related *Z. mauritiana* Lam. (*Z. jujuba* Lam., not Mill.) has the brts. and the under side of the lvs. tomentose and is probably not hardy within our area.

**3. BERCHÈMIA** Neck. Deciduous twining shrubs; winter-buds small, with 2 or 3 outer scales: lvs. alternate, entire or nearly so, penninerved with conspicuous parallel veins; stipules subulate: fls. perfect, small, 5-merous, in terminal panicles; ovary free, 2-celled; style 2-parted: fr. an oblong or cylindric drupe, with a 2-celled stone. (Named probably after Berthout van Berchem; about 1789.) About 12 species in S. and E. Asia, E. Afr. and N. Am.

A. Fls. in short lateral or terminal panicles with short lateral brs. .... 1. *B. scandens*  
 AA. Fls. in large spreading panicles to 15 cm. long with elongated racemose brs. .... 2. *B. racemosa*

**1. B. scandens** (Hill) K. Koch. SUPPLE-JACK. Shrub to 5 m.: lvs. elliptic-ovate to oblong-ovate, 3-8 cm. long, acute to obtuse, rounded or broad-cuneate at base, often undulate, with 9-12 pairs of veins; petiole to 1 cm. long: fls. greenish white, in terminal panicles 1-4 cm. long: fr. bluish black, oblong, 6-8 mm. long. Fl.vi; fr.vii-viii. S.O.3:t.153(c). Gr.G.2:t.165. B.B. 2:404. E.N.III.5:406b-d. S.H.2:f.183a-e. (*B. volubilis* DC.) Va. to Fla., Mo. and Tex. Intr. 1714. Zone VI.

Related species: *B. hypochrysa* Schneid. Lvs. oblong-ovate or elliptic-oblong, 5-11 cm. long, acuminate, golden-brown beneath, with 12-14 pairs of veins; petiole 1-2 cm. long: panicle 6-10 cm. long, its lower brs. to 3 cm. long. C. and W. China. Cult. 1920. Zone VII?—*B. polyphylla* M. A. Laws. Brts. pubescent: lvs. oval or ovate, 1-3 cm. long, obtuse or acute with 5-9 pairs of

veins: fls. in terminal or partly axillary racemes 1-6 cm. long; fl.-bud acuminate. Himal., w. China. Not in cult.—*B. p. leioclada* (Hand.-Mazz.) Hand.-Mazz., var. Brts. glabrous, sometimes glaucescent. C. and W. China. Cult. 1911. Zone VII?

2. *B. racemosa* Sieb. & Zucc. Lvs. ovate, 2.5-6 cm. long, glaucescent beneath, with 7-9 pairs of veins; petiole 1-2 cm. long; fls. greenish, in large terminal panicles 5-15 cm. long; fl.-buds pointed: fr. ovoid or obovoid, 5-6 mm. long, first red, finally black. Fl.vii-ix; fr.vii-viii of the following year. E.N.III.5:406A-C. Japan, Formosa. Intr. 1880. Zone (V).

Related species: *B. Giraldiana* Schneid. Lvs. ovate to ovate-oblong or oblong, 3.5-7 cm. long, acute to acuminate, sometimes obtuse, with 8-12 pairs of veins; panicle 8-15 cm. long; fl.-bud rounded at apex, abruptly apiculate: fr. oblong, about 7 mm. long. S.H.2:f.182m-n,183k. C. and W. China. Cult. 1911. Zone VII.

4. *RHAMNÉLLA* Miq. Deciduous trees or shrubs; winter-buds small, with several outer scales; terminal bud wanting: lvs. alternate, serrulate, penninerved; stipules subulate: fls. perfect, small, green, in axillary cymes, 5-merous; stamens perigynous; ovary incompletely 2-celled, about 1/8 inferior; style 2-lobed: drupe oblong, black, with a 1-seeded bony nutlet. (Diminutive of *Rhamnus*.) Six species in E. Asia.

*R. franguloides* (Maxim.) Weberb. Small tree to 10 m.: lvs. ovate-oblong, 5-12 cm. long, long-acuminate, rounded at base or broad-cuneate, finely serrulate, glabrous except pubescent on the veins beneath; petioles 3-8 mm. long; fls. in short-peduncled 5-15-fl. clusters; pedicels in fr. 2-4 mm. long; fr. cylindric-oblong, 8 mm. long, black. Fl.v-vi; fr.ix-x. S.I.2:t.48(c). N.K.9:t.5. S.H.2:f.183h-i,186a. (*R. japonica* Miq., *Microrhamnus* f. Maxim.) Japan, Korea, E. China. Cult. 1906. Zone VI? Similar in lf. to *Rhamnus crenata*, but base of stipules persistent and fr. narrow-oblong.

5. *SAGERÉTIA* Brongn. Deciduous or evergreen shrubs, often scandent, usually with spinescent brts.; winter-buds small, with several outer scales; terminal bud wanting: lvs. opposite or subopposite, small, penninerved, entire or serrulate, of firm texture; stipules small, deciduous: fls. perfect, 5-merous, whitish, small, sessile or subsessile, rarely pedicelled, forming terminal and axillary spikes often panicked; petals hooded; disk cup-shaped, 5-lobed: ovary 2-3-celled, with short 2-3-lobed style: fr. a small subglobose drupe, with fleshy to leathery exocarp and 2-3 indehiscent nutlets with leathery walls. (Named after Auguste Sageret, French botanist; 1763-1851.) About 15 species in E. and S. Asia and in N. Am.

*S. pycnophylla* Schneid. Spiny scandent shrub to 2 m.; brts. tomentulose: lvs. elliptic to elliptic-obovate, 5-18 mm. long, or the smaller ones suborbicular, rounded or obtuse at ends, sharply or crenate-serrulate, yellowish green and lustrous beneath and finely reticulate; petioles 1-2 mm. long, pubescent: fls. sessile, glabrous, in spikes 1-3.5 cm. long and usually 1-4 at end of brts. Fl.vi-vii; fr.x. W. China. Intr. 1910. Zone V.

Closely related species: *S. theezans* Brongn. Lvs. persistent or subsistent, ovate or broad-elliptic, 8-25 mm. long, obtusish, rounded or subcordate at base: fls. pubescent, in villous usually paniculate spikes: fr. purplish black, subglobose, 5 mm. across. Fl.ix-x; fr.iv-v. N.K.9:t.15. E.N.III.5:409. C. and E. China. Intr. 1908. Zone VII? May be useful as a hedge-plant south; fls. very fragrant.—*S. minutiflora* (Michx.) Trel., a native of the S. E. States (Gr.G.2:t.166) is probably not hardy within our area.

6. *RHAMNUS* L. BUCKTHORN. Deciduous or sometimes evergreen trees or shrubs, often spiny; winter-buds scaly or naked; terminal bud present or wanting: lvs. alternate or opposite, penninerved, serrulate to entire, stipulate: fls. perfect, polygamous or dioecious, small, greenish, yellowish or whit-

ish, 4-5-merous, sometimes apetalous, in axillary clusters, umbels or racemes: ovary 2-4-celled; style usually undivided: fr. a subglobose drupe with 2-4 1-seeded nutlets usually splitting on the inner side. (Ancient Greek name.) About 100 species chiefly native to the temp. regions of the n. hemisphere; few in Brazil and S. Africa.

A. Winter-buds scaly.

B. Lvs. opposite or subopposite.

C. Petioles 5-25 mm. long: lvs. with 2-8 pairs of ascending curving veins: brts. usually spinescent.

D. Lvs. large, 3-10 cm. long.

E. Lvs. sharply serrulate with acuminate or aristate teeth, rounded or subcordate at base: fr. on pedicels 12-25 mm. long.....1. *R. arguta*

EE. Lvs. with short acute or obtuse teeth: fr. on pedicels 3-8 mm. long.

F. Petioles  $\frac{1}{4}$  to  $\frac{1}{2}$  as long as blade.

G. Lvs. broad-ovate to oblong.

H. Lvs. broad-ovate to elliptic, 4-7 cm. long, thin, light green beneath.

HH. Lvs. narrow-elliptic to oblong, 6-10 cm. long, firm, lustrous above, grayish green beneath.....2. *R. cathartica*

GG. Lvs. obovate to oblong-obovate, narrow-cuneate.....3. *R. davurica*

FF. Petioles  $\frac{1}{4}$  to  $\frac{1}{2}$  as long as blade, 5-12 mm. long: lvs. elliptic-oblong to oblong, with 5-8 pairs of veins.....4. *R. japonica*

DD. Lvs. small, 1-3, rarely to 4 or occasionally to 5 cm. long.....5. *R. utilis*

E. Lvs. closely crenate-serrulate, usually elliptic-obovate.....6. *R. saxatilis*

EE. Lvs. remotely and obscurely crenate-serrulate, those of shoots often rhombic-lanceolate or obovate-lanceolate.

F. Young brts. and lvs. more or less pubescent.....7. *R. dumetorum*

FF. Young brts. and lvs. glabrous or nearly so.....8. *R. rosthornii*

CC. Petioles 2-4 mm. long: lvs. with numerous parallel straight veins, 6-12 cm. long.

13. *R. costata*

BB. Lvs. alternate.

C. Brs. spinescent: lvs. with 3-6 pairs of veins, 0.6-7 cm. long.

D. Lvs. lanceolate or elliptic-lanceolate to linear.....9. *R. spathulifolia*

DD. Lvs. elliptic or elliptic-ovate to oblong-ovate or obovate.

E. Lvs. glabrous, obtuse or acutish, not over 4.5 cm. long, chartaceous.

EE. Lvs. pubescent, rarely glabrous, acuminate, membranous.....10. *R. petiolaris*

CC. Brts. not spinescent.....11. *R. schneideri*

D. Lvs. deciduous.

E. Stipules persistent: lvs. small: fls. 5-merous.....12. *R. heterophylla*

EE. Stipules not persistent: lvs. large: fls. 4-merous (except No. 19 and *R. purpurea* under No. 16): lvs. large.

F. Lvs. with 12-25 pairs of parallel, nearly straight veins.

G. Lvs. pubescent.....14. *R. imeretina*

GG. Lvs. glabrous.....15. *R. fallax*

FF. Lvs. with 4-12, rarely to 14 pairs of veins.

G. Petioles 6-15 mm. long (see also No. 1).

H. Lvs. subcordate or rounded at base, with 8-12 pairs of veins.

16. *R. alpina*

HH. Lvs. cuneate, with 6-8 pairs of veins.....17. *R. pumila*

CC. Petioles 3-8 mm. long.

H. Lvs. elliptic to oblong-lanceolate, serrulate: fls. 4-merous.

HH. Lvs. elliptic, crenate-serrate: fls. 5-merous: low shrub.....18. *R. lanceolata*

DD. Lvs. evergreen or half-evergreen, remotely spinulose-denticulate (or crenate-serrate in the hybrid).....19. *R. alnifolia*

EE. Lvs. with 12-25 pairs of parallel, nearly straight veins.....20. *R. alaternus*

AA. Winter-buds naked.

B. Lvs. evergreen: infl. peduncled.....21. *R. californica*

BB. Lvs. deciduous.

C. Fls. in peduncled umbel-like cymes.

D. Lvs. with 7-15 pairs of veins, 5-15 cm. long.

E. Lvs. acute to short-acuminate, sometimes obtuse, often nearly entire.

F. Peduncles usually longer than petiole: lvs. with 8-15 pairs of veins.

22. *R. purshiana*

FF. Peduncles usually shorter than petiole: lvs. with 8-10 pairs of veins.

23. *R. caroliniana*

EE. Lvs. distinctly acuminate, closely serrulate.....24. *R. crenata*

DD. Lvs. with 6-8 pairs of veins, 2-5 cm. long, glabrous: low shrub.....25. *R. rostrata*

CC. Fls. fascicled, sometimes solitary: lvs. with 8 or 9 pairs of veins, usually entire, 3-7 cm. long.....26. *R. frangula*

Subgen. I. EURHAMNUS Dipp. Winter-buds scaly, terminal bud wanting: lvs. often opposite: fls. polygamo-dioecious, usually 4-merous; style 2-4-parted; seed (not the outer coat of nutlet) with dorsal furrow; cotyledons thin, curved, green.

Sect. I. CERVISPINA Moench. Brts. usually spinescent and often spur-like with fascicled lvs.

1. *R. arguta* Maxim. Shrub to 3 m., with slender, rarely spinescent brts.: lvs. sometimes alternate, roundish-oval to ovate, 2.5-7 cm. long, obtuse or acutish, rounded or subcordate at base, sharply and finely serrulate, with acuminate or aristate teeth, bright green, lighter beneath, glabrous; petiole 1-2.5 cm. long: pubescent above: fls. slender-pedicled, often in clusters on spurs: fr. subglobose-pyriform, 6-8 mm. long, on pedicels 1.2-2.5 cm. long. Fl. iv-v; fr. ix. S.H.2:f.1971-n, 199h-h<sup>1</sup>. N. China. Cult. 1909? Zone V? Distinct on account of the peculiar serration and the long-stalked fr.

2. *R. cathartica* L. COMMON B. Shrub or small tree to 6 m.: lvs. elliptic or ovate, 4-7 cm. long, acute or obtusish, rounded or subcordate at base, sometimes broad-cuneate, crenate-serrulate, dull green above, light green and usually glabrous beneath, with 3-5 pairs of veins, thin; petiole 6-25 mm. long: fls. yellowish green, in 2-5-fld. clusters: fr. black, subglobose, about 6 mm. across; seed with the furrow open only near base. Fl. v-vi; fr. ix-x. F.D.21:t. 2183(c). S.E.2:t.318(c). M.Am.1:t.41(c). B.B.2:502. M.A.t.68(h). (*R. Willdenowiana* Hort., not Roem. & Schult.—HART'S THORN, WAYTHORN, REINEBERRY.) Eur., w. and n. Asia; naturalized in the E. States. Cult. for centuries. Zone II. Used as a hedge-plant.—*R. c. pubescens* Bean. Lvs. pubescent beneath.

See also *R. koraiensis* and *R. rugulosa* under No. 11.

3. *R. davurica* Pall. Large spreading shrub or small tree to 10 m., with rather stout often spinescent brts., glabrous: lvs. elliptic-obovate to oblong, 4-10 cm. long, acuminate, cuneate, crenate-serrulate, lustrous above, grayish green and glabrous or slightly pubescent beneath, of firm texture: petiole 6-25 mm. long: fls. and fr. like those of preceding sp.; seed usually with narrow furrow. Fl. v-vi; fr. ix-x. G.F.9:425 (as *R. crenata*). N.K.9:t.12. B.C.5:2925. (*R. cathartica* var. *d.* Maxim., *R. mandshurica* Hort.) Dahuria to N. China, Manch. and Korea. Intr. 1817. Zone II. Similar to the preceding, but of more vigorous spreading habit and with larger lustrous lvs.—*R. d. nipponica* Mak., var. Lvs. narrow-oblong, 5-15 cm. long, 2.5-5 cm. broad, light-green beneath. N.K.9:t.13. S.H.2:f.197q(l). Japan, Korea. Intr. before 1892. Zone II.

4. *R. japonica* Maxim. Shrub to 3 m.; brts. yellowish or grayish brown, lustrous, often spinescent or spur-like: lvs. obovate to oblong-obovate, 5-8 cm. long, rounded and short-acuminate, cuneate, serrulate, with 3-5 pairs of veins, slightly pubescent beneath or nearly glabrous, bright green; petiole 8-25 mm. long, pubescent: fls. greenish brown, usually in dense clusters on spurs: fr. black, 6-8 mm. across: seeds with usually closed furrow. Fl. v; fr. x. S.I.2:t.48(c). M.K.t.75(c). S.H.2:f.196t-u, 197e-k. Japan. Intr. 1888. Zone III. Shrub with bright green lvs. and slightly fragrant fls.

Related species: *R. virgata* Roxb. Shrub or small tree; young brts. pubescent: lvs. narrow-elliptic to lanceolate, 4-8 cm. long, usually obtusely acuminate, slightly pubescent on both sides, denticulate or erose-denticulate; petiole 4-10 mm. long: fr. bluish black; seed with open furrow. S.H.2:f.192f-h(l). N. W. Himal. Cult. 1919. Zone VII?—*R. leptophylla* Schneid. Shrub to 2 m.: lvs. elliptic-obovate, 4-7 cm. long, acuminate, remotely denticulate, glabrous beneath, bright green: pedicels and receptacle pubescent outside: seed with an open furrow. S.H.2:f.196v-w, 198e-h. C. and W. China. Intr. 1907. Zone V.—*R. l. scabrella* Rehd., var. Young brts. pubescent: lvs. 2-4 cm. long, scabrid-pilose above, midrib beneath and petiole pilose. Intr. 1926.

5. *R. utilis* Dene. Shrub to 3 m.; brts. usually not spinescent, glabrous: lvs. narrow-elliptic to oblong, 6-12 cm. long, short-acuminate to acuminate,

cuneate, serrulate, yellow-green, glabrous and yellowish green beneath, with 5-8 pairs of yellow veins, sometimes with yellowish pubescence on veins when young; petiole 5-12 mm. long; fls. yellowish green; fr. black, 6-7 mm. across, usually 2-seeded; seed furrowed. Fl.v-v; fr.ix-x. Rondot, Vert de Chine, t.1. S.H.2:f.197t-w, 1991. (*R. chlorophora* Dipp., not Dene.) C. and E. China. Cult. 1870. Zone VI. With rather large bright or yellow-green lvs.

6. *R. saxatilis* Jacq. Rock B. Low spreading shrub to 60 or 90 cm.; young brts. minutely pubescent, becoming mostly spiny; lvs. elliptic-ovate to obovate, 1-2.5 cm. long, often folded, acute or obtusish, cuneate, serrulate, glabrous, with 2-4 pairs of veins; fls. very small, greenish yellow; fr. turbinate, black; seeds usually 3, with open furrow. Fl.v-vi; fr.viii-ix. F.D.21:t. 2186(c). S.O.3:t.t.159(c). H.W.3:57. S.H.2:f.1930-o<sup>4</sup>, 196a-e. C. and S. Eu. Intr. 1752. Zone V.

Related species: *R. infectoria* L. AVIGNON-BERRY. Spreading shrub to 2 m., spiny; lvs. elliptic or sometimes obovate or ovate, 1-4 cm. long, acute, dark green, usually glabrous above and slightly pubescent beneath; petiole 4-10 mm. long; seeds usually 2, with only partly open furrow. G.O.t.98(c, as *R. saxatilis*). F.D.21:t.2185(c). E.N.III.5:f.201b. S.H.2:f.195a-a<sup>2</sup>, 196f-h<sup>1</sup>. (*R. saxatilis* ssp. i. Rouy & Fouc.) S. Eu. Intr. 1683. Zone VI.—*R. tinctoria* Waldest. & Kit. Shrub to 1.5 m.; young brts. pubescent; lvs. elliptic or narrow-elliptic, 2-5 cm. long, pubescent beneath and usually above; petiole 4-10 mm. long; seed with open furrow. F.D.21:t.2184(c). G.O.t.97(c). S.H.2:f.195b-b(1). S. E. Eu. Intr. 1820. Zone V.—*R. prunifolia* Sibth. & Sm. Spreading, procumbent or upright shrub; lvs. oval or obovate, 8-18 mm. long, obtuse, cuneate, finely denticulate, glabrous or nearly so; petiole 1-3 mm. long; seed with open furrow. S.H. 2:f.193m-n<sup>4</sup> (not l-l<sup>4</sup>). (*R. Simonii* Hort.) S. E. Eu. Intr. before 1858. Zone VII?

7. *R. dumetorum* Schneid. Spreading shrub to 2 m., with numerous short spiny brts. minutely pubescent when young, later usually red-brown; lvs. elliptic or obovate, 8-20 mm. long, those of shoots elliptic-lanceolate to obovate-oblong, 1.5-3.5 cm. long, acute or obtuse, cuneate, crenate-denticulate, slightly pubescent above, pubescent on the veins beneath, with 3-4 pairs of veins; petiole 3-6 mm. long, pubescent; fls. green, sparingly pubescent, apetalous; fr. globose-obovoid, about 6 mm. across, on very short pedicels; seed with furrow open only at base. Fl.v-vi; fr.x. W. China. Intr. 1910. Zone V.—*R. d. crenoserrata* Rehd. & Wils., var. Lvs. 4-7 cm. long, crenate-serrate, usually with 5 pairs of veins; pedicels of fr. about 5 mm. long. W. China. Intr. 1910. Zone V.

Related species: *R. globosa* Bge. Spiny shrub; brts. pubescent, rather slender; lvs. usually obovate, sometimes nearly suborbicular, 1.5-4 cm. long, abruptly and obtusely short-acuminate, crenate-serrulate, pubescent on both sides; petiole 3-10 mm. long; fr. short-stalked, usually 2-seeded; seed with furrow open only at base. Rondot, Vert de Chine t.2. S.H.2:f.195f-f<sup>2</sup>, 196q-r. (*R. chlorophora* Dene., *R. virgata* var. *aprica* Maxim.) N. China Cult. 1890. Zone V.

8. *R. Rostkornii* Pritz. Shrub to 2 m.; young brts. glabrous or slightly pubescent; lvs. obovate to obovate-oblong or lance-oblong, obtusely acuminate or obtusish, gradually narrowed at base, 1.2-4 cm. long, remotely crenate-denticulate, with usually 3 pairs of veins, glabrous; petiole 2-5 mm. long, finely pubescent; fr. globose-ovoid, 5 mm. across, on a stalk 2-4 mm. long, seeds usually 2, with partly open furrow. Fl.v-vi; fr.ix. S.H.2:f.195g-g<sup>2</sup>, 196i. W. China. Intr. 1908. Zone VI?

Related species: *R. parvifolia* Bge. Spiny shrub, to 2 m.: lvs. elliptic-obovate to elliptic, 1.5-3.5 cm. long, acute, cuneate, dark green and often pilose above, grayish green and glabrous or with axillary tufts of hairs beneath, with 3-5 pairs of veins; petiole 5-16 mm. long; fr. subglobose, on a stalk 5-10 mm. long; seed with open or sometimes closed furrow. N.K.9:t.11. S.H.2:f.192i-l, 196x-y<sup>1</sup>. (*R. polymorphus* Turcz., *R. virgata* var. *sylvestris* Maxim.) N. E. Asia. Intr. 1910. Zone V.

9. *R. spathulaefolia* Fisch. & Mey. Shrub to 2 m.; brts. finely pubescent when young, often becoming spinescent: lvs. elliptic-lanceolate to lanceolate or oblanceolate, 1.5–5 cm. long, acute or obtusish, rarely short-acuminate, gradually narrowed at base, denticulate or remotely crenate-serrulate, pubescent on both sides when young, later glabrescent: petiole 2–10 mm. long: fr. black, on a stalk 4–10 mm. long; nutlet dehiscent; seed with the furrow open only at ends, at apex divided by an inflexed appendix. Fl.v–vi; fr. viii–ix. S.H.2:f.193a–a<sup>3</sup>, 194g. (*R. Pallasii* var. s. Maxim.) W. Asia. Cult. 1870. Zone V.

Related species: *R. Pallasii* Fisch. & Mey. Spreading spiny shrub: lvs. linear to linear-lanceolate, 1.5–3.5 cm. long, serrulate, slightly pubescent when young; petiole 3–6 mm. long: fr. usually with 2 splitting nutlets; seed with open furrow, without appendix at apex. Pallas, Fl. Ross. 2:t.14. S.H.2:f.193c–c<sup>2</sup>, 194b–e<sup>1</sup>. S.L.293 (h). W. Asia. Cult. 1890. Zone V.—*R. Erythroxylon* Pall. Spreading spiny shrub; young brts. finely pubescent: lvs. linear to linear-lanceolate, 2–5 cm. long, acute, serrulate, slightly pubescent when young; petiole 5–12 mm. long: fr. with 3 indehiscent nutlets; seed with narrow furrow. Pallas, Fl. Ross. 2:t.13 (c). L.A.2:535. S.H.2:f.193b, 194f. Siberia. Intr. 1823. Zone V.

10. *R. petiolaris* Boiss. Shrub; brts. dark red-brown: lvs. chartaceous, ovate-oblong to elliptic-ovate, 1.5–4.5 cm. long, obtuse or acute, cuneate or broad-cuneate, crenate-serrulate, glabrous, with 4–5 pairs of veins; petiole 0.8–2.5 cm. long; fr. subglobose, 5–7 mm. across; seeds 3–4, with open furrow. S.H.2:f.195c–d, 199f. Asia Minor. Cult. 1906. Zone VII?

Related species: *R. oleoides* L. Shrub to 1 m.: lvs. evergreen, obovate, 0.6–2.5 cm. long, obtuse, cuneate, glabrous or pubescent on the veins beneath at first, with 3–4 pairs of veins; petiole 2–5 mm. long: seed with narrow furrow open at base. S.H.2:195c–d. Mediterr. reg. Cult. 1933. Zone VII?

11. *R. Schneideri* Lévl. & Vant. Shrub; brs. mostly spiny; brts. glabrous: lvs. sometimes opposite, elliptic to elliptic-obovate, 2.5–6 cm. long, short-acuminate or acute, cuneate, crenate-serrulate, glabrous, with 4–6 pairs of veins; petiole 3–15 mm. long; fls. slender-pedicelled: fr. broad-obovoid; stalk 7–18 mm. long; seeds 2, with furrow open at base only. N.K.9:t.6a. S.H.2:f.198r–u. Korea.—*R. S. manshurica* Nakai, var. Young brts. and petioles pubescent; lvs. short-pilose above and on the veins beneath. N.K.9:t.6b. Korea, Manch. Intr. 1917. Zone V.

Related species: *R. koraiensis* Schneid. Shrub to 1.5 m.; young brts. pubescent: lvs. elliptic or ovate, 2–4 cm. long, obtusely acuminate, cuneate, crenulate, pubescent at first on both sides, later glabrescent: pedicels and calyx pubescent: fr. subglobose; seeds 1–3. N.K.9:t.8. Korea. Cult. 1928. Zone V.—*R. rugulosa* Hemsl. Shrub to 2 m.; brts. pubescent: lvs. elliptic-ovate to oblong-ovate, 4–7 cm. long, acuminate or sometimes rounded at apex, rounded to broad-cuneate at base, crenulate, densely villous beneath, pubescent or glabrescent above, with 5–6 pairs of veins impressed above, prominent beneath: fls. pubescent: seeds with open furrow. S.H.2:f.196k–m, 198a–d. C. and W. China. Cult. 1917. Zone V.

Sect. 2. *ESPINOSA* K. Koch. Brts. not spinescent: lvs. alternate (except No. 13).

12. *R. heterophylla* Oliv. Shrub to 1.5 m., with slender alternate brs.; young brts. densely short-pilose, with persistent, somewhat spinescent stipules: lvs. ovate or sometimes suborbicular to oblong-lanceolate, 5–30 mm. long, acute or acuminate, cuneate to rounded at base, remotely and finely crenate-serrulate, glabrous above, villous on midrib beneath and yellowish green, firm, with 3–4 pairs of veins; petiole 1–2 mm. long; fls. minute, 1 or 2 in the axils, very short-stalked, 5-merous, pubescent outside: fr. subglobose, about 5 mm. across, black, 3-seeded, on stalks about 1 mm. long. Fl.vii; fr. x. H.I.18:1759. W. China. Intr. 1910. Zone VI? Distinct species with small lvs. of different shapes on the same br.

13. *R. costata* Maxim. Shrub to 5 m.; brts. stout, glabrous: lvs. opposite, short-petioled, ovate-oblong, 8-14 cm. long, short-acuminate, broad-cuneate or narrowed to a subcordate base, crenate-serrulate, rugose above, pubescent beneath chiefly on the veins, with about 20 pairs of veins; petiole 2-4 mm. long: fls. yellowish green, on slender stalks 1.5-3 cm. long: fr. obovoid, about 8 mm. across, 2-seeded; seeds with closed furrow. Fl.vi; fr.x. S.I.2:t.48(c). S.H.2:f.191m(l). M.G.31:29(h),30. S.L.292(h). Japan. Cult. 1908. Zone VI? Distinct and handsome species.

A similar species is *R. Sargentiana* Schneid. Shrub to 6 m.; lvs. alternate, elliptic-oblong, 4-12 cm. long, sparingly hairy beneath, with 12-18 pairs of veins; petiole 2-5 mm. long: pedicels 2-3 mm. long; fr. about 5 mm. across, 3-seeded. W. China. Intr. 1908. Zone VI?

14. *R. imeretina* Kirchn. Shrub to 3 m., with stout brts. slightly pubescent when young: lvs. elliptic-oblong to oblong, 10-25 cm. long, acuminate, rounded or subcordate, serrulate, dark green and glabrescent above, pubescent beneath chiefly on the veins, with 15-25 pairs of veins impressed above; petiole 1-2 cm. long: fls. green, small, in few-fld. clusters: fr. about 6 mm. across. Fl.vi; fr.x. B.M.6721(c). S.H.2:f.190n-n<sup>3</sup>,191f-g. M.G.21:405(h). (*R. libanotica* Hook. f., not Boiss., *R. colchica* Lipsky, *R. grandifolia* Hort., not Fisch. & Mey., *R. castaneifolia* Hort.) Cauc., W. Asia. Intr. before 1858. Zone V. With large lvs. changing to bronzy purple in autumn.

Related species: *R. libanotica* Boiss. Lvs. smaller, oblong-obovate, 6-12 cm. long, crenate-denticulate, pubescent beneath, with 10-15 pairs of veins; petiole 8-10 mm. long: fr. about 5 mm. across. S.H.2:f.189s,190n-n<sup>3</sup>. Syria, Cilicia. Cult. 1905. Zone VI?—See also *R. Sargentiana* under No. 13.

15. *R. fallax* Boiss. CARNIOLAN B. Shrub to 3 m.; brts. rather stout, glabrous, becoming reddish brown: lvs. elliptic-oblong to oblong or oblong-obovate, 5-12 cm. long, acuminate, rounded or subcordate at base, crenate-serrulate, dark green above, lighter green and glabrous or nearly so beneath, with 12-20 pairs of veins; petiole 6-15 mm. long: fls. yellowish green, in 3-7-fld. clusters; pedicels 3-6 mm. long: fr. subglobose, 5-6 mm. across. Fl.v-vi; fr.vii-ix. S.O.3:t.157(c, as *R. alpinus*). H.W.3:58. H.M.5:341(h). (*R. carniolicus* Kern., *R. alpina* var. *grandifolia* Hort.) Mts. of S. E. Eu. Cult. 1800. Zone V.

16. *R. alpina* L. ALPINE B. Shrub to 3 m.; young brts. glabrous or finely pubescent, becoming dull grayish brown: lvs. elliptic, 5-10 cm. long, rounded or abruptly short-acuminate, rounded to subcordate at base, serrulate, glabrous, with 9-12 pairs of veins; petioles 5-15 mm. long: fls. and fr. like the preceding species, but fr. smaller. Fl.v-vi; fr.viii-ix. L.B.1077(c). F.D.21:t.2187(c). S.H.2:f.189i-l,190f-h. S. W. Eu. Intr. 1752. Zone V.

*R. a. × Alaternus*; see under No. 20.

Related species: *R. purpurea* Edgew. Tall shrub or small tree; brts. glabrous: lvs. elliptic to elliptic-oblong, 7-16 cm. long, acuminate, broad-cuneate, crenate-serrulate, glabrous, with 7-10 pairs of veins; petiole 5-10 mm. long: fls. 5-merous: fr. subglobose, on pedicels of about equal length. M.G.1916:31. Brandis, For. Fl. t.18. Cult. 1916. N. W. Himal. Zone VII?

17. *R. pumila* L. DWARF B. Low, often procumbent shrub; young brts. finely pubescent: lvs. suborbicular to elliptic, 2-5 cm. long, acute or acutish, broad-cuneate, crenate-serrulate, glabrous or slightly pubescent on veins beneath, with 5-8 pairs of veins; petiole 3-10 mm. long: fls. yellowish green, on pedicels 4-7 mm. long: fr. bluish black, subglobose. Fl.v-vii; fr.viii-ix. S.H.2:f.189e-h,190o-p. Alps. Intr. 1752. Zone V. Adapted for rockeries.

18. *R. lanceolata* Pursh. Upright slender-branched shrub to 2 m.; brts. puberulous, becoming reddish brown: lvs. ovate-lanceolate to oblong-lance-

olate, 2.5-8 cm. long, acute or acuminate, often obtuse on flowering brts., cuneate or rounded at base, finely serrulate, glabrous or minutely downy and light green beneath, with 7-9 pairs of veins; petiole 5-10 mm. long: fls. perfect, of 2 forms on distinct plants, one with short clustered pedicels and short style and one with few often solitary pedicels and exserted style: fr. subglobose, about 6 mm. across, 2-seeded. Fl.v; fr.viii-ix. Gr.G.2:t.168. B.B.2:503. S.H.2:f.190p-s,192a-c. Pa. to Neb., Iowa, Tex. and Ala. Cult. 1870. Zone V. Shrub with bright green lvs.

Closely related species: *R. Smithii* Greene. Shrub to 5 m.; brts. glabrous, becoming light grayish brown: lvs. oblong-lanceolate to lanceolate, 3-7 cm. long, obtuse or rarely acutish, usually rounded at base, crenate-serrulate, glabrous, yellowish green beneath, firm and thickish. Colo. Intr. 1905. Zone V.

19. *R. alnifolia* L'Hérit. Low spreading shrub, rarely exceeding 1 m.; young brts. minutely downy: lvs. elliptic to ovate, 4-10 cm. long, acute, cuneate, unequally crenate-serrate, glabrous or slightly pubescent on the veins beneath, with 6-8 pairs of veins; petiole 5-12 mm. long: fls. usually 2-3, apetalous, 5-merous: fr. subglobose, 6 mm. across, black, 3-seeded. Fl.v-vi; fr.ix-x. G.O.t.61(c). B.B.2:503. Hooker, Fl. Bor. Am.1:t.42. S.H.2:f.190t-w,192d-e. S.L.292(h). N. B. and N. J. to B. C. and Calif. Intr. 1778. Zone II. Rather compact shrub with bright green lvs.

20. *R. Alaternus* L. Evergreen shrub to 4 or 6 m.; brts. minutely downy: lvs. elliptic or ovate to ovate-lanceolate, 2-5 cm. long, acute, remotely serrate or nearly entire, dark green and lustrous above; yellowish green and glabrous or nearly so beneath, with 3-5 pairs of veins; petiole 4-6 mm. long: fls. yellowish green, very small, 5-merous, polygamo-dioecious, in short fascicle-like racemes: fr. black, 6 mm. across. Fl.iii-iv; fr.vii-ix. N.D.3:t.14(c). H.W.3:59. S.H.2:f.187a-f,188g-m. Mediterr. region. Intr. about 1700. Zone VII? Evergreen shrub of bushy habit.—*R. A. argenteo-variegata* (West.) Rehd., f. Lvs. rather narrow, with broad creamy-white margin. S.O.3:t.156, upper fig.(c). (*R. A. var. variegata* Bean.)—*R. A. angustifolia* (Mill.) Dum.-Cours. Lvs. oblong-lanceolate to lanceolate, more deeply toothed. (*R. a. Mill., R. Perrieri* Hort.)—*R. A. integrifolia* Bean, var. Lvs. mostly without teeth, rather conspicuously veined.

*R. A. × alpina* = *R. hybrida* L'Hérit. Half-evergreen shrub to 4 m.: lvs. elliptic or ovate to elliptic-oblong, 4-10 cm. long, obtuse or acutish, shallowly serrulate, lustrous above, glabrous with about 7 pairs of veins; petiole 4-8 mm. long. S.H.2:f.189a-c. G.W.12:342(h, as *R. latifolia viridis*)? Orig. before 1788. Zone VI?—*R. h. Billardi* Dipp. Lvs. smaller, narrower, more lanceolate and more coarsely denticulate. S.H.2:f.189d.

Related species: *R. crœcea* Nutt. Shrub to 1 m.; brts. glabrous, often spinescent: lvs. elliptic or broad-ovate to suborbicular, 0.6-2 cm. long, rounded and often apiculate at apex, glandular-denticulate, often copper-colored beneath: fls. 4-merous, in short fascicles: fr. red, obovoid. J.H.6:217. S.H.2:f.187g-i,188a-f. Calif. Intr. 1848. Zone VII?—*R. c. ilicifolia* (Nutt.) Greene, var. Tree to 6 m.: lvs. 2-4 cm. long, spinulose-dentate. S.M.723. Calif. to Ariz. Intr. ?

Subgen. II. FRANGULA Dipp. Unarmed shrubs; winter-buds naked: lvs. always alternate: fls. perfect, 5-merous, in sessile or peduncled umbel-like cymes, rarely solitary; styles simple with 3-lobed stigma: seed not furrowed; cotyledons flats, thick, hypogeous. (*Frangula* Mill.)

21. *R. californica* Eschsch. COFFEE-BERRY. Evergreen shrub to 5 m.; young brts. pubescent: lvs. oblong to oblong-lanceolate, 3-10 cm. long, obtuse or acute, to short-acuminate, usually rounded at base, serrulate or entire, yellowish green and glabrous beneath or pubescent on the veins, with 8-12 pairs of veins; petiole 4-15 mm. long: peduncles longer or shorter than petiole, pubescent: fr. depressed-globose, 8 mm. across, changing from red to purple-black. Fl.v-vii; fr.viii-ix. Hooker, Fl. Bor. Am.1:t.44. R.H.1874:

354. S.H.2:f.186c-f(l). (*R. oleifolia* Hook., *R. Purshiana* var. *c.* Rehd., *Frangula c.* Gray.) Ore. to Calif. Cult. 1871, or possibly 1858? Zone VII?

Related species: *R. tomentella* Benth. Brts. and lvs. beneath densely yellowish or grayish tomentose. S.S.2:t.63,f.2. R.H.1858:658;1872:194. (*R. californica* var. *t.* Brew. & Wats., *R. ursina* Greene.) Calif. to Ariz. Cult. 1858.

22. *R. Purshiana* DC. CASCARA BUCKTHORN. Tall shrub or tree to 15 m.; young brts. pubescent or tomentose: lvs. elliptic to ovate-oblong, 5-15 cm. long, acute or obtuse, rounded at base, remotely denticulate or sometimes entire, dark green above, lighter and pubescent beneath or nearly glabrous, with 10 to 15 pairs of veins; petiole 1-2 cm. long: infl. pubescent: fr. turbinate, 8 mm. long, purplish black, with 2-3 seeds. Fl.v-vi; fr.ix. S.S.2:t.62,63. Am. For. 29:177(h). K.B.1908:430,t(h). (*Frangula P.* Coop.) B. C. to Mont. and N. Calif. Cult. 1870. Zone VI. The source of the drug "Cascara Sagrada."

23. *R. rupéstris* Scop. Spreading shrub to 80 cm., sometimes procumbent; young brts. pubescent: lvs. elliptic to elliptic-oblong or sometimes broad-oval to nearly orbicular, 2-5 cm. long, obtuse or acute, rounded at base, denticulate or sometimes entire, pubescent on the veins beneath, with 5-8 pairs of veins; petiole 2-5 mm. long: fls. in pubescent 3-8-fld. umbels: fr. globose-obovoid, 6 mm. across, first red then black. Fl.v-vi; fr.vii-ix. F.D.21:t.2188(c). S.O. 3:t.155(c). S.H.2:f.185e-e<sup>3</sup>,186m-o. (*Frangula r.* Schur.) S. E. Eu. Cult. 1800. Zone V.

24. *R. Frangula* L. ALDER B. Shrub or small tree to 6 m.; young brts. pubescent: lvs. oval or obovate to obovate-oblong, 3-7 cm. long, acute, rounded or broad-cuneate at base, entire, dark lustrous green above, lighter green and often slightly pubescent beneath, with 8 or 9 pairs of veins; petiole 6-12 mm. long: fls. in clusters of 2-10, glabrous; pedicels 8-12 mm. long: fr. globose, 6 mm. across, changing from red to dark purple, 2-seeded. Fl.v-vii; fr.vii-ix. S.E.2:t.319(c). F.D.21:t.2189(c). H.W.3:t.48(c). B.B.2:504. Gg. 8:3. (*Frangula Alnus* Mill., *R. Korolkowii* Hort.) Eu., W. Asia, N. Afr.; naturalized in the E. States, also in Ill. Long cult. Zone II. With lustrous lvs. changing to clear yellow in fall and numerous red to purple-black fr. in late summer.—*R. F. latifolia* (Kirchn.) Dipp. Lvs. larger and broader, to 12 cm. long and to 6 cm. broad: fr. larger. S.H.2:f.186k(l). (*R. l.* Kirchn., not L'Hérit.) Caucas. Cult. 1860.—*R. F. angustifolia* Loud., var. Lvs. lance-oblong to elliptic-oblong, 1-2 cm. wide.—*R. F. heterophylla* Mouillef., var. Lvs. lanceolate, with irregular, undulate and often lobed margin.—*R. F. asplenifolia* Dipp. Lvs. linear to linear-lanceolate, 4-6 cm. long and 3-5 mm. wide, with wavy margin. Morton Arb. Bull. 4:56. Cult. 1888.

Related species: *R. latifolia* L'Hérit. Small tree: lvs. elliptic to elliptic-oblong, 10-18 cm. long, entire, with 10-13 pairs of veins, pubescent beneath; receptacle pubescent on both sides. B.M.2663(c). G.O.t.100(c). I.T.3:t.106. Azores. Intr. 1778. Zone VII?

25. *R. caroliniana* Walt. INDIAN CHERRY. Shrub or small tree, to 10 m.; young brts. puberulous: lvs. elliptic to oblong or lance-oblong, 5-15 cm. long, acute or acuminate, usually rounded at base, obscurely serrulate or nearly entire, nearly glabrous, with 8-10 pairs of veins; petiole 6-16 mm. long, pubescent: infl. pubescent, 2-8-fld.: fr. globose, 8 mm. across, changing from red to black, sweet; nutlets 3. Fl.v-vi; fr.ix. S.S.2:t.61. B.B.2:503. Gr.G.2:t.167. (*Frangula c.* Gray.) N. Y. to Fla., w. to Neb. and Tex. Intr. 1727. Zone (V). Lvs. changing to yellow in fall.

26. *R. crenata* Sieb. & Zucc. Shrub to 3 m.; young brts. and young lvs. rusty-pubescent, soon glabrous: lvs. oblong-ovate to lance-oblong or obovate-

oblong, 5-10 cm. long, acuminate, rounded at base, serrulate, bright green above, lighter beneath and pubescent at least on the veins, with 7-12 pairs of veins; petiole 8-15 mm. long; infl. pubescent, on a peduncle to 1 cm. long, sometimes sessile: fr. subglobose, 6-8 mm. across, changing from red to black. Fl.vi; fr.viii-ix. S.I.2:t.47(c). N.K.9:t.14. S.H.2:f.185f-g<sup>1</sup>, 186p-q. (*Frangula c. Miq.*) Japan and Korea to C. China. Intr. 1905. Zone III.

7. **HOVENIA** Thunb. Deciduous tree; winter-buds with 2 outer caducous scales, pubescent; lvs. alternate, long-petioled, 3-nerved at base, estipulate: fls. perfect, 5-merous, small, greenish, in axillary and terminal cymes; petals convolute, enclosing the stamens; disk pubescent; style 3-parted: fr. 3-celled and 3-seeded, with leathery exocarp, indehiscent; the brs. of the infl. fleshy and twisted at maturity; seed flattened, with lustrous dark brown testa; cotyledons flat, broad. (After David ten Hoven, senator of Amsterdam; 1724-87.) One species.

**H. dulcis** Thunb. JAPANESE RAISIN-TREE. Tree to 10 m.: lvs. broad-ovate to elliptic, 10-15 cm. long, acuminate, subcordate or rounded and usually unequal at base, coarsely serrate, glabrous or pubescent on the veins beneath; petiole 3-5 cm. long; fls. 7 mm. across, in many-fl. cymes 4-6 cm. broad on peduncles 1.5-3 cm. long; fr. subglobose, about 8 mm. across, light grayish or brownish; the fleshy brs. of the infl. reddish. Fl.vi-viii; fr.ix-x. B.M.2360(c). B.R.501(c). S.I.2:t.47(c). I.S.1:t.37. S.H.2:291. (*H. acerba* Lindl., *H. inaequalis* DC.) China; cult. in Japan and India. Cult. 1820. Zone (V). Grown for its handsome lvs. and possibly also for the fleshy edible infl.

8. **CEANOTHUS** L. Deciduous or evergreen shrubs, rarely small trees, sometimes spiny; winter-buds small, pubescent, with few outer scales: lvs. alternate, sometimes opposite, serrate or entire, usually 3-nerved at base; stipules small, deciduous; fls. perfect, small, 5-merous, in small umbels forming spikes or panicles; sepals often incurved, colored; petals hooded and clawed, spreading or recurved; filaments slender; disk annular; ovary 3-celled, partly or sometimes scarcely adnate to receptacle: fr. usually globose-turbinate, 3-lobed at apex, dry at length and separating into 3 dehiscent parts, the receptacle persisting as a cup; seeds albuminous; embryo with flat cotyledons. (Ancient Greek name.) Nearly 50 species in N. Am. chiefly in the Pacific coast region, s. to Mex.

A. Lvs. alternate, distinctly 3-nerved at base.

B. Lvs. crenate or serrate.

C. Lvs. glabrous or pubescent and green beneath.

D. Lvs. membranous, deciduous.

E. Fls. white.

F. Infl. slender-peduncled, at end of the young growth.

G. Lvs. ovate to oblong-ovate, acute or acuminate.....1. *C. americanus*

GG. Lvs. elliptic to elliptic-lanceolate, obtuse or acutish.....2. *C. ovatus*

FF. Infl. short-peduncled, lateral on brts. of the previous season.3. *C. sanguineus*

EE. Fls. blue or pink.

F. Lvs. pubescent beneath: fls. blue.....4. *C. Delilianus*

FF. Lvs. glabrous or nearly glabrous beneath: fls. pale blue, pink or pinkish.

5. *C. pallidus*

DD. Lvs. leathery, persistent, obtuse, glabrous or appressed-pubescent beneath: fls.

blue, rarely white.....6. *C. thyrsiflorus*

CC. Lvs. tomentose beneath.

D. Brts. glabrous: lvs. grayish tomentulose beneath, the veins glabrescent.

7. *C. velutinus*

DD. Brts. tomentose: lvs. tawny or whitish tomentose beneath: fls. blue.8. *C. coeruleus*

BB. Lvs. entire, rarely finely serrulate, 1-2.5 cm. long: fls. white: low spinescent shrub.

9. *C. Fendleri*

AA. Lvs. opposite, penninerved, thick, small.....10. *C. cuneatus*

1. *C. americanus* L. NEW JERSEY TEA. Shrub to 1 m., with slender upright brs.; young brts. pubescent: lvs. ovate to ovate-oblong, 3-8 cm. long, acute or acuminate, irregularly serrulate, dull green above, pubescent or nearly glabrous beneath; petiole 6-12 mm. long: fls. in terminal and axillary slender-peduncled panicles forming large corymbose panicles at end of brs.: fr. 5-6 mm. across. Fl.vi-ix; fr.ix-x. B.M.1479(c). Gr.G.2:t.169. B.C.2:696. Gn.56:137(h). Can. to Man., Neb., Tex. and S. C. Intr. 1713. Zone IV. Summer-blooming shrub adapted for borders of shrubberies.—*C. a. intermedius* (Pursh) K. Koch, var. Lvs. ovate to lance-ovate, 1-3 cm. long; fls. in smaller, very slender-peduncled spikes: fr. smaller. S.H.2:f.201e-f(1). (*C. i.* Pursh.) Tenn. to Fla. and Ala. Intr. 1812.

*C. a.* × *coeruleus*; see No. 4.

2. *C. ovatus* Desf. Upright shrub to 60 cm.; brts. slightly pubescent and often slightly glandular: lvs. elliptic to elliptic-lanceolate, 2-6 cm. long, obtuse to acute, crenate-serrulate, lustrous above, nearly glabrous beneath; petiole 4-6 mm. long: inf. like that of the preceding, but smaller and peduncles shorter: fr. 4-5 mm. across. Fl.v-vi; fr.vii-viii. B.B.2:505. S.H.2:201g-i. (*C. ovalis* Bigel.) N. Eng. to Neb., Colo. and Tex. Cult. 1830. Zone IV.—*C. o. pubescens* Torr. & Gray. Brts. and lvs. pubescent beneath; lvs. usually smaller and narrower and with more prominent veins. (*C. p.* Rydb.) Mich. to Iowa, Neb. and Tex. Intr. 1904.

*C. o.* × *Delilianus*; see No. 5.

3. *C. sanguineus* Pursh. Shrub to 4 m.; brts. purple or reddish, glabrous: lvs. orbicular or ovate to obovate, 2.5-8 cm. long, obtuse, rounded or subcordate at base, serrate, slightly pubescent beneath; petiole 1.5-2.5 cm. long: fls. white, in lateral leafless narrow panicles 4-12 cm. long on stout peduncles: fr. 4 mm. across. Fl.v-vi. B.M.5177(c). S.H.2:f.201k,202a-b. (*C. oreganus* Nutt.) B. C. to Calif. Intr. 1853 (or 1833?). Zone VI?

4. × *C. Delilianus* Spach. (*C. americanus* × *coeruleus*). Young brts. finely pubescent: lvs. elliptic-ovate or ovate to oblong-ovate, 4-8 cm. long, sometimes 10 cm., acute or short-acuminate, rarely obtuse, rounded at base, dark green and slightly pubescent above, pubescent or sometimes nearly tomentose beneath; petiole 5-10 mm. long: fls. pale to deep blue, in slender-stalked, lateral and terminal narrow panicles; rachis pubescent; pedicels glabrous, 5-8 mm. long. M.G.18:485. Gn.61:223(h);80:76(h). Orig. before 1830. Zone VI-VII.—Here belong: *C. Arnouldii* Carr., *C. versallensis* Hort., *C. hybridus* Hort., partly, *C. azureus* Hort., not Desf., "Gloire de Versailles," bright blue (Gn.85:595[h]); "Gloire de Plantières," deep blue; "Victor Jouin," dark blue; "Ciel de Provence," deep blue (R.H.1903:322,t[c]); "Léon Simon," pale blue (Nederl. Fl. Pomont.72[c]).—The various forms of this and the following hybrid are valued for their showy fls. and their late blooming season.

*C. D.* "Indigo" × *floribundus* Hort., not Hook. = *C. Burkwoodii* Burkwood. Lvs. evergreen: fls. deep blue. Cult. 1929.

5. × *C. pallidus* Lindl. (?*C. Delilianus* × *ovatus*). Brts. terete, slightly pubescent or nearly glabrous, often purplish: lvs. ovate-oblong or elliptic-oblong to oblong, 3-6 cm. long, obtuse, rounded or broad-cuneate at base, serrate, slightly pubescent chiefly on veins beneath or nearly glabrous; petiole 3-6 mm. long: fls. light blue in rather short panicles on long leafy brts.; rachis pubescent. B.R.26:20(c). Orig. before 1830.—*C. p. roseus* (Carr.) Rehd., var. Lvs. larger, to 8 cm. long, usually ovate-oblong, less pubescent or nearly glabrous beneath: fls. pink. R.H.1875:30,t(c). (*C. ovatus*

var. *r. Carr.*, *C. r. Koehne.*) Orig. before 1830. Here belongs "Marie Simon," with flesh-colored fls.—*C. p. plenus* Rehd., var. Lvs. similar to those of the preceding form: fls. white, pink in bud, double. Gn.77:432. Gn.M.28:7(h). (*C. americanus fl. pleno albo* Hort.)

6. *C. thyrsiflorus* Eschsch. Evergreen shrub or small tree to 10 m.; young brts. glabrous or slightly pubescent, sharply angled: lvs. oblong, 2–5 cm. long, obtuse, crenate-serrulate, lustrous above, light green and glabrous or appressed-pubescent beneath: petiole 6–15 mm. long: fls. blue, rarely white, in lateral narrow panicles 3–7 cm. long. Fl.v–vii. B.R.30:38(c). S.S.2:64. G.C.37:179(h); 41:221,t(h). Gn.77:135(h),475(h). Ore. to Calif. Intr. 1837. Zone VII? Fine free-flowering shrub with blue fls.; the hardest of the taller evergreen species.—*C. t. griseus* Trel., var. Lvs. broad-ovate, minutely tomentulose beneath: fls. pale lilac. Gn.86:447(h).

*C. t. × dentatus* = *C. Lobbianus* Hook. Brts. terete: lvs. distinctly 3-nerved: fls. deep blue in oval peduncled heads. B.M.4810 (4811 by error). F.S. 10:t.1016(c). Calif. Intr. 1853.—*C. t. × rigidus* = *C. Veitchianus* Hook. Lvs. obovate, obtuse, glandular-serrate, grayish beneath: fls. deep blue, in dense panicked clusters 3–5 cm. long. B.M.5127(c). G.C.69:211(h); 77:431(h). Calif. Intr. 1853.

Related species: *C. foliosus* Parry. Shrub to 0.3 m.; brts. terete: short-petioled, oval or elliptic, 0.5–2 cm. long, obtuse or obtusish, glandular-serrate, glabrous or nearly so: fls. blue, in panicles to 2.5 cm. long. B.M.9540(c). Calif. Cult. 1933. Zone VII?

7. *C. velutinus* Dougl. Evergreen tall shrub to 3 or 4 m.; brts. glabrous: lvs. broad-elliptic, 5–7 cm. long, obtuse, rounded or subcordate at base, serrulate, dark green, glabrous and lustrous above, closely tomentose beneath with glabrescent veins; petiole to 12 mm. long: fls. white, in large compound panicles 8–12 cm. long. Fl.vi–vii. B.M.5165(c). G.C.II.22:232. B. C. to Calif. and Colo. Intr. 1853. Zone VI.

8. *C. coerules* Lag. Tall shrub; brts. terete, densely tomentose: lvs. ovate to oblong-ovate, 3–8 cm. long, acute or obtuse, rounded at base, serrate, with villous tawny or white tomentum beneath; petiole to 15 mm. long: fls. deep blue, in panicles 8–15 cm. long; pedicels villous, rarely glabrous. Fl.vii–ix. L.B.2:110(c). B.R.4:291(c). P.M.2:74,t(c). Gn.61:223(h); 80:76(h). (*C. azureus* Desf.) Mex. Intr. 1818. Not hardy within our area, but the parent of many beautiful hardier hybrid forms.

9. *C. Fendleri* Gray. Deciduous, usually low, sometimes procumbent, rarely to 2 m. high; brts. terete, tomentulose, spinescent: lvs. elliptic to elliptic-lanceolate, 1–2.5 cm. long, entire or finely serrulate, grayish green and tomentulose beneath; petiole short: fls. white, in clusters 2–3 cm. long, at end of lateral leafy brts. Fl.vi–vii. R.H.1901:423(h). M.G.23:208; 27,499(h). S.L. 119(h). S. Dak. to N. Mex. and Ariz. Cult. 1893. Zone V. Adapted for rockeries and sandy banks; the hardest of the western species.

Related species: *C. parvifolius* Trel. Evergreen shrub to 1 m., with slender brts., glabrous: lvs. oblong, 1–2.5 cm. long, obtuse, cuneate: fls. blue, in short panicles 1.5–4 cm. long. Calif. Cult. 1933. Zone VII?—*C. cordulatus* Kellogg. Evergreen spiny rigid shrub, glabrous: lvs. oval or elliptic, 0.8–2.5 cm. long, obtuse, cuneate or sometimes rounded to subcordate at base, sometimes denticulate near apex: fls. white, in dense panicles 1–3 cm. long. Calif. Cult. 1933. Zone VII?

10. *C. cuneatus* Nutt. Evergreen shrub to 2 m., of spreading habit; brts. pubescent when young: lvs. cuneate-obovate to spatulate, 1–2.5 cm. long, obtuse, entire, dull grayish green, tomentulose beneath: fls. dull white or bluish, in clusters 1–2 cm. across, on short lateral brts. Fl.iv–v. B.H.8:170. S.H.2:f.203g-k(l). Ore. to Calif. Intr. 1848. Zone VII.

Closely related species: *C. prostratus* Benth. Procumbent: lvs. cuneate-obovate, coarsely spiny-toothed: fls. blue. S.H.2:f.2031-m(1). Wash. to Calif. Cult. 1886. Zone VII?

9. *DISCÀRIA* Hook. Deciduous shrubs with slender opposite spiny brs.: lvs. opposite or clustered, small; stipules connected by narrow ridges or lines: fls. perfect, 4-5-merous, sometimes apetalous, solitary or clustered: disk at base of the campanulate or tubular receptacle with free often undulate margin; stigma 3-lobed, ovary 3-celled: fr. 3-lobed, separating at maturity into 3 dehiscent parts. (Greek *diskos*; referring to the prominent disk.) About 12 species in S. Am., Austr. and N. Zealand.

*D. serratifolia* (Vent.) Benth. Shrub to 4 m., with slender pendulous spiny brs.; spines 1.5-2.5 cm. long: lvs. ovate-oblong to oblong-lanceolate, 1-2.5 cm. long, shallowly crenate-serrate, glabrous and lustrous on both sides: fls. greenish white, campanulate, 3-4 mm. across, 5-merous, apetalous, in clusters on last year's brts.; sepals triangular-ovate. Fl.v. G.C.II.6:325. J.H. 8:59. B.S.1:500. (*Colletia* s. Vent.) Chile, Patag. Intr. 1842. Zone VII. Of distinct habit and with fragrant fls. borne in great profusion.

10. *COLLÈTIA* Juss. Deciduous shrubs with opposite spines: lvs. caducous, opposite, small, usually obovate or spatulate, serrate; stipules not connected by lines: fls. small, perfect, 4-6-merous, solitary or fascicled: disk inconspicuous or with rolled-in margin, at base of the campanulate or tubular receptacle; petals minute or wanting, at the mouth of receptacle; ovary 3-celled; stigma 3-lobed: fr. dry, coriaceous, separating into 3 parts. (Named after Philibert Collet, French botanist; 1643-1718.) About 10 species in S. Am.

*C. infausta* N. E. Br. Glabrous shrub to 3 m.; brs. green, rigid, with sharply pointed terete and slightly curved spines 1-2.5 cm. long and about 2 mm. thick: lvs. with the short petiole 4-8 mm. long, elliptic-lanceolate to linear-lanceolate, acute, entire or serrate: fls. greenish white, the tube suffused with red and about 6 mm. long, with recurved ovate acute lobes, apetalous; anthers half-exserted. Fl.ii-iv. B.M.3644(c). B.R.1776(c). G.C. 60:132. Gn.75:605(as *C. cruciata*). B.S.3:104. (*C. horrida* Lindl., not Brongn., *C. spinosa* Lindl., not Lam.) Chile. Intr. 1823. Zone VII. Sometimes grown for its striking odd appearance.

Related species: *C. cruciata* Hook. Brs. stout and rigid, with triangular much compressed spines, 1.5-4 cm. long and sometimes 2 cm. broad at base: lvs. elliptic-ovate, about 6 mm. long, serrate, caducous: fls. yellowish white, urn-shaped, about 6 mm. long, with 5 reflexed lobes: fr. 3-lobed. Fl.ix. B.M.5033(c). Add.8:286(c). Gt.18:t.543. G.C.II.8:617. Gn.55:293. S.H.2:299. (*C. biontiensis* Lindl.) S. Braz., Uruguay. Intr. 1824. Zone VII?—Sometimes slender brs. with nearly terete spines appear on plants of this species and this has given rise to the belief that it is identical with *C. infausta*.—*C. armata* Miers. Brs. pubescent, spines sometimes glabrous: lvs. elliptic-lanceolate to lanceolate, 5-12 mm. long: fls. 5 mm. long; anthers exserted. Fls.ix-xi. (*C. valdiviensis* Phil.) S. Chile. Intr. about 1880. Zone VII?

#### Fam. 60. VITACEAE Lindl. GRAPE FAMILY

Shrubs, usually climbing by tendrils, rarely upright, or small trees: lvs. alternate, simple or compound, stipulate: fls. bisexual or unisexual, regular, small, in cymes, corymbs or panicles, usually opposite a lf.; sepals 4-5, rarely 3-7, minute or obsolete; petals as many, valvate, rarely connate at base; stamens opposite the petals and as many; disk annular or lobed; ovary superior, 2-, rarely 3-6-celled; each cell with 2, rarely 1 ovule; style 1 or wanting; stigma capitate, peltate or lobed: fr. a berry; seed albuminous;

embryo small; cotyledons flat.—Ten genera with about 450 species, mostly in trop. and subtrop. regions.

- A. Petals cohering at apex and cast off as a whole; infl. paniculate; bark without lenticels, finally separating in long strips (except in 2 species); pith brown: lvs. usually simple. 1. *Vitis*
- AA. Petals free, expanding at anthesis: infl. usually cymose; bark with lenticels, not shredding; pith white.
- B. Fls. 5-merous (rarely 4-merous and lvs. pinnate); infl. opposite the lf.: lvs. simple, digitate or pinnate to bipinnate.
- C. Tendrils twining without disk-like tips: disk cupular, distinct from the ovary.
- CC. Tendrils with disk-like adhesive tips, rarely without: disk adnate to the ovary, not distinct ..... 3. *Parthenocissus*
- BB. Fls. 4-merous.
- C. Infl. axillary: fr. 2-4-seeded: lvs. digitate or pedate.
- D. Style nearly wanting; stigma 4-lobed: lfts. 1.5-6 cm. long..... 4. *Tetraglossis*
- DD. Style filiform; stigma small: lfts. 6-15 cm. long, stalked..... 5. *Cayratia*
- CC. Infl. opposite the lf.: brts. and lvs. more or less fleshy: fr. 1-2-seeded: lvs. ternate; lfts. sessile ..... 6. *Cissus*

1. **VITIS L. GRAPE.** Deciduous, rarely evergreen shrubs, climbing by tendrils; pith brown, interrupted at the nodes by diaphragms (except in No. 24): lvs. simple, dentate, usually lobed, rarely palmately compound: fls. polygamo-dioecious, 5-merous, in panicles opposite the lf.; sepals minute or obsolete; petals cohering at the apex and falling as a whole at anthesis; disk hypogynous, consisting of 5 nectariferous glands; ovary 2-celled; cells 2-ovuled; style conical, short; fr. a pulpy 2-4-seeded berry; seeds usually pyriform, with a contracted beak-like base, with 2 grooves on the ventral side. (Ancient Latin name of the grape.) About 60 species in the n. hemisphere, chiefly in the temp. regions.—For American species see also L. H. Bailey, *Grapes of N. Am.* (Bailey, Gent. Herb. 3:151-244. 1934).

Bark without lenticels, on older brs. separating in long strips and fibres; tendrils forked; seeds pyriform. Subgen. *EUVITIS* Planch.

- A. Brts. glabrous or tomentose: lvs. always simple (3-5-parted in var. of No. 1).
- B. Lvs. green and glabrous or pubescent beneath (occasionally floccose-tomentose when young in No. 1).
- C. Basal sinus of lvs. narrow.
- D. Lvs. suborbicular, usually deeply 3-5-lobed, usually slightly floccose or pubescent beneath ..... 1. *V. vinifera*
- DD. Lvs. ovate, undivided or slightly 3-lobed, glabrous beneath or pubescent only on veins ..... 2. *V. vulpina*
- CC. Basal sinus of lvs. wide.
- D. Tendrils well developed; lvs. ovate to orbicular-ovate.
- E. Young brts. and petioles red or reddish: diaphragm thick: lvs. usually distinctly lobed with rounded or obtuse sinuses.
- F. Young brts. and lvs. beneath on veins pubescent: lvs. 12-25 cm. long, short-acuminate ..... 3. *V. amurensis*
- FF. Young brts. and lvs. glabrous, lvs. 8-12 cm. long, long-acuminate ..... 4. *V. palmata*
- EE. Young brts. green; diaphragm thin.
- F. Lvs. 8-20 cm. long, coarsely toothed with triangular teeth.
- G. Brts. usually glabrous: lvs. ovate, 3-lobed with acute sinuses. 5. *V. riparia*
- GG. Brts. usually pubescent: lvs. suborbicular, scarcely lobed. 6. *V. monticola*
- FF. Lvs. 5-10 cm. long, undivided, denticulate or with very short broad teeth, pubescent on the veins beneath..... 7. *V. flexuosa*
- DD. Tendrils usually wanting or small: lvs. usually reniform, broader than high. 8. *V. rupestris*
- BB. Lvs. tomentose beneath at least while young or glaucous.
- C. Lvs. becoming glabrous or nearly so, green beneath.
- D. Lvs. distinctly 3-lobed: brts. angled, pubescent..... 9. *V. Baileyana*
- DD. Lvs. indistinctly or slightly 3-lobed.
- E. Lvs. ovate or broad-ovate.
- F. Lvs. with very short, mucronulate teeth broader than high or denticulate.
- G. Lvs. reticulate beneath, remotely denticulate, scarcely toothed: sides of basal sinus at right or wider angle: brts. terete. (See also var. of No. 16.) 10. *V. Wilsonae*
- GG. Lvs. not reticulate, with very broad mucronulate teeth; sides of basal sinus at narrow angle: brts. angled..... 11. *V. cinerea*
- FF. Lvs. with coarse triangular acute teeth; basal sinus rounded, usually wide: brts. angled ..... 12. *V. arizonica*

- EE. Lvs. orbicular-ovate to reniform, usually coarsely crenate-dentate with rounded mucronulate teeth .....13. *V. californica*  
 CC. Lvs. permanently tomentose or glaucous beneath; brts. terete.  
 D. Lvs. glaucous or glaucescent beneath, glabrous or nearly so....14. *V. argentifolia*  
 DD. Lvs. tomentose beneath, sometimes only floccose at maturity.  
 E. Lvs. floccose at maturity beneath.  
 F. Lvs. usually deeply lobed with round sinuses, ferrugineous-pubescent or floccose beneath at least on veins.....15. *V. aestivalis*  
 FF. Lvs. not or indistinctly lobed.  
 G. Lvs. brownish floccose beneath.....16. *V. Coignetiae*  
 GG. Lvs. grayish floccose beneath.....11. *V. cinerea*  
 EE. Lvs. densely and persistently tomentose beneath.  
 F. Tendrils intermittent (every third joint without tendril).  
 G. Lvs. not or slightly lobed, ovate to ovate-oblong, truncate or nearly so at base .....17. *V. pentagona*  
 GG. Lvs. deeply lobed.  
 H. Young brts. angled, grayish tomentose.....18. *V. Thunbergii*  
 HH. Young brts. terete, white-tomentose.....19. *V. candicans*  
 FF. Tendrils continuous; tomentum rusty.....20. *V. Labrusca*  
 AA. Brts. with spines or glandular or lvs. partly compound.  
 B. Lvs. simple, slightly or not lobed.  
 C. Brts. with glandular bristles: lvs. pubescent and glandular beneath.....21. *V. Romaneti*  
 CC. Brts. with prickles: lvs. glaucescent and glabrous or nearly so beneath.....22. *V. Davidi*  
 BB. Lvs. partly compound, pubescent or glabrescent beneath.....23. *V. Piasezkii*  
 Bark with lenticels, close; tendrils simple: seeds ovoid. Subgen. *MUSCADIINA* Planch.  
 24. *V. rotundifolia*

1. *V. vinifera* L. WINE G. Stems to 15 or 20 m. long; young growth glabrous or floccose: lvs. suborbicular, 7-15 cm. across, cordate, 3-5-lobed with rounded sinuses, the lobes coarsely toothed and usually overlapping, glabrous or floccose beneath; petiole more than half as long as blade: panicles large and long: fr. usually ellipsoid, sometimes subglobose, black and bloomy to red and greenish. Fl.vi; fr.ix-x. F.D.21:t.2176(c). H.A.10:t.40(c). S.H.2:311. Cult. from the earliest times in Eu. and W. Asia and often escaped; probably native of the Caucasian region. Zone (V)-VI. Extensively grown for its fr. in Eu. and California, the forms mentioned as ornamental vines.—*V. v. apiifolia* Loud., var. *PARSLEY G.* Lvs. deeply 3-5-cleft with incisely lobed and deeply cut segments. Schmidel, Icon. t.8. L.A.1:f.140(l). Gn.54:425(h). (*V. v. laciniata* Ktze., *V. laciniata* L.) Cult. 1648.—*V. v. purpurea* Bean. *TEINTURIER G.* Lvs. first claret red, later dull purple.—The spontaneous or subspontaneous form is sometimes distinguished as var. *syvéstris* Willd. and the cultivated forms as var. *sativa* DC.

2. *V. vulpina* L. FROST G. Vigorous high climbing vine, the trunk sometimes to 50 or 60 cm. thick; diaphragms thick: lvs. broad-ovate, 10-12 cm. long, cordate with narrow acute sinus, undivided or indistinctly 3-lobed, irregularly and coarsely serrate with acute teeth, lustrous above, bright green beneath and glabrous or puberulous on the veins: panicles many-fl., 10-25 cm. long: fr. globose, about 1 cm. across, black, slightly glaucous, with thick skin, edible after frost. Fl.vii; fr.x. B.B.2:508. (*V. cordifolia* Lam.—*CHICKEN G.*, *RACON G.*, *WINTER G.*) Pa. to Fla., E. Kans. and Tex. Intr. 1806. Zone V.

3. *V. amurénis* Rupr. AMUR G. Strong growing vine; brts. obscurely angled, reddish and floccose when young: lvs. broad-ovate, 12-25 cm. long, cordate with broad round sinus, usually 3-5-lobed with rounded sinuses, the middle lobe broad-ovate, short acuminate, apiculate-dentate, green beneath and glabrous or pubescent on the veins: panicle slender-stalked, elongated: fr. about 8 mm. across, black, 2-3-seeded. Fl.vi; fr.ix. Gt.10:t.339;13:t.424, f.3-4(c). G.Z.12:160,t. Gn.54-425. (*V. vulpina* var. *a.* Reg.) Manch., Amur reg. Intr. about 1854. Zone IV. With large lvs. changing to crimson or purplish in fall.

*V. a.* × *Coignetiae*; see under No. 16.

4. *V. palmata* Vahl. RED G. Slender, but strong growing vine; brts. glabrous, bright red when young, angled; diaphragm thick: lvs. ovate, 8-12 cm. broad, deeply 3-5-lobed with round sinuses; lobes long-acuminate, coarsely toothed, dark green and lustrous above, bright green and glabrous or pubescent on the veins beneath; petiole red: panicle large and loose, long-stalked: fr. black, not bloomy, 7-10 mm. across; seed subglobose, often solitary. Fl.vii-viii; fr.x. G.F.2:341. B.C.6:3486. (*V. rubra* Planch., *V. monosperma* Michx.—CAT G.) Ill. and Mo. to Tex. Intr. 1633. Zone IV. Graceful vine.

5. *V. riparia* Michx. RIVERBANK G. Vigorous high climbing vine; brts. glabrous; diaphragm very thin: lvs. broad-ovate or ovate, 8-18 cm. long, with a broad open basal sinus, usually 3-lobed, with short acuminate lobes, unequally and coarsely toothed with triangular acuminate teeth, lustrous, bright green beneath and glabrous or pubescent on the veins: fls. in panicles 8-18 cm. long, fragrant; the staminate with long erect stamens, the pistillate with shorter recurved stamens: fr. globose, 8 mm. across, purple black, densely bloomy. Fl.vi; fr.ix. B.M.2429(c). B.C.6:3486. B.B.2:507. A.G.1893:353. Gn.54:425(h). (*V. vulpina* auth., not L., *V. odoratissima* Don, *V. cordifolia* var. *riparia* Gray, *V. odorata* Hort.) N. S. and N. B. to Man., Kans., Colo., Mo. and Tex. Cult. 1656. Zone II. Often grown for its handsome bright green lvs. and the fragrant staminate fls.—*V. r. praecox* Bailey, var. JUNE G. Fr. smaller, sweet, ripening in July.—*V. r. syrticola* (Fern. & Wieg.) Fern., var. Lvs. beneath and petioles densely pilose. (*V. vulpina* var. s. Fern. & Wieg.) Mich. to N. Y. and Ind. Cult. 1928.

*V. r. × argentifolia* = *V. Slavinii* Rehd. Distinguished from *V. argentifolia* by the lvs. being smaller, greenish or grayish green beneath and by the coarser serration; from *V. riparia* by the partly deeply lobed lvs. more or less pubescent beneath, with rounded sinuses, the shorter much broader teeth and by the narrow and slenderer fruiting panicles. N. Y. Intr. 1920.—*V. r. × Coignetiae* = *V. Andersonii* Rehd. From *V. vulpina* it differs chiefly in the much larger, less deeply 3-lobed lvs. more pubescent beneath, in the narrower acute basal sinus and the shorter scarcely acuminate teeth; from *V. Coignetiae* in the more deeply 3-lobed lvs. very slightly or not floccose-tomentose beneath and in the coarser serration with triangular acute or short-acuminate teeth. Orig. before 1918.—See also *V. Doaniana* under No. 19.

Related species: *V. Longii* Prince. Young shoots floccose or pubescent: lvs. more orbicular, with more angular teeth, duller and more pubescent beneath. Munson, Found. Grape Cult. t.33. (*V. Solonis* Planch., *V. nuevo-mexicana* Muns.) Okla., N. W. Tex., N. Mex. and S. Colo. Cult. 1830. Zone V. Possibly a hybrid between *V. rupestris* and *V. arizonica*.—*V. Treleasei* Bailey. Shrubby and little climbing; tendrils short and deciduous if not finding support; diaphragms twice as thick; stipules smaller: lvs. large, broad-ovate to reniform-ovate, indistinctly 3-lobed, crenate-dentate; panicle 5-8 cm. long: fr. small, black with thin bloom, sweet. Munson, Found. Grape Cult. t.31. S. W. Tex., N. Mex., Ariz. Intr. 1887. Zone V.

6. *V. monticola* Buckl. SWEET MOUNTAIN G. Slender vine to 10 m.; young brts. floccose, sometimes glabrous, angled; diaphragms thin: lvs. sub-orbicular or reniform, 5-10 cm. across, basal sinus rounded to nearly truncate, coarsely toothed and often slightly 3-lobed, dark green and lustrous above, more or less pubescent and sometimes cobwebby beneath when young: panicle short and broad: fr. 12-14 mm. across, black or light-colored, sweet; seeds broadly pear-shaped, 5-7 mm. long. Fl.vi; fr.ix. B.C.6:3485. Munson, l.c., t.27. S. W. Tex. Cult. 1887. Zone V.

A similar plant is *V. Champini* Planch. Probably a hybrid between *V. candicans* and *V. rupestris* or *Berlandieri*. Lvs. reniform, pubescent or cobwebby when young; the growing tips usually white-tomentose: fr. 15 mm. across, black, slightly bloomy, sweet. Munson, l.c., t.10. A.G.12:579. S. W. Tex. Cult. 1880.

7. *V. flexuosa* Thunb. Slender vine; young growth rufous-tomentose; lvs. broad- or triangular-ovate, 5-8 cm. broad, acuminate, with broad open sinus or nearly truncate, unequally sinuate-dentate with short small teeth, sometimes angularly 3-lobed, lustrous above, pubescent or floccose on the veins and in the axils beneath, thin and firm; panicle slender, 5-14 cm. long; fr. about 8 mm. across, black, 2-3-seeded. Fl.vi; fr.ix. S.H.2:f.209f-g<sup>1</sup>(l). Japan, Korea, China. Cult. 1880. Zone V. Graceful vine.—*V. f. parvifolia* (Roxb.) Gagnep., var. Lvs. somewhat smaller, lustrous bronzy-green above, purple beneath when young. J.L.28:f.107(l). S.H.2:f.209h-h<sup>1</sup>(l). (*V. p.* Roxb., *V. f.* var. *chinensis* Veitch.) Himal. to C. China. Intr. 1900.

8. *V. rupéstris* Scheele. Bush G. Shrub to 2 m., sometimes slightly climbing; tendrils few and small or none; diaphragms thin: lvs. reniform to orbicular-ovate, 7-10 cm. wide, with very wide basal sinus or nearly truncate, coarsely toothed and sometimes slightly 3-lobed, lustrous above, glabrous at maturity or slightly pubescent on the veins beneath, somewhat glaucescent on both sides, thick and firm; panicle slender, 4-10 cm. long; fr. purple-black and somewhat glaucous, 7-14 mm. across, of pleasant taste; seeds small and broad. Fl.vi; fr.viii-ix. S.H.2:f.209i(l) B.B.2:508. S. Pa. to Tenn., Mo., Okla. and S. W. Texas. Intr. about 1860. Zone V.

9. *V. Baileyana* Muns. High climbing; stems with short internodes and often many short brts.: lvs. ovate to orbicular-ovate, 5-10 cm. long, cordate, toothed with rather small teeth, usually distinctly 3-lobed near apex, with short lobes, bright green above but not lustrous, grayish beneath and pubescent at maturity only on the veins: panicles compact, 8-12 cm. long; fr. 7-10 mm. across, black, not or slightly bloomy; seed small, broadly pear-shaped. Fl.vi; fr.ix. Munson, l.c., t.24,39. (*V. virginiana* Muns., not Poir.) W. Va. and N. C. to Tenn. and Ga. Intr. about 1890. Zone V.

Related species: *V. Berlandieri* Planch. SPANISH G. Lvs. lustrous above, gray-pubescent beneath at first, at maturity only on the veins; panicle 10-20 cm. long; fr. purple, slightly glaucous, pleasant-tasting. Munson, l.c., t.23,39. B.C. 6:3487. S. W. Tex. and Mex. Intr. before 1883. Zone VI.

10. *V. Wilsonae* Veitch. High climbing; young brts. floccose-tomentose; lvs. reddish when young, broad-ovate, 7-15 cm. wide, cordate to subcordate at the very base with the sides usually diverging at a right or wide angle, short-acuminate, sinuate-dentate or denticulate with short mucronate teeth, floccose-tomentose when young, at maturity glabrous above, cobwebby on the veins beneath and reticulate; panicle slender and narrow, with the stalk 10-20 cm. long; fr. black, bloomy, about 1 cm. across. Fl.vi; fr.ix-x. G.C. 46:236. (*V. reticulata* Pamp., not M. A. Laws.) C. China. Intr. 1907. Zone (V).

Related species: *V. betulifolia* Diels & Gilg. Lvs. ovate to oblong-ovate, rarely broad-ovate, 5-10 cm. long, cordate to rounded or nearly truncate at base, acuminate, remotely denticulate to dentate with very broad mucronate teeth, rarely slightly 3-lobed, whitish or tawny floccose-tomentose when young and usually thinly so at maturity; petiole usually 1-4 cm. long; panicle slender, 4-10 cm. long; fr. blue-black. C. and W. China. Intr. 1907. Zone V.

11. *V. cinérea* Engelm. SWEET WINTER G. High climbing; young brts. gray-tomentose; diaphragms thick: lvs. broad-ovate, 8-20 cm. across, with wide basal sinus, usually distinctly 3-lobed or 3-angled, unequally toothed with short broad teeth, cobwebby above when young, dull dark green at maturity and with persistent gray cobwebby pubescence beneath: panicle irregular, 15-30 cm. long; fr. 10-14 mm. across, black, scarcely bloomy, becoming sweet after frost. Fl.vi; fr.x. B.C.6:3488. B.B.2:507. Munson, l.c. t.21,39. Ill. to Kans., Tex., Mex. and N. Fla. Cult. 1883. Zone V.—*V. c.*

*canescens* (Engelm.) Bailey, var. Lvs. almost as broad as long, not lobed. (*V. aestivalis* var. *c.* Engelm.) Mo. and S. Ill. to Tex.

12. *V. arizonica* Engelm. CANYON G. Usually low; brts. angled, with short internodes and thick diaphragms; young growth white-tomentose: lvs. broad-ovate, 4-8 cm. wide, rarely larger, basal sinus wide to nearly truncate, not or indistinctly 3-lobed, with triangular pointed apex, sometimes distinctly lobed on vigorous shoots, dentate with short acute or mucronate teeth, white-cobwebby when young, finally nearly glabrous: panicle short and broad, slender-stalked: fr. 6-8 mm. across, black, pleasant-tasting. Fl.vi; fr.ix. Munson, l.c.t.30. Gn.54:427(h). W. Tex., N. Mex. and Ariz. to s. e. Calif. and n. Mex. Cult. 1890. Zone VI.

13. *V. californica* Benth. Usually high climbing; brts. with long internodes and thin diaphragms, white-tomentose when young: lvs. orbicular-ovate to orbicular-reniform, 7-12 cm. wide or more, basal sinus narrow to wide, finely to coarsely crenate-toothed with rounded mucronulate teeth, not or sometimes indistinctly 3-lobed, usually whitish cobwebby until half-grown and remaining pubescent beneath, rarely nearly glabrous: panicle long-stalked and usually forked: fr. about 1 cm. across, glaucous-white, rather dry, but pleasant-tasting; seeds large, pyriform. Fl.vi; fr.ix. B.C.6:3488. Munson, l.c.t.28. Gn.36:143(h). Ore. to Calif. Cult. 1890. Zone VII? The lvs. turn crimson in autumn.

14. *V. argentifolia* Muns. BLUE G. Strong high climbing vine, with long internodes and thick diaphragms; young brts. usually glabrous and mostly glaucous: lvs. broad-ovate, 10-30 cm. wide, shallowly 3-lobed on old growth, deeply 3-5-lobed on vigorous shoots, basal sinus deep to shallow, shallowly or sinuately toothed, dull green and glabrous above, glaucous beneath and glabrous or sparingly pubescent on the veins, rather thin; petiole long: panicle 5-10 cm. long, usually long-stalked: fr. about 1 cm. across, purple-black and densely glaucous, sour but pleasant-tasting; seeds rather small and broad. Fl.vi; fr.ix. B.C.6:3489. B.B.2:507. Munson, l.c.t.13. W.A.88,t(h). (*V. bicolor* Leconte, not Raf., *V. Leconteana* House, *V. aestivalis* var. *bicolor* (Leconte) Deam.—SUMMER G.) N. E. and Ill. to N. C. and W. Tenn. Intr. 1739. Zone V. Easily recognized by the glaucous under side of the large lobed lvs.

*V. a.* × *riparia*; see under No. 5.

15. *V. aestivalis* Michx. SUMMER G. Strong high climbing vine, with medium or rather short internodes and thick diaphragms; young brts. floccose: lvs. broad-ovate, 10-30 cm. wide, similar to those of the preceding species, basal lobes often overlapping, more coarsely toothed, dull and glabrescent above, with rusty floccose tomentum beneath, partly persisting at least on the veins; petiole floccose; panicle 10-25 cm. long, slender: fr. about 8 mm. across, black, bloomy, dryish and astringent to juicy and sweet. Fl.vi; fr.ix. Munson, l.c.t.14. B.B.2:506. Am. For. 26:286(trunk). (*V. Labrusca* var. *a.* Reg.) N. Y. to Mo., Fla., and Miss. Intr. 1748. Zone V. Easily recognized by the brown cobwebby tomentum on the under side of the large lobed lvs.; the var. cult. for its fr.—*V. a. Bourquiniana* (Muns.) Bailey, var. Lvs. only slightly rusty beneath, the pubescence usually grayish or dun-colored, of thinner texture: fr. large and juicy, black to amber-colored. Munson, l.c.t.18. (*V. B.* Muns.) Possibly hybrid. Intr. about 1847.

Related species: *V. Lincecumii* Buckl. Bushy or high climbing; lvs. as long as broad or little longer, 3-lobed, tomentose beneath; panicle 5-10 cm. long: fr. 12-20 mm. across, black, bloomy, pleasant-tasting: seeds 6-10 mm. long. Munson,

l.c.t.11. Mo. to Tenn. and Tex. Intr. about 1860. Zone V.—*V. L. glauca* Muns., var. Lvs. glaucous below, veins rusty-pubescent. Munson, l.c.t.12. Mo. to Tex.

16. *V. Coignétiae* Planch. Strong growing vine; young brts. floccose-tomentose: lvs. orbicular-ovate, 10–25 cm. broad, deeply cordate with narrow sinus, unequally and shallowly toothed or denticulate, indistinctly lobed, dull and rugose above, nearly glabrous, grayish or rusty-tomentose beneath, reticulate; panicle short, pedunculate: fr. about 8 mm. across, black with purple bloom, not edible. Fl.vi–vii; fr.ix–x. R.H.1892:342; 1898:426–8. G.C. III:22:305. B.C.6:3491. Gn.63:124(h), 209(h). (*V. Kaempferi* of Rehd., not K. Koch.) Japan. Cult. 1875. Zone V. Handsome vine with large heavy foliage turning crimson in fall.—*V. C. glabréscent* Nakai, var. Lvs. becoming glabrescent beneath at maturity. Cult. 1890.

*V. C. × riparia*; see under No. 5.

Related species or probably hybrid with *V. amurensis* is *V. pulchra* Rehd. Brts. sparingly floccose, reddish: lvs. 7–12 or 15 cm. wide, coarsely dentate and often slightly 3-lobed, shallowly cordate or nearly truncate at base, crimson when unfolding, becoming lustrous bronzy green above, purplish beneath, later deep green, slightly floccose-tomentose beneath and pilose on the veins: panicle narrow, 6–10 cm. long. (*V. flexuosa major* Hort.) Orig. unknown, intr. about 1880? Zone (V).

17. *V. pentagōna* Diels & Gilg. Brts. gray-tomentose when young, reddish: lvs. ovate, 8–12 cm. long, truncate or nearly so at base, sinuate-denticulate and slightly 5-angled, slightly pubescent on the veins above, grayish or reddish tomentose beneath; petiole 4–9 cm. long: panicle to 16 cm. long, tomentose: fr. 6–7 mm. across; seed pyriform, about 4 mm. long. Fl.vi; fr.ix. S.H.2:f.207(l). C. and W. China. Cult. 1890. Zone V.—*V. p. béilula* Rehd. & Wils., var. Lvs. 3–5 cm. long, similar to those of *V. flexuosa* var. *parvifolia*, but tomentose beneath. Intr. 1907.

Related species: *V. lanata* Roxb. Young brts. tomentose: lvs. ovate, 8–15 cm. long, cordate, not lobed, tomentose beneath; panicle short; fls. small, the petals sometimes separating at the top: fr. purple, 5 mm. across. China, Liukiu Isls., Himal. Cult. 1902. Zone VII?

18. *V. Thunbergii* Sieb. & Zucc. Slender vine; young brts. angled, rusty-tomentose: lvs. deeply 3–5-lobed, 6–10 or to 14 cm. across, cordate, the lobes broad-ovate with rounded sinuses or sometimes with short lobes and acute sinuses, shallowly and irregularly toothed, dark dull green above and glabrous, rusty tomentose beneath: panicle 5–8 cm. long: fr. black with purple bloom, 8–10 mm. across. Fl.vii–viii; fr.ix–x. B.M.8558(c). R.H.1880:210,t (c), 279; 1882:221. S.H.2:f.207c–d. (*V. Sieboldii* Hort.) Japan, China. Cult. 1879. Zone V. Lvs. turning crimson in fall.—*V. T. sinuata* (Reg.) Rehd., var. Lvs. smaller, deeply 3–5-lobed with broad rounded sinuses and often lobulate lobes. Gt.22:t.765,f.1. N.K.12:t.5. Japan, China. Cult. 1873.

19. *V. cándicans* Engelm. MUSTANG G. Strong high climbing vine; young growth white-tomentose; diaphragm very thick: lvs. broad-ovate to ovate-reniform, 6–12 cm. broad, basal sinus broad and open or nearly truncate, indistinctly lobed or angled, on vigorous shoots deeply 3–5-lobed, sinuately and shallowly toothed, white-tomentose on both sides when young, later dark green and glabrous above, white tomentose beneath; petiole 3–6 cm. long, white-woolly: panicle 5–12 cm. long: fr. 1.5–2 cm. across, purple or light-colored, with tough skin and of disagreeable taste. Fl.vi; fr.vii–viii. Munson, l.c.t.3,37. S.H.2:f.207h–i(l). (*V. mustangensis* Buckl.) Okla. and Ark. to Tex. Cult. 1860. Zone V?

Related species or hybrid with *V. vulpina* is *V. Doaniāna* Munson. Internodes rather short; diaphragms thin: lvs. orbicular-ovate, 3-lobed at apex, coarsely toothed, bluish green, usually more or less floccose above, tomentose

beneath: panicle small: fr. 12-15 mm. across, black, bloomy, sweet. G.F.9:455. Munson, l.c.9,37. Okla. to Tex. and N. Mex. Cult. 1890.—*V. c.* × *?* *rupestris*; see *V. Champini* under No. 6.

20. *V. Labrusca* L. Fox G. Strong growing vine; shoots with a tendril or infl. at every joint, floccose when young: lvs. orbicular-ovate or broad-ovate, 7-16 cm. wide, basal sinus usually open, undivided or slightly 3-lobed, rarely deeply lobed with rounded sinuses, shallowly and irregularly toothed, dark green above, tomentose beneath, at first whitish, later dun-colored or rusty, thick and strongly veined: panicle little branched, 5-10 cm. long: fr. globose, 1.5-2 cm. across, purple-black, sometimes red-brown or amber-green, with thick skin and of sweetish musky taste. Fl.vi; fr.ix. Gr.G.2:t.161. B.B. 2:506. Munson, l.c.t.6,38. N. Eng. to Ga., Tenn. and S. Ind. Intr. 1856. Zone V. The parent species of the greater part of the cult. American grapes; also planted for its luxuriant growth and handsome lvs.—*V. L. alba* Prince, var. Fr. whitish or greenish.

21. *V. Romanéti* Roman. Vigorous vine; young shoots floccose-pubescent and glandular-bristly, purplish when young: lvs. orbicular-ovate, 10-25 cm. wide, deeply cordate, obscurely 3-lobed, shallowly toothed, the teeth with bristle-like tip, dark green above and slightly pubescent on the veins or nearly glabrous, grayish tomentose beneath, pilose and sparingly glandular-bristly on the veins, of firm texture; petiole floccose and glandular-bristly; panicle longer than lvs.: fr. black, 1 cm. across, edible. Fl.v-vi; fr.vii-viii. R.H.1890:444,t(c). J.L.28:f.98(l). (*V. rutilans* Carr.) China. Intr. 1881. Zone VII? Young growth purple with bristly pubescence.

22. *V. Davidi* (Roman.) Foëx. Vigorous vine: shoots with straight or slightly recurved prickles, glabrous: lvs. broad-ovate, 10-20 cm. long, cordate, acuminate or acute, sinuate-denticulate and obscurely angled, lustrous dark green and glabrous above, glaucous and nearly glabrous beneath except glandular-bristly on veins and on the petiole: panicle usually longer than lf.: fr. black, about 1.5 cm. across. Fl.vi-vii; fr.ix-xi. R.H.1885:55; 1890:465. J.L.28:f.17,83(h),85. (*V. Davidiana* Dipp., *V. armata* Diels & Gilg, *Spinovitis* D. Roman.) China. Cult. 1885. Zone VI. The lvs. changing to brilliant red in fall.—*V. D. cyanocarpa* (Gagnep.) Sarg., var. Less prickly: fr. bluish. J.L.28:389,t(c),f.84(h),89. S.L.385(h). (*V. armata* var. *Veitchii* Veitch.)

23. *V. Piasézkii* Maxim. Young brts. and petioles rufous-pubescent and glandular-bristly: lvs. variable on same branch, ovate and slightly or deeply lobed, 4-8 cm. long, cordate with rounded sinus, or 3-5-foliate, the middle lft. stalked, rhombic-ovate or ovate, 5-12 cm. long, acute or short-acuminate, cuneate, the lateral ones sessile and very oblique, smaller, coarsely and angularly toothed, glabrous above, with floccose tomentum beneath, persisting at least on the veins: panicle to 15 cm. across: fr. about 1 cm. across, black, bloomy. Fl.v-vi; fr.viii-ix. B.M.9565(c). J.L.28:f.99. S.H.2:f.206a-a<sup>1</sup>. (*Parthenocissus sinensis* Diels & Gilg.) W. China. Intr. 1807. Zone VI?—*V. P. Pagnucci* (Roman.) Rehd., var. Brts. glabrous: lvs. glabrous or nearly glabrous beneath. R.H.1888:f.134; 1889:204,t(c). S.H.2:f.206g-g<sup>1</sup>. (*V. P. Roman.*, *Ampelovitis Davidii* Carr., *Ampelopsis Davidiana* Mottet.) C. China. Cult. 1885. Zone (V).

24. *V. rotundifolia* Michx. MUSCADINE. Vigorous vine to 30 m., with close lenticellate bark, sometimes producing aerial roots; pith without diaphragms; tendrils simple; lvs. suborbicular to broad-ovate, 5-12 cm. wide, acute or acuminate, with shallow basal sinus, coarsely toothed with triangular teeth, glabrous and lustrous above, yellowish green and glabrous beneath or

slightly pubescent on veins: panicle dense, small: fr. globose, 1.5-2.5 cm. across, dull purple, not bloomy, with very tough skin, of musky flavor. Fl.vi; fr.viii-ix. B.B.2:509. Munson, l.c.t.35,39. (*Muscadinia* r. Small, *V. muscadina* and *V. verrucosa* Hort.) Del. to N. Fla., w. to Mo., Kans., Tex. and Mex. Intr. 1806. Zone V.

2. **AMPELÓPSIS** Michx. Deciduous shrubs, climbing by tendrils: brs. with close lenticellate bark and white pith: winter-buds small, with several outer scales: lvs. alternate, simple or compound, long-petioled: fls. perfect, small, greenish, in long-peduncled dichotomous cymes, opposite the lvs. or terminal, 5-merous, rarely 4-merous; calyx indistinct; petals expanding; stamens short: ovary 2-celled, adnate to a distinct cup-shaped disk, entire or crenulate at the margin; style slender: fr. a 1-4-seeded berry. (Greek *ampelos*, grape, and *opsis*, likeness.) About 20 species in N. Am., C. and E. Asia.

A. Lvs. simple, undivided or lobed.

B. Lvs. whitish beneath, of firm texture.

C. Fr. pale yellow or pale bluish or whitish: lvs. bright green and lustrous above.

CC. Fr. dark blue or violet: lvs. usually not or slightly lobed with shallow rounded

micronulate teeth, with a velvety sheen above when young.....1. *A. humulifolia*

BB. Lvs. green beneath, thin.

C. Lvs. not or slightly lobed: fr. bluish or greenish.....3. *A. cordata*

CC. Lvs. 3-5-lobed, rarely scarcely lobed: fr. finally blue.....4. *A. brevipedunculata*

AA. Lvs. compound, sometimes partly simple.

B. Lvs. 3-5-parted or digitate, sometimes partly simple and 3-lobed.

C. Segments of lvs. serrate or pinnately lobed, lower lvs. sometimes simple.

D. Middle lft. short-stalked: fr. dark blue.....5. *A. Delavayana*

DD. Lfts. sessile, cuneate: fr. orange, sometimes bluish before maturity.

CC. Segments of lvs. at least partly pinnate; rachis broadly winged and the pinnae

articulate.....6. *A. aconitifolia*

BB. Lvs. pinnate or bipinnate; lfts. petioled.

C. Lfts. 1-4 cm. long, coarsely toothed.....7. *A. japonica*

CC. Lfts. 5-10 cm. long, crenate-serrate.....8. *A. arborea*

CC. Lfts. 5-10 cm. long, crenate-serrate.....9. *A. megalophylla*

1. *A. humulifolia* Bge. Climbing shrub; brts. glabrous, rarely slightly villous: lvs. broad-ovate, 7-12 cm. long, truncate or cordate with a wide round sinus, 3-5-lobed with rounded sinuses, sometimes slightly lobed, with acute or acuminate coarsely dentate lobes, lustrous bright green and glabrous above, glaucescent and glabrous or pilose on the veins beneath; cymes loose; peduncles slender, longer than petioles: fr. usually few, 6-8 mm. across, usually pale yellow, with bluish cheek, or entirely pale yellow or pale blue, 1-2-seeded. Fl.vii; fr.x. R.H.1868:29. N.I.4:187. Gn.7:199. (*Cissus Davidiana* Carr., *Vitis* D. Nichols.) N. China. Cult. 1868. Zone V. With handsome foliage resembling that of a true *Vitis*.

2. *A. Bodinieri* (Lévl. & Vant.) Rehd. Climbing to 6 m.; young growth purplish; brts. glabrous: lvs. triangular-ovate and not lobed or broad-ovate and slightly lobed, 5-10 cm. long, subcordate or sometimes truncate at base, short-acuminate, the lateral lobes acute, shallowly and coarsely crenate-serrate, dark green and with a velvety sheen above when young, glaucescent below: cymes long-stalked, rather dense: fr. dark blue. Fl.v-vi; fr.x. ?J.L. 28:f.90. Veitch, *Novelties*, 1905:5(h,l); 1908-9:29(h). (*A. micans* Rehd., *Vitis repens* Veitch, not Wight & Arn., *Vitis flexuosa Wilsonii* Veitch.) C. China. Intr. 1900. Zone V. Similar to the preceding.—*A. B. cinerea* (Gagnep.) Rehd., var. Lvs. grayish pubescent on both sides or only beneath, often deeply 3-5 lobed. Intr. 1907.

Related species: *A. vitifolia* (Boiss.) Planch. Without tendrils; glabrous: lvs. broad-ovate, 4-7 cm. wide, truncate or subcordate at base, undivided or slightly 3-lobed, coarsely dentate with triangular acuminate teeth: cymes

slender-stalked. S.H.2:f.213k-l(1). (*A. aegirophylla* Planch., *Vitis persica* Boiss.) Persia and Turkest. to N. W. Himal. Cult. 1885. Zone VI?

3. *A. cordata* Michx. High climbing, nearly glabrous: lvs. round-ovate, 5-12 cm. long, acuminate, subcordate or nearly truncate, not or indistinctly 3-lobed, acutely but shallowly serrate, glabrous or sparingly pubescent along the veins and in the axils beneath; petiole shorter than blade, often pubescent: cymes slender-stalked, loose: fr. 6-8 mm. across, bluish or greenish blue. Fl.vii; fr.ix-x. M.N.2:t.6(c). B.B.2:509. Ohio Nat. 1:t.1.f.1-2,3-4(h). (*Vitis indivisa* Willd.) Va. to Ohio and Ill., Fla., Tex. and Mex. Cult. 1796. Zone V.

4. *A. brevipedunculata* (Maxim.) Trautv. Vigorous climber; young brts. hairy: lvs. broad-ovate, 6-12 cm. long, acuminate, cordate, 3-lobed, the lateral lobes broadly triangular-ovate, spreading, coarsely serrate, dark green above, lighter beneath and pilose; petioles as long as blade or shorter, hairy: cymes on pilose stalks 1.5-3.5 cm. long: fr. 6-8 mm. across, changing from pale lilac to verdigris color and finally to bright blue, rarely whitish. Fl.vii-viii; fr.ix-x. B.C.1:277. S.H.2:f.213d\*(1). Gn.85:557. (*A. heterophylla* var. *amurensis* Planch., *Vitis b. Dipp.*) N. E. Asia. Cult. 1870. Zone IV. Particularly handsome in fall with its strikingly colored fr.—*A. b. Maximowiczii* (Reg.) Rehd., var. Brts. and lvs. glabrous or glabrescent: lvs. more deeply 3-5-lobed, with rounded sinuses; peduncles longer. B.M.5682(c). Gt.22:t.765,f.2. Gn.87:541. S.H.2:f.213b-d(1). (*A. heterophylla* Sieb. & Zucc., not Bl., *Vitis h. Thunb.*, *V. h. var. humulifolia* Hook.) E. Asia. Cult. 1868.—*A. b. elegans* (K. Koch) Rehd., f. Lvs. usually smaller, variegated with white and greenish white and tinged pink while young. H.F.1866:103,t(c). Witte, Flora, t.74(c). Gn.54:5. (*Vitis e. K. Koch*, *A. heterophylla* f. *e. Voss*, *A. heterophylla tricolor* Hort.) Cult. 1855.—*A. b. citrulloides* (Lebas) Rehd., f. A form with more deeply 5-lobed lvs., the middle lobe and sometimes the lateral lobes sinuately lobed or toothed with wide sinuses and much constricted near base and middle. (*A. c. Lebas*, *A. heterophylla c. Hort.*) Cult. 1875.

5. *A. Delavayana* Planch. Vigorous vine; young growth hairy and usually reddish: lvs. broad-ovate, 5-12 cm. long, cordate at base, acuminate, slightly or deeply 3-lobed and partly 3- or rarely 5-parted, the middle segment elliptic-oblong, cuneate, the lateral ones very oblique, usually semicordate, coarsely and shallowly crenate-dentate with rounded mucronulate teeth, usually pubescent beneath; cymes on peduncles 1-3 cm. long, pubescent, rarely nearly glabrous: fr. dark blue, small. Fl.vii; fr.x. J.L.28:f.102(1). Gn.89:272(1), S.H.2:f.214g(1). (*Vitis D. Franch.*, *A. heterophylla* var. *D. Gagnep.*) C. China. Intr. 1900. Zone V. Occasionally brs. with all the lvs. simple occur and such specimens are without frs. almost indistinguishable from *A. brevipedunculata*.

6. *A. aconitifolia* Bge. Slender luxuriant vine; brts. glabrous: lvs. 5-foliolate, long-stalked; lfts. lanceolate or rhombic-lanceolate, 4-7 cm. long, pinnately lobed, often divided nearly to the midrib, with rather narrow toothed or entire lobes, green beneath and glabrous, or pilose on the veins: cymes glabrous, on peduncles 2-5 cm. long; fr. about 6 mm. across, orange or yellow when fully ripe, sometimes bluish before maturity. Fl.viii; fr.ix-x. R.H.1868:10;1883:318. N.T.1:66. Gn.54:427(h, as *Vitis serjaniaefolia*). J.L.28:f.87. N.I.1:66. (*Vitis a. Hance*, *A. dissecta* Carr. *A. a. var. dissecta* Koehne.) N. China. Cult. 1868. Zone IV. Very graceful vine.—*A. a. glabra* Diels, var. Lvs. usually 3-parted; the lower lvs. often only 3-lobed; segments usually rhombic, coarsely toothed and lobed, rarely pinnatifid. R.H.1867:451. J.L.28:87(form with narrow segments). (*A. palmiloba* Carr., *A. a. var. p.*

Rehd., *A. tripartita* Carr., *A. rubricaulis* Carr., *A. aconitifolia* Koehne, not Bge.)

7. *A. japonica* (Thunb.) Mak. Root tuberous: brts. glabrous: lvs. 3-5-foliolate; lfts. partly pinnate and partly pinnately lobed, the middle one 4-10 cm. long, the lower ones much smaller and usually simple, rachis broadly winged, the pinnae articulate, ovate to oblong-ovate, acute or acuminate, cuneate, sparingly and coarsely toothed, shining dark green above, glabrous, chartaceous; petiole 1-6 cm. long; cymes small, on slender often twining stalks 3-8 cm. long; fr. 5-7 mm. across, blue, punctate. Fl.vii-viii; fr.ix-x. Gt.16:t.531. I.T.5:t.176. R.H.1870:17. Gn.6:365. N.I.1:66. (*A. serjaniaefolia* Bge., *Vitis* s. Franch. & Sav.) Japan, N. China. Cult. 1867. Zone VI? Graceful vine with lustrous foliage.

8. *A. arborea* (L.) Koehne. PEPPER-VINE. Slender vine; brts. glabrous or nearly so: lvs. bipinnate, 10-20 cm. long; petiole 1-4 cm. long; lfts. broad-ovate or rhombic-ovate to obovate, 1-4 cm. long, acute to acuminate, broad-cuneate to rounded at base, the terminal one stalked, the lateral ones short-stalked to sessile, coarsely toothed, dark green above and glabrous, pubescent on the veins beneath at least when young: fls. usually 5-merous, in loose long-stalked cymes: fr. about 8 mm. across, dark purple. Fl.viii; fr.ix-x. B.B.2:510. S.H.2:f.214a-b. (*Vitis* a. L., *A. bipinnata* Michx., *Cissus stans* Pers.) Va. to Mo., Fla., Tex. and Mex. Intr. 1700. Zone VII?

Closely related species: *A. orientalis* (Lam.) Planch. Lvs. bipinnate, biterminate or simply pinnate; lfts. 9-15, 2-7 cm. long, the terminal one often rounded at base, glabrous beneath; petiole 3-5 cm. long; fls. 4-merous: fr. red. S.H.2:f. 214c-e. G.C.1871:1615. (*Vitis* o. Boiss.) Asia Minor, Syria. Intr. 1818. Zone VI?

9. *A. megalophylla* Diels & Gilg. Climbing to 10 m.; glabrous: lvs. long-petioled, doubly pinnate or the smaller ones simply pinnate, 20-60 cm. long; segments 7-9, the one or two lower pairs pinnate; lfts. stalked, ovate to ovate-oblong, 5-12 cm. long, rounded or subcordate at base, coarsely toothed, pale or glaucous beneath, the veins ending in the teeth: cymes loose and slender: fr. turbinate, 6 mm. across, black. Fl.viii; fr.ix-x. B.M.8537(c). J.L.28:f.16,86(h),97. Gn.65:45. S.L.85(h). (*Vitis* m. Veitch.) W. China. Intr. 1894. Zone VI? Vigorous vine with large compound lvs.

Related species: *A. Chaffanjoni* (Lévl.) Rehd. Lvs. simply pinnate, to 30 cm. long; lfts. 3-7, elliptic to oblong, 4-1 cm. long, acuminate, rounded or broad-cuneate at base, remotely dentate, purplish beneath, glabrous. J.L.28:f.95,96. (*V. leoides* Veitch, not Maxim., *A. Watsoniana* Wils.) C. China. Intr. 1900. Zone VII.

3. **PARTHENOCISSUS** Planch. Deciduous or rarely evergreen climbing shrubs: bark close, lenticellate; pith white; tendrils with adhesive tips, rarely without; winter-buds rounded, with 2 or 4 outer scales: lvs. digitate or partly 3-lobed, long-petioled: fls. perfect, rarely polygamous, in peduncled compound cymes opposite the lvs., often crowded at the ends of the brts. and forming panicles; calyx minute; petals 5, rarely 4, spreading; style short and thick; disk indistinct; ovary 2-celled; cells 2-ovuled: fr. a 1-4-seeded dark blue or bluish black berry. (Greek *parthenos*, virgin, and *kissos*, ivy; translation of its French name.) Syn.: *Quinaria* Raf., *Psedera* Neck. About 10 species in N. Am., E. Asia and Himal.

a. Lvs. 5-foliolate.

b. Young brts. terete.

c. Tendrils with 3-5 brs., without adhesive disks: cymes solitary.....1. *P. inserta*

cc. Tendrils with 5-12 brs., with adhesive disks: cymes usually crowded into terminal panicles .....2. *P. quinquefolia*

- BB. Young brts. quadrangular: lfts. usually with white markings and purplish below when young ..... 3. *P. Henryana*  
 AA. Lvs. partly 3-foliate and partly simple, 3-lobed ..... 4. *P. tricuspidata*

1. *P. inserta* (Kern.) K. Fritsch. Usually low and rambling over bushes, rarely high-climbing; young growth green; tendrils with 3-5 twining brs., only occasionally with an adhesive disk: lfts. elliptic to oblong, 5-12 cm. long, acuminate, usually cuneate at base, coarsely and sharply serrate, dark green and lustrous above, lighter and usually lustrous beneath, glabrous: cymes dichotomous, on peduncles 3-7 cm. long: fr. bluish black, usually slightly bloomy, about 8 mm. across, 3-4-seeded. Fl.vi-vii; fr.vii-viii. B.M. 2443(c). F.D.21:t.2177(c). S.T.1:t.89. (*P. vitacea* Hitchc., *P. dumetorum* Rehd., *P. quinquefolia* Graebn., not Planch., *P. laciniata* Small.) N. Eng. to Mich. and Assina., s. to Tex. and Colo. Cult. before 1800. Zone II. Does not cling to walls and may be used for covering arbors, rocks and bushes.—*P. i. macrophylla* (Lauche) Rehd., f. lfts. large, elliptic, sometimes to 18 cm. long and 10 cm. broad. (*Ampelopsis quinquefolia* var. *latifolia* Dipp.)—*P. i. dubia* (Rehd.) Rehd., f. Young brts. and lfts. beneath at least on the veins pilose. (*P. hirsuta* Graebn., not Small.)—*P. i. laciniata* (Planch.) Rehd., var. lfts. smaller and narrower, more deeply and incisely serrate with flaring teeth, usually yellowish green. Wyo. to N. Mex. Intr. 1898.

Related species: *P. heptaphylla* (Buckl.) Small. lfts. usually 7, oblong-ovate, 3-6 cm. long, coarsely serrate. S.T.1:t.90. (*P. texana* Rehd., *Ampelopsis h. Buckl.*) Tex. Intr. about 1900. Zone VII.

2. *P. quinquefolia* (L.) Planch. VIRGINIA CREEPER. High climbing; young growth reddish; tendrils with 5-8 brs. ending in adhesive tips: lfts. stalked, elliptic to obovate-oblong, 4-10 cm. long, acuminate, usually cuneate, coarsely and often crenately serrate, dull green above, glaucescent beneath: cymes usually forming terminal panicles: fr. bluish black, slightly bloomy, 6 mm. across, with usually 2-3 seeds. Fl.vii-viii; fr.ix-x. Em.2:535,t.(c). M. Am. 1:t.40(c). Gr.G.2:t.162. S.T.1:t.88. S.L.250(h). (*Vitis q.* Lam., *V. hederacea* Ehrh., *Ampelopsis q.* Michx., *A. virginiana* Hort.) N. Eng. to Fla. and Mex., w. to Ohio, Ill. and Mo. Intr. 1622. Zone III. Clinging firmly to walls and tree-trunks; lvs. turning scarlet and crimson in fall.—*P. q. Engelmännii* (Graebn.) Rehd., f. Does not differ from the type except in its smaller lfts. (*P. E.* Graebn.)—*P. q. murorum* (Focke) Rehd., var. Tendrils with shorter usually 8-12 brs.: lfts. usually broader, the outer ones usually broad-ovate, rounded at base. S.H.2:f.211d(l). M.G.21:25(h). (*P. q.* var. *latifolia* Rehd., *P. radicansissima* Graebn., *Ampelopsis muralis* Hort.) The more southern form.—*P. q. minor* (Graebn.) Rehd., var. A form of the preceding var. with smaller, oval to orbicular-ovate lfts. rounded at base, on stalks 6-8 mm. long.—*P. q. hirsuta* (Pursh) Planch., var. Young brts., inf. and lfts. beneath soft pubescent, usually bright red while young. Gt.48:t.1462(c). (*P. h.* Small, *Ampelopsis h.* Donn, *A. Graebneri* Bolle, *A. pubescens* Schlecht.) N. Eng. to Mex.—*P. Saint-Paulii* (Graebn.) Rehd., var. Young brts. finely pubescent; tendrils with 8-12 brs.; lfts. oblong-ovate, cuneate, short-stalked, pubescent beneath, sharply serrate with usually flaring teeth: panicles elongated. R.H. 1907:567. S.H.2:f.212i(l). S.T.1:t.88,f.9,10. (*P. S.* Graebn.) Iowa and Ill. to Mo. and Tex.

Related species: *P. laetevirens* Rehd. Tendrils with 5-8 slender brs.: lvs. obovate or elliptic, remotely and often coarsely serrate, bright yellow-green, glabrous or pubescent on the veins beneath. C. China. Intr. 1907. Zone VII?

3. *P. Henryana* (Hemsl.) Diels & Gilg. High climbing; young brts. angled; tendrils with 5-7 slender brs.: lfts. stalked, elliptic-ovate to cuneate-

obovate, 3-6 cm. long, acuminate, toothed usually only above the middle, velvety green above and variegated with white along the veins at least when young, purplish beneath and glabrous, or pubescent only on the midrib: fls. in narrow panicles 8-15 cm. long: fr. dark blue, usually 3-seeded. Fl.vii; fr.x. G.C.38:309;39:354. Gn.69:341. J.L.28:f.92(l). R.H.1907:211. S.L.249 (h). (*V. H. Hemsl.*) C. China. Intr. about 1895. Zone VII? The handsome coloring of the lvs. is more pronounced in a partly shaded position; it disappears in the full sun.

Closely related species: *P. Thomsöni* (M. A. Laws.) Planch. Young brts. and lvs. purplish when young; tendrils with 3-5 brs.: lfts. long-acuminate, glabrous or slightly pubescent on the midrib beneath: fls. in slender-stalked cymes opposite the lf.: fr. black. Gn.63:203. J.L.28:f.100. (*P. Henryana* var. *glaucescens* Diels & Gilg, *Vitis T. M. A. Laws., Ampelopsis T. Hort.*) Himal., C. China. Intr. 1900. Zone VII?

4. *P. tricuspidata* (Sieb. & Zucc.) Planch. Boston Ivy. High climbing; tendrils short, much-branched: lvs. slender-stalked, broad-ovate, 10-20 cm. wide, 3-lobed with acuminate coarsely serrate lobes, or, chiefly on young plants and basal shoots, smaller and partly 3-foliolate with stalked lfts., the middle one obovate, the lateral ones obliquely broad-ovate, partly simple and broad-ovate, coarsely serrate and not or slightly lobed, glabrous and lustrous above, pubescent on the veins beneath; cymes usually on short 2-lvd. brts., narrow and somewhat elongated: fr. bluish black, bloomy, 6-8 mm. across. Fls.vi-vii; fr.ix-x. B.M.8287(c). G.C.II.14:664. R.H.1877:176. B.C. 5:2479. A.G.15:94(h). S.L.248(h). (*Ampelopsis t.* Sieb. & Zucc., *A. Veitchii robusta* Hort., *A. Hoggii* Hort., *A. japonica* Hort., *Vitis inconstans* Miq.—JAPANESE IVY.) Japan, C. China. Intr. 1862. Zone IV. Clinging firmly to walls and forming a dense cover; the lustrous lvs. stand dust and smoke well and turn to a brilliant scarlet and orange in fall.—*P. t. Veitchii* (Graebn.) Rehd., var. Lvs. smaller, crenate-serrate, purple while young, ovate and simple or 3-foliolate; lfts. with only 1-3 coarse teeth on each side, the lateral ones usually entire inside. B.H.27:224,t(c). R.H.1877:176. M.G.7:8(h). (*Ampelopsis V. Hort.*) Juvenile form.—*P. t. purpurea* (Rehd.) Rehd., var. A form of the preceding with dark purple lvs. not changing to green. (*Ampelopsis Veitchii* p. and *atropurpurea* Hort.) Cult. 1889.—*P. t. Löwi* (Low) Rehd., var. Lvs. small, 2-3 cm. long, simple and often broader than long, incisedly dentate and almost palmately lobed with very unequal teeth, or 3-foliolate, apple-green, purplish when young. Gn.71:516. A.F.30:1238. M.G.23:261. R.H.1917:272(h). (*A. L. Low.*) Cult. 1908.

Related species: *P. himalayana* (Royle) Planch. Lvs. 3-foliolate; lfts. 3, short-stalked, the middle one obovate to ovate or oblong-ovate, the lateral ones obliquely ovate and rounded or semicordate at base, coarsely serrate, glaucous and nearly glabrous beneath; cymes about as long as lf. Collett, Pl. Simla, f.31. S.H.2:f.211f(l). (*Vitis h. Brandis, V. semicordata* var. *h. Hance, Ampelopsis h. Royle.*) Himal. Cult. 1894. Zone VII?—*P. h. rubrifolia* (Lévl. & Vant.) Gagnep., var. Lfts. smaller and broader, purplish while young; cymes smaller. (*Vitis r. Lévl. & Vaniot.*) W. China. Intr. 1907. Zone VII?—Closely related to the preceding is *P. semicordata* (Wall.) Planch. Young shoots and lfts. beneath pilose; lfts. smaller. (*V. s. Wall.*) Himal. Intr. before 1914. Zone VII?

4. **TETRASTIGMA** Planch. Evergreen or deciduous climbing shrubs: tendrils with adhesive tips or twining: lvs. alternate, digitate or pedate; lfts. 3-5, sometimes reduced to 1: fls. polygamo-dioecious, 4-merous, in axillary cymes or umbels; petals expanding; disk adnate to base of ovary; stigma sessile, 4-lobed or 4-parted: fr. 2-4-seeded; seeds ovoid-globose, sulcate on

the ventral side. (Greek *tetra*, four, and *stigma*; referring to the 4-lobed stigma.) About 40 species in trop. and subtrop. Asia.

**T. obtectum** (M. A. Laws.) Planch. Evergreen or half-evergreen climbing shrub with disciferous tendrils; brts. pilose: lfts. long-petioled, digitate; lfts. 5, sessile, cuneate-obovate or elliptic, 1.5–3.5 cm. long, acute, remotely crenate-serrate with mucronate teeth, glabrous or pubescent (var. *pilòsum* Gagnep.) beneath: fls. greenish, small, in slender-stalked umbels; pedicels slender: fr. obovoid, 6 mm. long. Fl.vi–viii; fr.x. (*Vitis oblecta* Wall. ex Laws.) Himal., C. and W. China. Intr. 1904? Zone VII?

Related species: **T. serrulatum** (Roxb.) Planch. Glabrous: lvs. pedate; lfts. 5 or 3, ovate to elliptic-lanceolate, 1.5–6 cm. long, fls. in compound cymes: fr. globose, black. S.H.2:f.211b,212a-b. (*Vitis capreolata* Don, *Cissus serrulata* Roxb.) Himal. Cult. 1880. Zone VII?

**5. CAYRÀTIA** Juss. Climbing shrubs, rarely herbaceous; tendrils usually branched: lvs. alternate, 3-foliolate or 5–9-foliolate and pedate, the lfts. stalked: fls. perfect, 4-merous, in axillary, corymbose or umbellate infl.; calyx indistinct; petals valvate, spreading; disk 4-lobed, small, thin, adnate to the ovary; style filiform: fr. 2–4-seeded; seed with 1 or 2 deep ventral grooves. (The latinized Indian name.) Syn. *Columella* Lour., not *Columellia* Ruiz & Pav. About 16 species in e. and trop. Asia.

**C. oligocarpa** (Lévl. & Vant.) Gagnep. To 3 m. long; young brts., petioles and peduncles finely grayish pubescent; tendrils forked: lvs. long-petioled, pedate; lfts. 5, the middle one on a petiolule 2–4 cm. long, elliptic-ovate, 6–15 cm. long, acuminate, cuneate, the lateral ones smaller and broader and on much shorter stalks, crenate-dentate with short and broad mucronulate teeth, glabrous or nearly so above except on midrib and veins, grayish pubescent on the veins beneath when young, membranous: peduncle 5–8 cm. long; corymb loose, 6–12 cm. across; anthers orbicular: fr. globose, 6–8 mm. across, yellow, finally black: seeds 3–4, with 2 deep ventral grooves. Fl.vi; fr.ix–x. (*Vitis o.* Lévl. & Vant., *Columella o.* (Lévl. & Vant.) Rehd., *Cissus o.* Bailey.) C. and S. China. Intr. 1907. Zone VII.

The related *C. japonica* (Thunb.) Gagnep. (*Cissus j.* Willd.) is herbaceous; it has smaller and broader lfts., a rather dense infl., and elliptic-oblong anthers.

**6. CÍSSUS** L. Deciduous or evergreen shrubs climbing by tendrils, rarely herbs with usually tuberous roots; stems and lvs. more or less fleshy: lvs. alternate, simple or compound; lfts. sessile: fls. perfect or polygamo-monoecious, 4-merous, in usually umbel-like cymes, opposite the lf. or terminal; petals expanding; disk cupular, 4-lobed or of 4 distinct glands; style filiform, stigma small: fr. 1–2-seeded. (Greek *kissos*, ivy.) About 250 species in trop. and subtrop. countries.

**C. incisa** (Torr. & Gr.) Desmoul. MARINE IVY. Stem to 10 m., warty, fleshy; glabrous: lvs. 3-parted or 3-foliolate; lfts. or segments ovate or obovate, 1.5–2.5 cm. long, cuneate, coarsely dentate and often lobed: fls. in umbel-like peduncled cymes: fr. obovoid, about 8 mm. long, black, on recurved pedicels. Fl.vi–viii; fr.x. B.B.2:210. (*Vitis i.* Nutt. ex Torr. & Gr., not Jacq.) Mo. and Kans. to Ariz., Tex. and Fla. Intr. before 1876. Zone VII?

#### Fam. 61. TILIACEAE Juss. LINDEN FAMILY

Trees, shrubs or herbs, often with stellate or fascicled pubescence: lvs. alternate, rarely opposite, entire or lobed, stipulate: fls. perfect, regular; sepals 5, rarely 3 or 4, free or connate, usually valvate; petals as many, convolute, valvate or imbricate, rarely wanting; stamens 10 or usually more, hypo-

gynous; filaments distinct or connate only at base; anthers 4-celled, opening by slits or pores; staminodes sometimes present; ovary superior, 2-10-celled; cells with 1 to several ovules; style 1, stigma radiate: fr. a caps. or indehiscent and either nut-like or drupaceous, rarely a berry or separating into drupelets; seed albuminous.—About 35 genera and 300 species in trop., subtrop. and temp. regions.

- A. Peduncle with a large adnate, usually oblong bract; ovary sessile; lvs. slender-petioled.  
 1. *Tilia*  
 AA. Peduncle without bract; ovary and stamens borne on an androgynophore: lvs. short-petioled ..... 2. *Grewia*

1. *TILIA* L. LINDEN. Deciduous trees, mostly with fascicled hairs; winter-buds large, obtuse, with few or several scales; terminal bud wanting: lvs. alternate, 2-ranked, slender-petioled, usually cordate or truncate and oblique at base, serrate; stipules caducous: fls. yellowish or whitish, fragrant, in usually drooping cymes; peduncle adnate, usually about  $\frac{1}{2}$  to a large ligulate bract; sepals 5, distinct; petals 5, imbricate, often with a staminode opposite each petal; stamens many, distinct or in 5 fascicles opposite the petals; filaments often forked at apex; ovary 5-celled, the carpels opposite the sepals; cells 2-ovuled; style slender, with 5-lobed stigma: fr. globose or ovoid, nutlike, with usually 1-3 seeds; cotyledons palmately 5-lobed. (Ancient Latin name.) LIME-TREE, WHITEWOOD, BASSWOOD. About 30 species in the temp. regions of the n. hemisphere, in N. Am. s. to Mex., but none in W. N. Am.; in Asia s. to C. China and S. Japan.

- A. Lvs. glabrous beneath at maturity or pubescent with simple hairs.  
 B. Lvs. pubescent beneath and often above, rarely glabrescent: fls. usually 3, without staminodes ..... 1. *T. platyphyllos*  
 BB. Lvs. glabrous beneath except axillary tufts of hairs.  
 C. Fls. without staminodes.  
 D. Lvs. green or sometimes glaucescent beneath; tertiary veins prominent.  
 E. Lvs. lustrous and dark green above, with acuminate teeth.  
 F. Lvs. with aristate teeth: fr. obtuse at ends ..... 2. *T. dasystyla*  
 FF. Lvs. with acuminate teeth: fr. narrowed at ends ..... 3. *T. euchlora*  
 EE. Lvs. dull green above, sometimes slightly glaucescent beneath, serrate with short acute teeth ..... 4. *T. europaea*  
 DD. Lvs. glaucous beneath; tertiary veins not prominent ..... 5. *T. cordata*  
 CC. Fls. with staminodes.  
 D. Lvs. glaucous or glaucescent beneath, 4-8 cm. long.  
 E. Lvs. closely serrate, not lobed ..... 6. *T. japonica*  
 EE. Lvs. coarsely serrate and usually 3-lobed ..... 7. *T. mongolica*  
 DD. Lvs. green or sometimes glaucescent beneath, 8-15 cm. long ..... 8. *T. americana*  
 AA. Lvs. with fascicled or stellate, rarely simple pubescence beneath: fls. with staminodes.  
 B. Brts. and petioles glabrous.  
 C. Lvs. thinly grayish tomentose or grayish pubescent beneath, ovate or broad-ovate.  
 D. Lvs. without axillary tufts of hairs beneath, orbicular-ovate ..... 9. *T. Molikiei*  
 DD. Lvs. with axillary tufts of hairs, ovate ..... 10. *T. neglecta*  
 CC. Lvs. closely and densely tomentose.  
 D. Lvs. oblong-ovate or ovate, sharply serrate, 8-18 cm. long: fr. usually short-ellipsoid, smooth.  
 E. Petioles to 4 cm. long, tomentum of lf. often brownish; brts. slender.  
 11. *T. heterophylla*  
 EE. Petiole to 7 cm. long; tomentum of lf. always white; brts. stout.  
 12. *T. monticola*  
 DD. Lvs. orbicular-ovate, 5-10 cm. long, sinuately serrate: fr. globose, tuberculate.  
 13. *T. Oliveri*  
 BB. Brts. pubescent or tomentose, at least when young (or glabrate and lvs. denticulate); petioles pubescent.  
 C. Lvs. denticulate or with bristle-like teeth.  
 D. Lvs. white-tomentose, minutely denticulate, entire below the middle ..... 14. *T. Tuan*  
 DD. Lvs. brownish-tomentose beneath, with bristle-like teeth ..... 15. *T. Henryana*  
 CC. Lvs. serrate.  
 D. Lvs. orbicular-ovate.  
 E. Tomentum white or grayish white, close: lvs. finely serrate.  
 F. Petiole shorter than half the blade: fr. slightly 5-angled: habit upright.  
 16. *T. tomentosa*  
 FF. Petiole longer than half the blade: fr. 5-furrowed; habit pendulous.  
 17. *T. petiolaris*

EE. Tomentum at least of young brts., petioles and veins beneath brownish: lvs. coarsely serrate with long-pointed teeth.

F. Lvs. without axillary tufts of hairs beneath.....18. *T. mandshurica*

FF. Lvs. with axillary tufts of hairs beneath.....19. *T. Maximowicziana*

DD. Lvs. triangular-ovate or ovate, coarsely and irregularly serrate with short-pointed teeth, often glabrescent with age.....20. *T. Miqueliana*

1. *T. platyphyllos* Scop. LARGE-LEAVED L. Tree to 40 m.; young brts. pubescent, rarely glabrous: lvs. roundish-ovate, 6-12 cm. long, abruptly acuminate, obliquely cordate, sharply and regularly serrate, dull and short-pubescent or glabrous above, light green and pubescent beneath, especially on the veins, rarely nearly glabrous; petiole pubescent 1.5-5 cm. long: fls. yellowish white, in pendent 3-, rarely 4-6-fld. cymes; floral bract 5-12 cm. long, pubescent on midrib below; stamens longer than petals; fr. subglobose to pyriform, 8-10 mm. long, tomentose, 5-ribbed, hard-shelled. Fl.vi; fr. ix-x. R.I.6:t.316-18(c) H.W.3:24,25(h),t.42(c). G.F.2:256. M.A.t.74(h). M.D.1917:t.6(h). (*T. grandifolia* Ehrh., *T. europaea* L., in part, *T. officinarum* Crantz, in part.) Eu. Zone III. Planted in Eu. for centuries; the earliest Linden to bloom; very variable, with numerous spontaneous forms; the following are often cult.—*T. p. laciniata* (Loud.) K. Koch, var. Smaller tree with deeply and irregularly lobed lvs., often cut to the midrib, with narrow divisions. S.H.2:f.253h-h<sup>1</sup>. M.D.1920:67;1919:t.17(h). G.W.15:662(h). (*T. p. asplenifolia* Kirchn., *T. europaea* L. Loud., *T. grandifolia filicifolia* Hort.)—*T. p. rubra* (West.) Rehd., var. Brts. red. (*T. p.* var. *corallina* Hartw. & Ruempl.)—*T. p. aurea* (Loud.) Kirchn. Brts. bright yellow. (*T. grandifolia* var. *aurantia* Hort.)—*T. p. fastigiata* Rehd., f. Of narrow pyramidal habit. M.G.13:161(h). M.D.14:210(h). (*T. grandifolia pyramidalis* Beiss., not *T. p. pyramidalis* Schneid.)—*T. p. vitifolia* (Host) Simonk., var. Lvs. slightly 3-lobed, less pubescent. R.I.6:t.319(c). M.D.1920:67.

*T. p. × americana* = *T. flaccida* Host. Lvs. slightly pilose on veins beneath, serrate with acute or subacuminate teeth, axils of secondary veins bearded; cymes 3-fld.; stamens as long as petals. S.H.2:f.254a-b,256e-f. (*T. carlsruhensis* Simonk., *T. praecox* A. Br., not Host.)—*T. p. × cordata*; see No. 4.

2. *T. dasystyla* Stev. Tree to 30 m.; brts. glabrous, red: lvs. firm, roundish-ovate, 8-14 cm. long, abruptly acuminate, obliquely cordate, sharply serrate with aristate teeth, glabrous, lustrous dark green above, bright green and with axillary tufts of whitish hairs beneath: infl. 3-7-fld.; style pubescent or glabrous: fr. globose-ovoid, about 1 cm. long, slightly 5-ribbed. S.H.2:254 e-f,255e. (*T. rubra* Stev., not DC., *T. begonifolia* Stev., *T. caucasica* Rupr., *T. multiflora* Ledeb.) S. e. Eu., Cauc. to n. Persia. Cult. 1880. Zone V.

3. *× T. euchlora* K. Koch (?*T. cordata* *× dasystyla*). Tree to 20 m.; brts. often slightly pendulous, glabrous when young: lvs. roundish-ovate, 5-10 cm. long, abruptly short-acuminate, obliquely cordate, finely and sharply serrate with mucronate teeth, lustrous dark green and glabrous above, pale green and glabrous beneath, except axillary tufts of brown hairs; petiole glabrous, 3-5 cm. long: fls. 3-7, in pendulous cymes; floral bract linear-oblong, glabrous, 5-8 cm. long; style pubescent near base: fr. short-ellipsoidal, narrowed at ends, slightly 5-ribbed, tomentose. Fl.vii. S.H.2:f.252n-o. M.D. 1920:67. (*T. dasystyla* of Kirchn., not Stev., *T. rubra* var. *e.* Dipp.) Intr. about 1860. Zone V. One of the handsomest Lindens with smooth glossy lvs. and of good habit; a valuable avenue tree.

*T. e. × petiolaris*; see under No. 17.

4. *× T. europaea* L. (*T. cordata* *× platyphyllos*). COMMON L. Tree to 40 m.; brts. glabrous: lvs. broad-ovate, 6-10 cm. long, short-acuminate, obliquely cordate or nearly truncate, sharply serrate, dark green and glabrous

above, bright green beneath and glabrous except axillary tufts of hairs; petiole 3-5 cm. long; fls. 5-10 in pendulous cymes 7-8 cm. long; fr. subglobose or short-oval, faintly ribbed, tomentose, hard-shelled. Fl.vi-vii. H.A.3:t. 47(c). R.I.6:t.313. G.F.2:256. M.G.19:188(h),189(h). Am. For. 21:782,t(h); 26:214(h). (*T. intermedia* DC., *T. vulgaris* Hayne.) Eu. Zone III. Often planted as street tree.—*T. e. pallida* Reichenb., var. Lvs. larger, yellowish to bluish green beneath. R.I.6:t.315(c). M.G.39:274(h). (*T. vulgaris* var. *p.* Sarg., *T. p.* Simonk.)—*T. e. pendula* Rehd., f. Brs. pendulous. (*T. Beaumontia pendula* Hort.)

5. *T. cordata* Mill. SMALL-LEAVED EUROPEAN L. Tree to 30 m.; brts. glabrous or slightly pubescent at first; lvs. suborbicular, 3-6 cm. long, sometimes broader than long, abruptly acuminate, cordate, sharply and rather finely serrate, dark green and glabrous and somewhat lustrous above, glaucous or glaucescent and glabrous beneath except axillary tufts of brown hairs; petiole slender, 1.5-3 cm. long; fls. yellowish white, fragrant, 5-7 in pendent or nearly upright cymes; stamens about as long as petals; floral bract 3.5-8 cm. long, glabrous; fr. globose, slightly or not ribbed, thin-shelled. Fl.vii. R.I.6:t.311, 312(c). H.W.3:21,22(h),t.41(c). G.F.2:257. M.G.1904:188(h). G.W.1914:352 (h);494(h). (*T. ulmifolia* Scop., *T. parvifolia* Ehrh., *T. microphylla* Vent., *T. silvestris* Desf., *T. europaea* L. in part.) Eu. Zone III. Planted as shade tree since ancient times.—*T. c. pyramidalis* Wittm., var. Of narrow pyramidal habit. Gt.45:180(h).

*T. c.* × *americana* = *T. flavescens* A. Br. Lvs. 6-8 cm. long, with rather coarse acuminate teeth, glabrous and green beneath; cymes many-fld.; staminodes partly present; stamens shorter than petals. S.H.2:252p-q (1).—Here belongs also *T. floribunda* A. Br. with longer and looser cymes, and *T. Spaethii* Spaeth with larger lvs.—*T. c.* × *dasystyla*; see No. 3.

A related species is *T. amurensis* Rupr. Bark thin, scaly; lvs. broad-ovate, coarsely serrate with acuminate teeth; fls. 3-20, sometimes with incompletely developed staminodes; fr. subglobose. N.K.12:t.7. I.S.t.177. S.H.2:f.250e-g. (*T. cordata* var. *mandshurica* Maxim., *T. Maximowiczii* Bak.) Manch., Korea. Cult. 1909. Zone V.

6. *T. japonica* (Miq.) Simonk. JAPANESE L. Tree to 20 m., similar to *T. cordata*; young brts. slightly pubescent at first; lvs. suborbicular, 5-8 cm. long, abruptly acuminate, cordate, sharply serrate, light bluish green and pubescent on the veins beneath when young, with axillary tufts of hairs; petiole 2.5-5 cm. long; fls. in 7-40-fld. pendulous cymes; bract stalked; fr. short-ellipsoid, not ribbed, thin-shelled. Fl.vii. S.I.1:t.72(c). I.S.t.179. M.K. t.76(c). (*T. cordata* var. *j.* Miq.) Japan. Intr. 1875. Zone V.

Related species: *T. insularis* Nakai. Lvs. broad-ovate, 6-8 cm. long, coarsely serrate, with whitish axillary tufts beneath, thickish; cyme 4.5-7 cm. across; fls. 12-14 mm. across. N.T.12:43(b),t.10. Korea: Dagelet Isl. Intr. 1919. Zone V.—*T. paucicostata* Maxim. Lvs. ovate, 5-8 cm. long, short-acuminate, obliquely truncate or subcordate at base, rather coarsely toothed, light or slightly bluish green beneath, with axillary tufts of hairs; cymes 7-15-fld.; fr. globose or pyriform, slightly ribbed. S.H.2:f.250n-o. N. and C. China. Intr. 1901. Zone V.—*T. kiusiana* Mak. & Shiras. Lvs. oblong-ovate, 3-5 cm. long, obliquely rounded or subcordate at base, light green beneath, bearded in the axils; petiole 5-10 mm. long; fls. small, in 20-35-fld. pendulous cymes; fr. globose. S.I.2:t.50(c). Bull. Coll. Agric. Tokyo, 4,2:t.17. S.H.2:f.250a-b. Japan. Intr. 1930. Zone VII?

7. *T. mongolica* Maxim. MONGOLIAN L. Tree to 10 m.; young brts. glabrous, reddish; lvs. reddish when unfolding, suborbicular to ovate, 4-7 cm. long, coarsely serrate and often 3-lobed, dark green and lustrous above, glaucescent and glabrous beneath without or with small axillary tufts of hairs; petiole reddish, 2-3 cm. long; cyme 6-20-fld.; bract stalked; fr. sub-

globose, thick-walled. Fl.vii. S.T.1:t.61. I.S.t.180. R.H.1902:476-8. S.H.2: f.249g-h,250c-d. Mongolia, China. Intr. 1880. Zone IV. Small graceful tree.

8. *T. americana* L. AMERICAN L. Tree to 40 m.; brts. glabrous, green: lvs. broad-ovate, 10-20 cm. long, abruptly acuminate, cordate to truncate at base, coarsely serrate with long-pointed teeth, light green beneath, with tufts of hairs in the axils of the lateral veins, wanting at base; petiole 3-5 cm. long: fls. about 1.5 cm. across, in pendulous 6-15-fld. slender-branched cymes; floral bract usually stalked, tapering toward the base; stamens shorter than petals: fr. ellipsoid to subglobose, thick-shelled, without ribs. Fl.vii. G.O.t.45(c). S.S.1:t.24. Mn.6:153. FL.5:136,t(h). M.G.31:357(h). (*T. glabra* Vent., *T. nigra* Borkh.) Can. to Va. and Ala., w. to N. D., Kans. and Tex. Intr. 1752. Zone II. Frequently planted as an avenue tree.—*T. a. macrophylla* (Bayer) V. Engl., f. Lvs. very large and broad, 12-20 cm. long. (*T. nigra* var. *m.* Bayer, *T. mississippiensis* Hort., in part, *T. laxiflora* Hort., in part.)—*T. a. dentata* (Kirchn.) Rehd., f. Lvs. large, coarsely and irregularly, often nearly doubly dentate. M.G.39:274(h). (*T. longifolia* d. Kirchn., *T. am. f. megalodonta* V. Engl.)—*T. a. ampelophylla* V. Engl., f. Lvs. large, lobed and coarsely and irregularly toothed with acuminate teeth. (*T. inciso-dentata* Hort., *T. longifolia dentata* Hort., in part.)—*T. a. fastigiata* (Slavin) Rehd., f. Narrow pyramidal form with ascending brs.

*T. a. × platyphyllos*; see under No. 1.—*T. a. × cordata*; see under No. 5.—*T. a. × petiolaris*; see No. 9.

Closely related species: *T. floridana* (V. Engl.) Small. Tree to 18 m.: lvs. tomentose or pubescent beneath when unfolding, soon glabrous, without or with very small axillary tufts and green or glaucescent beneath: fls. in pubescent few-fld. rather compact cymes; floral bract subsessile: fr. rusty-tomentose. S.M.738. S.H.2:f.256i-k. N. C. to Fla., w. to Mo., Okla. and e. Tex. Cult. 1915. Zone V.

9. *× T. Moltkei* Spaeth (*T. americana × petiolaris*). Tree of vigorous growth with more or less pendent brs.; brts. glabrous or slightly pubescent at first: winter-buds glabrous or pubescent near apex: lvs. orbicular-ovate, 10-18 cm. long, similar to those of *T. americana* slightly grayish tomentose beneath, often pilose on veins, without axillary tufts; petiole 5-6 cm. long: cymes 5-8-fld., dense; pedicels tomentulose: fr. subglobose or depressed-globose and faintly furrowed. Fl.vii. E.H.7:t.407,f.11. Gt.84:197. S.H.2:f.256g(l). (*T. spectabilis* Dipp., not Host, *T. Blechiana* Hort., partly, *T. alba spectabilis* Hort.) Orig. before 1880. Possibly partly *T. americana × tomentosa*.

10. *T. neglecta* Spach. Tree to 30 m.; brts. glabrous, red: lvs. broad-ovate or ovate, 10-20 cm. long, acuminate, obliquely cordate or truncate, coarsely serrate with apiculate teeth pointing forward, lustrous and glabrous above, greenish or grayish and loosely stellate-pubescent beneath, with scattered mostly simple hairs on the veins, often tinged brownish; petiole glabrous, 3-6 cm. long: cymes rather loose, 5-15-fld.; pedicels pubescent or nearly glabrous; bracts glabrous, usually decurrent nearly to base: fr. subglobose to ellipsoid, about 8 mm. across, rarely slightly angled. Fl.vii. S.M.740. (*T. Michauxii* Sarg., not Nutt., *T. nigra vestita* A. Br., *T. pubescens* Hort., not Vent.) Can. to N. C., w. to Minn. and Mo. Cult. 1830. Zone IV.

11. *T. heterophylla* Vent. Large tree; brts. glabrous, reddish or yellowish brown: lvs. ovate, 8-13 cm. long, gradually acuminate, obliquely truncate or rarely subcordate at base, finely serrate with aristate teeth, glabrous above and lustrous at maturity, beneath with close thick white tomentum or often brownish on the upper lvs., and with small tufts of reddish brown hairs; petiole glabrous, 3-4 cm. long: cymes 10-20-fld., 6-8 cm. long, pubescent

except the glabrous peduncle; bract tomentose beneath at first: fr. ellipsoid, 8 mm. long, apiculate, rusty-tomentose. Fl.vii. S.M.745. W. Va. to n. Fla., Ala. and Ind. Cult. 1755. Zone V.—*T. h. Michauxii* (Nutt.) Sarg., var. *Brts.* red-brown: lvs. ovate to ovate-oblong, 8–15 cm. long, acute or abruptly acuminate, cordate or rarely obliquely truncate, coarsely serrate, with short white or grayish tomentum beneath; peduncle pubescent at first: fr. subglobose, 6–8 mm. across. (*T. M.* Nutt.) S.M.746. N. Y. to Ohio, Ind., Ark., Ala. and Ga. Cult. 1800. Zone V. With large lvs. white beneath.

12. *T. monticola* Sarg. Tree to 20 m.; brts. glabrous, stout, usually bright red during the first year; winter-buds bloomy: lvs. ovate to ovate-oblong, 10–13 cm. long, gradually acuminate, obliquely truncate or cordate, finely serrate with straight or incurved teeth, dark green and lustrous above, densely white-tomentose beneath, thin: petiole 3–7 cm. long, glabrous: fls. 8–10 mm. long, in usually 7–10-fld. glabrous cymes; pedicels sparingly pubescent: fr. ellipsoid, 6–8 mm. long, rusty-tomentose. Fl.vii. S.M.747. (*T. heterophylla* Sarg., in part, not Vent.) Mts. of Va., Tenn. and N. C. Cult. 1888. Zone V.

13. *T. Oliveri* Szysz. Tree to 15 m.; young brts. glabrous, reddish brown: lvs. broad-ovate or orbicular-ovate, 7–10 cm. long, short-acuminate, obliquely cordate or truncate at base, sinuately denticulate with short gland-tipped teeth, dark green and glabrous above, white-tomentose beneath without axillary tufts; petiole glabrous, 3–5 cm. long: fls. small, in pendulous 7–20-fld. cymes; pedicels short, thickened; floral bract sessile: fr. globose, apiculate, about 8 mm. long, warty, thick-shelled. Fl.vi. I.S.t.184. R.H.1924:188. S.H.2:f.259a-b(l). (*T. pendula* Engl.) C. China. Intr. 1900. Zone V.

14. *T. Tuan* Szysz. Tree to 15 m.; brts. glabrous or pubescent at first: lvs. broad-ovate to ovate, 6–13 cm. long, acuminate, obliquely truncate or subcordate, remotely and minutely denticulate, usually entire below the middle, glabrous above, densely gray-tomentose beneath, with small axillary tufts; petiole pubescent, 3–6 cm. long: fls. in 15–20-fld. cymes; floral bract stellate-pubescent: fr. subglobose, about 8 mm. across, warty, thick-shelled. Fl.vii. H.I.20:1926. C.C.245. I.S.t.191. C. China. Intr. 1901. Zone V.—*T. T. chinensis* Rehd. & Wils. Brts. tomentose; winter-buds densely pubescent: lvs. ovate to oblong-ovate. Intr. 1907.

15. *T. Henryana* Szysz. Tree to 15 m.; brts. stellate-pubescent at first, soon glabrous: lvs. broad-ovate to ovate, 5–12 cm. long, short-acuminate, obliquely cordate or truncate, denticulate with bristly teeth, midrib and veins pubescent above, brownish stellate-pubescent beneath with axillary tufts of hairs; petiole 2–4 cm. long, pubescent: fls. whitish, 20 or more in pendulous cymes; floral bract stellate-pubescent: fr. short-ellipsoid, 5-ribbed. Fl.vii–viii. H.I.20:1927. I.S.t.185. C. China. Intr. 1901. Zone V.—*T. H. subglabra* V. Engl., var. Lvs. nearly glabrous beneath.

16. *T. tomentosa* Moench. SILVER L. Tree to 30 m., with upright brs.; young brts. tomentose: lvs. suborbicular, 5–10 cm. long, abruptly acuminate, cordate to nearly truncate at base, sharply and sometimes doubly serrate or even slightly lobulate, dark green and slightly pubescent above at first, white-tomentose beneath; petiole 2–3.5 cm. long, tomentose: fls. 7–10 in pendulous cymes: fr. ovoid, 8–10 mm. long, minutely warty and slightly 5-angled. Fl. vii–viii. R.I.6:t.324(c). H.W.3:26,t.43(c). F.E.14:1154,t(h). M.G.19:189(h). E.H.7:t.373(h). (*T. alba* Ait., *T. argentea* DC., *T. alba pyramidalis* Hort.) S. E. Eu., W. Asia. Intr. 1767. Zone IV. Handsome tree of broad-pyramidal habit.

*T. t.* × *cordata* = *T. Juranyana* Simonk. Lvs. lustrous above, with scattered stellate hairs beneath, serrate with mucronate teeth: fr. ovoid, slightly ribbed. Hungary. Cult. ? Zone V.

17. *T. petiolàris* DC. PENDENT SILVER L. Tree to 25 m., with pendent brs.; young brts. tomentose: lvs. orbicular-ovate, 5-11 cm. long, acuminate, obliquely cordate or nearly truncate at base, regularly and sharply serrate, slightly pubescent above, white-tomentose beneath; petiole 3-6 cm. long: fls. whitish, 3-10 in pendulous tomentose cymes: fr. depressed-globose, 8 mm. across, warty and with 5 grooves. Fl.vii. B.M.6737(c). B.S.2:595. G.C. 66:131;100:402(h). E.H.7:t.374(h). Gn.86:579(h). (*T. tomentosa* var. *p.* Kirchn., *T. alba* K. Koch., not Michx., *T. americana pendula* Hort.) Doubtfully native in S. E. Eu. and W. Asia. Intr. before 1840. Zone V. Handsome tree with pendent brs.

*T. p.* × *euchlora* = *T. orbiculàris* Jouin. Brs. pendulous: lvs. lustrous and glabrous above, grayish tomentose beneath; petiole shorter. S.H.2:f.252l-m(1). Gn.89:731(h). Orig. about 1870.—*T. p.* × *americana*; see No. 9.

18. *T. mandshùrica* Rupr. & Maxim. MANCHURIAN L. Tree to 20 m.; young brts. and buds with brownish tomentum: lvs. orbicular-ovate, 8-15 cm. long, short-acuminate, usually cordate at base, coarsely serrate with long-pointed teeth, sometimes indistinctly lobed, sparingly pubescent above, grayish or whitish tomentose beneath, without axillary tufts; petiole 3-7 cm. long, tomentose: fls. 7-10 in pendulous brownish tomentose cymes: fr. globose, 5-ribbed toward the base or indistinctly ribbed. Fl.vi-vii. N.K.12:t.12. I.S.t.182. N. E. Asia. Intr. about 1860. Zone IV.

19. *T. Maximowicziana* Shiras. Tree to 30 m.; young brts. tomentose: lvs. orbicular-ovate or broad-ovate, 8-14 cm. long, abruptly acuminate, obliquely cordate, coarsely serrate with broad mucronate teeth, dark green and slightly pubescent above at first, grayish tomentose beneath and with brownish axillary tufts, finally often partly glabrescent; petiole 3-7 cm. long: fls. small, 10-18 in pendulous tomentose cymes; style exserted: fr. subglobose, 5-ribbed, 1 cm. across. Fl.vi. S.I.2:t.50(c). M.K.t.77(c). G.F.6:113 (as *T. Miqueliana*). B.C.6:3348. (*T. Miyabei* Jack.) Japan. Cult. 1880. Zone V.

Related species: *T. intónsa* Rehd. & Wils. Tree to 20 m.; young brts. pilose: lvs. broad-ovate, 8-14 cm. long, abruptly acuminate, sharply and rather finely serrate, grayish green and stellate-pubescent beneath, usually with axillary tufts: cymes pilose, 1-3-fld.: fr. ovoid, 5-angled. (*T. tonsura* Veitch.) W. China. Intr. 1903.—*T. chinénsis* Maxim. Tree to 15 m.; brts. glabrous: lvs. broad-ovate to ovate, 6-10 cm. long, sharply and closely serrate, glabrous above, thinly tomentose beneath, with fulvous tufts: fr. 5-ribbed. I.S.t.186. (*T. Baroniana* Diels.) Intr. 1925. Zone V.

20. *T. Miqueliana* Maxim. Tree to 15 m.; young brts. tomentulose: lvs. ovate or triangular-ovate, 6-8, on shoots to 12 cm. long, longer than broad, acute or acuminate, obliquely cordate at base, coarsely serrate with broad mucronate teeth, dark green and glabrous or nearly so above, grayish tomentose beneath, without axillary tufts; petiole 2-4 cm. long, tomentose: fls. 10-20 in pendulous tomentose cymes; stamens 60-75; style shorter than petals: fr. subglobose, 5-ribbed at base. Fl.vi. S.I.1:t.72(c). I.S.t.183. S.H. 2:f.258a-b. E. China; cult in Japan. Intr. before 1900. Zone V.

2. *GRÈWIA* L. Trees or shrubs, more or less stellate-pubescent; winter-buds small, with several pointed narrow scales: lvs. alternate, 2-ranked, short-petioled and usually oblique, entire or serrate, stipulate: fls. 5-merous, rather small, solitary or in terminal or lateral cymes; petals glandular and usually ciliate at base, rarely very small or wanting; stamens many, distinct; an-

thers suborbicular; ovary 5-celled, with 2 to several ovules in each cell: fr. a drupe with 1 or several stones, fleshy or sometimes fibrous; seeds with copious albumen. (After Nehemiah Grew, who wrote on the anatomy of plants; 1628-82.) About 90 species in trop. and subtrop. regions of Asia, Afr. and Austral.

**G. biloba** D. Don. Shrub to 2.5 m.; brts. stellate-pubescent: lvs. ovate or rhombic-ovate to rhombic-lanceolate, 5-12 cm. long, acute or acuminate, cuneate or rounded at base, unequally or doubly serrate, nearly glabrous above, sparingly stellate-pubescent or nearly glabrous beneath except on the veins; petiole 3-10 mm. long: fls. creamy yellow, 1-1.5 cm. across, in 5-8-fld. umbels, opposite the lvs., densely pubescent; peduncle 5-20, pedicels 3-6 mm. long; sepals oblong-lanceolate, densely pubescent outside, petals about  $\frac{1}{2}$  as long: fr. orange or red, usually 2-lobed and 8-12 mm. across, or 3-4 lobed or of only 1 carpel. (*G. parviflora* var. *glabrescens* Rehd. & Wils.) E. China, Formosa. Cult. 1890. Zone VII?—**G. b. parviflora** (Bge.) Hand-Mazz., var. Brts. tomentose: lvs. ovate to rhombic-ovate, 4-9 cm. long, broad-cuneate or rounded at base, scabrid above, densely stellate-pubescent beneath. I.T.1:t.12. Gt.38:601. N.K.12:t.16. (*G. p.* Bge.) N. China, Korea. Intr. 1883. Zone (V).

Related species: **G. oppositifolia** Roxb. Small tree: lvs. ovate, 6-10 cm. long, rounded at base, crenate-serrate, stellate-tomentulose; petiole 4-8 mm. long: fls. about 3 cm. across, on a peduncle 1.5-3 cm. long. Wight, Icon. Pl. 1:t. 32. N. W. Himal. Cult. 1914. Zone VII?

#### Fam. 62. MALVACEAE Neck. MALLOW FAMILY

Herbs, shrubs or trees, usually with stellate pubescence: lvs. alternate, simple, usually palmately veined and more or less lobed, stipulate: fls. perfect, regular, rarely unisexual, solitary or in compound infl.; sepals 5, often united, valvate, often with bractlets at base; petals 5, convolute, often adnate to the stamens; stamens numerous, very rarely 5, the filaments united into a tube; anthers 1-celled; pollen spiny; ovary superior, 2-many-celled; ovules 1-many in each cell; styles and stigmas usually as many as carpels: fr. a caps. or separating into carpels, very rarely fleshy; seed with scant albumen; embryo usually curved, with leafy folded cotyledons.—About 40 genera and 900 species in the temp. and trop. regions over the whole earth.

A. Fr. separating into carpels; calyx without involucre.....1. *Hoheria*  
 AA. Fr. a dehiscent caps.; calyx with an involucre of bractlets at base.....2. *Hibiscus*

1. **HOHERIA** Cunningh. Shrubs or small trees with stellate pubescence: lvs. alternate, crenate or serrate, cordate at base: fls. perfect, axillary and solitary or fascicled; calyx 5-toothed; without involucre; staminal column divided at apex into numerous filaments; style divided at apex into as many brs. as carpels; ovary 5-15-celled; ovules one in each cell: mature carpels membranous, separating from the axis, wingless or winged on back. (From the N. Zealand vernacular name *hoheri*). Six species in N. Zeal.

**H. glabrata** Sprague & Summerh. Tree to 10 m.; brts. sparingly pubescent at first, later glabrous: lvs. ovate to ovate-lanceolate, 5-12 cm. long, acuminate, cordate at base, doubly or simply crenate-serrate, nearly glabrous; petiole 2-7 cm. long: fls. white, 2.5-3.5 cm. across, in 2-5-fld. fascicles; pedicels 1.5-4 cm. long, calyx broad-campanulate with triangular acute lobes; petals obliquely obovate, retuse; ovary 10-15-celled: fr. depressed-globose; carpels wingless on back. Fls.vi. B.M.5935(c). G.C.74:119(h);78:132. Gn.83:421(h);87:443(h). (*H. Lyallii* var. Hook. f., *Plagianthus Lyallii*

Gray, in part, *Gaya Lyallii* E. J. Baker, in part.) Intr. 1871. Zone VII. Handsome in bloom with its numerous white fls.; the hardiest species.

**2. HIBISCUS L.** Herbs or deciduous or evergreen shrubs, rarely small trees; winter-buds (of our species) minute, covered by the lf.-basis: lvs. alternate, palmately veined and lobed: fls. usually solitary and axillary, mostly large and conspicuous; calyx 5-toothed or 5-parted, usually with an involucre of bractlets below; corolla usually campanulate, of 5 distinct petals; staminal column with numerous anthers below the 5-toothed apex; style 5-cleft at apex with usually capitate stigmas; ovary 5-celled, with 3-many ovules in each cell: caps. loculicidally dehiscent into 5 valves; the cells sometimes with horizontal walls. (Ancient Latin name.) About 200 species mostly in the Tropics.

**H. syriacus L. SHRUBBY ALTHAEA.** Shrub to 3 or occasionally small tree to 5 or 6 m.; young brts. villous, later glabrous: lvs. ovate or rhombic-ovate, 5-10 cm. long, more or less 3-lobed and coarsely toothed with rounded or acutish teeth, broad-cuneate or rounded at base and 3-nerved, glabrous except a few hairs on the veins beneath; petiole 5-15 mm. long: fls. solitary, short-stalked, white to red or purple or violet, broad-campanulate, 6-10 cm. across; calyx with unequal ovate-lanceolate lobes and an involucre of linear bractlets shorter than calyx. Fl.viii-ix. B.M.83(c). Gn.52:504,t(c). R.B. 3:25,t(c). F.E.25:459(h); 32:127(h). G.W.13:65(h). Gn.75:604(h). (*Althaea frutex* Hort.) China, India. Intr. before 1600. Zone (V). Shrub with showy fls., valued for its late flowering season.—Numerous garden forms of which may be mentioned: "Totus albus." Pure white, single. G.C.II.10:524. Gn. 52:504(c).—"Coelestis." Purplish blue. F.P.1879:t.495(c).—"Speciosus." Fls. double, pinkish, striped and blotched deep rose. R.H.1845:133,t(c).—"Variegatus." Fls. double, purple: lvs. variegated. B.H.18:277,t(c).—"Punicus." Red, double.—"Monstrosus." White with dark purple centre.—"Grandiflorus superbus." Rosy, single.—"Pulcherrimus." Pink and white, double.—"Admiral Dewey." Pure white, double.—"Hamabo." Pale blush with large carmine blotch at base of each petal.

#### Fam. 63. STERCULIACEAE Schott. & Endl. STERCULIA FAMILY

Trees, shrubs or herbs, sometimes climbing: lvs. alternate, simple or digitate, stipulate: fls. perfect or unisexual, usually regular; sepals 3-5, valvate, more or less connate; petals convolute or reduced or wanting; stamens in 2 whorls, those opposite the sepals reduced to staminodes or wanting; the anthers united into a tube and variously arranged, 2-celled; ovary superior, sessile or on an androgynophore, 4-5-celled; cells with 2-many ovules; styles 4-5, distinct or connate: fr. usually dry, often separating into carpels; seeds albuminous. About 50 genera and 750 species in the Tropics, few extratropical.

**FIRMIANA Marsili.** Deciduous trees: lvs. alternate, simple, palmately lobed: fls. 5-merous, unisexual, in terminal panicles; sepals colored, petals wanting; androgynophore developed; carpels 5, distinct at base, connate at apex into a single style; rudimentary and free in the staminate fls.: fr. consisting of leathery follicles opening long before maturity and leaf-like, seeds globular, on their edges near the base. (After Karl Joseph von Firmian, governor of Lombardy; 1718-82.) About 10 species in Asia, 1 in Africa.

**F. simplex** (L.) W. F. Wight. PHOENIX-TREE. Round-headed tree to 15 m., with smooth gray-green bark: lvs. palmately 3-5-lobed, 16-20 cm. long, cordate, lobes acuminate, entire, glabrous or tomentulose beneath; petiole about as long as blade: fls. yellowish green, in terminal panicles 25-50 cm. long; sepals narrow-oblong, about 1 cm. long: carpels 4-5, 3-10 cm. long. Fl.vii; fr.xi. E.N.III.6.f.49(fr). Cavanilles, Diss. 5:t.149. L.A.1:363. (*F. platanifolia* R. Br., *Sterculia p.* L. f.) China, Japan. Intr. 1757. Zone VII. Ornamental tree planted for its large lvs.

#### Fam. 64. ACTINIDIACEAE Tieghem. ACTINIDIA FAMILY

Trees or climbing shrubs: lvs. alternate, serrate to crenate, rarely entire: fls. perfect, polygamous or dioecious, in cymes or panicles or solitary; sepals 5, imbricate; petals 5, imbricate or convolute; stamens many or ten; anthers versatile; ovary superior, 3-5- or many-celled: styles free or connate; ovules several to many, rarely 2, in each cell: fr. a berry or dehiscent caps; seeds albuminous, with rather large straight embryo. Four genera with about 280 species chiefly tropical and subtrop.

A. Stamens numerous; styles numerous, radiating: fr. a berry.....1. *Actinidia*  
AA. Stamens 10; style 1: fr. a caps.....2. *Clematoclethra*

1. **ACTINIDIA** Lindl. Deciduous twining shrubs; pith solid or lamellate; winter-buds very small, enclosed in the swollen base of the petiole: lvs. alternate, long-stalked, serrate, rarely entire, estipulate: fls. dioecious or polygamous, in axillary cymes or solitary, cup-shaped, white or rarely reddish; sepals 5, rarely less, imbricate; petals 5, rarely 4, convolute, thin; stamens numerous; anthers versatile: ovary superior, many-celled; styles many, radiating: fr. a berry with numerous small albuminous seeds; embryo comparatively large. (Greek *actis*, ray, referring to the radiating styles.) Syn. *Trochostigma* Sieb. & Zucc. About 25 species in Asia from Saghalin to Java and Himal.

A. Brts. glabrous or nearly so: lvs. glabrous or pubescent only on the veins beneath.  
B. Anthers dark purple: lvs. dark green and lustrous above.  
C. Lvs. green beneath, often bristly on the veins.....1. *A. arguta*  
CC. Lvs. glaucous beneath, glabrous.....2. *A. melanandra*  
BB. Anthers yellow.  
C. Lvs. firm, never colored: fr. spotted.....3. *A. callosa*  
CC. Lvs. thin, often partly colored: fr. not spotted.  
D. Pith of brs. solid, white: lvs. partly white or yellow.....4. *A. polygama*  
DD. Pith of brs. lamellate: lvs. partly pink or white.....5. *A. kolomikta*  
AA. Brts. densely hairy; lvs. tomentose beneath.....6. *A. chinensis*

1. **A. arguta** (Sieb. & Zucc.) Miq. High climbing: brs. with brown lamellate pith: lvs. broad-ovate to elliptic, 8-12 cm. long, abruptly acuminate, rounded to subcordate at base, rarely cuneate, setosely and sharply serrate, green beneath and usually setose on midrib; petiole 3.5-8 cm. long, sometimes setose: infl. glabrous, shorter than petiole: fls. 3 or more, about 2 cm. across; sepals elliptic-oblong; petals brownish at base: fr. ellipsoid, about 2.5 cm. long, greenish yellow, edible. Fl.vi-vii; fr.ix-x. B.M.7497(c). L.I.t. 25. R.H.1874:395f.54. M.G.13:378(h). H.B.2:582(h). (*A. volubilis* Carr., not Miq., *A. rufa* Miq., *A. polygama* Hort., not Miq.) Japan, Korea, Manch. Cult. 1874. Zone IV. Vigorous growing vine, forming a dense covering for arbors, etc.—**A. a. cordifolia** (Miq.) Bean, var. Lvs. broad-ovate, cordate at base, more setose on veins beneath; petiole purple.

*A. a. × chinensis*; see under No. 6.

Related species: **A. purpurea** Rehd. Lvs. elliptic to elliptic-oblong, 8-12 cm. long, with appressed teeth, dull above, green and glabrous beneath or tomentose at midrib; petiole 3-5 cm. long: pistillate fls. usually solitary, about 1.5 cm.

across; sepals ovate: fr. ovoid to oblong, 2-2.5 cm. long, rostrate, purple, sweet. W. China. Intr. 1908. Zone VI?—*A. Giraldii* Diels. Lvs. broad-elliptic or broad-ovate, 6-12 cm. long, short-acuminate or obtuse, setulose-pilose on the veins and veinlets beneath; petiole strigose; infl. strigulose; sepals concave, 4 mm. long; petals 7 mm. long. C. China. Cult. 1933. Zone VI?

2. *A. melanandra* Franch. High climbing; brts. glabrous, with lamellate pith: lvs. elliptic to oblong, 6-9 cm. long, abruptly acuminate, rounded or cuneate, appressed-serrulate, glaucous beneath and glabrous except axillary tufts of hairs; petiole 2-3.5 cm. long: fls. white, 2-2.5 cm. across, pistillate solitary, staminate several; infl. glabrous, about as long as petiole; ovary bottle-shaped, glabrous: fr. 2.5-3 cm. long, ellipsoid. Fl.vi-vii: fr.ix-x. Japan, C. China. Intr. about 1900. Zone V.

3. *A. callōsa* Lindl. Climbing to 7 m.; brts. with conspicuous lenticels; pith lamellate: lvs. elliptic to oblong, 8-12 cm. long, acuminate, cuneate to rounded, setosely serrulate, glabrous and green beneath; petiole 3-5 cm. long: fls. white or yellow, fragrant, 1.5-2 cm. across, on slender glabrous pedicels; ovary pubescent: fr. oblong-ovoid, greenish or russet, spotted. S.H.2: f.216(l). Himal., S. China. Intr. ?—*A. c. Henryi* Maxim., var. Lvs. broad-elliptic to elliptic-ovate or oblong-ovate, 5-10 cm. long, sometimes subcordate, bearded in the axils of the veins beneath: infl. usually much shorter than petiole. Fl.vi; fr.x. C. and W. China. Intr. 1907. Zone VI?

Related species: *A. venōsa* Rehd. Climbing to 8 m.; brs. with white lamellate pith: lvs. elliptic to oblong-ovate, 8-15 cm. long, usually rounded at base, tomentulose on the veins beneath at first, later nearly glabrous; the lateral veins connected by conspicuous parallel veinlets: fls. buff-yellow: fr. ovoid or subglobose, spotted. W. China. Intr. 1908. Zone VI?—*A. coriacea* Dunn. Pith solid, white: lvs. subcoriaceous, oblong to lance-oblong, 6-10 cm. long, cuneate, remotely serrate, glabrous: fls. small, reddish: fr. ovoid, spotted. G.C.100:245. W. China. Intr. 1908 (distributed as *A. Henryi*).—*A. rubricaulis* Dunn. Brts. purple, lenticellate; pith solid: lvs. chartaceous, lanceolate to elliptic-oblong, 7-10 cm. long, acuminate, usually rounded at base, serrulate: ovary glabrous. W. China. Cult. 1924. Zone VII?

4. *A. polygama* (Sieb. & Zucc.) Miq. SILVER-VINE. Climbing to 5 m.: lvs. broad-ovate to ovate-oblong, 8-14 cm. long, acuminate, rounded or subcordate at base, appressed-serrate, usually setose on the veins beneath, in part of the lvs. of the staminate plant the upper half or sometimes nearly the whole lf. silvery white or yellowish; petioles bristly: fls. 1-3, white, 1.5 cm. across, fragrant; ovary glabrous, bottle-shaped: fr. yellow, ovoid, beaked, 2-3 cm. long, edible. Fl.vi; fr.ix-x. Ito & Kaku, Fig. Pl. Koishik. Bot. Gard. 2:t. 20(c). S.H.2:f.216f-g,217a-f. (*A. volubilis* Miq.) Manch. to Japan and C. China. Intr. 1861. Zone IV. The staminate plant is very handsome with its partly silvery white lvs. The plant attracts cats.

5. *A. Kolomikta* (Rupr.) Maxim. KOLOMIKTA-VINE. Climbing usually to 2, rarely to 5 or 7 m.: lvs. ovate-oblong, 10-12 cm. long, acuminate, rounded or cordate at base, unequally setose-serrate, pubescent on the veins beneath when young, part of the lvs., particularly in the staminate plant, with a large white to pink blotch at the apex extending often to the middle or beyond: fls. 1-3, white, 1.5 cm. across, fragrant; ovary cylindric, glabrous: fr. oblong-ovoid, 2-2.5 cm. long, greenish or yellowish, sweet. Fl.v; fr.ix-x. R.H.1898: 36,t.(c). B.M.9093(c). M.G.11:397(h). G.W.3:61(h). N. E. Asia to Japan and C. and W. China. Intr. about 1855. Zone IV. The staminate plant is strikingly handsome with its lvs. blotched pink and white.

\* Related species: *A. tetramera* Maxim. Lvs. narrower and smaller, glabrous except axillary tufts of hairs or rarely setose on the midrib: fls. smaller, tetramerous: fr. yellow, finally brown. C. and W. China. Intr. 1927.

6. *A. chinensis* Planch. Climbing to 8 m.: brs. with shaggy hairs red when young; pith lamellate; lvs. orbicular or oval, 8-12 cm. long, cordate at base, rounded or emarginate or on shoots acuminate, ciliate-serrulate, finally glabrous above and dark green, whitish tomentose beneath with reddish hairs on the veins; fls. several, 3-4 cm. across, creamy-white, changing to buff-yellow; fr. ovoid to subglobose, 3-5 cm. long, hairy, edible. Fl.vi; fr.viii-ix. B.M.8538(c). G.C.46:77,79,t. H.I.16:1593. U. S. Inv. 50:t. U. S. Im. 111-112:t;164:t. N.H.15:6. S.L.75(h). China. Intr. 1900. Zone VII? With large fls. and large frs. similar in flavor to gooseberries.

*A. ch. × arguta* = *A. Fairchildii* Rehd. Brts. sparingly villous: lvs. sub-orbicular or broad-obovate, rounded or short-acuminate at apex, villous on the veins beneath; infl. densely villous; male fls. 2 cm. across; anthers yellowish. Jour. Hered. 18:59. Orig. 1923.

2. **CLEMATOCLETHRA** Maxim. Deciduous climbing shrubs; brs. with solid pith; winter-buds conspicuous, with imbricate scales: lvs. alternate, petioled, usually serrate, estipulate: fls. perfect, in axillary cymes, sometimes solitary, white; sepals 5, imbricate, persistent; petals 5, imbricate; stamens 10, short; ovary 5-celled; cells with about 10 ovules; style cylindric, slender: fr. berry-like, with thin flesh, usually 5-seeded. (*Clematis* and *clethra*; referring to the climbing habit and the similarity of the fl. to that of *Clethra*.) About 10 species in C. and W. Asia.

*C. lasioclada* Maxim. Climbing to 6 m.; young brts. pubescent: lvs. ovate, 5-10 cm. long, acuminate, rounded or subcordate at base, setose-denticulate, glabrous except pubescent on the midrib above and with axillary tufts of hairs beneath or villous along the midrib and sometimes along the veins, light or pale green beneath; petiole 2-6 cm. long: fls. 1.2-1.5 cm. across, in 2-7-fld. peduncled cymes, shorter than petiole; sepals orbicular-ovate, puberulous like the pedicels and peduncles or nearly glabrous: fr. globose, black, about 8 mm. across. Fl.vii; fr.ix-x. E. N. ed. 2, 21:46. W. China. Intr. 1908. Zone VI?

Related species: *C. scandens* Maxim. Brts. setose: lvs. oblong-ovate to oblong, 5-10 cm. long, rounded or broad-cuneate at base, minutely denticulate, pubescent beneath and hispid on veins; petiole 1-4 cm. long, usually hispid: fl.-clusters usually about as long as petiole. W. China. Intr. 1911.—*C. integrifolia* Maxim. Brts. glabrous or nearly so: lvs. ovate to ovate-oblong, 3.5-7 cm. long, rounded at base, setose-denticulate, glaucous and glabrous beneath; petiole 2-4.5 cm. long: fls. solitary or in few-fld. clusters much shorter than petioles. N. W. China. Intr. 1908.—*C. actinidioides* Maxim. Brts. glabrous: lvs. ovate to ovate-oblong, 4-8 cm. long, rounded to subcordate at base, minutely serrulate, light green and glabrous beneath; petiole 2.5-5 cm. long: fls. long-stalked, often solitary. B.M.9439(c). W. China. Intr. 1908.

## Fam. 65. EUCRYPHIACEAE Gay. EUCRYPHIA FAMILY

Evergreen trees or shrubs: lvs. opposite, simple or pinnate; stipules connate: fls. perfect, large, white, axillary; sepals 4, imbricate, cohering at apex and separating at base at anthesis; petals 4, large, convolute; stamens very numerous, surrounded at base by tubular excrescences, inserted on the elongated floral axis below the 5-18-celled ovary; cells with several pendulous ovules: fr. a dehiscent caps., separating into 5-18 carpels opening at the inner suture; seeds winged, albuminous.—One genus with 4 species in Chile and Australia.

**EUCRYPHIA** Cav. Characters of the family. (Name from Greek *eu*, well, and *kryphios*, covered.)

*E. glutinosa* (Poepp. & Endl.) Baill. Evergreen or half-evergreen tree to 5 m., with upright brs. pubescent when young: lvs. pinnate, clustered at the end of the brs.; petiole about 1 cm. long; lfts. 3-5, the lateral ones sessile, elliptic to ovate, 3-6 cm. long, lustrous and dark green above, pubescent when young: fls. 1 or 2, at end of brts., 5-6 cm. across; anthers yellow; fr. pear-shaped, about 1.5 cm. long. Fl.vii-viii. B.M.7067(c). G.C.30:351(h); 81:51,123,t(h). Gn.86:563. B.S.1:536. (*E. pinnatifolia* Gay.) Chile. Intr. 1859. Zone VII? With large white fls.; requires soil free of lime.

*E. g. × cordifolia* = *E. nymansensis* Bansch. Lvs. partly simple, partly with 3, rarely 5 lfts., serrate, pubescent or puberulous: fls. 6-7 cm. across. G.C.76:167;80:177. Gn.88:621. Orig. 1915. Zone VII? Here belongs "Nymansay."—*E. g. × lucida* (Labill.) Baill. = *E. intermedia* Bausch. Lvs. simple and partly pinnate, entire or with few teeth, glaucescent and glabrous. G.C.100:190. Cult. 1936. Zone VII? Here belongs "Rostrevor."

### Fam. 66. THEACEAE Mirb. TEA FAMILY

Deciduous or evergreen trees or shrubs: lvs. alternate, simple, entire or serrate, stipulate: fls. usually perfect, regular, axillary or subterminal, usually solitary; sepals 5-7, rarely many, imbricate, usually persistent; petals 5, rarely 4 or more, distinct or connate at base; stamens very many, rarely 5, 10 or 15; free or united at base, often adnate to the petals; ovary superior, 2-10-celled; cells with 1 to many ovules; styles as many as carpels or connate into 1: fr. a loculicidal caps. or indehiscent and dry or drupaceous; seeds 1 to many; albumen wanting or scanty; embryo usually curved. Syn.: *Ternstroemiaceae* R. Br.—About 18 genera and 200 species in trop. and subtrop., few in temp. regions.

A. Fr. a caps.: fls. perfect, upright, 3-10 cm. across.

B. Lvs. evergreen: fr. subglobose; seeds 1-3, large.....1. *Camellia*

BB. Lvs. deciduous: seeds many, small, flattened.

C. Fr. splitting from above, without persistent central axis: fls. distinctly stalked.

CC. Fr. splitting from above and below, with a persistent central axis: fls. subsessile.

AA. Fr. a berry: fls. dioecious, nodding, about 5 mm. across: lvs. evergreen, 3-6 cm. long.

3. *Franklinia*

4. *Eurya*

1. *CAMELLIA* L. Evergreen trees or shrubs; winter-buds with many imbricate scales: lvs. alternate, short-petioled, serrulate: fls. perfect, axillary, solitary, rarely 2 or 3, white to red; sepals 5 to many, imbricate; petals 5-7, slightly connate at base; stamens numerous, the outer ones connate and partly adnate to the petals at base, the inner ones free; ovary 3-5-celled; ovules 4-6 in each cell; styles filiform, connate below: fr. a loculicidal woody caps. with a persistent central axis; seeds few, subglobose or angular; embryo straight with thick cotyledons. (After Georg Joseph Kamel, Latinized Camellius, Jesuit priest in the Philippines; 1661-1706.) Syn.: *Thea* L. About 45 species in trop. and subtrop. Asia.

A. Sepals many, deciduous: fls. 7-12 cm. across.....Sect. *EUCAMELLIA* Cohen Stuart

AA. Sepals 5, persistent: fls. about 3.5 cm. across, white.....Sect. *THEOPSIS* Cohen Stuart

1. *C. japonica*

2. *C. cuspidata*

1. *C. japonica* L. *CAMELLIA*. Shrub or tree to 15 m., glabrous: lvs. ovate to elliptic, 5-10 cm. long, acuminate, lustrous dark green above: fls. subsessile, red in the typical form; petals 5-7, roundish; ovary glabrous; seeds subglobose or angular, 2-2.5 cm. across. Fl.iv-vi; fr.ix-x. B.M.42(c). S.Z.1:t.82(c). F.S.20:t.2121(c). S.I.1:t.73(c). Gn.28:203;36:247. (*Thea j.* (L.) Nois.) China, Japan. Cult. 1742. Zone VII? Ornamental evergreen tree or shrub with large lustrous lvs. and large fls. varying from white to red; many garden

forms with single or double fls. Only precariously hardy within our area like the two following species.

Related species: *C. Sasánqua* Thunb. Shrub of loose habit; young brts. pubescent: lvs. elliptic to oblong-ovate, 4–8 cm. long, bluntly acuminate, crenate-serrate, hairy on the midrib above; fls. 3.5–5 cm. across, white; petals obovate to oblong; ovary pubescent. S.Z.1:t.83(c). S.I.2:t.52(c). Gn.54:142;t(c);82:33,106. (*Thea Sasangua* Nois.) China, Japan. Intr. 1811. Zone VII? Several garden forms with white to deep rose, single or double fls.

2. *C. cuspidata* (Kochs) Veitch. Shrub to 2 m.; young brts. puberulous: lvs. elliptic to ovate-lanceolate, 5–8 cm. long, long-acuminate, rounded or cuneate, indistinctly denticulate, lustrous dark green above or sometimes purplish green, paler and minutely dotted beneath; petiole 3–4 mm. long, slightly pubescent: fls. solitary, white, 3–4 cm. across, on a short pedicel clothed with imbricate green bracts; petals usually 6; ovary glabrous. Fl. v–vi. G.C.51:261. J.L.38:62,f.38. B.S.1:285. (*Thea c. Kochs.*) China. Intr. 1901. Zone VII?

2. **STEWARTIA** L. Deciduous shrubs or trees with smooth flaky bark; winter-buds with several imbricate scales, usually silky; lvs. alternate, short-petioled, serrate: fls. perfect, solitary, axillary or subterminal, cup-shaped, with 1 or 2 bracts below the calyx; sepals 5, persistent; petals 5, sometimes 6, rarely to 8, obovate to roundish, crenulate, white, silky outside, connate at base; stamens numerous, adnate at base to the petals; ovary superior, 5-celled; styles 5, free or connate: fr. a woody caps. loculicidally dehiscent into 5 valves; seeds compressed, 1–4 in each cell, usually narrowly winged. (After John Stuart, Earl of Bute, a patron of botany; 1713–92.) Syn.: *Stuartia* L'Hérit. About 8 species in E. N. Am. and E. Asia.

A. Styles united, with 5 stigmas.

B. Stamens with purple filaments: caps. depressed-globose, apiculate. 1. *S. Malacodendron*

BB. Stamens with whitish filaments (purple in var. of No. 5): caps. ovoid, pointed.

C. Sepals orbicular, much larger than the orbicular or ovate bracts below; fls. 6–8 cm. across; seeds not or scarcely winged.

D. Fls. cup-shaped: seeds with acute edge; brts. straight, terete.

DD. Fls. nearly flat: seeds with rounded edge: brts. mostly zigzag, slightly compressed.

2. *S. Pseudo-camellia*

3. *S. koreana*

CC. Sepals and bracts foliaceous, ovate to ovate-oblong, of nearly equal length or

bracts longer: seeds narrowly winged.....4. *S. sinensis*

AA. Styles distinct: lvs. usually rounded at base, 6–12 cm. long.....5. *S. ovata*

1. *S. Malacodendron* L. Shrub to 6 m.; young brts. pubescent: lvs. short-petioled, elliptic to elliptic-oblong, 6–10 cm. long, acute or short-acuminate, cuneate, serrulate and ciliate, light green and pubescent beneath; petioles 2–5 mm. long, pubescent: fls. 8–10 cm. across; petals obovate, spreading; style shorter than stamens; anthers bluish: fr. about 1.5 cm. across; seeds wingless, lustrous. Fl.vi–vii. B.M.8145(c). Gn.14:136;t(c);34:280. G.C.77:399,t. B.S.2:553. (*S. virginica* Cav.) Va. and Ark. to Fla. and La. Cult. 1752. Zone VII. With showy white fls.

2. *S. Pseudo-camellia* Maxim. Shrub or tree to 20 m., with upright brs.; bark red, peeling off in large flakes; brts. glabrous, slender: lvs. elliptic or obovate-elliptic to elliptic-lanceolate, 3–8 cm. long, acuminate, cuneate, remotely crenate-serrulate, bright green, light green and glabrous or with scattered long hairs beneath, thickish; petiole 3–10 mm. long: fls. cup-shaped, 5–6 cm. across, axillary near base of brts. on pedicels 1–3 cm. long; petals sub-orbicular, concave; stamens white, connate at base; anthers orange: fr. ovoid, 5-angled, about 2 cm. long. Fl.vii–viii; fr.x–xi. B.M.7045(c). S.I.1:t.73(c). Gn.43:172;t(c). G.F.9:35. G.C.60:217. (*S. grandiflora* Briot, *S. ja-*

*ponica* var. *grandiflora* Hort.) Japan. Cult. 1874. Zone V. Tree with large white fls.; lvs. changing to dark purple in fall.

3. *S. koreana* Rehd. Tree to 15 m., with upright brs.; bark flaky, red-brown; brts. glabrous: lvs. elliptic to broad-elliptic, 6-10 cm. long, abruptly acuminate, broad-cuneate or rounded at base, remotely serrate, silky-pubescent at first, finally glabrous above, slightly pubescent beneath: fls. white, 7-7.5 cm. across, in the axils of the lower lvs. on glabrous pedicels 1.5-2 cm. long; bracts 4-7 mm. long; sepals 5, about 1 cm. long, suborbicular, densely pubescent outside; petals 5-6, broadly obovate, spreading, the outer slightly concave, the inner nearly flat: caps. ovoid, rostrate, 2 cm. long; seeds about 5 mm. long, dark brown. Fls. vi-vii; fr.ix-x. N.K.17:t.16. H.B.7:398. Korea. Intr. 1917. Zone V. Tree with showy fls.; lvs. turning orange or orange-red in fall.

4. *S. sinensis* Rehd. & Wils. Shrub or tree to 10 m.; bark flaky, brown; brts. pilose or glabrous: lvs. elliptic-obovate to oblong-elliptic, 5-10 cm. long, acuminate, cuneate or rarely nearly rounded at base, remotely serrate or crenate-serrulate, sparingly appressed-pubescent beneath or glabrous except the midrib; petiole 5-8 mm. long: fls. about 5 cm. across, cup-shaped; petioles 4-8 mm. long; bracts ovate to ovate-oblong, 2-2.5 cm. long, acute, serrulate or entire, nearly glabrous outside; sepals similar to bracts, unequal, 1-2.5 cm. long; petals broad-obovate; filaments connate  $\frac{1}{3}$ , pilose below the middle: caps. 5-angled, subglobose, 2 cm. high, 1.5 cm. across, rostrate, pilose or glabrescent; seed oval, 1 cm. long, compressed, narrowly winged, brown. Fls. vii; fr.ix-x. B.M.8778(c). C. China. Intr. 1901. Zone VI? With large white fls.

Related species: *S. monadélpha* Sieb. & Zucc. Tree to 25 m.; brts. pilose: lvs. elliptic to oblong-elliptic, 4-6 cm. long, acute, remotely serrulate, appressed-pubescent beneath: fls. 2.5-3.5 cm. across: pedicels 6-15 mm. long; bracts 1-1.5 cm. long; filaments united below: caps. ovoid, rostrate, 1 cm. long, appressed-pubescent. S.Z.1:t.96(c). Japan. Cult. 1903. Zone VI?—*S. serrata* Maxim. Young brts. pilose: lvs. elliptic to obovate, 4-7 cm. long, serrate with incurved teeth, pilose on midrib and in the axils of the veins beneath: fls. short-stalked, 5-6 cm. across, with large bracts at base; petals red at base outside; filaments free; ovary glabrous: fr. ovoid, 2 cm. long. B.M.8771(c). Japan. Cult. 1917. Zone VI?

5. *S. ovata* (Cav.) Weatherby. Shrub to 5 m.; brts. glabrous: lvs. ovate or elliptic to ovate-oblong, 6-12 cm. long, acuminate, usually rounded at base, remotely serrulate, sparingly pubescent and grayish green beneath; petiole 3-15 mm. long: fls. cup-shaped, 6-7 cm. across; petals obovate, often 6, concave; filaments white, with orange anthers: fr. ovoid, 1.5-2 cm. long, sharply 5-angled, pointed, pubescent; seeds narrowly winged. Fl.vii-viii; fr.ix-x. B.M.8918(c). B.R.1104(c). Gr.G.2:t.139. M.G.15:479. Gn.89:468. (*S. pentagyna* L'Hérit., *Malachodendron pentagynum* Dum.-Cours., *M. ovatum* Cav.) N. C. and Tenn. to Fla. Cult. 1800? Zone V. With beautiful large fls. particularly those of the var., and with bright green lvs. changing to orange and scarlet in fall.—*S. o. grandiflora* (Bean) Weatherby, var. Fls. 8-10 cm. across, stamens purple; petals sometimes up to 8. N.F.8:f.23. Ga. Cult. 1914.

3. **FRANKLINIA** Marsh. Deciduous shrub or small tree; winter-buds elongated, naked, pubescent: lvs. alternate, serrate: fls. perfect, axillary, solitary, subsessile: sepals 5, persistent, suborbicular, unequal, silky-pubescent, subtended by 2 minute caducous bracts; petals 5, unequal, concave: stamens inserted on the petals; ovary 5-celled; styles connate, with 5-lobed

stigma: caps. subglobose, woody, 5-valved, dehiscent loculicidally from above and septicidally from below, leaving a persistent central axis; seeds several in each cell, flattened, angular, wingless. (After Benjamin Franklin, American statesman; 1706-1790.) One species in e. N. Am.

*F. alata* Marsh. FRANKLINIA. Shrub or tree to 10 m., with upright brs.; bark smooth, thin; young brts. silky: lvs. obovate-oblong, 12-15 cm. long, acute, gradually narrowed into a short petiole, remotely serrate, bright green and shining above, pubescent below: fls. cup-shaped, 7-8 cm. across; petals roundish-obovate, concave, crenulate: fr. globose, 1.5-2 cm. across; seeds wingless. Fl.ix-x; fr.x. S.S.1:t.22. M.M.6:201,t(c). M.G.14:25. Gng. 7:167(h). Gn.M.40:167(h). (*Gordonia* a. Sarg., *G. pubescens* L'Hérit.) Ga. Intr. 1770, but not found wild again since 1790. Zone (V). Lvs. turning crimson in fall; chiefly valued for its large late appearing fls.

4. *EURYA* Thunb. Evergreen shrubs or trees; winter-buds naked: lvs. alternate, serrate to crenate, rarely entire, short-petioled, rarely subsessile: fls. dioecious, axillary, solitary or fascicled: pedicels usually short, with 2 small persistent bracts at apex; sepals 5, persistent: corolla campanulate or urceolate, of 5 petals united at base; staminate fls. with many stamens shorter than petals and with rudimentary ovary or without; pistillate fls. without stamens; ovary 5-celled; styles 3-5, more or less connate or free: fr. a many-seeded berry; seeds albuminous. (Derivation of name uncertain.) More than 50 species in E. Asia, India and Malaysia.

*E. japonica* Thunb. Shrub or small tree to 7 m.; brts. glabrous; terminal bud glabrous: lvs. elliptic-oblong or elliptic to obovate-oblong, 3-6 cm. long, acute or acuminate with obtuse emarginate apex, cuneate, glabrous, yellowish green beneath, with inconspicuous veins; petiole 2-5 mm. long: fls. 1-3, white, 5-6 mm. across; pedicels nodding, 1-3 mm. long, sepals suborbicular, about half as long as the oval petals; style shorter than petals, 3-4-cleft: fr. globose, 5 mm. across, black. Fl.iii-iv; fr.x-xi. S.I.2:t.53(c). N.K. 17:t.21(as *E. j.* var. *montana*). S.H.2:f.611f-k. Japan, Korea, Formosa. Cult. 1870. Zone VII.

#### Fam. 67. GUTTIFERAE Choisy. GARCINIA FAMILY

Trees or shrubs, rarely herbs, with oil-glands or oil-ducts: lvs. opposite or whorled, rarely alternate; stipules usually wanting: fls. perfect, polygamous or dioecious, solitary or in cymes; sepals 4-5, imbricate; petals as many; imbricate or convolute; stamens usually many and fascicled, rarely few; ovary superior, of 3-5, rarely fewer or more carpels and with as many cells or 1-celled; styles distinct or united; ovules usually many and on parietal placentae: fr. a capsule, drupe or berry-like; seed without albumen. Including *Hypericaceae*.—More than 40 genera and about 650 species chiefly in the Tropics and some in temp. regions.

|------------------------|---------------------|
| A. Fls. 4-merous ..... | 1. <i>Ascyrum</i>   |
| A. Fls. 5-merous ..... | 2. <i>Hypericum</i> |

1. *ÁSCYRUM* L. ST. PETER'S-WORT. Shrubs or subshrubs with 2-edged brts., glabrous: lvs. opposite, sessile, entire, pellucid-dotted, exstipulate: fls. yellow, 4-merous, in terminal, usually 3-fid. cymes; sepals nearly equal or the 2 outer larger; stamens many, slightly or not united at base; ovary 1-celled, with 2-3, rarely 4 parietal placentae; ovules many; styles distinct or connate at base: fr. a septicidal caps.; seeds not winged. (Ancient Greek

name of a plant, probably *Hypericum*.) Five species in N. and C. Am. and Himal.

**A. hypericoides** L. ST. ANDREWS CROSS. Upright shrub to 80 cm. high: lvs. crowded, linear-oblong to linear-oblancoate, 0.5-2 cm. long, obtuse or acutish, with smaller lvs. in axillary fascicles: fls. about 1.5 cm. across; outer sepals oblong-elliptic to ovate, 5-11 mm. long, inner smaller and narrower; petals narrow-oblong, as long as outer sepals; styles 2, very short: caps. flat. Fls. VI-IX. (*A. Cruz-Andree* L.) Va. and Tenn. to Fla., Tex. and Mex., W. Indies. Intr. 1737. Zone VII.—**A. h. multicaule** (Michx.) Fern., var. Low and diffuse subshrub with slender ascending brts. 10-30 cm. long: lvs. oblong to oblong-oblancoate, 1-2 cm. long: outer sepals elliptic, oval or oblong-oblancoate, rounded at base. M.M.3:65,t(c). G.F.5:257. B.C.1:405. B.B.2:528. Tex. and Ga. to Mass., Ill. and Kans. Cult. 1870. Zone V. Low short-lived subshrub with bright yellow fls.

Related species: **A. stans** Michx. Upright shrub to 80 cm., with 2-edged or 2-winged brts.: lvs. oblong to obovate, 1-4 cm. long, partially clasping: fls. 2.5-4 cm. broad; outer sepals broad-oval or suborbicular, the inner lanceolate, shorter; petals obovate; styles 3-4. G.G.1:t.91. B.B.2:528. L.I. to Pa., Fla. and Tenn. Intr. 1816. Zone VI.

**2. HYPERICUM** L. ST. JOHN'S-WORT. Herbs or shrubs, sometimes evergreen: lvs. opposite, sometimes whorled, short-petioled or sessile, entire, dotted with pellucid glands, exstipulate: fls. perfect, in terminal or axillary cymes or solitary, yellow, rarely pink or purplish; sepals 5, imbricate or valvate, petals 5, oblique, convolute; stamens usually numerous, distinct or in 3 or 5 bundles, rarely as few as 3: ovary 1-5-celled, with 3-5 parietal placentae; styles 3-5, distinct or connate: fr. a septicidal caps., rarely berry-like; seeds cylindric. (Ancient Greek plant name of obscure meaning.) About 200 species in the temp. and subtrop. regions of the n. hemisphere, few in the s. hemisphere.—Ornamental usually low shrubs or subshrubs chiefly planted for their showy yellow fls.

A. Styles 5.

B. Lvs. ovate to ovate-lanceolate: fls. 2.5-7 cm. across; stamens in 5 fascicles.

C. Fls. about 7 cm. across, usually solitary: low suffrutescent stoloniferous plant.

1. *H. calycinum*

CC. Fls. 3-6 cm. across: plants shrubby.

D. Styles distinct.

E. Sepals ovate; petals roundish or obovate.

F. Brts. 2-edged

FF. Brts. terete

EE. Sepals linear-lanceolate; petals oblong

DD. Styles connate, 1.5-2 cm. long

BB. Lvs. linear-oblong to lanceolate: fls. 8-25 mm. across; stamens free.

C. Cymes many-fld.; fls. about 1 cm. across

CC. Cymes few-fld.; fls. 1.5-2.5 cm. across

AA. Styles 3.

B. Styles more or less united; stamens distinct, shorter than petals.

C. Fls. in axillary, few-fld. cymes forming narrow leafy panicles.

D. Lvs. narrowly linear, 1-4 cm. long: ovary incompletely 3-celled

DD. Lvs. narrow-oblong, 2-8 cm. long: ovary completely 3-celled

CC. Fls. terminal, solitary or in cymes.

D. Sepals foliaceous: fls. 1-3, 2.5-5 cm. across: ovary incompletely 3-celled.

10. *H. frondosum*

DD. Sepals not foliaceous: fls. smaller.

E. Lvs. short-petioled: ovary completely 3-celled.

F. Fls. many, in large terminal corymbs; upright shrub

FF. Fls. solitary or few: decumbent shrub

EE. Lvs. sessile: ovary incompletely 3-celled.

F. Lvs. linear to narrow-oblong; stem 2-edged

FF. Lvs. ovate to oblong; stem quadrangular

BB. Styles free; stamens in 3 or 5 fascicles.

C. Lvs. opposite, sessile; stamens about as long as petals.

D. Fr. a caps.; style longer than ovary.

- B. Sepals deciduous; style as long as stamens: lvs. of disagreeable goat-like odor when bruised ..... 15. *H. hircinum*  
 EE. Sepals persistent; styles longer than stamens: lvs. of aromatic odor.

- DD. Fr. a berry: style shorter than ovary ..... 17. *H. Androsaemum*  
 CC. Lvs. whorled; stamens shorter than petals ..... 18. *H. Coris*

1. *H. calycinum* L. ROSE OF SHARON. Evergreen or half-evergreen subshrub, to 30 cm., stoloniferous, with procumbent or ascending 4-angled stems: lvs. short-petioled, ovate-oblong to oblong, 5-10 cm. long, obtuse, dark green above, glaucous beneath, subcoriaceous: fls. solitary, rarely 2 or 3, 7-8 cm. across, bright yellow; sepals large, broad-obovate; stamens in 5 clusters; anthers red; style shorter than stamens, divergent. Fl.vii-ix. B.M.46(c). G.25:333. Gs.8:182. B.C.3:1630. Gn.87:458(h). S. E. Eu., Asia Minor. Intr. 1676. Zone (V). Low plant with large and showy yellow fls., valued as a ground cover, particularly in sandy soil.

*H. c. × patulum*; see under No. 2.

Related species: *H. Ascyron* L. Perennial to 1.5 m. tall, scarcely subshrubby; stems 4-angled: lvs. partly clasping, ovate-oblong to ovate-lanceolate, 4-9 cm. long: fls. 3-6 cm. across, in 3-12-fld. cymes; petals narrow-obovate to oblanceolate, persistent until after they wither: caps. 2-3 cm. long. Fl.vii-viii. B.B.2:529. N. E. N. Am., E. and C. Asia. Intr. 1764. Zone III.—*H. A. Vilmorinii* Rehd., var. A form with fls. 7-9 cm. across. B.M.8557(c). Korea. Cult. 1914.

2. *H. pátulum* Thunb. Half-evergreen or evergreen spreading shrub, to 1 m.: brts. arching, 2-edged, usually purplish: lvs. ovate-oblong to ovate-lanceolate, 3-6 cm. long, acutish, glaucous beneath: fls. solitary or in cymes, 4-5 cm. across, golden yellow; sepals orbicular-ovate, about  $\frac{1}{2}$  as long as petals; petals roundish, overlapping; styles upright, as long or slightly shorter than stamens. Fl.vii-ix. B.M.5693(c). R.H.1875:170,t(c). Gt.15:513. Gn. W.21:95. Japan. Intr. 1862. Zone VII. Free-flowering shrub with golden-yellow fls.—*H. p. oblongifolium* (Wall.) Koehne, var. Lvs. 5-10 cm. long, acutish, bluish gray beneath: fls. 3-4 cm. across; sepals less than half as long as petals. (*H. o.* Wall., not Choisy.) Himal.—*H. p. uralum* (Don) Koehne, var. Lvs. 2-3 cm. long, acute or acutish: fls. 2-2.5 cm. across; sepals less than half as long as petals. G.C.78:329(h). (*H. u.* Don, *H. nepalense* Hort., not Choisy.) Himal.—*H. p. Henryi* Bean, var. More vigorous: lvs. ovate to ovate-oblong, 5-7 cm. long: infl. larger; fls. 5-6 cm. across; sepals ovate, acute. China. Intr. 1898. Zone (V), VI.—*H. p. Forréstii* Chittenden. Similar to var. *Henryi*, but fls. larger. J.L.48:f.26. S. W. China. Cult. 1922.

*H. p. × calycinum* = *H. Moserianum* André. Shrub to 40 cm.: stems reddish, arching: lvs. ovate, 4-5 cm. long, obtuse and mucronulate: fls. 1-5, 5-6 cm. across, golden-yellow, with broad petals. R.H.1889:464. Gn.54:409,t(c). R.B.16:97. G.C.III.10:333. Orig. about 1887. Zone VII?—*H. M. tricolor* Mauméné. Lvs. variegated with white and edged red: fls. smaller. J.8:186. Orig. about 1893.

3. *H. Hookerianum* Wight & Arn. Evergreen or half-evergreen compact shrub, to 2 m.: brts. reddish brown, terete: lvs. subsessile, ovate to ovate-oblong, 3-8 cm. long, obtuse or acutish, dark blue-green above, glaucous beneath: fls. cup-shaped, 5 cm. across, in several-fld. clusters; sepals large, obovate, obtuse; petals broad-obovate; stamens scarcely half as long as petals; styles recurved at apex, slightly longer than stamens: caps. broad-ovoid, furrowed. Fl.viii-ix. B.M.4949(c). Gn.54:490. G.3:463. (*H. oblongifolium* Hook., not Choisy.) Sikkim, W. China. Intr. before 1853. Zone VII. Very handsome and showy.—*H. H. Leschenaultii* (Choisy) Dyer. Sepals acute. G.C.74:143. Himal., Java.

4. *H. Dyeri* Rehd. Half-evergreen shrub to 1 m., with slender spreading brs.; brts. angled: lvs. ovate to ovate-oblong, 2-3.5 cm. long, acute, glaucous

beneath: fls. about 3 cm. across, yellow, in loose leafy cymes; sepals linear-lanceolate; petals oblong; stamens very numerous, about as long as petals; styles upright, shorter than stamens. Fl.viii-ix. V.F.25. R.H.1931:436. (*H. lysimachoides* Wall. ex Dyer, not Boiss. & Noë.) Himal. Intr. 1894. Zone VI.

Related species: *H. kouytchéne* Lévl. Shrub to 0.5 m.: lvs. elliptic-ovate to elliptic-oblong, 2-4.5 cm. long; fls. about 5 cm. across, in 3-fld. cymes; sepals ovate-oblong to ovate-lanceolate; petals oblong-obovate, twice as long as stamens; styles longer than stamens. B.M.9345(c). W. China. Intr. 1907. Zone VI?—*H. cérnum* Roxb. Brts. terete: lvs. narrow-elliptic to ovate-lanceolate, 3-7 cm. long; fls. pale yellow, 5 cm. across, long-stalked, nodding, solitary or in 3-5-fld. cymes; petals obovate; stamens little shorter than petals; styles slender, nearly as long as stamens. (*H. oblongifolium* Choisy.) Himal. Intr. about 1910. Zone VII.—*H. reptans* Hook. f. & Thoms. Prostrate shrub: lvs. elliptic-oblong, 6-12 mm. long; fls. solitary, about 4 cm. across. Gn.24:267; 30:221. Himal. Cult. 1883. Zone VII?—Sometimes confused with *H. repens* L., a perennial with smaller narrower lvs. and smaller fls. with 3 styles. S.F. 8:t.775(c).

5. *H. chinense* L. Half-evergreen shrub to 60 cm.; brts. terete: lvs. sessile, oblong or narrow-oblong, 4-8 cm. long, obtuse: fls. solitary or in 3-7-fld. cymes, bright yellow, 4-6 cm. across; sepals ovate to elliptic-ovate or oblong-ovate, obtuse or acutish; the longer stamens as long as petals; style 1.5-2 cm. long, 5-cleft at apex. Fl.vi-ix. B.M.334(c). G.C.III.1:705; 92:411. S.H.2:f.224a. (*H. monogynum* Willd., *H. salicifolium* Sieb. & Zucc.) China, Japan. Intr. 1753. Zone VII.

6. *H. lobocarpum* Gattinger. Upright shrub to 2 m.; brts. angled: lvs. sessile or short-petioled, narrow-oblong to oblanceolate, 3-7 cm. long, obtuse or mucronulate, revolute at the margin: fls. 1-1.5 cm. broad, numerous, in dense cymes forming a terminal corymb or panicle; sepals oblong, obtusish; petals cuneate: capsule 5-lobed, 5-7 mm. long. Fl.viii-ix. G.F.10:453. S.H. 2:f.223b-c. N. C. and Tenn. Intr. before 1898. Zone V.

*H. l. × galioides* = *H. arnoldianum* Rehd. Infl. a cylindric panicle; fr. 3-5-celled. Orig. 1904.—*H. l. × prolificum* = *H. Dawsonianum* Rehd. Similar to *H. prolificum*, but differs in the many-fld. infl. and in the 3-5-celled lobed caps. Orig. 1893.

Closely related species: *H. oklahomense* E. J. Palmer. Lvs. narrower, firmer, with conspicuous fascicles of smaller lvs.: infl. looser; fls. about 2 cm. across; petals oblong-obovate, about as long as stamens and style: caps. deeply lobed, sharply ridged. Okla. Intr. 1924. Zone V.

7. *H. Kalmianum* L. Shrub to 1 m.; stems 4-angled; brts. 2-angled: lvs. linear-oblong to oblanceolate, 2.5-5 cm. long, bluish green above, glaucous beneath: fls. 1.5-2.5 cm. across, bright yellow, in 3-fld. cymes; sepals foliaceous, oblong, acute; stamens about half as long as petals; styles united below, slightly longer than stamens: fr. ovoid, 6-10 mm. across, beaked. Fl.viii. B.M.8491(c). G.F.3:113. M.M.6:t.8(c). Que. and Ont. to Mich. and Ill. Intr. 1760. Zone IV. Handsome hardy species.

*H. K. × densiflorum* = *H. nóthum* Rehd. Fls. more numerous, smaller; sepals narrower; fr. 3-5-celled. Orig. 1903.

8. *H. galioides* Lam. Subshrub to 1 m., with slender stems; brts. nearly terete or 2-edged; lvs. sessile, linear-oblanceolate, 1-5 cm. long, with axillary clusters of smaller lvs., acute, with recurved margin, dark green and conspicuously dotted above: fls. 1-1.5 cm. across, in terminal and axillary few-fld. cymes forming narrow leafy panicles; sepals linear or linear-spatulate, nearly as long as petals; petals cuneate: fr. conic-ovoid, 5-6 mm. long, furrowed. Fl.vii-ix. G.F.10:433. G.C.III.24:301. Del. to Ga., Mo. and Tex. Intr. 1790. Zone V.

*H. g. × lobocarpum*; see under No. 6.

Related species: *H. fasciculatum* Lam. Shrub to 1.5 m.; brts. sharply 4-angled; lvs. of axillary clusters nearly as long as main pair, subulate, 5-20 mm. long, thick; sepals nearly as long as petals. N. C. to Fla. and Tex. Intr. 1811. Zone VII?

9. *H. prolificum* L. Shrub with exfoliating light brown bark and rather stout upright brs., to 1.5 m. tall; brts. 2-edged: lvs. short-petioled, narrow-oblong to oblanceolate, 3-8 cm. long, obtuse, dark lustrous green above and pellucid-punctate: fls. about 2 cm. across, bright yellow, in terminal and axillary few- to several-fld. cymes; styles united at base: caps. oblong, 1-1.5 cm. long, not furrowed. Fl.vii-ix. G.F.3:526. W.D.2:t.88(c). (*H. foliosum* Jacq., *Myriandra prolifica* Spach.) N. J. to Iowa and Ga. Intr. about 1750. Zone IV. Often cult.; the most vigorous of the hardier cult. species.

*H. p. × frondosum* = *H. Vanfleettii* Hort. Fls. 2.5-3 cm. across, in terminal cymes, often with a few pairs of axillary solitary fls. below. Cult. 1925.—*H. p. × lobocarpum*; see under No. 6.

10. *H. frondosum* Michx. Upright shrub with rather stout brs., to 1 m. tall, often with a single stem, with thin exfoliating reddish bark; brts. 2-edged: lvs. ovate-oblong to oblong, 2.5-6 cm. long, mucronate, bluish green above, glaucous beneath, pellucid-dotted: fls. terminal, 1 or few, sessile or subsessile, 3-5 cm. across, bright yellow; sepals obovate, unequal, much shorter than the broad-obovate petals; stamens very numerous; fr. ovoid, about 1 cm. long, not furrowed. Fl.vii-viii. B.M.8498(c). G.F.2:185. B.C. 3:1631. Gn.W.20:934. (*H. aureum* Bartr., not Lour., *H. prolificum* var. *a.* Koehne.) S. C. and Tenn. to Ga. and Tex. Intr. 1747. Zone V. Dense shrub with large bright fls.

*H. f. × prolificum*; see under No. 9.

Closely related species: *H. splendens* Small. Lvs. oblong, 2-4 cm. long: fls. stalked, in several-fld. cymes; stamens orange: caps. with 3 narrow wings. Ga. Intr. 1906. Zone VII.

11. *H. nudiflorum* Michx. Upright shrub or subshrub, to 1 m.; brts. 4-angled: lvs. elliptic-oblong to oblong-lanceolate, 2-6 cm. long, obtuse, flat, thin: fls. light yellow, 1.5-2 cm. across, in loose dichotomous cymes on a leafless peduncle; sepals elliptic-oblong to elliptic-ob lanceolate, 3-4 mm. long: fr. conic-ovoid, 6-7 mm. long. Fl.vii-viii. N. C. to Fla. and Ala. Cult. 1897. Zone (V).

12. *H. cistifolium* Lam. Stoloniferous subshrub, to 1 m.; stems 4-angled: lvs. narrow-oblong to linear-lanceolate, 2-8 cm. long, obtuse or acutish, often slightly clasping, revolute: fls. 1-1.5 cm. across, nearly sessile, in loose dichotomous cymes; sepals ovate to lanceolate, acute; petals cuneate at base: fr. subglobose to globose-ovoid, 4-6 mm. long, 1-celled. Fl.vii-ix. B.B. 2:532. (*H. sphaerocarpum* Michx.) Ohio to Ill., Ala. and Ark. Intr. 1880. Zone V. May be used as a sand-binding plant.

Related species: *H. turgidum* Small. Shrub to 60 cm.: lvs. linear to linear-ob lanceolate, 1-2.5 cm. long, acute, revolute: fls. about 1 cm. across, in several-fld. cymes; sepals ovate to elliptic: caps. subglobose, broadest above the middle, abruptly pointed, 3.5 mm. across. Ala. Intr. 1907. Zone VI or VII?—*H. glomeratum* Small. Shrub to 1 m.: lvs. narrow-oblong to linear-oblong, 2-4 cm. long, apiculate: fls. 2-2.5 cm. across, in dense cymes; sepals narrow-oblong: caps. incompletely 3-celled. N. C. Cult. 1905. Zone VI.—*H. adpressum* Bartr. Subshrub with upright stems or ascending from a creeping base, to 50 cm.: lvs. narrow-oblong to lanceolate, 2-6 cm. long: fls. 1-1.5 cm. across, in terminal cymes; sepals lanceolate or ovate-lanceolate: fr. ovoid, 5-6 mm. long, slender-beaked. B.B.2:531. (*H. fastigiatum* Ell.) Mass. to Ga. and La. Intr. 1888. Zone V.

13. *H. densiflorum* Pursh. Upright shrub to 2 m.; brts. 2-edged: lvs. linear-oblong to linear, 1-5 cm. long, acute, revolute: fls. 1-1.5 cm. across,

in dense many-fl'd. corymbs; sepals unequal, oblong to elliptic-oblong: caps. ovoid, 4-6 mm. long, slightly 3-lobed. Fl.vii-ix. G.F.3:527. R.H.1899:517, 518. M.M.4:t.7(c). (*H. prolificum* var. *d.* Gray.) N. J. to Fla., Mo. and Tex. Intr. 1889. Zone V.

14. *H. Buckleyi* M. A. Curtis. Subshrub with decumbent or ascending stems, to 30 cm. high; stems 4-angled: lvs. obovate to elliptic, 5-20 mm. long, rounded at apex: fls. 2-2.5 cm. across, 1-3, terminal; sepals obovate or spatulate, about half as long as the narrow-obovate thin petals; styles connate: caps. conic-ovoid, 6-10 mm. long. Fl.vi-vii. G.F.4:581. N. C. to Ga. Intr. 1889. Zone V. Adapted for rockeries and as ground-cover.

15. *H. hircinum* L. Half-evergreen subshrub of round compact habit, to 1 m.; brts. 2-edged: lvs. ovate to ovate-lanceolate, 2.5-6 cm. long, acute to obtuse, of goat-like odor when crushed: fls. about 3 cm. across, bright yellow, solitary or in 3-fl'd. cymes; sepals lanceolate, deciduous, about  $\frac{1}{2}$  or  $\frac{1}{4}$  the length of the petals; stamens much longer than petals; caps. ovoid, pointed, 6 mm. long. Fl.vii-ix. W.D.2:t.86(c). Mediterr. region. Intr. 1640. Zone VII.—*H. h. pumilum* Wats., var. Shrub to 30 cm. high, of dwarf compact habit: lvs. smaller. W.D.2:t.87(c). (*H. h.* var. *minus* Bean.)

Related species: *H. inodorum* Willd. Slender-branched shrub, to 1.5 m., without goat-like odor: lvs. rather crowded, oblong-ovate, 2.5-5 cm. long, obtuse: fls. 2-2.5 cm. across, one or few; sepals lanceolate, about  $\frac{1}{2}$  as long as the narrow petals; stamens little longer than petals. Jaub. & Spach, Ill. 1:t.38. S.H.2:224b. S. E. Eu., Cauc. Cult. 1870.—*H. olympicum* L. Procumbent subshrub, 15-30 cm. high, with little-branched stems; brts. slightly 2-edged or nearly terete: lvs. sessile, elliptic-oblong to oblong, 1-3 cm. long, acutish, grayish green: fls. 1-5, yellow, about 5 cm. across; sepals ovate, acute; stamens in 3 bundles, slightly shorter than the oblong-obovate petals; styles 3, longer than the stamens. B.M. 1867(c). S.F.8:t.772(c). S.E. Eu., Asia Minor. Intr. 1706. Zone VII?—*H. polyphyllum* Boiss. & Bal. Similar to the preceding, but stems upright or ascending; lvs. narrower, with black dots beneath; sepals sparingly black-dotted. S.St. 123(h). Farrer, Engl. Rock-gard. 1:t.40(h). Asia Minor. Cult. 1910. Zone VII?

16. *H. elatum* Ait. Half-evergreen shrub, to 1.5 m.; brts. slightly 2-edged: lvs. ovate to ovate-oblong, 3-8 cm. long, obtuse or acutish, often subcordate at base, bluish green beneath, of aromatic odor when bruised: fls. 2-3 cm. across, in several- to many-fl'd. terminal panicles; sepals ovate to ovate-lanceolate, reflexed in fr.; styles longer than stamens: fr. ovoid, pointed. Fl.vii-viii. R.I.6:t.352(c). S.H.2:f.225d-e. Webb & Berthelot, Fl. Canar.2:t.85(c). (*H. grandifolium* Choisy, *Androsaemum Webbianum* Spach.) Canary Isls., Madeira. Intr. 1762 and sometimes escaped from cult. Zone VII?—The typical Canary Island plant differs in its more reticulate lvs. and in the larger fls. from the cult. form which may be *H. elatum*  $\times$  *Androsaemum* (*H. multiflorum* Hort., not H.B.K.).

17. *H. Androsaemum* L. TUTSAN. Half-evergreen shrub, to 1 m.; brts. 2-edged: lvs. ovate to ovate-oblong, 5-10 cm. long, obtuse, cordate or subcordate at base, whitish beneath, slightly aromatic: fls. 2-2.5 cm. across, light yellow, in 3-9-fl'd. cymes or solitary; sepals ovate, about 1 cm. long, little shorter than the petals; styles short, recurved, persistent: fr. berry-like, subglobose, about 8 mm. across, purple-black. Fl.vi-ix. R.I.6:t.352(c). F.D.21:2094(c.) S.H.2:f.225a-c. (*Androsaemum officinale* All.—SWEET-AMBER.) W. and S. Eu., W. Asia. Cult. before 1600. Zone VI.

18. *H. Córís* L. Upright or sometimes procumbent subshrub, to 60 cm.; brts. terete: lvs. in whorls of 4-6, linear, 1-2 cm. long, revolute: fls. 2 cm. across, golden-yellow, in terminal panicles; sepals glandular-denticulate,

scarcely  $\frac{1}{2}$  as long as petals, upright in fr. Fl.vii-viii. B.M.6563(c). R.I.6: t.351(c). F.D.21:t.2106(c). N.F.31:f.51(h). S. Eu. Cult. 1640. Zone VII?

Closely related species: *H. empetrifolium* Willd. Shrubby; brts. slightly angled: lvs. in 3's, 8-16 mm. long; panicle many-fld.; sepals  $\frac{1}{2}$ - $\frac{3}{4}$  as long as petals, spreading in fr. B.M.6764(c). S. E. Eu., W. Asia. Intr. 1788. Zone VII?

### Fam. 68. TAMARICACEAE Desv. TAMARISK FAMILY

Shrubs or small trees, rarely herbs: lvs. alternate, sessile, often scale-like or needle-shaped, estipulate: fls. regular, perfect, solitary or in spikes; sepals 4-5; petals as many, imbricate; stamens 4 to many, inserted on a disk; ovary superior, 1-celled, with 3-5 parietal placentas; ovules 2 to many; styles 3-5 or stigma sessile: fr. a 1-celled or incompletely 3-4-celled capsule; seeds bearded, rarely winged, with or without albumen; embryo straight; cotyledons flat.—Four genera with about 100 species from Eu. and the Mediterr. region to E. Asia and India.—Besides the 2 genera described below *Reaumuria hypericoides* Willd. from W. Asia and *Hololachne songarica* Ehrenb. from Songaria have been occasionally introduced into botanic gardens, but hardly ever successfully cult.

- A. Stamens free; styles present; seeds with sessile tuft of hairs.....1. *Tamarix*  
 AA. Stamens connate, about  $\frac{1}{2}$ ; stigma sessile; seeds with stalked tuft of hairs.....2. *Myricaria*

1. **TAMARIX L. TAMARISK.** Deciduous shrubs or trees, with very slender terete brs.; the ultimate small brts. falling with the lvs.: lvs. small, usually scale-like, often sheathing; fls. small, short-pedicel or sessile, in dense racemes usually collected in terminal panicles; sepals and petals 4-5; stamens 4-5, rarely 8-12, distinct or slightly connate at base; anthers exserted: ovary 1-celled, surrounded at base by a more or less deeply lobed disk; styles 2-5, clavate or short and thick: fr. a caps. dehiscent into 3-5 valves; seeds many, minute, with a sessile tuft of hairs at apex. (Ancient Latin name of the plant.) About 75 species in W. Eu. and from the Mediterr. region to E. Asia and India.—Cult. chiefly for their feathery foliage and the profusely produced pink or pinkish fls. in spring or summer; also used as sand-binding plants.

- A. Racemes lateral on last year's brs.  
 B. Fls. 4-merous; anthers mucronate.....1. *T. parviflora*  
 BB. Fls. 5-merous; anthers obtuse.....2. *T. juniperina*  
 AA. Racemes in large terminal panicles, rarely lateral on the brs. of the current year; fls. 5-merous.  
 B. Brts. and lvs. finely pubescent: disk of fls. 5-lobed, the lobes narrowed into the filaments .....3. *T. hispida*  
 BB. Brts. and lvs. glabrous.  
 C. Petals deciduous: filaments inserted on the margin of the disk, slightly dilated at base.  
 D. Fl.-buds ovoid: filaments inserted at the corners of the 5-angled disk.4. *T. anglica*  
 DD. Fl.-buds subglobose: filaments inserted between the shallow rounded lobes.5. *T. gallica*  
 CC. Petals persistent; filaments inserted between the lobes, slightly below the margin, filiform.  
 D. Bracts ovate-lanceolate: disk 10-lobed: shrub.....6. *T. pentandra*  
 DD. Bracts subulate.  
 E. Disk 5-lobed; erect shrub with upright panicles.....7. *T. odessana*  
 EE. Disk 10-lobed: usually a tree with spreading brs. and nodding panicles.8. *T. chinensis*

1. ***T. parviflora* DC.** Shrub or small tree to 5 m., with slender dark purple brs. usually arching: lvs. ovate, acuminate, semi-amplexicaul, scarious at apex: fls. light pink, in slender racemes 2-4 cm. long; bracts linear-oblong, subobtus, adnate at base, as long or longer than pedicel; calyx small, with obtuse lobes; petals ovate-oblong, upright, persistent; anthers apiculate;

styles 3, scarcely half as long as ovary. Fl. iv-v. F.S.9:t.898(c). R.H.1855:401,t(c). Gn.61:272(h). (*T. tetrandra* var. *p.* (DC.) Boiss., *T. tetrandra* var. *purpurea* Hort.) S. E. Eu. Cult. 1853. Zone IV. Often confused with *T. africana* and *T. tetrandra*.

Related species: *T. tetrandra* Pall. Brs. almost black; lvs. ovate-lanceolate, slightly narrowed at base, with diaphanous margin; fls. light pink; bracts broad and gibbous at base, adnate at the lower third, the free part triangular-lanceolate, acute, longer than pedicels; petals deciduous; styles 3-4, about  $\frac{2}{3}$  as long as ovary. S. E. Eu., W. Asia. Intr. 1821.

2. *T. juniperina* Bge. Shrub or small tree to 5 m., densely branched with very thin and slender brts.: lvs. green, oblong-lanceolate, acuminate, scarious at apex: fls. bright pink in slender racemes 3-6 cm. long, lateral on last year's brs.; bracts linear-lanceolate, slightly longer than pedicels; pedicels slender, shorter than calyx; sepals ovate-lanceolate, acute, little shorter than the persistent petals; disk 5-lobed, with emarginate lobes. Fl. v. S.Z.1:t.71(c). (*T. chinensis* Sieb., not Lour., *T. japonica* Hort., *T. plumosa* Hort.) N. and C. China, cult. in Japan. Cult. 1877. Zone V.

Related species: *T. africana* Poir. Racemes thicker and denser, 5-8 cm. long and 8-9 mm. thick: fls. nearly sessile; styles much longer than ovary. Mediterr. region. Doubtful if in cult. Zone VII?

3. *T. hispida* Willd. KASHEGAR T. Shrub with slender upright brs.: lvs. bluish green or glaucous, ovate-lanceolate, acuminate, rounded or subcordate at base, finely pubescent like the brts.: fls. pink, nearly sessile, in dense racemes 5-7 cm. long, forming terminal panicles; bracts subcordate at base, acuminate; petals deciduous, much longer than sepals; disk 5-lobed, the filaments inserted on the lobes. Fl. viii-ix. R.H.1894:352,t(c). S.H.2:f.228a-d<sup>1</sup>. (*T. kashgarica* Lemoine.) From east of Caspian Sea to Songaria. Cult. 1893. Zone VI.

4. *T. ánglica* Webb. ENGLISH T. Shrub to 3 m., with upright slender brs.; brts. reddish brown: lvs. ovate-lanceolate, narrowed at base, bright green: fls. whitish, tinged with pink, in slender racemes 3-5 cm. long; bracts lanceolate, subulate, more than twice as long as pedicels; petals deciduous; filaments dilated at base and attached to the lobes of the 5-angled disk, without glands between the filaments. Fl. viii-x. S.E.2:t.261(c). Hooker, Jour. Bot. 3(1841):t.15. W. Eu. Cult. 1877. Zone VI?

Related species: *T. Karelíni* Bge. Glaucous shrub: lvs. ovate, acute, densely imbricated, punctate: racemes very slender, 5-15 cm. long; fls. subsessile; bracts lanceolate, as long as calyx; petals elliptic-oblong; styles half as long as ovary. Transcaspiá. Intr. 1930. Zone VI?

5. *T. gállica* L. FRENCH T. Shrub or small tree to 10 m., with slender erect or spreading brs.: lvs. dull to bluish green, ovate-lanceolate to rhombic-ovate, acute or acuminate, broad at base, with scarious margin: fls. pink, in dense cylindric racemes 3-5 cm. long; bracts deltoid-ovate, acuminate, more than twice as long as pedicels; filaments inserted between the rounded or slightly emarginate lobes of the disk. Fl. vi-viii. S.O.3:t.130(c). G.H.t. 37(c). Hooker, Jour. Bot. 3(1841):t.15. M.A.t.76(h). Gn.34:329. Mediterr. region. Cult. 1596. Zone V.

6. *T. pentándra* Pall. Shrub or small tree to 5 m.; brs. purple: lvs. lanceolate to ovate, acute, glaucous or pale green: fls. rosy-pink, in dense or slender racemes 3-8 cm. long forming large terminal panicles; bracts ovate-lanceolate, acute or acuminate, slightly longer than pedicels; petals elliptic, connivent; disk with 5 emarginate or 2-lobed lobes; styles linear-spatulate with connivent stigmas, about  $\frac{1}{2}$  as long as ovary. Fl. viii-ix. B.M.8138(c). B.S.2:577. Gn.77:494(h). F.E.20:344,t.105(h). S.L.367(h). (*T. Pallasii* Desv.,

*T. hispida aestivalis* Hort., *T. amurensis* Hort.) S. E. Eu. to C. Asia. Cult. 1883. Zone II.—A variable species.

7. *T. odessana* Stev. Shrub to 2 m., with upright slender brs.: lvs. lanceolate, subulate, decurrent: fls. pink, in slender racemes about 3 cm. long, on short naked peduncles: bracts linear-subulate, longer than the pedicels; pedicels deflexed, about as long as calyx; petals obovate, spreading; disk 5-lobed, with rounded lobes; styles often 4, sublinear, about  $\frac{1}{2}$  as long as ovary; anthers apiculate. Fl.vii-ix. Caspian region. Intr. about 1885. Zone IV.

8. *T. chinensis* Lour. CHINESE T. Shrub or small tree to 5 m., with slender spreading, often drooping brs. and very thin brts.: lvs. bluish green, lanceolate, acuminate, keeled: fls. pink, in slender racemes 3-5 cm. long, forming large and loose usually pendulous panicles; bracts linear-subulate, gibbous at base, longer than pedicels; sepals ovate, much shorter than petals: disk deeply 10-lobed; styles clavate,  $\frac{2}{3}$ - $\frac{3}{4}$  as long as ovary; stamens as long or twice as long as petals; anthers obtuse. Fl.vii-ix. Ito, Fig. Pl. Koishik. 2:t.14(c). China. Intr. 1916 (or earlier?). Zone VII?

The very distinct *T. aphylla* (L.) Karst. (*T. articulata* Vahl) with jointed brts., minute sheathing lvs. and 5-merous sessile fls. in terminal panicles, from N. E. Afr. and W. Asia is probably not hardy within our area.

2. MYRICARIA Desv. Deciduous shrubs or subshrubs; lvs. alternate, scale-like: fls. small, pink or white, short-pedicel or subsessile, in terminal or lateral dense racemes; sepals and petals 5; stamens 10, the filaments connate  $\frac{1}{3}$ - $\frac{1}{2}$ , rarely only at base; anthers introrse; ovary 1-celled, with 3 sessile stigmas; seeds with a stalked tuft of hairs: fr. a 3-valved caps. (Derived from *Myrica*, probably the ancient name of the Tamarisk.) About 10 species from Eu. to C. Asia, China and Siberia.

*M. germanica* (L.) Desv. Subshrub to 2 m., with upright wand-like stems, glabrous; lvs. lanceolate, obtuse, glandular-dotted, bluish green: fls. light pink or whitish, in terminal dense racemes, 10-20 cm. long, often with lateral ones at base; bracts ovate-lanceolate, long-acuminate, below with a broad membranous margin, exceeding the fl.-buds; stamens connate about  $\frac{1}{2}$ . Fl. v-viii. S.O.3:t.131(c). G.H.t.38(c). F.D.13:t.1248(c). (*Tamarix g.* L.) C. and S. Eu., W. Asia. Intr. about 1582. Zone V.

Related species: *M. dahurica* Ehrenb. Racemes on lateral brts.; bracts oblong-ovate, obtusish, with a membranous margin all around, not exceeding the fl.-buds; stamens connate, often only  $\frac{1}{3}$ . Dahuria, Transbaicalia. Intr. 1816. Zone V.

## Fam. 69. CISTACEAE Lindl. ROCK-ROSE FAMILY

Shrubs or herbs; lvs. usually opposite, rarely alternate, stipulate or exstipulate: fls. perfect, regular, solitary or in racemes and cymes; sepals 5 or sometimes 3, in  $\frac{2}{3}$  phyllotaxy; petals 5, rarely 3, caducous, sometimes wanting; convolutions of calyx and corolla in opposite directions; stamens numerous, hypogynous, unequal; ovary superior, 1-celled, with 3-10 parietal placentae; style 1: fr. a caps. dehiscent between the placentae; seeds with copious albumen and crustaceous testa; embryo usually curved.—Seven genera with about 160 species in N. Am. and the Mediterr. region, few in E. Asia and in S. Am.

- a. Lvs. usually opposite, longer than 1 cm.: stigma large.
- b. Caps. 5-10-valved: fls. white or red to purple: upright shrubs.....1. *Cistus*
- bb. Caps. 3-valved: fls. often yellow.
- c. Style very short, straight; sepals 3 or 5.....2. *Halimium*
- cc. Style elongated, curved or bent at base; sepals 5.....3. *Helianthemum*
- aa. Lvs. alternate, crowded, 2.5-7 mm. long, scale-like or subulate: fls. small, yellow; stigma minute: heath-like shrubs.....4. *Hudsonia*

1. **CISTUS** L. Rock-rose. Low upright shrubs, evergreen or half-evergreen, usually villous, more or less glandular and aromatic: lvs. opposite, entire, petioles connate at base, estipulate: fls. large in terminal and axillary cymes at end of brts., rarely solitary, white to purple; sepals 3 or 5; petals 5; stamens numerous; style elongated or short with a large 5-10-lobed stigma; ovary 5-10-celled, with many-ovuled placentae; caps. splitting into 5 or 10 valves. (*Kistos*, the ancient Greek name of the plant.) About 20 species in the Mediterr. region. Low shrubs with showy fls., not hardy north of the middle Atlantic states.

## A. Sepals 5.

## B. Fls. red or purple.

## C. Lvs. distinctly 3-nerved, sessile.

D. Fls. stalked: lvs. with straight revolute margin.....1. *C. albidus*DD. Fls. subsessile: lvs. with undulate margin.....2. *C. crispus*CC. Lvs. penninerved, short-petioled.....3. *C. villosus*

## BB. Fls. white.

C. Sepals rounded at base: lvs. sessile, lanceolate, 3-8 mm. broad....4. *C. monspeliensis*

CC. Sepals cordate at base.

D. Lvs. sessile, 3-nerved.....5. *C. hirsutus*

DD. Lvs. petioled, penninerved, 3-nerved at base.

E. Lvs. 1.2-4.5 cm. long.....6. *C. salvifolius*EE. Lvs. 5-9 cm. long, cordate at base, viscid.....7. *C. populifolius*

## AA. Sepals 3: fls. white: lvs. 3-nerved, viscid.

B. Lvs. subsessile: fls. usually solitary, long-stalked; sepals lepidote.....8. *C. ladaniferus*BB. Lvs. petioled: fls. cymose; sepals hairy.....9. *C. laurifolius*

1. **C. albidus** L. Shrub to 2 m.; young parts white-tomentose: lvs. sessile, elliptic to ovate-oblong, 2-5 cm. long, obtuse, revolute, 3-nerved at base, reticulate beneath and stellate-tomentose: fls. 3-8, stalked, about 6 cm. across, rosy lilac, the petals blotched yellow at base; sepals broad-ovate, short-acuminate; style longer than stamens. Fl.vi-vii. R.I.3:t.39(c). S.C.31(c). G.C.45:117(h). W. Mediterr. region. Cult. 1640. Zone VII.—*C. a. albus* E. F. Warb., var. Fls. pure white. Cult. 1930.

*C. a. × crispus* = *C. pulverulentus* Pourr. Low shrub: lvs. undulate, the upper plane or nearly so: fls. short-stalked, subtended by acuminate bracts; sepals ovate-lanceolate. (*C. Delilei* Burnat.) S. W. Eu. Cult. 1929.—*C. a. × villosus* = *C. canescens* Sweet. Lvs. oblong-lanceolate to linear-oblong, stellate-tomentose, 3-nerved, short-petioled. S.C.45(c). Cult. 1827.

2. **C. crispus** L. Compact shrub to 1 m.; young brts. with long white hairs: lvs. sessile, elliptic-ovate to lanceolate, 1-4 cm. long, acute, undulate, rugose above, stellate-tomentose on both sides: fls. subsessile, purplish red, 3.5-4 cm. across, in dense terminal heads; sepals lanceolate, acuminate. Fl. vi-vii. R.I.3:t.38(c). S.C.22(c). B.M.9306(c). Gn.34:252,t(c);79:299(h);83:176(h). W. Mediterr. region. Intr. 1656. Zone VII.

*C. c. × villosus* var. *creticus* = *C. crispatus* Bornet. Brts. villous: lvs. sessile, connate, obovate-oblong to oblanceolate, pubescent on both sides: fls. about 5 cm. across, pink; sepals ovate-lanceolate, acuminate, villous. J.L.55:f.11. Cult. 1930.—*C. c. × albidus*; see under No. 1.

Related species: *C. varius* Pourr. Lvs. sessile, lanceolate, rugose above, undulate: fls. white, 2-2.5 cm. across; stamens half as long as petals. Willk. Ic. t.87(c). (*C. Pouzolii* Del., ?*C. crispus* × *monspeliensis*.) W. Mediterr. reg. Intr. 1929.

3. **C. villosus** L. Compact shrub to 1 m.; young brts. villous: lvs. elliptic to ovate-oblong, 2.5-6 cm. long, obtuse, abruptly narrowed into a short sheathing petiole, penninerved, rugose and sparingly stellate-pubescent above, more densely so beneath and grayish: fls. purple to rose-colored, 5-6 cm. across, petals yellowish at base, in 3-5-fld. terminal cymes; peduncle grayish tomentose; sepals ovate, acuminate, villous; style about as long as stamens. Fl.vi-vii. B.M.43(c). R.I.3:t.40(c). F.D.13:t.1254(c). S.C.35(c). Gn.27:571. B.S.1:344. Mediterr. region. Intr. about 1650. Zone VI?—*C. v. tauricus*.

(Presl) Grosser, var. Lower lvs. roundish, the middle ones obovate-spatulate, the upper lanceolate; pedicels twice as long as sepals. (*C. t.* Presl.) E. Mediterr. region. Cult. 1898. Probably the hardest variety. Zone (V).—*C. v. crêticus* (L.) Boiss., var. Glandular-pubescent: lvs. rugose, undulate and crisped on the margin, strongly reticulate beneath. H.A.13:t.33(c). Willk. Ic. t.83(c). Cult. 1894.

*C. v. × ladaniferus* = *C. purpureus* Lam. Young brts. villous and resinous: lvs. nearly sessile, oblong-lanceolate, 3-nerved at base, penninerved above, grayish tomentose beneath: fls. 6–8 cm. across, reddish purple with a dark red blotch at base of each petal. B.R.5:408(c). S.C.17(c). G.C.48:118,119(h). Gn.31:326,t(c);86:305(h). Orig. before 1790.—*C. v. × laurifolius*. Here belongs: "Silver Pink" Hillier. Lvs. resembling *C. laurifolius*, but smaller and grayer; fls. pale pink. Orig. before 1933.—*C. v. × albidus*; see under No. 1.—*C. v. × crispus*; see under No. 2.

Related species: *C. heterophyllus* Desf. Brts. stellate-tomentose and white-pilose: lvs. subsessile, elliptic to ovate-lanceolate, 1.5–2 cm. long, stellate-pubescent and scabrid above, more densely so beneath: fls. long-stalked, 5 cm. across; sepals orbicular, apiculate; petals rose, yellow at base. S.C.t.6(c). Algeria. Intr. 1817.—*C. parviflorus* Lam. Brts. appressed villous-tomentose: lvs. petioled, 3-nerved, ovate-elliptic or elliptic, 1–2 cm. long, obtuse or acute, whitish-tomentose and reticulate beneath: fls. 2–6, 2.5–3 cm. across, rose; style very short. S.C.t.14(c). Mediterr. reg. Cult. 1825.—*C. p. × monspeliensis* = *C. Skanbergii* Lojac. Brts. densely villous: lvs. petioled, oblong to linear-lanceolate, the lower obtuse, the upper acutish: fls. 2–5, rose; outer sepals broad-ovate, acuminate. B.M.9514(c). S. Eu. Cult. 1930.

4. *C. monspeliensis* L. Shrub to 1.5 m.; brts. pilose, viscid when young: lvs. subsessile, 3-nerved, lanceolate to linear-lanceolate, obtuse or acutish, 2–5 cm. long, revolute at margin, rugose and dark green above, grayish and stellate-pubescent beneath, hairy on the veins: fls. white, about 2.5 cm. across, in 3–10-fld. cymes; sepals ovate, acuminate, long-pilose like the pedicels; stigma subsessile. Fl.vi–vii. R.I.3:t.37(c). F.D.13:t.1252(c). S.C.27(c). W. Mediterr. region. Intr. before 1650. Zone VII.

*C. m. × populifolius* = *C. nigricans* Pourr. Viscid: lvs. ovate-lanceolate, 4–5 cm. long, acute, undulate, attenuate into a short petiole: infl. long-stalked, 3–5-fld.; fls. 5 cm. across; sepals broadly cordate-ovate, apiculate. S.C.12(c). E.N.III.6:302. Cult. 1825.—*C. m. × ladaniferus × laurifolius* = *C. Hetiéri* Verguin. Viscid: lvs. lanceolate to linear-lanceolate, 3–6 cm. long, sessile and connate at base, whitish tomentose and reticulate beneath: fls. 4 cm. across, on slender villous pedicels; sepals ovate, acuminate, clothed with long white hairs. S. France. Cult. 1930.—*C. m. × laurifolius* = *C. glaucus* Pourr. Lvs. petioled, lanceolate to linear-lanceolate, 3-nerved, gray-tomentose and reticulate beneath: fls. 4–5 cm. across; the 2 outer sepals ovate-lanceolate, half as long as the inner ones. H.A.13:t.36(c). (*C. Ledon* Lam.) Cult. 1900.—*C. m. × crispus*; see under No. 2.—*C. m. × parviflorus*; see under No. 3.—*C. m. × hirsutus*; see under No. 5.—*C. m. × salvifolius*; see under No. 6.

5. *C. hirsutus* Lam. Shrub to 1 m.; young brts. with long white hairs: lvs. sessile, elliptic-lanceolate, obtuse, 3–6 cm. long, 3-nerved, pilose above, stellate-pubescent beneath: fls. in terminal cymes with alternate bracts, 3–3.5 cm. across, white, the petals yellow at base; bracts alternate; outer sepals cordate, 8–12 mm. long, margin long-pilose, accrescent after anthesis, acuminate, the inner ones smaller, ovate. Fl.vi–vii. S.C.19(c). S. W. Eu. Intr. about 1650. Zone VII.—*C. h. psilocéphalus* (Sweet) Willk., var. Lvs. short-petioled, undulate: outer sepals pilose-ciliate, glabrous on back. S.C. 33(c). Cult. 1826.

*C. h. × monspeliensis* = *C. platysépalus* Sweet. Lvs. sessile, 3-nerved, ovate-lanceolate, nearly glabrous except glandular-pubescent on veins beneath: fls. 3–6; sepals cordate, not revolute on margin, like the pedicels rather sparingly long-pilose. S.C.47(c). J.L.55:f.13. Cult. 1827.—*C. h. × salvifolius* = *C. obtusifolius* Sweet. Lvs. sessile or subsessile, oval to ovate-oblong, rugose and scabrid above, paler and stellate-pubescent beneath: outer sepals smaller, short

and sparingly pilose. S.C.42(c). Cult. 1827.—*C. h.* × *populifolius* = *C. laxus* Ait. Lvs. ovate-lanceolate, short-petioled, pubescent on both sides when young and slightly viscid, ciliate; fls. 5 cm. across, on villous stalks; sepals very hairy, acuminate, the outer broader and cordate. S.C.12(c). J.H.55:f.12. (*C. Merinói* Pau.) Cult. 1656.—*C. h.* × *ladaniferus* = *C. lusitanicus* Maund, not Mill. Somewhat viscid; lvs. sessile, oblong-lanceolate to lanceolate, 3–6 cm. long, obtuse or acutish, revolute, dull and nearly glabrous above, sparingly stellate-pubescent and reticulate beneath; fls. short-stalked, 6–7 cm. across; petals with purplish blotch; sepals broad-ovate, stellate-pubescent outside. J.H.55:f.9. Gn. 90:447(h). (*C. recognitus* Hort., not Rouy & Fouc.) Cult. 1830.—*C. l. decumbens* Maund. Habit spreading; lvs. oblong-lanceolate, shiny above; petals with conspicuous purple blotch. B.M.8490(c). G.C.66:25(h). Gn.78:428(h), 539:83:304. (*C. Loretii* Hort., not Rouy & Fouc.) Cult. 1830.

6. *C. salvifolius* L. Shrub to 60 cm.; young brts. thinly stellate-tomentose; lvs. short-petioled, oval to ovate-oblong, 1.5–4 cm. long, grayish green and rugose above, paler beneath, stellate-tomentose on both sides; fls. 1–3, white, the petals yellow at base, 3.5–4.5 cm. across; outer sepals cordate, acuminate, stellate-tomentose. Fl.v–vi. R.I.3:t.36(c). F.D.13:t.1253(c). S.C. 54(c). Gn.83:305(h). G.C.100:25(h). Mediterr. region. Intr. about 1550. Zone VII?

*C. s.* × *populifolius* = *C. corbariensis* Pourr. Young brts. minutely pubescent; lvs. petioled, ovate, 2–5 cm. long, cordate or rounded at base, undulate at margin, stellate-pubescent on both sides; fls. 3.5 cm. across. R.I.3:t.36(c). S.C. 8(c). Gn.78:58(h). (*C. populifolius minor* Hort.) Spontaneous hybrid. Zone VII?—*C. s.* × *monspeliensis* = *C. florentinus* Lam. Young brts. tomentose; lvs. short-petioled, elliptic-lanceolate, 2.5–3.5 cm. long, dull green and rugose above, grayish and stellate-pubescent beneath, 3-nerved at base. S.C.t.59(c). Gn.53:130,134;83:305(h). Spontaneous hybrid.—*C. s.* × *laurifolius* = *C. Costei* E.G. Camus. Lvs. petioled, 3-nerved at base, ovate, acuminate, gray-tomentose beneath; fls. 2–3; outer sepals ovate-lanceolate, half as long as the broader inner ones; peduncles and pedicels slender. S. France. Cult. 1930.—*C. s.* × *hirsutus*; see under No. 5.—*C. s.* × *ladaniferus*; see under No. 8.—*C. s.* × *Halimium umbellatum* see *Halimicistus Sahucii*.—*C. s.* × *Halimium lasianthum* see *Halimicistus wintonensis*, p. 647.

7. *C. populifolius* L. Shrub to 2 m.; young brts. slightly pubescent and viscid; lvs. long-petioled, ovate, acuminate, cordate, 5–9 cm. long, glabrous, reticulate beneath; petiole 1–2.5 cm. long, ciliate; fls. 2–5, white, about 5 cm. across; petals yellow at base; outer sepals cordate at base. Fl.vi–vii. S.C. 23 and 70(c). (*C. cordifolius* Mill.) S. W. Eu. Cult. 1656. Zone VII?

*C. p.* × *monspeliensis*; see under No. 4.—*C. p.* × *hirsutus*; see under No. 5.—*C. p.* × *salvifolius*; see under No. 6.

8. *C. ladaniferus* L. Shrub to 1.5 m.; brts. very viscid; lvs. subsessile, lanceolate or linear-lanceolate, 4–8 cm. long, narrowed at ends, 3-nerved, glabrous and viscid above, gray-tomentose beneath; fls. solitary, 7–10 cm. across, white, each petal with a large purple blotch at base; sepals 3, concave, lepidote, yellow. Fl.vi–vii. H.A.13:t.36(c). L.D.4:t.265(c). S.C.1(c). Gn.30:30;t(c);66:257(h);78:616(h). W. Mediterr. region. Intr. 1629. Zone VII.—*C. l. albiflorus* Dunal, var. Petals only yellow at base, not blotched purple. S.C.84(c). Gn.89:356. (*C. l. immaculatus* Hort.)

*C. l.* × *salvifolius* = *C. Verguinii* Coste & Soulié. Slightly viscid; lvs. short-petioled, lanceolate, nearly glabrous or slightly whitish pubescent and reticulate beneath; fls. 4–5 cm. across, solitary or tomentose stalks longer than calyx; petals white with purple blotch; sepals usually 4–5, slightly ciliate. S. France. Cult. 1930.—*C. l.* × *monspeliensis*; see under No. 4.—*C. l.* × *laurifolius* × *monspeliensis*; see under No. 4.—*C. l.* × *hirsutus*; see under No. 5.—*C. l.* × *laurifolius*; see under No. 9.

9. *C. laurifolius* L. Shrub to 2.5 m.; young brts. hairy and viscid; lvs. petioled, ovate to ovate-lanceolate, 3.5–7 cm. long, acuminate, rounded at base, 3-nerved, undulate at margin, glabrous and dark green above, tomen-

tose beneath, viscid: fls. 3-8, in long-peduncled cymes, 5-7 cm. across, white, petals yellow at base; sepals 3, ovate, concave, pubescent. Fl.vi-viii. R.I. 3:t.37(c). S.C.52(c). Gn.53:131;64:234. Gs.2:279(h). M.G.32:297(h). Mediterranean region. Intr. 1731. Zone VII?

*C. l. × ladaniferus* = *C. cyprius* Lam. Shrub to 2.5 m.; young brts. glutinous: lvs. oblong-lanceolate, 4-8 cm. long, narrow at ends, glabrous above, gray-pubescent beneath, viscid: fls. 3-6, in long-peduncled cymes, about 7 cm. across, white, each petal with a purple blotch; sepals lepidote. S.C.39(c). B.M.112(c, as *C. ladaniferus*). Gn.83:389(h). R.H.1917:327,329(h). J.H.58:306(h). Orig. before 1790.—*C. l. × villosus*; see under No. 3.—*C. l. × ladaniferus × monpetiense*: see under No. 4.—*C. l. × salvifolius*; see under No. 6.

× **HALIMIOCISTUS** Janchen. Hybrids between *Cistus* and *Halimium*.

The following are in cult.: *H. Sahùcii* (Coste & Soulié) Janchen. (*C. salvifolius* × *H. umbellatum*). Lvs. linear-lanceolate or lanceolate: fls. white, 3 cm. across; sepals 4-5, rarely 3, subequal, rounded at base. S. France. Cult. 1933.—*H. wintonensis* (Hillier) Warb. (*C. salvifolius* × *H. lasianthum*). Lvs. similar to *C. salvifolius*: fls. white, with purple-brown zone at base of petals. (*C. w.* Hillier.) Orig. before 1926.

**2. HALIMIUM** Spach. Evergreen shrubs, subshrubs or herbs: lvs. exstipulate, the lower opposite, the upper alternate or all alternate; fls. in terminal raceme- or umbel-like cymes, yellow or white; sepals 3 or 5; petals 5, fugacious; stamens many; style short, straight, with capitate or 3-lobed stigma: caps. 3-valved with many seeds; embryo strongly curved like a ring or hook. (From Greek *halimos* (*Atriplex Halimus*), in reference to color and shape of lvs.) Seven species in the Mediterranean region and W. Asia.

A. Lvs. linear to linear-lanceolate, sessile.....1. *H. umbellatum*  
AA. Lvs. ovate or obovate to lanceolate, at least partly petioled.....2. *H. lasianthum*

1. *H. umbellatum* (L.) Spach. Low shrub with upright or ascending brs.: lvs. sessile, clasping, linear to linear-lanceolate, 0.8-2.5 cm. long, revolute, pubescent above, white-tomentose beneath, the upper ones of flowering brts. bract-like, triangular, acuminate: fls. about 2 cm. across, in terminal cymes, white, yellow at base of petals; sepals oval, 5 mm. long, short-pubescent or viscid-puberulous. S.C.5(c). B.S.1:615. (*Helianthemum u.* Mill.) S. Eu., N. Afr. Intr. 1731. Zone VII.

*H. u. × Cistus salvifolius*; see under *Halimiocistus*, above.

Related species: *H. Libanotis* (L.) Lange. Lvs. linear, 1-3.5 cm. long, glabrous above, grayish tomentulose beneath except midrib: fls. 1-3 at end of lateral brts., on slender pedicels; sepals oval, glabrous. E.P.IV.193:40. (*Helianthemum L.* Willd.) W. Mediterr. reg. Cult. 1894.

2. *H. lasianthum* (Lam.) K. Koch. Upright shrub to 1 m., with spreading brs.; young brts. grayish stellate-tomentose intermixed with white hairs: lvs. short-petioled, oval to ovate-oblong or lanceolate, 1.5-3.5 cm. long, obtuse or mucronulate, 3-nerved at base, grayish tomentulose and with long white hairs when young; upper and middle lvs. of flowering brts. broad-ovate, sessile, smaller: fls. 1-5 at end of short brts., 3.5 cm. across, yellow, each petal with a brownish purple blotch at base; pedicels silky-villous, 1-2 cm. long: sepals 3, ovate, acuminate, stellate-tomentose. Fl.v-vi. B.M.264(c). S.C.50(c). B.S.1:613. Gn.84:355. (*Helianthemum l.* Pers., *H. formosum* Dun.) Portugal. Intr. 1780. Zone VII?

*H. l. × Cistus salvifolius*; see under *Halimiocistus*, above.

Related species: *H. halimifolium* (L.) Willk. & Lange. Young brts. lepidote and grayish pubescent: lvs. short-petioled, oblong or oblong-obovate to lanceolate, attenuate at base, white-tomentose and lepidote when young, later grayish

green: fls. 2-7, 3.5 cm. across, yellow, each petal with a small dark blotch; sepals 5, lepidote and pubescent or nearly glabrous, the outer ones smaller. S.C.t.4(c). E.P.IV.193:40. (*Helianthemum h.* Willd.) S. Eu., N. Afr. Cult. 1656.—*H. h. multiflorum* (Salzm.) Grosser, var. With numerous upright flowering brts.: lvs. stellate-tomentose or lepidote and pilose above; pedicels and sepals lepidote and stellate-pilose. Willk. Ic. t.108(c). N. Afr.—*H. h. × alyssoides* = *H. cheiranthoides* (Lam.) K. Koch. Lvs. oblong-lanceolate, stellate-tomentose and lepidote on both sides: fls. 2-3, yellow; outer sepals minute. (*Helianthemum ch.* Pers.) Portugal. Cult. 1894.—*H. alyssoides* (Lam.) K. Koch. Lvs. ovate-lanceolate to oblong-obovate, the lower short-petioled, the upper ones sessile: fls. bright yellow, unblotched, 3.5-4 cm. across; peduncles, pedicels and sepals short-villous. S.C.81(c). (*Helianthemum a.* Vent., *H. scabrosum* Pers.) S. W. Eu. Intr. 1775.—*H. ocyroides* (Lam.) Willk. & Lange. Lvs. lanceolate to oblong-obovate, the upper ones of the flowering brts. green and sessile, those of the sterile brts. gray and petioled: fls. in loose panicles, bright yellow, each petal purple at base, 2.5-3 cm. across; pedicels slender, sparingly hirsute; sepals ovate-lanceolate, sparingly pilose or nearly glabrous. B.M.627(c). S.C.13,40(c). (*Helianthemum o.* Pers., *H. algarvense* Dunal.) Spain, Portugal. Intr. 1800.

To the closely related genus *Crocánthemum* Spach, differing from *Halimium* chiefly in the alternate lvs., the presence of small cleistogamous fls. and 5 sepals, belongs *C. canadense* (L.) Britt. Perennial: lvs. oblong-lanceolate, 1-3 cm. long, grayish tomentose beneath; normal fls. solitary; yellow, 2-3 cm. across. Gr.G.I.t.87. B.B.2:540. (*Helianthemum c.* Michx.) Me. to N. C. and Miss.

**3. HELIANTHEMUM** Adans. SUN-ROSE. Evergreen or half-evergreen, shrubby, suffruticose or herbaceous plants, rarely annual: lvs. mostly opposite, or the upper ones alternate, rarely all alternate, entire, with or without stipules: fls. in terminal circinate raceme- or umbel-like or subcapitate cymes, usually yellow; sepals 5, the 2 outer ones smaller; petals 5; stamens many, rarely only 7-20; ovary 1-celled or imperfectly 3-celled; style slender: fr. a 3-valved caps., with several to many seeds; embryo folded. (Greek *helios*, sun, and *anithemon*, flower.) About 70 species in Eu., N. Afr. and W. Asia.—Low, often prostrate, sun-loving plants suited for rockeries, grown for their profuse yellow, rarely white to purple fls.; most species like limestone soil.—For further information see the monograph by Grosser (E.P. IV. 193 [1903]), also Janchen, Die Cistaceen Oesterreich-Ungarns (1909).

A. Style as long or longer than stamens: lvs. stipulate.

B. Stipules linear-subulate, the lower and middle ones as long as petioles: fls. white.

BB. Stipules lanceolate or linear-lanceolate, longer than petiole: fls. usually yellow.

C. Lvs. stellate-tomentose on both sides (see also *H. sulphureum* under No. 3).

CC. Lvs. glabrous or only pilose above, rarely slightly tomentose.

D. Lvs. grayish tomentose beneath.....3. *H. nummularium*

DD. Lvs. green beneath with scattered stellate hairs.....4. *H. grandiflorum*

AA. Style shorter than stamens; fls. yellow: lvs. exstipulate.

B. Lvs. grayish pubescent beneath: fls. 8-15 mm. across.....5. *H. canum*

BB. Lvs. green on both sides: fls. 15-20 mm. across.....6. *H. alpestre*

**1. H. apenninum** (L.) Mill. Low much-branched subshrub with upright or procumbent stems to 40 cm.; young brts. and lvs. whitish or grayish tomentulose: lvs. petioled, oblong-elliptic to linear-oblong, obtusish or acute, 1-3 cm. long, usually revolute, grayish tomentulose on both sides or green above: inf. 3-10-fld., raceme-like; fls. white, 2.5-3 cm. across; sepals 5, the inner elliptic, 5-8 mm. long, white-tomentulose, the outer linear-lanceolate,  $\frac{1}{3}$ - $\frac{1}{2}$  as long; petals obovate. Fl.v-viii. S.C.62(c). S.E.19:t.1322(c). R.I.3:f.4554(c). F.D.13:t.1261(c). (*H. pulverulentum* DC., *H. polifolium* Pers.) W. and S. Eu., Asia Minor. Intr. 1731. Zone VI.—*H. a. roseum* (Jacq.) Gross., var. Lvs. lanceolate, acutish, 2-3.5 cm. long, with flat margin; greenish above: fls. reddish. S.C.7(c). (*H. a. var. rhodanthum* Bean.) S. Eu.—*H. a. versicolor* (Sweet) Grosser, var. Lvs. about 1.5 cm. long, glabrous and green above: fls. rose, pink or reddish, sometimes variegated. S.C.26(c).

*H. a.* × *nummularium*; see under No. 3.

Related species: *H. pilosum* (L.) Benth. Upright: lvs. linear; fls. white; sepals 3–5 mm. long, the outer oblong to linear, the inner broad-oval, yellowish or purplish. Willk. Ic. t.132(c). S.C.t.49(c). W. Mediterr. reg. Cult. 1933. Zone VII?

2. *H. glaucum* (Cav.) Pers. Cespitose subshrub with upright or procumbent stems: lvs. petioled, the lower ones suborbicular, the middle and upper ones ovate-oblong to oblanceolate, 1–2 cm. long, flat or slightly revolute at the margin, stellate-tomentose on both sides, glaucous beneath: fls. in 3–15-fld. racemes, yellow or white, about 2 cm. across; bracts shorter than pedicels; outer sepals linear-lanceolate, green, ciliate, the inner ones ovate, tomentulose. Fl.v–vii. Cavanilles, Ic. Pl. Rar. 3:t.261. S. Eu., N. Afr. Intr. 1815. Zone VII?—*H. g. crôceum* (Pers.) Boiss., var. Fls. bright yellow; sepals densely stellate tomentulose. S.C.53(c). (*H. c.* Pers.) R.I.3:f.4552(c).

3. *H. nummularium* (L.) Mill. Subshrub to 35 cm. with ascending stems: lvs. broad-ovate or elliptic to lanceolate, 0.8–2.5 cm. long, margin flat or slightly revolute, green and hairy or slightly tomentose, rarely glabrous above, grayish tomentose beneath: infl. usually many-fld.; fls. 2–2.5 cm. across; inner sepals ovate or elliptic, 5–8 mm. long, loosely tomentose and on the veins often pilose, rarely glabrescent. Fls.v–vii. S.C.34,60,74,80(c). R.I.3:t.4547,4550(c). (*H. Chamaecistus* Mill. in part, *H. vulgare* Gaertn., *H. variabile* Spach in part, *H. nummularium* var. *discolor* Janchen.) Eu., W. Asia. Cult. about 1750. Zone III.—*N. n. Scopôlii* (Willk.) Schneid., var. Lvs. ovate to ovate-lanceolate or oblong, 1.5–4 cm. long, pubescent above; fls. 2.5–3 cm. across; sepals hirsute on veins, glabrous or slightly tomentose between. (*H. tomentosum* Spreng.)—*H. n. stramineum* (Sweet) Rehd., var. Lvs. green above, whitish beneath: fls. sulphur-yellow; petals with a darker yellow blotch at base. S.C.93(c).—*H. n. roseum* (Sweet) Schneid., var. Lvs. elliptic, the lower ones roundish, gray-tomentose beneath: fls. pale rose. S.C.55(c). (*H. r.* Sweet, *H. pyrenaicum* Janchen.) A form with double fls. is *H. n. roseo-plènum* Schneid., f. S.C.86(c). (*H. roseum* var. *multiplex* Sweet.)—*H. n. mutabile* (Jacq.) Rehd., var. Lvs. sparingly pilose or glabrescent above, grayish white-tomentose beneath: fls. pale rose or sometimes variegated with white; sepals with reddish villous veins, glabrous between the veins. S.C.106(o). G.O.t.46(c). Gs.3:107(h). S.L.192(h). (*H. m.* Pers.)—*H. n. venustum* (Sweet) Rehd., var. Brts. purplish: lvs. lustrous dark green above, white-tomentose beneath: fls. dark crimson, the petals with yellow spot at base; sepals stellate-puberulous. S.C.10(c). (*H. v.* Sweet.)—*H. n. diversifolium* (Sweet) Rehd., var. Lvs. green and pilose above, the lower ones obtuse, flat, the upper ones linear-lanceolate, acute, revolute: fls. red, petals with a dark red blotch at base. S.C.95(c). (*H. d.* Sweet.) A form with double fls. is *H. n. rubro-plènum* Rehd., f. S.C.98(c). (*H. d.* var. *multiplex* Sweet.)—*H. n. macranthum* (Sweet) Schneid., var. Lvs. ovate-oblong, acutish, flat, pilose or nearly glabrous above, thinly grayish tomentose beneath: fls. white, 3.5–4 cm. across; petals with yellow blotch at base. S.C.103(c). (*H. m.* Sweet.)—A form with double fls. is *H. n. albo-plènum* Schneid., f. S.C.104(c). (*H. m.* var. *multiplex* Sweet.)

*H. n.* × *apenninum* = *C. sulphureum* Willd. Lvs. petioled, lanceolate to linear-lanceolate, 1–2 cm. long, green and stellate-pilose above, grayish stellate-tomentose beneath; stipules linear-subulate, longer than the petioles: fls. sulphur-yellow, in few-fld. racemes; outer sepals narrow-linear, half as long as the inner elliptic ones, stellate-tomentose. S.C.37(c). Orig. before 1813.—A form with rose fls. is *H. s. roseum* (Grosser) Rehd., f. S.C.t.51(c). (*H. canescens* Sweet); a form with copper-colored fls. is *H. s. cupreum* (Sweet) Rehd., f. S.C.66(c). (*H. c.* Sweet.)

4. *H. grandiflorum* (Scop.) Lam. Procumbent to nearly upright subshrub to 40 cm. high: lvs. petioled, broad-ovate to oblong-ovate or oblong, 1-3 cm. long, hirsute or pilose above, with scattered fascicled hairs beneath, ciliate; infl. usually many-fl.; fls. yellow, 2.5-3 cm. across; inner sepals 5-8 mm. long, puberulous or sometimes nearly glabrous between the pilose veins. Fl.v-vii. S.C.69(c). R.I.3:f.4549(c). (*H. Chamaecistus* var. *g.* Fiek.) Eu., W. Asia. Cult. about 1750. Zone III.—*H. g. obscurum* (Pers.) Rehd., var. Lvs. oblong to narrow-oblong or narrow-lanceolate, pilose and hirsute on both sides: fls. 2-2.5 cm. across; sepals hirsute and villous. S.C. 73(c). R.I.3:f.4547-8(c). (*H. o.* Pers., *H. hirsutum* Mérat, *H. hyssopifolium* Ten., *H. Chamaecistus* var. *hirsutum* Gross.)—Two forms of var. *obscurum* are: *H. g. cupreum* (Sweet) Rehd., f. Lvs. lustrous and less pilose above; fls. copper-colored, sometimes suffused with yellow. S.C.58(c). (*H. hyssopifolium* var. *c.* Sweet, *H. nummularium* var. *c.* Schneid.)—*H. g. multiplex* (Sweet) Rehd., f. Fls. double, copper-colored. S.C.72(c). (*H. nummularium* f. *cupreo-plena* Schneid.)—*H. g. glabrum* (Koch) Rehd., var. Lvs. bright green, glabrous or only ciliate and pilose on the midrib beneath: fls. 2.5-3 cm. across; sepals nearly glabrous. (*H. glabrum* Kern., *H. Chamaecistus* var. *serpyllifolium* Gross., *H. nummularium* var. *glabrum* Schneid., *H. nitidum* Clementi).

5. *H. canum* (L.) Baumg. Dwarf compact shrub, about 15 cm. high; brts. pubescent and sparingly pilose: lvs. short-petioled, oblong to linear-lanceolate, 1-2.5 cm. long, acute or acutish, green and strigose-pilose above; grayish or whitish tomentose beneath: infl. 3-12-fl., raceme-like; fls. bright yellow, about 1.2 cm. across; sepals tomentulose and pilose or villous, the outer ones linear-lanceolate, about  $\frac{1}{2}$  as long as the inner ovate obtuse ones. Fl.vi-viii. S.C.77(c). G.H.2:t.110(c). R.I.3:f.4553-4(c). (*H. vineale* Pers., *H. marifolium* Mill.) C. and S. Eu., Asia Minor. Intr. 1823. Zone V.

Related species: *H. hymettium* Boiss. & Heldr. Procumbent and ascending: lvs. oblong-lanceolate, acute, the lower exstipulate, the middle and upper ones stipulate; infl. usually simple; fls. yellow; inner sepals oblong, red-veined. Willk. Ic. t.156(c). Greece. Cult. 1933. Zone VII?

6. *H. alpestre* (Jacq.) Dun. Low caespitose subshrub: lvs. ovate-lanceolate to lanceolate, 1-2 cm. long, obtuse or acutish, flat, green and glabrous on both sides or sparingly strigose-pilose: infl. 2-7-fl.; fls. bright yellow, about 1.5 cm. across. Fl.v-vii. S.C.2(c). L.B.131(c). R.I.3:4536(c). Mts. of S. Eu. Intr. 1816. Zone V.

Related species: *H. oelandicum* Willd. Lvs. oblong-lanceolate to lanceolate, 6-10 mm. long, glabrous or pilose on midrib beneath and margin, fleshy: fls. 3-4, yellow, 6-8 mm. across; petals scarcely longer than sepals. Reichenbach, Ic. Pl. Crit. t.1(c). Spitzbergen, Oeland, Engl. The true species probably not in cult.—*H. lunulatum* (All.) Lam. Caespitose subshrub: lvs. elliptic-oblong, usually obtuse, glabrous or sparingly pubescent; fls. yellow, 1.5 cm. across, solitary on stalks 2-2.5 cm. long; outer sepals linear, the inner oval, acute; petals with crescent-shaped orange spot at base. R.I.3:f.4529(c). E.P.IV.193:f.15A. S. Eu. Cult. 1933. Zone VII?

Closely related genus: *Fumana* Spach. Subshrubs differing chiefly in the outer stamens being sterile and in the anatropous ovules. About 9 species in Eu., N. Afr. and W. Asia.—*F. nudifolia* (Lam.) Janchen. Low caespitose subshrub with procumbent brs.: lvs. linear, 5-35 mm. long, ciliate, estipulate: fls. terminal, 1-4, stalked, yellow, 1 cm. across; outer sepals about half as long as the inner broad-ovate ones; petals pointed. R.I.3:f.4531(c). F.D.13:t.1257(c). S.C.16(c). E.P.IV.193:126. (*F. procumbens* Gren. & Godr., *Helianthemum Fumana* Mill.) Eu., W. Asia. Intr. 1752. Zone V.

4. **HUDSONIA** L. Low evergreen heath-like shrubs or subshrubs, with tufted diffusely branched stems: lvs. alternate, sessile, scale-like or subulate,

exstipulate: fls. solitary at the end of short brts., yellow; sepals 3, equal, petals 5, obovate-oblong, fugacious; stamens 10-30; ovary 1-celled, with 3 2-ovuled placentae, style filiform; stigma minute; fr. a 3-valved caps. enclosed by the connivent sepals; embryo coiled. (After William Hudson, an English botanist; 1730-93.) Three species in E. N. Am.—Rarely cultivated, difficult to grow and short-lived; they thrive best in sandy soil.

*H. tomentosa* Nutt. Tufted shrub to 20 cm. high; hoary-pubescent: lvs. elliptic to oblong, about 2 mm. long, densely imbricated and appressed: fls. bright yellow, 8 mm. across, sessile or nearly so; sepals obtuse: caps. glabrous. Fl.v-vii. G.G.1:t.90. E.P.IV.193:132. S.H.2:f.237. N. B. to Va. and along the Gt. Lakes to Minn.; seashore and lake and river shores. Intr. 1826. Zone IV.

Related species: *H. ericoides* L. Soft-pubescent, greenish: lvs. slender, subulate, 6-8 mm. long: fls. on slender pedicels 1-1.5 cm. long; sepals acutish. S.C. 36(c). L.B.2:192(c). N. S. to N. C. Intr. 1805.—*H. montana* Nutt. Slightly villous, green: lvs. subulate, 3-6 mm. long: fls. about 1 cm. across on a pedicel 1 cm. long; sepals acuminate. High mts. of N. C. Intr. ?

#### Fam. 70. VIOLACEAE DC. VIOLET FAMILY

Herbs, shrubs or small trees: lvs. usually alternate, stipulate: fls. perfect, regular or irregular; sepals 5, distinct or nearly so; petals 5, often one spurred; stamens 5, connivent; ovary 1-celled, with 2-5 placentae, ovules usually many, anatropous; style usually club-shaped: fr. a loculicidal caps., rarely a berry.—About 15 genera with 300 species in both hemispheres.

**HYMENANTHÈRA** R. Br. Evergreen or half-evergreen shrubs or small trees: lvs. alternate, sometimes fascicled, small, entire or toothed; stipules deciduous: fls. small, axillary, solitary or fascicled; sepals and petals 5; anthers nearly sessile, connate into a tube with a membranous appendage at the apex and 5 scale-like appendages on the back; ovary with 2 1-ovuled placentae; style short, with 2-lobed stigma: fr. a berry with 1 or 2 subglobose seeds. (Greek *hymen*, membrane, and *anthera*; referring to the membranous appendage of the anthers.) Four or 5 species in Australasia.

*H. crassifolia* Hook. f. Dense half-evergreen shrub to 2 m., with rigid brs. pubescent when young: lvs. crowded, short-stalked, obovate, 1-2.5 cm. long, rounded or slightly emarginate at apex, entire, glabrous, thickish: fls. solitary or few, short-stalked, yellowish white or brownish, 4 mm. across: fr. subglobose, white, about 6 mm. across. Fl.v; fr.viii. B.M.9426(c). G.C.III. 12:412. Gn.84:122. S.H.2:f.238. New Zeal. Intr. about 1875. Zone VII?

Related species: *H. angustifolia* R. Br. Half-evergreen, to 3 m.: lvs. linear-spattulate, 0.6-2.5 cm. long, obtuse or emarginate. Tasmania. Cult. 1923. Zone VII?

#### Fam. 71. FLACOURTIACEAE Dum. FLACOURTIA FAMILY

Trees or shrubs, rarely climbing: lvs. usually alternate and often 2-ranked, usually pinnately veined, undivided; stipules usually caducous: fls. usually in cymes, regular, perfect, rarely unisexual; sepals 2-6, usually 4-5, imbricate or valvate, often persistent and accrescent after anthesis; petals as many as sepals, rarely more, sometimes wanting; receptacle often with appendages between the ovary and the petals; stamens numerous, hypogynous or perigynous; ovary superior or nearly so, 1-celled, with usually 3-5 parietal placentae; ovules usually numerous, anatropous or epitropous; styles as many as placentae or 1: fr. a caps. or berry, rarely drupe or achene; seed albuminous; embryo straight. About 85 genera with 500 species, mostly tropical.

- A. Fls. dioecious, 0.6-1.5 cm. across.  
 B. Fr. a berry; sepals imbricate; lvs. 5-6-nerved at base.....1. *Idesia*  
 BB. Fr. a caps.; sepals valvate; lvs. 3-5-nerved at base.....2. *Poliothyrsis*  
 AA. Fls. perfect, 3-3.5 cm. across; sepals valvate; lvs. 3-nerved at base.....3. *Carrierea*

1. **IDÉSIA** Maxim. Deciduous tree; winter-buds glabrous, with several to many imbricate acuminate scales: lvs. alternate, long-petioled, dentate; stipules small, caducous: fls. dioecious or polygamous, apetalous, in large terminal panicles; sepals 3-6, usually 5, imbricate, yellowish, pubescent; staminate fls. with numerous stamens and a small rudimentary pistil; filaments filiform, pubescent; anthers elliptic; pistillate fls. with a subglobose ovary and short staminodes at base; styles usually 5, spreading, with obovate stigmas: fr. a fleshy, many-seeded berry; seeds roundish-ovoid. (After Eberhard Ysbrant Ides, Dutch traveler in China [1691-95].) One species in E. Asia.

**I. polycárpa** Maxim. Tree to 15 m.; bark close, grayish white; brs. spreading, forming a broad round head: lvs. ovate to oblong-ovate, acuminate, cordate or subcordate, 12-25 cm. long, remotely crenate-serrate, deep green above, glaucous beneath, glabrous, except bearded in the axils; petiole 6-15 cm. long, with 1-3 glands about the middle: fls. greenish yellow, fragrant, slender-pedicled, in pendulous panicles 10-25 cm. long; staminate fls. about 1.5 cm., pistillate 8 mm. across; fr. dull orange-red or orange-brown, 7-8 mm. across, in large pendulous panicles. Fl.v-vi; fr.ix-xi. B.M.6794(c). I.S.1:t.38. N.K.17:t.15. G.C.39:13. Gn.13:99. J.L.27:410,t(h). F.E.24:853 (h). (*Polycarpa Maximowiczii* Hort.) S. Japan, C. and W. China. Intr. about 1864. Zone VI?—**I. p. vestita** Diels., var. Lvs. densely pubescent or tomentose beneath: W. China. Intr. 1908.

2. **POLIOTHÝRSIS** Oliv. Deciduous tree; winter-buds with 2 or 4 outer pubescent scales: lvs. petioled, alternate, dentate; stipules small, caducous: fls. monoecious, apetalous, in terminal panicles; sepals 5, ovate to lanceolate, valvate: staminate fls. with numerous free short stamens and a rudimentary pistil: pistillate fls. with staminodes at base of ovary: styles 3, reflexed, 2-parted at apex: fr. a 3-4-valved caps.; seeds many, oblong, with a broad wing, the seed in the centre. (Greek, *polios*, grayish white, and *thyrsos*, panicle; referring to the color of the infl.) One species in China.

**P. sinénsis** Oliv. Slender tree to 15 m.; young brts. pubescent: lvs. ovate to ovate-oblong, acuminate, usually rounded or truncate at base, 8-16 cm. long, dentate, pubescent beneath or nearly glabrous; petiole 2-4 cm. long: fls. greenish white changing to yellow, 6-8 mm. across, in loose panicles 10-20 cm. long; sepals whitish tomentose outside: caps. oblong-ovoid, nearly 2 cm. long. Fl.vii; fr.x-xi. H.I.19:1885. I.S.2:t.93. Gt.73:180. S.H.2:f.243. C. China. Intr. 1908. Zone VII.

3. **CARRIÈREA** Franch. Deciduous trees; winter-buds small, with 2 outer scales: lvs. alternate, long-petioled, crenate-dentate, exstipulate: fls. perfect, apetalous, in terminal racemes or panicles; sepals 5, free, valvate; stamens numerous, shorter than sepals; ovary obovoid, pubescent, with 3-4 short spreading 3-lobed styles; placentae 3-4: fr. a woody oblong caps. attenuate at ends, tomentulose, dehiscent into 3 or 4 divisions; seeds many, winged. (After Elie Abel Carrière, French horticulturist and botanist; 1816-1896.) Three species in S. E. Asia.

**C. calycina** Franch. Shrub or tree to 15 m.; bark smooth, lenticellate, grayish brown: lvs. oval to obovate-oblong, 5-15 cm. long, abruptly short-

acuminate, rounded to subcordate and 3-nerved at base, lustrous green and glabrous on both sides; petiole 3–5 cm. long: infl. 5–12-fl.; fls. creamy white, cup-shaped, 3–3.5 cm. across; pedicels 2-bracted, 1.5–3 cm. long; sepals ovate, cordate, tomentulose on both sides: fr. 5–6 cm. long; seeds oblong, compressed, 7 mm. long, with terminal wing 1 cm. long. Fl.vi; fr.x–xi. R.H. 1896:498. G.C.88:67;96:294. S.H.2:f.241h,244. W. China. Intr. 1908. Zone VII.

# Fam. 72. STACHYURACEAE Gilg. STACHYURUS FAMILY

Contains only the following genus.

**STACHYURUS** Sieb. & Zucc. Shrubs or small trees, deciduous to evergreen; brts. with large pith; winter-buds small, with 2–4 outer scales: lvs. alternate, slender-petioled, serrate; stipules small, caducous: fls. regular, perfect or functionally dioecious, subsessile, in pendulous racemes axillary on last year's brs.; sepals and petals 4, imbricate; stamens 8, distinct; ovary superior, incompletely 4-celled by the intrusion of the parietal placentae; style short, with a 4-lobed stigma; ovules many: fr. berry-like, with leathery pericarp; seeds many, with soft arillus, albuminous; embryo straight. (Greek *stachys*, spike, and *urus*, tail; referring to the shape of the infl.) Five or 6 species in E. Asia and the Himal.—Planted for the early appearing racemes of yellow fls.

**S. praecox** Sieb. & Zucc. Shrub to 4 m., with slender spreading brs.; brts. reddish brown or chestnut-brown, lustrous, glabrous: lvs. elliptic-ovate to ovate-lanceolate, acuminate, rounded at base, 7–14 cm. long, serrate with slightly spreading teeth, glabrous and lustrous beneath or slightly pubescent on the veins; racemes before the lvs., short-stalked, 5–8 cm. long; fls. campanulate, yellow, about 8 mm. long; style shorter than petals: fr. globose, about 8 mm. across; greenish yellow, with reddish cheek. Fl.iii–iv; fr.vii–viii. B.M.6631(c). S.I.1:t.74. R.H.1908:87. Gn.75:204. G.C.III.21:285. B.S. 2:546. M.O.72(h). Japan. Cult. 1865. Zone (V), VI.

Closely related species: **S. chinensis** Franch. Brts. greenish or dull brown: lvs. ovate to oblong-ovate, 6–12 cm. long, long-acuminate, rounded or subcordate at base, crenate-serrate: fls. more spreading: style as long or slightly longer than petals: fr. about 6 mm. across. G.C.79:229(h). R.H. 1932:95. China. Intr. 1908. Zone VII.

# Fam. 73. CACTACEAE Lindl. CACTUS FAMILY

Shrubs or trees with fleshy stems branched or unbranched, cylindric, flattened or globular, often constricted or jointed, usually spiny, with watery or milky juice: lvs. alternate, scale-like or wanting, rarely flat and broad, usually with bundles of spines in the axils: fls. perfect, usually regular; sepals and petals usually many, rarely 8–10, similar and gradually passing into each other; stamens many, spirally or in groups, inside of the receptacle; ovary inferior, with 3 or more parietal placentae; style 1 with lobed stigma; ovules many: fr. a berry, sometimes dry; seeds small; embryo straight or curved. Syn.: *Opuntiaceae* H. B. K.—About 25 genera and 1200 species in N., C. and S. Am., few in Africa.—For further information see Britton & Rose, *Cactaceae*. 4 vols. (1919–23), where 125 genera are recognized.

a. Stems not or not conspicuously jointed: lvs. obsolete: fls. with calyx-tube prolonged beyond the ovary.

b. Fls. borne on the tubercles or ribs, at or near the areolas; ovary scaly.

c. Stem ribbed or with vertical rows of tubercles: fls. borne close to the fully developed cluster of spines.....1. *Echinocereus*

- cc. Stems with tubercles arranged in spiral rows: fls. close to areolas which subsequently develop spines ..... 2. *Echinocactus*  
 bb. Fls. arising from the axils of the tubercles or near their base; stem broken into tubercles arranged in spiral rows: ovary naked ..... 3. *Mamillaria*  
 aa. Stems conspicuously jointed, flattened or cylindric: lvs. scale-like: calyx-tube not prolonged beyond the ovary ..... 4. *Opuntia*

1. **ECHINOCÈREUS** Engelm. Stems ovoid to cylindric, ribbed and angled or with tubercles in vertical rows, spiny: fls. from areolas just above the spine-bearing areolas; ovary scaly; style filiform, longer than stamens, shorter than petals: fr. fleshy; seeds tuberculate, almost destitute of albumen; embryo straight. (Greek *echinos*, hedge-hog, and *cereus*.) About 40 species in N. Am. and Mex.

- A. Ribs 5-8; fls. scarlet ..... 1. *E. triglochidiatus*  
 aa. Ribs 12-18.  
 B. Fls. green: areolas with 12-18 radial spines ..... 2. *E. viridiflorus*  
 bb. Fls. rosy-purple areolas with 20-30 radial spines ..... 3. *E. Reichenbachii*

1. ***E. triglochidiatus*** Engelm. Cespitose, with simple stems erect or spreading, deep green; spines 3-8, usually spreading, 3 cm. or less long, reddish to yellow at first: fls. scarlet, 5-7 cm. long; tube and ovary with few areolas and spines; perianth-segments oblong, obtuse, 3 cm. long: fr. red, 3 cm. across. Fl.v. Britt. & Rose, Cact. 3:10. (*E. gonacanthus* Engelm. & Bigel., *E. paucispinus* Ruempl.) Colo. and N. Mex. to w. Tex. Intr. 1912. Zone V.

2. ***E. viridiflorus*** (Engelm.) Engelm. & Gray. Stems solitary or clustered, 8-18 cm. high and 3-5 cm. thick, with 13 ribs; radial spines 12-18, horizontally spreading, straight or slightly curved, the lower lateral ones the longest, to 1.2 cm. long, ruby-red, the others white, central spines usually absent or one, stout, about 2 cm. long and curved upwards, red with brown point: fls. lateral, broad-funnel form, 2.5-3 cm. long; petals green, each with an olive-green to pink stripe in the middle; ovary and tube spiny: fr. ellipsoid, about 1 cm. long, greenish. Fl.v-vi. B.M.6788(c). B.B.2:569. (*Cereus v.* Engelm.) Wyo. and Kans. to Tex. and N. Mex. Cult. 1844. Zone V.

3. ***E. Reichenbachii*** (Walp.) Haage. Stems globose to cylindric-ovoid, to 5 or rarely to 15 cm. high, solitary or in clusters of 6-12; ribs 12-13 with confluent tubercles; spines numerous, white or rarely pink or brown, radial ones 20-30, pectinate, straight or slightly recurved, the lateral ones 4-8 mm. long, the upper and lower ones shorter, central spines wanting or few, short: fls. rotate-funnelform, 6-8 cm. long and nearly as broad; petals rosy-purple: fr. ovoid, 1.8-2 cm. long, greenish. Fl.v. B.M.6669(c). B.B.2:569. Gt.29:52. (*E. caespitosus* Engelm.) Kans. to Tex. and Mex. Cult. 1844. Zone VI?

Another species is *E. coccineus* Engelm. Stems with 9-11 ribs; spines 1-15, with usually 4 stout central ones, to 3 cm. long: fls. scarlet. B.M.6774(c). (*E. phoeniceus* Ruempl., *E. paucispinus* Hook. f., not Engelm. *E. aggregatus* Rydb.) Colo. to N. Mex., Ariz. and Mex. Cult. 1885. Zone VI?

2. **ECHINOCÁCTUS** Link & Otto. Stems globose to oblong or cylindric, tubercled, the tubercles arranged in spiral or vertical rows, spine-bearing: fls. borne on the tubercles, at or near the areolas from which subsequently spines develop; calyx-tube scaly; petals numerous; stamens numerous; style columnar: fr. usually covered with scales and often with tufts of bristles: embryo curved. (Greek *echinos*, hedge-hog, and *cactus*.) About 200 species from N. Am. to S. Am.

***E. Simpsónii*** Engelm. Stems globose, to 15 cm. high and to 10 cm. across; tubercles ovoid, slightly 4-sided at base, 1.2-1.6 cm. long; central

spines 5-7, yellowish below, red or red-brown above, 1-3 cm. long, lateral 15-20, slightly shorter, whitish: fls. rosy-pink, about 2 cm. across, borne to one side at end of tubercles; petals oblong, obtuse, crenulate, the inner narrower, acutish; filaments golden-yellow: berry dry, 6-7 mm. across, with a few scales near apex. Fl.rv-v. B.B.2:570. G.C.II.6:242. W.G.2:90. (*Pediocactus* S. Brit. & Rose, *Mamillaria Purpusii* and *M. Spaethii* K. Schum.) Wash. and Mont. to Kans. and N. Mex. Intr. before 1876. Zone V.

**3. MAMILLARIA** Haw. Stems simple or branched and clustered, usually hemispherical or short-cylindric, often depressed or sometimes elongated; the surface broken up into spirally arranged tubercles (mamillae) spiny at apex: fls. usually short-funnelform, with naked or nearly naked tube and ovary, borne in the woolly axils between the tubercles or at the inner end of a narrow groove on the upper surface: fr. globose to clavate, smooth, berry-like. (Latin *mamilla*, nipple; referring to the shape of the tubercles.) About 600 species in N. and C. Am.

A. Central spines 1 or wanting: fls. yellow.....1. *M. missouriensis*  
 AA. Central spines several: fls. purple, 3.5-5 cm. across.....2. *M. vivipara*

1. *M. missouriensis* Sweet. Stems nearly simple, to 6 m. high and 3-5 cm. across or cespitose; tubercles cylindric-conical, spreading, slightly grooved; spines white, weak, puberulent, the radial ones spreading, 12-17, the central one 1-1.2 cm. long, stout, often wanting: fls. tubular, about 2.5 cm. long, yellow to fawn-color with reddish streaks, from the upper surface of the tubercle; sepals fimbriate; petals acute or acuminate; stamens and style shorter than petals: fr. red, subglobose or pyriform, 6-8 mm. long; seeds subglobose, black, pitted. Fl.v. B.B.2:570. (*M. Nuttallii* Engelm., *Cactus m. Ktze.*, *Neobesseyia m.* Brit. & Rose, *Coryphantha m.* Brit. & Rose.) S. Dak. to Kans., Colo. and Tex. Intr. 1813. Zone V?

2. *M. vivipara* (Nutt.) Haw. Stems 3-12 cm. high and 3-5 cm. thick; tubercles cylindric-conical, slightly grooved, with 3-8 slender reddish brown central spines 1-2 cm. long, surrounded by 12-25 lateral ones somewhat shorter, whitish or greenish: fls. purple, 3.5-5 cm. across; sepals fringed; petals lanceolate: fr. ovoid, 1.2-1.8 cm. long, green; seeds light brown, obovoid, pitted. Fl.v. B.B.2:571. (*Coryphantha v.* Brit. & Rose.) Man. and Alberta to Minn., Colo. and Kans. Intr. 1913. Zone V.

**4. OPUNTIA** Mill. Stems conspicuously jointed, the joints flattened or terete, procumbent or upright; sometimes tree-like: lvs. scale-like, spirally arranged, caducous, bearing in their axils areolas covered with short wool intermixed with barbed bristles and usually with spines: fls. on the upper part of the joints, on the bristle-bearing part of the areolas; ovary usually with bristle- and spine-bearing areolas; sepals and petals spreading, rotate; style cylindric, with 5-8-lobed stigma: fr. usually pear-shaped, fleshy, frequently edible, rarely dry; seeds flattened or disk-like. (*Opuntia*, ancient Greek name of a plant growing near Opous in Boeotia.) About 130 species in N., C. and S. Am.

A. Joints terete, cylindric: fls. purple.....1. *O. imbricata*  
 AA. Joints flattened or tumid and subglobose to ellipsoid.

B. Joints flat, 5-14 cm. long.

C. Spines wanting or few: fls. pale yellow.....2. *O. humifusa*

CC. Spines numerous: fls. yellow with darker center or red.

D. Fls. yellow.

E. Spines 1-6 in each areola: fr. fleshy.....3. *O. phaeacantha*

EE. Spines 5-15 in each areola: fr. dry.....4. *O. polyacantha*

DD. Fls. red: spines 2-4 in each areola.....5. *O. rhodantha*

BB. Joints tumid, 3-5 cm. long, fragile.....6. *O. fragilis*

1. *O. imbricatā* (Haw.) DC. To 3 m. or higher, often tree-like; joints cylindric, the ultimate 2-3 cm. thick; tubercles prominent, 2-2.5 cm. long, laterally flattened; spines 8-30, 2-3 cm. long, brown, with papery sheaths; lvs. terete, 8-24 mm. long; fls. purple, 5-8 cm. across: fr. yellow, 2.5-3 cm. long, tuberculate, spineless. Fl.vii-viii. B.M.8290(c). R.Mo.22:t.6,7. G.C. 34:90(h). (*O. arborescens* Engelm., *O. vexans* D. Griffiths.) Colo. to Tex., N. Mex. and Mex. Intr. 1820. Zone VI.

Related species: *O. Davisii* Engelm. & Bigel. Cespitose, with few or many simple stems; joints slender, about 1 cm. thick; spines yellow, 6-12, the longest 4-5 cm. long; fls. olive-green to yellow, 3.5 cm. long; areolas of ovary large, with few spines. B.M.6652(c). N. Mex. and w. Texas. Cult. 1882. Zone V.

2. *O. humifusa* Raf. Prostrate; joints usually resting on the ground and rooting on the lower margin, obovate to suborbicular, 5-10 cm. long, thick, pale green; areolas with grayish wool and a few short greenish yellow bristles; spines usually wanting or only 1, stout, less than 2.5 cm. long, yellow or variegated; lvs. thick, 4-5 mm. long; fls. pale yellow, about 5 cm. broad: fr. obovoid or clavate-obovoid, 2-3 cm. long, red. Fl.vii-viii. B.M.2393,7041(c). Add.3:t.105(c). Gn.20:548,t(c). M.A.1:t.61(c). Gs.4:123(h). (*O. vulgaris* Haw., not Mill., *O. mesacantha* Raf., *O. compressa* Macbr., *O. Rafinesquei* Engelm.) Mass. to Ga. and Ala., w. to Mo. and Tenn. Cult. 1596. Zone IV.

3. *O. phaeacantha* Engelm. Prostrate; joints rooting at the lower margin, broad-obovate to orbicular, 10-15 cm. long, moderately thick; areolas about 2.5 cm. apart, with light brown wool and yellowish brown bristles; spines usually 1-3 (-6), sometimes to 6 cm. long, mostly on marginal areolas reddish brown with lighter tips: fls. 6-8 cm. across, yellow with reddish centre: fr. ovoid to globose, sometimes pyriform, about 3 cm. long, red, sweet. B.B.2:572. Gs.4:123. Ariz. and Tex. Cult. 1885. Zone VII?

4. *O. polyacantha* Haw. Prostrate, wide-spreading; joints obovate to orbicular, 5-10, rarely to 15 cm. long, often wrinkled and tuberculate, bright green; areolas about 1 cm. apart, all armed, with short grayish wool and reddish brown bristles; spines numerous, lateral ones 5-10, slender, mostly whitish, variegated with red, not exceeding 1.5 cm., central ones 0-5, stout, to 5 cm. long, usually reddish brown with pale tips: fls. yellow or orange-yellow, darker in centre, 5-6 cm. across: fr. obovoid or subglobose, 2-2.5 cm. long, with numerous short spines, dry. Fl.v-vi. B.M.7046(c). G.C.III.28:413;50:340. B.B.2:573. (*O. missouriensis* Engelm., *O. Schweriniana* K. Schum.) Alb. and N. D. to Okla., Tex. and Utah. Cult. 1814. Zone V.

5. *O. rhodantha* K. Schum. Prostrate and ascending; joints obovate to obovate-oblong, 7-12 cm. long, slightly tuberculate, deep green; areolas with grayish wool and reddish brown bristles; spines 2-4, to 3 cm. long, grayish, and usually a few smaller ones: fls. 6-7 cm. long and 5.5 cm. broad; petals carmine-red; filaments red, anthers yellow, ovary scaly and bristly. M.M.7:133. Britton & Rose, Cact. t.35,f.2(c). Colo. Intr. about 1895. Zone VI?—*O. r. xanthostemma* (K. Schum.) Rehd., var. Joints tuberculate: fls. carmine-red; filaments yellow below, red above. Gn.58:67. G.W.1:83. (*O. x.* K. Schum.) Colo. Intr. about 1895. Zone VI?

6. *O. fragilis* Haw. Prostrate, to 10 cm. high; joints tumid, nearly as thick as broad, subglobose to ellipsoidal, 2-5 cm. long, easily detached, bright green; areolas 6-10 mm. apart, with whitish wool and a few white to yellow bristles; spines 1-4 and occasionally a few smaller ones, weak, the upper ones usually longer and stronger, rarely to 2.5 cm. long, dark brown: fls. greenish yellow, 2.5-3 cm. across: fr. ovoid to subglobose, 2-2.5 cm. long, dry, with a few spines. B.B.2:573. Fl.vii-rx. B. C. and Wisc. to Ariz. and Tex. Intr.

1814. Zone V.—*O. f. brachyarthra* (Engelm.) Coul., var. Joints ellipsoid, with more and stronger spines: fls. small: fr. more spiny. Gt. 30:413. N.I.2: 502. (*O. b.* Engelm.) Colo. to N. Mex. Cult. 1881.

#### 74. THYMELAEACEAE Reichb. MEZEREUM FAMILY

Shrubs or trees, rarely herbs: lvs. alternate, rarely opposite, simple, entire, exstipulate: fls. perfect or unisexual, regular, usually in terminal spikes, panicles or clusters, sometimes axillary; usually a short or elongated, often colored, calyx-tube bearing at apex 4-5 imbricate, often petaloid, sepals and as many petals or the latter wanting; stamens 4-5 or 8-10, rarely 2; ovary superior, 1-celled, rarely 2-celled; ovule solitary, pendulous; style 1, stigma usually capitate, sometimes sessile: fr. a nut, drupe or berry, rarely a caps.; seed albuminous or exalbuminous; embryo straight with thick cotyledons.—About 40 genera and 450 species widely distributed in both hemispheres.

- A. Stamens not exerted; style short or wanting; fls. often in terminal clusters or panicles.
- B. Fls. in terminal or lateral heads or clusters, often with bracts; disk wanting or ring-like or of 1 lateral entire scale: lvs. usually alternate.....1. *Daphne*
- BB. Fls. in terminal spikes, often panicle, without bracts, yellow or whitish; with 1 or more usually dentate disk-scales: lvs. usually opposite.....2. *Wikstroemia*
- AA. Stamens and style exerted: fls. yellow, with indistinct limb, in a few-fl. lateral clusters before the lvs.....3. *Dica*

1. **DAPHNE L.** Deciduous or evergreen shrubs; winter-buds small, with several outer scales: lvs. alternate, rarely opposite, short-petioled, entire: fls. perfect, apetalous, in terminal or axillary short racemes or umbels, usually with bracts; calyx-tube (receptacle) campanulate to cylindrical, 4- or rarely 5-lobed, corolla-like, usually pubescent outside; stamens 8 or 10 in two rows, included; stigma capitate, sessile or on a short style; ovary without disk at base, or a ring-like disk or 1 entire scale: fr. a leathery or fleshy 1-seeded drupe. (*Daphne*, Greek name of *Laurus nobilis*.) About 50 species in Eu. and Asia.

- A. Fls. axillary.
- B. Lvs. deciduous: fls. before the lvs.
- C. Lvs. opposite, silky below: fls. lilac.....Sect. *GENKWA* Benth. & Hook.
  - 1. *D. Genkwa*
- CC. Lvs. alternate, glabrous: fls. rosy-purple to white.....Sect. *MEZEREUM* Spach.
  - 2. *D. Mezereum*
- BB. Lvs. evergreen.
- C. Fls. in sessile racemes: lvs. oblanceolate.....3. *D. Laureola*
- CC. Fls. in long-peduncled clusters: lvs. obovate to oblong-obovate.....4. *D. pontica*
- AA. Fls. in terminal heads.....Sect. *DAPHNANTHES* C. A. Mey.
  - B. Lvs. deciduous: fls. without bracts, white to yellow.
  - C. Lvs. glabrous.
    - D. Fls. yellow, glabrous.....5. *D. Giraldii*
    - DD. Fls. white, pubescent outside.....6. *D. altaica*
  - CC. Lvs. pubescent: fls. white.....7. *D. alpina*
- BB. Lvs. evergreen.
  - C. Corolla densely pubescent outside.
  - D. Habit upright; shrub to 1 m.: lvs. elliptic to oblong, often pubescent.
  - E. Lvs. minutely whitish punctulate, usually acute: fls. without bracts.
    - 8. *D. oleoides*
  - EE. Lvs. not punctulate, usually obtuse: fls. with bracts.....9. *D. collina*
  - DD. Habit procumbent or very dwarf: lvs. linear to oblanceolate, glabrous.
    - E. Lvs. 8-12 mm. long: dwarf gnarled shrub to 15 cm. tall.....10. *D. petraea*
    - EE. Lvs. 1-2.5 cm. long: shrub with slender procumbent stems.....11. *D. Cneorum*
  - CC. Corolla glabrous or sparingly puberulous outside (see also species under No. 11).
  - D. Lvs. obtuse or obtusish: brts. glabrous.
    - E. Lvs. less than 5 cm. long: low diffusely branched shrub (see also *D. glomerata* under No. 4).....12. *D. Blagayana*
    - EE. Lvs. more than 5 cm. long: upright shrub.....13. *D. odora*
    - DD. Lvs. emarginate: young brts. strigose-pubescent.....14. *D. retusa*

1. **D. Genkwa** Sieb. & Zucc. Shrub to 1 m., with slender upright brs. silky-pubescent when young: lvs. opposite or occasionally alternate, elliptic-

oblong, 3-5 cm. long, acute, silky-pubescent on the veins beneath: fls. lilac, 1.2 cm. across, scentless, 3-7 in short-stalked clusters; tube slender, about 1 cm. long, silky-pubescent outside: fr. white. Fl.iv-v; fr.vi. S.Z.1:t.75(c). Gt.15t.499(c). N.K.17:t.12. F.S.3:t.208(c). Gn.42:94,t(c). (*D. Fortunei* Lindl.) China, Korea; cult. in Japan. Intr. 1843. Zone (V).

2. *D. Mezereum* L. MEZEREUM. Upright shrub to 1 m., with stout glabrous brs.: lvs. alternate, oblong to oblanceolate, 3-8 cm. long, obtuse to acute, cuneate at base, grayish green beneath, glabrous: fls. long before the lvs., in sessile clusters of usually 3, lilac-purple or rosy-purple, 1.2 cm. across, very fragrant; tube silky-pubescent outside, 6 mm. long: fr. subglobose, 8 mm. across, scarlet. Fl.iii-iv; fr.viii-ix. R.I.11:t.556(c). F.D.10:t.976(c). Gn.29:602,t(s);86:659(h). Eu. to Cauc. and Altai; occasionally naturalized in the N. E. States. Cult. 1561. Zone IV. Planted for its early fragrant fls. and conspicuous scarlet fr.—*D. M. alba* West., var. Fls. white; fr. yellow. Gn.29:602,t(c);80:104(h). G.C.III.21:183(h),185. R.H.1905:532.—*D. M. plena* Schneid., f. Fls. white, double. (*D. M. fl. albo pleno* Hort.) Gn.29:602,t(c).—*D. M. grandiflora* Dipp., var. Fls. larger, bright purple, from Oct. to Feb. (*D. M. autumnalis* Hort.)

*D. M.* × *Laureola*; see under No. 3

Related species with yellow fls.: *D. Pseudo-mezereum* Gray. Low, sometimes procumbent shrub: lvs. oblong to oblong-oblanceolate, acutish: fls. greenish yellow; sepals ovate, obtuse. C. Japan. Cult. 1905. Zone V?—*D. kamtschatica* Maxim. Low shrub: lvs. oblong-obovate, obtuse: fls. yellow; sepals ovate to lanceolate, acute. N.K.17:13. N. E. Asia, Korea. Cult. 1912. Zone IV?

3. *D. Laureola* L. SPURGE LAUREL. Bushy shrub to 1 m.; glabrous: lvs. oblanceolate, 5-8 cm. long, acute, gradually narrowed at base, dark green and lustrous above, light green beneath: fls. in 5-10-fld. nearly sessile racemes, yellowish green, 8 mm. long, scentless or sometimes fragrant: fr. ovoid, bluish black. Fl.iii-v. R.I.11:t.555(c). F.D.10:t.977(c). Gn.29:602. G.C.77:218. S.L.27(h). S. Eu., W. Asia. Cult. 1561. Zone VI?—*D. L. Philippi* (Gren.) Meissn., var. Dwarf; lvs. obovate, 2-5 cm. long: fls. often violet outside, smaller, fragrant. (*D. P. Gren.*) Pyrenees. Cult. 1894.

*D. L.* × *Mezereum* = *D. Houtteana* Planch. Upright shrub to 1 m., with stout brs.: lvs. half-evergreen, oblong-lanceolate, purplish: fls. lilac-violet in short-stalked clusters. F.S.6:t.592(c). (*D. Mezereum atropurpurea* Dipp., *D. Laureola purpurea* Hort.) Orig. before 1850.

4. *D. pónica* L. Shrub to 1.5 m.; glabrous, usually with a single stem at base, much branched at the top: lvs. obovate to obovate-oblong, 5-8 cm. long, acute, narrowed toward the base, lustrous above: fls. in long-peduncled 1-3-fld. racemes, greenish yellow, fragrant; tube 8 mm. long; lobes linear-lanceolate. Fl.iv-v. B.M.1282(c). G.C.77:219. B.S.1:473. G.W.5:261(h). Asia Minor. Intr. 1752. Zone VI.

Related species: *D. glomerata* Lam. Low shrub; glabrous: lvs. obovate-lanceolate, 1.5-3 cm. long: fls. light pink, 1.2 cm. across, in 2-6-fld. racemes, crowded into a terminal head. S.H.2:f.267a-d. Asia Minor. Intr. 1934.

5. *D. Giráldii* Nitsche. Upright shrub to 50 cm. or more; glabrous: lvs. crowded at end of brts., oblanceolate, 3-6 cm. long, acute to obtuse and mucronate, glaucescent below: fls. yellow, glabrous, slightly fragrant, on short glabrous pedicels in 3-8-fld. terminal heads without bracts; tube 6-8 mm. long; lobes acute, about half as long as tube: fr. ovoid, scarlet. Fl.vi; fr.vii. B.M.8732(c). N. W. China. Intr. 1910. Zone V.

6. *D. altaica* Pall. Upright shrub to 1.5 m., much-branched; brts. glabrous: lvs. narrow-oblong to oblanceolate, 3-6 cm. long, acute, cuneate, dull green, glaucescent beneath, glabrous: fls. white, fragrant, in terminal clusters of

6-10; tube slender, 8 mm. long, puberulous outside; lobes ovate-lanceolate, obtuse; ovary glabrous: fr. ovoid, yellowish red. Fl.v-vi. B.M.1875(c). L.B.399(c). G.O.t.13(c). Gt.12:t.409(c). Altai, Songaria. Intr. 1796. Zone V.

Closely related species: *D. caucásica* Pall. Shrub to 2 m.: lvs. lanceolate or oblanceolate, 3-4 cm. long, obtuse, rarely acuminate, glaucescent beneath: fls. white, silky outside, in 15-20-fld. heads; ovary puberulous at apex. B.M.7388(c). S.L.151(h). Cauc. Cult. 1893. Zone VI?—*D. c.* × *Cneorum* = *D. Burkwoodii* Burkwood. Habit like *D. caucásica*: fls. creamy white, flushed pink, fragrant. G.C.101:436. Cult. 1935.—*D. Sôphia* Kal. Lvs. oblong-ovate, obtuse or acuminate: fls. white, appressed-puberulous, in 6-15-fld. heads; sepals oblong-ovate, acute. Bull. Soc. Nat. Moscou, 22:t.3. Russia. Cult. 1895. Zone V.

7. *D. alpina* L. Dwarf shrub to 15 cm.; brts. pubescent: lvs. often crowded toward the end of brts., obovate to oblong-obovate, 1-4 cm. long, obtuse or acutish, cuneate, grayish green, pubescent on both sides: fls. white, fragrant, in terminal clusters of 6-10; tube 8 mm. long, silky outside; lobes ovate-lanceolate, acute; ovary pubescent: fr. oblong-ovoid, red, slightly pubescent. Fl.v-vi. R.I.11:t.553(c). F.D.10:t.978(c). L.B.66(c). Gn.29:603. Eu. Alps. Intr. 1759. Zone V.

8. *D. oleoides* Schreb. Shrub to 1 m.; brts. pubescent: lvs. elliptic-obovate to obovate-lanceolate, 2.5-3.5 cm. long, acute or obtuse and mucronulate, villous-pubescent on both sides or finally glabrous above, minutely whitish dotted beneath, less so above: fls. white to pale lilac, whitish pubescent outside, 1.2-1.5 cm. long, in 3-8-fld. heads, without bracts; lobes ovate to lanceolate, acute: fr. red. Fl.v-vi. R.I.11:t.553(c). S.F.t.357(c). (*D. buxifolia* Vahl.) Mediterr. region. Intr. 1815. Zone VII?

9. *D. collina* Smith. Shrub to 1 m.; brts. villous: lvs. oblong-obovate to oblanceolate, 2.5-4 cm. long, obtuse or obtusish, glabrous and lustrous above, tomentose beneath: fls. rose-purple, about 1 cm. across, in 10-15-fld. heads, with tomentose oval bracts half as long as calyx-tube; lobes oval, obtuse, nearly as long as tube; ovary silky. Fl.v-vi. B.M.428(c). B.R.24:56(c). R.I. 11:t.544(c). F.D.10:t.980(c). Italy, Asia Minor. Intr. 1752. Zone VII?—*D. c. neapolitana* (Lodd.) Lindl., var. Brts. slightly pubescent: lvs. glabrous, glaucous beneath and slightly hairy toward the base: fls. rosy-purple, fragrant. L.B.719(c). B.R.822. (*D. n.* Lodd.)

*D. c.* × *odora*; see under No. 13.

Related species: *D. sericea* Vahl. Shrub to 40 cm.; young brts. pubescent, soon glabrous: lvs. crowded at end of brts., lanceolate, 1-2 cm. long, acuminate, silky beneath, sometimes becoming nearly glabrous: heads 5-8-fld.; fls. pink; lobes broad-ovate,  $\frac{1}{2}$  as long as the broad-cylindric calyx-tube. Asia Minor. Cult. 1933. Zone VII?

10. *D. petraea* Leyb. Low much-branched shrub to 15 cm. high; brts. slightly puberulous: lvs. crowded, sessile, linear-spatulate, 8-12 mm. long, acutish or obtuse, glabrous, coriaceous: fls. rosy-pink, fragrant, 8 mm. across, puberulous, in 3-5-fld. clusters, tube slender, 1 cm. long; sepals ovate, obtuse. Fl.vi. Gn.87:255;89:227(h). Flora,38:t.13. Gs.3:104,t(hc). (*D. rupestris* Facch.) S. Tyrol. Cult. 1894. Zone V.

Related species: *D. arbúscula* Čelak. Dwarf shrub; young brts. red: lvs. oblanceolate, 1.5-2.3 cm. long, obtuse, with revolute margin, grooved above, puberulous or glabrous beneath: fls. rosy-pink, tube 1.5 cm. long, appressed-puberulous. G.C.57:268. Gn.79:260. J.L.41:f.93. S.L.150(h). Hungary. Intr. before 1915? Zone V?

11. *D. Cneðrum* L. Procumbent shrub with slender trailing and ascending brs.; young brts. pubescent: lvs. crowded, oblanceolate, 1-2 cm. long, usually obtuse and mucronulate, cuneate, dark green and lustrous above, glaucescent beneath, glabrous: fls. bright rosy-pink, 1 cm. across, fragrant, sessile in 6-8-fld. heads; tube 6-7 mm. long, grayish puberulous outside;

sepals ovate, obtuse; bracts spatulate, obtuse, leafy: fr. yellowish brown. Fl.iv-v. B.M.313(c). R.I.11:t.554(c). L.B.1800(c). R.H.1917:252,t(c). G.C. 69:312(h). Gn.88:182(h). M.G.1900:417,418(h). S.L.149(h). Mts. of C. and S. Eu. Intr. 1752. Zone IV. The best of the evergreen Daphnes, forming a dense mat covered with fragrant fls. in spring.—*D. C. major* Dipp. Of more vigorous growth, with larger fls. Gn.51:358;65:457(h).—*D. C. Verlòti* (Gren. & Godr.) Meissn., var. Lvs. linear-lanceolate, 1.5–2.5 cm. long, acute; sepals lanceolate, obtusish; bracts acute. R.H.1901:304,305;1902:552,t(c). C. Eu. Cult. 1894.

*D. C. × caucasica*; see under No. 6.

Related species: *D. striata* Tratt. Dwarf shrub; brts. glabrous: lvs. oblanceolate, crowded at end of brts.: fls. glabrous, rosy-pink, in 8–12-fld. heads; tube somewhat funnelform, slightly striate. Fl.vi-vii. R.I.11:t.554(c). F.D.10:t. 981(c). Eu. Alps. Cult. 1827. Zone V.—*D. aurantiaca* Diels. Shrub to 1.2 m.; brts. glabrous: lvs. elliptic or obovate to elliptic-oblong, 1–1.5 cm. long, acute, glabrous: fls. terminal and axillary, 2–4, sessile, glabrous, orange-yellow, fragrant; tube 1 cm. long; lobes elliptic-ovate, obtuse; ovary glabrous. S. W. China. Cult. 1924. Zone VII?

12. *D. Blagayana* Frey. Low diffusely branched shrub, glabrous: lvs. crowded at end of brts., obovate to oblong-obovate, 2.5–4 cm. long, rounded at apex, cuneate; fls. white or yellowish white, 1.2 cm. across, fragrant, in 10–15-fld. heads, with oblong-obovate to lanceolate silky bracts; tube 1.5–1.8 cm. long, sparingly puberulous outside: lobes broad-ovate: fr. globose, pinkish white. Fl.iv-v. B.M.7579(c). Gt.29:t.1020(c). G.C.32:300,301(h). Gn.71:7 (h).247;88:183(h). S.L.31(h). Mts. of S. E. Eu. Intr. 1875. Zone V.

13. *D. odora* Thunb. Upright shrub to 2 m.; glabrous: lvs. elliptic-oblong, 5–8 cm. long, narrowed at ends, bluntly pointed, dark green above: fls. rosy-purple, fragrant, about 1.5 cm. across, glabrous, in dense terminal peduncled heads; bracts lanceolate, acute, sparingly ciliate, persistent, as long as the calyx-tube; ovary glabrous. Fl.iii-v. B.M.1587(c). Smith, Exot. Bot. t.47 (c). Gn.28:8,t(c). Japan, China. Intr. 1771. Zone VII? Varies with white and spotted fls.

*D. o. × collina* = *D. hybrida* Lindl. Similar to *D. odora*: lvs. elliptic-oblong, 4–8 cm. long, glabrous or slightly hairy on the veins beneath: fls. reddish purple, pubescent outside, very fragrant. B.R.1177(c). (*D. Delphinii* Hort., *D. Dauphinii* Hort., *D. Fiontiana* Hort.) Orig. about 1820. Zone VII?

14. *D. retusa* Hemsl. Shrub to 1 m., densely branched; young brts. densely strigose: lvs. oblong to oblong-oblancheolate, 2.5–7 cm. long, obtuse and usually emarginate, cuneate, with revolute margin, glabrous: fls. white inside, rosy-purple outside, 2 cm. across, fragrant, glabrous, on short tomentose pedicels in many-fld. terminal heads; tube 1.5 cm. long; lobes ovate, slightly shorter than tube; bracts obovate or oval, ciliate, deciduous: fr. red. Fl.v. B.M. 8430(c). B.S.1:474. W. China. Intr. 1901. Zone VI?

Related species: *D. tangutica* Maxim. Brts. densely strigose, later pale yellowish gray, stout: lvs. 3–8 cm. long, oblanceolate to elliptic-oblong: fls. rosy-purple outside, 1.2 cm. across; lobes ovate, obtuse, less than half as long as tube, white inside, stained purple toward the tips; tube 1.5 cm. long. B.M. 8855(c). (*D. Wilsonii* Rehd.) N. W. China. Intr. 1914. Zone VI?—*D. acutifolia* Rehd. Shrub to 1.2 m.; young brts. thinly strigose, later purple-brown, slender: lvs. oblong-lanceolate or oblanceolate, 4–8 cm. long, short-acuminate, with obtuse or slightly emarginate apex: fls. 5–7, white; tube 1 cm. long; lobes ovate-oblong, acute to acuminate. W. China. Cult 1932. Zone VII.

2. **WIKSTROËMIA** Endl. Deciduous or evergreen shrubs or small trees: lvs. opposite or sometimes alternate: fls. perfect, apetalous, in terminal spikes or racemes, often paniculate; bracts wanting; receptacle cylindric, slender, usually pubescent outside; sepals 4, rarely 5; stamens twice as many

as sepals, in two whorls; ovary sessile, pubescent; stigma capitate, subsessile; 1-4 connate or distinct, often toothed disk-scales at base of ovary: fr. a drupe. (After Johan Emanuel Wikstroem, Swedish botanist; 1789-1856.) About 35 species in E. Asia, Malaysia and Australasia.—Of little ornamental merit.

**W. Chamaedaphne** (Bge.) Meissn. Upright shrub to 50 cm. or more, with slender red-brown glabrous brs.: lvs. opposite or subopposite, oblong-lanceolate to lanceolate, 2-6 cm. long, acute or acutish, narrowed into a very short petiole, pale green beneath, glabrous: fls. small, yellow, subsessile, silky outside, in dense peduncled spikes 0.5-4 cm., rarely to 10 cm. long, usually 3 or more forming terminal panicles; tube slender, 6-8 mm. long; sepals oval, obtuse,  $\frac{1}{4}$  as long as tube. Fl.vii-ix. N. China. Intr. 1910. Zone V.

**3. DIRCA** L. Deciduous shrubs; winter-buds small, conical, enclosed by the base of the petiole before leaf-fall, terminal bud wanting: lvs. alternate, membranous: fls. perfect, apetalous, in 2-3-fld. clusters axillary on last year's brts., before the lvs.; receptacle narrow-funnelform, indistinctly 4-lobed, deciduous; stamens 8, with filiform filaments exceeding the tube: ovary sessile, glabrous; style slender, as long as stamens, with small stigma: fr. a drupe; seed with bony testa, exalbuminous; embryo with fleshy cotyledons. (*Dirke*, Greek mythological name.) Two species in N. Am.

**D. palustris** L. LEATHERWOOD. Shrub to 2 m., often with a short single stem; brs. flexible, with very tough bark; brts. glabrous: lvs. short-petioled, elliptic to obovate, 3-7 cm. long, obtuse, cuneate, light green above, glaucescent beneath and pubescent when young: fls. short-stalked, pale yellow, 6-8 mm. long: fr. ellipsoid, 8 mm. long, pale green or reddish. Fl.iii-iv; fr. v-vi. M.A.2:t.146(c). B.R.292(c). G.O.t.49(c). G.C.69:196,197(h). S.L.163(h). N. B. and Ontario to Fla. and Mo. Intr. 1750. Zone IV. Interesting shrub valued for its early fls.

#### Fam. 75. ELAEAGNACEAE Lindl. OLEASTER FAMILY

Trees or shrubs covered more or less with peltate or stellate silvery or brown scales: lvs. alternate or opposite, entire, exstipulate: fls. perfect or unisexual, regular, apetalous, axillary; calyx-tube (receptacle) with a prominent perigynous disk, developed beyond the ovary, persistent and enclosing the fr., or cup-shaped in the staminate fl.; calyx-lobes 4, rarely 2 or 6, valvate; stamens as many or twice as many as calyx-lobes, inserted in the tube; ovary superior, 1-celled and 1-ovuled; ovule erect, anatropous; style 1, with simple stigma: fr. drupe-like, consisting of the dry fr. proper enclosed by the usually fleshy calyx-tube; seed with bony testa, ex-albuminous or nearly so; embryo straight, with fleshy cotyledons.—Three genera with about 30 species in N. Am., Eu. and Asia s. to Malaysia.

A. Lvs. opposite; stamens 8: fls. dioecious, with 4 sepals.....2. *Shepherdia*  
AA. Lvs. alternate: stamens 4.

B. Fls. dioecious; sepals 2; tube short: lvs. linear to lanceolate.....1. *Hippophaë*

BB. Fls. perfect or polygamous; sepals 4; tube elongated much beyond the ovary: lvs. lanceolate to ovate.....3. *Elaeagnus*

**1. HIPPOPHAË** L. Deciduous shrubs or trees with spiny brs.; the young growth covered with silvery scales or stellate hairs; winter-buds small, round, with few outer scales: lvs. alternate, short-petioled, narrow: fls. dioecious, axillary on last year's brs. in short racemes, the axis of which develops in the pistillate plant usually into brts. or thorns, but usually deciduous in the staminate plant: staminate fls. sessile with reduced tube and 2 valvate sepals; stamens 4, with short filaments; pistillate fls. short-stalked, the calyx-tube

with 2 minute lobes; style filiform with cylindric stigma: fr. drupe-like, with a bony ovoid stone. (*Hippophaë* is the ancient Greek name of a spiny plant.) Syn.: *Hippophaë* St.-Lag. Two species in Eu. and Asia.

**H. rhamnoides** L. SEA-BUCKTHORN. Shrub or tree to 10 m.; brs. gray, usually spiny; winter-buds golden-brown: lvs. linear to linear-lanceolate, 2-6 cm. long, acutish, covered on both sides with silvery-white scales, at maturity often glabrescent above: fls. before the lvs., very small, yellowish: fr. subglobose to ovoid, 6-8 mm. long, orange-yellow. Fl. III-IV; fr. IX(-III). B.M.8016(c). Gn.49:62,t(c);65:148(h);82:477. G.W.S:115,t(c);15:345(h). Eu. to Altai Mts., W. and N. China and N. W. Himal. Long cult. Zone III. Attractive in fr.—**H. r. procera** Rehd., var. Tree to 18 m.; young brts. villous: lvs. oblong-lanceolate to lanceolate, stellate-pubescent above. W. China. Intr. 1923. Zone VII?

Related species: **H. salicifolia** D. Don. Tree to 15 m., with pendulous brs., less spiny; young shoots scaly and brownish villous: lvs. lanceolate, to 1 cm. broad, acute, dull green above, stellate-tomentose below, the midrib brown: fr. yellow. S.H.2:f.277k-l,278e-f. M.D.1918:t.27(h). S.L.8(h). Himal. Intr. 1822. Zone VI.

**2. SHEPHERDIA** Nutt. Deciduous or evergreen shrubs; winter-buds with 1 or 2 pairs of outer scales: lvs. opposite, petioled: fls. dioecious, small, nearly sessile, in short axillary spikes or the pistillate often solitary; calyx of staminate fls. 4-parted, with 8 stamens alternating with 8 lobes of the disk; the pistillate with urn-shaped 4-cleft calyx enclosing the ovary, the orifice closed by the lobes of the disk; style slender with 1-sided stigma: fr. drupe-like, ovoid. (After John Shephard, once curator of the Liverpool Botanic Garden; 1764-1836.) Syn.: *Lepargyrea* Raf. Three species in N. Am.; the evergreen *S. rotundifolia* Parry from Utah not in cult.

A. Lvs. green and nearly glabrous above, silvery and scurfy with brown scales beneath.  
AA. Lvs. silvery on both sides.....

1. *S. canadensis*  
2. *S. argentea*

1. **S. canadensis** Nutt. Spreading unarmed shrub to 2.5 m., with brown scurfy brts.: lvs. elliptic to ovate, 2-5 cm. long, obtuse, green and sparingly scurfy above, silvery mixed with brown scales beneath: fls. yellowish about 4 mm. across: fr. ovoid, 4-6 mm. long, yellowish red, insipid. Fl. IV-v; fr. VI-VII. B.B.2:576. S.L.341(h). Nfd. to Alaska, s. to Me., Ohio, N. Mex. and Ore. Intr. 1759. Zone II.—**S. c. xanthocarpa** Rehd., f. Fr. yellow. Intr. 1904.

2. **S. argentea** Nutt. BUFFALO-BERRY. Shrub or sometimes nearly tree-like, to 6 m., with often spiny spreading brs. silvery when young: lvs. oblong to oblong-lanceolate, 1.5-6 cm. long, obtuse, cuneate, silvery on both sides: fls. yellowish; fr. ovoid, 4-6 mm. long, scarlet, sour, edible. Fl. IV-v; fr. VIII. I.T.2:t.50. Gt.38:625. A.G.1900:827. B.B.2:577. S.L.341(h). Minn. and Man. to Sask., Kans. and Nev. Intr. 1818. Zone II. The fr. is made into jellies and preserves and the shrub used as a hedge plant in the northwest.

*S. a.* × *canadensis* = *S. gottingensis* Rehd. The scales of the leaf which are divided to the base in *S. canadensis* and merely dentate in *S. argentea* are divided in the hybrid about ½ to the middle. Orig. about 1892.

**3. ELAEAGNUS** L. OLEASTER. Deciduous or evergreen shrubs or trees, often spiny: winter-buds small, ovoid, with few outer scales: lvs. alternate, short-petioled, dotted with silvery or brown scales like other parts of the plant: fls. axillary, solitary or clustered, perfect or polygamous, apetalous; calyx-tube (receptacle) campanulate or tubular, 4-lobed; stamens 4, on very short filaments, included: fr. drupe-like, with an ellipsoid striate stone. (Greek *elaia*, olive, and *agnos*, the Greek name of *Vitex agnus-castus*). About 40

species in S. Eu., Asia and N. Am.—Grown for their handsome foliage and decorative frs. and some for their edible frs.

- A. Lvs. deciduous: fls. in spring.  
 a. Fr. mealy, yellow or silvery: lvs. with silvery scales on both sides.  
 c. Brts. silvery: style of perfect fls. enclosed at base by the tubular disk: fr. yellow.  
 1. *E. angustifolia*  
 cc. Brts. brown: style not enclosed by a tubular disk: fr. silvery, dry. 2. *E. commutata*  
 BB. Fr. juicy, red-brown to pink, dotted with brown or silvery scales: lvs. often with brown scales beneath.  
 c. Calyx-tube much longer than limb, gradually narrowed at base: fr. subglobose to ovoid, on a stalk 8-12 mm. long: brts. sometimes silvery. 3. *E. umbellata*  
 cc. Calyx-tube about as long as limb, abruptly contracted at base: fr. ovoid to oblong, on a stalk 1.2-2.5 cm. long: brts. brown. 4. *E. multiflora*  
 AA. Lvs. persistent: fls. in fall.  
 a. Brts. and lvs. beneath silvery white. 5. *E. macrophylla*  
 BB. Brts. brown and lvs. dotted with brown scales beneath.  
 c. Lvs. with yellow and brown scales beneath: brts. spineless. 6. *E. glabra*  
 cc. Lvs. whitish beneath, dotted with brown scales: brs. usually spiny. 7. *E. pungens*

1. *E. angustifolia* L. OLEASTER. Shrub or small tree to 7 m., sometimes thorny; young brts. silvery: lvs. oblong-lanceolate to linear-lanceolate, 4-8 cm. long, acute to obtuse, usually broad-cuneate at base, dull green above, silvery beneath; petiole 5-8 mm.: fls. 1-3, short-stalked, on the lower part of the brts., 1 cm. long, yellow inside, silvery outside, fragrant; calyx-tube campanulate, about as long as limb; style of the perfect fls. enclosed at base by a tubular disk: fr. ellipsoid, yellow, about 1 cm. long, yellow and coated with silvery scales, with sweet mealy flesh. Fl.vi; fr.viii-x. R.I.11:t.549(c). F.D. 10:t.972(c). S.O.3:t.134,135(c). S.H.2:f.279a-g. Gs.2:37(b). S.L.9(h). (*E. hortensis* Bieb.—RUSSIAN OLIVE.) S. Eu. to W. and C. Asia, Altai and Himal. Long cult. in Eu.; occasionally escaped. Zone II.—*E. a. spinosa* (L.) Ktze., var. Brs. usually spiny: lvs. broader, elliptic to elliptic-oblong, 3-7 cm. long, densely scaly: fr. smaller, subglobose to ellipsoid. B.R.1156(c). L.B.1339(c). (*E. hortensis latifolia* Hort., *E. s. L.*, *E. hortensis* var. *s.* Boiss.)—*E. a. orientalis* (L.) Ktze., var. Often spineless: brts. scaly and stellate-pubescent: lvs. elliptic to oblong, 3-7 cm. long, obtuse, usually rounded at base, dull green above, scaly and stellate-pubescent beneath; petiole 4-6 mm. long: fr. to 2 cm. long. A.G.21:405,519,613,645. (*E. o. L.*, *E. sativa* Hort.)

2. *E. commutata* Bernh. SILVER-BERRY. Upright shrub to 4 m., stoloniferous, unarmed, with reddish brown brts.: lvs. short-petioled, ovate to oblong or ovate-lanceolate, 2-10 cm. long, acute or obtuse, cuneate, silvery on both sides, sometimes with scattered brown scales beneath: fls. 1-3, short-stalked, yellow, silvery outside, 1.2-1.5 cm. long, fragrant: fr. broad-ellipsoid, 1 cm. long, silvery, with dry mealy flesh. Fl.v-vi; fr.ix-x. B.M.8369(c). B.B. 2:576. (*E. argentea* Pursh, not Moench.) E. Can. to N. W. Terr., s. to Minn., S. Dak. and Utah. Intr. 1813. Zone II.

3. *E. umbellata* Thunb. Shrub to 4 m., with spreading, often spiny brs.; brts. yellowish brown, often partly silvery: lvs. elliptic to ovate-oblong, 3-7 cm. long, obtuse to short-acuminate, rounded to broad-cuneate at base, often with crisped margin, usually with silvery scales above when young, sometimes glabrous, silvery beneath and usually mixed with brown scales: fls. yellowish white, fragrant, scaly outside, 1.2 cm. long; tube much longer than limb, gradually narrowed toward the base and slightly constricted; style scaly: fr. subglobose to ovoid, 6-8 mm. long, silvery mixed with brown scales at first, finally red, on stalks 8-12 mm. long. Fl.v-vi; fr.ix-x. S.I.2:t.54(c). N.K.17:t.1. R.H.1901:85. M.G.14:569. A.G.12:206. (*E. crispa* Thunb.) China, Korea, Japan. Intr. 1830. Zone III.—*E. u. parvifolia* (Royle) Servetaz, var. Brts. and winter-buds silvery; lvs. elliptic-ovate to elliptic-lanceolate, usually short-acuminate, usually stellate-pubescent above, finally glabrous, silvery

beneath: style stellate-pubescent: fr. short-stalked, subglobose, silvery, finally light red. Fr.viii. B.R.29:51(c). M.M.5:145. (*E. p.* Royle, *E. japonica* Hort.) Himal. Cult. 1843. Zone (V).

4. *E. multiflora* Thunb. Shrub to 3 m., with spreading unarmed brs.; brts. reddish brown: lvs. elliptic or ovate to obovate-oblong, 2.5-6 cm. long, short-acuminate to obtusish, broad-cuneate, stellate-pubescent above, becoming glabrous, silvery beneath, with scattered larger brown scales: fls. 1-2, yellowish white, with silvery and brown scales outside; tube campanulate, distinctly constricted above ovary, about as long as limb: fr. oblong, about 1.5 cm. long, red, scaly, of pleasant acid flavor, pendulous on a slender stalk 1.5-2.5 cm. long. Fl.iv-v; fr.vi. B.M.7341(c). Add. 4:t.155(c). G.F.1:499. Gng.1:275, 277. (*E. longipes* Gray, *E. edulis* Carr.) China, Japan. Intr. 1862. Zone IV.—*E. m. ovata* (Maxim.) Servettaz, var. Lvs. stellate-pubescent above at first, soon glabrous: fls. 1-3: fr. ellipsoid, 8-12 mm. long, red with brown scales, nodding on pedicels 1.2-1.5 cm. long. Fr.vii-viii. M.G.14:569 and G.C.66:301 (both as *E. multiflora*).

5. *E. macrophylla* Thunb. Evergreen shrub to 3 m., with spreading unarmed brs.; brts. silvery white: lvs. broad-ovate or broad elliptic, 5-11 cm. long, short-acuminate, rounded at base, scaly above, glabrescent at length, densely silvery-scaly beneath; petiole rather stout, about 1.5 cm. long: fls. 4-6, about 1 cm. long, fragrant, on stalks 6 mm. long, nodding, outside with silvery and brownish scales; tube campanulate, abruptly narrowed above the ovary, as long as limb: fr. ellipsoid, 1.5 cm. long, red, scaly. Fl.ix-xi; fr.v. B.M.7638(c). N.K.17:t.4. G.C.III.25:90. Gn.80:582. S.H.2:f.281a-c, 282g-h. Japan, Korea. Intr. 1843. Zone VII.

6. *E. glabra* Thunb. Evergreen sarmentose or climbing shrub to 6 m., unarmed, very rarely spiny; brts. lustrous: lvs. elliptic-ovate to elliptic-lanceolate, 3-7 cm. long, acutish to acuminate, broad-cuneate at base, lustrous above, with yellow and brown scattered scales beneath, lustrous; petiole 5-10 mm. long, brown: fls. short-stalked, white, brown outside, fragrant, narrowly funneliform; tube slender, gradually narrowed toward the base, twice as long as limb: fr. ellipsoid, 1.2-2 cm. long, gray or ferrugineous, on a stalk 4-10 mm. long. Fl.x-xi; fr.v. S.H.2:f.281i-1, 282b-c. C. China, Korea, Japan. Cult. 1888. Zone VII.

7. *E. pungens* Thunb. Spreading shrub, usually spiny, to 4 m.; brts. brown: lvs. elliptic to oblong, 5-10 cm. long, acutish to obtuse, rounded at base, with wavy and often crisped margin, scaly above at first, soon glabrous and lustrous, covered with dull white scales beneath and dotted with brown scales; petiole 6-12 mm. long, brown: fls. 1-3, pendulous, 1.2 cm. long, fragrant, silvery white, tube abruptly contracted above the ovary, longer than the limb: fr. ellipsoid, 1.5 cm. long, brown at first, finally red. Fl.x-xi; fr.v. S.H.2:f.281d-g, 282a. Japan. Intr. 1830. Zone VII.—*E. p. aurea* Servettaz, var. Lvs. margined with deep yellow.—*E. p. variegata* Rehd., var. Lvs. margined with yellowish white. G.M.54:327.—*E. p. Frederici* Bean, var. Lvs. rather small and narrow, with pale yellow center and dark green narrow margin. (*E. p. aureo-picta* Hort.)—*E. p. maculata* Rehd., var. With large deep yellow blotch in the middle. Gs.20:104. A.G.13:122. A.F.23:1015. (*E. p. aureo-maculata* Hort., *E. p. var. aureo-variegata* Bean.)—*E. p. Simónii* (Carr.) Nichols., var. Lvs. rather large, elliptic-oblong, without or with few brown scales beneath. Gs.20:53. (*E. S. Carr.*)—*E. p. tricolor* Rehd., var. Lvs. variegated with yellow and pinkish white.—*E. p. reflexa* (Morr. & Dcne.) Servettaz, var. Brs. elongated and less spiny: lvs. ovate-lanceolate, acute

to acuminate, lustrous above, ferrugineous beneath. H.U.4:328,t(c). L.D.II. 4:t.6(c). Gs.20:53. (*E. r.* Morr. & Dcne.) Possibly hybrid between this species and *E. glabra*.

Fam. 76. LYTHRACEAE Lindl. LOOSE-STRIPE FAMILY

Herbs, shrubs or trees: lvs. opposite or whorled, sometimes alternate, entire, usually with small stipules: fls. perfect, usually regular, perigynous, in terminal or axillary racemes, panicles or cymes; calyx-tube (receptacle) tubular, usually ribbed; sepals 4 or 8, rarely to 16; petals as many, imbricated or wanting; stamens inserted below the petals, usually twice as many, sometimes fewer or more; ovary superior, with 1 style and an entire or slightly 2-lobed stigma, usually 2-6-celled, rarely 1-celled; ovules usually many, on axile placentae: fr. a usually dehiscent caps.; seed exalbuminous; embryo straight, with flat or rarely folded cotyledons.—Twenty-two genera with about 450 species, mostly trop., few in temp. regions.

- A. Fls. axillary; stamens 8-18; lvs. linear to narrow-oblong.  
 B. Fls. yellow, solitary in the axils; stamens 10-18.....1. *Heimia*  
 BB. Fls. rose-purple, in axillary clusters; stamens 8-10.....2. *Decodon*  
 AA. Fls. in terminal panicles; stamens 15-200; lvs. elliptic to oblong.....3. *Lagerstroemia*

1. **HEIMIA** Link. Deciduous shrubs with virgate brs.: lvs. opposite or partly alternate or in 3's, subsessile, exstipulate: fls. axillary, solitary, short-stalked; calyx campanulate, with horn-like spreading processes between the lobes; petals 5-7, yellow; stamens 10-18, about half as long as petals, equal; style slender, longer than stamens, with capitate stigma; ovary globose or obovoid, 3-6-celled: caps. loculicidal; seeds small, numerous. (After Ernst Ludwig Heim, physician in Berlin; 1747-1834.) Two or 3 species from Mex. to Argentine.

*H. salicifolia* (H. B. K.) Link. Shrub to 3 m., glabrous; brts. slightly winged: lvs. opposite or partly alternate, linear-lanceolate to narrow-oblong, 1.5-5 cm. long, acute: fls. 1.5-2 cm. across: petals oval. Fl.vii-ix. S.B.3:t. 231(c). L.D.8:567,t(c). (*Nesaea* s. H. B. K.) Mex. to Argentine. Intr. 1821. Zone VII.—*H. s. grandiflora* Lindl., var. Fls. larger 2.5-3 cm. across. B.R. 27:t.60(c). H.I.6:t.554,f.a. Intr. 1839.

2. **DÉCODON** J. F. Gmel. Suffrutescent plant: lvs. opposite or whorled, subsessile, entire, exstipulate: fls. in short-peduncled cymes in the axils of the upper lvs., trimorphous; calyx-tube campanulate, ribbed, sepals 5-7, with as many horn-like processes at the sinuses; petals lanceolate, crinkled; stamens 10, rarely 8, of 2 lengths, exserted; ovary 3-6-celled; style filiform, of 3 lengths; stigma capitate: caps. subglobose, loculicidal, 3-6-valved; seeds angled. (Greek *decas*, ten, and *odous* or *odōn*, tooth.) One species in N. Am.

*D. verticillatus* (L.) Ell. Aquatic subshrub, with slender virgate curved angled brs., the submerged portion often spongy: lvs. elliptic-lanceolate to lanceolate, 3-20 cm. long, acuminate, cuneate, with often undulate margin: fls. in clusters of 2-8; petals rose-purple, 8-10 mm. long; caps. 5 mm. across. Fl.vii-ix. B.B.2:580. Torrey, Fl. N. Y. 1:t.28(c). House, Wild Fl. N. York, 1:t.143a(c). Mass. to Ont. and Minn., s. to Fla. and La. Intr. 1759. Zone IV.

3. **LAGERSTROËMIA** L. Evergreen or deciduous shrubs or trees; winter-buds pointed, with 2 outer scales: lvs. opposite or the upper alternate, entire, with very small conical and deciduous stipules: fls. in terminal and axillary panicles, perfect, regular, pink, purple or white; pedicels bracted; calyx turbinate or hemispheric, often ribbed or winged; sepals 6-9; petals

usually 6, with long and slender claw and crinkled or fringed blade; stamens many, with long filaments: ovary 3-6-celled, with a long style and capitate stigma; caps. loculicidal; seeds winged at the top. (After Magnus von Lagerstroem, a friend of Linnaeus; 1696-1759.) About 30 species in S. and E. Asia, New Guinea, Philipp. Isls., Australia.

*L. indica* L. **CRAB-MYRTLE**. Deciduous shrub or tree to 7 m.; brts. 4-angled, glabrous: lvs. subsessile, elliptic or obovate to oblong, 2.5-7 cm. long, acute or obtuse, broad-cuneate or rounded at base, glabrous or pilose along the midrib beneath: fls. bright pink, 3-4 cm. across, in panicles 6-20 cm. long; calyx smooth outside, not ribbed: fr. a broad-ellipsoid caps., 1-1.2 cm. long. Fl.vii-ix. B.M.405(c). R.H.1874:130,t(c). Gt.6:t.191(c). G.C.66:186(h). Gng.1:151(h);5:281(h). China; much cult. in trop. and subtrop. countries. Intr. 1747. Zone VII. Handsome shrub, much cult. in the South for its profuse summer bloom, hardy as far north as Baltimore; occasionally escaped.—Many color forms from pale pink to cherry red and violet, and one with white fls., *L. i. alba* Nichols.

#### Fam. 77. PUNICACEAE Horan. POMEGRANATE FAMILY

Only one genus which see for characters.

**PUNICA** L. Shrubs or small trees; winter-buds small, with 2 pairs of outer scales: lvs. usually opposite and fascicled, entire, exstipulate: fls. perfect, perigynous, 1-5 at end of brts., terminal and axillary; calyx-tube campanulate or tubular, sepals 5-8, fleshy, valvate; petals 5-7, imbricate; stamens very numerous; ovary inferior or nearly so with the carpels in 1 or 2 superimposed series, 3 with axile placentae in the lower and usually 5-7 with parietal placentae in the upper whorl; style 1 with capitate stigma: fr. a berry, with thick leathery rind, the central pulpy mass formed by the fleshy outer seed-coats; embryo straight, with convolute cotyledons. (The ancient Latin name of the plant.) Two species in the Mediterr. reg. to the Himal. and in Socotra.

*P. Granatum* L. **POMEGRANATE**. Deciduous shrub or small tree to 5, rarely 10 m., with spinescent brs.; brts. angled, glabrous: lvs. short-petioled, obovate to oblong, 2-8 cm. long, acutish, glabrous, lustrous above: fls. short-stalked, scarlet, about 3 cm. across; petals crumpled; calyx purple: fr. subglobose, 6-8 cm. across, deep yellow, crowned by the persistent calyx. Fl.v-vi; fr.ix-x. B.M.1832(c). E.N.III.7:24. S. E. Eu. to Himal. Cult. since time immemorial. Zone VII. Grown for its fls. and fr.—Many forms are known, most of them tenderer than the type.—*P. G. pleniflora* Hayne. Fls. double, scarlet. Trew, Pl. Ehret. t.71(c). R.B.12,169,t(c).—*P. G. albescens* DC., var. Fls. white. A.R.t.96(c).—*P. G. multiplex* Sweet, var. Fls. white, double. R.B.12:169,t(c).—*P. G. flavescens* Sweet, var. Fls. yellow.—*P. G. Legréillei* Vanh. Fls. double, striped red and yellowish white. F.S.13:t.1385(c). R.H.1867:232,t(c);1880:130,t(c). I.H.5:t.156(c).—*P. G. nana* (L.) Pers., var. Low form with smaller linear-lanceolate to linear lvs., smaller fls. and fr. B.M.634(c). L.B.988(c). Zone VI. A double-fl'd. form is *P. G. plena* Voss, f.

#### Fam. 78. NYSSACEAE Endl. TUPELO FAMILY

Deciduous trees; winter-buds scaly: lvs. alternate, entire or toothed, exstipulate: fls. dioecious or polygamous, in axillary or terminal heads; calyx in the staminate fls. minute, 5-toothed or indistinct, in the pistillate fl. ad-

nate to the ovary; petals 5 or more or wanting; stamens twice as many or fewer than petals, usually in 2 series; ovary 1-celled or 6-10-celled; ovules solitary, anatropous, pendulous; disk epigynous or wanting; style subulate or conic, with simple or divided stigma: fr. drupaceous, crowned with the remnants of the calyx; seed albuminous with thin or membranous testa; cotyledons foliaceous, radicle cylindric. The family is sometimes included in Cornaceae. Three genera in N. Am., W. China, Himal. and Malayan Archipelago.

A. Lvs. cuneate or rounded at base, entire or remotely dentate; infl. without bracts. 1. *Nyssa*  
 AA. Lvs. cordate at base, serrate-dentate: infl. with 2 large bracts. .... 2. *Davidia*

1. **NYSSA L. TUPELO.** Deciduous trees: winter-buds with imbricate scales: lvs. entire or remotely toothed: fls. minute, greenish white, polygamo-dioecious, in axillary peduncled clusters; the staminate in many-fld. peduncled clusters; calyx disciform or cup-shaped, 5-toothed; petals 5, small, ovate to linear-oblong, inserted on the margin of the conspicuous disk; stamens 5-12, exserted, without rudimentary ovary; pistillate fls. sessile, rarely short-stalked, 1 or 2 to several, with bractlets at base, on slender or sometimes short peduncles; calyx-tube campanulate with 5-toothed limb; petals small; stamens 5-10, short, with often sterile anthers; disk less developed: ovary 1-2-celled, style terete, recurved, stigmatic on the inner face: fr. an oblong drupe, usually 1-seeded, with a bony, ribbed or winged stone; embryo straight. (Greek name of a nymph; alluding to the habitat of the trees, in swampy or moist soil.) Four species in N. Am. and 2 in Asia.

*N. sylvatica* Marsh. **TUPELO.** Tree to 30 m., with slender spreading usually more or less pendulous brs. forming a flat-topped nearly cylindric or sometimes broad head: lvs. obovate or elliptic, 5-12 cm. long, acute or obtusish, rarely acuminate, cuneate or sometimes rounded at base, entire, rarely coarsely dentate, lustrous above, glaucescent beneath, pubescent on the veins or glabrous at maturity; petiole 6-35 mm. long, terete or wing-margined: fls. on pubescent or tomentose peduncles 1-3.5 cm. long; staminate pediceled, in many-fld. heads; pistillate in 2- or several-fld. clusters: fr. ovoid, 8-12 mm. long, blue-black, with thin acrid flesh; stone slightly 10-12-ribbed. Fl.v-vi; fr.x. S.S.5:t.217. Em.312,t.7(c). G.F.3:491(h); 7:275(h). F.L.6:8,t(h). (*N. multiflora* Wagh., *N. villosa* Michx., *N. aquatica* L., partly.—PEPPERIDGE, BLACK GUM, SOUR GUM.) Me., Ont. and Mich. to Fla. and Tex. Intr. before 1750. Zone IV. Tree of distinct habit, with lustrous foliage turning bright scarlet in fall.—*N. s. biflora* (Walt.) Sarg., var. Lvs. usually narrower and obtuse, subcoriaceous, glabrous at maturity: pistillate fls. in pairs: fr. ellipsoid, about 8 mm. long; stone slightly flattened, prominently ribbed. S.S.5:t.218. (*N. b.* Walt.) N. C. to Fla. and La. Intr. 1739. Zone VII.

Related species: *N. sinensis* Oliv. Tree to 15 m.; brts. pubescent: lvs. elliptic, 8-15 cm. long, dull dark green above, light green and pubescent on the veins beneath: pistillate fls. short-pediceled, few, on slender peduncles: fr. oblong, 1.2-1.5 cm. long, bluish. H.I.20:1964. C.C.259. C. China. Intr. 1902. Zone VII?—*N. aquatica* L. **COTTON GUM.** Tree to 30 m.; brts. soon glabrous: lvs. ovate to oblong, 10-16 cm. long, acute or acuminate, entire or remotely toothed, lustrous above, glaucescent and downy-pubescent beneath: pistillate fls. solitary, with 2-4 bractlets at base, on slender hairy peduncles: fr. oblong, 2-2.5 cm. long, purple. S.S.5:t.220. (*N. uniflora* Wagh.) Va. to s. Ill., Fla. and Tex. Intr. before 1735. Zone VII.—*N. Ogéche* Marsh. **OGECHEE LIME.** Tree to 20 m.; brts. pubescent: lvs. elliptic to obovate-oblong, 10-14 cm. long, acute to obtuse, entire, at maturity slightly hairy and lustrous above, glaucescent beneath and fulvous-pubescent on the veins or sometimes nearly glabrous: pistillate fls. solitary, on short villous peduncles: fr. oblong, 1.2-1.6 cm. long, red. S.S.5:t.219. S. C. to Fla. Intr. 1806. Zone VII?

2. **DAVIDIA** Baill. Deciduous tree; winter-buds large, with several imbricate scales: lvs. alternate, slender-petioled, dentate, exstipulate: fls. andromonoecious, apetalous, in dense subglobose heads consisting of numerous staminate fls. and 1 perfect fl., with 2 large bracts at base; sepals and petals wanting; stamens 1-7, with slender filaments; ovary 6-10-celled, with rudimentary perianth and a circle of short stamens on top of the ovary at base of the short thick style; stigmas spreading: fr. a drupe, with 3-5-seeded stone. (After Armand David, French missionary who botanized in China from 1862-74; 1826-1900.) One species in China.

**D. involuocrata** Baill. DOVE-TREE. Tree to 20 m. with ascending brs.: brts. glabrous: lvs. broad-ovate, 8-14 cm. long, acuminate, cordate, dentate-serrate with acuminate teeth, strongly veined, bright green and finally glabrous above, densely silky-pubescent beneath; petiole 3.6-7 cm. long: fl-heads 2 cm. across on slender peduncles about 7 cm. long and terminal on short lateral spurs; bracts 2, rarely 3, opposite, ovate to oblong-obovate, entire or serrate, creamy-white, the larger one to 16 cm. long, pendulous, the smaller about half as long: fr. pear-shaped, about 3.5 cm. long, green with purple bloom. Fl.v-vi; fr.x. Nouv. Arch. Mus. Paris, II.8:t.10(c). I.S.1:t.40. W. China. Intr. 1904. Zone VI. Pyramidal tree with rather large bright green lvs. and strikingly handsome in bloom with its large creamy-white floral bracts.—**D. i. Vilmoriniana** (Dode) Wangerin, var. Lvs. glaucescent or yellowish green and glabrous beneath or only sparingly pubescent on the veins while young. B.M.8432(c). G.C.64:12,13,17(h);78:25(h). R.H.1906:297-9 (h). Gn.82:199. Gn.M.40:131. C. and W. China. Intr. 1897. Zone V. (*D. V. Dode*, *D. laeta* Dode.)

## Fam. 79. ALANGIACEAE Lindl. ALANGIUM FAMILY

The family contains only the following genus.

**ALANGIUM** Lam. Trees or shrubs, sometimes spiny: lvs. alternate, petioled, entire or lobed, estipulate: fls. perfect, regular, white or yellowish white, in axillary cymes with subulate or linear deciduous bracts; pedicels articulate; calyx-lobes 4-10, petals as many, linear or strap-shaped, valvate, sometimes coherent at base, at first tubular, later recurved; stamens as many as petals or 2 to 4 times as many; filaments free; disk large; ovary inferior, 1-, rarely 2-celled; ovule solitary, pendulous, anatropous; style cylindric, elongated, with entire or 2-3-lobed stigma: fr. an ellipsoid or globose drupe crowned by the calyx, 1-seeded; seed albuminous; embryo straight with foliaceous cotyledons and a long radicle. (Name an anagram of Adanson's name Angolam for this plant.) Syn.: *Marlea* Roxb. About 20 species chiefly in s. Asia extending to Japan, C. China, and Australasia; also in Africa.

**A. platanifolium** (Sieb. & Zucc.) Harms. Tree, but usually shrubby in cult.; brs. pubescent when young, soon glabrous: lvs. suborbicular to broad-ovate, 10-20 cm. long, 3-5-, rarely to 7-lobed, with oblong to triangular acuminate entire lobes, subcordate to broad-cuneate at base, palminerved, dark green above and sparingly pubescent beneath; petiole 2-7 cm. long: fls. 2.5-3 cm. long, fragrant, in 1-4-fld. peduncled cymes; petals linear, usually 6, coherent at base: fr. ovoid, 6-8 mm. long. Fl.vi-vii. I.S.2:t.95. E.P.IV.220b:23. (*Marlea platanifolia* Sieb. & Zucc.) C. China, Japan. Intr. 1867. Zone VII.

Related species: **A. chinense** (Lour.) Harms. Lvs. ovate, usually oblique at base, 8-20 cm. long, entire or with few lobes and usually unsymmetrical, acuminate, glabrous above: cymes 3-15-fld.; fls. about 2 cm. long. B.R.24:61(c).

I.S.2:t.94. E.P.IV.220b:20. (*A. begoniifolium* (Roxb.) Baill., *Marlea begoniifolia* Roxb.) C. China to S. Asia, Afr. Intr. 1805. Zone VII?

Fam. 80. MYRTACEAE R. Br. MYRTLE FAMILY

Evergreen shrubs or trees, aromatic: lvs. usually opposite, entire, pellucid-dotted, exstipulate: fls. perfect, regular; sepals usually 4-5, imbricate, sometimes lid-like and deciduous; petals as many, imbricate; stamens numerous, often in fascicles opposite the petals; ovary inferior, 1- to many-celled; ovules 1 to many in each cell; style 1: fr. usually a berry or a caps., rarely a drupe or a nut; seeds often angled, exalbuminous.—About 70 genera and 2800 species in trop. and sub trop. regions.

**EUCALÝPTUS** L'Hérit. GUM-TREE. Evergreen trees, rarely shrubs: lvs. usually alternate and pendulous, petioled, rarely opposite and sessile, but opposite and sessile in the juvenile stage of many species, penninerved, usually glabrous: fls. white to yellow or red, usually in axillary umbels, sometimes corymbose or paniculate; calyx-tube turbinate, campanulate or oblong, adnate to the ovary; calyx-lobes and petals connate into a lid or cap and separating from the calyx-tube at anthesis; stamens numerous; anthers opening by slits or pores: fr. a caps. opening at the top by 3-6 valves; seeds numerous, angled. (Greek *eu*, well, and *calyptein*, to cover; referring to the lid of the fl.) About 300 species in Australia and a few in Malesia.—Much planted in sub trop. countries for timber and ornament; the following species may be precariously hardy at the southern limit of our area.

**E. Gúnnii** Hook. f. CIDER G. Tree to 25 m., sometimes shrubby: lvs. of young plants opposite or nearly so, orbicular, 2-6 cm. wide, rounded or emarginate at apex, short-petioled or sessile: lvs. of adult plant alternate, lanceolate, 5-10 cm. long, acute at ends; petiole to 2.5 cm. long: umbels 3-fld., short-stalked; fls. about 1.5 cm. across; lid hemispherical, short-pointed, lustrous; stamens yellow, 5-7 mm. long; anthers oval, opening by parallel slits: fr. turbinate, truncate, 6-10 mm. across. Fl.ix-x. G.C.III.2:781;11:787(h). Maiden, Crit. Rev. Eucal. 3:t.108,f.2-8,t.9,f.1. S. Austral., Tasmania. Intr. about 1850. Zone VII? A variable species; the hardest form is **E. G. montàna** Hook. f., var. Smaller tree: young lvs. sometimes perfoliate, adult lvs. usually smaller: fr. smaller, more hemispherical, with thinner rim. B.M. 7808(c, excl. f.3,4). B.S.1:534. Maiden, l.c.3:t.83,f.11(as *E. cordata*),t.108,f.1. (*E. Perriniana* F. v. Muell.)

Fam. 81. ONAGRACEAE Lindl. EVENING-PRIMROSE FAMILY

Herbs, rarely shrubs or trees: lvs. opposite or alternate or whorled, entire or toothed, rarely lobed; stipules small, deciduous or wanting: fls. perfect, regular, epigynous or perigynous, usually solitary or few, axillary, rarely in racemes or panicles; sepals 4, rarely 2 or 3; petals 4, rarely 2 or wanting, usually clawed, convolute; stamens usually twice as many as petals or as many, rarely fewer; ovary inferior, 2-4-celled; ovules numerous, rarely few, on axile placentae; style 1 with 1-4 stigmas: fr. a caps., rarely a berry or a nut; seeds small, exalbuminous. Syn.: *Epilobiaceae* DC.—About 36 genera with 500 species distributed through both hemispheres but most numerous in Am.—The genus *Zauschneria* sometimes considered woody is scarcely suffruticose and only precariously hardy within our area.

**FÚCHSIA** L. Shrubs or small trees, usually glabrous: lvs. opposite or sometimes whorled or alternate, petioled, dentate, with small caducous stip-

ules: fls. axillary, 1 or several, peduncled and usually pendulous, sometimes forming terminal panicles; calyx-tube prolonged beyond the ovary and campanulate to tubular, with 4 spreading valvate lobes, usually colored, often red; petals 4, sometimes 5, rarely wanting, usually upright; stamens usually 8, often exserted; style exserted, with capitate, simple or 4-lobed stigma: fr. a 4-loculed, soft berry with numerous usually brown seeds. (After Leonard Fuchs, German physician and botanical author; 1501-65.) About 70 species in trop. and sub trop. Am., a few in New Zealand.—Even the hardier species are within our area usually killed to the ground even if protected, but the young shoots springing up from the base flower the same season. One of the hardest is *F. magellanica* var. *Riccartonii*; it may persist even in Zone V.

*F. magellanica* Lam. Small shrub: lvs. short-petioled, ovate-oblong, 2.5-5.5 cm. long, acuminate, rounded at base, dentate or denticulate, slightly pubescent on margin and midrib beneath, bright green: fls. usually solitary, pendulous; calyx red, the tube cylindric, less than half as long as the oblong-lanceolate lobes; petals obovate, violet, half as long as calyx-lobes; stamens much exserted. Fl.vi-ix. B.M.97(c). S.H.2:f.285f-g,286c. (*F. coccinea* Curtis, not Ait., *F. macrostemma* Ruiz & Pav.) Peru, Chile. Cult. 1800. Zone VII. A variable species.—*F. m. globosa* (Lindl.) Bailey, var. Lvs. ovate, glabrous; petiole longer: fl. nearly globose in bud; calyx-tube very short, the lobes often cohering for some time at apex. B.R.1556(c). Gn.55:75. B.C.3:1299. S.H.2:f.285i,286h. (*F. g.* Lindl., *F. macrostemma* var. *g.* Sweet.) Orig. 1830.—*F. m. riccartonii* (Lebas) Bailey, var. Lvs. oblong-ovate, with purplish tinge; calyx-tube short; lobes shorter and broader. R.H.1896:30; 1926:172,t(c). B.C.3:1300. (*F. R.* Lebas.) Cult. 1835.—*F. m. conica* (Lindl.) Bean, var. Lvs. broad-ovate or oval, 2-3.5 cm. long: fls. red and purple; calyx-tube 1 cm. long; lobes nearly twice as long; petals obovate. B.R.1062(c). (*F. c.* Lindl.) Cult. 1827.

The following are of about the same hardness: *F. exoniensis* Paxt. Lvs. often in 3's, ovate, 3-8 cm. long, dark green, suffused with red-purple: fls. solitary, slender-stalked; calyx-tube about 1.5 cm. long; lobes oblong-lanceolate, 2.5-3.5 cm. long, scarlet; petals purple, obovate, about half as long as sepals; stamens much exserted. P.M.10:151(c). G.C.II.20:565. (*F. corallina* Porcher.) Probably hybrid of *F. magellanica*. Cult. 1843.—*F. discolor* Lindl. Dwarf and compact shrub; brts. deep purple, puberulous: lvs. oblong-ovate or narrow-elliptic, 2-4 cm. long, cuneate, remotely denticulate, glabrous or very sparingly hairy beneath; pedicels thin, to 3 cm. long; tube about 1 cm. long, half as long as the narrow lobes; ovary often puberulous. B.R.1805(c). B.C.3:1300. S.H.2:f.285h;286f-g. (*F. magellanica* var. *d.* Bailey.) Falkland Islands. Intr. before 1835.—*F. gracilis* Lindl. Slender shrub; young brts. and young lvs. puberulous: lvs. oblong-ovate or elliptic-oblong, 3-5.5 cm. long, cuneate, dentate: petioles slender, to 1.5 cm. long: fls. usually solitary; calyx-tube cylindric, about 1.5 cm. long, more than half as long as the lanceolate lobes; pedicels slender, to 4 cm. long, puberulous like the ovary. B.R.847(c).1052(c). B.M.2507(c). Gn.55:71. B.C.3:1301. (*F. magellanica* var. *g.* Bailey.) Mex. Intr. 1822.—*F. microphylla* Kunth. Dwarf shrub; brts. puberulous: lvs. broad-elliptic to ovate, 5-15 mm. long, glabrous: fls. polygamous, without the ovary 1-1.3 cm. long; calyx-tube longer than the ovate lobes, deep pink; petals rose-purple; fr. subglobose, 3 mm. across. B.R.1269(c). N.H.13:16. S.H.2:f.285c-d. Mex. Intr. 1825.—*F. rosea* Ruiz & Pav. Upright shrub: lvs. ovate, 2-3 cm. long, acutish, rounded at base, entire; petiole 5-12 mm. long: fls. slender-stalked, usually several; calyx-tube about 1 cm. long; lobes lanceolate, about as long, reflexed, red, longer than the broad-ovate purple petals: fr. oblong. A.R.2:t.120(c). B.M.1024(c). (*F. lycioides* Andrews.) Chile. Intr. 1796.—*F. parviflora* Lindl. Suffrutescent, with ascending brs.: lvs. elliptic-ovate or ovate, 2-4 cm. long, acute to obtusish, entire, glabrous or slightly pubescent when young; petiole 0.5-1.5 cm. long: fls. slender-stalked; calyx-tube 5-6 mm. long, pink; lobes triangular-ovate, acuminate, 3-4 mm. long, finally reflexed; petals shorter than sepals, purple: fr. subglobose. B.R.1048(c). Mex. Cult. 1824.—*F. procumbens*

R. Cunningham. Prostrate shrub: lvs. ovate to orbicular-ovate, 1-1.8 cm. long, cordate, sinuate-dentate; petiole 1-2 cm. long: fls. solitary, erect, 1-1.5 cm. long, apetalous; calyx-tube orange-yellow; lobes ovate-oblong, shorter than tube, finally reflexed; anthers blue; style shorter than tube. B.M.6139(c). Gn.86: 607;88:324(h);90:48(h). Gs.6:171(h). N. Zeal. Intr. about 1855.

## Fam. 82. ARALIACEAE Vent. GINSENG FAMILY

Shrubs, trees or herbs, often prickly, sometimes climbing; stems usually with large pith: lvs. alternate, entire, lobed or compound; stipules present or wanting: fls. regular, small, perfect or unisexual, epigynous, usually in umbels often forming compound infl.; sepals minute or obsolete; petals 5, rarely more, valvate or imbricate, sometimes cohering at apex and falling off as a cap; stamens usually 5, inserted at the edge of the disk; ovary inferior, 2-15-celled; cells 1-ovuled; styles as many as carpels, often connate: fr. a drupe, rarely splitting into segments; seeds albuminous, with small embryo. Syn. *Hederaceae* Lindl.—About 50 genera and more than 500 species in the trop. and temp. regions of both hemispheres.

- A. Lvs. evergreen; stems unarmed.
  - B. Stems climbing by rootlets, rarely shrubby: styles connate: lvs. simple, usually 3-5-lobed .....1. *Hedera*
  - BB. Stems upright: styles 2-5, distinct or connate at base.
    - C. Lvs. palmately lobed; styles 5, distinct.
      - D. Lvs. usually 3-5-lobed: styles very short, upright.....1a. *Fatsihedera*
      - DD. Lvs. palmately 7-9-lobed, large: styles slender, divergent.....2. *Fatsia*
      - CC. Lvs. undivided or 3-lobed to 3-foliate: styles 2-4.....4. *Nothopanax*
  - AA. Lvs. deciduous: stems prickly, rarely unarmed.
    - B. Lvs. palmately lobed: styles 2.
      - C. Styles distinct; stems and petioles densely covered with slender prickles; shrubs.
        - 3. *Oplopanax*
      - CC. Styles connate beyond the middle; stems and brs. with stout conical prickles; tree .....5. *Kalopanax*
    - BB. Lvs. compound: styles 2-5.
      - C. Lvs. digitate: umbels solitary or few.....6. *Acanthopanax*
      - CC. Lvs. pinnate to 3-pinnate; umbels in large panicles.....7. *Aralia*

1. **HÉDERA** L. IVY. Evergreen shrubs climbing by aerial rootlets; winter-buds ovoid, with several outer scales: lvs. alternate, petioled, entire, coarsely dentate or lobed: fls. perfect, in terminal solitary or racemose umbels; pedicels not articulate; calyx 5-toothed; petals valvate, 5; stamens as many; ovary 5-celled; styles connate into a short column: fr. a 3-5-seeded berry-like drupe. (Ancient Latin name of the Ivy.) Five species in Eu., N. Afr. and Asia.

- A. Pubescence of young growth stellate, grayish.....1. *H. Helix*
- AA. Pubescence of young growth scaly.
  - B. Lvs. usually lobed, to 15 cm. long; scales with 15-20 rays, gray or yellowish.
    - C. Lvs. of sterile brs. with 2-5 lobes on each side: fr. yellow.....2. *H. nepalensis*
    - CC. Lvs. of sterile brs. usually 3-, rarely 5-lobed: fr. black.....3. *H. rhombea*
  - BB. Lvs. usually entire, to 25 cm. long, thickly coriaceous; scales yellow, with 20-25 rays: fr. black .....4. *H. colechica*

1. **H. Hélix** L. ENGLISH I. High climbing, to 30 m., or creeping: lvs. of sterile brts. 3-5-lobed, 4-10 cm. long, dark green above, often with whitish veins, pale or yellowish green beneath, those of flowering brts. ovate to rhombic, entire, rounded to truncate at base: umbels globose, usually several forming a raceme; peduncle slender; calyx, pedicels and tips of young brts. with grayish white stellate hairs with usually 5 or 6 rays: fr. black, globose, 6 mm. across. Fl.ix-x; fr.iv-v. R.I.23:t.138b(c). S.E.4:t.633(c). G.H.t.25(c). M.D. 1915:t.31(h);1920:t.15,16(h). Eu. to Caucas. Cult. since ancient times. Zone (V).—Many garden forms and several geographical varieties are known. The following are forms of the typical variety (var. *vulgaris* DC.): **H.H. báltica** Rehd., var. A small-leaved form hardly different from the type, but hardier.

Zone IV.—*H. H. arboréscens* Loud., var. Upright low shrub: lvs. ovate to elliptic, entire. (*H. arborea* Hort.) This form is produced by rooting cuttings from flowering brs.—*H. H. argénteo-variegata* West., var. Lvs. variegated or irregularly edged with white.—*H. H. aureo-variegata* West., var. Lvs. variegated with yellow or wholly yellow. Hibberd, Ivy: frontisp., p.62,t.f.6 (c). (*H. H. chrysophylla* Hibb.)—*H. H. marginata* Hibb. Lvs. broadly triangular-ovate, irregularly edged yellowish white, striped red or pink in autumn. F.E.31:318.—*H. H. tricolor* Hibb. Similar to the preceding, but edges of lvs. becoming red in autumn. (*H. H. marginata rubra* Hibb., *elegantissima* Hort., *Cullisi* Hort.)—*H. H. digitata* Loud., var. Lvs. rather large and broad, digitately lobed with 5 triangular-oblong lobes, sometimes with 2 small additional lobes at the truncate base. Gn.25:141;34:493.—*H. H. pedata* Hibb. Lvs. pedately 5-lobed, the middle lobe long and narrow, the lateral lobes much shorter, dark green with whitish veins. Gn.25:141;34:493; 59:154.—*H. H. sagittae-folia* K. Koch. Lvs. rather small, with triangular, pointed middle lobe and broad obtusish lateral lobes, deeply cordate at base, dull dark green.—*H. H. deltoidea* Hibb. Lvs. rather small, bluntly deltoid, almost entire, except 2 deep basal lobes. Gn.25:141;34:493. (*H. H. hastata* Hort.)—*H. H. minima* Hibb. Lvs. small, 1.5–3 cm. long, close-set, 3-lobed or pedately 5-lobed with short and spreading basal lobes, dull purplish brown in winter. Gn.59:154. M.G.1897:229(as var. *digitata*). (*H. H. donerailensis* Hort.)—*H. H. conglomerata* Nichols. Slow growing; lvs. crowded, small, entire or 3-lobed, undulate. R.H.1890:163.—*H. H. tortuosa* Hibb. Lvs. ovate or rhombic, entire or obscurely 3-lobed, more or less curled and twisted, more so during cold weather. Gn.55:336. Tobler, Hedera:28.

The following are geographical vars.: *H. H. hibernica* Kirchn. Lvs. larger and broader, 6–14 cm. across, of light color and thinner texture, with short and broad lobes, often subcordate at base, dark green; stellate hairs mostly with 8, sometimes 12 rays. (*H. H. scotica* Hort., *irlandica* Hort., *H. hibernica* Bean.)—*H. H. maculata* (Hibb.) Rehd., var. A form of the preceding with the lvs. spotted and striped yellowish white. (*H. hibernica* var. *m.* Bean, *H. grandifolia maculata* Hibb., *H. latimaculata* Hort., *H. latifolia maculata* Hort.)

*H. H. poetica* West., var. Lvs. broad-ovate, shallowly lobed, cordate, often undulate, bright or yellowish green, those of flowering brs. narrower, entire: fr. yellow. Tobler, Hedera: 38–42. (*H. H.* var. *chrysocarpa* Ten., *H. poetarum* Bertol., *H. chrysocarpa* Walsh.) S. E. Eu., Asia Minor.

*H. H. taurica* (Tobl.) Rehd., var. Lvs. narrow, usually sagittate with elongated middle lobe and 1 or 2 short spreading lobes on each side at base, usually undulate; rather more pubescent, the hairs with about 8 rays: fr. yellow. Tobler, Hedera: 43–46. (*H. poetarum* var. *t.* Tobl.) Crimea.

*H. H.* × *Fatsia japonica* = *Fatsihedera Lizei*; see p. 674.

Related species: *H. canariensis* Willd. High climbing; hairs with 12–20 rays: lvs. roundish-ovate, usually cordate, 5–15 cm. across, entire or with 5–7 short lobes, bright green: fr. larger. Jour. Bot. 3:t.32(c). Mo. Bot. Gard. Rep. 8:t.27. Tobler, Hedera:49. Gn.25:141;34:492,496. (*H. Helia* var. *c.* DC., *H. algeriensis*, *H. maderensis* and *H. azorica* Hort.) Canary Isls., Madeira, N. Afr. Cult. 1833, Zone VII?

2. *H. nepalensis* K. Koch. High climbing; hairs scale-like, with 15–20 rays, gray or yellowish: lvs. of sterile brts. triangular-ovate to triangular-oblong, 5–12 cm. long, pinnately lobed, with 2–5 obtusish teeth or lobes on each side, usually truncate at base, those of fertile brts. oblong-ovate to oblong-lanceolate, broad-cuneate at base, entire; petioles scaly: umbels few

to many on rather short stout peduncles: fr. yellow or red. R.H.1884:84,t (c). Tobler, Hedera: 69-74. (*H. himalaica* Tobl., *H. cinerea* Bean, *H. Helix* var. *aurantiaca* André, *H. Helix* var. *cinerea* Hibb.) Himal., Assam to Afghan. and Punjab. Cult. 1880. Zone VII?—*H. n. sinénsis* (Tobl.) Rehd., var. Lvs. of sterile shoots entire or 3-lobed, those of fertile brts. elliptic-ovate to elliptic-lanceolate. Tobler, Hedera: 81-83. (*H. himalaica* var. *s.* Tobl., *H. s.* Hand.-Mazz.) China. Intr. ?

3. *H. rhómbea* (Miq.) Bean. High climbing; hairs scale-like, with 15-20 rays, yellow or yellowish: lvs. of sterile brts. triangular-ovate to broad-ovate, 2-5 cm. long, 3-lobed, rarely 5-lobed, with obtuse lobes, truncate to cordate, those of fertile brts. ovate or rhombic-ovate to oblong-ovate, 5-10 cm. long, rounded to broad-cuneate at base: umbels racemose on slender peduncles; apex of ovary elevated; calyx-limb obsolete: fr. small, black. N.K.16:t.14,15. Tobler, Hedera: 86-88. (*H. Helix* var. *rhómbea* Miq., *H. japonica* Tobl., not Jungh., *H. Tobleri* Nakai.) Japan, Korea. Cult. 1867? Zone VI?

4. *H. cólchica* K. Koch. High climbing; hairs scale-like, yellow, with 20-25 rays: lvs. broad-ovate to elliptic or on flowering brts. oblong-ovate, 10-25 cm. long, cordate or rounded at base, entire, rarely slightly lobed, dark green, thick and leathery: calyx-lobes triangular-ovate, conspicuous: fr. black. Gt.11:t.360. Tobler, Hedera: 58-66. Gn.25:141;34:492;86:448(h). (*H. Helix* var. *c.* K. Koch, *H. Roegneriana* Hort., *H. coriacea* Hibb.) Asia Minor, Cauc. to Persia. Cult. 1860. Zone (V).—*H. c. arboréscens* Paul. Of shrubby habit. Gn.W.20:467.—*H. c. dentata* Hibb. Lvs. with remote small teeth, of somewhat thinner texture. G.M.30:388;54:318. (*H. Helix* var. *dentata* Reg.)

1a. × **FATSHÉDERA** Guillaum. (*Hedera* × *Fatsia*). Evergreen upright shrub with long-petioled 3-5-lobed lvs.: fls. in large terminal panicles; styles 5, very short.

**F. Lizei** (Cochet) Guillaum. (*H. Helix* × *F. japonica*.) Shrub to 2.5 m. or more; stems rusty-pubescent when young: lvs. usually 3-5-lobed, 8-18 cm. long and to 28 cm. across, glabrous, lobes triangular-ovate, entire or sparingly toothed; petiole 4-12 cm. long, usually with 2 stipular subulate appendages at the enlarged base: infl. pubescent; anthers sterile; styles about 1 mm. long, upright. B.M.9402(c). R.H.1912:568;1924:179(h). G.C. 86:423;88:489. (*Aralia* L. Cochet.) Orig. 1911. Zone VII.

2. **FÁTSIA** Dcne. & Planch. Evergreen shrub or small tree, unarmed: lvs. large, deeply palmately 7-9-lobed, exstipulate; petiole enlarged at base: fls. perfect or polygamous, 5-merous, in umbels forming large terminal panicles; pedicels slightly articulate; disk broad-conical; styles 5, diverging, filiform, with small capitate stigma: fr. subglobose, black, fleshy; seeds flattened; albumen solid. (From Fatsi, an incorrect transliteration of its Japanese name.) One species in Japan.

**F. japónica** (Thunb.) Dcne. & Planch. Shrub or tree to 5 m., glabrous; stems stout: lvs. leathery, 7-9-lobed, usually broader than long, 15-35 cm. across, cordate, divided beyond the middle into oblong-ovate, acuminate, serrate lobes with rounded sinuses, dark lustrous green above, paler beneath; petiole usually 10-30 cm. long: fls. white, in umbels 3-4 cm. across, pedicels 1-1.5 cm. long: fr. about 8 mm. across. Fl.x-xii. S.I.2:57(c). B.M.8638(c). G.C.29:217(h). (*Aralia* j. Thunb.) Japan. Intr. 1838. Zone VII. There are some horticultural varieties probably more tender.

3. **OPLÓPANAX** Miq. Deciduous shrubs, prickly throughout; winter-buds with several outer scales: lvs. alternate, long-petioled, palmately 5-7-lobed, exstipulate: fls. greenish white, in umbels forming terminal panicles; pedicels not articulate; calyx-teeth indistinct; petals 5, valvate; stamens 5; styles, 2, distinct: fr. a compressed drupe; albumen solid. (Greek *hoplon*, weapon, and *panax*; referring to the plant being armed with prickles.) Syn.: *Echinopanax* Dene. & Planch. Three species in W. N. Am. and E. Asia.

**O. hórridus** (Sm.) Miq. DEVL'S CLUB. Shrub to 4 m. with upright stems densely furnished like the petioles and infl. with slender prickles: lvs. orbicular-ovate, 15-25 cm. across, 5-7-lobed, incisely lobulate and sharply serrate, prickly on both sides, glabrous and bright green above, slightly villous beneath: panicle pubescent, 8-15 cm. long: fr. broad-ellipsoid, 8 mm. long, scarlet. Fl.vii-viii; fr.viii-ix. B.M.8572(c). Gs.2:195(h). (*Panax* h. Sm., *Fatsia horrida* S. Wats., *Echinopanax horridum* Dene. & Planch.) Alaska to Calif. Intr. about 1829. Zone V. Ornamental shrub with large bright green lvs. and conspicuous scarlet fr.

Closely related species: **O. elátus** (Nakai) Nakai. Lvs. larger, lobes not lobulate or with 1 small lobe on each side of the middle lobe, closely doubly serrate, setose-pilose on the veins and veinlets beneath. J.C.26,1:t.15. N.K.16:t.11. Korea. Intr. 1917. Zone V.—**O. japónicus** (Nakai) Nakai. Lvs. sometimes peltate, more deeply incised, conspicuously ciliate, with long-acuminate lobes and lobules; pedicels slenderer, in fr. up to 1 cm. long. Japan. Intr. 1915. Zone V.

4. **NOTHÓPANAX** Miq. Evergreen unarmed shrubs or trees, glabrous or nearly so: lvs. digitate or simple and often lobed, slender-petioled, exstipulate or with small appendages at base: fls. 5-merous, in solitary, racemose or paniculate umbels; calyx-limb nearly entire or 5-toothed; petals valvate; ovary 2-, rarely 3-4-celled; styles distinct or connate at base: fr. flattened, rarely subglobose; seeds flattened, with solid albumen. (Greek *nothos*, false, hybrid and *panax*; referring to intermediate character of the genus.) About 15 species chiefly in Australasia, few in China.

**N. Dàvidi** (Franch.) Harms. Shrub or tree to 6 m., glabrous: lvs. coriaceous, simple, oblong-oval to oblong-lanceolate, 6-15 cm. long, long-acuminate, rounded or broad-cuneate at the 3-nerved base, remotely serrate, sometimes deeply 3-lobed to 3-parted or 3-foliolate, with sessile, narrow-lanceolate lfts.; petiole 5-15 cm. long: umbels about 2.5 cm. across forming panicles to 18 cm. long; calyx minutely 5-toothed; styles 2, connate about  $\frac{1}{2}$ , diverging above: fr. flattened, 5-6 mm. across, black. Fl.vii-viii; fr.ix-x. R.H. 1919:212. J.L.56:78(h). (*Panax* D. Franch. *Acanthopanax diversifolius* Hemsl.) C. and W. China. Intr. 1907. Zone VII. Handsome evergreen shrub.

5. **KALÓPANAX** Miq. Deciduous tree; brs. stout, armed with short broad-based prickles; winter-buds with 2 or 3 outer scales, glabrous, the terminal broadly conic-ovoid: lvs. palmately lobed, serrulate, long-petioled; infl. terminal, large, consisting of many racemes with 2-8 slender-stalked umbels: fls. slender-stalked, 5-merous, perfect; pedicels not articulate; calyx-limb minutely 5-toothed; petals valvate; disk convex; fr. a 2-seeded drupe; albumen solid. (Greek *kalos*, handsome, and *panax*.) One species in E. Asia.

**K. pictus** (Thunb.) Nakai. Sparingly branched tree to 30 m.; brs. with numerous stout prickles; lvs. suborbicular, 9-25, sometimes to 35 cm. across, 5-7-lobed with broadly triangular-ovate to oblong-ovate acuminate serrate lobes, dark green above and glabrous or nearly so, light green beneath and

usually slightly pubescent when young: petiole 8-50 cm. long: umbels forming a large compound terminal inflorescence 20-30 cm. across; pedicels 5-10 mm. long; fls. white; stamens longer than petals: fr. subglobose, 4 mm. across, bluish black, crowned by the slender style. Fl.vii-viii; fr.ix-x. S.I.2:t.56(c). M.K.t.78(c). N.K.16:t.8-10. M.D.1913:145;1918:t.5,6&8a(h). B.C.1:192. (*K. ricinifolium* Miq., *Acanthopanax* r. Seem., *K. septemlobus* Koidz.) China, Manch., Korea, Japan. Intr. about 1865. Zone IV. Tree of striking subtropical appearance.—*K. p. magnificus* (Zab.) Nakai, var. Brts. nearly unarmed or with few prickles: lvs. with ovate lobes, pubescent beneath. M.D.1918:t.5,j,k,t.8b(h). (*Acanthopanax acerifolius* Schelle.)—*K. p. Maximowiczii* (Vanh.) Hara, var. Lvs. 5-7-lobed beyond the middle, lobes oblong-lanceolate, pubescent beneath. F.S.20:t.2067(h,c). M.G.34:164(h). M.D. 1915:t.8(h);1918:t.5,e,7&8(h). (*Aralia* M. Vanh.) Japan. Cult. 1874. Zone V.

6. **ACANTHOPANAX** Miq. Deciduous, rarely evergreen trees or shrubs, usually sparingly branched and prickly, rarely unarmed; winter-buds ovoid with several outer scales: lvs. alternate, slender-petioled, digitate, only occasionally entire, exstipulate: fls. perfect or polygamous, in terminal umbels usually few or solitary or forming large terminal panicles; pedicels slightly or not articulate; calyx-teeth minute; petals 5, rarely 4, valvate; stamens as many; ovary 2-5-celled; styles 2-5, connate or free: fr. a 2-5-seeded black drupe; albumen solid. (Greek *acanthos*, spine, and *panax*; referring to the prickly nature of most of the species.) About 20 species in E. Asia and Himal.—Ornamental shrubs with handsome rather large lvs.

- A. Styles 5, connate into a column.....Sect. **ELEUTHEROCOCCUS** (Maxim.) Harms.
- B. Brts. glabrous and smooth, with slender usually reflexed prickles; peduncles glabrous, usually slender.
- C. Lfts. glabrous or pubescent, not setose.
- D. Lvs. 5-foliolate, or only partly ternate.
- E. Brts. usually densely furnished with slender, bristle-like prickles, light yellowish brown .....1. *A. senticosus*
- EE. Brts. with few usually reflexed prickles, greenish.....2. *A. leucorrhizus*
- DD. Lvs. 3-foliolate, rarely a few 4-5-foliolate.....3. *A. setchuensis*
- CC. Lfts. on both sides with bristles or setose hairs, usually 5; brts. yellowish or brownish .....4. *A. Simoni*
- BB. Brts. rough-pubescent at first, later glabrous and slightly rough, light yellowish gray, with short conical prickles: peduncles stout, pubescent.....5. *A. Henryi*
- AA. Styles 2-5, divided at least at apex.
- B. Brs. prickly.
- C. Fls. subsessile or on short pubescent pedicels 3-10 mm. long: styles 2.
- D. Lfts. usually 5, rough-pubescent beneath.....Sect. **CEPHALOPANAX** Baill.
- DD. Lfts. usually 3, glabrous or nearly so.....6. *A. divaricatus*
- CC. Fls. slender-pedicled; pedicels glabrous; styles 2-5.....7. *A. sessiliflorus*
- D. Lfts. usually 5: umbels usually solitary; styles usually 5.
- E. Umbels at end of elongated leafy brts. on short peduncles: brts. usually with numerous bristly prickles.....8. *A. Giraldui*
- EE. Umbels on short lateral spurs, on slender peduncles 4-6 cm. long: brts. with few short stout prickles.....9. *A. Sieboldianus*
- DD. Lfts. 3, 2-4 cm. long: umbels 4-7 at end of brts., rarely solitary; styles 2.
- .....Sect. **ZANTHOXYLOPANAX** Harms.
- 10. *A. ternatus*
- BB. Brs. unarmed: umbels in large terminal panicles; styles 2, connate.
- .....Sect. **SCIADOPHYLLOIDES** Harms.
- 11. *A. sciadophylloides*

1. **A. senticosus** (Maxim.) Harms. Shrub to 5 m., with upright sparingly branched stems, usually densely covered with slender bristles or prickles: lfts. 5, sometimes 3, short-stalked, elliptic-obovate to oblong, 6-12 cm. long, short-acuminate, cuneate, sharply and doubly serrate, dark green and with scattered hairs above, light green beneath and brownish pubescent

on the veins when young; petiole slender, 6-12 cm. long; umbels globose, many-fl., 3-4 cm. across, 1 or few on slender peduncles 5-7 cm. long; pedicels 1-2 cm. long; fls. purplish yellow: fr. subglobose, 8 mm. across. Fl.vii; fr.x. Gt.12:t.393. S.H.2:f.290a(l). S.L.69(h). M.D.1918:t.1(h). (*Eleutherococcus* s. Maxim.) N. China, Manch. Intr. about 1860. Zone II.—*A. s. inférnis* Komar., var. Brts. without or few prickles: lvs. and umbels larger.

2. *A. leucorrhizus* (Oliv.) Harms. Shrub to 4 m.; brts. yellowish green, with scattered or below the petiole with several reflexed slender prickles or nearly unarmed: lfts. 3-5, short-stalked, oblong-lanceolate, 5-10 cm. long, acuminate, cuneate, sharply and doubly serrate, glabrous; petiole 3-7 cm. long; umbels several or solitary, 4-5 cm. across, on slender stalks 5-10 cm. long; pedicels 1-2 cm. long, glabrous; fls. greenish: fr. globose-ovoid, 6 mm. long. Fl.vii; fr.x. B.M.8607(c). G.C.64:176. B.S.1:130. (*Eleutherococcus* l. Oliv.) C. and W. China. Intr. 1901. Zone V.—*A. l. fulvescens* Harms & Rehd., var. Lfts. 3-5, scabrous above, fulvous-pubescent on the veins beneath, usually simply serrate. C. and W. China. Intr. 1908.—*A. l. scabérulus* Harms & Rehd., var. Lfts. always 5, smaller and narrower, usually oblong-obovate, doubly serrate, pubescent beneath and setose on the midrib and petiole. C. and W. China. 1907.

3. *A. setchuenénsis* Harms. Upright shrub to 3 m.; brts. yellowish, with few nearly straight prickles: lfts. 3, stalked, oblong-obovate, 5-12 cm. long, long-acuminate, broad-cuneate or nearly rounded at base, remotely serrulate or serrate-dentate to nearly entire, dark green above, glaucescent beneath, glabrous; petiole 4-10 cm. long; umbels 3-7, about 3 cm. across, on peduncles 1-3 cm. long, the middle one sometimes to 10 cm. long; pedicels 6-20 mm. long: fr. black, broad-ellipsoid, 6-8 mm. long, crowned by the short style. Fl.vi; fr.x. M.D.1918:t.2g-k. Gn.85:606. W. China. Intr. 1904. Zone VI.

4. *A. Simòni* (Dcne.) Schneid. Shrub to 3 m.; brts. greenish, smooth, with several stout slightly reflexed prickles below the petioles: lfts. 5, short-stalked, oblong to oblanceolate, the middle one 8-12 cm. long, the lateral ones much smaller, acuminate, cuneate, sharply and doubly serrate, bristly on both sides, bright green; petiole 5-7 cm. long, often with slender prickles: umbels several, on peduncles 1-5 cm. long; pedicels 4-10 mm. long: fr. 6 mm. across. Fl.vii; fr.x. G.C.38:404(as *A. leucorrhizus*). S.H.2:f.290c(l). M.G.25:25(h). M.D.1913:272;1918:t.1(h). S.L.71(h). (*Eleutherococcus* S. Dcne.) C. China. Cult. 1900. Zone V.

5. *A. Hénryi* (Oliv.) Harms. Shrub to 3 m.; brts. rough-pubescent when young, becoming light yellowish gray, with stout often slightly recurved prickles: lfts. 5, nearly sessile, obovate to oblong, 3-6 cm. long, narrowed toward the ends, serrulate, scabrid above, pubescent beneath; petiole 4-7 cm. long, scabrous: umbels usually several, on stout pubescent stalks 1-3 cm. long, rarely longer; pedicels 8-15 mm. long, slightly pubescent or glabrous: fr. black, globose-ellipsoid, 8 mm. long, crowned by the slender style. Fl.viii-ix; fr.x. B.M.8316(c). H.I.1718. G.C.38:402. M.D.1913:272;1918:t.7(h). S.L.70(h). (*Eleutherococcus* H. Oliv.) C. China. Intr. 1901. Zone V.

6. *A. divaricatus* (Sieb. & Zucc.) Seem. Shrub to 3 m., with spreading brs.; brts. glabrous or pubescent, with often paired prickles often recurved at apex: lfts. 5, sessile or short-stalked, oblong-obovate to broad-oblanceolate, 4-12 cm. long, acute or short-acuminate, cuneate, simply or doubly serrate, sparingly pubescent above, villous-pubescent beneath, rarely nearly glabrous; petiole 3-8 cm. long, sometimes prickly: umbels usually 3-7, dense, on rather short pubescent peduncles; pedicels 4-10 mm. long, pubescent: ovary 2-

celled; style slender, slightly 2-lobed: fr. black, subglobose, 6-7 mm. across. Fl.viii; fr.ix-x. S.I.2:t.58(c). S.H.2:f.289o-r,290h. Japan. Cult. 1903. Zone V.

Related species: *A. lasiogyne* Harms. Shrub to 6 m.; brts. light gray: lfts. 3, subsessile, obovate to oblong or oblong-obovate, 4-6 cm. long, acute to acuminate, cuneate, entire or sparingly serrate above the middle, glabrous: petiole 1.5-6 cm. long, glabrous: umbels short-stalked; pedicels 5-7 mm. long, pubescent; ovary woolly; styles 2, connate at base. M.D.1918:t.2a-f. W. China. Intr. 1910. Zone VII?

7. *A. sessiliflorus* (Rupr. & Maxim.) Seem. Shrub to 4 m. with spreading brs., with few short prickles or unarmed: lfts. 3, sometimes 5, very short-stalked, oblong-obovate or obovate to oblong-oblancheolate, 6-15 cm. long, acuminate, cuneate, irregularly serrate, nearly glabrous or sometimes scabrid; petiole 3-6 cm. long: fls. dull purplish, nearly sessile in globose dense heads on short pubescent peduncles, usually several at end of brts.: fr. black, broad-ellipsoid, 10-14 mm. long, in a globose head 3-4 cm. across. Fl.vii-viii; fr. ix-x. Gt.II:t.369. G.C.III.22:339. G.W.8:115,t. N. China, Manch., Korea. Intr. about 1860. Zone II.—*A. s. parviceps* Rehd., var. Lower: lfts. elliptic, 5-9 cm. long, acute, less distinctly serrate: umbels 1 or few, less than 3 cm. across; fr. ovoid, 1 cm. or less long. N. China. Intr. 1881.

8. *A. Giraldii* Harms. Shrub to 3 m.; brts. densely furnished with bristle-like spreading or reflexed prickles: lfts. 3-5, sessile, obovate to oblong or oblanceolate, 3-7 cm. long, acute or acuminate, cuneate, doubly serrate, glabrous, or sparingly setose when young; petiole 3-6 cm. long, glabrous, often bristly: umbels usually solitary, on glabrous peduncles 5-20 mm. long; fls. greenish: fr. subglobose, 8 mm. across, crowned by the short style divided nearly to the middle into 5 spreading lobes. M.D.1918:t.3a-h. Fl. vii-viii; fr.ix. C. and N. China. Intr. 1912. Zone V.—*A. G. inermis* Harms & Rehd., var. Brts. unarmed or nearly so, slightly rough. C. China. Intr. 1908.

9. *A. Sieboldianus* Mak. Spreading shrub to 3 m., with slender arching brs. unarmed or with few compressed prickles: lvs. partly fascicled on short spurs; lfts. 5-7, subsessile, obovate to oblong-obovate, 2-3.5 cm. long, acute, cuneate, crenate-serrate, glabrous; petiole 3-8 cm. long, glabrous: fls. dioecious, greenish white, in umbels 2-2.5 cm. across, solitary on a slender stalk 5-10 cm. long borne on short lateral spurs; styles 5, connate nearly to the apex: fr. black, subglobose, 6-8 mm. across (not seen in cult. owing to the absence of the staminate plant). Fl.vi-vii. S.H.2:f.289k-n;290d-e. B.C.1:193(l). (*A. pentaphyllum* March., *A. spinosus* Hort., not Miq., *Aralia pentaphylla* Sieb. & Zucc., not Thunb., *Eleutherococcus japonicus* Nakai, not *A. japonicus* Franch. & Sav.) Japan. Cult. 1859. Zone IV.—*A. S. variegata* (Nichols.) Rehd., f. Lvs. edged white. F.S.20:t.2079(c). (*Aralia pentaphylla variegata* Nichols.).

Related species: *A. spinosus* Miq. Lfts. often sparingly appressed-setose above, thinner; peduncles shorter than petioles; styles 2, nearly distinct. S.H. 2:f.290f-g. Japan. Intr. ?

10. *A. ternatus* Rehd. Shrub to 2 m.; brs. gray or grayish brown, with few stout straight spines usually in pairs below the petiole or unarmed: lfts. 3, subsessile, elliptic-ovate or rhombic-elliptic, 2-4 cm. long, short-acuminate to acutish, cuneate, entire or sparingly dentate, lustrous on both sides, glabrous, thickish; petiole 1-2.5, rarely to 4 cm. long: umbels usually 4-7, rarely solitary, on peduncles 1-1.5 cm. long; style 2, distinct: fr. subglobose, compressed, 6-7 mm. across, black-purple. Fl.x; fr.x-xi. W. China. Cult. 1910. Zone V.

Related species: *A. trifoliatum* (L.) Voss. Scandent shrub to 7 m., prickles recurved: lfts. 3, stalked, elliptic-ovate to elliptic-oblong, 4-8 cm. long, acuminate, cuneate, serrulate; petiole usually prickly: umbels 3-10, terminal; peduncles 2-7 cm. long, slender; styles 2 connate to the middle. L.B.10:t.977(c). (*A. aculeatum* Witte.) E. Himal., China, Philipp. Intr. 1773. Zone VII.

11. *A. sciadophylloides* Franch. & Sav. Shrub or tree to 12 m.; brts. glabrous, slender, unarmed: lfts. 5, rarely 3 or 4, stalked, obovate or elliptic to oblong, 10-22 cm. long, short-acuminate, cuneate to rounded at base, crenate-serrate and ciliate, glabrous or with axillary tufts of hairs beneath; petiole 7-25 cm. long: umbels in large and loose glabrous panicles; pedicels 4-10 mm. long: fr. subglobose, bluish black. Fl.viii-ix; fr.x-xi. S.I.2:t.55(c). M.K.t.79(6). M.D.1918:t.4g-l. S.H.2:f.289s-u,291e. (*Kalopanax* s. Harms.) Japan. Intr. 1905. Zone VII?

7. *ARALIA* L. Herbs or deciduous shrubs or trees: brts. with large pith, armed with stout prickles; winter-buds with few outer scales: lvs. alternate, petioled, pinnate to thrice pinnate, estipulate: fls. in umbels forming usually large terminal panicles; pedicels articulate; calyx-lobes minute; petals imbricate; stamens 5; ovary 5-, rarely 2-celled: styles free or connate only at base: fr. a small berry-like drupe, with 2-5 compressed stones. (Name of uncertain derivation.) About 20 species in N. Am., Asia, Malaya and Australia.

A. Prickles stout: tall shrubs or trees, with large much compound infl.

B. Veins of lfts. curving before reaching the margin; lfts. distinctly stalked...1. *A. spinosa*

BB. Veins straight, ending in the teeth; lfts. subsessile or short-stalked.

C. Infl. with elongated main axis: lfts. rather closely serrate.....2. *A. chinensis*

CC. Infl. with short main axis and subumbellate spreading secondary axes: lfts. rather coarsely or remotely serrate.....3. *A. elata*

AA. Prickles slender, bristly: low suffrutescent plants: infl. with few or several umbels.

4. *A. hispida*

1. *A. spinosa* L. HERCULES' CLUB. Tree to 15 m. with very prickly stems: lvs. 40-80 cm. long, bipinnate, usually prickly above; lfts. ovate, 5-8 cm. long, acuminate, serrate with small usually accumbent teeth, glaucous and nearly glabrous beneath; petiole to 25 cm. long: fls. small, whitish, in large pubescent panicles 20-35 cm. long, with elongated main axis, 1-3 at end of the brs.; pedicels 3-10 mm. long: fr. globose, about 6 mm. across, black. Fl.viii; fr.ix-x. S.S.5:t.211. Gn.50:126;75:19(h). (ANGELICA-TREE, DEVIL'S WALKING-STICK.) S. Pa. and s. Ind. and e. Iowa to Fla. and e. Tex. Intr. 1688. Zone IV.

2. *A. chinensis* L. CHINESE ANGELICA-TREE. Shrub, rarely tree to 8 m., similar to the preceding, less prickly: lvs. 40-80 cm., bipinnate, unarmed or with few prickles: lfts. ovate or broad-ovate, 5-10 cm. long, rather closely serrate with small, often accumbent teeth, pubescent and paler beneath, the veins dividing before reaching the margin and ending in the teeth: fls. in an elongated usually solitary pubescent panicle 25-40 cm. long; umbels on axes of the 2d to 4th order: fr. about 3 mm. across. China. Intr. ?—*A. c. nuda* Nakai, var. Lfts. glaucescent and glabrous beneath except sparingly pubescent along midrib: panicle puberulous; main axis glabrescent. Intr. 1919. Zone (V)?

3. *A. elata* (Miq.) Seem. JAPANESE ANGELICA-TREE. Shrub or tree to 15 m.; stems usually prickly: lvs. 40-80 cm., sometimes over 1 m. long, bipinnate; lfts. ovate or elliptic-ovate to narrow-ovate, 6-12 cm. long, acuminate, serrate with rather broad teeth or remotely serrulate, dark green above, glaucescent beneath and slightly pubescent on the veins when young: fls. in a broad corymbose infl. consisting of a short main axis with several subumbellate spreading brs. 30-45 cm. long, pubescent; umbels on axes of the 3d to 5th order. Fl.viii; fr.ix-x. S.I.2:t.55(c). B.S.1:198. G.C.78:269. G.W.5:509(h).

B.C.1:344(h). (*A. chinensis* var. *mandshurica* (Maxim.) Rehd., *A. chinensis* var. *canescens* Koehne, not Franch. & Sav., *Dimorphanthus elatus* Miq., *D. mandshuricus* Maxim., *A. japonica* Hort.) N. E. Asia. Intr. 1830. Zone III. Like *A. spinosa* of striking appearance with its spiny stems, large bold lvs. surmounted by ample clusters of white fls. in late summer.—*A. e. variegata* (Rehd.) Nakai, f. Lfts. irregularly bordered with white. G.C.31:231;60:245 (h). (*A. chinensis* var. *albo-marginata* Bean.)—*A. e. aureo-variegata* (Rehd.) Nakai, f. Lfts. variegated or irregularly margined with yellow. (*Dimorphanthus mandshuricus elegantissimus* fol. var. Hort.)—*A. e. pyramidalis* (Bean) Rehd., f. Of fastigiate habit with erect brs.: lvs. shorter, less spreading; lfts. smaller, pubescent on the veins beneath when young. (*A. e. f. fastigiata* Rehd.) Cult. 1917.—*A. e. canescens* (Franch. & Sav.) Nakai, var. Lfts. densely grayish or yellowish pubescent beneath. (*A. spinosa* var. *c.* Franch. & Sav.) Japan. Tenderer.

4. *A. hispida* Vent. BRISTLY SASSAPARILLA. Subshrub to 1 m.; stems woody up to 25 cm.; root-stock creeping; lvs. bipinnate; lfts. ovate or elliptic to oblong, 2-7 cm. long, acute, rounded or broad-cuneate at base, sharply and irregularly serrate, glabrous or pubescent on the veins beneath: umbels on slender peduncles, 3 or more in a terminal loose corymb; fls. white: fr. subglobose, 6-8 mm. across, purple-black. Fl.vi-vii: fr.viii-ix. B.M.1085(c). L.B.1306(c). Nfd. to N. C., w. to Minn. and Ind. Cult. 1788. Zone III.

Related species: *A. nudicaulis* L. Root-stock creeping; the upright woody stem rarely 10 cm. long, usually with 1 or few lvs. 20-30 cm. high, with three 3-5-foliolate divisions; lfts. elliptic to ovate, 5-12 cm. long, acuminate, serrulate: umbels 2 or 3. Fl.v-vi. B.B.2:506. Nfd. to N. C., w. Man. and Mo. Intr. 1731. Zone III.

### Fam. 83. UMBELLIFERAE Juss. PARSLEY FAMILY

Herbs, rarely shrubs, containing a volatile oil or balsam; stem usually hollow: lvs. alternate, usually pinnately or ternately compound, rarely simple, exstipulate: fls. small, perfect, regular or the outer fls. irregular, epigynous, in simple or compound umbels; calyx-limb minute; petals 5, valvate; stamens 5, inserted at the margin of the epigynous disk; ovary inferior, 2-celled; cells 1-ovuled; styles 2: fr. consisting of 2 dry winged or ribbed achenes with oil-ducts, separating from each other at maturity but remaining attached at the top to a slender Y-shaped carpophore; seed albuminous; embryo straight. Syn.: *Amiaceae* Presl.—About 230 genera and 1500 species in boreal, temp. and subtrop. regions.

**BUPLEÛRUM** L. Herbs or shrubs: lvs. simple, entire, often perfoliate: fls. yellow or yellowish green, in compound umbels; calyx-limb without teeth; petals suborbicular, entire and strongly involute; stylopodium depressed: fr. oblong, compressed; achenes with 5 slender, wing-like ribs. (Ancient Greek name of an umbelliferous plant.) About 75 species in Eu., Asia and Afr., 1 in N. Am.

**B. fruticosum** L. Evergreen or half-evergreen upright glabrous shrub to 2.5 m., with slender brs. purplish when young: lvs. subsessile, narrow-elliptic to oblong-obovate, 5-8 cm. long, mucronate, cuneate, entire, bluish green, leathery: fls. yellow, small, in terminal slender-stalked umbels 7-10 cm. across, with a reflexed involucre at base, the umbellets also with reflexed involucres. Fl.vii-viii. E.N.III.8:180. S.F.t.263(c). B.C.1:600. S. Eu. Intr. about 1600. Zone VII. The only shrubby representative of Umbelliferae hardy within our area.

## Fam. 84. CORNACEAE Lk. DOGWOOD FAMILY

Trees or shrubs, rarely herbs: lvs. opposite, or alternate, entire, rarely toothed or lobed, exstipulate, rarely stipulate: fls. perfect, rarely unisexual, regular, epigynous; sepals 4, rarely 5, minute or wanting; petals 4, rarely 5, usually valvate; stamens as many, inserted on the margin of the usually present epigynous disk; ovary inferior, usually 2-celled, rarely 3-5-celled; ovules solitary, pendulous; style short: fr. a drupe or berry; seeds albuminous, with straight usually small embryo.—Ten genera with about 90 species in the temp. and subtrop. regions of the n. hemisphere, few in the s. hemisphere.

- A. Fls. borne on the upper surface of the lvs.: lvs. alternate, deciduous.....1. *Helwingia*  
 AA. Fls. axillary or in a terminal inf.: lvs. usually opposite.  
 B. Lvs. evergreen; fls. polygamous, in terminal panicles.....2. *Aucuba*  
 BB. Lvs. deciduous; fls. perfect, in corymbs or umbels.....3. *Cornus*

1. **HELWÍNGIA** Willd. Deciduous shrubs; winter-buds small, with few outer scales: lvs. alternate, petioled, serrate; petiole sometimes with stipular appendages: fls. dioecious, small, 3-5-merous, usually 4-merous, in fascicles on the upper surface of the lvs.; calyx-limb obsolete; petals triangular-ovate, valvate; staminate fls. without or with rudimentary styles in the middle of the large disk; pistillate fls. without stamens or staminodes, with a short style with 3-5 thick subulate stigmas; ovary 3-5-celled: fr. a berry-like drupe with 1-4 stones. (After G. A. Helwing, a German clergyman and botanical author; 1666-1748.) Three species in E. Asia and Himal.

**H. japónica** (Thunb.) F. G. Dietr. Bushy shrub to 1.5 m. with slender green glabrous brts.: lvs. ovate, 3-7 cm. long, acuminate, broad-cuneate, serrulate with bristle-like teeth from near the base, glabrous and bright green on both sides; petiole 1-2.5 cm. long, sometimes with subulate branched small stipules: fls. greenish white, staminate 10-20, short-stalked; pistillate 1-3, subsessile: fr. subglobose, 6 mm. across, black. Fl.vi; fr.viii. S.I.2:t.58(c). S.Z.1:t.68(c). E.P.IV.229:35. A.G.13:8. S.L.192(h). (*H. rusciflora* Willd.) China, Japan. Intr. about 1830. Zone (V). Interesting on account of the position of the fls.

Related species: **H. chinénsis** Batal. Shrub to 2 m.: lvs. ovate-lanceolate to linear-lanceolate, to 12 cm. long, acute, cuneate, with short suberect teeth, entire toward the base: staminate fls. on pedicels 7-25 mm. long. E.P.IV.229:36. W. China. Intr. 1910? Zone VII?

2. **AUCÚBA** Thunb. Evergreen shrubs with stout terete forked brs.: lvs. opposite, petioled, serrate or entire: fls. dioecious, small, purplish, in terminal panicles; pedicels short, with 2 bractlets; calyx minute, 4-toothed; petals 4, ovate to lanceolate, valvate; staminate fls. with 4 stamens and a large 4-angled central disk, without rudimentary ovary; filaments short; pistillate fls. with an inferior, 1-celled and 1-ovuled ovary; style short, thick, with an oblique capitate stigma, without stamens: fr. a 1-seeded berrylike drupe; seed albuminous with the minute embryo at the top. (Name latinized from the Japanese Aokiba.) Three species in E. Asia and Himal.

**A. japónica** Thunb. JAPANESE AUCUBA. Stout shrub to 5 m.: brts. thick, glabrous, green: lvs. elliptic-ovate to elliptic-lanceolate, 8-20 cm. long, acute to acuminate, with an obtusish apex, broad-cuneate at base, remotely coarsely dentate, lustrous green on both sides; petiole 1-5 cm. long: fls. about 8 mm. across; petals short-acuminate; the staminate fls. in panicles about 5-10 cm. long, rather densely strigillose; the pistillate infl. shorter, rather sparingly strigillose or nearly glabrous: fr. short-ellipsoid, 1.2-1.5 cm. long, scarlet, in

dense panicles 5-8 cm. long. Fl. III-IV; fr. XI(-III). B.M.5512(c). S.I.2:t.59(c). Gt.25:t.859(c). I.H.11:t.399(c). E.P.IV.229:39. Am. For. 28:103(h). Japan. Intr. first in 1783 in its variegated form and in 1861 in its normal green form distinguished as *A. j. cóncolor* Reg., var. (*A. j. viridis* Hort.). Zone VII.—The best known form is *A. j. variegata* D'Ombr., not Reg. GOLDEN-DRUSTREE. Lvs. with numerous small yellow spots. B.M.1197(c). F.M.5:t.277(c). R.H.1866:t.292(c). Gs.2:280(h). (*A. j.* var. *maculata* Reg., *A. j. punctata* Hort.)—*A. j. picturata* T. Moore. Lvs. ovate-oblong with a large irregular blotch in the middle and smaller yellow dots around it. F.M.10:t.527(c). F.W.1876:353. (*A. j. latimaculata* Kirchn., *A. j. picta* Bull., *A. j. aureo-maculata* D'Ombr.)—*A. j. limbata* Bull. Lvs. large, coarsely dentate, with a greenish yellow margin.—*A. j. dentata* Carr. Lvs. smaller, elliptic, with few coarse teeth on each side near apex.—*A. j. longifolia* T. Moore. Lvs. narrow-oblong-lanceolate, 8-12 cm. long, green. (*A. j.* var. *angustifolia* Reg., *A. j.* var. *salicifolia* Bean.)—*A. j. luteo-carpa* (D'Ombr.) Rehd., var. Lvs. elliptic-oblong, remotely dentate, sparingly dotted: fr. yellow. F.M.1872:t.12(c). (*A. j. fructu luteo* Hort.)

Related species: *A. himalaica* Hook. f. & Thoms. Lvs. ovate-lanceolate to lanceolate, 10-25 cm. long, long and sharply acuminate, serrate to entire: infl. densely fulvous-pubescent; petals long-acuminate; F.S.12:t.1271(c). I.H.6:t.197(c). (*A. japonica* var. *h.* Dipp.) E. Himal. Cult. 1857. Zone VII.—*A. chinensis* Benth. Lvs. lanceolate to obovate, 8-20 cm. long, sharply long-acuminate, entire or dentate toward the apex: infl. sparingly strigillose; petals long-acuminate. China. Intr. 1901. Zone VII?

3. **CORNUS** L. Dogwood. Deciduous, rarely evergreen trees or shrubs, rarely herbs; winter-buds elongated, with 2 valvate scales, the axillary ones appressed: lvs. opposite, rarely alternate, petioled, entire, usually pubescent with 2-armed appressed hairs: fls. perfect, small, 4-merous, in terminal cymes or heads often surrounded by involucre bracts; calyx with minute teeth; petals ovate to oblong, valvate; style simple, filiform or cylindric; ovary inferior, 2-celled: fr. a drupe with a 2-celled stone. (The ancient Latin name of *C. mas*.) About 40 species in temp. regions of the N. hemisphere; all woody except 2 species.—Ornamental shrubs grown chiefly for their handsome fls. and some for their showy frs. and also for the winter effect of the brightly colored brs.

A. Fls. white in cymes or panicles without an involucre; stone subglobose.

Sect. *THELYCRANIA* Endl.

B. Lvs. alternate.

C. Lvs. beneath with irregularly diverging hairs, usually cuneate at base.

CC. Lvs. beneath with straight parallel hairs, usually rounded at base. 1. *C. alternifolia*

BB. Lvs. opposite. 2. *C. controversa*

C. Fr. white or blue.

D. Lvs., brts. and infl. with appressed hairs or glabrescent.

E. Lvs. whitish beneath: fr. white or bluish white.

F. Mature brts. bright red, or sometimes green or yellow, smooth, rather stout; pith white: cymes flat: stone compressed.

G. Stone ellipsoid, narrowed at ends: lvs. acute. 3. *C. alba*

GG. Stone about as broad as high; rounded at base: lvs. acuminate. 4. *C. stolonifera*

FF. Mature brts. gray, thin; pith white or light brown: cyme convex, paniculate; stone subglobose, not compressed. 12. *C. racemosa*

EE. Lvs. green or only slightly paler beneath: pith white.

F. Fr. pale blue; anthers blue; cyme convex: lvs. acuminate. 11. *C. foemina*

FF. Fr. white; cyme flat: lvs. usually obtusely short acuminate or acutish. 10. *C. glabrata*

DD. Lvs. with more or less spreading hairs beneath at least on the veins or at least brts. and infl. villous.

E. Fr. white.

F. Lvs. smooth above: brts. red-brown or red, smooth, rather stout: pith white, ample. 5. *C. Baileyi*

- FF. Lvs. scabrid above: brts. brownish, slightly rough, thin: pith narrow, brown .....9. *C. asperifolia*
- EE. Fr. blue.
- F. Mature brts. greenish, spotted; pith white: lvs. woolly beneath: fr. pale blue .....6. *C. rugosa*
- FF. Mature brts. red or purple; pith brown: lvs. pubescent only on the veins: fr. usually dark blue, sometimes partly whitish.
- G. Lvs. green beneath, rusty-pubescent on the veins.....7. *C. Amomum*
- GG. Lvs. whitish beneath, grayish or whitish pubescent on the veins. ....8. *C. obliqua*
- CC. Fr. black or bluish black (green in a var. of No. 19).
- D. Style cylindric: lvs. with 6-8 pairs of veins, whitish or grayish beneath.
- E. Fls. in broad glabrous panicles: lvs. 10-15 cm. long, closely appressed-pilose beneath .....13. *C. macrophylla*
- EE. Fls. in flat more or less villous cymes.
- F. Lvs. with appressed hairs beneath, scabrid.....14. *C. Bretschneideri*
- FF. Lvs. more or less villous beneath.....15. *C. poliophylla*
- DD. Style thickened at apex: lvs. with 2-5 veins, green beneath.
- E. Calyx-teeth longer than disk.
- F. Lvs. with 2-3 pairs of veins, usually oblong, cuneate.....16. *C. paucinervis*
- FF. Lvs. with 4-5 pairs of veins, usually ovate, rounded to broad-cuneate. ....17. *C. pumila*
- EE. Calyx-teeth shorter than disk.
- F. Petiole 1-3 cm. long; lvs. appressed-pilose beneath.....18. *C. Walteri*
- FF. Petiole 0.6-1.2 cm. long; lvs. villous-pubescent beneath.....19. *C. sanguinea*
- AA. Fls. in dense umbels with an involucre: stone ellipsoid to oblong.
- B. Fls. yellow with a yellowish involucre not exceeding the fls. and deciduous during anthesis .....Sect. MACROCARPIUM Spach.
- C. Lvs. without conspicuous tufts of hairs in the axils beneath; pedicels not or slightly exceeding the involucre.....20. *C. mas*
- CC. Lvs. with conspicuous brown axillary tufts of hairs beneath: pedicels nearly twice as long as bracts.....21. *C. officinalis*
- BB. Fls. greenish yellow with large white or pink bracts.
- C. Frs. in dense clusters, but individually distinct.....Sect. BENTHAMIDIA K. Koch.
- D. Involucral bracts 4, emarginate.....22. *C. florida*
- DD. Involucral bracts 4-6, acuminate to obtuse.....23. *C. Nuttallii*
- CC. Frs. connate into a globose fleshy head.....Sect. BENTHAMIA Benth. & Hook.
24. *C. kousa*

1. *C. alternifolia* L. Shrub or small tree to 8 m., with the brs. spreading in irregular whorls forming horizontal tiers: brts. glabrous, greenish: lvs. alternate, slender-stalked, usually crowded at end of brts., elliptic-ovate, 6-12 cm. long, acuminate, cuneate, nearly glabrous above, glaucescent beneath and appressed-pubescent, with 5-6 pairs of veins; petiole 2-5 cm. long: cymes 4-6 cm. across, puberulous, slender-stalked: fr. 6-8 mm. across, bluish black, bloomy, on red pedicels. Fl.v-vi; fr.viii. Em.463(c). G.O.t.43 (c). S.S.5:t.216. B.C.2:852(h). (*Svida a.* Small.) N. B. to Minn., s. to Ga. and Ala. Intr. 1760. Zone III.—*C. a. argentea* Temple. Lvs. variegated with white. (*C. a. variegata* Hort.)

2. *C. controversa* Hemsl. Tree to 20 m., similar to the preceding: lvs. broad-ovate to elliptic-ovate, 7-12 cm. long, abruptly acuminate, usually rounded at base, glaucous beneath and slightly appressed-pubescent, with 6-9 pairs of veins; cymes 6-12 cm. across: fr. bluish black, 6 mm. across. Fl. v; fr.viii-ix. B.M.8464(c). M.K.t.81(c). N.K.16:t.25,26. Gn.88:537(h). J.L. 40:f.7(h). (*C. brachypoda* K. Koch, not *C. A. Mey.*, *C. macrophylla* Koehne, not Wall.) Japan, China. Intr. before 1880. Zone V.—*C. c. variegata* (Nichols.) Rehd., var. Lvs. edged white. Gng.3:67;16:291. J.H.III.28:129; 47:147.

3. *C. alba* L. Shrub to 3 m. with usually erect stems and blood-red brs. usually bloomy when young; pith ample, white: lvs. ovate to elliptic, 4-8 cm. long, acute to acuminate usually rounded at base, rugose and often somewhat bullate above and dark green, glaucous beneath, with 5-6 pairs of veins; petiole 1-2.5 cm. long: fls. yellowish white, in cymes 3.5-5 cm. across: fr. white or slightly bluish; stone higher than broad, acute at ends, flattened. Fl.v-vi; fr.viii-ix. S.O.2:t.65(c). N.K.16:t.24. S.H.2:f.294p-r,295m-o. (*C.*

*tatarica* Mill.) Siberia to Manch. and n. Korea. Intr. 1741. Zone II.—*C. a. argenteo-marginata* Rehd., var. Lvs. edged with creamy white. R.H.1906: 421. J.L.40:f.7(h). (*C. alba elegantissima variegata* Hort., *C. alba variegata* Bean.)—*C. a. Gouchaultii* (Carr.) Rehd., var. Lvs. variegated with yellowish white and pink.—*C. a. Spaethii* Wittm. Lvs. broadly edged with yellow. Spaeth, Cat. 1889-90,t(c). Gn.64:368(h):88:127(h).—*C. a. sibirica* Loud., var. Less vigorous; brts. bright coral-red. G.L.21, No. 4:29. G.M.54:249. (*C. s. Lodd.*)—*C. a. Kesselringii* (E. Wolf) Rehd., var. Brts. very dark purple, almost purplish black; young unfolding lvs. red. (*C. sibirica* var. K. E. Wolf.) Cult. 1906.

Related species: *C. Hessei* Koehne. Dwarf compact shrub, to 0.5 m. high: lvs. crowded, narrow-elliptic to lanceolate, 4-9 cm. long; cymes 2-3 cm. across: fr. bluish white; stone broader than high. S.H.2:f.294k-1,295g-l. ? N. E. Asia. Intr. before 1889. Zone IV.

4. *C. stolonifera* Michx. RED-OSIER DOGWOOD. Shrub to 2.5 m. with prostrate stems and stoloniferous; brts. dark blood-red; pith white, large: lvs. ovate to oblong-lanceolate, 6-12 cm. long, acuminate, rounded at base, dark green above, glaucous beneath, with about 5 pairs of veins; petiole 1-2.5 cm. long: fls. dull white, in cymes 3-5 cm. across; disk usually red: fr. white, globose, 5 mm. across; stone as broad as high or slightly broader, rounded at base. Fl.v-vi; fr.ix-x. B.B.2:662. G.C.II.8:679. B.C.2:852(h). (*C. alba* Wagh., not L.) Nfd. to Man., s. to Va., Ky. and Neb. Cult. 1856. Zone II.—*C. s. flaviramea* (Spaeth) Rehd., var. Brts. yellow. (*C. alba* f. Spaeth.) Cult. 1899.—*C. s. nitida* (Koehne) Schneid., var. Brts. green in winter: lvs. lustrous above, with 6-8 pairs of veins. (*C. alba* var. n. Koehne.)—*C. s. coloradensis* (Koehne) Schneid., var. Brts. brownish red: lvs. smaller, less pale beneath: fr. bluish white; stone higher than broad. (*C. alba* var. c. Koehne, *C. instolonea* Nels., *C. stolonifera* var. *riparia* Rydb.) Yukon and Man. to N. Mex. and Calif.

*C. s. × rugosa*; see under No. 6.

5. *C. Baileyi* Coult. & Evans. Upright shrub to 3 m.; brts. dark red in winter, short-villous when young; pith white, large: lvs. ovate to lanceolate, 5-12 cm. long, acute or acuminate, rounded at base, glaucous beneath and with woolly and appressed hairs: cymes 3-5 cm. across, dense, villous: fr. white, 8 mm. across, much broader than high, compressed. Fl.v-vi; fr.vii-viii. G.F.3:465. B.C.2:853. B.B.2:662. S.H.2:295v-x<sup>2</sup>. (*C. stolonifera* var. B. Drescher.) Ont. and Minn. to Pa. and Ind. Intr. 1892. Zone IV.

Related species: *C. pubescens* Nutt. Shrub to 6 m., sometimes nearly tree-like; brts. purple: lvs. elliptic to ovate, 4-10 cm. long, acute to obtusish, slightly pubescent above, glaucous and woolly beneath: fls. yellowish white, in dense cymes 5 cm. across: fr. white; stone much broader than high. (*C. californica* var. p. Macbr., *C. Torreyi* S. Wats., *Svida p.* Standl.) S.H.2:f.294s(1). B. C. to Calif. Intr. 1874. Zone VI?

6. *C. rugosa* Lam. Upright shrub to 3 m., sometimes tree-like; young brts. green, spotted purple, older purplish, sometimes yellowish; pith white: lvs. suborbicular to broad-ovate, 5-12 cm. long, acute or short-acuminate, slightly pubescent above, pale and densely villous beneath, with 6-8 pairs of veins; petiole 1-1.5 cm. long: cymes dense, 5-7 cm. across, slightly villous or nearly glabrous: fr. light blue or greenish white, 5-6 mm. across; stone subglobose. Fl.v-vi; fr.ix. S.O.2:t.69(c). Em.464(c). E.P.IV.229:61. B.B.2:661. (*C. circinata* L'Hérit.) N. S. to Man., s. to Va., Ill. and Iowa. Intr. 1784. Zone III.

*C. r. × stolonifera* = *C. Slavinii* Rehd. Brts. purple: lvs. intermediate in shape, more or less woolly beneath: fr. bluish, rarely white. Orig. before 1910.

7. *C. Amomum* Mill. Shrub to 3 m. with spreading brs.: brts. purple, rarely greenish; pith brown: lvs. elliptic-ovate or elliptic, 5-10 cm. long, short-acuminate, usually rounded at base, dark green and nearly glabrous above, lighter green or slightly paler beneath and with brown hairs on the veins; petiole 8-15 mm. long: fls. yellowish white in flat dense cymes 4-6 cm. across, usually slightly villous: fr. blue or sometimes partly white, 6 mm. across; stone subglobose, furrowed. Fl.vi; fr.ix. S.O.2:t.64(c). Em.466,t(c). B.B.2:661. (*C. sericea* L., *C. cyanocarpa* Moench, *C. coerulea* Lam., *Svida* A. Small.) Mass. to Ga., w. to N. Y. and Tenn. Intr. 1658. Zone V.  
*C. A. × macrophylla*; see under No. 13.—*C. A. × paucinervis*; see under No. 16.

8. *C. obliqua* Raf. Shrub similar to the preceding, but usually more loosely branched: brts. purple to yellowish red: lvs. elliptic-ovate to oblong, 5-8 cm. long, acuminate, cuneate, dark green and glabrous above, glaucous beneath and with grayish white or brownish hairs on the veins: cymes 4-5 cm. across, slightly villous: fr. blue or partly or sometimes nearly white; stone furrowed. Fl.vi; fr.ix. R.H.1888:444,t(c), as *C. stolonifera*. S.T.1:t.39. (*C. Purpusii* Koehne, *C. Amomum* var. *Schuetzeana* Rickett.) Que. to Minn. and Kans., s. Pa., Ill. and Mo. Cult. 1888. Zone III.

*C. o. × racemosa* = *C. arnoldiana* Rehd. Of more upright habit; brts. slender, grayish the second year; cymes less villous: fr. white or light blue; stone less furrowed. S.T.2:t.40. Orig. before 1900.

9. *C. asperifolia* Michx. Upright shrub to 5 m., or sometimes small tree to 15 m. with slender spreading brs.; pith brown, narrow; brts. reddish brown, slightly rough, pubescent when young: lvs. elliptic to ovate, 4-10 cm. long, acuminate, rounded or cuneate at base, scabrid above, rarely nearly smooth, woolly pubescent beneath; petiole 5-15 mm. long: fls. yellowish white, in rather loose pubescent corymbs 4-7 cm. across: fr. white, 6 mm. across; stone subglobose, slightly furrowed. Fl.v-vi; fr.ix. G.F.10:105. S.S.14:t.709. B.B. 2:662. (*C. candidissima* Bischoff, not Mill., nor Marsh.) Ont. to Fla., w. to Iowa, Kans. and Tex. Cult. 1836. Zone IV?

*C. a. × macrophylla*; see under No. 13.

10. *C. glabrata* Benth. Shrub to 4 m., with slender brs., soon glabrous, reddish brown, becoming dark gray-brown; pith white: lvs. narrow-elliptic, 3-8 cm. long, acuminate, cuneate, lustrous and green on both sides and sparingly appressed-pubescent, with 3-4 pairs of veins; petiole 5-10 mm. long: cymes 2.5-3 cm. across, nearly glabrous: fr. white or light blue, 5-6 mm. across; stone subglobose, not ribbed: Fl.v; fr.ix-x. S.H.2:f.296g-h(l). Ore. to Calif. Intr. 1894. Zone VI?

11. *C. foemina* Mill. Shrub to 5 m., with purple-brown brs.; pith white, narrow: lvs. elliptic or ovate to ovate-lanceolate, 3-7 cm. long, acuminate, cuneate, sparingly and minutely appressed-pubescent and green on both sides or slightly paler beneath; petiole 5-10 mm. long: cymes 3-6 cm. broad; anthers light blue: drupe subglobose, 5-6 mm. across, pale blue or white; stone usually longer than broad, faintly ribbed. Fl.v-vi; fr.ix. S.O.2:t.67(c). B.B. 2:663,f.3187. L'Héritier, *Cornus*, t.4. (*C. stricta* Lam., *Svida* s. Small.) Va. to Mo., Fla. and Tex. Intr. 1758. Zone VI?

12. *C. racemosa* Lam. Shrub to 5 m., with gray brs.; pith white to light brown: lvs. narrow-elliptic to ovate-lanceolate, 4-10 cm. long, long-acuminate, cuneate, appressed-pubescent or nearly smooth, glaucous beneath; petiole 8-15 mm. long: cymes 3-6 cm. broad, paniculate, rather loose; petals oblong, obtusish: fr. white, 4-5 mm. across, on red pedicels: stone broader than high,

slightly ribbed. Fl.vi-vii; fr.ix-x. S.O.2:t.68(c). B.B.2:663.f.3186. Gs.3:270. (*C. paniculata* L'Hérit., ?*C. candidissima* Marsh., not Mill., ?*C. gracilis* Koehne, *C. oblongata* Hort.) Me. to Ont. and Minn., s. to Ga. and Neb. Intr. 1758. Zone IV.

*C. r.* × *obliqua*; see under No. 8.

13. *C. macrophylla* Wall. Tree to 15 m.; brts. yellowish or reddish brown: lvs. elliptic-ovate to elliptic-oblong, 10-16 cm. long, long-acuminate, rounded or cuneate at base, dark green above and nearly glabrous, glaucous beneath and appressed-pilose, with 6-8 pairs of veins; petiole 1-3 cm. long: fls. yellowish white in panicle-like cymes 8-14 cm. across; petals oblong; style club-shaped: fr. bluish black, globose, 6 mm. across. Fl.vii-viii; fr.x. B.M.8261 (c). S.I.1:t.77.f.1-12(c). N.K.16:t.29. I.S.1:t.43. S.T.1:t.41. M.G.28:193(h), 195. (*C. brachypoda* C. A. Mey., *C. corynostylis* Koehne.) Himal., China, Japan. Intr. 1827. Zone VI. Tree with conspicuous clusters of creamy white fls. in summer.

*C. m.* × *Amomum* = *C. Horseyi* Rehd. Differs chiefly in the smaller and narrower lvs. pale or grayish green beneath and with scattered fulvous hairs on the veins and on the petiole, with fewer veins: stone broader than high. Orig. before 1919. Zone V.—*C. m.* × *asperifolia* = *C. Dunbarii* Rehd. Lvs. smaller and narrower, scabrid above and with more numerous less closely appressed hairs beneath: cymes smaller, flattish, more pubescent: fr. blue. Orig. before 1919. Zone V.

14. *C. Bretschneideri* L. Henry. Shrub to 4 m., with yellowish or reddish brts. appressed-pubescent when young: lvs. ovate to elliptic-ovate, 5-10 cm. long, acuminate, usually rounded at base, dull green and slightly scabrid above, grayish green and loosely appressed-pubescent beneath with scabrid hairs, with 5-7 pairs of veins; petiole 8-15 mm. long: fls. creamy white in cymes 6-10 cm. across; calyx-teeth scarcely as long as disk; stamens longer than petals; style cylindric, shorter than petals: fr. bluish black, 6 mm. across. Fl.vi; fr.ix. J.13:309. S.H.2:f.298d-d<sup>1</sup>(l). (*C. aspera* Wanger.) N. China. Cult. 1887. Zone V.

Related species: *C. Hemsleyi* Schneid. & Wanger. Shrub to 6 m.: lvs. elliptic-ovate, 5-7 cm. long, whitish and slightly scabrid beneath, with 6-7 pairs of veins; petiole 0.5-1 cm. long, pubescent: infl. 5-7 cm. across; calyx-teeth longer than disk. S.H.2:f.296m-n. C. China. Intr. 1908. Zone V.

15. *C. poliophylla* Schneid. & Wanger. Shrub to 4 m.; brts. at first densely pubescent, later glabrate and brown: lvs. elliptic-ovate or elliptic, 6-12 cm. long, short-acuminate, rounded at base, deep green above and short-villous, whitish beneath and densely short-villous, with 7-8 pairs of veins; petiole 1-1.5 cm. long: infl. 8-10 cm. across; peduncle 5 cm. long; calyx-teeth slightly longer than disk; ovary appressed-pubescent: fr. black. Fl.vi; fr. ix-x. S.H.2:f.298a. C. China. Intr. 1908. Zone V.

Related species: *C. Monbeigii* Hemsl. Shrub to 3 m.: lvs. elliptic or elliptic-ovate, 6-8 cm. long, subcordate at base, whitish and densely silky-pubescent beneath, with 6-7 pairs of veins: infl. about 8 cm. across; ovary with appressed and spreading hairs. S.H.2:f.296o-p. C. and W. China. Intr. 1917. Zone VII?

16. *C. paucinervis* Hance. Shrub to 3 m.; brts. quadrangular, appressed-pubescent when young, usually reddish brown: lvs. elliptic or oblong-obovate to elliptic-lanceolate, 4-10 cm. long, acute, cuneate, dark green above, lighter beneath, with appressed hairs on both sides, with 2-4 pairs of ascending veins, of thickish texture; petiole 3-5 mm. long: cymes dense, long-peduncled, 6-8 cm. across; style club-shaped: fr. sparingly produced, 5-6 mm. across, black. Fl.vii-viii; fr.ix. G.C.50:95. G.M.54:593. E.P.IV.229:72. Gt.45:285. (*C. quinquerivis* Franch.) C. China. Intr. 1907. Zone (V) Nearly half-evergreen.

*C. p.* × *Amomum* = *C. dubia* Rehd. Lvs. broader with 3-4 pairs of veins sparingly ferrugineous-pubescent beneath: fr. larger, bluish black; stone ribbed. Orig. before 1920.

17. *C. pumila* Koehne. Dense shrub to 2 m.; brts. terete, with very short internodes, glabrous: lvs. crowded, broad-ovate, 4-8 cm. long, short-acuminate, abruptly contracted at base, dark green above, paler beneath and appressed-pubescent, with 4-5 pairs of veins; petiole 6-10 mm. long: fls. white, in dense long-peduncled cymes 5-7 cm. broad; style club-shaped: fr. black. Fl.vii; fr.ix. S.H.2:f.298i-k,301e-f. (*C. mas* var. *nana* Dipp.) Orig. unknown. Cult. 1890. Zone V.

18. *C. Wálteri* Wanger. Tree to 12 m.; brts. soon glabrous, greenish yellow to brownish red: lvs. elliptic to oblong-elliptic, 5-12 cm. long, long-acuminate, cuneate, sparingly appressed-pilose above, more densely so beneath and paler green, with 4-5 pairs of veins; petiole 1.5-3 cm. long; cymes corymbose, loose after anthesis, 5-7 cm. across, sparingly appressed-pubescent or nearly glabrous, on a peduncle 1.5-2 cm. long; sepals minute; style club-shaped, shorter than stamens: fr. globose, 6-7 mm. across, black. Fl.vi; fr.ix-x. S.L.137(h, as *C. Wilsoniana*). C. China. Intr. 1907. Zone V.

Related species: *C. coreana* Wanger. Tree to 20 m.; bark deeply divided into square scaly plates; brts. reddish brown or purple: lvs. elliptic to elliptic-ovate, broad-cuneate to rounded at base; petiole 1-2 cm. long; infl. 7-8 cm. across. N.K.16:t.27,28. Korea. Intr. 1918. Zone V.

19. *C. sanguinea* L. RED DOGWOOD. Shrub to 4 m., with dark red, rarely greenish brs.; lvs. broad-elliptic to ovate, 4-8 cm. long, acuminate, rounded or broad-cuneate at base, villous on both sides, more densely so and lighter green beneath, with 3-5 pairs of veins; petiole 6-15 mm. long: fls. dull white, in pubescent dense cymes 4-5 cm. across; style clavate, as long as stamens, slightly shorter than petals: fr. 6 mm. across, purple-black. Fl.v-vi; fr.ix. R.I.24:t.144(c). F.D.26:t.2704(c). S.O.2:t.66(c). Eu. Long cult. Zone IV. Planted for the dark red brs. in winter and the dark blood-red autumnal color of its lvs.—*C. s. variegata* West., var. Lvs. variegated with yellowish white. S.O.2:t.66(c, l). G.W.9:247,248(h). Orig. before 1770.—*C. s. atrosanguinea* Gibbs. Brts. of deep red color.—*C. s. viridissima* Dieck. Brts. and fr. green.

Related species: *C. australis* C. A. Mey. Brts. finally glabrous, purplish or greenish: lvs. ovate or elliptic-ovate, to 8 cm. long, densely pilose at first, later sparingly appressed-pilose on both sides, scabrid beneath, with 3-4 pairs of veins; petiole 7-10 mm. long: cymes dense and rather small; style clavate, as long as stamens, shorter than petals: fr. 5-6 mm. across. S.H.2:f.299c(1). (*C. sanguinea* var. *a.* Koehne.) W. Asia. Cult. 1915. Zone V.—*C. a. Koenigii* (Schneid.) Wanger, var. Lvs. larger, on flowering brts. to 13 cm. long; petiole 1-2 cm. long: fr. 8-10 mm. across. S.H.2:f.299d(1). (*C. K. Schneid.*) Transcauc. Intr. 1912. Zone V?

20. *C. mas* L. CORNELIAN CHERRY. Shrub or small tree, to 8 m.; bark close, scaly, dark brown; young brts. minutely appressed-pilose, greenish yellow, later brown: lvs. ovate to elliptic, 4-10 cm. long, acute to acuminate, broad-cuneate at base, appressed-pilose and green on both sides, lustrous above, with 3-5 pairs of veins; petiole 5-10 mm. long: fls. yellow, in short-stalked umbels before the lvs.; bracts yellowish; pedicels about as long as bracts; sepals shorter or as long as disk: fr. ellipsoid, 1.2-1.5 cm. long, scarlet, of pleasant acid taste. Fl.iii-iv; fr.viii. B.M.2675(c). Add. 3:t.101(c). R.I. 24:t.143(c). M.M.5:192. G.C.II.9:399. M.A.t.80(h). (*C. mascula* Hort.) C. and S. Eu., W. Asia. Cult. since ancient times. Zone IV. Chiefly planted for its early yellow fls. and its lvs. remaining green until late in fall; also for its edible fr.—*C. m. aurea* Schneid., f. Lvs. yellow.—*C. m. elegantissima*

(T. Moore) Nichols. Lvs. variegated with creamy white and tinged with red. E.P.1877:109,t(c). G.Z.21:169. (*C. m. aureo-elegantissima* Schelle, *C. mascula aurea elegantissima* T. Moore).—*C. m. variegata* Loud., var. Lvs. bordered white. R.H.1906:420. (*C. m. argenteo-marginata* Schelle.)—*C. m. macrocarpa* Dipp. With larger fr.—*C. m. sphaerocarpa* Cretziou. Fr. globose.—*C. m. flava* West., var. With yellow fr. (*C. m. f. luteo-carpa* Wanger., var. *xanthocarpa* Bean.)—*C. m. alba* West., var. With white fr. (*f. albo-carpa* Schneid.)—*C. m. nana* Carr. A dwarf form.

21. *C. officinalis* Sieb. & Zucc. Shrub or small tree, to 10 m. tall, similar to the preceding species; bark flaky, light brown; lvs. ovate to elliptic, rarely ovate-lanceolate, 5-12 cm. long, acuminate, sparingly appressed-pilose above, more densely so beneath and with large fulvous axillary tufts of hairs, with 6-7 pairs of veins; petiole 6-15 mm. long: fls. yellow; pedicels up to twice as long as bracts: fr. oblong, about 1.5 cm. long, scarlet. Fl. III-IV; fr. VII. S.Z.1:t.50(c). N.K.16:t.23. Add. 3:t.89(c). Japan, Korea. Cult. 1877. Zone V.

To Sect. MACROCARPIUM belongs also: *C. sessilis* Torr. Shrub to 4.5 m.; young brts. silky-pubescent: lvs. ovate to elliptic, 5-9 cm. long, short-acuminate, broad-cuneate, nearly glabrous above, silky-pubescent and whitish beneath; petiole about 1 cm. long: umbels 20-30-fl.; bracts yellow, about as long as fls.: fr. narrow-ellipsoid, 12 mm. long, dark purple. Rep. Expl. Surv. Miss. 4:t.7. Calif. Cult. 1933. Zone VII.

22. *C. florida* L. FLOWERING DOGWOOD. Shrub or small tree to 5, rarely to 12 m.; brts. green, soon glabrous: lvs. elliptic or ovate, 8-15 cm. long, abruptly acuminate, broad-cuneate to rounded at base, nearly glabrous above, glaucous beneath and usually only pubescent on the veins, with 6-7 pairs of veins; petiole 5-15 mm. long: fls. greenish white or yellowish; bracts 4, white or pinkish, obovate, emarginate or truncate and mucronate at apex, 4-5 cm. long, during winter enclosing the fl.-buds: fr. ellipsoid, 1 cm. long, crowned by the persistent calyx. Fl.v; fr. IX-X. Em.468(c). B.M.526(c). S.S.5:t.112, 113. Gn.52:177(h);53:222;89:286(h). F.E.23:511(h). S.L.139(h). Am. For. 21:623,786,787(h). (*Cynoxylum floridum* Raf.) Mass. to Fla., w. to Ont., Tex. and to Mex. Cult. 1731. Zone IV. One of the handsomest American flowering trees; the lvs. turn bright scarlet, but remain pale beneath.—*C. f. pendula* Dipp. With pendulous brs. F.E.17:68(h).—*C. f. rubra* West., var. Bracts of the floral involucre red or pink. B.M.8315(c). R.H.1894:500,t(c). F.E.9:572. A.G.18:441. Cult. in Am. 1731.—*C. f. pluribracteata* Rehd., f. Infl. with 6-8 larger and several smaller bracts; fls. often aborted. Cult. 1914.—*C. f. xanthocarpa* Rehd., f. With yellow fruit.

23. *C. Nuttallii* Audub. Tree to 25 m.; similar to the preceding: lvs. elliptic ovate to obovate, 8-12 cm. long, short-acuminate, broad-cuneate, appressed-pilose on both sides while young, at maturity only beneath or glabrescent, glaucous beneath, with 5-6 pairs of veins; petiole 6-15 mm. long: involucre bracts usually 6, sometimes 4 or 5, obovate to oblong, usually acute, 5-8 cm. long, white or tinged pink, not enclosing the fl.-buds during the winter: fr. ellipsoid, 1 cm. long, bright red or orange, Fl.v; fr. IX. B.M.8311(c). S.S.5:t.214,215. Gn.79:374,375(h);89:287(h). G.C.63:204(h). K.B.1915:178, t(h). B. C. to S. Calif. Intr. 1835. Zone VII. Beautiful in bloom, but not doing well in the eastern states.

24. *C. Kousa* Hance. Tree to 7 m. with spreading brs. and slender green glabrous brts. becoming brown: lvs. elliptic-ovate, 5-9 cm. long, acuminate, cuneate, dark green above, glaucous and appressed-pilose beneath and with large axillary fulvous tufts of hairs; petiole 4-6 mm. long: fls. in a dense

globose head borne on a slender stalk 4-6 cm. long; involucre bracts elliptic-ovate to oblong-ovate, 2.5-5 cm. long, acuminate, cuneate at base: head of frs. globose, pinkish, 1.5-2.5 cm. across; stone ellipsoid, 6 mm. long. Fl.vi; fr.viii. S.Z.1:t.16(c). Add.2:t.43(c). I.S.1:t.42. G.C.68:43(h). Gn.43:152, t(c); 60:165. K.B.1915:179, t. (*Benthamia japonica* Sieb. & Zucc., *C. japonica* Koehne, not Thunb.) Japan, Korea. Intr. 1875. Zone V. With showy white fls. in June; lvs. turning scarlet in fall.—*C. K. chinensis* Osborn, var. Lvs. without or with inconspicuous axillary tufts of hairs beneath, usually larger and more pubescent: bracts 5-6 cm. long. B.M.8833(c). Gn.89:287(h). H.B. 3:258(h). China. Intr. 1907.

### Subclass. II. GAMOPETALAE Brongn.

Perianth double, the inner whorl more or less connate, rarely distinct or wanting. (*Sympetalae* A. Br., *Metachlamydeae* Engl.)

### Fam. 85. CLETHRACEAE Klotzsch. WHITE-ALDER FAMILY

Contains only the following genus which see for characters.

**CLÉTHRA L. WHITE-ALDER.** Deciduous or evergreen small shrubs or trees, with stellate pubescence; winter-buds small, pubescent: lvs. alternate, short-petioled, usually serrate, exstipulate: fls. perfect, white or pinkish, in terminal racemes or panicles; sepals 5, distinct, persistent; petals 5, distinct; stamens 10; anthers opening by a pore or a slit; ovary superior, 3-celled, with central placentae; style cylindric, slender, 3-fid at apex: fr. a 3-valved caps., many-seeded; seeds with a loose translucent cellular coat, larger than the body, albuminous. (Ancient Greek name of the Alder, given on account of the resemblance of the lvs.) About 30 species in Am., E. Asia and Madeira. —Ornamental shrubs grown for their handsome spikes of white usually fragrant fls.

- A. Lvs. glabrous or nearly so: racemes paniced; sepals obtuse.....1. *C. alnifolia*  
 AA. Lvs. pubescent beneath, at maturity at least on the veins.  
 B. Lvs. white-tomentose beneath; pairs of veins 7-10: filaments glabrous.....2. *C. tomentosa*  
 BB. Lvs. pubescent beneath, chiefly on the veins; pairs of veins 10-15.  
 C. Racemes usually solitary: sepals acute; filaments pilose.....3. *C. acuminata*  
 CC. Racemes paniced; sepals obtuse; filaments glabrous.....4. *C. barbinervis*

1. *C. alnifolia* L. Shrub to 3 m.: lvs. obovate to obovate-oblong, 4-10 cm. long, acute to short-acuminate, cuneate, sharply serrate, glabrous or nearly so on both sides, with 7-10 pairs of veins; fls. fragrant, about 8 mm. across, in pubescent upright usually paniced racemes 5-15 cm. long; pedicels 1-6 mm. long; caps. subglobose, 3 mm. across. Fl.vii-ix. Em.426,t. S.O.1:t.47(c). G.O.t.76(c). Gd.W.t.22(c). Gn.19:208,t(c). M.G.18:473,474(h). S.L.132(h). (*C. Michauxii* Courtois, *C. paniculata* Ait.) Me. to Fla. Intr. 1731. Zone III. —*C. a. rosea* Rehd., f. Fls. pinkish. Intr. 1906.

2. *C. tomentosa* Lam. Shrub to 3 m.: lvs. obovate, 4-10 cm. long, acute or short-acuminate, cuneate, serrate, usually chiefly above the middle, pubescent above, tomentose beneath: fls. fragrant, in pubescent solitary or paniced racemes 6-15 cm. long; pedicels 2-5 mm. long: caps. depressed-globose, 4 mm. across. Fl.viii-ix. B.M.3743(c). G.F.4:65. B.C.2:801. B.S.1:373. (*C. alnifolia* var. *t.* Michx.) N. C. to Fla. and Ala. Intr. 1731. Zone (V).

3. *C. acuminata* Michx. Shrub or small tree to 6 m., with upright or spreading brs.: lvs. ovate-elliptic or elliptic to elliptic-oblong, 8-20 cm. long, acuminate, broad-cuneate or rounded at base, serrulate, pubescent beneath at least on the veins: fls. secund, in usually solitary racemes 8-20 cm. long, densely

pubescent; pedicels 3-8 mm. long; sepals oblong-ovate, acutish, ribbed; petals upright; filaments hairy; style glabrous: caps. ovoid, 5 mm. long, nodding. Fl.vii-ix. L.D.7:430(c). L.B.1427(c). B.T.f.685. Va. and W. Va. to Ga. and Ala., in the mts. Intr. 1806. Zone V.

4. *C. barbinervis* Sieb. & Zucc. Shrub or tree to 10 m. with spreading brs.; brts. nearly glabrous: lvs. obovate to oblong-obovate, 6-12 cm. long, acuminate, cuneate, sharply serrate, pubescent at first on both sides, at maturity at least on the veins beneath; petiole 6-15 mm. long; fls. fragrant, in paniced pubescent racemes 10-15 cm. long; pedicels 2-8 mm. long; sepals broad-ovate, mucronulate; petals 5-6 mm. long, slightly shorter than stamens; filaments and style glabrous: caps. subglobose, 4 mm. across. Fl.vii-ix. S.I.1:t.78(c). B.M.8970(c). Gt.19:654. B.A.1930:58(h). (*C. canescens* auth., not Reinw.) Japan. Intr. 1870. Zone (V).

Related species: *C. Fargèsii* Franch. Shrub to 4 m.; lvs. ovate-oblong or elliptic-oblong, 8-14 cm. long, cuneate or rounded at base, nearly glabrous; petiole 1-2.5 cm. long; racemes paniced 10-20 cm. long; sepals acute: filaments pubescent. C. China. Intr. 1900. Zone VII?—*C. monostachya* Rehd. & Wils. Closely related to the preceding species: lvs. elliptic-oblong to oblong-lanceolate, nearly glabrous: racemes usually solitary; filaments sparingly pubescent; style appressed-pilose. C. China. Intr. 1908. Zone VII?—*C. Delavayi* Franch. Shrub or tree to 15 m.; brts. often red: lvs. elliptic-oblong to oblanceolate, pubescent beneath: racemes solitary; calyx red; petals about 1 cm. long, ciliate; stamens half as long as petals; filaments and style appressed-pilose. B.M.8970(c). G.C.82:83. W. China. Intr. 1913. Zone VII? The handsomest of the Chinese species.

#### Fam. 86. PYROLACEAE Dumort. SHINLEAF FAMILY

Herbs or low suffruticose plants, sometimes parasitic and without chlorophyll: lvs. alternate, estipulate, basal or scattered: fls. perfect, regular, terminal and solitary or in corymbs or racemes; calyx 5-parted, sometimes wanting in the parasitic genera; petals distinct, 5, rarely 4; stamens 10; anthers opening by apical pores or by slits; hypogynous disk present or wanting; ovary superior, 5-celled, many-ovuled; style and stigma 1: fr. a caps. splitting into 5 valves; seed as in the preceding family.—Eleven genera and about 40 species in the boreal and temp. regions of the n. hemisphere.

**CHIMAPHILA** Pursh. Evergreen suffruticose plants with creeping stem: lvs. usually crowded into irregular whorls, serrate, thickish: fls. nodding, in terminal stalked umbel-like racemes; sepals persistent, 5; petals 5, orbicular, concave, forming a saucer-shaped corolla; anthers 2-horned, opening with 2 pores; filaments short, dilated about the middle; style very short, with peltate stigma: caps. deeply furrowed, splitting from the apex downward. (Greek, *cheima*, winter, and *philein*, to love; alluding to its popular name Wintergreen.) About 8 species in N. and C. Am., Eu. and N. Asia.

A. Lvs. broadest above the middle, bright green.....1. *C. umbellata*  
 AL. Lvs. broadest below the middle, mottled with white.....2. *C. maculata*

1. *C. umbellata* (L.) Nutt. WINTERGREEN. Plant 15-25 cm. high: lvs. 3-6 in a whorl, short-petioled, usually oblong-obovate, 2-4.5 cm. long, obtuse or acutish, sharply serrate with 4-13 obtusish teeth and with 3-4 slightly elevated pairs of veins beneath, bright green and lustrous above: fls. 3-6, umbellate; about 1.5 cm. across, white or pinkish; pedicels diverging during anthesis; the dilated portion of filament ciliate; caps. globose, 5-6 mm. across. Fl.vii-viii; fr.ix. F.D.20:t.2044(c). K.D.444(a). N. and C. Eu., N. Asia to Japan. Cult. 1796. Zone III?—*C. u. cisatlantica* Blake, var. PIRISSEWA. Plant to 30 cm.: lvs. oblong-obovate to oblanceolate, 4-7 cm. long, acute and mucronate

with 6-18 acute teeth: fls. 4-8; pedicels ascending during anthesis, more racemose. M.M.7:t.9(c). B.M.778(c). L.B.463(c). (*C. corymbosa* Pursh, in part.—PRINCE'S PINE.) N. S. to Minn., s. to Ga. Intr. 1762.—*C. u. occidentalis* (Rydb.) Blake, var. Lvs. 3-9 cm. long, acute, with 10-18 acute teeth and with indistinct veins beneath: fls. 4-9; pedicels ascending, more racemose: caps. 6-7.5 mm. across. Brown & Schaeffer, Alp. Fl. Can. 57. (*C. o.* Rydb.) B. C. to Cal., e. Mont. and Colo. Intr. ?

2. *C. maculata* Pursh. Plant 8-25 cm. high: lvs. usually in threes, ovate-lanceolate to lanceolate, the lower ones ovate, 2.5-7 cm. long, acute or acuminate, rounded or cuneate at base, remotely and sharply serrate, variegated with white along the veins: fls. 2-5, white or pinkish, 1.5-2 cm. across; bracts linear; dilated portion of filaments villous: caps. depressed-globose, 7 mm. across. Fl.vi-vii. B.M.897(c). M.M.9:t.1(c). G.C.74:122. Gn.87:452. Me. to Ont., s. to Mex. Intr. 1747. Zone IV?

Related species: *C. Menziesii* (R. Br.) Spreng. Plant 8-20 cm.: lvs. alternate or in threes, ovate, to oblong-lanceolate, 2-4 cm. long, acute at ends, sharply serrate, sometimes variegated: fls. 1-3, white, 1.2 cm. across. E.N.IV.1:8. Parsons, Wild Fl. Calif. 105. B. C. to Mex. Intr. ?

### Fam. 87. ERICACEAE DC. HEATH FAMILY

Shrubs or small trees, often evergreen; lvs. alternate, rarely opposite or whorled, entire or serrate, exstipulate: fls. perfect, regular or slightly irregular, solitary or in racemes, panicles or umbels: calyx 4-5-parted, persistent: corolla gamopetalous, rarely of distinct petals, often urceolate, 4-5-lobed or -parted; stamens as many or twice as many as corolla-lobes, inserted at base of a hypogynous disk; anthers opening by apical pores, rarely by slits, usually with appendages: ovary superior or inferior, 2-5-celled, many-ovuled; style and stigma 1: fr. a caps., rarely a berry or drupe; seeds minute, many in each cell, rarely only 1, albuminous, with small central embryo.—About 70 genera with 1500 species, distributed through both hemispheres, chiefly in the colder and temp. regions, also on high mts. in the tropics.

Ovary superior; calyx free: fr. a caps., rarely berry-like or a berry.

A. Fr. a caps., with dry calyx.

B. Corolla of distinct petals.

C. Fls. in elongated racemes, panicles or solitary; anthers opening by slits: lvs. deciduous.

D. Petals 3 or 4; fls. in panicles or racemes.

E. Petals 3; stamens 6.....1. *Tripetaleia*

EE. Petals 4-5; stamens 8-10.....2. *Elliottia*

DD. Fls. solitary; petals 5; stamens 5-10.....3. *Cladothamnus*

CC. Fls. in terminal umbel-like clusters; anthers opening by pores: lvs. evergreen.

D. Lvs. tomentose beneath or lepidote, 2-7 cm. long.....4. *Ledum*

DD. Lvs. glabrous, not exceeding 1.5 cm.....8. *Leiophyllum*

BB. Corolla gamopetalous.

C. Corolla deciduous.

D. Caps. septicidal.

E. Corolla without pouches for the anthers; stamens 5-16.

F. Lvs. alternate or sometimes clustered; anthers opening by pores.

G. Corolla rotate or broad-campanulate to funnel-form; stamens exserted.

H. Seed enclosed in a loose elongated testa lacerated at the ends; corolla zygomorphous; stamens 5-20.....5. *Rhododendron*

HH. Seed with close reticulate testa, obtuse at ends, ovoid: corolla actinomorphic, rotate to rotate-campanulate; stamens 10.

I. Lvs. without lepidote glands.

J. Lvs. elliptic, ciliate: fls. 1-3.....10. *Rhodothamnus*

JJ. Lvs. linear, slightly serrulate: fls. 2-10.....10a. *Phyllothamnus*

II. Lvs. with lepidote glands beneath, elliptic to elliptic-oblong, entire.

11. *Kalmiopsis*

GG. Corolla globose-campanulate to cylindric; stamens inclosed.

H. Corolla globose-campanulate or urceolate, 4- or 5-lobed.

I. Fls. fascicled.

J. Lvs. broad: fls. from lateral buds, 4-5-merous.....6. *Menziesia*

# ERICACEAE

- JJ. Lvs. linear, heath-like: fls. from terminal buds, 4-6-merous.  
 13. *Phyllocladus*
- II. Fls. in terminal elongated racemes, 4-merous: lvs. linear.  
 14. *Daboecia*
- HH. Corolla cylindric, 8-10 mm. long; ovary 3-celled: fls. 1-2: lvs. 8-12 mm. long ..... 7. *Tsusiophyllum*
- FF. Lvs. opposite, small: corolla deeply 5-cleft; stamens 5, included; anthers opening by slits ..... 9. *Loiseleuria*
- EE. Corolla broad-campanulate or nearly rotate, with 10 pouches receiving as many anthers ..... 12. *Kalmia*
- DD. Caps. loculicidal.
- E. Anther-cells opening by pores or short slits at apex: upright shrubs, or prostrate shrubs with minute lvs.
- F. Fls. solitary; corolla campanulate: lvs. scale-like or subulate.... 16. *Cassiope*
- FF. Fls. in umbels, racemes or panicles.
- G. Calyx 5-lobed or 5-parted, the lobes valvate or separate.
- H. Anthers awned.
- I. Awns of anthers upright or ascending.
- J. Fls. in terminal umbels or racemes.
- K. Lvs. persistent, narrow: fls. in umbels; corolla urceolate: seeds numerous, oval ..... 17. *Andromeda*
- KK. Lvs. deciduous, broad: fls. in racemes or umbels: seeds few in each cell, 3-5-angled ..... 15. *Enkianthus*
- JJ. Fls. in lateral clusters; corolla campanulate: lvs. half-evergreen.  
 18. *Zenobia*
- II. Awns of anthers reflexed: fls. in terminal panicles; corolla urceolate: lvs. evergreen, serrate ..... 19. *Pieris*
- HH. Anthers not awned.
- I. Caps. subglobose to ovoid, with thickened sutures, glabrous: fls. in racemes or clusters ..... 20. *Lyonia*
- II. Caps. conical, pubescent, sutures not thickened; flowers in large terminal panicles: lvs. deciduous, serrulate, 10-15 cm. long.  
 22. *Oxydendrum*
- GG. Calyx 5-parted, the lobes distinctly imbricate; corolla urceolate.
- H. Lvs. densely scaly beneath, evergreen: fls. in leafy terminal racemes.  
 21. *Chamaedaphne*
- HH. Lvs. not scaly, deciduous or evergreen, serrulate; racemes axillary or terminal ..... 23. *Leucothoe*
- EE. Anther-cells opening through their whole length: evergreen trailing shrub with ovate-cordate lvs. .... 24. *Epigaea*
- CC. Corolla persistent, 4-merous, enclosing the caps.: lvs. linear, small, persistent.
- D. Calyx longer than the deeply 4-parted corolla, colored ..... 30. *Calluna*
- DD. Calyx shorter than corolla, not colored; corolla lobes short.
- E. Stamens inserted at base of a high furrowed disk: fls. often axillary or in terminal clusters ..... 31. *Erica*
- EE. Stamens adnate to base of corolla; disk minute; fls. in a dense terminal bractless spike ..... 32. *Bruckenthalia*
- AA. Fr. a berry or surrounded by a fleshy calyx and berry-like: lvs. evergreen (except No. 29).
- B. Calyx accrescent, becoming fleshy and surrounding the caps. .... 25. *Gaultheria*
- BB. Calyx dry, small, at base of the berry-like fr.
- C. Anthers with short upright appendages at apex: lvs. serrulate: upright shrubs.  
 26. *Pernettya*
- CC. Anthers with 2 long reflexed appendages: habit often prostrate.
- D. Lvs. evergreen, usually entire.
- E. Cells of ovary many-seeded: fr. a berry, granulated or warty: fls. in large terminal panicles: lvs. 5-12 cm. long ..... 27. *Arbutus*
- EE. Cells of ovary 1-seeded: fr. a drupe, smooth, with several 1-seeded or 1 several-seeded stone: fls. in small panicles or racemes: lvs. rarely exceeding 5 cm.  
 28. *Arctostaphylos*
- DD. Lvs. annual, marcescent, serrate: fr. juicy: habit prostrate; clusters few-fl.  
 29. *Arctous*
- Ovary inferior or half-inferior: fr. a berry or berry-like drupe, crowned by the persistent calyx-lobes.
- A. Fr. white; ovary free at apex: fls. 4-merous: trailing evergreen with appressed-bristly brs. and broad-elliptic lvs. 4-8 mm. long ..... 33. *Chiogenes*
- AA. Fr. colored (only exceptionally white): ovary perfectly inferior.
- B. Ovary 10-celled: fr. berry-like with 10 small nutlets: lvs. evergreen, or deciduous and resinous-dotted: upright shrubs ..... 34. *Gaylussacia*
- BB. Ovary 4-5-celled, rarely incompletely 8-10-celled: fr. a many-seeded berry: lvs. evergreen or deciduous, not resinous-dotted; sometimes trailing ..... 35. *Vaccinium*

Subfam. I. RHODODENDROIDEAE Drude. Ovary superior, free from the calyx.

Tribe 1. RHODODENDREAE Spreng. Fr. a septicidal caps.: corolla deciduous, sometimes of separate petals.

1. **TRIPETALEIA** Sieb. & Zucc. Deciduous shrubs; winter-buds with 2 or 3 outer scales: lvs. alternate, short-petioled, entire: fls. white or pinkish. in terminal racemes or panicles; calyx 5-lobed; petals 3, oblong; stamens 6, shorter than petals; anthers opening by a slit; ovary 3-celled, the cells many-ovuled; style slender: caps. septicidal, many-seeded. (Greek *tri-*, three in compound words, and *petalon*.) Two species in Japan.

**T. paniculata** Sieb. & Zucc. Shrub to 2 m.; brts. red-brown, angled or slightly winged: lvs. rhombic-ovate or rhombic, 2.5-6 cm. long, acute, cuneate, glabrous except pubescent on the midrib beneath: fls. in panicles 5-10 cm. long; bracts subulate; pedicels 2-4 mm. long; calyx small, cupular, with 5 short lobes; petals about 8 mm. long, white tinged with pink; ovary stipitate: caps. subglobose, 3 mm. across. Fl.viii. N.T.1:12. S.H.2:f.311e-f,312c-d. Japan. Intr. 1892. Zone V.

Related species: **T. bracteata** Maxim. Brts. subterete, light brown: lvs. ob-ovate, obtuse, glabrous: fls. pink, in rarely branched racemes; bracts elliptic to obovate; pedicels 5-15 mm. long, calyx divided to base into 5 foliaceous lobes 5 mm. long; ovary sessile. K.B.1934:192,t. M.I.1:t.71. N.T.1:15. K.B.1934:192,t. (*Botryostege* b. Stapf.) Japan. Intr. 1915. Zone V?

2. **ELLIÓTTIA** Muhlenb. Deciduous shrub; winter-buds glabrous, with 2 or 3 outer scales: lvs. alternate, petioled, entire: fls. slightly irregular, 4- or occasionally 5-merous, white, in terminal racemes or panicles; calyx small, with 4 rounded apiculate lobes; petals 4, oblong, obtuse; stamens 8, about half as long as petals; anthers opening by a slit; style slender, curved, exserted: ovary 4-, rarely 5-celled: fr. a depressed-globose 4-, rarely 5-valved caps. septicidally dehiscent, many-seeded; seeds suborbicular, compressed, winged all around. (After Stephen Elliott, American botanist who wrote a flora of S. Carolina; 1771-1830.) One species in E. N. Am.

**E. racemosa** Muhlenb. Shrub to 3 m. or occasionally small tree to 10 m., with slender upright brs. puberulous when young: lvs. oblong or elliptic-oblong, 7-10 cm. long, acute at ends, glandular-mucronate, dull green and glabrous above, paler and sparingly hairy beneath; petiole slender, pubescent, 8-12 mm. long: racemes loose, 10-25 cm. long; pedicels slender, 6-12 mm. long, the lower ones often branched; petals 1-1.5 cm. long; fls. slightly fragrant: caps. 8-10 mm. across; seeds with the wing 3-4 mm. across. Fl.vii. B.M.8413(c). S.S.14:t.712. G.F.7:205. G.C.51:11;78:49. Gn.75:471. A.B. 1938:t.1. S. C. and Ga. Cult. 1813. Zone VII? With fragrant white fls. in summer.

3. **CLADOTHÁMNUS** Bong. Deciduous shrub; winter-buds with 2 or 3 outer scales: lvs. alternate, subsessile, entire: fls. pink, regular, 1-3, terminal, nodding; sepals 5, narrow-oblong, green; petals 5, oblong; stamens 10; anthers opening by a short slit; style slender, shorter than petals: caps. 5-6-celled, many-seeded. (Greek *klados*, branch, and *thamnos*, shrub.) One species in N. W. Am.

**C. pyrolaeiflorus** Bong. Upright much-branched shrub to 3 m.; brts. glabrous, red-brown, angled; lvs. obovate-oblong to oblanceolate, 3-6 cm. long, mucronate, narrowed toward the base, glabrous: fls. usually solitary, 2-2.5 cm. across, pink, yellow toward the end of petals; pedicels 6-12 mm. long: caps. subglobose, 6-7 mm. across, surrounded and exceeded by the leafy sepals. Fl.vi. B.M.8353(c). G.F.10:215. S.H.2:f.312e,313a-d. Alaska to Ore. Cult. 1910. Zone VI?

4. **LEDUM** L. Evergreen shrubs; winter-buds ovoid, with several scales: lvs. alternate, short-petioled, entire, often revolute, tomentose or

glandular beneath: fls. rather small, white, on slender pedicels in umbel-like terminal clusters; calyx-lobes 5, short and broad; petals 5, spreading; stamens 5-10, with slender filaments; anthers opening by apical pores; ovary 5-celled; style elongated; caps. opening from the base to the apex into 5 valves. (Ledon is the Greek name of Cistus.) Probably only 3 species in the colder regions of the n. hemisphere.

A. Lvs. tomentose beneath, revolute at the margin.

B. Stamens 7-11: lvs. linear to linear-oblong, sometimes oblong, the midrib more or less visible ..... 1. *L. palustre*

BB. Stamens 5-8: lvs. elliptic to oblong, densely rusty-tomentose beneath, the midrib not visible ..... 2. *L. groenlandicum*

AA. Lvs. lepidote-glandular and glaucous beneath, not or slightly revolute. 3. *L. glandulosum*

1. *L. palustre* L. WILD ROSEMARY. Upright shrub to 1 m.; young brts. rusty-tomentose: lvs. linear to linear-oblong, 1-4.5 cm. long, strongly revolute, dark green and somewhat rugose above, rusty-tomentose beneath: fls. 1-1.5 cm. across, in a dense terminal cluster; pedicels glandular-villous; petals oval; stamens usually 10: caps. ovoid, 4-5 mm. long. Fl.v-vi. S.O.3:163(c). F.D.20:2033(c). L.B.6:560(c). S.L.210(h). N. Eu. and N. Asia. Intr. 1762. Zone II.—*L. p. decumbens* Ait., var. Decumbent, densely branched shrub: lvs. linear, 1-1.5 cm. long; caps. abruptly bent downward. B.B.2:677. (*L. d.* Steud.) Arctic Am., N. E. Asia. Intr. 1762.—*L. p. dilatatum* Wahlbg., var. Upright shrub: lvs. usually oblong, 2-7 cm. long, less revolute, the rusty pubescence often restricted to the midrib and veins, exposing a close white tomentum. N.K.8:t.1,2. (*L. d.* Rupr., *L. hypoleucum* Komar., *L. pacificum* Small.) N. Eu. to Japan; Sitka. Cult. 1902.

2. *L. groenlandicum* Oed. LABRADOR TEA. Upright shrub to 1 m.; young brts. rusty-tomentose: lvs. elliptic to oblong or narrow-oblong, 2-5 cm. long, obtuse, densely rusty-tomentose beneath: fls. 1.5 cm. across; pedicels minutely puberulous; calyx-lobes acute or acutish; petals oblong: caps. oblong, 5-6.5 mm. long. Fl.v-vi. G.O.t.50(c). S.O.3:t.164(c). L.B.534(c); 1049(c). B.S. 2:13. M.G.21:74(h). S.L.46(h). (*L. latifolium* Ait.) Greenl. to Alb. and Wash., s. to Pa. and Wisc. Intr. 1763. Zone II.—*L. g. compactum* Bean, var. Dwarf, with short brs. shorter and broader lvs. and smaller fl.-clusters.

3. *L. glandulosum* Nutt. Shrub to 2 m.: brts. puberulous: lvs. elliptic or ovate to oblong, 1.5-5 cm. long, obtuse, not revolute, dark green above, glaucous and resinous-lepidote beneath; petiole 4-6 mm. long: fls. 1.2 cm. across; pedicels slender; calyx-lobes obtuse; petals suborbicular to oblong; stamens 10: caps. subglobose to ovoid, 3-4 mm. long. Fl.v-vi. B.M.7610(c). Alb. and B. C. to Wyo. and Calif. Intr. 1894. Zone V or VI?

5. RHODODÉNDRON L. Evergreen or deciduous shrubs, rarely trees; buds with several to many imbricate scales: lvs. alternate, petioled, entire, rarely ciliate-serrulate: fls. pediceled, usually in terminal umbel-like racemes, sometimes solitary or few, rarely from lateral buds; calyx 5-parted, often very small, rarely 6-10-parted; corolla rotate to campanulate or funneliform, sometimes tubular, usually slightly irregular, with 5-, rarely 6-10-lobed limb, rarely some of the lobes divided to the base; stamens 5-10, rarely more; anthers opening with apical pores; ovary 5-10-celled; cells many-ovuled; style slender with capitate stigma; caps. usually ovoid to oblong, septicial; seeds minute, numerous, enclosed in a loose elongated testa lacerated at the ends. (Greek *rhodon*, rose and *dendron*, tree; the ancient Greek name of *Nerium Oleander*.) Including *Azalea* L., *Rhodora* L., *Therorhodon* Small, *Azaleastrum* Rydb. and *Biltia* Small. More than 600 species distributed through the colder and temp. regions of the n. hemisphere, also on the high

mts. of s. Asia and Malaysia and extending to N. Guinea and Austr.; 26 species known in N. Am., but none extending into Mex.—Rhododendrons and Azaleas are much planted for their beautiful fls. and the evergreen species also for their foliage; they demand, with few exceptions, soil free from lime. Many hybrids have originated in cult. and make the classification and determination of the garden forms difficult. It is manifestly impossible to give within the scope of this Manual a fairly complete account of the ever increasing number of these hybrids and of the numerous new species introduced chiefly during the last three decades from central and western China and adjoining regions, and only a selection of the hardier and better known species could be included. Descriptions of all species known up to 1930 are given in "Species of Rhododendron" (861 pp., ill. 1930); brief descriptions and much other information will be found in "BOWERS, Rhododendrons and Azaleas" (549 pp., ill. 1936), and descriptions of species, varieties and hybrids in "MILLAIS, Rhododendrons" (2 vols., ill. 1917-24).

- A. Lvs. evergreen, glabrous, lepidote or tomentose, not ciliate, or ciliate and lepidote, rarely deciduous and lepidote; stamens 5-20; ovary glabrous, lepidote or tomentose, not setose, sometimes more than 5-celled. (See also X Subgen. *Azaleodendron* with half-evergreen lvs.) ..... Subgen. I. **EURHODODENDRON**
- B. Fls. several or many from a terminal bud, rarely with additional lateral clusters: lvs. persistent.
- C. Lvs. not lepidote, glabrous or tomentose beneath, never less than 5 cm. long; ovary glabrous, glandular or tomentose, never lepidote; stamens 10-20. .... Sect. 1. **LEIORHODIUM**
- CC. Lvs. lepidote, sometimes less than 5 cm. long; ovary lepidote.
- D. Corolla rotate or campanulate to funnelform; stamens 10. .... Sect. 2. **LEPIPERUM**
- DD. Corolla salver-shaped, with spreading limb and cylindric tube, villous within; stamens 5-10: lvs. 1-7 cm. long. .... Sect. 3. **POGONANTHUM**
- BB. Fls. solitary or few from lateral buds clustered at end of brts.: lvs. usually deciduous, lepidote: corolla rotate-campanulate; stamens 10. .... Sect. 4. **RHODORASTRUM**
- AA. Lvs. deciduous, pubescent, often strigose and ciliate, never lepidote, sometimes persistent and strigose; stamens 5-10; ovary setose, rarely glabrous, 5-celled (see also X Subgen. *Azaleodendron* with half-evergreen lvs.)
- B. Fls. from leafless terminal or lateral buds, solitary to many in umbel-like racemes; bracts deciduous; stamens 5-10: upright shrubs.
- C. Fls. solitary or 2 from lateral buds: lvs. deciduous. .... Subgen. II. **AZALEASTRUM**
- CC. Fls. in terminal usually many-fl. clusters, rarely solitary.
- ..... Subgen. III. **ANTHODENDRON**
- D. Fls. and leafy brts. from the same terminal bud; fls. 1-3, rarely more.
- E. Brts. with flattened appressed setose hairs: lvs. persistent or sometimes deciduous, scattered: stamens 5-10. .... Sect. 1. **TSUTSUTI**
- EE. Brts. glabrous or villous; lvs. deciduous, clustered at end of brts., scattered only on vigorous shoots: stamens 8-10. .... Sect. 2. **SCIADOREXION**
- DD. Fls. from terminal buds, several to many, lvs. from distinct lateral buds below.
- E. Stamens 5-10; corolla rotate-campanulate, sometimes with 1-3 of the lobes divided to or nearly to the base. .... Sect. 3. **RHODORA**
- EE. Stamens 5; corolla funnelform. .... Sect. 4. **PENTANTHERA**
- BB. Fls. on a leafy-bracted peduncle, solitary or in 2-3-fl. racemes with leafy bracts; corolla rotate; stamens 10; procumbent small shrub. .... Subgen. IV. **THERORHODION**

## Subgen. I. EURHODODENDRON

## Sect. 1. LEIORHODIUM

- A. Under side of lvs. glabrous, or pubescent only when young or only on the midrib.
- B. Stamens 10; corolla 5-lobed.
- C. Lvs. glabrous beneath.
- D. Ovary pubescent.
- E. Fls. red, pink or white; bud-scales deciduous.
- F. Pedicels pubescent; ovary glandular-pubescent: lvs. obtuse or obtusish at ends ..... 1. *R. catawbiense*
- FF. Pedicels glabrous; ovary white-silky: lvs. acute at ends. .... 2. *R. macrophyllum*
- EE. Fls. yellow; bud-scales persistent. .... 6. *R. chrysanthum*
- DD. Ovary glandular or glabrous.
- E. Fls. red to white.
- F. Lvs. acute at ends. .... 3. *R. ponticum*
- FF. Lvs. rounded to cordate at base: corolla sometimes 6-lobed. .... 15. *R. Souliei*
- EE. Fls. yellow; calyx about as long as ovary. .... 16. *R. croceum*
- CC. Lvs. on midrib and brts. with brown shaggy tomentum. .... 17. *R. longesquamatum*

- BB. Stamens more than 10; ovary 6-8-celled; corolla 6-8-lobed, sometimes 5-lobed.  
 c. Style glandular to the tip.  
 d. Stamens pubescent .....10. *R. decorum*  
 DD. Stamens glabrous.  
 E. Lvs. rounded or subcordate at base.....11. *R. Fortunei*  
 EE. Lvs. cuneate at base.....12. *R. discolor*  
 CC. Style glabrous, or glandular only at base.  
 D. Lvs. rounded at ends or subcordate at base, 5-10(-14) cm. long....13. *R. Fargesii*  
 DD. Lvs. cuneate at base, 10-20 cm. long.....14. *R. sutchuenense*  
 AA. Under side of lvs. tomentose or pubescent.  
 B. Sepals about as long as ovary.  
 C. Corolla 7-lobed; ovary 6-9-celled (see also *R. Metternichii* under No. 5).  
 18. *R. auriculatum*  
 CC. Corolla 5-lobed.  
 D. Lvs. rounded or subcordate at base; ovary glandular (corolla occasionally 6-7-lobed in *R. detonsum*, see under No. 21).....21. *R. adenogynum*  
 DD. Lvs. cuneate; ovary glandular-pubescent.....4. *R. maximum*  
 BB. Sepals much shorter than ovary.  
 C. Ovary tomentose, pubescent or glandular.  
 D. Young brts. tomentose.  
 E. Infl. rounded; pedicels 2.5-3 cm. long; tomentum of lvs. rufous.  
 5. *R. Degronianum*  
 EE. Infl. elongated; pedicels 3-5 cm. long; tomentum white at first.7. *R. Smirnowii*  
 DD. Young brts. glabrous.  
 E. Ovary 5-celled.  
 F. Tomentum of lvs. close and thin, midrib glabrous or glabrescent.  
 G. Lvs. acute at ends; style 3-4 cm. long.....8. *R. caucasicum*  
 GG. Lvs. obtuse at ends; style 1.5 cm. long.....9. *R. brachycarpum*  
 FF. Tomentum of lvs. floccose; midrib woolly-tomentose.....22. *R. rufum*  
 EE. Ovary 6-9-celled .....19. *R. Traillianum*  
 CC. Ovary glabrous.  
 D. Ovary 5-8-celled; corolla slightly spotted.....20. *R. campanulatum*  
 DD. Ovary 5-celled; corolla distinctly spotted crimson.....23. *R. Przewalskii*

## Sect. 2. LEPHIPHERUM

- A. Fls. 2.5-5 cm. across; upright shrubs, rarely procumbent.  
 B. Fls. yellow.  
 C. Brts. pilose; lvs. 2-2.5 cm. long.....41. *R. megeratum*  
 CC. Brts. scaly or glabrous; lvs. 3-8 cm. long.  
 D. Calyx small .....24. *R. Keiskei*  
 DD. Calyx longer than ovary.....25. *R. Hanceanum*  
 BB. Fls. pink to purple or white.  
 C. Lvs. hirsute on midrib beneath.....26. *R. Augustinii*  
 CC. Lvs. quite glabrous beneath.  
 D. Style longer than stamens.  
 E. Brts. glabrous or scaly.  
 F. Fls. partly axillary below the terminal cluster.  
 G. Lvs. densely scaly beneath.....27. *R. Davidsonianum*  
 GG. Lvs. beneath with distant scales.....23. *R. yunnanense*  
 FF. Fls. all terminal.  
 G. Corolla not or slightly scaly outside; lvs. generally lanceolate.  
 H. Lvs. with bristly hairs above.....29. *R. hormophorum*  
 HH. Lvs. without bristly hairs.....30. *R. Searsiae*  
 GG. Corolla scaly outside; lvs. generally elliptic.  
 H. Petioles 4-6 mm. long.....31. *R. concinnum*  
 HH. Petioles 1-1.5 cm. long.....32. *R. rubiginosum*  
 EE. Brts. bristly; calyx 4-8 mm. long.  
 F. Corolla scaly and pubescent outside, purple-crimson.....33. *R. saluenense*  
 FF. Corolla glabrous outside, white.....34. *R. moupinense*  
 DD. Style shorter than stamens.  
 E. Tube of corolla shorter or as long as lobes, slightly or not lepidote outside.  
 35. *R. carolinianum*  
 EE. Tube of corolla longer than lobes, lepidote outside.  
 F. Corolla about 2.5-3 cm. across; style about 2 cm. long; lvs. 4-10 cm. long.  
 36. *R. minus*  
 FF. Corolla 2-2.5 cm. long; style about 1 cm. long; lvs. 2-6 cm. long.  
 37. *R. myrtifolium*  
 AA. Fls. 1-2 cm., rarely 2.5 cm.  
 B. Corolla-tube cylindric, longer than limb.  
 C. Style at least 3 times as long as ovary; fls. about 2 cm. across....37. *R. myrtifolium*  
 CC. Style scarcely twice as long as ovary; fls. about 1.5 cm. across.  
 D. Lvs. not ciliate; calyx very short.....38. *R. ferrugineum*  
 DD. Lvs. ciliate; calyx 2.5-3.5 mm. long.....39. *R. hirsutum*  
 BB. Corolla-tube funnelform or campanulate, as long or shorter, rarely longer than lobes; fls. white to pink or purple, yellow in No. 41 and in *R. flavidum* under No. 45.  
 C. Upright shrubs; lvs. 2.5-5 cm. long; stamens 8-12.

- d. Fls. pink, purple or yellow, 1-6; stamens shorter than corolla, pubescent at base.  
 e. Calyx-lobes pointed, longer than ovary: lvs. 4-8 cm. long.....40. *R. glaucum*  
 ee. Calyx-lobes rounded, shorter than ovary: lvs. 2-3.5 cm. long.  
 f. Brts. pilose: fls. yellow.....41. *R. megeratum*  
 ff. Brts. scaly: fls. purple.  
 g. Stamens 8; corolla scaly outside.....42. *R. lepidotum*  
 gg. Stamens 10-12; corolla glabrous.....43. *R. campylogynum*  
 dd. Fls. white, in many-fl. racemes; stamens as long as corolla, glabrous.  
 44. *R. micranthum*  
 cc. Dwarf, usually matted or procumbent shrubs: lvs. 1-3 cm. long; stamens 5-10.  
 d. Style pubescent below.....45. *R. cantabile*  
 dd. Style glabrous.  
 e. Corolla not scaly outside.  
 f. Style much shorter than stamens.....46. *R. intricatum*  
 ff. Style as long or longer than stamens.  
 g. Stamens glabrous .....47. *R. lapponicum*  
 gg. Stamens pubescent.  
 h. Lvs. about 3 cm. long, narrow-oblongate.....48. *R. hippophaeoides*  
 hh. Lvs. 1-2 cm. long.  
 i. Calyx ciliate .....49. *R. parvifolium*  
 ii. Calyx glabrous .....50. *R. scintillans*  
 ee. Corolla scaly outside.....51. *R. drummonium*

## Sect. 3. POGONANTHUM

- A. Stamens 5 .....52. *R. Sargentianum*  
 AA. Stamens 6-10 .....53. *R. Collettianum*

## Sect. 4. RHODORASTRUM

- A. Lvs. persistent: fl.-clusters many, racemously arranged.....54. *R. racemosum*  
 AA. Lvs. deciduous, rarely evergreen: fl.-clusters few at end of brts.  
 B. Lvs. rounded at ends, sometimes evergreen, 2-4 cm. long.....55. *R. dauricum*  
 BB. Lvs. acute at ends, 3-7 cm. long, deciduous.....56. *R. mucronulatum*

## Subgen. II. AZALEASTRUM

- A. Stamens 10, subequal, pubescent only at base.....57. *R. albiflorum*  
 AA. Stamens 5, the 2 upper much shorter and densely pilose.....58. *R. semibarbatum*

## Subgen. I × III. AZALEODENDRON

## Subgen. III. ANTHODENDRON

## Sect. 1. TSUTSUTSI

- A. Brts. densely clothed with flattened appressed hairs.  
 B. Scales of fl.-buds not viscid.  
 c. Corolla with cylindric tube and spreading lobes.  
 d. Fls. white, about 8 mm. across, tube 3 mm. long; stamens 4-5.....59. *R. Tschonoskii*  
 dd. Fls. pink to white, dotted carmine, 1.4-2 cm. across, tube 6-8 mm. long; lvs. to 3.5 cm. long.....60. *R. microphytum*  
 cc. Corolla funnel-form-campanulate, 1.8-5 cm. across.  
 d. Stamens 5.  
 e. Lvs. crenulate, elliptic-lanceolate to linear-lanceolate.....61. *R. indicum*  
 ee. Lvs. elliptic or obovate to lanceolate, entire.....62. *R. obtusum*  
 dd. Stamens 10: lvs. elliptic to elliptic-oblong, 2-5 cm. long.....63. *R. Simsii*  
 BB. Scales of fl.-buds viscid; stamens 10: lvs. deciduous.....64. *R. yedoense*  
 AA. Brts. with few appressed hairs and many spreading often glandular hairs: bud-scales viscid.  
 B. Stamens 8-10; fls. white to pale purple.....65. *R. mucronatum*  
 BB. Stamens 5, sometimes 6-10; fls. pink to pale rosy-purple.....66. *R. linearifolium*

## Sect. 2. SCIADORHODION

- A. Lvs. rhombic, 2-3 at end of brts.  
 B. Stamens subequal; corolla red; style villous.....67. *R. Weyrichii*  
 BB. Stamens unequal, often declinate; style glabrous or glandular.....68. *R. reticulatum*  
 AA. Lvs. broad-elliptic to obovate, 4-6 at end of brts.  
 B. Corolla white; style glabrous: lvs. 3-5 cm. long.....69. *R. quinquefolium*  
 BB. Corolla pink; style glandular: lvs. 5-10 cm. long.....70. *R. Schlippenbachii*

## Sect. 3. RHODORA

- A. Corolla not divided to base.  
 B. Stamens 10; corolla not spotted.  
 c. Lvs. obovate to oblong-oblongate, pubescent beneath: fls. 3-6, magenta.  
 71. *R. Albrechti*  
 cc. Lvs. elliptic to narrow-elliptic, glabrescent: fls. 1-2, rose-pink.....72. *R. pentaphyllum*  
 BB. Stamens 5-7: fls. pink or whitish, spotted: lvs. glabrous and green beneath.  
 73. *R. Vaseyi*  
 AA. Corolla divided to base; stamens 10: lvs. tomentulose beneath.....74. *R. canadense*

## Sect. 4. PENTANTHERA

- A. Corolla yellow or with large yellow blotch on upper lip.  
 B. Corolla wide-funnelform, not glandular outside, the yellow blotch divided by lighter veins into smaller dots.  
 C. Lvs. glabrous beneath except on veins: winter-buds glabrous; stamens shorter than corolla ..... 75. *R. japonicum*  
 CC. Lvs. soft-pubescent beneath: winter-buds pubescent: stamens as long as the yellow corolla ..... 76. *R. molle*  
 BB. Corolla funnelform, with cylindric tube: blotch not dissolved into dots.  
 C. Corolla glandular outside.  
 D. Tube narrow, much longer than the lobes: corolla yellow, very fragrant. 77. *R. luteum*  
 DD. Tube gradually dilated above the middle.  
 E. Corolla white or pinkish; stamens about as long as lobes; tube often longer than lobes ..... 78. *R. occidentale*  
 EE. Corolla yellow or orange to scarlet; stamens longer than lobes: tube about as long as lobes ..... 79. *R. calendulaceum*  
 CC. Corolla finely pubescent and glandless outside, red to scarlet; tube longer than lobes. 80. *R. speciosum*  
 AA. Corolla white to deep pink or carmine, without or with two small yellow markings at base of upper lobe.  
 B. Fls. before or with the lvs.: corolla-tube pubescent inside.  
 C. Fl.-buds without prominent rows of stipitate glands outside.  
 D. Lvs. glabrous beneath or pilose only on midrib ..... 81. *R. nudiflorum*  
 DD. Lvs. pubescent beneath ..... 82. *R. roseum*  
 CC. Fl.-buds with prominent rows of stipitate glands outside; tube glabrous inside. 83. *R. atlanticum*  
 BB. Fls. appearing after the lvs. are fully developed; corolla-tube glabrous inside or slightly pubescent.  
 C. Brts. more or less strigose and pubescent: style usually pubescent. 84. *R. viscosum*  
 CC. Brts. and lvs. glabrous or the latter strigillose on midrib beneath: style usually glabrous ..... 85. *R. arborescens*

## Subgen. IV. THERORHODION

86. *R. camtschaticum*

## Subgen. EURHODODENDRON Endl.

## Sect. 1. LEIORHODIUM Rehd.

(Including Series: Ponticum, 1-9; Fortunei, 10-14; Thomsonii, 15-16; Barbatum, 17; Auriculatum, 18; Lacteam, 19; Campanulatum, 20; Taliense, 21-23.)

1. *R. catawbiense* Michx. Spreading shrub to 2, rarely to 6 m.: lvs. elliptic to oblong, 6-12 cm. long, obtuse and mucronulate, rounded at base, lustrous above, whitish beneath, glabrous; petioles 1.5-3 cm. long: fls. many; corolla broad-campanulate, 6 cm. across, lilac-purple, spotted olive-green, with broad roundish lobes; sepals short, triangular; pedicels rusty-pubescent and glandular; filaments pubescent at base, whitish; style red; ovary rusty-tomentose. Fl.v-vi. B.M.1671(c). L.B.1176(c). Gn.M.2:18. F.E.7:312,t.71 (h). M.G.17:381(h). Va. to Ga.; in the mts. Intr. 1809. Zone IV. One of the most beautiful native shrubs covering extensive tracts on the higher mts. of the s. Alleghenies.—*R. c. tomopetalum* Rehd., f. Corolla divided  $\frac{2}{3}$  or more into oblong-lanceolate lobes with 2-4 coarse teeth. Cult. 1936.

*R. c. × ponticum* = *R. Morelianum* Lem. Fls. lilac-violet. H.U.4:1,t(c). L.D.II.3:53(c). Orig. before 1826. Here belongs "*Everestianum*" (G.26:103. S.L.341[h]) and *Fastuosum fl. pleno*" (F.S.2:t.143[c], Watson, Rhod. 38.t. [c]).—*R. (c. × ponticum) × arboreum* = *R. altaclerense* Lindl. Fls. crimson. B.R.1414(c). Orig. 1826.—*R. c. × arboreum* = *R. Russellianum* Sweet. Fls. crimson: lvs. tomentose beneath. S.B.4:t.9(c).—*R. R. album* Millais. Fls. white.—*R. c. × caucasicum* = *R. stanwellianum* Methven. Fls. bluish.—*R. c. × maximum* = *R. wellesleyanum* Waterer. Lvs. oblong-lanceolate, glabrous or glabrate beneath: sepals ovate: fls. white, slightly tinged pink. Cult. 1880.—Many forms of uncertain parentage are in cultivation under the general designation "Catawbiense Hybrids."

2. *R. macrophyllum* G. Don. Shrub to 3, rarely to 6 m., glabrous: lvs. 10-20 cm. long, acute, mucronate, cuneate, pale green beneath; petiole 1-2.5

cm. long: infl. many-fld.; pedicels 3.5-5 cm. long, glabrous or nearly so; calyx-lobes 1-2 mm. long, the upper sometimes longer; corolla broad-campanulate, pale rose to rose-purple, spotted red-brown, rarely white, 3-4 cm. long, 4-6 cm. across, lobes wavy; stamens pubescent at base; anthers purple; ovary white-silky. Fl.v-vi. B.M.4863(c). B.T.754. Gn.M.42:279(h). (*R. californicum* Hook., *R. californicum washingtonianum* Zab.) B. C. to Calif. Intr. 1850. Zone VI?

3. *R. pōiticum* L. Shrub to 3 m.; brts. puberulous at first, soon glabrous: lvs. elliptic to oblong, 6-12 cm. long, acute at ends, pale green beneath, glabrous: fls. many; corolla about 5 cm. across, lilac-purple, spotted brownish; upper calyx-lobes as long as ovary, lower ones half as long; pedicels longer than corolla, puberulous; ovary finely glandular. Fl.v-vi. B.M.650(c). Reichb., Fl. Exot. 2:t.38(c). (*R. baeticum* Boiss. & Reut.) Asia Minor, Balkan Pen., Spain and Portugal. Intr. 1763 (from Gibraltar). Zone VII?—*R. p. album* Sweet, var. Fls. white.—*R. p. roseum* Sweet, var. Fls. rose-purple.

*R. p. × arboreum* = *R. Smithii* Sweet. Fls. rose-purple. B.F.2:t.50(c).—*R. p. × catawbiense*; see under No. 1.—*R. p. × caucasicum*; see under No. 8.—*R. p. × nudiflorum* = *R. azaleoides*; see p. 712.

4. *R. maximum* L. Large shrub or small tree to 12 m.; young brts. pubescent: lvs. oblong-obovate or oblong to lanceolate-oblong, 10-20 cm. long, acute or short-acuminate, cuneate, dark green above, paler beneath and with close thin tomentum, rarely nearly glabrous; petiole 1.5-2.5 cm. long, pubescent when young; fls. many; corolla rose-colored to purple-pink, spotted olive-green to orange, campanulate, 3.5-4 cm. across, deeply lobed with oval flat lobes; filaments pilose near base; ovary glandular-pubescent; style glabrous; sepals ovate; pedicels glandular-pubescent. Fl.vi-vii. B.M.951(c). Em.435,t(c). S.S.5:t.238-9. M.M.1:t.1(c). C.L.4:105. Gn.87:540(h). N. S. and Ont. to Ga., Ala. and Ohio. Intr. 1736. Zone III.—*R. m. album* Pursh, var. Fls. white. (*R. Purshii* Don.)—*R. m. purpureum* Pursh, var. Fls. deep pink to purple. (*R. p. Don.*)—The form with white fls. tinged pink (var. *roseum* Pursh) is considered the typical form.

*R. m. × catawbiense*; see under No. 1.—*R. m. × ponticum* = *R. intermedium* Wender. Orig. before 1826.—*R. m. × arboreum* = *R. Cunninghamii* T. Moore. Lvs. brown-tomentose beneath. Fls. white with dark purple spots. G.M.B.1851:121,t(c). P.F.1:t.16(c). (*R. cinnamomeum* var. *C. Paxt.*) Orig. before 1850.

5. *R. Degronianum* Carr. Shrub to 2 m.; brts. tomentose at first: lvs. oblong or elliptic-oblong to obovate, 7-15 cm. long, obtuse to acute at apex, cuneate, glabrous above, beneath with a rufous felt-like tomentum, midrib very prominent, glabrescent; petiole 2-3 cm. long, floccose when young: fls. about 12; pedicels 2.5-3 cm. long, floccose; calyx 1-2 mm. long, with triangular teeth, floccose; corolla funnel-campanulate, 4.5-5 cm. across, pink, not or faintly spotted, lobes ovate to rounded, crenulate; filaments villous near base; anthers yellow; ovary white-tomentose. Fl.iv-v. B.M.8403(c). R.H.1869:368. N.T.1:59. (*R. Metternichii* var. *pentamerum* Maxim.) Japan. Intr. 1870. Zone V.

*R. D. × catawbiense* hybr. = *R. Watereri* Wils. Lvs. with thin close dun-colored tomentum beneath, becoming glabrescent: fls. pale to deep rose-pink; ovary glabrescent; calyx with spreading rounded lobes. Orig. before 1909. Zone V.

Related species: *R. Makinoi* Tagg. Lvs. narrow-lanceolate, 7-17 cm. long, 1-2.5 cm. broad, with a thick woolly tomentum beneath including the midrib; corolla 3.5-4 cm. across. N.T.1:62. M.I.1:35. (*R. stenophyllum* Mak., not Hook., *R. Metternichii* var. *angustifolium* Bean.) Japan. Cult. 1914.—*R. Metternichii*

Sieb. & Zucc. Shrub to 4 m.: lvs. oblong to lance-oblong; fls. 7-merous; calyx-lobes acute, 2-3 mm. long; corolla 5-6 cm. across, 7-lobed; stamens 14; ovary brown-tomentose. S.Z.1:t.9(c). N.T.1:64. (*R. M. var. heptamerum* Maxim.) Japan. Intr. ?

6. *R. chrysanthum* Pallas. Much-branched shrub to 1 m., glabrous; brts. stout, partly covered by the persistent bud-scales: lvs. elliptic to ovate-lanceolate or oblong-obovate, 2.5-8 cm. long, obtuse and mucronulate, cuneate, slightly revolute, rugulose above, light green beneath; petioles stout, 1-1.5 cm. long; fls. 5-8, subtended by persistent bud-scales; corolla funnel-form-campanulate, 2.5-3 cm. across, pale, yellow; sepals minute, rounded, pubescent; pedicels floccose-tomentose, 4-6 cm. long, filaments villous at base; ovary rufous-tomentose; style glabrous. Fl.v-vi. Hooker, Parad. Lond. 2:t.80(c). N.K.8:t.13. N.T.1:68. T.M.41:t.8(h). Altai to Kamchatka, Korea, Japan. Intr. 1796. Zone II.—Difficult to grow.

7. *R. Smirnowi* Trautv. Shrub or small tree to 6 m.; young brts. white-tomentose: lvs. oblong, 8-15 cm. long, acutish or obtuse, cuneate, dark green and finally glabrous above, with thick woolly tomentum beneath, white at first later pale brown; petioles 8-18 mm. long, tomentose: fls. many; corolla rosy-red, campanulate-funnelform, 6-7 mm. across, lobes longer than tube, with frilled, darker colored margin; stamens pilose below the middle; ovary tomentose; calyx short, tomentose; pedicels 3-5 cm. long, pubescent. Fl.v. B.M.7495(c). Gt.35:t.1226(c). G.C.49:417. W.A.74,t(h). A.B.1927:40 (h). Cauc. Intr. 1886. Zone IV. Distinct and handsome in bloom, but of rather loose habit.—There are crosses with Catawbiense hybrids in cult.; also *R. S. × Fortunei* has been raised by J. B. Gable, and crosses with many other species in Eu.

Related species: *R. Ungérni* Trautv. Lvs. oblong, mucronate, with pale brown tomentum beneath: fls. pale rose to white, 5 cm. across, the lobes with flat margin; sepals longer, pointed; pedicels glandular-pubescent. B.M.8332(c). Gt. 35:t.1226(c). Cauc. Intr. 1886. Zone V.

8. *R. caucasicum* Pall. Low dense shrub to 0.5 m. tall, with often pro-cumbent stems; brts. with usually persistent bud-scales, slightly pubescent when young: lvs. narrow-elliptic to obovate-oblong, 5-10 cm. long, acute, cuneate at base, dark green above, with close brown tomentum beneath; petioles 6-8 mm. long: fls. 7-10; corolla funnelform-campanulate, 5 cm. across, with emarginate rounded lobes, pink to yellowish white, spotted greenish; stamens villous near base; ovary rufous-tomentose; calyx minute; pedicels loosely pubescent, about 3 cm. long. Fl.v. B.M.1145(c). Cauc. Intr. 1803. Zone V. Rare in cult.—*R. c. flavidum* Reg., var. Fl. straw-yellow with greenish spots. Gt.16:t.516(c).—*R. c. stramineum* Hook., var. Fls. straw-yellow with fulvous spots. B.M.3422(c).

*R. c. × ponticum album* known as "Cunningham's White" is much used in Germany as a stock for hardy Rhododendrons.—*R. c. × arboreum* = *R. venustum* Sweet. Fls. rose-colored, paler in the centre, with dark blotch. S.B.II.3: t.285(c). Here also belong *R. Nobleanum* Lindl. Fls. bright rose. B.R.1820(c). Gn.77:30. and *R. pulcherrimum* Lindl. Similar but fls. paler.—The species has also entered into the so-called Catawbiense Hybrids. See No. 1.

9. *R. brachycarpum* D. Don. Shrub to 4 m.; young brts. gray-tomentose: lvs. elliptic to oblong-oblancheolate, 8-20 cm. long, obtuse and apiculate, cuneate to auriculate, dark green and reticulate above, with gray to dun-colored tomentum beneath; petiole stout, 1-3 cm. long, gray-tomentose: corolla broad-funnelform, about 5 cm. across, white or yellowish, striped and flushed pink, spotted greenish or brown; stamens unequal, pubescent near base; style glabrous; ovary brown-tomentose; calyx minute; pedicels slightly

villous. Fl.vi. B.M.7881(c). N.K.8:t.14. G.F.1:292. G.C.77:233. Japan, Korea. Intr. 1861. Zone V.—*R. b. rosaeflorum* Miyoshi, var. Fls. pink.—*R. b. lutescens* Koidz., var. Lvs. glabrous beneath: fls. white to yellowish white, slightly or not spotted.

10. *R. decorum* Franch. Shrub to 6 m.: lvs. oblong to oblong-obovate, 5–15 cm. long, rounded at apex, cuneate or obtuse at base, glaucous beneath with scattered minute hairs, with 12–16 pairs of veins; petiole 2–3 cm. long; fls. 8–10; pedicels glandular; calyx small, glandular; corolla broad-funnel-form, about 5 cm. across, 6–8-lobed, white to pink, usually spotted greenish or pinkish, hairy at base within; stamens 12–16, puberulous at base; ovary and style densely glandular. Fl.v–vi. B.M.8659(c). Millais, Rhod. 2:28(h). (*R. Spooneri* Hemsl. & Wils.) W. China. Intr. 1904. Zone (V).

Related species: *R. serotinum* Hutch. Lvs. elliptic-oblong, 9–16 cm. long, slightly cordate at base: corolla white, flushed rose outside, blotched red within. B.M.8841(c). W. China. Cult. 1889. Zone (V).

11. *R. Fortunei* Lindl. Shrub to 4 m.; brts. smooth: lvs. oblong, 10–20 cm. long, abruptly pointed, rounded or subcordate, rarely cuneate, light green above, glaucescent beneath, with minute scattered hairs; petiole 1–2.5 cm. long, purplish: fls. racemose, rosy-lilac or blush, 7-lobed, fragrant, 7–9 cm. across; calyx minute, glandular; stamens 14–16, glabrous; ovary and style sparsely glandular; pedicels slender, stipitate-glandular. Fl.v–vi. B.M.5596(c). E. China. Intr. 1859. Zone VI.

Related species: *R. vernicosum* Franch. Brts. glandular when young; lvs. oblong-oval, obtuse to rounded at ends, 6–12 cm. long; petiole 1.5–3.5 cm. long; corolla 7-lobed, white to rose; style covered with dark red glands. B.M.8834(c). G.C.47:120,t. W. China. Intr. 1904. Zone (V).

12. *R. discolor* Franch. Shrub to 5 m., quite glabrous; young shoots yellowish: lvs. narrow-elliptic to oblong-lanceolate, 10–20 cm. long, acute and mucronulate, cuneate or sometimes subcordate, dark green above, whitish beneath; petiole 1.5–3 cm. long, purplish: fls. about 10; corolla funnelform-campanulate, white to pale pink, 6–10 cm. across, with 6–7 lobes; stamens 12–14; filaments glabrous; ovary and style glandular; calyx 3–5 mm. long, ciliate; caps. 3.5 cm. long. Fl.vi. B.M.8696(c). G.C.72:21. Gn.84:270. Millais, Rhod. 2:128,t(h). C. China. Intr. 1900. Zone VI.—*R. d. carneum* Wils., f. Fls. bright pink.

*R. d.* × *catawbiense* hybr. = *R. holmleaeense* Rehd. Lvs. shorter and broader; corolla 5–6-lobed; stamens 10–12; ovary 8-celled, sometimes 6–7-celled. Orig. 1915. Zone (V).

Related species: *R. Houlstonii* Hemsl. Lvs. elliptic- to lance-oblong, 7–15 cm. long, obtuse, cuneate or rounded at base: corolla pink, 7-lobed; pedicels glandular; stamens 14; calyx minute, not ciliate. Gn.91:703(h). C. China. Intr. 1900. Zone VI?

13. *R. Fargesii* Franch. Shrub to 6 m.: lvs. elliptic to elliptic-oblong or ovate-oblong, 5–8 cm. long, obtuse, mucronate, truncate to subcordate at base, glaucous beneath and minutely punctulate, with 9–10 pairs of veins fairly distinct beneath: fls. 6–10; pedicels 1.5–2.5 cm. long, glandular; calyx minute, glandular; corolla 7-lobed, about 5 cm. across, white to deep rose, spotted red, glabrous within; stamens 14, glabrous; ovary glandular. Fl.v–vi. B.M.8736(c). G.C.71:42,239. Gn.84:403. C. China. Intr. 1901. Zone (V).

Related species: *R. erubescens* Hutch. Lvs. elliptic-oblong, rounded at base, with minute scattered hairs beneath: corolla 7-lobed, white, rose-carmine outside, puberulous within; stamens 12–14, pubescent at base; ovary glandular, 6-celled. B.M.8643(c). C. China. Intr. 1902. Zone VII?—*R. oreodoxa* Franch. Young shoots thinly tomentose, soon glabrous: lvs. elliptic to oblong, 5–10 cm. long, obtuse, rounded at base: pedicels short, glandular or nearly glabrous; corolla pale rose, 7–8-lobed; stamens 14, finely puberulous or glabrous at base:

ovary glabrous. B.M.8518(c). S.R.284. G.C.71:239. Gn.84:170;85:225. (*R. haematochilum* Craib.) W. China. Intr. 1904. Zone (V).—*R. orbiculare* Dcne. Young brts. purplish, glandular: lvs. suborbicular to broad-ovate, 5–10 cm. long, rounded and mucronate at apex, cordate, glaucous beneath, glabrous: fls. broad-campanulate, 5 cm. across, rosy-red, 7-lobed; pedicels 4–6 cm. long, nearly glabrous; stamens 14; ovary glandular; style and pedicels glabrous. B.M.8775(c). G.C.71:274;101:1,t(c). M.D.1937:t.30a(c). (*R. rotundifolium* Franch.) W. China. Intr. 1904. Zone VII.

14. *R. sutchuenense* Franch. Shrub to 5 m.; brts. thinly tomentose at first: lvs. oblong-oblancheolate to oval-oblong, 10–25 cm. long, acutish or obtuse, cuneate, glabrous beneath except the floccose-tomentose midrib; petioles 1.5–3 cm. long, tomentose at first: fls. 8–10, on stout pedicels 1.5–2.5 cm. long; calyx small; corolla 5-, rarely 6-lobed, rose-pink, spotted darker rose within, 6–8 cm. across: stamens 12–15, pubescent at base; anthers blackish purple; ovary 12-celled, glabrous. Fl. iv–v. B.M.8362(c). R.H.1922:150(h),t(c). G.C.73:171. Gn.87:159. C. and W. China. Intr. 1911. Zone (V).—*R. s. Gerálidii* Hutchins., var. Fls. with a dark red-purple blotch.

Related species: *R. praevernium* Hutchins. Lvs. elliptic-oblancheolate, midrib beneath glabrous: corolla 5-lobed, white or flushed rose, with dark wine-red blotch at base; stamens 15; ovary glabrous. G.C.73:159. Gn.84:115;87:521. C. China. Intr. 1907.—*R. calophyllum* Franch. Tree to 12 m.; brts. gray-pubescent: lvs. oblong-obovate to oblanceolate, 20–30 cm. long, acuminate, cuneate, slightly pubescent on midrib beneath at first: corolla 7–8-lobed, white to rose-color with dark blotch; stamens 16–20, glabrous; ovary glabrous. Gn.86:215. G.C.77:431. W. China. Intr. 1904. Zone VII.—*R. Davidii* Franch. Lvs. oblong to oblong-oblancheolate, acute or abruptly short-acuminate; petiole 2 cm. long: fls. 8–12, racemose; rachis 5–10 cm. long; pedicels about 1 cm. long, glandular; corolla broad-campanulate, 7–8-lobed, 4–5 cm. across, rosy-red or lilac-purple, spotted; stamens 14–16; glabrous; ovary glandular. S.R.263. W. China. Intr. 1904. Zone VII.

15. *R. Souliéi* Franch. Shrub to 3 m.; young brts. purplish, glandular: lvs. broad-ovate, 5–8 cm. long, rounded and mucronate at apex, bluish green, glabrous: fls. about 6; pedicels 2–3.5 cm. long, glandular; corolla pale rose or white, cup-shaped, 5–7 cm. across, with 5 or sometimes 6 broad short lobes; stamens 8–10; style and ovary glandular; calyx-lobes unequal, oblong, obtuse, glandular; pedicels 3–5 cm. long. Fl. v–vi. B.M.8622(c). G.C.45:380. Gn.73:278. S.R.731. W. China. Intr. 1905. Zone VII?

Related species: *R. Williamsianum* Rehd. & Wils. Shrub to 1.5 m. high, usually low and spreading: lvs. broad-oval to suborbicular, 1.5–4 cm. long, cordate: fls. 2–4; pedicels 2 cm. long; calyx minute; corolla campanulate, 5–6 cm. across, pale rose. B.M.8935(c). G.C.93:2,t;106,43(h). B.S.3:430,t. M.D. 1937:t.30(h). M.G.52:325(h). W. China. Intr. 1908. Zone (V).—*R. Thomsonii* Hook f. Lvs. broad-oval to suborbicular, 4–8 cm. long, rounded and mucronate at apex, rounded or subcordate at base; infl. racemose; pedicels 1–2 cm. long, glabrous; corolla cup-shaped, 5–6 cm. across, blood-red, greenish toward the base; style and the 6–10 celled ovary glabrous. B.M.4997(c). S.R. 744. Himal. Intr. 1849. Zone VII.

16. *R. crœcum* Balf. f. & W. W. Sm. Shrub to 6 m. high; brts. glandular when young: lvs. oblong to oval-oblong, rarely oval, 5–12 cm. long, rounded and apiculate at apex, usually subcordate at base, pale green beneath; petiole 2–2.5 cm. long, glandular at first: fls. 7–8; pedicels 4–5 cm. long, glandular; calyx 1 cm. long, with oval to oblong glandular-ciliate lobes; corolla cup-shaped, 5–7 cm. across, yellow, sometimes with a crimson blotch: stamens 10, glabrous; ovary and style to the tip glandular. Fl. v–vi. G.C.79:335. Intr. 1913. Zone (V)?

Related species: *R. litiense* Balf. f. Close to the preceding: lvs. oblong to oval, 4–8 cm. long, glaucous beneath; pedicels 1.5–2.5 cm. long; corolla about 5 cm. across, without markings. W. China. Intr. 1913.—*R. Wardii* W. W. Sm. Lvs. oblong-oval to suborbicular, 5–10 cm. long, glaucous beneath and reticulate:

fls. 7-14; pedicels 2.5-4 cm. long, slightly glandular; corolla 5-7 cm. across, without markings. B.S.3:428.t. G.C.89:416. N.F.4:7. W. China. Intr. 1913. Zone VII?

17. *R. longesquamatum* Schneid. Shrub to 3 m.; young brts. covered with brown shaggy hairs; scales of buds persistent: lvs. obovate-oblong, 6-12 cm. long, acute, rounded or subcordate at base, dark green above, on midrib beneath densely rufous-villous like the petioles: fls. 6-15 cm.; corolla broad-campanulate, 5-6 cm. across, pink with dark red blotch; stamens shorter than corolla, pubescent at base; sepals densely rufous-villous and glandular like the pedicels; ovary stipitate-glandular; style glandular at base. Fl.vii. B.M. 9430(c). (*R. Brettii* Hemsl.) W. China. Intr. 1904. Zone VII?

Related species: *R. pachytrichum* Franch. Brts. with brown bristly hairs; bud-scales deciduous: lvs. narrow-oblong to oblong-ovate, 8-15 cm. long, acuminate or apiculate, rufous-pubescent on midrib beneath and on petioles; corolla 3-4 cm. across, campanulate, pale pink to white; sepals small, triangular; pedicels shaggy. W. China. Intr. 1903. Zone VII?—*R. strigillosum* Franch. Shrub to 6 m.; young brts. with white bristly hairs, often glandular: lvs. oblong-lanceolate, 7-14 cm. long, acuminate, cordate, with brown bristly hairs beneath chiefly on midrib: fls. campanulate, red, sometimes white, 3.5 cm. across; filaments glabrous; pedicels and calyx bristly. B.M.8864(c). G.C.73:135. W. China. Intr. 1904. Zone VII?

18. *R. auriculatum* Hemsl. Shrub to 7 m.; winter-buds with acuminate or aristate scales; brts. stipitate-glandular: lvs. oblong, 12-30 cm. long, obtuse and apiculate, auriculate at base, dark green above, rusty-tomentose beneath; petiole glandular-pubescent: fls. 8-15, fragrant; pedicels 2.5-3.5 cm. long, glandular-villous; calyx with short glandular-pubescent lobes; corolla white to pinkish, spotted with green or rose-color, campanulate-funnelform, 7-lobed, 6-9 cm. wide; stamens 14, glabrous; style longer than stamens, shorter than corolla, glandular; ovary glandular. Fl.viii. B.M.8786(c). Gn.86:455;87:539. Millais, Rhod. 2:48,t(h). C. China. Intr. 1900. Zone VII?

19. *R. Traillianum* Forrest & W. W. Sm. Shrub or small tree to 10 m.; young brts. floccose: lvs. elliptic or lanceolate to oblong-lanceolate, 6-11 cm. long, rounded or short-acuminate, rounded to subcordate at base, minutely rugulose above, with a close tawny or grayish green tomentum beneath; petiole 1.5-2.5 cm. long: fls. 10-15; pedicels about 2 cm. long, floccose; calyx small, fimbriate; corolla funnel-campanulate, 3.5-4 cm. across, white or flushed rose, with crimson spots, lobes rounded, emarginate; filaments hairy at base; ovary 8-9-celled, sparingly pilose; style glabrous. Fl.v-vi. W. China. Cult. 1933. Zone VII.

Related species: *R. dictyotum* Tagg. Lvs. oblong-elliptic to oblanceolate, with a loose detachable tomentum beneath, midrib glabrescent; corolla 4-5 cm. across, flushed pink, spotted crimson; ovary densely floccose, 6-celled. S. E. Tibet. Intr. 1923. Zone VII.

20. *R. campanulatum* D. Don. Shrub to 5 m.; young brts. glabrous: lvs. elliptic to elliptic-oblong, 8-14 cm. long, usually obtuse and mucronate, broad-cuneate to subcordate, dark green and glossy above, ferrugineous-tomentose beneath: fls. many; corolla broad-campanulate, 5 cm. across, rosy-purple, spotted purple; stamens pubescent at base; ovary 6-7-celled, glabrous; calyx small, pubescent. Fl.v. B.M.3759(c). L.B.1944(c). H.U.1:255. Gn.59:294. Sikkim, Nepal. Intr. 1825. Zone VII?

Related species: *R. Wallichii* Hook. f. Lvs. elliptic, cordate at base, beneath with a loose tomentum of separate tufts: ovary 5-6 celled. B.M.4928(c). (*R. campanulatum* var. *W. Hook. f.*) Sikkim. Cult. 1856. Zone VII?—*R. aeruginosum* Hook. f. Lvs. elliptic or oval, apiculate at apex, obtuse or subcordate at base, glaucous with a verdigris bloom above, particularly when young, with a rusty woolly tomentum beneath: fls. lilac-rose to reddish purple; ovary 5-8-celled. Hook. f. Rhodod. Sikkim t.22. Sikkim. Intr. about 1850. Zone VII.

21. *R. adenogynum* Diels. Shrub to 3 m.: lvs. oblong-ovate to lance-oblong, 5-12 cm. long, acute to acuminate, rounded or subcordate at base, with a thick woolly tawny tomentum beneath; petiole 2 cm. long; fls. about 12; pedicels 1.5-3 cm. long, glandular and tomentose; calyx 1.5 cm. long, with unequal stipitate-glandular and gland-ciliate lobes: corolla funnel-campanulate, 5 cm. across, white, flushed rose and spotted crimson, with broad rounded lobes; filaments pubescent at base: ovary glandular, 5-6-celled; style glandular near base. Fl.v-vi. B.M.9253(c). G.C.79:339;89:33. S.R.632. W. China. Cult. 1917. Zone VII.

Related species: *R. Balfourianum* Diels. Lvs. lance-ovate, 5-8 cm. long, acute to acuminate, with a crustaceous pale cinnamon tomentum beneath: calyx 1 cm. long; corolla pale rose with crimson markings. W. China. Intr. 1906. Zone VII.—*R. detonsum* Balf. f. & Forrest. Lvs. oblong to oblong-elliptic, abruptly short-acuminate or obtusish, with a floccose brownish detachable tomentum beneath: calyx 3-5 mm. long; corolla 5-7-lobed, rose-pink with a few crimson spots; stamens 10-14; style glandular except near apex. W. China. Cult. 1933. Zone VII.

22. *R. rufum* Batal. Shrub to 5 m.; brts. whitish floccose at first, soon glabrous: lvs. elliptic to oblong or oblong-obovate, 7-11 cm. long, obtuse or acutish, obtuse or rounded at base, tawny or rust-brown woolly-tomentose beneath including midrib; petiole 1.5-2 cm. long; fls. 6-12; pedicels 1.5 cm. long, floccose; calyx minute; corolla funnel-campanulate, 3-4 cm. across, white to pinkish purple, spotted crimson, puberulous within at base; filaments puberulous at base; ovary woolly. Fl.v-vi. J.A.9:t.13(h). N. W. China. Intr. 1925. Zone V or IV? Of slow growth.

Related species: *R. cucullatum* Hand-Mazz. Lvs. narrow-obovate to oblanceolate, acute to obtuse and mucronate, cuneate, beneath with a woolly rusty-red tomentum including the midrib; petiole short; infl. compact; calyx minute; corolla funnelform, about 4 cm. across, white, spotted crimson; ovary glandular. W. China. Cult. 1933. Zone VII.—*R. Wasoni* Hemsl. & Wils. Lvs. elliptic or ovate to oblong-ovate, 4-8 cm. long, acute to short-acuminate, rounded to subcordate at base, rarely broad-cuneate, beneath with soft bright brown tomentum; pedicels floccose-tomentose; corolla funnel-campanulate, 3.5-4.5 cm. across, pink to creamy-white, spotted; anthers nearly black; ovary tomentose. B.M.9190(c). W. China. Intr. 1904. Zone VII?

23. *R. Przewalskii* Maxim. Compact shrub to 2.5 m.; young brts. yellow, glabrous: lvs. oval or obovate to ovate, 5-10 cm. long, 2-4 cm. broad, acute or abruptly apiculate, rounded to subcordate at base, rarely broad-cuneate, dark green above, with close scurfy brown tomentum beneath; petiole yellow: flowers 12-15; corolla campanulate-funnelform, 3-4 cm. across, white to deep pink, spotted purple, lobes short and broad, emarginate; stamens glabrous or slightly pubescent at base; ovary and style glabrous; calyx short, with rounded lobes, glabrous; pedicels glabrous, about 1 cm. long. Fl.vi-vii. (*R. kialense* Franch.) N. W. China. Intr. 1880. Zone V.

Related species: *R. sphaeroblastum* Balf. f. & Forrest. Lvs. oval to oval-oblong, 7.5-15 cm. long, 4-6.5 cm. broad, abruptly mucronate, rounded at base, rusty woolly-tomentose beneath: calyx ciliate; corolla white, spotted crimson; filaments puberulous at base. W. China. Cult. 1933. Zone VII.—*R. agglutinatum* Balf. f. & Forrest. Lvs. oblong-oval or broad-obovate, 4-7.5 cm. long, abruptly apiculate, rounded at base, with a tawny thin tomentum beneath: corolla white, tinged rose, spotted crimson; filaments hairy below the middle. W. China. Cult. 1925. Zone VII.—*R. schizopetalum* Balf. f. & Forrest. Lvs. elliptic to oblong, 6-8 cm. long, abruptly apiculate, rounded at base, beneath with a rather thin light brown tomentum splitting irregularly; pedicels 1 cm. long; corolla campanulate, 4-5 cm. across, rose, spotted crimson; filaments hairy below the middle. W. China. Intr. ? Zone VII.—*R. flavifolium* Balf. f. & Forrest. Lvs. oval to oval-oblong, 4.5-12 cm. long, abruptly apiculate, rounded or subcordate at base, beneath with a thin yellow tomentum later reddish and splitting: corolla funnel-campanulate, 4-5 cm. across, white or rose, with a few

crimson spots; filaments hairy below the middle. W. China, S. E. Tibet. Cult. 1925. Zone VII.—*R. aganiphum* Balf. f. & Ward. Lvs. oblong to elliptic-oblong, 6-9 cm. long, acute or abruptly apiculate, rounded or subcordate at base, beneath with a white or light yellowish lustrous tomentum; corolla funnel-campanulate, 4.5-5 cm. across, white or flushed rose, spotted crimson; filaments sparingly puberulous at base. W. China, S. E. Tibet. Cult. 1933. Zone VII.

### Sect. 2. LEPIPHERUM Don.

(Series: *Triflorum*, 24-31; *Heliolepis*, 32; *Saluense*, 33; *Moupinense*, 34; *Carolinianum*, 35-37; *Ferrugineum*, 38-39; *Glaucum*, 40; *Boothii*, 41; *Lepidotum*, 42; *Campylogynum*, 43; *Micranthum*, 44; *Lapponicum*, 45-51.)

24. *R. Keiskei* Miq. Shrub to 3 m. or sometimes procumbent; brts. slightly scaly: lvs. elliptic-oblong to lanceolate, 3-6 cm. long, acute to rounded at ends, mucronate, sometimes subauriculate at base, sparingly scaly above, densely so and pale beneath; petiole 4-6 mm. long, bristly and pubescent like base of midrib: fls. 3-6; corolla broad-campanulate, with short tube, sparingly scaly without, 4 cm. across, pale yellow; stamens exserted, slightly pilose near base; style glabrous, longer than stamens; calyx minute; pedicels densely scaly. Fl.v. B.M.8300(c). Millais, *Rhodod.* 198. R.H.1917:348,t(c). N.T.1:71. Japan. Intr. 1905. Zone (V).

Related species: *R. ambiguum* Hemsl. Lvs. elliptic to lanceolate, 4-7 cm. long, acute, subcordate or rounded at base, slightly scaly above, more densely so beneath: fls. pale yellow, spotted yellow-green, 5 cm. across, slightly scaly outside. B.M.8400(c). Gs.7:125(h). W. China. Intr. 1904. Zone VII?—*R. lutescens* Franch. Shrub to 2 m.; brts. scaly: lvs. lanceolate or ovate-lanceolate, 3-8 cm. long, long-acuminate, cuneate, sparingly scaly above, more densely so and light green beneath: fls. pale yellow, rotate-funnelform, 3-4 cm. across; calyx minute, scaly. Millais, *Rhod.* 2:244,t(c). R.H.1914:324,t(c). B.M.8851(c). S.R.789. J.L.49:t.14. W. China. Intr. 1904. Zone VII?

25. *R. Hanceanum* Hemsl. Shrub to 1 m.; brts. slightly scaly: lvs. elliptic-lanceolate to elliptic-obovate, 4-8 cm. long, acute to acuminate, rounded to broad-cuneate at base, minutely scaly beneath; petiole 3-8 mm. long: fls. 5-many, racemose, with persistent acuminate bud-scales; calyx-lobes oblong, 6 mm. long, glabrous or slightly scaly and ciliate; corolla funnel-campanulate, 2.5 cm. across, pale yellow, glabrous; stamens exserted, pilose below. Fl.v. B.M.8669(c). K.B.1914:202,t. W. China. Intr. 1909. Zone VII?

26. *R. Augustini* Hemsl. Shrub to 6 m.; brts. scaly and pubescent: lvs. oblong-lanceolate to elliptic-oblong, 3-8 cm. long, acuminate or acute, broad-cuneate, dark green and minutely rugulose and puberulous above, scaly beneath and setose on midrib like petiole: fls. 3-4; corolla broad-campanulate, 3.5-5 cm. across, pale to purple pink, rarely nearly white, spotted yellow, tube much shorter than lobes; stamens as long or slightly shorter than corolla, pubescent toward the base; style longer, sepals short, ciliate; pedicels 1-2 cm. long. Fl.v-v. B.M.8477(c). G.C.97:217,t. Gn.91:123(h). F.R.3:162. R.H.1909:18. Millais, *Rhodod.* 24,t(c); 2:88,t(h). C. and W. China. Intr. 1899. Zone VII.—*R. A. album* Wils., f. Fls. white.

Related species: *R. villosum* Hemsl. & Wils. Brts. scaly and setose: lvs. ovate-oblong, 5-8 cm. long, sparingly scaly and bristly above, more scaly but less bristly beneath and pubescent on midrib: fls. light to dark purple, 3.5-4 cm. across; corolla funnelform; stamens with tuft of hairs near base. W. China. Intr. 1904.

27. *R. Davidsonianum* Rehd. & Wils. Brts. sparingly scaly: lvs. elliptic to oblong, rarely lanceolate, 2.5-6 cm. long, acute or short-acuminate, cuneate, sparingly scaly above, densely so and glaucous beneath, thinly coriaceous: fls. in few- to several-fld. terminal and axillary clusters; corolla funnelform-campanulate, 2.5-3 cm. across, pink, glabrous, lobes ovate, as long as tube; stamens slightly exserted, villous at base; style glabrous, longer than sta-

mens; calyx minute. Fl.v. B.M.8605(c). R.H.1914:323,324. Gn.78:316. W. China. Intr. 1908. Zone VII?

28. *R. yunnanense* Franch. Half-evergreen shrub to 2 m.; brts. slightly scaly: lvs. thin, narrow-elliptic or oblong-obovate to elliptic-lanceolate, 4-7.5 cm. long, acute at ends, ciliate, sparingly bristly above or sometimes glabrous, slightly scaly on both sides, thin: fl.-clusters terminal and often also axillary, 4-5-fld.; corolla broad-funnelform, 4-5 cm. across, white or slightly pinkish, with crimson spots; stamens exserted, hairy near base; style glabrous, longer than stamens; calyx minute. Fl.v. B.M.7614(c). G.C.54:396(h),397. Gn.88:168(h). M.G.1903:173. F.R.2:360. W. China. Intr. 1889. Zone VI.

Related species: *R. siderophyllum* Franch. Lvs. elliptic to elliptic-oblong, 3-6 cm. long, acute or acuminate, broad-cuneate, slightly scaly and not bristly above, paler and with yellow scales beneath, coriaceous: fls. 6-8, pale bluish, spotted dark brown, 3-3.5 cm. across, lower lobes longer than upper ones; style as long, stamens shorter than corolla. W. China. Intr. 1904. Zone VII.

29. *R. hormóphorum* Balf. f. & Forrest. Shrub to 1 m.; young brts. scaly: lvs. short-petioled, lanceolate to narrow-elliptic, 3-5 cm. long, acute at ends, ciliate and with bristly hairs above, pale green beneath and sparingly scaly: fls. 2-4; pedicels sparingly scaly, 6-8 mm. long; calyx minute; corolla funnel-campanulate, about 3 cm. across, lavender or rose, spotted; stamens pubescent below. Fl.v. Gn.89:659. W. China. Intr. 1918. Zone VII?

30. *R. Searsiae* Rehd. & Wils. Shrub to 5 m.; brts. densely scaly: lvs. oblanceolate, 5-8 cm. long, acuminate, cuneate, glaucescent and densely scaly beneath; petioles 5-8 mm. long: fls. 3-8; pedicels 1 cm. long, densely scaly; calyx lobes unequal, the longer 4-5 mm. long, glandular and ciliate; corolla funnel-campanulate, white or pale purple; stamens pubescent at base. Fl.v. B.M.8993(c). S.R.808. W. China. Intr. 1908. Zone VII.

Related species: *R. Bodinieri* Franch. Lvs. lance-oblong to obovate, long-acuminate, rounded to broad-cuneate at base, laxly scaly beneath: fls. 6-7, rose, spotted purple; calyx minute. W. China. Cult. 1933. Zone VII.—*R. longistylum* Rehd. & Wils. Lvs. oblanceolate to elliptic-oblong, 2.5-5 cm. long, acute, attenuate at base, laxly and minutely scaly beneath; fls. 8-20, pink, 2-2.5 cm. across; calyx-lobes unequal, to 5 mm. long, slightly ciliate. R.H.1914:232,233 (h). M.O.303(h). W. China. Intr. 1908. Zone VII.

31. *R. concinnum* Hemsl. Shrub to 3 m.; brts. densely scaly: lvs. elliptic-obovate or elliptic-ovate to lance-oblong, 3-5 cm. long, acute, broad-cuneate or rounded at base, scaly on both sides, densely so and glaucescent beneath; petiole 4-5 mm. long: fls. 3-6; calyx very short; corolla funnel-campanulate, pale or rosy purple, rarely white, spotted brown, scaly, sometimes slightly so; stamens densely villous at base; style glabrous. Fl.v. B.M.8280,8620(c). R.H.1917:348,t(c). Gs.7:124(h). (*R. yanthinum* Bur. & Franch., *R. Benthamianum* Hemsl., *R. coombense* Hemsl.) W. China. Intr. 1901. Zone VII.—*R. c. laetevirens* Cowan, f. Lvs. green beneath between the scales, larger: corolla deep crimson-purple, scaly.—*R. c. lepidanthum* (Rehd. & Wils.) Rehd., var. Lvs. larger and broader, to 7.5 by 3 cm.: corolla larger, dark purple, rather densely villous and scaly outside. (*R. pseudoyanthinum* Balf. f.) Cult. 1908.

Related species: *R. polylepis* Franch. Lvs. oblanceolate to oblong-oblanceolate, acute at ends, 5-10 cm. long, with overlapping scales beneath: corolla dark purple; style minutely pubescent at base or glabrous. R.H.1914:324. W. China. Intr. 1904. Zone VII.—*R. bracteatum* Rehd. & Wils. Lvs. elliptic-ovate to oblong, 3.5-5 cm. long, obtusely mucronate, rounded at base, rather densely scaly beneath, passing toward base of brts. into linear or spatulate bracts: pedicels slender, 2 cm. long; corolla white, spotted red, laxly scaly outside, pubescent within at base; style with a few hairs near base. B.M.9031(c). W. China. Intr. 1908. Zone VII?

32. *R. rubiginosum* Franch. Shrub or tree to 10 m.; brts. scaly, purplish: lvs. elliptic to lance-elliptic, 3.5-8 cm. long, acute to acuminate, cuneate, densely red-brown scaly beneath; petiole 6-10 mm. long: fls. 4-8; pedicels 1 cm. long, densely scaly; calyx very short; corolla funnelform, 3.5-5 cm. across, rosy-lilac, spotted brown; stamens pubescent at base; style glabrous: Fl.iv-v. B.M.7621(c). S.R.329. G.C.78:227,t. Gn.89:376(h). W. China. Intr. 1889. Zone VII.

Related species: *R. heliopsis* Franch. Lvs. elliptic-oblong, 7-10 cm. long, acute to acuminate, distinctly mucronate, rounded or broad-cuneate at base, fairly densely scaly beneath, aromatic: corolla 3-3.5 cm. across, rosy-red, spotted crimson; style pubescent at base. W. China. Intr. 1912. Zone VII.

33. *R. saluenense* Franch. Shrub to 0.70 m.; brts. scaly and bristly: lvs. ovate-elliptic or oval-obovate to elliptic-oblong, 2-3 cm. long, rounded or obtuse and mucronate, rounded or broad-cuneate at base, laxly scaly above, densely so beneath; petiole short, bristly: fls. 2-3; calyx-lobes oval, 6-8 mm. long, scaly along the middle and puberulous, ciliate; corolla broad-campanulate, 3.5-4.5 cm. across, purple-crimson with darker markings, scaly and pubescent outside; filaments villous near base. Fl.iv-v. B.M.9095(c). S.R. 599. W. China. Intr. 1914. Zone VII.

34. *R. moupinense* Franch. Shrub to 1 m.; brts. bristly: lvs. oval or ovate-elliptic to oblong-elliptic, 3-5 cm. long, obtuse or sometimes acute, mucronate, rounded or broad-cuneate at base, glaucescent and rather densely scaly beneath; petiole bristly and scaly: fls. 1-3; pedicels very short; calyx 4 mm. long, scaly, lobes rounded; corolla broad-funnelform, 4-5 cm. across, white, spotted, glabrous outside; stamens pubescent below; anthers dark purple; style glabrous. Fl.v. B.M.8598(c). S.R.504. J.L.62:f.104(h). G.C. 75:161(h); 94:373,t. W. China. Intr. 1909. Zone VII.

35. *R. carolinianum* Rehd. Upright shrub to 2 m., usually lower and compact: lvs. elliptic to narrow-elliptic, 5-8 cm. long, acutish or abruptly short-acuminate, broad-cuneate, glabrous above, ferruginous scaly, often very densely so beneath, sometimes glaucescent; petiole 5-10 mm. long: fls. 5-10, before or with the young lvs.; corolla broad-funnelform, 3-4 cm. across, pale rosy purple, not or slightly spotted, tube gradually widened from the base, as long or shorter than lobes, glabrous or sparingly scaly outside; stamens shorter than corolla, villous at base; style glabrous, about 1.5 cm. long. Fl.vi-vii. B.R.37(c). Add.1:t.1(c). M.G.32:58(h). (*R. punctatum* Small, not Andr.) N. C. Cult. 1815. Zone V.—*R. c. album* Rehd., var. Fls. white or nearly white. (*R. c. var. Margarettae* Ashe.) N. C. Intr. 1895.—*R. c. foliatum* Rehd., var. Shrub to 5 m., of looser habit: lvs. usually longer and narrower: fls. slightly smaller, spotted, more lepidote outside, appearing after the lvs. N. C. Intr. before 1880.

*R. c. × ferrugineum*; see under No. 37.

36. *R. minus* Michx. Straggling shrub to 3 m.: lvs. narrow-elliptic to lanceolate, 4-10 cm. long, acute at ends, sometimes acuminate, quite entire, glabrous above, scaly and often glaucous beneath: fls. 6-10; corolla funnel-form, 2.5-3 cm. across, rosy-pink, spotted greenish, scaly outside, tube cylindric or nearly so, longer than the ovate lobes crinkled at margin; stamens about as long as corolla; style shorter, glabrous, 2-2.5 cm. long; sepals short. Fl.vi-vii. A.R.36(c). B.M.2285(c). (*R. punctatum* Andr., *R. Cuthberti* Small.) S. C. to Ga. and Ala. Intr. 1786. Zone V.

*R. m. × hirsutum*; see No. 37.—*R. m. × ferrugineum*; see under No. 37.

Related species: *R. Chapmanii* Gray. Brs. upright, rigid: lvs. oblong to oval, 2-5 cm. long, obtuse, revolute; petiole 3-6 mm. long: fls. rose-colored; corolla-tube 1.5-2 cm. long. N.H.18:49. W. Fla. Intr. 1936. Zone VII?

37.  $\times$  *R. myrtifolium* Lodd. (*R. hirsutum*  $\times$  *minus*). Compact shrub to 1.5 m.: lvs. elliptic, 2.5–6 cm. long, slightly crenulate, densely scaly beneath with brown scales, occasionally ciliate near base when young; corolla funnel-form, about 2.5 cm. across, light rosy pink, with cylindric tube, longer than the spreading lobes; stamens little longer than tube; style shorter than stamens, about 3 times as long as ovary, sepals ovate, about half as long as ovary. Fl.vi. L.B.908(c). S.L.294(h). (*R. ovalifolium* Hort., *R. ovatum* Hort., not Hook.) Orig. before 1824. Zone V.

Similar hybrids: *R. arbutifolium* Rehd. (*R. ferrugineum*  $\times$  *minus*). Lvs. elliptic to narrow-elliptic, 3–6 cm. long, acute at ends, dark dull green above, scaly beneath with pale scales interspersed with darker ones; fls. rose-colored; calyx minute. (*R. daphnoides* Hort., *R. Hamondii* Hort.) Origin unknown.—*R. lactevirens* Rehd. (*R. carolinianum*  $\times$  *ferrugineum*). Similar to the preceding: low wide-spreading shrub; lvs. somewhat narrower and longer, brighter green; fls. somewhat larger, about 3 cm. across. (*R. Wilsoni* Hort., not Nutt., *R. punctatum* Hort., not Andr., *R. oleaeifolium* Hort.)

38. *R. ferrugineum* L. Dense shrub to 1 m.; young brts. covered with rusty scales: lvs. elliptic-oblong to oblong-lanceolate, 2–4 cm. long, acute at ends, lustrous dark green and sparingly scaly above, densely rusty-scaly beneath: fls. 6–12, pink to carmine; corolla funnel-form, scaly outside, the tube about twice as long as the oblong spreading lobes, about 1.5 cm. across; style nearly twice as long as ovary; sepals very short; pedicels scaly, about 8 mm. long. Fl.vii–viii. L.B.65(c). R.I.17:t.106,f.1,2(c). F.D.20:t.2029(c). Mts. of C. Eu. Intr. 1752. Zone IV.—*R. f. album* D. Don, var. Fls. white. S.B.II.3:t.258(c).—*R. f. atrococcineum* Bean, var. Fls. nearly scarlet.

*R. f. \times hirsutum* = *R. halense* Gremblisch. Intermediate between the parents. (*R. intermedium* Tausch, not Wender., *R. hirsutiforme* Gremblisch.) R.I.17:t.1157(c). F.D.20:t.2030(c). Occurs occasionally with the parents. Cult. 1870.—*R. f. \times carolinianum*; see under No. 37.

A related species is *R. Kotschyi* Simonk. Smaller and lower: lvs. elliptic-oblong, 1–2 cm. long, obtusish, glabrous above: fls. rosy-pink; style as long or shorter than ovary. R.I.17:t.1157,f.2,3(c). Gn.56:159. (*R. myrtifolium* Schott & Kotschy, not Lodd., *R. ferrugineum* var. *m.* Schroet.) Carpathian Mts. Intr. 1846. Zone V.

39. *R. hirsutum* L. Shrub to 1 m.; young brts. scaly and hirsute: lvs. elliptic-oblong to obovate, 1–3 cm. long, obtuse to acutish, bright green and glabrous above, bright green and with scattered scales beneath, crenulate and ciliate with long hairs: fls. similar to those of the preceding species; corolla slightly scaly outside; pedicels 1–2.5 cm. long, hirsute and scaly; sepals lanceolate, as long as ovary, hirsute. Fl.vi. L.B.479(c). B.M.1853(c). R.I.17:t.107, f.3–5(c). F.D.20:t.2031(c). Mts. of Eu. Intr. 1685. Zone IV. Thriving in limestone soil.—*R. h. albiflorum* Schroet., var. Fls. white. (*R. h.* var. *album*, Schinz & Kell.)—*R. h. laciniatum* Schroet., f. Lvs. deeply toothed or incised, at least near base: fls. white. Schroeter, Pflanzenleben Alp. 113.

40. *R. glaucum* Hook. f. Shrub to 2 m.; brs. scaly: lvs. oval to elliptic-oblong or lance-oblong, 3–8 cm. long, acute or obtuse, mucronate, rounded to broad-cuneate at base, dull green above, glaucous beneath, with scattered brown and smaller yellow scales; petiole 3–8 mm. long: fls. 5–6; pedicels scaly, 1–2 cm. long; calyx-lobes lance-ovate, 8 mm. long, acute, scaly; corolla campanulate, with spreading rounded lobes, pink, 2.5 cm. across; stamens 10, pubescent near base. Fl.iv–v. S.R.299. G.C.67:275;101:215,t. Himal. Intr. about 1850. Zone VII.

41. *R. megèratum* Balf. f. & Forrest. Dwarf shrub to 0.5 m., sometimes prostrate; brts. pilose: lvs. elliptic or elliptic-obovate, 2–3 cm. long, obtuse and mucronate, broad-cuneate to rounded at base, bright green above,

glaucous and rather densely scaly beneath, sometimes sparingly ciliate; petiole bristly: fls. 1-3; pedicels densely bristly; calyx 8 mm. long, with oval rounded lobes; corolla campanulate, 2-2.5 cm. across, yellow, slightly scaly; stamens villous near base. Fl.v-vi. B.M.9120(c). G.C.89:431;100:337(h). W. China. Cult. 1926. Zone VII?

42. *R. lepidotum* Wall. ex G. Don. Shrub to 1 m.; brts. slightly scaly: lvs. elliptic to oblanceolate, 2-3.5 cm. long, obtuse or acute at apex, cuneate, densely scaly beneath with contiguous scales; petiole short: fls. 1-4; pedicels slender, 1.5-2 cm. long, densely glandular; calyx-lobes 4 mm. long, broad-oval; scaly; corolla campanulate, about 2.5 cm. across, with short and broad tube, purple or rosy-crimson, spotted, densely scaly outside; stamens 8, pubescent below; style 3 mm. long, thick, decurved. Fl.v-vi. B.M.4657(c). S.R.441. Himal. to W. China. Cult. 1852. Zone VII.

43. *R. campylógynum* Franch. Shrub to 2 m.; brts. glandular: lvs. obovate to oblong-obovate, 1-2.5 cm. long, obtuse and mucronate, cuneate, margin recurved and crenulate, pale green or glaucescent beneath and sparingly scaly at first; petiole short: fls. 1-4; pedicels 2-3 cm. long, slightly scaly; calyx 3-5 mm. long, glabrous, lobes rounded; corolla campanulate, 1.5-2 cm. long and as wide, with 5-6 short rounded lobes, rosy-purple to black-purple, glabrous outside; stamens 10-12, pubescent near base; ovary glandular-scaly; style thick, 1 cm. long, decurved. Fl.v-vi. B.M.9407A(c). J.L. 59:f.127(h). W. China. Intr. 1912. Zone VII?

44. *R. micranthum* Turcz. Shrub to 2.5 m.; brts. scaly and slightly pubescent at first: lvs. elliptic-oblong to oblanceolate, 2-3.5 cm. long, acute at ends, glabrous above, densely ferruginous-scaly beneath; petiole 1-3 mm. long: fls. in many-fld. dense racemes 3-3.5 cm. across; corolla campanulate, white, with oval spreading lobes, as long or shorter than the tube, 1 cm. across, scaly outside; style longer than corolla, shorter than stamens; filaments glabrous; sepals ovate to lanceolate, often ciliate; pedicels scaly, 1-2 cm. long: fr. oblong, 5-8 mm. long. Fl.v-vi. B.M.8198(c). Gn.84:270. M.O.t.29. N.K. 8:t.7. N. Korea to Manch. and N. China. Intr. 1900. Zone IV. Very distinct species, in habit and fls. resembling *Ledum*.

45. *R. cantabile* Hutch. Shrub to 1 m.; brts. scaly: lvs. ovate- to oblong-elliptic, 2-3 cm. long, obtuse at ends, densely scaly on both sides, rusty beneath; petiole short: infl. dense, 5-10-fld.; calyx-lobes oval, 4-5 mm. long, ciliate, scaly only at base; corolla funnelform, purple-blue or violet, 2-2.5 cm. across, glabrous outside; stamens villous toward the base; style villous below the middle. Fl.v. B.M.8963(c). W. China. Cult. 1922. Zone VII? One of the best of this group.

Related species: *R. Websterianum* Rehd. & Wils. Densely branched upright shrub; brts. densely grayish scaly: lvs. oval or elliptic-oblong, 6-15 mm. long, obtuse, usually cuneate, densely scaly on both sides, light yellowish gray or grayish white beneath: fls. 1-3, rosy-purple, 2.5-3 cm. across; stamens 10; sepals ovate, rounded, 2-5 mm. long. W. China. Intr. 1908. Zone VI?—*R. flavidum* Franch. Shrub to 1 m.; lvs. oblong-ovate, 1-1.5 cm. long, dark green above, paler beneath, scaly on both sides: fls. 3-6, yellow, 2 cm. across; corolla with very short tube and spreading wavy lobes; stamens and style scarcely as long as corolla; sepals oblong, 5-6 mm. long, scaly; pedicels short. B.M.8326(c). G.C. 47:229. J.L.36:55. B.S.359. (*R. primulinum* Hemsl.) W. China. Intr. 1905. Zone VI.

46. *R. intricatum* Franch. Shrub to 0.5 m.; young brts. scaly: lvs. broad-ovate to elliptic, 6-12 mm. long, dark green above, paler beneath, densely scaly on both sides: fls. 5-6: corolla broad-funnelform, with short rounded lobes, 1.5 cm. across, violet-purple; stamens pubescent at base, included in

the tube; style shorter than stamens; sepals short, triangular, scaly. Fl.vi. B.M.8163(c). G.C.41:262(h);63:143(h). Gn.78:29,t(c,h),190(h);87:512(h). S.L.293(h). (*R. nigro-punctatum* Hort., not Franch.) W. China. Intr. 1904. Zone VI?

47. *R. lapponicum* Wahlenb. Prostrate shrub, rarely to 0.5 cm. tall; young brts. very scaly: lvs. oblong, 6-20 mm. long, obtuse or abruptly pointed, dark green and rugose above, densely covered with brownish scales beneath; petiole 2-3 mm. long: fls. 3-6; corolla broad-campanulate, 1.5 cm. across, bright purple; stamens 5-8, as long as corolla, glabrous; sepals triangular, ciliate; pedicels 6-10 mm. long. Fl.vi-vii. B.M.3106(c). M.G.25:136(h). Mts. of N. Am., N. Eu., N. Asia. Intr. 1825. Zone II.

48. *R. hippophaeoides* Balf. f. & W. W. Sm. Upright shrub to 1 m.: lvs. oval-oblong to oblong, 2-3 cm. long, obtuse and mucronate, cuneate, densely scaly on both sides, beneath pale gray with often overlapping scales: fls. 4-8; pedicels 3-4 mm. long; calyx 2 mm. long, usually ciliate; corolla blue-purple to bluish rose, broad-campanulate, 2-2.5 cm. across, tube hairy within; stamens pubescent at base, alternately longer and shorter; anthers dark red-brown; style as long as stamens. Fl.iv. B.M.9156(c). G.C.77:94,t. N.F.1:93(h). Gt.79:161(h). W. China. Intr. 1913. Zone VII.

49. *R. parvifolium* Adams. Shrub to 1 m., with erect and spreading brs., scaly when young: lvs. narrow-elliptic to oblong or lance-oblong, 5-20 mm. long, acute or obtuse and mucronate, cuneate, dark green and scaly above, densely covered beneath with pale or rusty scales: fls. 2-5, with persistent bud-scales, corolla broad-campanulate, deeply 5-lobed, 1.5-2 cm. across, rosy-purple; stamens 10, slightly shorter than corolla, villous near base; style longer than stamens; sepals ovate to oblong-ovate, 1-2 mm. long, scaly; ciliate, sometimes only slightly so. Fl.iv-v. Gt.26:t.904(c). B.M.9229(c). G.C.63:76;87:123(h). N.K.8:t.6,8. Gn.89:113(h). (*R. confertissimum* Nakai.) Siberia, Korea. Cult. 1877. Zone IV.

Related species: *R. impeditum* Balf. f. & W. W. Sm. Lvs. elliptic to oblong, 8-12 mm. long, obtuse, densely scaly, red-brown beneath: fls. 1-2; calyx-lobes oblong, 3 mm. long, slightly scaly; corolla mauve or purple-blue, 1.5 cm. across, tube villous within; stamens long-exserted, villous at base. G.C.78:41,t. J.L.50:f.65(h). W. China. Cult. 1918. Zone VII.—*R. fastigiatum* Franch. Lvs. elliptic to elliptic-oblong, 6-8 mm. long, obtuse, densely scaly: fls. 4-5; calyx-lobes oval, 3-4 mm. long, slightly scaly; corolla 2 mm. across, light purple. G.C.39:263(h). J.L.50:f.64(h). W. China. Intr. 1911. Zone VII.

50. *R. scintillans* Balf. f. & W. W. Sm. Small upright shrub; brts. densely scaly; lvs. elliptic-oblong to oblong, 1-1.5 cm. long, obtuse and mucronate, densely scaly on both sides, pale brown beneath: fls. 2-3; pedicels very short, densely scaly; calyx very short, scaly; corolla, 1.5 cm. across, lavender-blue; stamens villous near base. Fl.iv-v. G.C.75:78. Gn.88:70. W. China. Cult. 1924. Zone VI.

Related species: *R. nitidulum* Rehd. & Wils. Brts. densely fuscous-scaly: lvs. oval to ovate, 7-12 mm. long, obtuse, densely scaly on both sides: fls. 1-2, violet-purple, rotate-funnelform, 2.5 cm. across; stamens 8-10, as long as corolla; sepals ovate to oblong-ovate, 2 mm. long. W. China. Intr. 1904. Zone VI?—*R. n. nubigenum* Rehd. & Wils., var. Lvs. 4-8 mm. long: fls. lilac-purple, about 2 cm. broad; sepals oblong, nearly as long as ovary, usually colored. W. China. Intr. 1903.

51. *R. drumonium* Balf. f. & Ward. Shrub to 0.5 m.; brts. short, crowded, scaly: lvs. elliptic to narrow-elliptic, 4-8 mm. long, obtuse to acutish, mucronate, densely scaly on both sides, red-brown beneath, often with scattered darker scales: fls. solitary; calyx 2 mm. long, scaly, ciliate; corolla broad-

funnel-form, 1-1.5 cm. across, mauve, villous within the tube; style slightly shorter than stamens. Fl.v-vi. W. China. Cult. 1933. Zone VI.

Related species: *R. achroanthum* Balf. f. & W. W. Sm. Lvs. oval to oval-oblong, 8-15 mm. long, rounded at ends or broad-cuneate at base; fls. 2-3, magenta-red, stamens 5-6; style longer than stamens. W. China. Cult. 1933. Zone VII.

### Sect. 3. *POGONANTHUM* G. Don.

(Series: *Cephalanthum*, 52; *Anthopogon*, 53.)

52. *R. Sargentianum* Rehd. & Wils. Low shrub to 0.6 m., with upright or ascending brs.; brts. fuscous-tomentose; lvs. oval, 8-15 mm. long, obtuse and mucronulate, broad-cuneate, revolute, scaly above at first, soon glabrous and slightly rugulose, densely rusty-scaly beneath, aromatic; petiole 2-4 mm. long, scaly; fls. 6-12; corolla about 1 cm. across, white or pale yellow, scaly and sparingly pubescent outside; tube 6-7 mm. long; lobes suborbicular; stamens 5, glabrous, inclosed; style glabrous, shorter than stamens; sepals obovate, 3-4 mm. long, ciliate near apex. Fl.vi. B.M.8871(c). W. China. Intr. 1904. Zone VI?

Related species: *R. cephalanthum* Franch. Shrub to 1 m.: lvs. oval to oblong, 1.5-3 cm. long, obtuse, pale brown beneath; fls. in dense clusters, white, about 1 cm. across; stamens slightly pubescent at base; sepals ovate-oblong. Millais, Rhod. 2:40,t(h). W. China. Intr. 1908. Zone VI?—*R. Adamsii* Rehd. Shrub to 0.5 m.: lvs. elliptic or elliptic-ovate, 1.5-2 cm. long, acute, rounded at base; fls. pink or white, glabrous outside; stamens puberulous at base; sepals ovate, 1-2.5 mm. long. Mém. Acad. Sci. St. Pétersb. 2:t.14. (*R. fragrans* Maxim., not Paxt.) E. Siberia. Apparently not yet intr., but probably the hardiest species of this group.

53. *R. Collettianum* Aitch. Low shrub, occasionally to 3 m.; brts. fuscous-scaly; lvs. elliptic to elliptic-lanceolate, 4-7 cm. long, acute at ends, dull green above, fulvous-scaly beneath, aromatic; fls. white, in clusters 5-6 cm. across; corolla 2.5 cm. across; lobes oblong, upright-spreading; stamens 10; sepals oblong, ciliate. Fl.v-vi. B.M.7019(c). G.C.III.4:297. J.L.36:331. Afghan. Intr. 1879. Zone VI.

Related species: *R. anthopogon* D. Don. Lvs. oval or obovate, 2-3.5 cm. long, rusty-scaly beneath; fls. sulphur-yellow, about 1.5 cm. across; stamens 6-8; sepals oblong, ciliate. B.M.3947(c). S.R.5. E. Himal. Intr. 1820. Zone VI?

### Sect. 4. *RHODORASTRUM* Maxim.

(Series: *Virgatum*, 54; *Dauricum*, 55-56.)

54. *R. racemосum* Franch. Upright shrub to 2 m.; brts. scaly; lvs. elliptic to oval or obovate, 1.5-3.5 cm. long, obtuse or acutish, rounded or broad-cuneate at base, glabrous above, glaucous and scaly beneath; fls. in numerous few-fl. clusters along the brts.; corolla pink, wide-campanulate, tube shorter than the oblong lobes; stamens 10, pubescent at base, longer than lobes. Fl.iv-v. B.M.7301(c). Gn.42:t.320(c); 87:565(h). Gt.57:t.1577(c). G.C.47:343. N.H.7:109. W. China. Intr. 1889. Zone (V).

55. *R. dauricum* L. DAURIAN *R.* Upright much-branched shrub to 2 m.; brts. scaly; lvs. deciduous or partly persistent till spring, elliptic to elliptic-ovate to oblong-ovate, 1-5 cm. long, obtuse, rounded or broad-cuneate at base, dark green and slightly scaly above, paler and densely scaly beneath, aromatic; fls. solitary, from axillary buds at end of brts.; corolla rotate-campanulate, 2.5-3.5 cm. across, rosy-purple, puberulous outside, lobes longer than tube; stamens about as long as lobes, villous below the middle; style longer than stamens; calyx minute. Fl.iii-iv. A.R.1:t.4(c). B.M.636(c). L.B. 605(c). G.C.III.12:701; 53:51. N.K.8:t.9. N.T.1:73. (*R. dahuricum* DC., *Azalea dahurica* K. Koch.) Altai Mts. to Korea, Manch. and N. Japan. Cult.

1780. Zone IV.—*R. d. sempervirens* Sims, var. Lvs. dark green, persistent or partly persistent; fls. darker, purple. B.M.1883(c). B.R.194(c). L.B.1584(c). R.H.1908:198. Gt.53:267. (*R. d.* var. *atrovirens* Ker.)

*R. d.* × *ciliatum* Hook f. = *R. praecox* Carr. Evergreen or half-evergreen shrub: lvs. elliptic, 2.5–5 cm. long, obtusish to acute, sparingly ciliate, lustrous dark green above, rusty-scaly beneath, sparingly ciliate: fls. few, bright rosy purple, broad-funnelform, about 4 cm. across; sepals ovate, ciliate. Fl.iii–iv. R.H.1868:210,t(c). Gn.61:428(h). Gt.56:t.1567(c). G.C.III.12:771. Orig. about 1855.—*R. p. rubrum* Wats. Fls. deeper colored. Gn.38:32,t(c).—*R. p.* “Early gem.” Lvs. more ciliate; fls. larger, pale lilac. G.C.II.11:335. Zone (V).

56. *R. mucronulatum* Turcz. Upright shrub to 2 m.; brts. sparingly scaly: lvs. deciduous, thin, elliptic-lanceolate to lanceolate, 3–7 cm. long, acute or acuminate, cuneate, laxly scaly on both sides, pale green beneath; petiole 3–5 mm. long: fls. before the lvs., 3–6 at end of brts.; pedicels short, scaly; calyx small, scaly; corolla funnel-campanulate, 3–4 cm. across, pale rosy-purple, puberulous outside; stamens villous below the middle; style glabrous, longer than stamens. Fl.iii–iv. B.M.8304(c). M.D.1898:1,t(c). G.F. 9:65. G.C.74:41(h). W.A.54,t(h, as *Azalea mucronulata*). (*R. dauricum* var. *m.* Maxim.) N. China, Manch., Korea, Japan. Intr. 1882. Zone IV. Valued for its early profuse fls.; lvs. changing to yellow and bronzy crimson in fall.—*R. m. ciliatum* Nakai, var. Lvs. and petioles ciliate, lvs. with a few appressed hairs above. N.K.8:t.11. N.T.1:75. (*R. dauricum* var. *c.* Wils.) Korea, Jap. Intr. 1917.—*R. m. acuminatum* Hutchins., var. Blooms several weeks later.

× Subgen. AZALEODENDRON Rodig. (*Eurhododendron* × *Anthodendron*, *Rhodazalea* Croux.).

*R. azaleoides* Dum.-Cours. (*R. nudiflorum* × *ponticum*). Lvs. rather large, acuminate, green beneath: fls. pale purple, not spotted, with wavy lobes. A.R.6:t. 379(c). (*R. ponticum* var. *deciduum* Andr.) Orig. before 1800.—Here belongs also: *R. gemmiferum* Bean. Lvs. broader, obtusish or acutish, pubescent beneath: fls. rose-purple, 3 cm. across. Orig. unknown. Zone (V).

*R. hybridum* Ker (*R. viscosum* × *maximum*). Lvs. oblong, 5–10 cm. long, acute at ends, glaucous beneath: fls. whitish, tinged with pink or purple, upper lobe spotted yellow, fragrant, 3 cm. across. B.R.t.195(c). (*R. azaleoides* Bean, not Dum.-Cours.) Orig. before 1850.

*R. fragrans* Paxt. (*R. cataebense* × *viscosum*). Lvs. shorter and broader: fls. pale pinkish, fragrant. P.M.10:147,t(c). Orig. about 1820.

*R. norbitonense* W. Smith (*R. molle* × [*maximum* × *ponticum*]). A hybrid with yellow fls., originated about 1830, of which the two following vars. are occasionally cult.: *R. n. broughtonianum* Rehd., var. Young brts. pubescent: lvs. persistent, oblong to oblong-obovate, 5–12 cm. long, pale green beneath, finely pubescent on both sides: fls. 8–16 in dense clusters, primrose-yellow, spotted reddish brown, about 6 cm. across; sepals oblong. G.C.51:53. B.S.2:345. Millais, Rhodod. 184,t(h). (*R. broughtonii aureum* W. Wats.)—*R. n. aureum* (Paxt.) Rehd., var. Similar to the preceding, but lvs. glaucous beneath: fls. paler; pedicels longer; sepals narrower. P.M.9:79,t(c). F.R.2:152,t(c). F.S. 1:45,t(c). (*R. Smithii aureum* Paxt.)

*R. azaleodendron* Vilm. & Bois. (*R. japonicum* × *Eurhododendron hybrids*). Evergreen: fls. white to rosy-red or rose-lilac, conspicuously spotted. G.C.III.13: 663. R.B.19:177,t(c). R.H.1893:369.

Subgen. AZALEASTRUM Planch.

(Series: Albiflorum, 57; Semibarbatum, 58.)

57. *R. albiflorum* Hook. Deciduous shrub to 2 m.; young brts. hairy and glandular: lvs. elliptic-oblong to oblong, 2.5–6 cm. long, acute at ends, appressed-pilose above and on the midrib beneath, slightly ciliate, pale green; petiole strigose: fls. nodding on short glandular-pubescent pedicels, white; corolla rotate-campanulate, 2 cm. across, with ovate lobes; stamens 10, pubescent at base; sepals oval to obovate-oblong, 7–12 mm. long, glandular-ciliate. Fl.vi–vii. B.M.3670(c). (*Azalea albiflora* Ktze.) B. C. and Alb. to

Ore. and Colo. Intr. before 1837, but rare in cult. and not thriving well in the East. Zone V.

58. *R. semibarbatum* Maxim. Shrub to 2 m.; brts. pubescent and glandular-pilose: lvs. deciduous, thin, elliptic or elliptic-ovate to elliptic-oblong, 2-4 cm. long, acute or obtusish and mucronate, broad-cuneate, minutely crenulate and ciliate, light green beneath and glabrous except the short-villous and sparingly setose midrib; petiole 4-10 mm. long, pubescent and glandular-setose: fls. few at end of brts. beneath the young leafy shoot; calyx-lobes ovate, 2-3 mm. long, glandular-setose, ciliate; corolla rotate-funnelform, 2-2.5 cm. across, with wide ovoid tube 5-6 mm. long and spreading broad-oval lobes, white, flushed pink, spotted red at throat: stamens 5, very unequal, the 3 lower ones as long as limb, puberulous only at base, the upper ones half as long, densely pilose; ovary glandular-setose; style glabrous. Fl.vi. B.M.9147(c). Gt.19:t.666(c). N.T.1:77. S.R.608. Japan. Intr. about 1860. Zone V. A very distinct species, but fls. insignificant.

Subgen. III. ANTHODENDRON Endl.

Sect. 1. TSUTSUTSI G. Don.

(Series Azalea, subser. Obtusum, 59-66.)

59. *R. Tschonoskii* Maxim. Deciduous densely branched shrub, to 1.5, rarely 2.5 m. tall, sometimes low and depressed: lvs. crowded at ends of brts., elliptic or oblong to ovate-lanceolate or lanceolate-oblong, 8-35 mm. long, acute at ends, pale green beneath, appressed-pilose on both side, with 1-3 prominent veins: fls. 2-6, short-stalked; corolla funnelform, about 1 cm. across, with cylindric tube, villous inside, sometimes with 4 lobes (*f. tetramerum* Makino); stamens exserted, pilose below the middle; calyx setose: fr. ovoid. Fl.vi. N.T.1:112. N.K.8:t.17. S.H.2:f.332l-o. (*Azalea T. Ktze.*) Japan, Korea. Intr. 1878. Zone V. Fls. insignificant; lvs. changing to orange-red and crimson in fall.

60. *R. microphytum* Franch. Shrub to 2 m.; lvs. persistent, elliptic to lance-oblong or lanceolate, 1-4 cm. long, acute or obtusish and mucronulate, cuneate or rounded at base, dark green above, pale green beneath, with scattered hairs on both sides or glabrescent above: fls. 3-6; pedicels short; calyx-lobes lanceolate, 1-3 mm. long, strigose; corolla funnelform, 1.5-2.5 cm. across, rose to nearly white, spotted carmine or crimson, tube cylindric, 5-8 mm. long, with oval or oblong spreading lobes; stamens longer than corolla, puberulous below the middle. S.R.90. H.B.6:244(h). W. China. Intr. 1913. Zone (V).

61. *R. indicum* (L.) Sweet. Evergreen or half-evergreen, dense and low shrub, rarely to 2 m. tall: lvs. short-petioled, elliptic-lanceolate to lanceolate or oblanceolate, 2-3.5 cm. long, acute at ends, dark green and somewhat lustrous above, glaucescent beneath, remotely crenulate-serrulate, ciliate, sparingly strigose on both sides: fls. 1-2; corolla broad-funnelform, bright red to scarlet, 5-7 cm. across; stamens 5, about as long as corolla; style longer. Fl.vi. B.R.1700(c). S.B.II.3:t.261(c). N.T.1:125. (*R. macranthum* G. Don, *R. lateritium* Planch., *R. i.* var. *macranthum* Maxim., *Azalea indica* L.) Japan. Cult. 1680. Zone (V).—*R. i. laciniatum* Mak., f. Corolla deeply 5-parted, with lanceolate obtuse lobes.—*R. i. balsaminaeflorum* (Carr.) Nichols., var. Dwarf form: lvs. 1-2.5 cm. long: fls. double, salmon-red. R.H.1882:432,t(c). Gn.18:254,t(c). F.M.19:t.418(c). (*R. i.* var. *rosaeflorum* Rehd., *Azalea Rolissonii* Moore.) Intr. about 1877. Zone (V).—*R. i. crispiflorum* (Hook.) Schneid., var. Lvs. thicker: lobes of corolla with wavy margin. B.M.4726(c). F.S.9:79,t(c). Intr. about 1850. Zone VI?

62. *R. obtusum* (Lindl.) Planch. Much-branched half-evergreen shrub, to 1 m., sometimes prostrate: lvs. elliptic to elliptic-lanceolate, 1-2.5 cm. long, acute at ends, or obovate and obtuse at ends of shoots and more coriaceous and partly persistent, dark green and lustrous above, strigose on midrib beneath: fls. 2-3, orange-red to bright red; corolla funnelform, 2.5-3.5 cm. across; stamens 5; anthers yellow; sepals small, ovate, ciliate. Fl.iv-v. B.R. 32:37(c). N.T.1:118. (*Azalea obtusa* Lindl.) Japan; cult. Intr. about 1844. Zone VI.—*R. o. album* (Mottet) Schneid., f. Fls. white. G.F.9:395. (*Azalea ramentacea* Lindl.) Intr. 1846.—*R. o. japonicum* (Maxim.) Wils., f. Lvs. elliptic to elliptic-ovate, 1-2 cm. long, acute, bright green; summer-lvs. oblanceolate to obovate, strigose on both sides: fls. 2-5; anthers yellow-brown to purple. N.T.1:116. M.I.2:t.132(c). (*R. indicum* var. *j.* Mak., *R. Kaempferi* var. *japonicum* Rehd., *R. kiusianum* Mak.) Japan.—Here belong the "Kurume Azaleas" of which many forms are in cult., one of the best known being "Hinodegiri" with bright crimson fls. Zone VI-VII.—*R. o. amoenum* (Lindl.) Rehd., var. Lvs. elliptic to elliptic-obovate, 1-2 cm. long; fl. rich magenta, double (hose-in-hose) about 2 cm. across; anthers usually purple. B.M.4728 (c). R.H.1854:241.t(c). F.S.9:t.885(c). (*Azalea a.* Lindl.) Intr. 1850. Zone (V).—*R. o. arnoldianum* Rehd., var. (var. *amoenum*  $\times$  var. *Kaempferi*.) Low shrub: lvs. 1.5-4 cm. long; fls. rosy mauve to red, 3-3.5 cm. across: similar to var. *japonicum* but lvs. larger, thinner and lighter green and persistent summer lvs. less numerous. H.B.3:283(h). Orig. 1910. Zone V.—*R. o. Kaempferi* (Planch.) Wils., var. Shrub to 3 m.: lvs. elliptic or rhombic to ovate-lanceolate, 2-6 cm. long, acute, summer lvs. elliptic to obovate, acute or obtusish, strigose on both sides and with rufous hairs on midrib and petiole, bright green, rather thin, persistent summer lvs. none or very few: fls. 2-4, red or orange-red to pink; sepals oval to oblong-ovate, 2-8 mm. long, obtuse, ciliate; corolla 3-5 cm. across; anthers yellow. S.I.2:t.61(c). S.T.2:t.113. N.T.1:134. M.G.17:417(h). S.L.301(h). (*R. K.* Planch., *R. indicum* var. *K.* Maxim., *Azalea K.* André.) Japan. Intr. 1892. Zone IV. Flowering profusely before or with the lvs. which turn orange and scarlet in fall.

*R. o.  $\times$  Simsii* = *R. Sanderi* Wils. Intermediate between the parents: shoot-lvs. elliptic-ovate to ovate-oblong: summer lvs. mostly obovate. Orig. about 1890. Zone VII?—Other hybrids of *R. obtusum* of uncertain parentage are *Azalea Arendsi* Arends, Gs.8:113,114. M.G.42:11, and *A. malvatica* Koster, Gt. 81:81.

Related species: *R. serpyllifolium* (Gray) Miq. Low much-branched shrub: lvs. mostly crowded at ends, subsessile, narrow-elliptic to obovate, 4-12 mm. long, obtuse to acutish, strigose above and on midrib beneath, ciliate: fls. solitary, sub-sessile, rose-red, 1.5-2 cm. across; stamens and style much exserted. Fl.iv. B.M.7503(c). N.T.1:110. (*Azalea serpyllifolia* Gray.) Japan. Cult. 1880. Zone VI?

63. *R. Simsii* Planch. Evergreen or half-evergreen shrub, to 3 m.: lvs. elliptic-ovate to lanceolate, 2-5 cm. long, acute at ends, sparingly strigose and dull green above, more densely strigose beneath at least on veins, summer lvs. obovate to oblanceolate and more persistent: fls. 2-6; corolla broad-funnelform, 3.5-5 cm. across, rose-red to bright or dark red; stamens 10, sometimes 7-9, as long as corolla, shorter than the style; anthers purple; sepals minute or to 5 mm. long and ovate to lanceolate, strigose and ciliate. Fl.v-vi. B.M.1480(c). L.B.275(c). S.B.II.2:t.128(c). (*R. indicum* var. *S.* Maxim., *R. indicum* var. *ignescens* Sweet, *Azalea indica* Sims, not L.) China, Formosa. Intr. 1808. Zone VII? Many garden forms are in cult.

64. *R. yedoense* Maxim. Deciduous shrub or half-evergreen, low; brts. strigose: lvs. narrow-elliptic to lanceolate, 3-7 cm. long, acute at ends, often

obscurely crenulate, dark green above, with impressed veins and sparingly strigose, paler beneath and more densely strigose or only so on veins: fls. 1-3, the inner bud-scales viscid; corolla double, pale rosy lilac, spotted dark purple; sepals oval, 1-1.5 cm. long, strigose and ciliate. Fl.v. Gt.35:t.1233a-b(c). R.H.1908:405,t.f.2(c). G.W.16:163,t(c). G.C.82:68,t. N.T.1:141. (*R. poukhanense* var. *yodogawa* Rehd., *Azalea yodogawa* Grignan.) Cult. in Korea and Japan. Intr. 1884. Zone V.—*R. y. poukhanense* (Lévl.) Nakai, var. Compact low shrub, but in shady places to 2 m.: lvs. elliptic or ovate-lanceolate to lanceolate or oblanceolate, 3-8 cm. long: fls. fragrant: corolla pale lilac-purple spotted purple-brown, about 5 cm. across; anthers purple; sepals ovate-oblong, 5-10 mm. long, obtuse, strigose. M.I.2:t.133. N.K.8:t.18. Gn. M.29:223(h). A.B.1931:23. H.B.1924:229(h). (*R. p. Lévl.*, *R. coreanum* Rehd., *Azalea poukhanensis* Stand. Pl. Names.) Korea. Intr. 1905. Zone IV. Flowering freely when quite small.

Related species: *R. scabrum* G. Don. Shrub to 2 m.: lvs. persistent, lanceolate to elliptic-lanceolate, 4-10 cm. long, acute or obtuse and mucronulate, obscurely crenulate, strigose on veins beneath, subcoriaceous: fls. rose-red to scarlet, about 6 cm. across; sepals oval, glandular-ciliate. B.M.8478(c). G.C.49:342. N.T.1:161. (*R. sublancoletum* Miq.) Japan. Cult. 1911. Zone VII.—*R. pulchrum* Sweet. Similar to *R. scabrum* and possibly a hybrid with *R. mucronatum*. Lvs. entire, thinner: fls. rosy-purple, 6-7 cm. across; sepals lanceolate. S.B.II.2:t.117(c). N.T.1:154. (*R. phoeniceum* var. *Smithii* Wils.) Cult. in China. Intr. before 1830. Zone VII?—*R. p. phoeniceum* (G. Don) Rehd., var. Fls. rose-purple to magenta. B.M.2667(c). S.B.II.3:t.284(c). (*R. ph. G. Don.* *R. ledifolium* var. *ph. DC.*, *R. puniceum* Planch.) Cult. in China. Intr. 1824.—*R. p. calycinum* (Lindl.) Rehd. Fls. large, bright rose-purple; sepals lanceolate, usually acuminate. P.F.2:t.17(c). M.I.4:t.217. (*R. c. Planch.*, *R. ledifolium* var. *purpureum* Maxim., *R. phoeniceum* var. *c. Wils.*) Cult. in Japan. Cult. 1851.

65. *R. mucronatum* G. Don. Evergreen or half-evergreen much-branched shrub to 2 m., rarely to 3 m.; brts., petioles and pedicels densely clothed with spreading gray-brown occasionally glandular hairs and strigose: lvs. elliptic to elliptic-lanceolate, 3-6 cm. long, acute or obtusish, on both sides with appressed gray to rufous hairs, summer lvs. smaller, oblong-lanceolate, obtuse, more coriaceous: fls. 1-3, fragrant: corolla white, broad-funneliform, about 5 cm. across; stamens 10, sometimes 8 or 9; sepals lanceolate, erose-serrate, about 1 cm. long, glandular-pubescent. Fl.v. B.M.2901(c). B.R.811(c). L.B. 1253(c). Gn.33:321,t(c). G.C.91:291. N.H.7:108. N.T.1:145. G.W.15:650. (*R. ledifolium* G. Don, *R. ledifolium* var. *leucanthum* DC., *R. rosmarinifolium* Dipp., not Vidal, *R. ledifolium* var. *album* Rehd., *Azalea mucronata* Bl.) Japan. Intr. 1819. Zone (V).—*R. m. Noordtianum* (Wittm.) Wils., f. Lvs. elliptic: fls. larger, white. R.B.30:133,t(c). Gn.59:310. M.G.20:73. (*Azalea ledifolia* var. *Noordtiana* Wittm., *A. japonica alba grandiflora* Pynaert.) Japan. Cult. 1905.—*R. m. narcissiflorum* (Planch.) Wils., f. Fls. double, white. Florist, 1880:89. (*R. n. Planch.*) Intr. about 1850.—*R. m. plenum* (Sims) Wils., f. Fls. rose-purple, double or semi-double. B.M.2509(c). Gt. 35:t.1233c-d(c). Intr. 1819.—*R. m. amethystinum* Wils., f. Fls. flushed pale lilac-purple, spotted faintly pink.—*R. m. Sekidëra* (Kômatu) Wils., f. Fls. large, white, the upper lobes splashed and spotted rose, occasionally a fl. entirely rose; stamens sometimes 6-9. Intr. 1917.—*R. m. ripense* (Mak.) Wils., var. Fls. rose-purple. M.I.2:t.120. N.T.1:143. (*R. r. Makino.*) Japan. Cult. 1910.

*R. m.* × *scabrum*; see under No. 64.

66. *R. linearifolium* Sieb. & Zucc. A garden form of the following; differs in its linear or linear-lanceolate lvs. and in the pink corolla being deeply

divided into linear-lanceolate segments. B.M.5769(c). S.H.2:f.330g-k,331f. (*R. Burmanii* f. l. Nakai, *Azalea linearifolia* Hook. f.) Cult. in Japan. Intr. before 1867. Zone VII.—*R. l. macrosépalum* (Maxim.) Mak., var. Deciduous or nearly deciduous shrub to 1 m., rarely taller; brts. villous and sparingly strigose; lvs. elliptic-ovate to ovate-lanceolate, 2–5 cm. long, short-acuminate to acute, sparingly glandular-hairy above, more densely so beneath, summer-lvs. oblanceolate and obtuse; fls. 2–10, fragrant; corolla rose-lilac to rose-purple, spotted, 3–5 cm. across; stamens 5, sometimes 6–10 (f. *decandrum* Wils.) shorter than corolla; style longer; sepals lanceolate, 1–3 cm. long, glandular-pubescent. Gt.19:t.662(c). D.L.1:420. N.T.1:156. (*R. m.* Maxim., *R. Burmanii* var. *m.* Nakai.) Japan. Intr. 1863. Zone VII.—*R. l. dianthiflorum* (Carr.) Wils., f. A form of the preceding var. with double fls. R.H.1891:60,t(c). (*R. d.* Millais.) Intr. 1889.

Sect. 2. *SCIADORHODION* Rehd. & Wils.

(Series: *Azalea*, Subser. *Schlippenbachii*, 67–70.)

67. *R. Weyrichii* Maxim. Deciduous shrub to 5 m.; young brts. ferrugineous-pubescent, becoming glabrous and purple; lvs. 2–3 at end of brts., broad-ovate or rounded-ovate to rhombic, 3.5–8 cm. long, acutish or obtuse and mucronulate, broad-cuneate or rounded at base, at first rufous-pubescent on both sides, soon glabrous, lustrous dark green above; petioles 5–10 mm. long, rufous-pubescent and setose; fls. 2–4, with the lvs.; corolla red, funnel-form, 3.5–6 cm. across, stamens 6–10, shorter than corolla; sepals minute; pedicels, calyx and ovary densely rufous-pubescent; fr. cylindric to oblong-ovoid, 1.5–2 cm. long, pubescent. Fl.v. B.M.9475(c). G.C.87:359,t. N.K.8:t.16. N.T.1:96. (*Azalea W.* Ktze.) Japan, Korea. Intr. 1914. Zone VI. Fls. red; lvs. turning vinous-purple in fall.

68. *R. reticulatum* D. Don. Deciduous much-branched shrub to 8 m.; young brts. pubescent, soon glabrous, yellow-brown; winter-buds acute, pubescent; lvs. 2 or 3 at end of brts., broad-ovate or ovate to rhombic, 3–6 cm. long, acute and mucronate, usually broad-cuneate, fulvous pubescent and strigose at first, at maturity dark green and sparingly strigose or glabrous above, pubescent on the veins beneath and sparingly strigose or nearly glabrous, pale or glaucescent, reticulate; petioles 4–8 mm. long, pubescent and strigose; fls. 1–2, rarely to 4, before the lvs.; corolla rotate-campanulate, slightly 2-lipped, rose-purple to magenta, not or slightly spotted; stamens usually 10, declinate, the longer ones as long, the shorter ones half as long as the corolla; anthers purple; style glabrous, or pubescent or glandular or both; ovary villous; pedicels and the minute calyx pubescent; fr. cylindric, curved, 1–1.5 cm. long. Fl.iv-v. Gt.17:225,t(c). B.M.6972(c). G.C.III.20:38. N.T.1:91,93. Gn.72:267(h). A.B.1930:20(h). (*R. rhombicum* Miq., *R. dilatatum* Miq., *Azalea reticulata* K. Koch.) Japan. Intr. 1865. Zone V. With rose-purple fls. before the lvs.—*R. r. pentandrum* Wils., f. Lvs. usually quite glabrous at maturity; stamens 5. B.M.7681(c). S.I.2:t.61(c). N.T.1:100. (*R. dilatatum* Maxim., not Miq.) Japan. Cult. 1880.—The generally cult. form with 10 stamens, glandular style and villous ovary has been distinguished as *R. wadanum* Mak. N.T.1:95.

69. *R. quinquefolium* Biss. & Moore. Deciduous shrub or small tree to 8 m.; young brts. glabrous, lustrous brown, old stems gray-brown, scaly; winter-buds acute, glabrous; lvs. 4–5 at end of brts., broad-elliptic to obovate, 3–5 cm. long, obtuse or acutish, mucronate, cuneate, ciliate and often red on margin, villous beneath at least on midrib; petiole very short, villous; fls.

1-3, with the lvs.; corolla white, spotted green, rotate-campanulate, about 4 cm. across; stamens 10, unequal; filaments greenish, villous at base; ovary glabrous; sepals deltoid to lanceolate, glandular-ciliate; pedicels slender, glandular-pubescent: fr. cylindric, 1-1.5 cm. long. Fl.v. Millais, Rhod. 2:218, t. N.T.108. M.I.1:t.30. Wilson, Pl. Hunt. 2:t.117(h). (*Azalea quinquefolia* Stand. Pl. Names.) Japan. Intr. 1896. Zone VI.

70. *R. Schlippenbáchii* Maxim. Deciduous shrub to 5 m.; young brts. glandular-pubescent, glabrous the 2d year: lvs. usually 5 at ends of brts., short-petioled, obovate or broad-obovate, 5-10 cm. long, truncate or rounded to emarginate at apex, mucronate, cuneate, slightly undulate, sparingly pubescent when young, later glabrous except on veins beneath, dark green above, pale beneath: fls. 3-6, fragrant, with the lvs.; corolla pale to rosy pink, rotate-funnelform, 6-8 cm. across, spotted red-brown; stamens 10, unequal, the longest as long as corolla; sepals ovate, 5 mm. long; pedicels glandular-pubescent: fr. oblong-ovoid, 1.5 cm. long, glandular. Fl.v. B.M. 7373(c). Gn.46:80,t(c). G.C.55:9,t. N.T.1:107. W.A.58,t(h). (*Azalea* S. Ktze.) Korea, Manch., Japan. Intr. 1893. Zone IV. With large pink fls. in spring; the lvs. changing to yellow, orange and crimson in fall.

#### Sect. 3. RHODORA G. Don.

(Series *Azalea*, Subser. *Canadense*, 71-74; Subser. *Nipponicum*, under 72.)

71. *R. Albrécti* Maxim. Shrub to 1.5 m.; young brts. glandular-pubescent, becoming glabrous and purple-brown: lvs. about 5 at end of brts., obovate to oblanceolate, 4-12 cm. long, acute or acutish, mucronulate, ciliate-serrulate, sparingly appressed-pilose above, gray-pubescent beneath, membranous; petiole short, winged: fls. with the lvs., 3-5; corolla rotate-campanulate, about 5 cm. across, red-purple; stamens 10, unequal, the longest as long as the corolla, style longer; sepals small, ciliate, purple; pedicels 1-2 cm. long, glandular-pubescent: fr. conic-ovoid, 1-1.2 cm. long, glandular-pubescent. Fl.v-vi. B.M.9207. N.T.1:83. S.H.2:f.325m-n,327e. (*Azalea* A. Ktze.) Japan. Intr. 1892. Zone V. Similar to *R. Schlippenbachii*, but less showy; the lvs. turn yellow in fall.

72. *R. pentaphýllum* Maxim. Shrub to 8 m.; young brts. sparingly pilose, soon glabrous; winter-buds acute, glabrous, purple-brown: lvs. usually 5 at end of brts., elliptic to elliptic-lanceolate, 3-6 cm. long, acute and mucronulate, cuneate, ciliolate-serrulate, villous on midrib above and beneath, otherwise glabrous, chartaceous, reticulate; petiole 3-8 mm. long, usually pilose and glandular: fls. 1-2, before or with the lvs.; corolla rotate-campanulate, 4-5 cm. across, rose-pink, unspotted; stamens 10; unequal, villous at base, shorter than corolla, style longer, glabrous; sepals triangular to deltoid, 1-5 mm. long, glabrous; pedicels 1-1.5 cm. long, glandular-pubescent to glabrous: fr. spindle-shaped, about 1.5 cm. long, verruculose. Fl.iv-v. N.T.1:86. M.I.3:t.168(c). (*R. quinquefolium* var. *roseum* Rehd.) Japan. Intr. 1914. Zone (V). Handsome shrub with soft-pink fls. in spring and orange to crimson lvs. in autumn.

Another species of this section is *R. nipponicum* Matsum. Shrub to 2 m.; brts. glandular-pubescent: lvs. scattered, subsessile, obovate-oblong, 6-18 cm. long, rounded or truncate at apex, appressed-pilose on both sides: fls. 6-15, with or after the lvs.; corolla tubular-campanulate, 1.5-2 cm. long, white, with short slightly spreading lobes; stamens and style included: the slender pedicels and small calyx glandular-pubescent. N.T.1:78. M.I.1:t.5. S.R.74. Japan. Intr. 1914. Zone VI? Fls. hidden by the lvs. which turn orange to crimson in fall.

73. *R. Vaseyi* Gray. Shrub to 5 m.; brts. puberulous and sparingly pilose at first, soon glabrous, light red-brown, older brs. with grayish brown flaky

bark; winter-buds broad-ovoid, obtuse, with 7-10 ciliate scales: lvs. scattered, elliptic to elliptic-oblong, 5-12 cm. long, acuminate, cuneate, with ciliate and usually slightly undulate margin, glabrous above except the midrib, green and glabrous beneath or sparingly pilose on midrib; petiole slender, 3-7 mm. long, glabrous or sparingly pilose: fls. 5-8, before the lvs.; corolla rotate-campanulate, 2-lipped, 2.5-3 cm. long, tube about 5 mm. long, the upper lip less deeply divided, light rose, spotted orange; stamens 5-7, usually 7, the longer exceeding the corolla, glabrous; style longer than stamens, glabrous or with few glands near base; sepals short, rounded, glandular-ciliate; pedicels 5-15 mm. long, stipitate-glandular. Fl. iv-v. B.M.8081(c). M.M.7:121,t(c). Gn.54:282,t(c); 56:119(h). G.F.1:377. M.G.14:332,333(h). S.L.302(h). (*Azalea* V. Rehd., *Biltia* V. Small.) N. C. Intr. about 1880. Zone IV. Handsome shrub with profuse light rose fls. before the lvs.—*R. V. album* Bean, var. Fls. white. Intr. 1891.

74. *R. canadense* (L.) Torr. RHODORA. Much-branched shrub to 1 m.; brts. puberulous when young, yellowish red or pinkish, often bloomy; winter-buds with acute to acuminate puberulous and ciliate scales: lvs. petioled, elliptic to oblong, 2-4.5, rarely to 6 cm. long, obtuse or acutish, cuneate, with ciliate and revolute margin, dull bluish green above, thinly grayish tomentulose beneath, usually sparingly glandular and pilose on midrib: fls. 3-7, before the lvs.; corolla 2-lipped, 1.5-2 cm. long, the lower lip divided to or nearly to the base into 2 narrow-oblong lobes, the upper lip with 3 short ovate lobes, rose-purple; stamens 10, about as long as corolla, pubescent near base; style slightly longer, glabrous or nearly so; sepals very short, unequal, setose-ciliate; pedicels 3-7 mm. long, puberulous, usually sparingly glandular: fr. ovoid-oblong, 1-1.5 cm. long, puberulous and setose. Fl. iv-v. B.M.474(c). Em.2:441,t(c). G.O.t.14(c). C.L.11:496. M.G.17:287(h). S.L.301(h). (*R. Rhodora* Gmel., *Rhodora canadensis* L.) Nfd. and Lab. to c. N. Y. and Pa. Intr. before 1756. Zone II. Valued for its early fls.—*R. c. albiflorum* (Rand & Redf.) Rehd., f. Fls. white. (*R. c. f. album* Voss.) Cult. 1894.

*R. c. × japonicum*; see under No. 75.

#### Sect. 4. PENTANTHERA G. Don.

(Series *Azalea*, Subser. *Luteum*, 75-85.)

75. *R. japonicum* (Gray) Suringar. Shrub with stout erect brs. to 2 m.; winter-buds ovoid, acute or acutish, slightly puberulous; brts. glabrous, sometimes setose: lvs. obovate to obovate-oblong, 4-10 cm. long, obtuse and mucronulate, cuneate, ciliate, appressed-setose above and on the veins beneath: fls. 6-12, before the lvs.; corolla campanulate-funnelform, 5-6 cm. across, orange-red or salmon-red to brick-red; stamens shorter than corolla, pilose below the middle, anthers brown; sepals small, ovate, setose; pedicels usually setose. Fl. iv-v. B.M.5905(c). Gt.57:516,t(c). F.S.19:t.2034-5(c). S.I. 2:t.62. Gn.59:503. C.L.11:495. N.T.1:81. Gng.4:279. (*R. molle* Sieb. & Zucc., not G. Don, *R. molle* var. *glabrior* Miq., *Azalea japonica* Gray, *R. glaberrimus* Nakai.) Japan. Intr. 1861. Zone V. Vigorous shrub with conspicuous fls. in spring.—*R. j. aureum* Wils., f. Fls. yellow.

*R. j. × molle* = *R. Kosterianum* Schneid. Many garden forms ranging in color from white to red: lvs. only slightly pubescent beneath. Here belongs "Anthony Koster" and "Miss Louisa Hunnewell." R.B.17:121,t(c); 20:277,t(c). G.C.III.13:513.—*R. j. × canadense* = *R. Fraseri* W. Wats. Young brts. and winter-buds finely pubescent: lvs. elliptic-oblong to oblong, 4-6 cm. long, acute at ends, pubescent on both sides: fls. rosy-lilac, spotted, 2-lipped, with very short tube and deeply divided lower lip, 3.5-4 cm. across. Orig. 1912.—*R. j. × roseum* Gable. N.H.18:257.—*R. j. × atlanticum* Gable. N.H.18:259.

76. *R. mólle* (Bl.) G. Don. Shrub to 1.5 m.; young brts. pubescent and often setose; winter-buds grayish pubescent: lvs. oblong to oblong-lanceolate or oblanceolate, 6-15 cm. long, obtuse and mucronulate, cuneate, ciliate and often revolute, pubescent above at least when young, grayish soft-pubescent beneath: fls. many; corolla campanulate-funnelform, about 5-6 cm. across, finely pubescent outside, golden-yellow, spotted greenish: stamens as long or longer than corolla; sepals short, ciliate; pedicels puberulous, not or slightly setose. Fl. iv-v. S.B.3:290(c). L.B.885(c). B.R.1253(c). S.H.2:f.328 g-h; 329a-b. (*R. sinense* Sweet, *Azalea mollis* Bl.) China. Intr. 1823. Zone (V). Shrub with conspicuous yellow fls.

*R. m.* × *occidentale* = *R. albicans* Waterer. Lvs. pubescent beneath: fls. large, usually light-colored, white to light pink or rose, with an orange blotch divided by lighter veins; stamens not or slightly exserted. F.P.1883:177,t(c). Gn.29:550,t(c), partly. Orig. before 1880. Here belongs "Graciosa" and "Exquisite."—*R. m.* × *japonicum*; see under No. 75.—*R. m.* × *gandavense*; see under No. 77.—*R. m.* × *viscosum*; see under No. 84.—*R. m.* × (*maximum* × *ponticum*) = *R. norbitonense*; see p. 712.

77. *R. luteum* Sweet. Shrub to 4 m.; brts. glandular-pubescent when young; winter-buds minutely pubescent, viscid: lvs. oblong to oblong-lanceolate or oblong-oblanceolate, acute or obtuse and mucronate, ciliate-serrulate, hairy on both sides; villous and glandular when young: fls. many, very fragrant; corolla yellow, funnelform, about 5 cm. across, with narrow-cylindrical tube, 1.5-2 cm. long; stamens much exserted, shorter than style; ovary glandular; sepals ovate to oblong, glandular-ciliate; pedicels, calyx and corolla outside glandular: fr. cylindric-oblong, 2-2.5 cm. long, glabrescent. Fl.v. B.M.433(c). S.O.3:t.169(c). R.I.17:t.108(c). Millais, Rhodod. 12:t(h); 165, t(c). Gn.29:550. (*R. flavum* G. Don, *Azalea pontica* L.) Asia Minor, Cauc., E. Eu. Intr. 1792. Zone (V). Handsome shrub with very fragrant yellow fls. —*R. l. macranthum* (Bean) Wils., var. Fls. to 6.5 cm. across.

*R. l.* × *Mortieri* = *R. gandavense* (K. Koch) Rehd. Here belong the so-called Ghent Azaleas representing hybrids of the preceding species with *R. calendulaceum* and *R. nudiflorum* and possibly other hybrids. Ann. Soc. Agric. Bot. Gand, 2:t.81,83,106(c). Witte, Flora, t.73(c). Orig. about 1840.—*R. g. plenum* Rehd., var. Forms with double fls. F.S.13:t.1298(c); 19:t.2021-24(c). F.P. 1880:t.516(c).—*R. gandavense* × *molle* = *R. mixtum* Wils. Mostly double-fl. forms, pink, red or yellow. R.B.19:232,t(c). G.W.15:493(h). Millais, Rhodod. 220(h). Orig. before 1890.

78. *R. occidentale* Gray. Shrub to 3 m.; young brts. soft-pubescent or glabrous; winter-buds puberulous or sometimes nearly glabrous: lvs. elliptic to oblong-lanceolate, 3-9 cm. long, acute or obtusish and mucronulate, cuneate, ciliate, thinly pubescent on both sides when young or nearly glabrous, at maturity usually pubescent only on midrib above and strigose on midrib beneath: fls. 6-12, usually after or with the lvs., rarely before; corolla funnelform, white or pinkish, with yellow blotch, villous and glandular-pilose outside, 3.5-5 cm. across; tube about 2 cm. long, gradually dilated upward, as long as lobes; stamens exserted, style as long or longer; ovary glandular-pilose; sepals broad-ovate to oblong-ovate, 1.5-4 mm. long, ciliate; pedicels usually glandular-pubescent: fr. ovate-oblong, 1-2 cm. long, setose-pilose. Fl. vi-vii(v-viii). B.M.5005(c). F.S.14:t.1422(c). Gn.34:416,t(c). G.C.II.26:105. G.W.11:8(h). (*Azalea Californica* Torr. & Gr.) Ore., Calif. Intr. 1850. Zone VI or VII. Handsome shrub with showy fls.; lvs. turning scarlet and yellow in autumn.

*R. o.* × *molle*; see under No. 76.—*R. o.* × *arborescens* Gable. N.H.16:255.—There are also hybrids with *R. calendulaceum* and with × *R. gandavense*.

79. *R. calendulaceum* (Michx.) Torr. Shrub to 3 m., rarely to 5 m.; young brts. pubescent and strigillose; winter-buds glabrous, with ciliolate

scales: lvs. broad-elliptic to elliptic-oblong or obovate-oblong, 4-8 cm. long, acute and gland-tipped, broad-cuneate, finely pubescent above and more densely so beneath when young: fls. usually 5-7, shortly after the lvs.; corolla yellow or orange to scarlet, nearly scentless, about 5 cm. across, glandular and pubescent outside, tube gradually dilated above the middle, 1.5-2 cm. long, as long or shorter than the ovate lobes; stamens much exerted, style as long or longer; ovary setose, glandless; sepals oblong, 3-4 mm. long or ovate and shorter; pedicels setulose and usually glandular: fr. ovoid-oblong, 1.5-2 cm. long, setose and pubescent. Fl.v-vi. S.H.2:f.329q-r,330a. K.S.351. C.L. 11:496. (*R. luteum* Schneid., not Sweet, *Azalea calendulacea* Michx., *A. lutea* L., partly.) Pa. to Ga. w. to Ohio and Ky. Cult. 1800. Zone V. The most showy American species. The chief color forms are the following: *R. c. croceum* Sweet, var. Fls. yellow to orange-yellow. B.M.1721(c). L.B.132(c).—*R. c. aurantium* (Lodd.) Rehd., f. Fls. deep orange-red to scarlet. B.R.145(c). L.B.1255(c).

*R. c. × nudiflorum* = *R. Mortieri* Sweet (possibly including *R. speciosum × nudiflorum*). Fls. more or less pinkish, with orange blotch: lvs. glabrescent. S.B.II.1:t.10(c). L.B.1382(c). B.R.1366,1402,1407,1559(c). Orig. before 1830.—*R. c. × arborescens* = *R. Anneliæ* Rehd. Lvs. glabrous and usually glaucous beneath, with strigose midrib: fls. fragrant, usually pinkish with yellow blotch, tube longer than lobes. Orig. about 1896; also spontaneous in N. C.

Another yellow-fl. species related to *R. canescens* is *R. austrinum* (Small) Rehd. Brts. pubescent and glandular; winter-buds pubescent: lvs. elliptic to oblong-obovate, finely pubescent on both sides: fls. many, before or with the lvs., yellow to orange, usually with purplish stripes outside, tube cylindric, longer than lobes; ovary setose and glandular; pedicels and calyx glandular. (*Azalea austrina* Small.) Fla. Intr. 1914. Zone VII.

80. *R. speciosum* (Willd.) Sweet. Shrub to 2 m.; young brts. finely pubescent and strigillose; winter-buds glabrous: lvs. elliptic or ovate to oblong, 3-6 cm. long, acute or obtusish and mucronate, broad-cuneate, strigillose above, finely pubescent beneath or sometimes nearly glabrous except on midrib: fls. 6-15, with the lvs.; corolla scarlet or bright red with yellow blotch, 4-5 cm. across, pubescent and pilose outside, tube slender, 2-2.5 cm. long, longer than lobes; stamens much exerted, slightly shorter than style; ovary setose, not glandular; sepals broad-ovate to oblong, ciliate, glabrous; pedicels strigillose: fr. ovoid to narrow-oblong, 2-3 cm. long, strigose. Fl.v. B.M.180(c). G.O.t.31(c). W.D.116(c). L.B.624(c). (*R. calendulaceum* f. s. Voss, *A. speciosa* Willd., *A. nudiflora* var. *coccinea* Ait.) Ga. to S. C. Cult. 1789. Zone VI. Handsome shrub with bright red fls.

*R. s. × nudiflorum*. Probably some forms of *R. Mortieri* (see under No. 79) represent this cross.

81. *R. nudiflorum* (L.) Torr. Shrub to 2, rarely to 3 m.; young brts. slightly pubescent and strigillose or nearly glabrous; winter-buds glabrous or slightly pubescent: lvs. elliptic or ovate to oblong or oblong-obovate, 3-8 cm. long, acute or acuminate, cuneate, ciliate, glabrous and green beneath, except strigillose or sometimes slightly pubescent on midrib: fls. 6-12, before the lvs., scentless; corolla usually light pink or white with pink tube, 3-4 cm. across; tube cylindric, 1.5-2 cm. long, gradually dilated above, strigose-pilose and puberulous outside, longer than the rather narrow and acuminate lobes; stamens much exerted, nearly 3 times as long as tube; style slightly longer; ovary setose, glandless; sepals roundish to ovate, rarely oblong, 1.5-2 mm. long; pedicels strigillose and sometimes puberulous, rarely glandular: fr. oblong to narrow-oblong, 1-2 cm. long. Fl.iv-v. S.O.3:t.170(c). B.R.120(c). Em.440,t(c). K.S.347. Gn.M.5:218(h). W.A.52,t(h). (*Azalea nudiflora* L., *A. lutea* L., partly, *A. periclymenoides* Michx.) Mass. to N. C.

w. to Ohio. Intr. about 1730. Zone III. Shrub with white to pink fls. before the lvs.—*R. n. album* Sweet, var. Fls. white.—*R. n. glandiferum* (Porter) Rehd., var. Corolla puberulous and glandular-pilose outside, usually pink to carmine. (*Azalea nudiflora* var. *glandifera* Porter.) L.B.51(c).

*R. n. × luteum*; see under No. 77.—*R. n. × calendulaceum*; see under No. 79.—*R. n. × atlanticum*; see under No. 83.—*R. n. × ponticum* = *R. azaleoides*; see p. 712.

82. *R. ròseum* (Loisel.) Rehd. Shrub to 3, rarely to 5 m.; young brts. finely pubescent and usually sparingly strigillose; buds grayish pubescent: lvs. elliptic or obovate to obovate-oblong, 3–7 cm. long, acute or short-acuminate, dull bluish green and sparingly pubescent above, grayish pubescent beneath: fls. 5–9, with the lvs., fragrant; corolla bright pink, rarely whitish, about 4 cm. across, tube rather gradually dilated, 1.5–2 cm. long, about as long as the ovate lobes; stamens about twice as long as tube, style longer, purple above; ovary setose and glandular; sepals roundish to ovate, pubescent, glandular-ciliate; pedicels villous and glandular: fr. oblong, 1.5–2 cm. long, slightly puberulous and glandular-setose. Fl.v. N.D.5:t.64(c). M.M.2:t.2(c). K.S.349. A.B.1927:26(h). (*R. canescens* Porter, not Sweet, *R. prinophyllum* Millais, *Azalea rosea* Loisel., *A. prinophylla* Small.) N. H. and s. Quebec to Va. (not on the coastal plain), w. to Ill. and Mo. Intr. 1812 or possibly about 1790. Zone III. Shrub with fragrant pink fls. appearing with the bluish green lvs.

*R. r. × japonicum*; see under No. 75.

Related species: *R. canescens* (Michx.) Sweet. Sparingly branched shrub to 5 m.; young brts. villous-pubescent: lvs. oblong-obovate or oblong to oblanceolate, 4–9 cm. long, grayish pubescent or tomentose beneath: fls. before or with the lvs., slightly fragrant, about 3.5 cm. across, tube slender, 1.5–2.3 cm. long, villous and sometimes glandular outside, longer than lobes, tube usually pink, lobes white; stamens much exserted; ovary villous, sparingly setulose; glandless. Abbot, Nat. Hist. Lepidopt. Georgia, 1:t.27(c): (*Azalea c.* Michx., *A. bicolor* Pursh.) N. C. and Fl. to e. Tex. Intr. 1750? Zone VII?—*R. c. candidum* (Small) Rehd., var. Lvs. glaucous beneath and pubescent. (*Azalea candida* Small.) Ga. to n. Fla.—*R. c. subglabrum* Rehd., f. Lvs. glabrous or glabrescent. Ga. and Ala. to e. Tex. Intr. 1916. Zone VII?—*R. alabamense* Rehd. Low shrub; young brts. strigose-pilose; buds glabrous: lvs. elliptic or obovate to obovate-oblong, 3–6 cm. long, slightly puberulous above when young, pale or glaucescent and short-villous beneath: fls. with the lvs., fragrant, white, 4–5 cm. across, tube gradually dilated, 2–2.8 cm. long: stamens twice as long as tube. Ala. Intr. 1922. Zone VII?

83. *R. atlanticum* (Ashe) Rehd. Stoloniferous shrub, to 0.5 m., sometimes taller; young brts. sparingly strigillose, sometimes glandular; buds glabrous or slightly pubescent: lvs. obovate to oblong-obovate, rarely elliptic, 3–6 cm. long, roundish or acutish at apex, glabrous above, bright green or glaucous and glabrous beneath except the strigillose and sometimes pubescent midrib, fls. 4–10, before or with the lvs., very fragrant; corolla white, usually flushed pink or purplish, glandular-pilose outside, not or slightly villous; tube cylindrical, 2–2.5 cm. long, glabrous inside; stamens twice as long as tube, style longer; ovary setose, with or without glands; sepals glandular-ciliate, rarely eglandular; pedicels hirsute or glandular-hirsute: fr. ovoid-oblong, 1.5–2 cm. long. Fl.iv-v. Jour. Elisha Mitchell Soc. 36:t.1(c). N.H.11:54(h). (*Azalea atlantica* Ashe.) Del. to S. C. Intr. about 1916. Zone VI? Low shrub with very fragrant white to purplish fls.—*R. a. neglectum* Rehd. Fls. purplish pink, tube slightly shorter, wider and more villous outside. N. and S. C.—*R. a. luteo-album* (Coker) Rehd., var. Brts. stipitate-glandular: lvs. bluish green, finely pubescent: fls. white, often yellowish in bud. S. C. Cult. 1928.

*R. a. × nudiflorum* = *R. pennsylvanicum* (Gable) Rehd. Lvs. elliptic, glaucous beneath and strigose on the midrib, ciliate; corolla white, flushed pink,

densely setose-pilose, scarcely glandular, not or scarcely villous. (*Azalea pennsylvanica* Gable.) Pa. Intr. about 1926.—*R. a. × japonicum*; see under No. 75.

84. *R. viscosum* (L.) Torr. Shrub to 3, rarely to 5 m.; young brts. strigillose or hirsute; buds glabrous or sometimes pubescent, with 8-12 ovate obtusish and usually mucronulate scales: lvs. ovate or elliptic-obovate to oblong-oblongeolate, 2-6 cm. long, acute or obtuse, glabrous except the slightly villous and strigillose midrib beneath, sometimes strigillose above, bright green or glaucescent beneath: fls. 4-9, after the lvs.; corolla white or suffused with pink, finely villous and glandular-hirsute outside; tube cylindric, somewhat dilated near apex, 1.5-2.5 cm. long, about 1½ times as long as the ovate-oblong lobes, slightly pubescent inside above the middle; stamens somewhat longer than lobes, style longer, pale or purplish near apex; ovary glandular-setose, sometimes glandless; sepals roundish to ovate, about 1 mm. long, setose-ciliate; pedicels pubescent and glandular: fr. oblong-ovoid, 1.3-2 cm. long. Fl.vi-vii. Em.438,t(c). S.O.3:t.171(c). M.M.10:81,t.6(c). (*Azalea viscosa* L.) Me. to S. C., in swamps. Cult. 1731. Zone III. Grown chiefly for its late and fragrant fls.—*R. v. rhodanthum* Rehd., f. Fls. bright pink.—*R. v. glaucum* (Ait.) Torr., var. Lvs. glaucous beneath and sometimes bluish green above. S.O.3:t.172(c). W.D.t.5(c). (*Azalea v. var. glauca* Ait.) With the type; a form with intensely pink fls. is *R. v. rubescens* (Lodd.) Sweet, var. (*R. v. var. roseum* Hollick, *Azalea v. var. rub.* Sweet.)—*R. v. nitidum* (Pursh) Gray, var. Lvs. obovate-oblong to oblanceolate, acute or abruptly acuminate, green on both sides, sometimes strigillose above: fls. usually pinkish.—*R. v. montanum* Rehd., var. Low shrub to 1.2 m.; brts. puberulous and hirsute like the pedicels and midrib beneath; winter-buds silky-pubescent, with 5-7 rounded scales: lvs. obovate to obovate-oblong, bright green: fls. suffused with pink and with numerous stipitate red glands. N. C. Intr. 1919.—*R. v. coerulescens* Rehd., f. A form of the preceding var. with the lvs. glaucous beneath and bluish green above and the fls. more highly colored. Intr. 1913.—*R. v. tomentosum* (Dum.-Cours.) Rehd., var. Lvs. densely pubescent beneath and slightly above. (*Azalea tomentosa* Dum.-Cours.)

*R. v. × molle* = *R. viscosépalum* (Gard. Chron.) Rehd. Lvs. larger, thinly pubescent and glaucescent beneath: fls. larger, white with yellow blotch, yellowish in bud; tube shorter, more dilated, more puberulous outside; stamens not or slightly exceeding the lobes. (*Azalea viscosépalum* Gard. Chron., *A. viscocephala* Arb. Kew.) Orig. about 1840.—*R. v. Daviesii* (Gard. Chron.) Rehd., var. Fls. larger, with more conspicuous yellow blotch and with shorter wider tube. Gt. 42:65,t(c). B.R.28:27. Gs. 20:183. (*Azalea D.* Gard. Chron.)—*R. c. × maximum* = *R. hybridum*; see p. 712.—*R. v. × catawbiense* = *R. fragrans*; see p. 712.

Related species: *R. serrulatum* (Small) Millais. Shrub to 7 m.; young brts. usually densely strigose; buds glabrous or sometimes grayish pubescent, with 15-20 mucronate to aristate scales: lvs. elliptic to obovate or obovate-oblong, 4-8 cm. long, usually acute, serrulate-ciliate, glabrous except the midrib or sometimes pubescent: fls. white, very fragrant; tube slender, 2.5-3.3 cm. long, about twice as long as the ovate-lanceolate lobes; style much longer than stamens. N.H.18:252. Ga. to Fla. and La. Intr. 1919. Zone VII?—*R. oblongifolium* (Small) Millais. Shrub to 2 m.; brts. finely villous and sparingly strigose or nearly glabrous; buds grayish pubescent: lvs. obovate to oblong-lanceolate, 4-10 cm. long, acute or acutish, pubescent beneath to nearly glabrous and sometimes glaucescent: fls. before the terminal buds are formed, white, tube abruptly dilated at apex, 2.5-3 cm. long, villous outside and often sparingly glandular-hirsute; sepals ovate to lanceolate, 1-3 mm. long. (*Azalea oblongifolia* Small.) Ark., Okl. and Tex. Intr. 1917. Zone VII?

85. *R. arborescens* (Pursh) Torr. Shrub to 3, rarely to 6 m.; brts. glabrous, rarely with few scattered hairs, often slightly bloomy; buds glabrous: lvs. obovate to elliptic or oblong-oblongeolate, 3-8 cm. long, acute or obtuse,

ciliate, glabrous and bright green above, glaucous or sometimes green beneath and glabrous or sparingly strigose or pubescent on midrib, fragrant when dry; petioles slender, glabrous or nearly so: fls. 3-6, after the lvs., very fragrant; corolla white or pinkish, glandular-hirsute outside and sometimes slightly villous; tube 2.5-3 cm. long, slightly dilated at apex, pubescent inside, longer than the ovate-oblong acuminate lobes; stamens about twice as long as tube, purple above; style as long or longer than stamens, usually glabrous, purple above; ovary glandular-setose; sepals ovate to narrow-oblong, 3-6 mm. long, glandular-ciliate; pedicels glandular-hirsute or glandless, sometimes nearly glabrous: fr. oblong-ovoid, 1-1.7 cm. long. Fl.vi-vii. L.B.1632 (c, as *Azalea verticillata*.) L.S.t.75(c). G.F.1:401. C.L.11:496. (*Azalea a.* Pursh.) S. Pa. to Ga. and Ala., chiefly in the mts. Intr. before 1814. Zone IV. Handsome shrub with large white deliciously fragrant fls.—*R. a. Richardsonii* Rehd., var. Lower, to 1.5, rarely to 2.5 m.: lvs. somewhat smaller; fls. more villous and more glandular; sepals shorter, villous outside; style pubescent near base. High mts. of N. C. Intr. 1917. Zone V.

*R. a. × occidentale*; see under No. 78.—*R. a. × calendulaceum*; see under No. 79.

Related species: *R. prunifolium* (Small) Millais. Glabrous shrub to 3 m.; lvs. elliptic to oblong, 3-12 cm. long, light green beneath, acute to acuminate: fls. 4-5, crimson, glabrous or sparingly hirsute outside; stamens much exserted, style longer, to 8 cm. long, glabrous; ovary glandless. (*Azalea prunifolia* Small.) Ga. to Ala. Intr. 1918. Zone VII.

#### Subgen. IV. THERORHODION Maxim.

(Series Camtschaticum, 86.)

86. *R. camtschaticum* Pall. Shrub to 30 cm. high; young brts. sparingly glandular-pilose: lvs. short-petioled or nearly sessile, obovate to oblong-obovate, rounded and mucronate at apex, cuneate, ciliate, sparingly pilose beneath, thin and reticulate: fls. 1-3 on glandular-pilose pedicels 1.5-3.5 cm. long; corolla rose-purple, 2.5-3.5 cm. across, with short tube; stamens villous near base; style longer than stamens. Fl.vii-viii. B.M.8210(c). Gt. 36:t.1200. P.F.1:t.22(c). N.T.1:41. G.W.13:554(h). (*R. kamtschaticum* Pall., *Therorhodon* c. Small.) N. E. Asia, N. Japan, Alaska to B. C. Intr. about 1800. Zone II? Difficult to grow; best in rockery in moist and cool situation.

6. *MENZIËSIA* J. E. Sm. Small deciduous shrubs; buds small, with several outer scales: lvs. alternate, petioled, entire: fls. in terminal clusters, 4-5-merous; sepals short; corolla campanulate or urceolate, with 4-5 short rounded lobes; stamens 5-10, included, rarely the anthers exserted; anthers opening by apical pores; disk 8-10-lobed; ovary 4-5-celled; ovules many: caps. 4-5-valved, leathery; seeds linear, pointed or caudate at ends. (After Archibald Menzies, English surgeon and naturalist; 1754-1842.) Seven species in N. Am. and E. Asia.—Interesting shrubs for the rockery.

*M. pilosa* (Michx.) Juss. Shrub to 2 m.; brts. slightly pubescent: lvs. elliptic to oblong-obovate, 1.5-5 cm. long, abruptly mucronate, cuneate, ciliate, sparingly appressed-pilose above, less so and glaucous beneath, short-petioled: fls. few, drooping, 4-merous; pedicels 1-2.5 cm. long, glandular-pubescent; sepals ciliate; corolla campanulate, 6-7 mm. long, yellowish white or pinkish; stamens included, 8, glabrous; style as long as corolla: caps. ovoid, 3-4 mm. long, glandular-setose. Fl.v-vi. B.M.1571(c). G.O.t.27(c). I.T.3:t.104. B.B.2:682. B.S.2:80. (*M. globularis* Salisb.) Pa. to Ga. and Ala. on the mts. Intr. 1806. Zone V.

Related species: *M. ferruginea* Sm. Lvs. glandular-ciliate; petiole pilose; pedicels glandular-hirsute; calyx long-ciliate; corolla 4-merous, cylindric, 9-13 mm. long; filaments pubescent. Smith, Pl. Icon. Ined. 565. Brown & Schäffer, Alp. Fl. Cant. 61. Alaska to Ore. Intr. 1811.—*M. glabella* Gray. Lvs. obovate, usually obtuse, crenate-serrulate and minutely ciliate; glabrous or nearly so and glaucous beneath: corolla 4-merous, ovoid-campanulate, 7-9 mm. long; filaments pubescent below. B.B.2:682. Henshaw, Mtn. Fl. Am.t.98. B. C. and Alb. to Wyo., Minn. and Idaho. Intr. about 1885.—*M. ciliicalyx* (Miq.) Maxim. Brts. glabrous: lvs. elliptic, ciliate, otherwise glabrous; pedicels glandular-hispid; calyx ciliate; corolla 4-5-merous, yellowish green with purplish limb, oblong-ovoid, 1.5 cm. long; stamens 8-10, pubescent. N.T.1:46. G.C.103:55. S.H.2:f.334h-i. Japan. Intr. 1915.—*M. c. multiflora* (Maxim.) Mak., var. Fls. 6-10; pedicels glabrous. J.C.27,11:t.3,f.5-8(c). G.C.104:457. (*M. m.* Maxim.) Japan. Intr. 1915.—*M. purpurea* Maxim. Lvs. elliptic to elliptic-obovate, 2.5-4 cm. long, obtuse and mucronulate, sparingly strigose above and on the midrib beneath: fls. 4-5-merous, campanulate, 12-15 mm. long, bright red, the lobes ciliate; filaments pubescent; sepals ciliate. S.H.2:f.334. N.T.1:44. Japan. Intr. 1915. Zone V? Very handsome with its bright fls.—*M. pentandra* Maxim. Lvs. elliptic to elliptic-oblong, 1.5-4 cm. long, acute, ciliate; corolla 5-merous, whitish, globose-urceolate, 5-7 mm. long, 5-lobed; stamens 5, glabrous. N.T.1:51. S.H.2:f.334a-b. Saghal., Japan. Intr. 1905 or 1892?

7. **TSUSIOPHYLLUM** Maxim. Half-evergreen low shrub, with strigose pubescence; winter-buds with few scales: lvs. alternate, small, entire: fls. 1-2, terminal, 5-merous; sepals oblong, small; corolla tubular, with short spreading limb; stamens 5, included; style shorter than stamens; anthers opening by slits; ovary 3-celled. (*Tsusia*, a subgenus of *Rhododendron*, and Greek *phyllon*, leaf.) One species in Japan.

*T. Tánakae* Maxim. Shrub to 0.5 m.; brts. strigose: lvs. elliptic-obovate, 8-12 mm. long, acute, strigose above, glaucous and glabrous beneath except the strigose midrib: fls. short-stalked, white or pinkish; corolla about 1 cm. long, pubescent outside and inside; ovary strigose. Fl.vi. N.T.1:38. S.H.2:f. 334o-q. Japan. Intr. 1915. Zone (V). Interesting low shrub for the rockery.

8. **LEIOPHYLLUM** Hedwig f. Evergreen low shrubs; buds minute, pointed, with indistinct scales: lvs. alternate or opposite, short-petioled, crowded, small, entire, coriaceous: fls. slender-pedicel, in terminal umbel-like corymbs; sepals 5, narrow-oblong to lanceolate, about half as long as petals; petals 5, broad-ovate to ovate-oblong, white or pink; stamens 10, longer than petals, glabrous; anthers opening lengthwise, disk 10-lobed; ovary 2-3-, rarely 5-celled; style slender, not exceeding the stamens: caps. ovoid, surrounded by the persistent calyx, 2-5-valved, many-seeded. (Greek *leios*, smooth, and *phyllon*, leaf.) Syn.: *Amyrsine* Pursh, *Dendrium* Desv. One species in E. N. Am.

*L. buxifolium* (Berg.) Ell. Upright shrub to 0.5 m., glabrous: lvs. usually alternate, oblong or obovate-oblong, 3-8 mm. long, lustrous above, paler beneath: pedicels glabrous; petals ovate-oblong to oblong, 2-2.5 mm. long; disk minute; stamens about twice as long as petals; style twice or thrice as long as ovary; caps. ovoid, 3 mm. long, smooth. Fl.v-vi. B.R.531(c). Gd.W.t. 49(c). L.B.52(c). Gn.87:243(h). (*Dendrium b.* Desv., *Ledum b.* Berg.) N. J. Intr. 1736. Zone V. Attractive low shrubs with small white fls. in spring.—*L. b. Hügeri* (Small) Schneid., var. Upright shrub to 0.4 m.: lvs. alternate, oblong to oblong-ovate, 9-15 mm. long; pedicels finely pubescent and glandular; petals broad-ovate to rhombic-ovate; stamens slightly longer than petals; style less than twice as long as ovary: caps. scabrous on back. B.M. 6752(c, as *L. buxifolium*). (*L. H. K.* Schum., *Dendrium H.* Small.) N. J. to N. and S. C. Cult. 1880.—*L. b. prostratum* (Loud.) Gray, var. Prostrate or

diffuse shrub: lvs. mostly opposite, oval to elliptic-oblong, 4-7 mm. long; otherwise similar to the preceding var., caps. tuberculate on back. Lounsberry, S. Wild Fl. t.122. (*L. Lyonii* Sweet, *Ammyrsine Lyonii* Sweet, *Dendrium* L. Small.) Mts. of N. C. and Tenn. Intr. 1870.

9. **LOISELEURIA** Desv. Evergreen prostrate shrub, glabrous; buds minute with indistinct scales: lvs. mostly opposite, small, usually crowded, entire, coriaceous, short-petioled: fls. few, in terminal clusters, short-pedicelled; calyx-lobes 5, about half as long as corolla; corolla broad-campanulate, with spreading ovate lobes about as long as tube; stamens 5, shorter than corolla, glabrous; anthers opening lengthwise; ovary 2-3-celled seated on a disk; style cylindric, shorter than stamens: caps. surrounded by the persistent calyx, 2-3-valved; seeds many. (After J. C. A. Loiseleur-Deslongchamps, prominent French botanist and physician; 1774-1849.) Syn.: *Azalea* L., *Chamaecistus* S. F. Gray. One circumpolar species.

**L. procumbens** (L.) Desv. Depressed shrub, rarely to 20 cm. high: lvs. oval to oblong, 3-8 mm. long, obtuse, revolute, often glaucous beneath, with prominent midrib: fls. 1-5, on pedicels 3-10 mm. long; calyx-lobes oblong to oblong-lanceolate, corolla pink or whitish, 4-5 mm. long: caps. ovoid, 3-4 mm. long. Fl.vii-viii. L.B.762(c). R.I.17:t.108,f.2(c). F.D.20:t.2028(c). N.T.1:28. G.C.53:343. S.L.47(h). (*Azalea* p. L., *Chamaecistus* p. Ktze.) Eu., N. Asia, in N. Am. from Alaska to Nfld., s. to N. H. Cult. 1800. Zone II. Attractive low shrub for the alpine rockery.

10. **RHODOTHAMNUS** Reichenb. Evergreen dwarf shrub: lvs. alternate, short-petioled, small, entire: fls. terminal, 1-3, on slender pedicels; sepals 5, half as long as corolla; anthers opening by apical pores, dark brown; style about as long as stamens; ovary 5-celled: caps. 5-valved, many-seeded. (Greek *rhodon*, rose, and *thamnos*, shrub; alluding to the rose-colored fls.) Syn.: *Adodendrum* Neck. One species.

**R. Chamaecistus** (L.) Reichenb. Diffusely branched shrub to 0.3 m.; brts. slender, glandular-pubescent when young: lvs. narrow-elliptic to cuneate-oblong, 8-12 mm. long, acute, ciliate, dark green and sparingly setose above, paler and glabrous beneath: fls. 2-2.5 cm. across, bright purple; pedicels and calyx glandular-hirsute. Fl.v-vi. B.M.488(c). L.B.1491(c). F.S.19:t.1962(c). R.I.17:t.106,f.4,5(c). G.C.33:293. Gn.89:264(h). (*Rhododendron* C. L., *Adodendron* C. Ktze.) Eu. Alps, E. Siberia. Intr. about 1790. Zone V? Low shrub with handsome fls. for the alpine rockery.

**R. e.** × *Phyllodoce empetriformis*; see 10a. *Phyllothamnus*.

10a. × **PHYLLOTHAMNUS** Schneid. (*Phyllodoce* × *Rhodothamnus*). Small shrub with the fls. resembling *Rhodothamnus*, the lvs. *Phyllodoce*; from the former it differs chiefly in the broad-campanulate corolla longer than the stamens and in the linear, slightly ciliate-serrulate lvs. with revolute margin, from the latter in the shape of the corolla and in the narrowly revolute lvs. with the midrib beneath glabrous and elevated.

**P. erectus** (Lindl.) Schneid. (*Phyllodoce empetriformis* × *Rhodothamnus Chamaecistus*). Evergreen shrub to 0.3 m.; lvs. linear, about 1.2 cm. long, slightly serrulate, glabrous: fls. 2-10, rotate-campanulate, about 1.2 cm. across, rosy pink, on pubescent pedicels; sepals about  $\frac{1}{3}$  as long as corolla. Fl.vi-viii. F.S.7:t.659(c). E.P.IV.1:39. J.F.1:58. P.F.1:t.19(c). S.H.2:f.337o. (*Phyllodoce* e. Drude, *Bryanthus* e. Lindl.) Orig. about 1845. Zone V.

11. **KALMIOPSIS** Rehd. Evergreen shrub; winter-buds with few foliaceous scales: lvs. alternate, petioled, entire, glandular-lepidote beneath: fls. solitary in the axils of bracts forming short racemes at end of brts.; calyx 5-parted, persistent; corolla broad-campanulate, 5-lobed, stamens 10, about as long as corolla; anthers oblong, opening by apical pores; disk small; style straight, with capitate, slightly lobed stigma; ovary 5-celled: caps. septically 5-valved, valves bifid at apex, separating from the central axis; seeds numerous, ovoid, with reticulate testa. (*Kalmia* and Greek *opsis*, likeness.) One species in N. W. N. Am.

**K. Leachiana** (Henderson) Rehd. Upright shrub to 25 cm.; young brts. puberulous and sparingly glandular: lvs. coriaceous, short-petioled, elliptic or elliptic-obovate to elliptic-oblong, 1-2 cm. long, acute or obtusish, mucronulate, cuneate, minutely ciliate or glabrous on the margin, lustrous dark green above, paler green beneath and with scattered immersed glandular scales, midrib and lateral veins slightly impressed above: fls. 3-10 at end of brts.; pedicels 1-1.5 cm. long, minutely glandular-puberulous; calyx gibbous at base, lobes ovate to oblong, 4-5 mm. long, glandular-ciliate; corolla 12-15 mm. across, rosy-purple, with broad-ovate spreading lobes about as long as tube; filaments ciliate only at the very base; anthers 2 mm. long, lilac; style slightly longer or half as long as corolla; ovary glandular-lepidote: caps. subglobose, 4-5 mm. across, enclosed by the persistent calyx. Fl.vi. J.A.13:t.40. N.H.12:172(h). N.F.9:f.77(h). (*Rhododendron Leachianum* Henderson.) Ore. Intr. 1933. Zone VI. Handsome shrub for the rock garden.

12. **KÁLMIA** L. Evergreen, rarely deciduous shrubs; buds with about 2 outer scales: lvs. alternate, opposite or whorled, entire, petioled, rarely sessile: fls. in terminal or lateral corymbs or solitary; pedicels in the axils of small thick bracts; calyx 5-parted, small, persistent; corolla saucer-shaped or broad-campanulate; stamens 10, with slender filaments; anthers opening by apical pores, held back in little pouches and springing up suddenly by the straightening of the slender filaments when the corolla expands or if touched; style slender; ovary 5-celled; caps. subglobose to globose-ovoid, 5-valved; seeds numerous, minute. (After Peter Kalm, Swedish botanist; traveled from 1748-1751 in N. Am.) About 8 species in E. N. Am. and W. Ind.

A. Fls. terminal

B. Infl. compound: lvs. alternate, 5-10 cm. long, acute, petioled.....1. *K. latifolia*

BB. Infl. simple: lvs. opposite or ternate, 0.5-3 cm. long, obtuse, subsessile...2. *K. polifolia*

AA. Fls. lateral; corolla 5-10 mm. across: lvs. usually opposite, obtuse or acutish, 2-6 cm. long .....3. *K. angustifolia*

1. **K. latifolia** L. MOUNTAIN-LAUREL. Shrub or small tree, occasionally to 10 or 12 m.; glabrous except infl.: lvs. alternate or irregularly whorled, elliptic to elliptic-lanceolate, 5-10 cm. long, acute or short-acuminate, cuneate, dark green above, yellowish green beneath; petiole 1-2 cm. long: fls. in large terminal glandular-pubescent corymbs; pedicels slender, 1-3.5 cm. long; corolla saucer-shaped, 2-2.5 cm. across, viscid outside, usually rose-colored, with purple markings within; ovary glandular: caps. 5-7 mm. across. Fl. v-vi. B.M.175(c). Em.443,t(c). M.M.8:183,t(c). S.S.5:t.236. Gng.7:289(h). G.C.66:203(h). M.G.18:576-9(h). A.B.1927:45(h). Quebec and N. B. to Fla. w. to Ohio and Tenn. Intr. 1734. Zone IV or (III). One of the most beautiful American flowering shrubs.—*K. l. alba* Bosse, var. Fls. white or nearly white. Cult. 1840.—*K. l. rubra* K. Koch, f. Fls. deep pink. R.H.1888: 540,t(c). (*K. l. Pavarii* André.) Cult. 1870.—*K. l. fuscata* Rehd., var.

Gn.29:379.33:603. B.C.3:1734. (*K. l. nana* Hort., *K. l. minor* Hort.) Cult. 1840.—**K. l. obtusata** Rehd., var. Of compact habit and slow growth; lvs. elliptic, obtuse at ends, 5-7 cm. long. Intr. 1886.—**K. l. laevipes** Fern., var. Pedicels glabrous or nearly so. Va. to Ga. and Ala. Intr. 1939.

2. **K. polifolia** Wangerh. Low straggling shrub to 0.7 m.; brts. 2-edged, glabrous or puberulous; lvs. sessile or nearly so, usually oblong, 2-3.5 cm. long, obtuse, revolute, glaucous-white beneath, glabrous; fls. in several-fld. terminal umbels; pedicels slender, 2-3 cm. long, glabrous; calyx-lobes ovate-oblong, obtuse; corolla 1-1.5 cm. across, rose-purple; caps. glabrous. Fl.v-vi. B.M.177(c). L.B.1508(c). Em.441,t(c). Gd.W.t.18(c). (*K. glauca* Ait., *K. occidentalis* Small.) Lab. and Hudson Bay to Pa. and Minn. and from Alaska to Wash. Intr. 1767. Zone II. With attractive rosy-purple fls.—**K. p. rosmarinifolia** (Pursh) Rehd., var. Lvs. linear-oblong, strongly revolute. (*K. glauca* var. *r.* Pursh.)—**K. p. microphylla** (Hook.) Rehd., var. Low diffusely branched shrub to 20 cm. high: lvs. ovate or obovate to elliptic-oblong, 5-20 mm. long, scarcely revolute; pedicels longer; corolla 8-12 mm. long. Brown & Schäffer, Alp. Fl. Can. t.61(c). N.F.31:f.57(h). G.C.89:180(h). (*K. glauca* var. *m.* Hook, *K. m.* Heller.) Yukon to Mont., Colo. and Calif. Intr. 1904.

3. **K. angustifolia** L. SHEEP-LAUREL (LAMB-KILL). Shrub to 1 m., rarely to 1.5 m.; brts. glabrous or nearly so: lvs. short-petioled, oblong to lanceolate, 2-6 cm. long, obtuse or acutish, bright green above, paler beneath, glabrous at least at maturity: fls. in many-fld. axillary clusters; pedicels puberulous; calyx-lobes ovate, slightly glandular; corolla about 1 cm. across, usually purple; caps. sparingly puberulous and glandular. Fl.vi-vii. B.M.331(c). M.N.II.2:t.45(c). Em.445,t(c). Nfd. and Hudson Bay to Mich. and Ga. Intr. 1736. Zone II.—**K. a. rubra** Lodd. Fls. dark purple; lvs. usually broader. L.B.502(c).—**K. a. candida** Fern., f. Fls. white.—**K. a. ovata** Pursh, var. Lvs. ovate or elliptic.

Related species: *K. carolina* Small. Young growth pubescent: lvs. gray-tomentulose beneath: corolla 5-7 mm. across, pink or purple. B.B.2:684. Va. to S. C. Intr. 1906. Zone V.—*K. cuneata* Michx. Deciduous or half-evergreen shrub to 1 m.: lvs. alternate, obovate-oblong, 1.5-5 cm. long, obtusish, cuneate, pubescent beneath when young: fls. few, slender-pedicelled, about 1.5 cm. across, whitish. B.M.8319(c). G.F.8:435. B.C.3:1735. B.S.1:680. N. and S. C. Intr. 1820. Zone VI?—*K. hirsuta* Walt. Evergreen shrub to 0.6 m.: lvs. alternate, subsessile, elliptic to lanceolate, 5-10 mm. long, hirsute: fls. solitary, 1-1.5 cm. across, on slender hirsute pedicels; sepals deciduous, oblong-lanceolate, hirsute. B.M.138(c). L.B.1058(c). L.S.t.126(c). (*Kalmiella h.* Small.) Va. to Fla. and Ala. Intr. 1790. Zone VII?

13. **PHYLLODOCE** Salisb. Evergreen prostrate or ascending shrubs: lvs. alternate, crowded, linear, revolute, usually serrulate: fls. in terminal umbels, nodding, on slender pedicels; calyx 4-6-parted, small, persistent: corolla urceolate or campanulate, 4-6-lobed; stamens 8-12; anthers oblong, opening by a large pore; style slender; caps. globose to ovoid, 4-6-valved, many-seeded. (After Phyllodoce, a sea-nymph.) Six or 7 species in N. Am., N. Eu. and N. Asia.—Low evergreen shrubs with heath-like foliage and attractive fls. for the alpine rock garden.

A. Corolla urceolate, slightly lobed; calyx pubescent.....1. *P. coerulescens*  
 AA. Corolla campanulate; calyx glabrous or glandular.....2. *P. empetrifolia*

1. *P. coerulea* (L.) Bab. Depressed shrub to 15 cm. tall: lvs. linear 4-9 mm. long, obtuse, serrulate, slightly glandular at first: fls. 2-6, ovoid to urceolate, 7-8 mm. long, glabrous, purple, turning bluish in drying; sepals linear to lanceolate; stamens included, glabrous. Fl.vi-viii. L.B.164(c). S.E.6:t.886 (c). N.K.8:t.5. N.T.1:35. G.W.17:261. S.L.34(h). (*P. taxifolia* Salisb., *Andromeda* c. L., *Bryanthus taxifolius* Gray.) Greenland to Que., s. to N. H.; N. Eu., N. Asia. Cult. 1800. Zone I.

Related species: *P. glanduliflora* (Hook.) Cov. To 30 cm. tall: lvs. linear to linear-oblong, 4-14 mm. long: fls. 3-8; calyx glandular; corolla sulphur-yellow, pubescent outside; filaments pubescent; sepals lanceolate to oblong-lanceolate. Brown & Schäffer, Alp. Fl. Can. t.59b. Henshaw, Mtn. Fl. Am. t.26. Alaska to Mont. and Ore. Intr. about 1885.—*P. aleutica* (Spreng.) A. Heller. To 20 cm. tall: lvs. linear: fls. 6-14, white or whitish, globose-urceolate; sepals linear to linear-lanceolate; filaments glabrous. N.T.1:30. Alaska, N. E. Asia. Intr. 1915.

2. *P. empetrifórmis* (Sm.) D. Don. Ascending shrub to 15 cm.: lvs. linear to linear-oblong, 6-15 mm. long, obtuse or acutish, serrulate, glabrous: fls. several to many; corolla urceolate, 7-9 mm. long, rosy-purple, its lobes much shorter than tube; stamens included, filaments as long as anthers; sepals ovate to ovate-oblong, obtuse, glabrous. Fl.v-vii. B.M.3176(c). C.L.21:41. B.S.2:148. S.L.258(h). (*Bryanthus* e. Gray.) B. C. to Calif., e. to Mont. Cult. 1830. Zone V.

*P. e.* × *glanduliflora* = *P. intermedia* Rydb. Differs from the preceding chiefly in the more elongated paler corolla and the narrower acute sepals. Montana. Cult. 1933. Zone V.—*P. e.* × *Rhodothamnus Chamaecistus*; see 10a. *Phyllothamnus*.

Related species: *P. nipponica* Mak. To 15 cm. tall: lvs. linear, 5-10 mm. long, serrulate: fls. 3-10; corolla open campanulate, white, 7-8 mm. long; stamens and style included, filaments twice as long as anthers; sepals ovate, acute, purple, glabrous; pedicels glandular, 1-1.5 cm. long. Japan. G.C.78:29. N.T.1:31. J.L.60:f.153(h);64:f.69(h). Intr. 1915. Zone V.—*P. n. amabilis* (Stapf) Stoker, var. Lvs. smaller: sepals red; corolla smaller, with pinkish lobes; anthers crimson. B.M.8405(c). J.L.63:570. (*P. a.* Stapf.) Cult. 1910.—*P. Breweri* (Gray) Heller. To 30 cm. high: lvs. linear, 6-20 mm. long: fls. axillary, forming terminal racemes; corolla divided to the middle; stamens exserted, filaments much longer than anthers. B.M.8146(c). G.C.78:27. Calif. Intr. about 1896. Zone VI?

A related genus is *Bryanthus* S. G. Gmelin; it differs chiefly in its 4-merous fls. borne in peduncled 3-10-fid. racemes, rotate corolla and 8 stamens. Its only species *B. muscifórmis* (Poir.) Nakai (*B. Gmelini* Don) is a prostrate shrub with evergreen linear remotely denticulate lvs. 2-3 mm. long: fls. rosy pink, 3-4 mm. across. Trans. Linn. Soc. 10:t.30B. N.T.1:25. Kamch. to Japan. Intr. ?

14. **DABOECIA** D. Don. Low evergreen shrub; lvs. alternate, entire, subsessile: fls. in terminal racemes; calyx small, 4-parted; corolla campanulate-urceolate, with 4 short recurved lobes; stamens 8, included; anthers with apical pores: caps. 4-valved; seeds small, globose-ovoid, verruculose. (St. Dabec's Heath, its Irish name.) Syn. *Boretta* Neck. One species in W. Eu.

*D. cantábrica* (L.) K. Koch. IRISH HEATH. Upright shrub to 0.5 m.; brts. glandular-pubescent: lvs. elliptic, 6-12 mm. long, the uppermost narrower, narrowed at ends, mucronate, revolute, dark green and lustrous above, whitish tomentose beneath; racemes elongated, glandular-pubescent: fls. short-pedicelled, nodding; corolla 8-12 mm. long, purple. Fl.vi-xi. Gt.47:257,t(c). R.B.3:121,t(c). Gn.52:344,t(c);71:442(h). M.G.32:179(h). (*D. polifolia* Don, *Menziesia polifolia* Juss., *Boretta* c. Ktze.) Irel. to N. Spain and Azores. Cult. 1800. Zone (V). Handsome summer-flowering shrub; prefers peaty soil.—*D. c. alba* (D. Don) Dipp., f. Fls. white. S.B.II.3:t.276(c). Gt.47:257,t(c). Gn.22:302;76:491(h). (*D. polifolia* var. *a.* Don.) Intr. about 1820.—*D. c.*

bicolor (Koopmann) Dipp., f. Fls. striped white and purple. Gt.47:257,t(c). (*D. polifolia striata* Hort., *D. p. versicolor* Hort.)—*D. c. pallida* (Bosse) Rehd., f. Fls. pink. (*Boretta c. var. rosea* Koopm.)—*D. c. atropurpurea* Dipp., f. Fls. rich purple.—*D. c. nana* (Lodd.) Rehd., var. Dwarf form with smaller and narrower lvs. L.B.20:1907(c). (*Menziesia polifolia* n. Lodd., *D. p. var. pygmaea* Nichols.)

Tribe 2. ANDROMEDEAE Drude. Fr. a loculicidal caps.: calyx dry, small: corolla deciduous.

15. ENKIANTHUS Lour. Deciduous, rarely evergreen shrubs with whorled brs.; winter-buds ovoid, with several outer scales: lvs. alternate, mostly crowded at end of brts., petioled, usually serrulate; fls. in terminal umbels or racemes, usually nodding; sepals 5, small; corolla campanulate or urceolate, 5-merous, white to red; stamens 10, included; anthers 2-awned at apex, opening by short slits; style slender, longer than stamens: caps. 5-valved; cells with 1-few, 3-5-angled or winged seeds. (Greek *egkyein*, to be pregnant, and *anthos*, flower: the large colored involucre of *E. quinqueflorus* resembles a flower enclosing smaller fls.) Syn.: *Enkianthus* DC.; including *Meisteria* Sieb. & Zucc. About 10 species in E. Asia and Himal.

- A. Corolla gibbous or saccate at base, urceolate, with reflexed lobes: fr. on straight pedicels.
  - B. Fls. in umbels, before the lvs.: corolla about 8 mm. long....Sect. EUENKIANTHUS Palib.
    - 1. *E. perulatus*
  - BB. Fls. in pendulous racemes after the lvs.; corolla 5 mm. long..Sect. ANDROMEDINA Palib.
    - 2. *E. subsessilis*
- AA. Corolla not gibbous at base, campanulate; fls. after the lvs.: fruiting pedicels recurved at apex.
  - B. Corolla with 5 short lobes.....Sect. ENKIANTELLA Palib.
    - 3. *E. campanulatus*
  - CC. Ovary and style glabrous.....Sect. 4. *E. deflexus*
  - CC. Ovary and style pubescent.....Sect. 4. *E. deflexus*
  - BB. Corolla with irregularly lacinate limb.....Sect. MEISTERIA (Sieb. & Zucc.) Palib.
    - 5. *E. cernuus*

1. *E. perulatus* (Miq.) Schneid. Shrub to 2 m.: lvs. elliptic-ovate to obovate, 2-5 cm. long, acute, sharply appressed-serrulate, glabrous and bright green above, pubescent on the veins beneath; petiole 8-13 mm. long; fls. in 3-10-fld. umbels, slender-pedicel, nodding; corolla white, urceolate, 8 mm. long; filaments pubescent below the middle; caps. oblong-ovoid, 8 mm. long. Fl.v. B.M.5822(c). S.I.2:t.62(c). G.C.III.21:357. N.T.1:199. Gt.80:359(h). (*E. japonicus* Hook. f., *Andromeda perulata* Miq.) Japan. Intr. about 1870. Zone V. Attractive shrub with small white fls. before the lvs.; the foliage turning partly scarlet in fall.

Related species: *E. serrulatus* (Wils.) Schneid. Shrub to 6 m.: lvs. elliptic-oblong, 4-9 cm. long, acuminate, serrulate, glabrous, reticulate: fls. 3-5, white, campanulate with reflexed lobes, 10-12 mm. long. S.H.2:f.340h(1). (*E. quinqueflorus* var. s. Wils.) C. and W. China. Intr. 1900. Zone VI?—The closely related *E. quinqueflorus* Lour. with evergreen entire lvs. and pink fls. is probably not hardy within our area.

2. *E. subsessilis* (Miq.) Mak. Dense shrub to 3 m.: lvs. elliptic to rhombic-obovate, 2-4.5 cm. long, acute, serrulate, pale green beneath and pubescent along the midrib; petiole 2-5 mm. long; fls. in pendulous racemes 4-6 cm. long; rachis pubescent; pedicels glabrous, about 1 cm. long; corolla globose-urceolate, 5 mm. long, white: fr. ovoid, 4 mm. long, on straight pedicels. Fl.v. S.I.2:t.62(c). S.T.1:t.25. N.T.1:185. (*E. nikoensis* Mak., *Andromeda* s. Miq.) Japan. Intr. 1892. Zone V. Lvs. brilliant red in fall.

3. *E. campanulatus* (Miq.) Nichols. Shrub or tree to 10 m.: lvs. elliptic to rhombic-elliptic, 3-7 cm. long, acute or acuminate, appressed-serrulate with aristate teeth, with scattered bristly hairs above and on the veins beneath; petiole 8-15 mm. long; fls. in pendulous umbel-like racemes; pedicels to 2 cm.

long, pubescent; corolla campanulate, 8-12 mm. long, yellowish or light orange, veined with red; sepals lanceolate; filaments short-pubescent: fr. oblong-ovoid, 5-7 mm. long, upright on the recurved pedicel. Fl.v. B.M.7059 (c). S.I.2:t.62(c). Gt.22:t.747. Gn.75:287. B.S.1:512. N.T.1:187. (*Andromeda c. Miq.*) Japan. Cult. 1870. Zone IV. With pendulous fls. of unusual color; the lvs. turning brilliant red in fall.—*E. c. albiflorus* Mak., var. Fls. white or nearly white. (*E. pallidiflorus* Craib.)—*E. c. Palibinii* (Craib) Bean, var. Lvs. with rufous pubescence along the midrib, narrower: fls. red, about 8 mm. long; filaments villous. B.M.7059(c). (*E. rubicundus* Mats. & Nakai, *E. P. Craib.*)—Also *E. ferrugineus*, *E. latiflorus*, *E. pendulus*, *E. recurvus* and *E. tectus* Craib are only forms of this species.

4. *E. deflexus* (Griff.) Schneid. Shrub or small tree to 7 m.; brts. red, pubescent when young: lvs. elliptic or obovate to oblong-lanceolate, 2.5-7 cm. long, acute at ends, serrulate, strigose on midrib beneath and usually sparingly hairy on both sides: fls. in many-fld. umbel-like racemes; sepals triangular, acute; corolla broad-campanulate, 1.5 cm. broad, yellowish red with darker veins; filaments and anthers pubescent; style below the middle and ovary pubescent; caps. 6-8 mm. long or smaller. Fl.v. B.M.6460(c). R.H. 1932:279. (*E. himalaicus* Hook. f., *E. sulcatus* Craib.) Himal., W. China. Cult. 1878. Zone VII?; the harder Chinese form intr. 1904. Similar to the preceding species, but with larger and showier fls.

Related species: *E. chinensis* Franch. Lvs. elliptic to elliptic-oblong, crenate-serrulate, glabrous or nearly so: infl. glabrous; fls. salmon-red. B.M.9413 (c). G.C.97:378. (*E. himalaicus* var. *c.* Diels, *E. sinohimalaicus* Craib.) Intr. 1900. Zone VII?

5. *E. cernuus* (Sieb. & Zucc.) Mak. Shrub to 5 m.: lvs. elliptic to rhombic-obovate or obovate-oblong, 2-4 cm. long, acute or obtusish, crenate-serrulate, bright green above, sparingly pubescent on the midrib and often on the veins beneath; petiole 2-5 mm. long: fls. slender-pedicel, in 10-12-fld. pubescent racemes; corolla campanulate, 6-8 mm. long, with irregularly lacinate limb, white; sepals ovate-lanceolate, ciliate: caps. ellipsoid, 5 mm. long. Fl.v. N.T. 1:194-5. S.H.2:f.340i-1,341s-t. (*E. Meisteria* Maxim.) Japan. Cult. 1900. Zone V.—*E. c. rubens* (Maxim.) Mak., var. Fls. deep red; filaments long-villous. N.T.1:145. M.T.1:t.33. (*E. Matsudai* Komatsu.)

16. **CASSIOPE** D. Don. Low evergreen shrubs; buds minute: lvs. scale-like and imbricated in 4 rows or linear and spreading: fls. solitary, axillary or terminal, nodding, usually 5-merous; calyx small, 4-5-parted, with ovate imbricate lobes; corolla campanulate 4-5-lobed or -cleft; stamens 8-10; filaments short; anthers with recurved awns on back, opening by apical pores; style short: caps. globose, 4-5-celled, loculicidal; seeds minute, wingless, smooth. (Cassiope, wife of Cepheus and mother of Andromeda.) About 12 species circumpolar and on Himal.—Interesting low evergreen shrubs with small white or pinkish fls. suited for the alpine rockery in a moist and half-shady situation.

A. Lvs. ovate to ovate-oblong, imbricated in 4 rows: fls. axillary.....1. *C. tetragona*  
 AA. Lvs. linear-subulate, spreading: fls. terminal.....2. *C. hypnoides*

1. *C. tetragona* (L.) D. Don. Upright or ascending shrub to 30 cm.: lvs. 4 mm. long, densely covering the stem and giving it a 4-angled shape, finely pubescent and ciliate, furrowed on back: corolla open-campanulate, 5-6 mm. wide, with short broad lobes, white tinged with pink; sepals ovate; pedicels glabrous. Fl.v. B.M.3181(c). E.P.IV.1:22,f.12b. M.G.25:125,127(h). (*Andromeda t. L.*) Circumpolar species, in N. Am. s. to Ore. Intr. 1810. Zone II.

Related species. A. LVS. FURROWED ON BACK: *C. fastigiata* (Wall.) D. Don. Upright: lvs. with membranous silvery-white and ciliate margin; fls. 8-10 mm. wide, white, on puberulous pedicels. B.M.4796(c). E.N.IV.1:22.f.12f. G.C.47:379(h). Himal. Intr. about 1849. Zone VII?—*C. selaginoides* Hook. Usually prostrate, to 25 cm. high: lvs. 4-ranked, lanceolate to lance-oblong, 2-3 mm. long, bristle-tipped, cordate at base, ciliate: corolla globose-campanulate, 7-10 mm. long; pedicels 5-15 mm. long, pubescent. B.M.9003B(c). Himal. Intr. 1920. Zone VII?—B. LVS. NOT FURROWED: *C. lycopodioides* (Pall.) D. Don. Prostrate: lvs. ovate, 1-1.5 mm. long, obtuse or acutish, with scarious margin, rounded on back: pedicels 1.5-2.5 cm. long; corolla campanulate, 6 mm. long. Proc. Wash. Acad.3:572. Alaska, N. E. Asia to Japan. Cult. 1933. Zone II.—*C. Mertensiana* (Bong.) G. Don. Shrub to 30 m.: lvs. ovate to lanceolate, 4-6 mm. long, glabrous or minutely ciliate, keeled on back: pedicels 8-10 mm. long; corolla cup-shaped, 6-8 mm. across. Henshaw, Mtn. Fl. Am. t.25. Alaska to Calif. Intr. about 1885. Zone V.

2. *C. hypnoides* (L.) D. Don. Prostrate shrub; the slender stems densely covered with spreading linear lvs. about 3 mm. long and minutely puberulous: fls. on slender stalks 8-20 mm. long; corolla open-campanulate, 5-6 mm. long, deeply lobed, wide; sepals red. Fl.vi-vii. B.M.2936(c). L.B.1946(c). G.C.39:226(h). E.N.IV.1:22.f.12j. B.B.2:686. (*Andromeda* h. L., *Harri-manella* h. Cov.) Circumpolar species, in Am. s. to N. H. and N. Y. Intr. 1798. Zone II.

17. **ANDRÓMEDA** L. BOG-ROSEMARY. Evergreen low shrubs with subterete brs.; winter-buds small, with 2 outer scales; lvs. short-petioled, narrow, entire: fls. in terminal umbels, nodding; calyx small, 5-lobed: corolla globose-urceolate, with 5 short recurved lobes; stamens 10, included; anthers with 2 slender ascending awns, opening by apical pores: caps. subglobose, 5-valved, loculicidal, the sutures not thickened; seeds oval, smooth. (*Andromeda*, daughter of Cepheus and Cassiope.) Two species in the colder parts of the n. hemisphere.—Low evergreen shrubs with attractive light pink fls.; the first species more graceful.

A. Lvs. glabrous beneath: pedicels 1-2 cm. long.....1. *A. Polifolia*  
 AA. Lvs. white-tomentulose beneath: pedicels less than 1 cm. long.....2. *A. glaucophylla*

1. *A. Polifolia* L. Shrub to 0.3, rarely to 0.8 m. tall, with creeping rootstock and upright usually little-branched stems: lvs. oblong to linear, 1.5-3.5 cm. long, usually acute, revolute, glaucous beneath, often becoming green; pedicels 2-4 times as long as corolla; calyx usually reddish; corolla 6-7 mm. long, white to pink; caps. subglobose to obovoid. Fl.v-vii. L.B.1714(c). R.I. 17:110.f.1(c). F.D.20:t.2034(c). Gn.88:208(h). G.W.12:50(h). N. and C. Eu., N. Asia; in N. Am. s. to N. Y., Idaho. Cult. 1768. Zone II.

2. *A. glaucophylla* Link. Similar to the preceding; brts. and winter-buds glaucous: lvs. usually linear, white-tomentulose beneath: fls. in rather dense clusters, on curved pedicels not more than twice as long as corolla; calyx whitish; caps. depressed-globose, glaucous. Fl.v-vii. L.B.1591(c), 1725(c). Gr.M.635. (*A. Polifolia* auth., not L., *A. Polifolia* var. *angustifolia* Ait. and *A. P. revoluta* Lodd.) Nfd. and Lab. to Manitoba, s. to N. J., Ind. and Minn. Cult. 1879. Zone II.—*A. g. latifolia* (Ait.) Rehd., var. Lvs. narrow-oblong to oblong. L.B.546(c). (*A. Polifolia* var. *l.* Ait., *A. canescens* Small.)

18. **ZENÓBIA** D. Don. Deciduous or half-evergreen shrub; buds ovoid, obtuse, with several outer scales: lvs. alternate, short-petioled, crenulate or entire: fls. in axillary clusters, forming racemes on the upper part of last year's brs.; calyx-lobes 5, valvate; corolla campanulate, obtusely 5-lobed; stamens 10; anthers with 4 terminal slender awns, opening by pores; disk 10-lobed; style about as long as corolla: caps. subglobose, 5-valved, with

thickened suture, loculicidal; seeds numerous, small, angled. (*Zenobia*, queen of Palmyra.) One species in E. N. Am.

*Z. pulverulenta* (Bartr.) Pollard. Shrub to 28 m., glabrous, with upright or arching terete brs.: lvs. oval to oblong, 2-7 cm. long, obtuse or acutish, glabrous and covered more or less with glaucous bloom: fls. on slender nodding pedicels 1-2 cm. long; corolla white, 6-8 mm. long; sepals ovate or triangular-ovate; caps. 6-7 mm. across. Fl.v-vi. B.M.667(c). L.B.551(c). Gn.24:572,t(c); 81:19;86:656. G.C.III.7:612;23:328,f.119(h). (*Z. speciosa* D. Don, *Andromeda* p. Bartr., *A. dealbata* Lindl., *A. glauca* and *A. candida* Hort.) N. C. to Fla. Intr. 1801. Zone V. With white fls. and conspicuous bluish white lvs.—*Z. p. nuda* (Vent.) Rehd., var. Lvs. green, without bloom; fls. and caps. somewhat smaller. Gn.86:656. B.M.970(c). S.B.II.t.330(c). (*Z. cassinefolia* (Vent.) Pollard, *Andromeda cassinefolia* Vent., *A. wilmingtonia* Michx., *A. speciosa* var. *nitida* Michx., *A. speciosa* var. *viridis* Hort.) Occurs with the type.

19. *PÍERIS* D. Don. Evergreen shrubs or small trees; winter-buds ovoid with several outer scales: lvs. alternate, rarely opposite, petioled, serrate to crenulate, rarely entire: fls. in terminal panicles, rarely reduced to small racemes; calyx-lobes separate; corolla ovoid-urceolate, with 5 short lobes; stamens 10, included; anthers with a pair of reflexed awns on back: caps. subglobose, usually depressed, 5-valved, the sutures not thickened, loculicidal; seeds small, scobiform. (*Pieris*, Greek mythological name.) Syn. *Portuna* Nutt. About 8 species in N. Am., E. Asia and Himal.

A. Brts. strigose; panicles upright.....1. *P. floribunda*  
AA. Brts. glabrous; panicles drooping.....2. *P. japonica*

1. *P. floribunda* (Pursh) Benth. & Hook. Shrub with erect stems to 2 m.; lvs. elliptic-ovate to oblong-lanceolate, 3-8 cm. long, acute or short-acuminate, obtuse at base, crenate-serrulate and ciliate, otherwise glabrous; fls. nodding, white, in dense panicles 5-10 cm. long; calyx-lobes ovate; corolla angled, 5-6 mm. long; caps. globose-ovoid, 5-6 mm. long, slightly angled. Fl.iv-v. B.M. 1566(c). Add. 5:t.163(c). Gn.31:612;86:222(h). G.C.45:408(h). S.L.47(h). (*Andromeda* f. Pursh, *Portuna* f. Nutt.) Va. to Ga. Intr. 1800. Zone IV. Dense shrub valued for its early profuse white fls.

2. *P. japonica* (Thunb.) D. Don. Shrub to 3 m., with spreading brs.; lvs. obovate-oblong to oblanceolate, 3-8 cm. long, crenate-serrate, lustrous dark green above, lighter green beneath, glabrous: fls. white, in pendulous panicles, 6-12 cm. long, calyx-lobes oblong-lanceolate; corolla ovoid, 6-8 mm. long; caps. depressed-globose, 5-6 mm. across. Fl. iv-v. S.I.1:t.78(c). R.B.11:109(c). B.H.21:272,t(c). N.T.1:201. Gn.12:98,t(c);57:399(h). B.S.2:167. G.W. 9:354(h). (*Andromeda* f. Thunb.) Japan. Cult. 1870. Zone (V). With lustrous lvs., beautiful and graceful in bloom.—*P. j. variegata* (Carr.) Bean, var. Lvs. smaller, with whitish margin. Yatabe, Icon. Fl. Jap. I:t.30a(c). (*P. j. var. albo-marginata* Rehd., *Andromeda j. variegata* Carr.) Cult. 1880.—*P. j. pygmaea* (Maxim.) Rehd., var. Dwarf form with smaller narrow-oblanceolate lvs. Yatabe, Icon. Fl. Jap. 1:t.30b(c). (*Andromeda j. var. p.* Maxim.)

Related species: *P. formosa* (Wall.) D. Don. Shrub or small tree to 6 m.: lvs. elliptic-oblong to lanceolate, 6-15 cm. long, acuminate, broad-cuneate, serrulate: fls. white or tinged with pink, in drooping panicles to 15 cm. long. B.M. 8283(c). I.H.5:t.162(c). G.C.II.15:569. Gn.54:77;81:408(h). (*Lyonia* f. Hand-Mazz.) E. Himal. Cult. 1858. Zone VII?—*P. Forrestii* Harrow. Upright shrub with pendent brs.; young growth red: lvs. oblong-lanceolate or oblanceolate, 6-12 cm. long, serrulate: pedicels 5 mm. long; sepals whitish; corolla urceolate, 9 mm. long, with narrow 5-angled mouth and upright lobes; filaments sparingly pilose; style as long as corolla. G.35:266. G.C.75:339. S. W.

China. Intr. about 1910.—*P. taiwanensis* Hayata. Shrub to 2 m.: lvs. oblanceolate or lanceolate to elliptic, 4–7.5 cm. long; panicles upright, 8–15 cm. long, lateral brs. often drooping; calyx-lobes ovate, 3–3.5 mm. long; corolla 7–8 mm. long. B.M.9016c). G.C.71:139;73:63. Formosa. Intr. 1918. Zone VII.

A distinct species is *P. nana* (Maxim.) Mak. Prostrate shrub; brts. puberulous: lvs. usually in whorls of 3, elliptic to elliptic-oblong, 5–10 mm. long, mucronulate, entire, very coriaceous: fls. terminal, in 3's or in short racemes; corolla globose-urceolate, 4 mm. long, white. N.T.1:168. G.C.75:217(h). (*Arctericia* n. Mak., *A. oxyccoides* Cov., *Andromeda* n. Maxim.) N. E. Asia. Intr. 1915. Zone I.

20. **LYONIA** Nutt. Evergreen or deciduous shrubs, rarely small trees; brs. angled or terete; winter-buds ovoid, with 2 or several outer scales: lvs. alternate, short-petioled, entire or shallowly toothed or serrulate, sometimes lepidote: fls. in axillary clusters or racemes or collected into terminal panicles; calyx 5-, rarely 4–8-lobed, with separated lobes; corolla urceolate or cylindric-campanulate, with short lobes; stamens 10, rarely 8–16; filaments with a pair of appendages near apex or without; anthers obtuse, without appendages, opening by apical pores; caps. subglobose or ovoid with thickened sutures separating from the valves; seeds small, scobiform. (Named for John Lyon, American botanist, d. about 1818.) Syn.: *Xolisma* Raf. About 30 species in N. Am., W. Ind. and E. Asia and Himal.

A. Fls. in terminal panicles: lvs. deciduous, entire or serrulate.....1. *L. ligustrina*  
AA. Fls. in axillary clusters or racemes: lvs. entire.

B. Brts. angled: lvs. persistent; corolla conic-ovoid.....2. *L. lucida*  
BB. Brts. terete: lvs. deciduous or half-evergreen; corolla cylindric-ovoid.

C. Fls. in axillary fascicles: lvs. obtuse or acute, cuneate.....3. *L. mariana*  
CC. Fls. in axillary racemes: lvs. acuminate or acute, rounded at base....4. *L. ovalifolia*

1. *L. ligustrina* (L.) DC. MALE-BERRY. Deciduous much-branched shrub to 4 m., glabrous or somewhat pubescent: lvs. short-petioled, elliptic or obovate to oblong-lanceolate, 3–7 cm. long, usually acute, or abruptly acuminate, entire or obscurely serrulate, pubescent on the veins beneath or glabrous: fls. whitish, in leafless racemes forming dense panicles 6–15 cm. long; calyx-lobes triangular-ovate; corolla globose- or ovoid-urceolate, puberulous, 3–4 mm. long; filaments flat, without appendages: caps. subglobose 3 mm. across. Fl.v-vii. L.B.1110(c). W.D.t.37,38,127,128(c). B.B.2:691. (*Andromeda* l. Muhlb., *A. paniculata* Ait., *Xolisma* l. Britt., *Arsenococcus ligustrinus* Small.) Canada to Fla., w. to Tenn. and Tex. Intr. 1748. Zone III.—**L. l. pubescens** Gray. Lvs. appressed-pubescent above, villous on the veins beneath and loosely pubescent on the surface, thickish, reticulate, entire or nearly so: infl. slightly leafy; corolla short-villous. (*Andromeda tomentosa* Dum.-Cours.) Cult. 1810.—**L. l. foliosiflora** (Michx.) Fern., var. Racemes less crowded, often elongated, conspicuously leafy-bracted: lvs. leathery, serrulate, usually lustrous above. (*Xolisma frondosa* Small, *A. paniculata* var. *foliosiflora* Michx.) Va. to Fla. and La. Intr. ?

2. *L. lucida* (Lam.) K. Koch. FETTER-BUSH. Evergreen shrub to 2 m. with sharply angled brs.; glabrous: lvs. broad-elliptic or obovate to oblong, 3–8 cm. long, abruptly acuminate, cuneate, entire, revolute, with a vein close to the margin, bright green and lustrous above: fls. in axillary clusters forming terminal leafy racemes; calyx-lobes lanceolate; corolla conic-ovoid, 6–8 mm. long, white to pink; filaments glabrous, with a pair of appendages near apex: caps. globose-ovoid, 4 mm. long. Fl.lv-v. B.M.1095(c). B.B.2:690. (*Andromeda* l. Lam., *A. nitida* Marsh., *Lyonia* n. Fern., *Xolisma lucida* Rehd., *Desmothamnus lucidus* Small.) Va. to Fla. and La. Intr. 1765. Zone VII.—**L. l. rubra** (Lodd.) Rehd., f. Fls. deep pink. L.B.672(c). (*Andromeda coriacea rubra* Lodd.)

3. *L. mariàna* (L.) D. Don. STAGGER-BUSH. Deciduous shrub to 2 m., glabrous or nearly so: lvs. elliptic to oblong, 3-6 cm. long, acute or obtuse, cuneate, entire, subcoriaceous and somewhat reticulate: fls. nodding, in axillary clusters forming terminal leafless racemes; calyx-lobes lanceolate; corolla cylindric-ovoid, about 1 cm. long, white or pinkish; filaments pubescent, with a pair of appendages near apex: caps. ovoid-pyramidal, 7-9 mm. long, about as long as sepals. Fl.v-vi. B.M.1579(c). M.N.2:t.47(c). G.O.t.113(c). A.G. 10:281. B.C.5:2623. (*Andromeda* m. L., *Pieris* m. Benth. & Hook., *Neopieris* m. Britt., *Xolisma* m. Rehd.) R. I. to Fla., w. to Tenn. and Ark. Intr. 1736. Zone V. With profuse white or pinkish fls.

4. *L. ovalifolia* (Wall.) Drude. Half-evergreen or deciduous shrub or tree to 12 m.; brts. glabrous: lvs. ovate or elliptic to ovate-oblong, 5-14 cm. long, short-acuminate, or acute, usually rounded at base, entire, glabrous or hairy on the veins beneath, subcoriaceous: fls. in lateral racemes, 5-14 cm. long, with a few lvs. or leafy bracts near base; sepals ovate or triangular-lanceolate; corolla oblong-urceolate, 8 mm. long, slightly pubescent; caps. 4-5 mm. across. Fl.v-vi. Wight, Icon. 1199. G.C.106:247. (*Andromeda* o. Wall., *Pieris* o. D. Don., *Xolisma* o. Rehd.) Himal., S. W. China. Intr. 1825. Zone VII? Similar in bloom to *Leucothoe racemosa*. Doubtful if at present in cult. —*L. o. lanceolata* (Wall.) Hand.-Mazz., var. Lvs. elliptic-oblong to oblong-lanceolate, cuneate or broad-cuneate, rarely rounded at base; sepals narrower, greenish. Wight, Icon. t.1198. (*Pieris* o. var. l. Clarke.) Himal., W. China. Intr. 1908. —*L. o. elliptica* (Sieb. & Zucc.) Hand.-Mazz., var. Lvs. deciduous, thinner; caps. 3-4 mm. across; racemes generally shorter. S.I.2: t.60(c). N.T.1:205. S.H.2:f.346p-r.347e-g. (*Andromeda* e. Sieb. & Zucc., *Pieris* o. var. e. Rehd. & Wils., *P. e. Nakai*.) China, Japan. Intr. 1892. Zone VI?

21. **CHAMAEDAPHNE** Moench. Low evergreen shrub, buds small, with several outer scales: lvs. alternate, short-petioled, scurfy, especially beneath, obscurely toothed or nearly entire, more or less appressed to the stem: fls. nodding, short-pedicelled, in terminal leafy racemes; calyx small, 5-lobed, subtended by two bractlets: corolla oblong-urceolate, with 5 short lobes; stamens 10, included; anther-sacs terminating into an elongated tube opening by a terminal pore: caps. depressed-globose, with thickened sutures; the wall splitting into 2 layers, the inner one 10-valved; seeds small wingless. (Greek *chamai*, on the ground, and *daphne*, laurel; alluding to the low habit and evergreen lvs.) Syn.: *Cassandra* D. Don. One circumpolar species.

*C. calyculata* (L.) Moench. Upright shrub with spreading or horizontal brs., to 1.5 m.: lvs. elliptic or obovate to oblong or lanceolate, 1-5 cm. long, obtuse or acute, revolute, dull green and slightly scaly above, densely so beneath: racemes 4-12 cm. long; corolla 6-7 mm. long, white; caps. 4 mm. across. Fl.iv-vi. B.M.1286(c). L.B.530,1464,1582(c). M.N.1:125,t(c). R.I.17:t.110, f.2(c). (*Andromeda* c. L. *Cassandra* c. D. Don, *Lyonia* c. Reichenb.) N. Eu., N. Asia; in N. Am. s. to Ga., Ill. and B. C. Cult. 1748. Zone II.—*C. c. angustifolia* (Ait.) Rehd., var. Lvs. linear-lanceolate, wavy on the margin. (*Andromeda* c. var. a. Ait.)—*C. c. nana* (Lodd.) Rehd., var. Low, not exceeding 30 cm., with horizontal brs. and smaller lvs. L.B.862(c). Gs.13:90(h). (*Andromeda* c. var. n. Lodd., *A. vaccinioides* Hort.) Cult. 1820.

22. **OXYDENDRUM** DC. Deciduous tree; winter-buds small, with about 3 outer scales: lvs. alternate, petioled, serrulate: fls. whitish, in terminal panicles of 6 or more slender one-sided racemes; calyx deeply divided into

5 separated lobes; corolla cylindric-ovoid, puberulous, with 5 short lobes; stamens 10; anthers linear-oblong, awnless, opening from the apex to the middle; style slightly exserted; caps. ovoid-pyramidal, slightly angled, 5-valved, loculicidal; seeds numerous, the loose reticulate seed-coat slender-pointed at ends. (Greek *oxys*, sour, and *dendron*, tree, referring to the acid taste of the lvs.) One species in N. Am.

**O. arbóreum** (L.) DC. **SORREL-TREE**. Tree, sometimes to 25 m. tall; bark deeply fissured; brts. glabrous or sparingly puberulous: lvs. slender-petioled, elliptic-oblong to oblong-lanceolate, 8–20 cm. long, acuminate, broad-cuneate, serrulate, lustrous above, glabrous, sparingly pubescent on veins beneath; petiole 8–15 mm. long, slender: panicles 10–25 cm. long, drooping; corolla 6–8 mm. long; caps. 5 mm. long, grayish pubescent. Fl.vii–viii; fr.ix–x. Add. 4:t.139(c). B.M.905(c). L.B.1210(c). S.S.5:t.235. F.E.24:131(h). M.G.19:253(h). (*Andromeda arborea* L.—**SOUR-WOOD**.) Pa. to Fla., w. to Ind. and La. Intr. 1747. Zone IV. Lvs. turning scarlet in fall, but remaining pale beneath; also valued for its late fls.

**23. LEUCÓTHOË** D. Don. Evergreen or deciduous shrubs; winter-buds small, roundish, with several outer scales: lvs. alternate, short-petioled, serrulate: fls. in axillary or terminal racemes or panicles; corolla ovoid or cylindric; anthers obtuse or 2- or 4-awned; caps. subglobose, 5-lobed, loculicidal, the sutures not thickened; seeds pendulous, scobiform. (Leucothoe, daughter of the mythological king Orchamus.) (Including *Eubotrys* Nutt. and *Agarista* D. Don.) About 35 species in N. and S. Am., Madag., Himal. and Japan.

A. Anthers awnless; lvs. evergreen or half-evergreen; calyx without bractlets at base.

Subgen. EU-LEUCOTHOË Drude.

B. Fls. in axillary dense racemes; filaments pubescent.

C. Lvs. long-acuminate, closely serrulate; petiole 1–1.5 cm. long.....1. *L. Catesbaei*

CC. Lvs. abruptly acuminate, remotely serrulate; petiole 5–10 mm. long...2. *L. axillaris*

BB. Fls. in terminal upright panicles or racemes.

C. Lvs. glabrous, distinctly petioled, serrulate toward the apex, evergreen: racemes usually paniced.....3. *L. Davisiae*

CC. Lvs. ciliate and more or less pilose, subsessile, entire, usually half-evergreen: racemes usually solitary.....4. *L. Grayana*

AA. Anthers awned; racemes or panicles terminal on short brts.; calyx with 2 bractlets at base: lvs. deciduous.....Subgen. EUBOTRYS (Nutt.) Gray.

B. Panicles nearly straight; anthers with 4 awns.....5. *L. racemosa*

BB. Panicles recurved; anthers with 2 awns.....6. *L. recurva*

1. *L. Catesbaei* (Walt.) Gray. Evergreen shrub to 2 m., with spreading and arching brs. reddish and puberulous when young: lvs. ovate-lanceolate to lanceolate, 6–15 cm. long, long-acuminate, rounded or broad-cuneate at base, appressed ciliate-serrulate, lustrous dark green above, lighter beneath, glabrous: racemes 4–7 cm. long; sepals oblong-ovate, scarcely imbricate: corolla cylindric-ovoid, about 6 mm. long, white, usually reddish in bud; caps. depressed-globose, 4–5 mm. across. Fl.iv–v. Add. 4:t.151(c). B.M.1955(c). L.B.1320(c). Gn.M.2:18. G.W.6:279(h). N.F.9:f.72(h). (*Andromeda* C. Walt.) Va. to Ga. and Tenn. Intr. 1793. Zone IV. With rather large lustrous lvs.—*L. C. Rollisöni* Bean, var. Lvs. smaller and narrower, 5–10 cm. long and 1–1.8 cm. wide.

2. *L. axillaris* (Lam.) D. Don. Evergreen shrub to 2 m., with arching brs. puberulous when young: lvs. elliptic to oblong-lanceolate, 5–10 cm. long, abruptly short-acuminate or acute, remotely serrulate, often entire toward the base, lustrous above, sparingly pubescent beneath when young; racemes 2–7 cm. long; pedicels very short; sepals ovate, imbricate; corolla cylindric-ovoid, 6–7 mm. long, white, greenish in bud. Fl.iv–v. G.O.114(c). B.B.2:687.

(*Andromeda a.* Lam.) Va. to Fla. and Miss. Intr. 1765. Zone VI? Similar to the preceding, but less hardy.

Related species: *L. populifolia* (Lam.) Dipp. Shrub to 4 m.; brts. with lamellate pith: lvs. ovate-lanceolate, 3–10 cm. long, acuminate, entire or obscurely serrulate: racemes peduncled, few-fl.; pedicels slender; corolla 8–10 mm. long. Smith, Exot. Bot. t.89(c). S.H.2:f.345h-k, 346k. (*Andromeda p.* Lam., *A. lucida* Jacq., not Lam., *A. acuminata* Ait., *L. acuminata* G. Don.) S. C. to Fla. Intr. 1765. Zone VII?

3. *L. Davisiae* Torr. Evergreen upright shrub to 1 m.; brts. glabrous: lvs. short-petioled, ovate-oblong to oval, 2–7 cm. long, obtuse to acute, entire or slightly toothed, lustrous dark green, glabrous: fls. nodding, in terminal upright panicles 6–10 cm. long; sepals ovate; corolla urceolate, 6–8 mm. long; pedicels short: caps. 5–6 mm. across. Fl.vi. B.M.6247(c). B.S.2:20. Gn.86:222. (*Andromeda D.* Schneid., *Oreocallis D.* Small.) Ore. to Calif. Intr. 1853. Zone (V). With conspicuous panicles of white fls.

Related species: *L. Keiskei* Miq. Slender shrub; lvs. ovate to ovate-oblong, 3.5–8 cm. long, long-acuminate, broad-cuneate or rounded, remotely and indistinctly crenate-serrate, glabrous; petiole 2–4 mm. long; racemes terminal and axillary at end of brs., short, to 4 cm. long; pedicels slender about 1 cm. long, nodding; corolla cylindric, 1.5 cm. long, white. N.T.1:175. M.I.1:t.34. Japan. Intr. 1915. Zone V. Graceful shrub with rather large white pendulous fls.

4. *L. Grayana* Maxim. Half-evergreen shrub to 1 m., with stout upright glabrous brs.: lvs. subsessile, broad-elliptic or obovate to oblong-ovate or -obovate, 5–8 cm. long, acute or short-acuminate, rounded at base, ciliate, otherwise nearly glabrous or slightly pilose, often rugose above: fls. in terminal racemes 5–10 cm. long, leafy at base; upper bracts linear-lanceolate or subulate, longer than the short pedicels; sepals ovate to ovate-lanceolate, glandular-ciliate: corolla urceolate-campanulate, 4–5 mm. long, greenish white to pinkish: ovary glabrous or pubescent: caps. depressed-globose, 4–5 mm. across. Fl.vii–ix. N.T.1:179. N. and C. Japan. Intr. 1890. Zone V.

5. *L. racemosa* (L.) Gray. Deciduous upright shrub to 4 m.: lvs. short-petioled, oblong to elliptic or lance-oblong, 2–7 cm. long, acute, serrulate, pubescent beneath, at least on the veins: fls. in upright or spreading racemes, 3–8 cm. long; sepals triangular-ovate to triangular-lanceolate; corolla cylindric, 8–9 mm. long, white or pinkish; caps. subglobose, 4 mm. broad; seeds wingless. Fl.v–vi. G.O.t.57(c). Em.423,t. B.S.2:21. B.B.2:689. (*Andromeda r.* Lam., *Lyonia r.* Don, *Eubotrys r.* Nutt.) Mass. to Fla. and La. Intr. 1736. Zone V. With bright green lvs. turning scarlet in fall and with slender racemes of white fls. in spring.—*L. r. projécta* Fern., var. Racemes 6–20 cm. long, glabrous. Rh.31:t.578,f.1,2. Va. to Ga. and Tenn.

6. *L. rectirva* (Buckl.) Gray. Deciduous spreading shrub, to 4 m.: lvs. short-petioled, elliptic-ovate or obovate to elliptic-lanceolate, 4–10 cm. long, acute or short-acuminate, serrulate, pubescent on the veins beneath or nearly glabrous: racemes spreading and curved, 2–10 cm. long; sepals ovate to oblong-ovate; corolla cylindric, 6–8 mm. long; anthers with 2 awns: caps. subglobose, 5–6 mm. broad; seeds winged. Fl.iv–vi. G.F.9:225. B.C.4:1850. I.T.1:t.40. B.B.2:688. (*Andromeda r.* Buckl., *Eubotrys r.* Britt.) Va. to Ga. and Ala. Cult. 1880. Zone V. Similar to the preceding species.

24. **EPIGAEA** L. Prostrate evergreen shrub with creeping stems: lvs. alternate, petioled: fls. perfect or dioecious, in short terminal and axillary bracted spikes; pedicels with 2 bractlets; sepals 5, imbricate, large, green: corolla salverform, with 5 spreading lobes; stamens 10, included; filaments adnate to base of corolla; anthers opening by slits; stigma 5-lobed; ovary

hairy: caps. depressed-globose, fleshy, hirsute, 5-valved, loculicidal; seeds minute on a white succulent placenta. (Greek *epi*, on, and *gaea*, earth; in allusion to the creeping habit.) Two species in N. Am. and Japan.

**E. repens** L. MAYFLOWER (TRAILING ARBUTUS). Stems hirsute, to 30 cm. long: lvs. ovate or suborbicular to oblong-ovate, 2-8 cm. long, rounded and mucronulate, rarely acute at apex, subcordate or rounded at base, ciliate, scabrous on both sides with persistent stiff hairs; petiole 5-30 mm. long: fls. white to pink, very fragrant; sepals ovate to lanceolate, acuminate, 5-8 mm. long; corolla-tube about 1.5 cm. long; staminate fls. larger: caps. berry-like after dehiscence, 8-9 mm. across, whitish. Fl. iv-v. L.B.160(c). B.R.201(c). B.B.2:692. Gd.W.t.37(c). M.M.3:t.2(c). G.C.42:343(h). Mass. to Ga., w. to Ohio and Tenn. Intr. 1736. Zone II. With white to pink sweetly fragrant fls. Rarely seen in cult.—**E. r. glabrifolia** Fern., var. Mature lvs. glabrous or glabrate, lustrous. Em.431,t(c). Lab. to Sask., s. to N. C., Tenn. and Wisc.—A form of this var. is **E. r. plena** Rehd., f. Fls. double.

Closely related species: **E. asiatica** Maxim. Lvs. ovate-oblong or oval-oblong, slightly scabrid above, usually acute: petiole 0.5-1.5 cm. long: pedicels 1-1.5, rarely 3 cm. long; corolla broad-campanulate, tube 9 mm. wide, glabrous inside, except minutely pubescent near base, lobes broad-ovate, short. B.M.9222(c). N.T.1:172. M.I.1:t.28. J.L.64:f.115. Japan. Cult. 1930. Zone V.

Related genus: **Orphanidésia** Boiss. Evergreen shrub with large hirsute ovate-oblong lvs.: fls. 1-2, axillary, salver-shaped; anthers with apical pores: caps. subglobose. One species **O. gaultherioides** Boiss. in Asia Minor (Lazistan). Gt.40:469. Intr. about 1885. Zone VI. Apparently not now in cult.

Tribe 3. GAULTHERIEAE Niedenz. Fr. a loculicidal caps. surrounded by the accrescent fleshy calyx and berry-like: corolla deciduous.

**25. GAULTHERIA** L. Evergreen, upright or prostrate shrubs, rarely small trees: winter-buds ovoid, with several outer scales: lvs. alternate, rarely opposite, short-petioled, usually serrate: fls. 5-, rarely 4-merous, in terminal panicles or axillary, racemose, clustered or solitary; pedicels bracteolate; calyx 5-parted, accrescent and usually becoming fleshy: corolla urceolate, or campanulate; stamens 10; anthers with 2 or 4 awns or obtuse; disk 10-lobed; ovary glabrous: fr. a 5-valved caps. enclosed by the fleshy calyx and often highly colored, berry-like; seeds numerous, minute. (After Dr. Gaultier, a physician in Quebec, about 1750.) More than 100 species in N. Am. to Chile, e. and s. Asia, Malaysia and Austral. Evergreen shrubs more conspicuous in fr. than in bloom.

A. Fls. in few- to many-fld. racemes.

B. Racemes many-fld.: lvs. 4-10 cm. long.

C. Lvs. subcordate to rounded at base, usually ovate; pedicels about as long as corolla.

CC. Lvs. broad-cuneate to round at base, usually oblong: pedicels much shorter than corolla

BB. Racemes 2-5-fld.: lvs. 1.5-3.5 cm. long.

AA. Fls. solitary and axillary, rarely terminal.

B. Corolla urceolate, short-lobed; anthers awned.

BB. Corolla campanulate, deeply lobed; anthers awnless.

1. **G. Shallon** Pursh. SHALLON. Diffuse shrub with upright and ascending stems, to 0.5 m.; brts. glandular-hirsute: lvs. ovate to orbicular-ovate, 5-12 cm. long, acute or short-acuminate, rounded to cordate at base, serrulate, glabrous at maturity; petiole 3-6 mm. long: racemes slender, 5-12 cm. long, in terminal panicles, glandular-pubescent; bracts ovate or ovate-oblong; calyx-lobes triangular, whitish, pubescent; corolla ovoid, about 1 cm. long, white to pink, pubescent: fr. purple, becoming black, about 1 cm. across, hairy. Fl.v-vi; fr.ix-x. B.M.2843(c). B.R.1411(c). L.B.1372(c). Gn.31:379.

S.L.182(h). M.G.30:112(h). Alaska and B. C. to S. Calif. Intr. 1826. Zone (V). Adapted for borders of evergreen plantations.

*O. S.* × *Pernettya mucronata*; see *Gaulthetia*, p. 739.

2. *G. Veitchiana* Craib. Shrub to 1 m., sometimes decumbent; brts. hispid: lvs. elliptic to oblong or oblong-obovate, 4-8 cm. long, abruptly mucronate, broad-cuneate to rounded, setose-serrulate, lustrous dark green and wrinkled above, lighter beneath and at first densely, later sparingly setose on the veins; petiole 2-3 mm. long: fls. nodding, in axillary and terminal dense racemes 2.5-5 cm. long, villous and closely bracteate, corolla ovoid, 4-6 mm. long, white, sometimes flushed pink; fr. about 6 mm. across, indigo-blue. Fl.v-vi; fr.viii-ix. B.M.9174(c). G.C.80:203. B.S.1:582. W. China. Intr. 1908. Zone VII? With conspicuous blue fr.

Related species: *G. hispida* R. Br. Brts. hispid: lvs. oblong to lanceolate, 3-6 cm. long, acute, cuneate to nearly rounded, appressed-setose on midrib beneath: racemes dense, 6-10-flid.; bracts broad-ovate: fr. white, about 1 cm. across. G.C.82:123. J.L.63:f.47. N.F.11:f.68(h). Tasm., Austral. Cult. 1927. Zone VII?—*G. Hookeri* Clarke. Shrub to 2 m.; brts. hispid: lvs. subsessile, elliptic-ovate, about 5 cm. long, acute, usually rounded at base, usually bristly beneath: racemes 2-5 cm. long, pubescent; corolla tubular, 4 mm. long, whitish: fr. dark blue, pubescent. Himal. Cult. 1933. Zone VII?—*G. Forrestii* Diels. Shrub to 1.5 m., glabrous: lvs. oblong to lanceolate or narrow-elliptic, 5-9 cm. long, acuminate, cuneate: racemes 3.5-5 cm. long: fls. urceolate-campanulate, 5 mm. long, white: fr. dark blue. W. China. Cult. 1933. Zone VII?—*G. Wardii* Marquand & Shaw. Brts. densely villous: lvs. subsessile, elliptic-lanceolate, 3-8 cm. long, short-acuminate, margin revolute with few teeth near apex: racemes 1-1.5 cm. long, short-villous; sepals ovate-oblong to lance-oblong, 4 mm. long, slightly shorter than the urceolate corolla, persistent, but not fleshy in fr. S. E. Tibet. Cult. 1933. Zone VII?—*G. tetramera* W. W. Sm. Shrub to 0.5, rarely to 1.5 m.: lvs. petioled, broad-elliptic to lance-elliptic, 3-5.5 cm. long, obtuse or acutish: racemes 1-2.5 cm. long: fls. 4-merous; corolla tubular-ovoid, 5 mm. long, greenish white: fr. blue. J.L.63:f.44. W. China. Cult. 1933. Zone VII?

3. *G. Miqueliana* Takeda. Low shrub to 30 cm.; young brts. pubescent; lvs. crowded at end of brts., obovate or broad-elliptic, 1.5-3.5 cm. long, 1-2 cm. broad, rounded to acutish at apex, broad-cuneate to rounded at base, crenate-serrulate: fls. nodding in peduncled bracted and pubescent racemes 2-6 cm. long, one to several at end of brs.; pedicels about as long as corolla, much exceeding the ovate bracts; corolla globose-ovoid, 6 mm. long, white; style as long as corolla; ovary glabrous; fr. about 6 mm. across, white, sometimes pinkish. Fl.vi-vii; fr.ix-x. N.T.1:223. (*G. pyroloides* Miq., in part.) Japan. Intr. 1892. Zone V. With conspicuous white fls. followed by white frs.

Related species, the first two close to the preceding: *G. cuneata* (Rehd. & Wils.) Bean. Lvs. scattered, elliptic-obovate to oblong-obovate, 6-12 mm. broad, acute, cuneate; ovary pubescent; fr. white. B.M.8829(c). G.C.76:161. J.L.63:f.43. N.F.11:f.70(h). (*G. pyroloides* var. *c.* Rehd. & Wils.) W. China. Intr. 1908. Zone (V).—*G. pyroloides* Miq. Lvs. scattered, broad-ovate to orbicular; style much shorter than corolla: fr. blue-black. (*G. pyrolaefolia* Hook. f.) Himal. Cult. 1933. Zone VII?—*G. rupéstris* R. Br. Procurrent or upright shrub to 1 m.; brts. glabrous or slightly pubescent, sometimes setose: lvs. oblong or elliptic-lanceolate to elliptic or suborbicular, 0.8-2.5 cm. long, serrate, glabrous: racemes 1-3 cm. long, usually crowded at end of brts.; sepals ovate, acute, persistent, but only occasionally fleshy; corolla short-tubular, 4-5 mm. long. Hook. f. Fl. N. Zeal. 1:t.42(c). N.F.8:f.10(h). N. Zeal. Cult. 1933. Zone VII?

4. *G. procumbens* L. CHECKERBERRY. Stems creeping, subterranean, with upright usually simple brs. to 15 cm., glabrous or puberulous, leafy at the top: lvs. oval or obovate, rarely suborbicular, 1.5-4 cm. long, obtuse and apiculate, crenate-serrate with often bristly teeth, lustrous bright green above, often variegated, glabrous; petiole about 4 mm. long: fls. nodding, on pedicels 4-8

mm. long, solitary; corolla ovoid, 6–7 mm. long; filaments villous: fr. subglobose, 8–10 mm. across, scarlet. Fl.v–ix; fr.viii–iv. B.M.1966(c). L.B.82(c). A.R.t.116(c). Gn.31:379. (AROMATIC WINTERGREEN, PARTRIDGE-BERRY, BOX-BERRY.) Nfd. to Man., s. to Ga. and Mich. Intr. 1762. Zone III.

Other species with solitary fls. and awned anthers, but with bristly stems are: *G. nummularioides* D. Don. Lvs. 2-ranked, suborbicular to broad-ovate, 6–15 mm. long, ciliate, bristly beneath, dull green and wrinkled above: fls. ovoid, white or pinkish, 5 mm. long: fr. blue-black. Royle, Ill. t.63,f.2(c). G.C.II.22:457. P.F.2:164. J.L.63:f.45,46(h). (*G. nummulariae* DC.) Himal. Intr. about 1850. Zone VII?—*G. trichophylla* Royle. Lvs. crowded, elliptic-oblong to oblong, 5–10 mm. long, acute, ciliate, otherwise glabrous, lustrous above: fls. nearly campanulate, 4 mm. long, pink: fr. blue. B.M.7635(c). S.H.2:f.350o, 351m-n. Himal., W. China. Intr. 1897. Zone VII?—*G. microphylla* Hook. f. Low shrub: lvs. broad-ovate to oblong, 4–6 mm. long, obtusish, slightly serrulate, glabrous: corolla subglobose, about 4 mm. long, white; stamens puberulous: fr. pink. Hook. f. Fl. Antarct. 2:t.116(c). Antarct. reg. Cult. 1933. Zone VI?—*G. lanceolata* Hook. f. Low upright shrub; brts. appressed-setose: lvs. narrow-lanceolate, 1–2.5 cm. long, acuminate, serrate, glabrous: corolla urceolate, 5–6 mm. long, white; filaments papillose above the middle. Hook f. Fl. Tasman. 1:72 (c). Tasmania. Cult. 1933. Zone VII?

5. *G. humifusa* (Graham) Rydb. Cespitose shrub, to 10 cm., glabrous or nearly so: lvs. very short-petioled, suborbicular or oval, 1–2 cm. long, rounded to acutish at apex, entire or obscurely toothed: fls. short-stalked: corolla campanulate, 4–5 mm. long, slightly longer than calyx, the lobes ovate, as long as tube; anthers obtuse: fr. scarlet, 6–7 mm. across. Fl.vii; fr.viii–ix. Hooker, Fl. Bor. Am. t.129. D.H.1:351. S.H.2:f.350n,351g-k. (*G. myrsinites* Hook.) Alb. and B. C. to Wash. and Colo. Cult. 1830. Zone V.

Related species: *G. ovatifolia* A. Gray. Diffuse shrub to 30 cm.: lvs. orbicular-ovate to ovate, 2–3.5 cm. long, acute or short-acuminate, truncate or subcordate: corolla 4.5–5 mm. long, much longer than calyx: fr. 7–9 mm. across. Brown & Schaeffer, Alp. Pl. Can. t.58b(c). B. C. to Idaho and Ore. Cult. 1890. Zone V.—*G. adenothrix* Maxim. Stems to 30 cm., hispid: lvs. ovate to suborbicular, 1.5–3 cm. long, obtuse or acute, ciliate-serrulate, glabrous: fls. nodding, several at end of brts. on upright hirsute bracted pedicels 1.5–3 cm. long: corolla 8 mm. long, white, often pinkish: fr. red. N.T.1:226. (*Diplycosta* a. Nakai.) Japan. Intr. 1915. Zone V. With rather conspicuous fls. borne above the lvs.—*G. minima* (Phil.) Sandwith. Cespitose shrub: lvs. oblong-ovate, 3–4 mm. long, obtuse, entire, glabrous: fls. short-stalked, upright; calyx 4-parted; corolla tubular, 4-lobed; stamens 10, as long as corolla-tube; anthers scarcely awned. Chile. Cult. 1933. Zone VII?

× **GAULTHÉTTA** Camp (*Gaultheria* × *Pernettya*). Chiefly differing from both genera in the calyx being fleshy and about half as long as fr.: fls. axillary, solitary or in short racemes. (*Gaulnettya* Mulligan.) Hybrids between various species have been found with the parents in New Zeal. and one in Mex.; the following orig. in cult.

*G. wisleyensis* (Marchant) Rehd. (*G. Shallon* × *P. mucronata*). Lvs. elliptic-oblong to oblong-ovate, 4–7 cm. long, broad-cuneate or nearly rounded at base; racemes short, puberulous and glandular. J.L.64:126,f.14–16. (*Gaulnettya* “Wisley Pearl” Mulligan, *G. w.* Marchant.) Orig. 1930. Zone VI?

26. **PERNÉTTA** Gaudich. Evergreen low shrubs; winter-buds small, with few outer scales: lvs. alternate, short-petioled, small, usually setose-serrate: fls. axillary, usually solitary, nodding on slender pedicels, rarely racemose; calyx 5-parted, usually spreading; corolla urceolate with 5 short lobes; stamens 10; anthers opening by apical pores, with 4 short awns: fr. a globose 5-celled many-seeded berry subtended at base by the dry calyx. (After A. J. Pernetty, who accompanied Bougainville and wrote a voyage

to the Falkland Islands; 1716-1801. Spelled *Pernettia* in a preliminary report. About 25 species in Am. from Mex. to the Magellan reg.

*P. mucronata* (L.) Gaud. Much-branched shrub to 0.5 m.; brts. puberulous and often sparingly strigose: lvs. nearly 2-ranked, ovate to ovate-lanceolate, 1-2 cm. long, spiny-pointed, serrate, lustrous, lateral veins obsolete beneath: fls. solitary, nodding; pedicels shorter than lvs., with 2-4 bractlets; corolla 5 mm. long, white, tinged pink: fr. white to dark purple, red in the typical form, 8-12 mm. across. Fl.v-vi; ix-iii. B.M.3093(c); 8023(c). B.R. 1695(c). Gn.23:470,t(c); 59:41; 79:609. M.G.13:397(h). Chile to Magellan region. Cult. 1828. Zone. VI-VII.—Chiefly grown for the profusely produced variously colored frs. which stay on the plant all winter.—Numerous forms have been raised in gardens; some of the more important color forms are: *P. m. alba* Davis. Fr. white. B.M.8023,f.(c). R.B.12:253,t,f.1(c). Gn.23:470,t,f.(c).—*P. m. rosea* Davis. Fr. pink. Gn.23:470,t,f.(c).—*P. m. coccinea* Davis. Fr. bright red. F.M.1879:339,t(c). Gn.23:470,t(c).—*P. m. lilacina* Davis. Fr. lilac. F.M.1879:339,t(c). R.B.12:253,t(c).—*P. m. purpurea* Davis. Fr. violet-purple. F.M.1879:339,t(c). Gn.23:470,t(c).—SPONTANEOUS VARS.: *P. m. angustifolia* (Lindl.) Nichols. Lvs. lanceolate to narrow-lanceolate, acute at ends, usually recurved, of thinner texture: fls. smaller; anthers twice as long as filaments. B.M.3889(c). B.R.26:63(c). E.N.IV.1:146,f.30a-e. (*P. a.* Lindl.) Chile, Argentine. Cult. 1840.—*P. m. rupicola* (Phil.) Reiche. Lvs. elliptic or narrow-elliptic, 6-12 mm. long, acute at ends, of thinner texture, lateral veins visible beneath: calyx more than half as long as corolla; stamens shorter than ovary. K.D.470. S.H.2:f.253c(1). (*Pr.* Phil.) Chile, Argentine.

*P. m.* × *Gaultheria Shallon*; see *Gaultheriella*, p. 739.

Related species: *P. pumila* (L. f.) Hook. Usually prostrate: lvs. dense, ovate to oblong-elliptic, 3-6 mm. long, acutish, minutely serrulate, lustrous: fls. on slender stalks 1-2 cm. long, campanulate, 5-6 mm. across; calyx dry in fr.; fr. white to pink, 6 mm. across. H.I.1:t.9. (*P. empetrifolia* Gaudich.) Magellan Straits, Falkland Is. Cult. 1933. Zone VII.—*P. tasmanica* Hook. f. Prostrate shrub; brts. slightly pubescent: lvs. elliptic-oblong, 4-8 mm. long, acutish, obscurely serrulate or nearly entire: fls. short-stalked, campanulate, 4 mm. long; anthers obtusish; calyx becoming fleshy, nearly half as long as the red to pink fr. Hook. f., Fl. Tasman, 1:t.73b. Tasmania. Intr. 1930? Zone VII.—*P. prostrata* (Cav.) Sleumer. Usually prostrate: lvs. elliptic to oblong-elliptic, 5-10 mm. long, acute, serrulate: fls. short-pedicelled, urceolate, 6-8 mm. long, white: fr. pink or purple. Venez. to Chile.—*P. p. Pentlandii* (DC.) Sleumer, var. Shrub to 0.5 m.; brts. pubescent and sparingly bristly: lvs. elliptic-oblong, 1.2-2 cm. long, glabrous beneath or bristly on midrib; corolla globose-ovoid, 8 mm. long: fr. 6-9 mm. across, blue-purple with the ovate acute calyx-lobes swollen and colored. B.M.6204(c). (*P. P.* DC.) Venez. to Chile. Cult. 1874. Zone VII.—*P. p. purpurea* (Don) Sleumer, var. Lvs. elliptic-ovate to broad-elliptic, 1-1.5 cm. long: brts. often setose. Costa Rica to Chile. Cult. 1937. Zone VII?

Tribe 4. ARBUTEAE Drude. Fr. an indehiscent drupe or berry; calyx dry, small: corolla deciduous.

27. *ARBUTUS* L. Evergreen trees or shrubs; bark of brs. and young stems smooth and exfoliating, usually reddish: lvs. alternate, petioled, serrate or entire: fls. in terminal panicles; calyx deeply 5-lobed, persistent; corolla urceolate; stamens 10, included; anthers with 2 slender awns, opening by terminal pores; disk usually 10-lobed; ovary 5-, rarely 4-celled, ovules numerous: fr. a subglobose, berry-like drupe with mealy flesh, usually granular outside. (Ancient Latin name.) About 12 species in W. N. and C. Am. and in the Mediterr. region.

- A. Panicle broad, drooping, not exceeding 10 cm. .... 1. *A. Unedo*  
 A. Panicle upright, pyramidal, larger. .... 2. *A. Menziesii*

1. **A. Ûnedo** L. STRAWBERRY-TREE. Tree to 10 or rarely 12 m.; young brts. glandular-pubescent: lvs. elliptic-oblong or elliptic-obovate, 5-10 cm. long, acute, cuneate, serrate, lustrous dark green above, glabrous; petiole 6 mm. long, glandular; panicles about 5 cm. long; calyx-lobes triangular, ciliolate; corolla 6 mm. long, white or pinkish; fr. strawberry-like, 1.5-2 cm. across, orange-red, warty. Fl. and fr. IX-XII. F.D.20:t.2040(c). L.B.123(c). G.C. III.14:329. S.L.87. Gn.82:437(h);89:608(h). S. W. Ireland and S. Eu. Cult. for centuries. Zone (VII). Conspicuous in late fall with its bright red frs. and white fls.—**A. U. rubra** Ait., var. Fls. deep pink. Gn.26:506;33:320. F.R. 2:375. (*A. U. Croomii* Hort.)—**A. U. integrissima** Sims, var. Lvs. entire. B.M.2319(c).

Related species: **A. Andr  chne** L. Tree to 12 m.; young brts. glabrous: lvs. ovate to elliptic-oblong, 5-10 cm. long, obtuse, usually entire; petiole 1-2.5 cm. long; panicles to 10 cm. long and broad; fls. dull white; fr. 1-1.5 cm. across, minutely warty. B.M.2024(c). B.R.113(c). G.C.III.4:724. R.H.1911:307(h). M.A.t.96(h). E. Mediterr. region. Intr. 1724. Zone VII.—**A. A. × Ûnedo** = **A. andrachnoides** Lk. Intermediate between the parents. B.R.619(c). L.B.580 (c). G.C.II.9:211. (*A. hybrida* Ker, *A. serratifolia* Lodd.) Orig. about 1800; also wild in Greece.

2. **A. Menzi  sii** Pursh. MADRONA. Tree to 15 or occasionally 30 m.; bark reddish brown: lvs. oval or obovate to oblong, 5-12 cm. long, obtuse or acutish, subcordate to broad-cuneate, entire, glabrous or slightly pubescent when young, glaucous beneath; petiole 1-3 cm. long; panicle 6-15 cm. long; corolla 7-8 mm. long, white; fr. broad-ellipsoid or obovoid, 10-13 mm. long, orange-red. Fl.v-vi; fr.x-xii. B.M.8249(c). S.S.5:t.231. G.F.3:515(h);5:151 (h). Gn.83:324(h);87:471(h). (*A. procera* Dougl.) B. C. to Calif. Intr. 1827. Zone VII. With conspicuous fls. and frs.

23. **ARCTOST  PHYLOS** Adans. Evergreen shrubs, sometimes prostrate, rarely small trees, with flaky bark; winter-buds ovoid, small, with few outer scales: lvs. alternate, petioled or sessile, entire, rarely toothed, often vertical and similar on both surfaces: fls. small, nodding, in terminal racemes or panicles; calyx 4-5-parted, persistent; corolla urceolate, or oblong-campanulate, 4-5-lobed; stamens 8-10, included; anthers short, with 2 recurved dorsal awns, opening by apical pores; disk 10-lobed; ovary 4-10-celled; cells 1-ovuled; style slender; fr. a smooth or warty, red or yellowish to brownish drupe, with granular, mealy or fleshy pulp or dry and with 4-10 nutlets. (Greek *arctos*, bear, and *staphyle*, bunch of grapes; a translation of bear-berry.) Syn. *Uva-ursi* Moench.; including: *Comarostaphylis* Zucc., *Xylococcus* Nutt. and *Schizococcus* Eastw. About 50 species in N. and C. Am., and one circumpolar.

A. Lvs. entire and flat or slightly revolute.

B. Ovary glabrous: lvs. glabrous: brts. glabrous or tomentulose.

C. Prostrate shrubs; lvs. 1-2 cm. long.....1. *A. Uva-ursi*

CC. Upright shrubs: lvs. 1.5-5 cm. long.....2. *A. Manzanita*

BB. Ovary pubescent: lvs. tomentose to glabrous beneath: brts. puberulous or tomentulose and usually pilose.

C. Lvs. 2.5-4 cm. long, tomentose or villous beneath: fr. 8-10 mm. across.

3. *A. tomentosa*

CC. Lvs. 1-2 cm. long, glabrous or nearly so: fr. about 4 mm. across.

4. *A. nummularia*

AA. Lvs. strongly revolute and entire or serrulate.

B. Infl. short and dense: lvs. entire.....5. *A. bicolor*

BB. Infl. a long and slender raceme: lvs. serrulate.....6. *A. diversifolia*

1. **A. Uva-ursi** (L.) Spreng. BEARBERRY. Prostrate; rooting brs. to 50 cm. long; young brts. glabrous or slightly tomentulose: lvs. obovate or obovate-oblong, 1.5-2 cm. long, cuneate, revolute, glabrous, bright green, lighter be-

neath: fls. few; pedicels 3-4 mm. long; corolla urceolate, 4-6 mm. long, white, tinged pinkish: fr. globose, 6-8 mm. across, bright red, lustrous. Fl. iv; fr. vii-ix. R.I.17:t.116,f.3(c). Em.431,t(c). Add.13:t.418(c). Gn.14:68(h). G.W. 14:69(h). (*A. officinalis* Wimm. & Grab., *Uva-ursi procumbens* Moench.) Eu. and N. Asia; in N. Am. s. to Va., N. Mex. and N. Calif. Cult. 1800. Zone II. Trailing evergreen shrub forming large mats, valuable for covering rocky slopes and sandy banks.

Related species: *A. nevadensis* Gray. Procumbent shrub, brs. sometimes rooting: lvs. oblong-obovate to oblanceolate, mucronate or acute: fls. in short racemes or panicles: fr. depressed-globose, brown. S.H.2:f.357e-g(1). Calif. to Ore. Cult. 1933. Zone VII?—*A. pumila*. Prostrate shrub with ascending brs.; brts. and lvs. beneath white-puberulous: lvs. obovate to oblong-obovate: fls. in dense clusters; corolla 3 mm. long: fr. globose. Calif. Cult. 1933. Zone VII?

2. *A. Manzanita* Parry. MANZANITA. Shrub to 4 m.; brts. and infl. white-tomentulose, older brs. dark red-purple: lvs. broad-ovate to obovate, 2.5-5 cm. long, obtuse and mucronate, usually rounded at base, dull green, puberulous when young; petiole 5-10 mm. long: fls. in dense panicles about 3 cm. long; corolla 7-8 mm. long, white or light pink: fr. depressed-globose, 8-12 mm. across, brownish red. Fl. iv-v; fr. viii-x. B.M.8128(c). G.F.4:571. G.C.44:163. Gn.83:68(h),69;88:756. S.L.88(h). Ore. to C. Calif. Intr. 1897. Zone VII? Shrub with dense panicles of white or pink fls. in spring.

Related species: *A. patula* Greene. Shrub to 2 m.; young brts. and infl. glandular-puberulous: lvs. orbicular to broad-elliptic, obtuse or acutish, rounded at base, 2.5-4.5 cm. long: infl. short, dense; corolla 6-7 mm. long, pink; fr. globose, 8-10 mm. across, dark brown or black, glossy. Calif. Cult. 1933. Zone VII?—*A. pungens* H.B.K. Shrub to 1 m.; young brts. and infl. white-tomentulose: lvs. elliptic to oblong, 1.5-2.5 cm. long, acute: infl. small, dense; corolla white or pinkish, 5 mm. long: fr. 6-8 mm. across, dark brown. B.M.3927(c). Ariz. and Calif. to Mex. Cult. 1840. Zone VII.—*A. viscida* Parry. Shrub to 3 m.; brts. glabrous and glaucous: lvs. orbicular to elliptic, 2-4.5 cm. long, obtuse to abruptly acute, rounded at base, glaucous: fls. in panicles or racemes 2-4 cm. long; pedicels glandular; corolla light pink, 6 mm. long: fr. deep red, 6-8 mm. across, viscid, rarely glabrous. Calif. Cult. 1933. Zone VII?

3. *A. tomentosa* (Pursh) Lindl. Shrub to 1.5 m.; young brts. white-tomentose and often hirsute: lvs. oval or ovate to oblong, 2.5-4 cm. long, usually acute, truncate or rounded at base, tomentose or villous beneath; petiole 2-8 mm. long: panicles to 3 cm. long, densely villous; bracts foliaceous, lanceolate, longer than pedicels; corolla 6-7 mm. long, white: fr. depressed-globose, 8-10 mm. long, across, brownish red. Fl. iii-v; fr. vii-ix. B.M.3320(c). B.R.1791(c). B. C. to Calif. Cult. 1835. Zone VII?

4. *A. nummularia* Gray. Shrub to 25 cm., with spreading or ascending brs.; young brts. pubescent and pilose: lvs. crowded, orbicular-ovate to elliptic, rarely oblong, 1-2 cm. long, obtuse and mucronate, rounded at base, glossy and glabrous or nearly so, usually ciliate: racemes 1-1.5 cm. long; corolla 4-lobed, 4-5 mm. long, white; stamens 8: fr. ovoid, 4-5 mm. long, greenish, separating into 2-4 thin-shelled nutlets. Fl. iii-v. (*Schizococcus nummularius* Eastw.) Calif. Cult. 1933. Zone VII.

Closely related species: *A. myrtifolia* Parry. Diffuse shrub to 40 cm.: lvs. elliptic or ovate, 8-15 mm. long, acute, usually broad-cuneate: corolla 5-lobed: fr. separating into 5 nutlets. (*Schizococcus myrtifolius* Eastw.) Calif. Cult. 1933. Zone VII.

5. *A. bicolor* (Nutt.) Gray. Shrub to 3 m.; young brts. and infl. finely pubescent: lvs. oblong to elliptic, 2-5 cm. long, acute, broad-cuneate at base, with strongly revolute margin, glabrous above, white-tomentose beneath: infl. short and dense; corolla about 8 mm. long, pink: fr. globose, 6-7 mm.

across, dark red; stone solid. Fl. III-IV; fr. VII-VIII. Apgar, Orn. Shrubs, f. 415. (*Xylococcus* b. Nutt.) Calif. Cult. 1933. Zone VII.

6. *A. diversifolia* Parry. Shrub or small tree to 6 m.; young brts. and inf. white-pubescent: lvs. elliptic to oblong-ovate or narrow-oblong, 3-7 cm. long, acute or obtuse, broad-cuneate, closely serrulate, white-pubescent beneath; petiole 4-6 mm. long; racemes 5-12 cm. long; pedicels 4-8 mm. long; bracts deciduous; corolla 6 mm. long, white; fr. subglobose, 5-6 mm. across, granulate, red; stone solid, 3-5-celled. Fl. V-VI; fr. VIII-IX. G.C. 97:336. (*Comarostaphylis* d. Greene.) Calif. Cult. 1926. Zone VII.

29. **ARCTÔUS** Niedenz. Deciduous depressed glabrous shrubs; winter-buds with several outer scales: lvs. alternate, petioled, serrulate: fls. few, in terminal clusters; calyx persistent, 4-5-lobed; corolla urceolate, with 4-5 small lobes; stamens included, 8 or 10; anthers awned; ovary 4-5-celled: fr. a berry-like juicy drupe with 4-5 separate nutlets. (Greek *arctôus*, boreal; referring to its distribution.) Three circumpolar species.

*A. alpinus* (L.) Niedenz. Low depressed shrub: lvs. obovate to oblanceolate, obtuse or acutish, narrowed into a short petiole, often ciliate, bright green, reticulate: fls. 2-4, 4 mm. long, white, tinged pinkish, with ciliate lobes: fr. black or purplish black, 6-10 mm. across. Fl. IV-VI; fr. VIII-X. R.I. 17:t.116, f. 4(c). F.D. 20:t.2041(c). S.E. 6:t.880(c). M.G. 25:138(h). (*Arctostaphylos alpina* Spreng., *Mairania alpina* Desv.) N. Eu., N. Asia; in N. Am. from Greenl. and Nfd. to Que. and N. H. Cult. 1789. Zone II. Lvs. turning bright red in fall; suited for a cool place in the alpine garden.

Closely related species: *A. ruber* (Rehd. & Wils.) Nakai. Lvs. usually ovate, brighter green: corolla narrower, with entire or obscurely erose lobes: fr. bright red, 9-13 mm. across. N.T. 1:217. (*A. alpinus* var. *r.* Rehd. & Wils., *A. erythrocarpa* Small, *Arctostaphylos* *r.* Fern.) Man. to Alaska and B. C.; W. China, Korea. Intr. ? Zone V?

Tribé 5. ERICEAE Drude. Corolla persistent: fr. a septicidal, rarely loculicidal caps.: evergreen shrubs with opposite or whorled, small needle-shaped or scale-like lvs.

30. **CALLÛNA** Salisb. **HEATHER.** Evergreen small shrub; winter-buds minute, with few scales: lvs. scale-like, opposite, 4-ranked, sessile, keeled: fls. in terminal spikes; calyx 4-parted, colored, with 4 small bractlets at base, longer than the 4-parted campanulate corolla, both becoming scarious and persistent; stamens 8, shorter than corolla, with 2 reflexed appendages on back; style slender, about as long as calyx: caps. 4-valved, septicidal, included in the persistent perianth, few-seeded. (Greek, *kallunein*, to sweep; referring to the use of the branches for brooms.) One species in Eu. and Asia Minor.

*C. vulgaris* (L.) Hull. **HEATHER.** Upright shrub to 0.4, rarely to 0.8 m.; lvs. oblong-ovate, 1-3 mm. long, sagittate at base, puberulous or nearly glabrous: fls. nodding or spreading, usually rosy-pink, in dense racemes 3-15 cm. or sometimes to 25 cm. long; calyx about 6 mm. long, the lobes ovate-oblong: caps. 2-2.5 mm. broad. Fl. VII-IX. R.I. 17:t.111, f. 2(c). F.D. 20:t.2022(c). M.M. 9:t.5(c). B.C. 2:631. Gn. 85:208(h); 86:27(h). (*Erica* v. L.) Eu., Asia Minor; naturalized in n.e. N. Am. Cult. for centuries. Zone IV. Low evergreen shrub valued for its late fls.; effective when planted in masses, and adapted for planting on sandy banks and slopes.—Numerous forms are in cult. of which the following may be mentioned: *C. v. alba* (West.) Don, var. Fls. white.—*C. v. Hammondii* Bean, var. Tall; lvs. bright green; fls. white, rather large.—*C. v. Scárléi* H. Fraser. Tall, pinnately branched: fls. white,

late, Sept. to Nov. (*C. v.* var. *Serlei* Bean.)—*C. v. purpurea* Don, var. Fls. dark purple. (*C. v. rubra* Kirchn.)—*C. v. plèna* (Waitz) Reg. Fls. double, pink. (*C. v. f. polypetala* Beijerinck, ? *C. v.* var. *multiflex* Sweet.)—*C. v. variegata* Reg. Lvs. variegated with white.—*C. v. àurea* Don, var. Lvs. golden yellow.—*C. v. cúprea* Bean, var. Lvs. golden yellow in summer, bronzy-red in winter.—*C. v. decumbens* Don, var. With spreading, partly prostrate brs.; fls. pink, in short racemes. (*C. v. prostrata* Kirchn.)—*C. v. nana* Kirchn. Low, only 10–20 cm. high.; fls. purple. (*C. v. pygmaea* and *C. v. minima* Hort.)—*C. v. Fôxii* Bean, var. Dwarf and dense, forming close cushion-like tufts. (*C. v. f. compacta* Beijerinck.)—*C. v. hirsuta* (Waitz) S. F. Gray, var. Brts. and lvs. pubescent or grayish tomentose. (*C. v.* var. *tomentosa* Don, *C. v.* var. *pubescens* Koch, *C. v.* var. *incana* Reichb.)—Forms of this var. are: *C. v. átrorúbens* Loud., var. Grayish pilose: fls. crimson. (*C. v. Alportii* Kirchn.)—*C. v. serôtina* Loud., var. Pubescent: fls. white, late, Sept. to Nov.

31. **ERICA L. HEATH.** Evergreen shrubs or rarely small trees: winter-buds minute: lvs. usually whorled, short-petioled, small, usually strongly revolute and linear: fls. terminal or axillary and often forming terminal spikes or panicles; calyx free, 4-parted; corolla campanulate, tubular or ventricose; lobes usually 4, very short, white, pink or rarely yellow; stamens 8; filaments slender; anthers with or without appendages; style slender: caps. subglobose, 4-valved, loculicidal, enclosed in the persistent corolla; seeds many, minute. (*Ereike*, the ancient Greek name of the Heath.) About 500 species, mostly in S. Africa, also in the Mediterr. region and C. and N. Eu.

- A. Lvs. and calyx-lobes conspicuously ciliate.
- B. Fls. in terminal umbel-like clusters; anthers appendaged.....1. *E. Tetralix*
- BB. Fls. in terminal spikes; anthers without appendages.....2. *E. ciliaris*
- AA. Lvs. and sepals glabrous.
- B. Anthers included in the corolla-tube.
- C. Brts. finely pubescent: fls. in terminal racemes or panicles; corolla about 6 mm. long. 3. *E. cinerea*
- CC. Brts. glabrous: fls. axillary, forming cylindric spikes; corolla 2–3 mm. long. 4. *E. scoparia*
- BB. Anthers exerted, without appendages; fls. lateral.
- C. Sepals less than ½ as long as corolla, usually ovate: corolla broad-campanulate. 5. *E. vagans*
- CC. Sepals more than ½ as long as corolla, lanceolate; corolla ovoid-oblong. 6. *E. carnea*

1. ***E. Tetralix* L. CROSS-LEAFED H.** Shrub to 0.6 m.; brts. minutely villous and glandular-hirsute: lvs. in whorls of 4, linear, 3–4 mm. long, puberulous and glandular-ciliate: fls. 4–12, in dense umbel-like clusters; sepals ovate-lanceolate, pubescent, ciliate; corolla oblong-ovoid, contracted at the mouth, 6–7 mm. long, rosy; anthers with appendages: caps. pubescent. Fl. VI–IX. R.I. 17:t.112,f.1(c). F.D.20:t.2023(c). S.E.6:t.889(c). N. and W. Eu.; naturalized in Mass. Cult. 1789. Zone III.—*E. T. alba* Ait., var. Fls. white.—*E. T. Martinésii* DC., var. Brts. and lvs. white-tomentose. (*E. T.* var. *canescens* Reg.)—*E. T. mollis* Bean, var. A form of the preceding var. with white fls.

*E. T. × ciliaris* = *E. Mackai* Hook. Lvs. in whorls of 4, ovate-oblong, glabrous above; fls. in umbels; corolla shorter and broader: caps. nearly glabrous. S.E.6:t.890(c). (*E. Mackaiana* Bab.) Spontaneous with the parents. Intr. 1833.—*E. M. plèna* Rehd., var. Fls. double. (*E. m.* var. *f. pleno* Bean, *E. Craefurdii* Hort.)—*E. M. Watsonii* (Benth.) Rehd., var. Fls. in short racemes; corolla longer, obliquely urceolate. S.E.6:t.888(c). (*E. ciliaris* subsp. *W.* Benth., *E. W.* Bean.)—*E. T. × vagans* = *E. Williamsii* Druce. Brts. puberulous: lvs. sparingly ciliate, minutely puberulous in the middle above or nearly glabrous; corolla rose, urceolate; stamens included. Spontaneous with the parents. Intr. about 1911.

2. *E. ciliaris* L. FRINGED H. Shrub with prostrate stems and ascending brs., to 0.7 m.; young brts. densely pubescent: lvs. ternate, ovate, 2-3 mm. long, glabrous but glandular-ciliate: fls. in whorls of 3, forming terminal racemes 5-12 cm. long; sepals lanceolate, ciliate; corolla obliquely urceolate, 8-10 mm. long; rosy-purple; anthers without appendages: caps. glabrous. Fl.vi-x. B.M.484(c). L.B.1805(c). S.E.6:t.887(c). Gn.53:364,t(c). W. Eu. from the Brit. Isles to Spain. Intr. 1773. Zone VII?—*E. c. Maweana* (Backh.) Bean, var. Of more vigorous and more upright habit: lvs. darker green; corolla 1.2 mm. long. B.M.8443(c). Gn.26:259. (*E. M.* Backh.) Portugal. Intr. 1872.

*E. c.* × *Tetralix*; see under No. 1.

3. *E. cinerea* L. TWISTED H. Shrub with ascending brs. to 0.6 m.; young brts. minutely pubescent: lvs. usually ternate, linear, 5-7 mm. long, glabrous except minutely ciliate, lustrous above: fls. in umbels or terminal racemes to 7 cm. long; sepals narrow-lanceolate; corolla ovoid, 6 mm. long, rosy-purple; anthers with dentate appendages: caps. glabrous. Fl.vi-ix. R.I.17:t.112,f.3(c). F.D.20:t.2024(c). S.E.6:t.891(c). W. Eu.; nat. in Mass. Cult. 1750. Zone V.—*E. c. atropurpurea* Lodd. Fl. deep purple. L.B.1409(c).—*E. c. pallida* Lodd. Fls. light rose. L.B.1505(c).—*E. c. alba* Sinclair. Fls. white. Gn.61:430(h).—*E. c. fulgida* Reg., var. Fls. red, not purple. (*E. c.* var. *coccinea* Bean.)

Related species: *E. terminalis* Salisb. Upright shrub to 1 m.: lvs. minutely pubescent, 4-5 mm. long, usually in whorls of 4: fls. 4-8, in umbels; sepals lanceolate: corolla oblong-ovoid, 6 mm. long, rosy; anthers with entire appendages: caps. silky. B.M.8063(c). (*E. stricta* Andr., not Willd., *E. multicaulis* Salisb., *E. corsica* DC.) S. Eu. Intr. 1765. Zone VII?—*E. arborea* L. Shrub or tree to 6 m.; young brts. pubescent, with branched hairs: lvs. usually ternate, 3-6 mm. long, glabrous: fls. in large pyramidal panicles, fragrant; sepals ovate; corolla subglobose, 3-4 mm. long, nearly white; anthers with short appendages. R.I.17:t.113,f.1(c). F.D.20:t.2025(c). Gn.79:288(h). K.V.12:t.12,16(h). Mediterr. reg. Intr. 1658. Zone VII.—*E. a. alpina* Bean, var. A lower and stiffer plant: lvs. bright green. Gn.75:384. G.C.65:283(h). (*E. alpina* Osborn.) Spain. Cult. 1899. Zone VI.—*E. a.* × *lusitanica* = *E. Veitchii* Bean. Similar to *E. arborea*, but hairs of brts. partly simple: stigma pink. G.C.37:138. Gn.71:101(h). Orig. before 1905. The other parent, *E. lusitanica* Rudolphi, is not hardy within our area.

4. *E. scoparia* L. BESOM H. Shrub to 3 m., with upright brs.; brts. glabrous: lvs. in whorls of 3 or sometimes 4, linear, 4-6 mm. long, acute, lustrous dark green, glabrous: fls. 1-4, axillary, short-stalked, forming long cylindric spikes: corolla greenish, 2 mm. long; stamens without appendages: caps. glabrous. Fl.v-vi. R.I.17:t.113,f.3(c). D.H.1:379. W. Mediterr. region, n. to C. France. Intr. 1770. Zone VII? With profuse, but insignificant fls. in spring.—*E. s. minima* Sinclair. Dwarf, rarely exceeding 0.5 m.: lvs. smaller. (*E. s.* var. *pumila* Bean.)

5. *E. vagans* L. CORNISH H. Low spreading and decumbent shrub, to 0.5 m.: brts. glabrous; yellowish gray: lvs. in whorls of 4-5, spreading, linear, 4-10 mm. long, dark green, glabrous: fls. usually in axillary pairs on slender pedicels about 8 mm. long, forming cylindric racemes 8-16 cm. long; corolla broad-campanulate with obtuse, nearly upright, lobes, about 3 mm. long, pinkish purple; anther-cells separated nearly to the base, without appendages. Fl.vii-x. R.I.17:t.113,f.2(c). F.D.20:t.2027(c). S.E.6:t.893(c). Gn.84:420(h). S.L.50(h). W. Eu., from Ireland to Portugal. Cult. 1811. Zone V. Forming large patches and flowering in late summer and fall.—*E. v. grandiflora* Bean, var. Fls. larger than in the type.—*E. v. rubra* Dipp. Fls. more deeply colored.—*E. v. alba* Sinclair. Fls. white.

*E. v.* × *Tetralix*; see under No. 1.

Related species: *E. verticillata* Forsk. Brts. whitish gray: lvs. usually 3, more upright, 4–6 mm. long: fls. on shorter pedicels in less dense spikes. R.I.17:t.115,f.3(c). S. E. Eu. Intr. 1774. Zone V.—*E. multiflora* L. Upright shrub to 1 m.: lvs. 5–6: fls. in dense spikes; corolla pink, about 5 mm. long; sepals lanceolate, slightly less than half as long; anther-cells only slightly separated at top. R.I.17:t.114,f.2(c). L.B.1572(c). Gt.50:t.1483,f.9(c). S. Eu. Intr. 1731. Zone VII.

6. *E. cárnea* L. SPRING H. Spreading shrub with decumbent stems, to 0.3 m., rarely taller; brts. glabrous: lvs. usually in whorls of 4, linear, 4–8 mm. long, bright green: fls. 2–4, axillary, forming terminal one-sided racemes 2–5 cm. long; pedicels about as long as calyx; corolla ovoid, 5–6 mm. long, rosy-red, like the sepals; anthers dark red; exserted. Fl.III-v. B.M.11(c). R.I.17:t.114,f.1(c). F.D.20:t.2026(c). Gn.72:176(h);78:101(h);80:605(h);86:27(h). S.L.170(h). (*E. herbacea* auth., not L.) C. and S. Eu. Intr. 1763. Zone V. Handsome low shrub chiefly valued for its early bright fls.—*E. c. purpuráscens* Reg., var. Fls. purple.—*E. c. alba* Bean, var. Fls. white.

*E. c.* × *mediterranea* = *E. darleyensis* Bean. Taller than *E. carnea*, and without the single upright stem of *E. mediterranea*: anthers less exserted. Gn. 78:6(h);88:79(h). (*E. mediterranea hybrida* Bean, *E. hybrida* Hort.) Orig. before 1894.

Related species: *E. mediterranea* L. Upright shrub to 3 m.: fls. smaller, with broader corolla-lobes; anthers half-exserted. R.I.17:t.115,f.1(c). B.S.1:523. G.W.17:369(h). (*E. carnea* var. *occidentalis* Benth.) W. Eu., Ireland to Portugal and Spain. Intr. 1765. Zone VI?—*E. m. alba* Bean, var. Fls. white.—*E. m. hibernica* Hook. & Arn., var. Shrub to 1 m.: lvs. glaucous. S.E.6:t.893(c). (*E. m. glauca* Hort., *E. h.* Syme.) Ireland.

32. **BRUCKENTHÄLIA** Reichenb. Evergreen low shrub: lvs. alternate or in whorls of 4, linear: fls. 4-merous, in short terminal dense spikes; calyx 4-lobed to about the middle, lobes denticulate, colored; corolla campanulate, deeply 4-lobed; stamens 8, included; filaments connate at base and adnate to corolla; anthers ellipsoid, attached at base to filament, opening by oblong terminal pores; disk rudimentary; style exserted: caps. subglobose, 4-valved, loculicidal, enclosed in the persistent calyx. (After Samuel von Bruckenthal, 1721–1803, and Michael v. B., Austrian noblemen.) One species.

*B. spiculifolia* (Salisb.) Reichenb. SPIKE-HEATH. Dwarf shrub to 25 cm., with upright slender brs.; young brts. downy: lvs. crowded, spreading, linear, 3–5 mm. long, bristle-pointed, slightly glandular and pubescent; racemes about 2 cm. long; corolla pink, 3 mm. long; calyx half as long. Fl.vi-viii. B.M. 8148(c). R.I.17:t.111,f.1(c). B.S.1:268. S.L.50(h). (*Erica* s. Salisb., *B. spiculiflora* Reichenb. f.) S. E. Eu. and Asia Minor. Cult. 1880. Zone V. Interesting small shrub adapted for the rock garden.

Subfam. II. VACCINIOIDEAE Drude. Ovary inferior, rarely only half-inferior; fr. a berry crowned by the persistent calyx-lobes.

33. **CHIÓGENES** Salisb. Evergreen trailing and creeping plant with slender slightly woody stems: lvs. alternate, small, short-petioled, ovate: fls. axillary, solitary; pedicels short, nodding, with 2 large bractlets under the 4-parted calyx; corolla campanulate, deeply 4-cleft; stamens 8, included; filaments short, inserted on the 8-toothed disk; anther-cells separate, each minutely 2-pointed at apex and opening by a large chink down to the middle; ovary 4-celled, adnate below the middle to the calyx-tube and growing into an almost wholly inferior, white, many-seeded berry crowned by the 4 calyx-teeth. (Greek *chion*, snow, and *genos*, offspring; in allusion to the snow-white berries.) Two species in N. Am. and E. Asia.

**C. hispídula** Torr. & Gr. Brts. appressed-setose: lvs. orbicular-ovate to ovate, 4–10 mm. long, narrowed at ends, revolute, lustrous and glabrous above, paler beneath and rusty-strigose on midrib: fls. 4 mm. long, white: fr. subglobose, about 6 mm. across, usually minutely bristly, aromatic. Fl.v–vi; fr. viii–ix. Torrey, Fl. N. Y. 1:t.68(c). B.B.2:704. (*C. serpyllifolia* Salisb.) Nfd. to B. C., s. to N. C. and Mich. Intr. about 1880. Zone III.—Forming a dense bright green carpet studded with white berries in summer; adapted for a cool half-shady place in the rock garden.

**34. GAYLUSSÁCIA** H. B. K. **HUCKLEBERRY**. Deciduous or evergreen shrubs; winter-buds ovoid, with about 3 outer scales: lvs. alternate, short-petioled, usually entire: fls. in axillary, usually few-fld., racemes; calyx 5-lobed; corolla tubular-campanulate or urceolate, 5-lobed; stamens 10; filaments short; anthers narrowed upward and opening by terminal pores or chinks: ovary 10-celled: fr. a berry-like drupe with 10 1-seeded nutlets, crowned by the persistent calyx-lobes. (After J. L. Gay-Lussac, eminent French chemist; 1778–1850.) Incl.: *Lasiococcus* Small, *Buxella* Small, *Decachaena* Torr. & Gr. About 50 species in N. and S. Am.

- A. Lvs. evergreen, obtusely serrate, not resinous.....1. *G. brachycera*  
 AA. Lvs. deciduous, entire, resinous-dotted beneath.  
 B. Resin glands on the lower surface of the lf. only: fls. in loose racemes.  
 C. Pubescence glandular; bracts as long as pedicels, persistent.....2. *G. dumosa*  
 CC. Pubescence not glandular or absent; bracts shorter than the pedicels, deciduous.  
 D. Lvs. acuminate or acute: fr. black.....3. *G. ursina*  
 DD. Lvs. obtuse: fr. blue, bloomy.....4. *G. frondosa*  
 BB. Resin glands on both surfaces of the lf.: fls. in dense short racemes.....5. *G. baccata*

1. **G. brachycera** (Michx.) Gray. Box-H. Shrub to 0.5 m., with creeping and ascending stem and spreading glabrous angled brs.: lvs. elliptic, 1.5–2.5 cm. long, slightly revolute, glabrous: fls. few, in short racemes with caducous bracts and bractlets: corolla cylindric-ovoid, 4 mm. long, white or pink. Fl.v–vi; fr.vii–viii. B.M.928(c). Add.6:t.201(c). L.B.648(c). B.B.2:696. Pa. to Va., Tenn. and Ky. Intr. 1796. Zone V.

2. **G. dumosa** (Andrews) Torr. & Gr. DWARF H. Shrub with creeping stem and erect somewhat glandular-hairy brs., to 0.5 m.: lvs. subsessile, obovate-oblong to oblanceolate, 2.5–4 cm. long, mucronate, lustrous above, lighter green and glandular-pubescent beneath: racemes loose, with foliaceous persistent bracts; corolla 5–7 mm. long, white, pink or red: fr. black, 6–8 mm. across, insipid. Fl.v–vi; fr.vii–ix. B.M.1106(c). B.S.1:584. B.B.2:696. Nfd. to Fla. and La.; in sandy swamps. Intr. 1774. Zone II?—**G. d. Bigeloviána** Fern., var. Lvs. elliptic-obovate to oblong-obovate, glandular on both sides as are the bracts; corolla 8–9 mm. long. Nfd. to R. I. and Conn.

3. **G. ursina** (M. A. Curtis) Torr. & Gr. BUCKBERRY. Shrub to 2 m., with spreading brs.; young brts. slightly pubescent: lvs. obovate to oblong, 4–10 cm. long, acute or short-acuminate, cuneate or rounded, slightly pubescent on both sides, green beneath, thin; fls. in 6–10-fld. racemes 2–5 cm. long; pedicels slender, about 1 cm. long; calyx glandular; corolla short-campanulate, 4–5 mm. long, with recurved lobes, whitish or reddish: fr. shining black, 8–12 mm. across, sweet. Fl.v–vi; fr.vii–viii. Mem. Am. Acad. II.3:t.10. N. and S. C. Intr. 1891. Zone V.

4. **G. frondosa** (L.) Torr. & Gr. DANGLEBERRY (TANGLEBERRY, BLUE H.). Shrub to 2 m., with spreading brs.; brts. glabrous: lvs. elliptic-obovate to oblong, 2.5–6 cm. long, obtuse or emarginate, pale green above, glaucescent, puberulous and resin-dotted beneath, rather firm: fls. in slender racemes 3.5–7

cm. long; pedicels 1-2.5 cm. long; corolla broad-campanulate, 5 mm. long, greenish purple; fr. 8-12 mm. across, edible. Fl.v-vi; fr.vii-viii. A.R.2:t.140 (c). Em.451,t(c). G.C.III.7:580. B.B.2:695. N. H. to Fla. Intr. 1761. Zone IV.

5. *G. baccata* (Wangh.) K. Koch. BLACK H. Shrub to 1 m., upright; young growth densely resinous and sticky: lvs. elliptic to oblong-lanceolate or elliptic-obovate, 2.5-5 cm. long, obtuse or mucronulate, yellowish green above, paler and resin-dotted beneath: fls. in dense drooping racemes 1-2.5 cm. long; pedicels 2-8 mm. long; corolla conic-ovoid 5 mm. long, dull red: fr. 6-8 mm. across, lustrous black, edible. Fl.v-vi; fr.vii-viii. B.M.1288(c). Em.451,t(c). I.T.4:t.152. (*G. resinosa* Torr. & Gr.) Nfd. to Man., s. to Iowa, Ill. and Ga. Intr. 1772. Zone II.—*G. b. glaucocarpa* (Robins.) Mackenzie, f. Fr. larger, blue, bloomy.—*G. b. leucocarpa* (Porter) Fern., f. Fr. white to pinkish, somewhat translucent.

35. *VACCINIUM* L. Deciduous or evergreen shrubs, rarely trees; winter-buds small, ovoid, with 2 or several outer scales: lvs. alternate, short-petioled, entire or serrate: fls. axillary or terminal, solitary or in racemes; calyx-lobes 4-5, rarely obsolete; corolla cylindric, urceolate or campanulate, 4-5-lobed or sometimes 4-parted; stamens 8 or 10; anthers awned or awnless, prolonged into terminal tubes, with an opening at the apex; ovary inferior, 4-10-celled: fr. a many-seeded berry crowned by the persistent calyx-lobes. (Ancient Latin name of obscure derivation.) About 130 species in the n. hemisphere, from the arctic circle to high mts. in the Tropics.

- a. Corolla campanulate or urceolate to cylindric, 4-5-lobed.
- b. Disk of fl. not or indistinctly lobed: fr. fleshy, many-seeded: lvs. deciduous, except Nos. 1 and 18-22.
- c. Ovary incompletely, but distinctly 10-celled (5-celled in No. 12).
- d. Corolla broad-campanulate; anthers awned: fr. insipid.
- e. Anthers included; corolla closed before anthesis; lvs. half-evergreen.
  - 1. *V. arboreum*
  - 2. *V. stamineum*
- dd. Corolla urceolate to cylindric; anthers awnless: fr. edible, usually blue or black.
- e. Fls. in elongated bracted racemes: lvs. serrulate.....3. *V. Oldhami*
- ee. Fls. in short cluster-like racemes or 1-3.
- f. Pedicels short: fls. in dense clusters or short racemes.
- g. Ovary and fr. glandular-hirsute.....4. *V. hirsutum*
- gg. Ovary and fr. glabrous.
- h. Shrubs to 4 m. tall.
- i. Corolla cylindric: lvs. pubescent beneath, 2-5 cm. long.
  - 5. *V. virgatum*
- ii. Corolla urceolate to ovoid-cylindric: lvs. 3-8 cm. long.
  - j. Lvs. densely pubescent beneath.....6. *V. atrococcum*
  - jj. Lvs. glabrous or slightly pubescent beneath.....7. *V. corymbosum*
- hh. Shrubs to 0.5 m. or only slightly taller: lvs. 1.5-4 cm. long.
  - i. Lvs. entire.
  - j. Brts. and lvs. glabrous or the latter pubescent beneath.
    - 8. *V. vacillans*
    - 9. *V. canadense*
  - ii. Lvs. serrulate .....10. *V. angustifolium*
- ff. Pedicels longer than calyx-tube; fls. 1-3: lvs. serrulate.
- g. Lvs. acute to acuminate, pilose at least on midrib: shrub to 1.5 m. tall.
  - 11. *V. Smallii*
- gg. Lvs. obtuse to acutish, glabrous: subshrub to 15 cm., with creeping root-stock .....12. *V. praestans*
- cc. Ovary 5- or 4-celled (10-celled in No. 19).
- d. Lvs. deciduous.
- e. Fls. axillary, 1-4: anthers awned.
- f. Brts. terete.
- g. Fls. 4-merous, 1-4.....13. *V. uliginosum*
- gg. Fls. 5-merous, solitary.....14. *V. cespitosum*
- ff. Brts. angled.
- g. Lvs. serrate.
- h. Lvs. 1-2 cm. long: shrub to 0.5 m. tall.....15. *V. Myrtillus*
- hh. Lvs. 2-5 cm. long; shrub to 1.5 m. tall.....16. *V. membranaceum*
- gg. Lvs. entire or nearly so.....17. *V. ovalifolium*

- EE. Fls. in bracted axillary racemes; anthers not or indistinctly awned: lvs. 3-10 cm. long .....18. *V. Arctostaphylos*  
 DD. Lvs. evergreen.  
 E. Fls. in axillary or terminal clusters.  
 F. Corolla 5-lobed: fr. black.  
 G. Corolla cylindric-ovoid: lvs. broadest above the middle.19. *V. Myrsinites*  
 GG. Corolla campanulate: lvs. broadest below the middle.....20. *V. ovatum*  
 FF. Corolla 4-lobed, campanulate: fr. dark red.....21. *V. Vitis-idaea*  
 EE. Fls. in terminal racemes 2-5 cm. long: brts. hirsute or bristly.  
 22. *V. Nummularia*  
 BB. Disk of fls. distinctly 5-lobed; racemes 3-10 cm. long: fr. leathery, few-seeded: lvs. evergreen.  
 C. Racemes with persistent foliaceous bracts; anthers awnless.....23. *V. bracteatum*  
 CC. Racemes with small caducous bracts; anthers awned.....24. *V. Sprengelii*  
 AA. Corolla deeply 4-lobed or 4-parted with revolute lobes.  
 B. Lvs. deciduous: upright shrubs.  
 C. Lvs. pubescent on the veins above and beneath.....25. *V. erythrocarpum*  
 CC. Lvs. quite glabrous or pubescent only near the base beneath.....26. *V. japonicum*  
 BB. Lvs. evergreen: trailing shrubs.  
 C. Lvs. ovate, acute.....27. *V. Oxyccoccus*  
 CC. Lvs. oblong, obtuse.....28. *V. macrocarpum*

Subgen. I. BATODENDRON (Nutt.) A. Gray. Corolla campanulate, 5-lobed; stamens included; style exserted; fls. in racemes, jointed with the pedicel; ovary incompletely 10-celled; fr. black. (B. Nutt.)

1. *V. arboreum* Marsh. FARKLEBERRY. Spreading shrub or small tree, to 9 m., evergreen in the S.; young brts. glabrous or slightly pubescent: lvs. obovate to oblong, 2-5 cm. long, acute or obtuse, entire or obscurely denticulate, glabrous and lustrous above, sometimes pubescent beneath, subcoriaceous: fls. axillary or in terminal bracted racemes 2-6 cm. long; pedicels 6-15 mm. long; corolla white, 6 mm. long: fr. globose, 6 mm. across, black, inedible. Fl.vii-viii; fr.x-xi. B.M.1607(c). L.B.1885(c). S.S.5:t.230. B.B.2: 698. (*Batodendron* a. Nutt., *B. andrachneforme* Small.) Va. and N. C. to Fla., S. Ill. and Tex. Intr. 1765. Zone VII.—*V. a. glaucescens* (Greene) Sarg., var. Lvs. glaucescent, glabrous or pubescent: bracts of inflorescence larger. S.M.804. S. Ill. and S. Mo. to La. and Tex.

Subgen. II. POLYCODIUM (Raf.) Sleumer. Corolla campanulate, 5-lobed; stamens exserted: fls. not jointed, in bracted racemes; ovary incompletely 10-celled: fr. greenish or yellowish or nearly black. (P. Raf.)

2. *V. stamineum* L. DEERBERRY. Diffusely branched shrub to 0.8 m.; brts. pubescent: lvs. elliptic or ovate to ovate-oblong, 3-10 cm. long, acute, entire, glaucous and pubescent beneath: fls. in many-fl. leafy-bracted downy racemes 3-6 cm. long; pedicels 4-8 mm. long; calyx glabrous; corolla greenish white or purplish, 6-8 mm. long, open in bud: fr. globular or pear-shaped, greenish, bloomy, inedible. Fl.v-vi; fr.ix. A.R.t.263(c). N.F.11:f.100. M.O. t.28. B.B.2697. (*Polycodium* s. Greene, *P. candicans* Small.) Mass. to Minn., s. to Fla. and La. Intr. 1772. Zone V. With pale lvs. and conspicuous fls. in spring.

Closely related species: *V. neglectum* (Small) Fern. Glabrous: lvs. oblong-lanceolate to narrow-obovate, short-acuminate, green or slightly glaucous beneath: fls. white or pink. (*Polycodium* n. Small.) Va. to Kans., Fla. and La. Intr. ? Zone VII.—*V. melanocarpum* C. Mohr. Young growth white-pubescent: calyx white-tomentose: fr. dark purple, lustrous, edible. N. C. to Ga. and Ala. Intr. 1909. Zone V.

Subgen. III. CYANOCOCCUS Gray. Corolla urceolate to cylindric or ovoid-campanulate, with 5 short lobes; anthers awnless; filaments pubescent: fls. in racemes or clusters from sepaarte buds: ovary usually incompletely 10-celled. (C. Rydb.)

3. *V. Oldhami* Miq. Upright much-branched shrub, to 4 m.; young brts. pubescent: lvs. short-petioled, ovate to elliptic, 3-8 cm. long, acute to acuminate, sometimes obtusish and mucronulate, ciliate-serrulate, setose on the

veins beneath and usually above near margin, green on both sides: racemes 3-6 cm. long, leafy-bracted toward the base, pubescent; pedicels nodding, 1-4 mm. long, glandular-pubescent; sepals broad-ovate, corolla campanulate, 4 mm. long, reddish; stamens nearly as long as corolla: fr. globose, 6-8 mm. across, the apex slightly exserted above the sepals, black, edible. Fl.vi-vii; fr.ix. N.T.1:237. N.K.8:t.23. (*V. ciliatum* Don, not Thunb.) Japan, Korea. Intr. 1892. Zone V. Lvs. turning crimson in fall.

4. *V. hirsutum* Buckl. HAIRY HUCKLEBERRY. Low shrub to 1 m.: brts. pubescent: lvs. ovate to elliptic-oblong, 2-6 cm. long, acute, entire, dull green above, paler beneath, pubescent on both sides: racemes dense and short; calyx-lobes acute; corolla ovoid, 9-12 mm. long, white, tinged pink, hairy like the calyx: fr. purplish black, glandular-hirsute, 6-7 mm. across, edible. Fl.v-vi; fr.viii. G.F.2:365. N. C. to Tenn. and Ga. Intr. 1887. Zone V.

5. *V. virgatum* Ait. RABBIT-EYE BLUEBERRY. Upright shrub to 4 m.; young brts. puberulent: lvs. ovate-oblong to cuneate-lanceolate, 2-5 cm. long, acute, serrulate or entire, green above, pale or glaucous beneath: racemes short, often spicate on naked brs.; bracts small, deciduous; corolla 7-10 mm. long, white or pink: fr. black, sometimes slightly bloomy, 5-7 mm. across. Fl.iv-v; fr.viii. B.M.3522(c). B.R.302(c, as *V. fuscatum*). B.B.2:703. (*V. amoenum* Ait.) S. Va. to Fla. and La. Intr. 1770. Zone VII.—*V. v. tenellum* (Ait.) Gray, var. Lower: lvs. smaller, 1-3 cm. long; racemes shorter and denser; corolla 6-8 mm. long, nearly white. B.B.2:703. (*V. t.* Ait.) Va. to Ill. and Mo., s. to Fla. and Miss. Cult. 1898. Zone VII?

6. *V. atrococcum* (Gray) Heller. DOWNY SWAMP BLUEBERRY. Upright shrub with spreading brs., to 4 m.; young brts. pubescent: lvs. elliptic-oblong or elliptic, 3.5-7.5 cm. long, usually acute at ends, dark green above, densely pubescent beneath, unexpanded at flowering time: fls. in dense racemes; calyx not glaucous; corolla ovoid to ellipsoid, 5-6 mm. long, greenish white, tinged with red: fr. black, not bloomy, 5-8 mm. across. Fl.v; fr.vii-viii (about 8 or 10 days earlier than the following species). B.B.2:702. (*V. corymbosum* var. *a.* Gray.—BLACK HUGH B.) Me. to Ont. and N. C. Intr. before 1898. Zone III. The lvs. turning bright scarlet in fall.—*V. a. leucococcum* Deane, f. Fr. greenish or yellowish white, translucent. Intr. 1925.

7. *V. corymbosum* L. HIGHBUSH BLUEBERRY (SWAMP B.) Shrub to 4 m., with spreading brs.; young brts. yellow-green, warty: lvs. ovate to elliptic-lanceolate, 3-8 cm. long, acutish, entire, half-grown at flowering time: fls. in dense clusters; calyx usually glaucous; corolla cylindric-urceolate to narrow-ovoid, 6-10 mm. long, white or pinkish: fr. blue-black, bloomy, 7-10 mm. across, edible. Fl.v; fr.vii-viii. Em.454,t(c). B.S.2:625. B.C.6:3422. Gn.M. 34:156. Me. to Minn., s. to Fla. and La.; in swampy and moist soil. Intr. 1765. Zone III. Lvs. turn bright scarlet and partly orange in fall.—*V. c. typicum* Camp, f. Lvs. entire, pubescent beneath, at least along the midrib. Em.2:454(c).—*V. c. albiflorum* (Hook.) Camp, f. Lvs. serrulate, pubescent at least along the midrib. B.M.3428,3433(c). B.R.400(c). L.B.774(c). (*V. c.* var. *amoenum* Gray, not *V. a.* Ait.)—*V. c. caesariense* (Mack.) Camp, f. Lvs. entire, glabrous beneath.—*V. c. glabrum* (Gray) Camp, f. Lvs. serrulate, glabrous and pale beneath. B.B.2:700. (*V. c.* var. *pallidum* Gray, not *V. p.* Ait.)

8. *V. pallidum* Ait. DRYLAND B. (Low B.) Shrub to 1 m.; brts. puberulent in lines, yellow-green: lvs. oval to ovate, 3-5.5 cm. long, acute or acuminate, dull green above, glaucous beneath, glabrous, ciliolate-serrulate: fls. in dense clusters, usually at the end of the brts.; calyx usually reddish;

corolla short-cylindric, 5-8 mm. long, white, often tinged red: fr. blue, bloomy, 6-8 mm. across, sweet. Fl.v; fr.vii-viii. Em.454,t(c, as *V. virgatum*). B.B.2:702. (*V. vacillans* Kalm ex Torr.) In dry soil. Me. to Ga., n. to Ind. Cult. 1878? Zone III.

Related species: *V. Torreyanum* Camp. Spreading shrub to 30 cm.; brts. bright or yellowish green: lvs. elliptic-spatulate to broad elliptic or oval, 1.5-3 cm. long, obtuse, entire or serrulate. (*V. vacillans* Torr.) Mass. to Va., w. to Minn. Cult. 1884. Zone IV.

9. *V. canadense* Richards. CANADA BLUEBERRY. Much-branched shrub, to 0.5 m.; brts. pubescent: lvs. narrow-elliptic to oblong-lanceolate, 1.5-4 cm. long, acute, entire, pubescent on both sides: fls. in dense clusters; corolla cylindric-campanulate, 4-6 mm. long, greenish white, often reddish: fr. blue, bloomy, 6-8 mm. across. Fl.v; fr.vii-viii. B.M.3446(c). B.B.2:701. (VELVET-LEAF B., SOUTHTOP.) Lab. to Man., s. to Va., Ill. and Mo. Intr. 1834. Zone II.

10. *V. angustifolium* Ait. LOWBUSH BLUEBERRY. Low shrub; brts. glabrous or slightly hairy: lvs. lanceolate, 7-20 mm. long, acute at ends, serrulate with bristle-pointed teeth, green and lustrous on both sides, glabrous or nearly so: fls. short-pedicel in short and dense clusters; calyx-lobes acute; corolla cylindric-campanulate, slightly contracted at the mouth, 6-7 mm. long, greenish white: fr. bluish black and bloomy, 6-12 mm. across. Fl.iv-v; fr.vii-viii. B.B.701(c). (*V. pennsylvanicum* var. *a.* Gray.) Nfd. to Sask., s. to the mts. of N. H. and N. Y. Intr. 1772. Zone II.—*V. a. laevifolium* House, var. To 0.6 m. tall: lvs. narrow-elliptic to lance-oblong, 1.5-3.5 cm. long, glabrous. B.M.3434(c). Em.456,t(c). (*V. pennsylvanicum* Lam., not Mill.) South to Va., Ill. and Wisc.—*V. a. leucocarpum* (Deane) Rehd., f. A form of the preceding var. with white fr.—*V. a. nigrum* (Wood) Dole, var. Similar to var. *laevifolium*; lvs. firmer, bluish green, glaucous beneath: fr. black, without bloom. B.B.2:702(c). (*V. n.* Britt.) Me. to N. Y., Pa. and Mich.—*V. a. myrtilloides* (Michx.) House, var. Brts. pubescent: lvs. elliptic-lanceolate, with bristle-tipped teeth, pubescent beneath, at least on midrib. (*V. m.* Michx.) Lab. to Hudson Bay and Mass.

*V. a. x pallidum*; see under No. 8.

11. *V. Smallii* Gray. Shrub to 1.5; brts. glabrous or nearly so: lvs. elliptic to elliptic-lanceolate, 3-6 cm. long, acute or acuminate, broad-cuneate to rounded at base, serrulate, green and pubescent on midrib beneath or nearly glabrous; infl. 1-3-fl.; pedicels nodding, longer or as long as the terete calyx-tube; lobes semi-orbicular; bracts ovate, caducous; corolla campanulate, 5-6 mm. long, white or reddish; stamens as long as corolla: fr. bluish black, 5-7 mm. across. Fl.v-vi; fr.ix. N.T.1:247. (*V. hirtum* var. *S.* Maxim., *V. Buergeri* Miq., in part.) Japan. Intr. 1915. Zone V.

Related species: *V. koreanum* Nakai. Shrub to 1 m.; brts. glabrous: lvs. less densely serrulate, pubescent on midrib and near base beneath: calyx-tube angled: fr. red. N.K.8:t.26. N.T.1:250. (*V. Buergeri* Miq., in part.) Japan, Korea. Intr. 1917. Zone V.—*V. hirtum* Thunb. Shrub to 0.5 m.; brts. and lvs. pubescent; lvs. 1.5-3.5 cm. long: calyx-tube angled: fr. red. N.T.1:255. Japan. Intr. ?

12. *V. praestans* Lamb. Low shrub with creeping rootstock and upright glabrous, simple or little branched stems to 15 cm.: lvs. broad-elliptic to obovate, 2.5-5 cm. long, obtuse or acutish, mucronate, narrowed into a slender petiole 3-10 mm. long, remotely and minutely serrulate, green on both sides, glabrous: fls. 1-3, on puberulous peduncles with leaf-like bracts; pedicels with 2 small lanceolate bractlets below the calyx; sepals semi-orbicular, ciliate; corolla campanulate, 5-6 mm. long, with rather large ovate lobes, white, tinged pinkish: fr. 10-12 mm. across, bright red, lustrous, fragrant,

sweet. Fl.vi; fr.viii-ix. N.T.1:266. Trans. Linn. Soc. 10:t.9. Kamch., Saghal., N. Japan. Intr. 1914. Zone III. In habit similar to *Gaultheria procumbens*; the large frs. of strawberry-like fragrance.

Subgen. IV. EUVACCINIUM Gray. Ovary 4-5-celled.

Sect. I. MYRTILLUS Koch. Lvs. deciduous: corolla urceolate; anthers awned; filaments glabrous; fls. axillary, 1-4. (*M. Gilib.*)

13. *V. uliginosum* L. BOG BILBERRY. Low shrub to 0.5 m.; brts. terete, glabrous or puberulous: lvs. subsessile, oval or obovate, 1-2.5 cm. long, obtuse or retuse, entire, pale and glaucous on both sides, slightly pubescent and reticulate beneath: fls. 1-4, subsessile; corolla 4 mm. long, pink or white; fr. blue-black, bloomy, 6 mm. across, sweet. Fl.v-vi; fr.viii-ix. R.I.17:t.117, f.3,4(c) F.D.20:t.2037(c). G.H.t.42(c). N.K.8:t.25. N. Eu., N. Asia, and N. Am., s. to the mts. of N. H. and N. Y. Cult. 1789. Zone II.

Related species: *V. occidentale* Gray. Shrub to 1 m.: lvs. oblong-obovate to oblanceolate, slightly reticulate and slightly paler beneath: fr. 4-5 mm. across. B. C. to Mont., Utah and Calif. Intr. 1918. Zone V?

14. *V. cespitosum* Michx. DWARF BILBERRY. Dwarf tufted shrub to 0.3 m.; brts. terete, glabrous: lvs. obovate to oblanceolate or spatulate, 1-4 cm. long, obtuse or acutish, cuneate, serrulate, bright green on both sides, lustrous above: fls. solitary, short-pediceled; corolla ellipsoid, 5-, rarely 4-toothed, 5 mm. long, white or pink: fr. black, bloomy, 6 mm. across, sweet. Fl.v; fr.viii. B.M.3429(c). Hooker. Fl. Bor. Am. t.126. D.H.1:333. B.B.2:699. Lab. to Alaska, s. to N. H., n. N. Y., Mich., Colo. and Calif. Intr. 1823. Zone II.

Closely related species: *V. delicosum* Piper. Shrub to 0.3 m.; lvs. obovate or oval, remotely serrulate, thickish, glaucescent beneath; corolla subglobose. Wash. Intr. 1920. Zone V.

15. *V. Myrtilus* L. WHORTLEBERRY. Shrub to 0.5 m.; brts. sharply angled, glabrous: lvs. very short-stalked, ovate or elliptic, 1-3 cm. long, acute, sometimes rounded or subcordate at base, serrate, conspicuously veined beneath: fls. solitary, short-pediceled; calyx-limb nearly entire; corolla globose-ovoid, 6 mm. long, usually pinkish: fr. black, bloomy, 8 mm. across, sweet. Fl.v; fr.viii-ix. R.I.17:t.118,f.1,2(c). F.D.20:t.2036(c). G.H.t.41(c). N.D.2:t.29(c). Eu., N. Asia, N. W. Am. Cult. 1789. Zone IV.—*V. M. leucocarpum* Dumort., var. Fr. white.

*V. M.* × *Vitis-idaea*; see under No. 21.

16. *V. membranaceum* Torr. Upright shrub to 1.5 m.; brts. slightly angled: lvs. ovate to oblong-ovate, 2-7 cm. long, acute or obtusish, serrulate, bright green and glabrous or nearly so, reticulate beneath, thin: fls. solitary, nodding; pedicel 5-15 mm. long, upright in fr.; calyx-limb nearly entire: corolla depressed-globose to globose-ovoid, 6 mm. across, greenish or purplish: fr. black, 6-8 mm. across, acid. Fl.vi; fr.vii-ix. B.M.3447(c). D.H.1:331. B.B.2:699. (*V. myrtilloides* Hook., not Michx., *V. macrophyllum* Piper.) Mich. to Mont., Ore. and B. C. Intr. 1828. Zone V.

Related species: *V. scoparium* Leib. GROUSEBERRY. Low shrub to 20 cm.: lvs. ovate to elliptic-ovate, 4-10 mm. long, serrulate, light green: corolla 3 mm. long, globose-urceolate, white: fr. red, 5 mm. across. (*V. erythrococcum* Rydb., *V. microphyllum* Rydb.) B. C. and Alb. to Calif. and Colo. Intr. 1904. Zone V.

17. *V. ovalifolium* Sm. Slender shrub to 4 m.; brts. sharply angled, glabrous: lvs. oval to oblong, 2.5-5 cm. long, obtuse, sometimes mucronulate, broad-cuneate or rounded, entire, pale green above, glaucous beneath, glabrous: fls. solitary, nodding; pedicels 5-12 mm. long, calyx-limb 10-toothed; corolla ovoid-urceolate, about 8 mm. long: fr. bluish purple, bloomy, about

1 cm. across, rather acid. Fl.vi; fr.vii-ix. Hooker, Fl. Bor. Am. t.127. B.B. 2:700. D.H.1:330. Que. to Mich., Alaska and Ore. Intr. 1880. Zone IV.

Related species: *V. parvifolium* Sm. Shrub to 3 m.; lvs. broad-oval to obovate, 6-12 mm. long, obtuse, dull green; calyx-limb 5-toothed; corolla subglobose, pinkish white; fr. red, 6 mm. across, acid. Hooker, Fl. Bor. Am. t.128. D.H.1:332. Proc. Iowa Acad. Sci. 23:t.28. Alaska to N. Calif. Intr. 1881. Zone V.

Sect. 2. *HEMIMYRTILLUS* Sleumer. Lvs. deciduous: corolla campanulate; anthers not or slightly awned; fls. in long racemes.

18. *V. Arctostaphylos* L. Shrub to 3 m.; young brts. terete, glabrous or pubescent: lvs. ovate-oblong, 3-10 cm. long, acute or acuminate, broad-cuneate or rounded, serrulate, dark green above and pubescent on veins, paler and pubescent beneath, more densely on veins, sometimes nearly glabrous: racemes 3-5 cm. long; pedicels 5-8 mm. long, as long or shorter than the leafy elliptic bracts; corolla campanulate, 6-8 mm. long, greenish white, tinged purple; sepals triangular: fr. globose, 6-8 mm. across, purple. Fl.v-vi; fr.viii-ix. B.M.974(c). L.D.1:t.38(c). B.S.2:623. Cauc. Intr. 1800. Zone V.

Sect. 3. *VITIS-IDAEA* (Moench) Koch. Lvs. evergreen: corolla campanulate; filaments pubescent; fls. in short racemes. (*Vitis-idaea* Moench.)

19. *V. Myrsinites* Lam. EVERGREEN BLUEBERRY. Evergreen shrub decumbent or upright, to 0.6 m., glabrous or nearly so: lvs. obovate to oblong-lanceolate or spatulate, 1-3 cm. long, entire or denticulate, lustrous above, veiny beneath and glabrous or puberulent: fls. in short racemes; bracts and calyx-lobes acute: corolla cylindric, 6-8 mm. long, white; fr. 5-8 mm. across, blue-black. Fl.iv-v; fr.v. B.M.1550(c). Va. to Fla. Cult. 1813. Zone VII.

Related species: *V. crassifolium* Ait. Procumbent shrub: brts. finely pubescent: lvs. oval or elliptic to obovate or suborbicular, 8-15 mm. long, acutish to obtuse, entire or slightly toothed: corolla campanulate, 4 mm. long, rose-red; fr. black. B.M.1152(c). A.R.2:t.105(c). (*Herpothamnus crassifolius* Small.) N. C. to Ga. Intr. 1787. Zone VII?

20. *V. ovatum* Pursh. Evergreen shrub to 4 m.; brts. pubescent: lvs. numerous, ovate to oblong-ovate or lance-oblong, 1-5 cm. long, acute, rounded to subcordate at base, serrulate, bright green above, paler beneath, glabrous: fls. in short racemes; calyx-lobes acute; corolla campanulate; 6 mm. long, white or pink, with 5 short lobes: fr. black, 8 mm. across, with or without bloom, acid. Fl.iv-v; fr.vii-viii. B.M.4732(c). B.R.1354(c). L.B.1605(c). B. C. to C. Calif. Intr. 1826. Zone VII. The cut brs. are used extensively by florists for decoration.

21. *V. Vitis-idaea* L. COWBERRY. Low evergreen shrub, with creeping rootstock and upright stems to 0.3 m. high: lvs. oval to obovate, 1-3 cm. long, obtuse or emarginate, dark green and lustrous above, pale and black-dotted beneath, coriaceous: fls. in short subterminal racemes, nodding; corolla campanulate, 4-lobed, 6 mm. long, white or pinkish: fr. dark red, acid and bitter, 8-10 mm. across. Fl.v-vi; fr.viii-x. R.I.17:t.117,f.1(c). F.D.20:t.2038(c). B.C.6:3424. N.K.8:t.24. (*Vitis-idaea punctata* Moench, *Vitis-idaea* V. Brit.) Eu., N. Asia. Cult. 1789. Zone V.—*V. V. majus* Lodd. Lvs. and frs. larger. L.B.616(c).—*V. V. minus* Lodd. MOUNTAIN CRANBERRY. Dwarf, forming dense mats to 10, rarely 20 cm. high; lvs. 5-18 mm. long: corolla pink or red. L.B.1023(c). B.B.2:697. Lab. and Mass. to Alaska and B. C. Cult. 1825. Zone II. Fr. used for jellies and preserves.

*V. V. × Myrtilus* = *V. intermedium* Ruthe. Evergreen or nearly evergreen; brts. slightly angled: lvs. serrate, without black dots beneath: fr. dark violet. R.I.17:t.118,f.4,5(c). D.H.1:338. Jour. Linn. Soc. Bot. 24:125,t. Occasionally with the parents. Intr. 1870.

Related species: *V. floribundum* H.B.K. Shrub; brts. and petioles pubescent: lvs. elliptic to ovate-elliptic, 8-15 mm. long, acute at ends, serrulate-crenate: fls. in short dense racemes 4-merous; corolla urceolate, 5-8 mm. long; anthers awnless. B.M.6872 (c, as *V. Mortinia*). Colombia to Peru. Cult. 1884. Zone VII?—*V. f. ramosissimum* (Dun.) Sleumer, var. Lvs. elliptic or ovate, 7-10 mm. long. Costa Rica to Peru. Cult. 1936.

22. *V. Nummularia* Clarke. Upright small shrub; brts. densely hirsute or bristly: lvs. subsessile, ovate or oval, 1-1.5 cm. long, obtuse, nearly entire, revolute at margin, rugose above, glabrous: racemes terminal, 2-5 cm. long; pedicels 6 mm. long, glabrous; bracts elliptic, caducous; calyx ciliate; corolla tubular, 5 mm. long, rose-red to pinkish; filaments pilose; anthers with long awns: fr. globose, 6 mm. across, black. Fl.v-vi. J.L.60:f.155(h). Himal. Intr. 1850. Zone VII.

Related species: *V. Delavayi* Franch. Brts. short-hispid: lvs. obovate, 10-13 mm. long, usually emarginate, cuneate, entire, glabrous: racemes 1.5-2.5 cm. long; pedicels hispid; calyx ciliate; corolla globose-urceolate, 4 mm. long, creamy white: fr. globose, 4-5 mm. across, dark crimson. W. China. Cult. 1933. Zone VII.—*V. moupinense* Franch. Brts. pubescent: lvs. obovate to oblong-obovate, obtuse or rounded at apex: racemes 2-2.5 cm. long; pedicels and calyx glabrous; corolla urceolate, 5 mm. long, brownish red: fr. 6 mm. across, purple-black. W. China. Intr. 1909. Zone VII.

Subgen. *V. EPIGYNIUM* (Klotzsch) Benth. & Hook. Lvs. evergreen: corolla urceolate or conic; filaments pubescent; anthers awned; disk distinctly 5-lobed; ovary 5- or 10-celled: fr. leathery, few-seeded. (*Epigynium* Klotzsch.)

23. *V. bracteatum* Thunb. Evergreen shrub to 1.5 m.: lvs. elliptic to elliptic-oblong, 2.5-6 cm. long, acute, broad-cuneate, remotely serrulate, glabrous or nearly so: racemes 2-5 cm. long, with persistent, lanceolate, leafy bracts; the short pedicels and calyx puberulous; corolla cylindric-ovoid, 6-7 mm. long, puberulous: fr. red. S.I.2:t.61(c). L.B.1648(c, as *Andromeda chinensis*). N.T.1:242. J.L.64:f.55. Japan, China. Cult. 1830. Zone VII.

24. *V. Sprengelii* (Don) Sleumer. Evergreen upright shrub, glabrous or slightly pubescent: lvs. subsessile, oblong-ovate to lanceolate, about 6 cm. long, acuminate, crenate-serrulate, glabrous: racemes 3-10 cm. long, several at end of brts.; bracts small, caducous; calyx glabrous; corolla tubular, 6 mm. long, white, glabrous within; anthers with 3 mm. long awns: fr. globose, 5 mm. across. (*V. mandarinorum* Diels, *V. Donnianum* Wight.) China, Himal. Intr. about 1908. Zone VII.

To this subgen. belong also: *V. fragile* Franch. Shrub to 1 m.: lvs. broad-ovate to oval, acutish or obtuse and mucronulate, serrulate, glabrous or setulose on midrib beneath: racemes 2.5-5 cm. long, pubescent; bracts red; calyx ciliate; corolla urceolate, 4-6 mm. long, rosy-red to white: fr. 5 mm. across, black. W. China. Intr. about 1920. Zone VII.—*V. Merrillianum* Hayata. Low shrub; brts. hispid: lvs. obovate, about 8 mm. long, rounded and emarginate, cuneate, entire, rugulose above, glabrous; petiole 1-2 mm. long; racemes terminal, short: calyx glabrous; corolla urceolate, 4 mm. long; anthers with short awns: fr. about 1 cm. across, 10-celled. J.C.25,19:t.24. Hayata, Ic. Formos. 2:117. Formosa. Cult. 1933. Zone VII.—*V. urceolatum* Hemsl. Shrub to 2 m.: lvs. elliptic-ovate to oblong-ovate, 6-9 cm. long, subsessile, long-acuminate, glabrous: fls. broad-urceolate, about 5 mm. long, pink, in axillary racemes; anthers partly exserted; bracts large, ovate, caducous: fr. globose, 6-7 mm. across, black. W. China. Intr. 1910. Zone VII?

Subgen. VI. *OXYCOCOIDES* (Benth. & Hook.) Sleumer. Corolla deeply 4-cleft with revolute linear-oblong lobes; ovary 4-celled: fls. solitary, axillary, nodding, jointed with the pedicel: lvs. deciduous. (*Hugeria* Small.)

25. *V. erythrocarpum* Michx. Shrub to 2 m., with spreading brs.; brts. pubescent: lvs. short-petioled, ovate to oblong-lanceolate, 3-7 cm. long, acuminate, rounded at base or broad-cuneate, setose-serrulate, green on both sides; slightly pubescent on the veins above and beneath: pedicels about 1

cm. long; corolla about 1 cm. long, pale red: fr. about 6 mm. across, bright red at first, later purplish red, acid. Fl.v; fr.ix. B.M.7413(c). Ad.21:674(c). B.B.2:705. (*Oxycoccus erythrocarpus* Pers., *Hugeria erythrocarpa* Small.) Va. to Ga. Intr. 1806. Zone V.

26. *V. japonicum* Miq. Shrub to 1 m.; brts. angular, glabrous: lvs. very short-petioled, ovate to ovate-oblong, 2-6 cm. long, acute to acuminate, rounded or subcordate at base, serrulate with bristly teeth, bright green and somewhat rugulose above, glaucescent beneath, quite glabrous: pedicels 1-1.5 cm. long; corolla 8 mm. long, pinkish: fr. sometimes pyriform, 5-7 mm. across, scarlet, pendulous. Fl.vii; fr.ix. N.K.8:t.20. N.T.1:228. (*Oxycoccoides japonicus* Nakai, *Hugeria japonica* Nakai.) Japan, Korea. Intr. 1892. Zone V.—*V. j. sinicum* (Nakai) Rehd., var. Lvs. ovate-oblong to ovate-lanceolate, smaller, pubescent on and along the midrib beneath near base. China. Intr. 1907. Zone VI.

Subgen. VII. OXYCOCCLUS (Hill) Gray. Corolla 4-parted to the base or nearly to the base, with revolute linear-oblong lobes; ovary 4-celled: fls. on slender pedicels, axillary or in racemes: trailing evergreen shrubs. (*Oxycoccus* Adans., *Schollera* Roth.)

27. *V. Oxycoccus* L. SMALL CRANBERRY. Creeping, with filiform stems to 0.5 m. long: lvs. ovate to oblong-ovate, 4-10 mm. long, acute, strongly revolute, dark green above, glaucous beneath: fls. 1-4 in a terminal raceme, on slender pedicels, 1.5-2.5 cm. long, with 2 small colored bracts near the middle: petals 5-6 mm. long, recurved; filaments half as long as anthers: fr. globose to pyriform, 6-8 mm. across, red. Fl.v-vii; fr.ix-xi. R.I.17:t.118,f. 6(c). F.D.20:t.2039(c). B.B.2:704. (*Oxycoccus palustris* Pers.) N. Eu., N. Asia and N. Am., s. to Pa., Mich. and Wisc. Cult. 1789. Zone II. Fr. used for jellies and preserves.—*V. O. intermedium* Gray, var. Coarser: lvs. 6-15 mm. long, acute or obtuse, slightly revolute: fls. 2-10 on a longer rachis; petals 6-8 mm. long: fr. 8-10 mm. across. Nfd. to B. C., s. to Mich. and to N. C. in the mts.; also N. Asia.

28. *V. macrocarpum* Ait. LARGE CRANBERRY. Creeping, with slender stems to 1 m. long, ascending at ends: lvs. elliptic-oblong to oblong, 6-18 mm. long, flat or slightly revolute, slightly whitened beneath: pedicels 1-10, from an elongated rachis terminated by a leafy shoot; pedicels with 2 leaf-like bracts near apex; petals 6-10 mm. long; filaments scarcely  $\frac{1}{2}$  the length of the anthers: fr. 1-2 cm. across. Fl.vi-viii; fr.ix-xi. B.M.2586(c). Em. 456,t(c). Gt.21:1,t(c). M.N.2:t.28(c). (*Oxycoccus macrocarpus* Pers.—AMERICAN C.) Nfd. to Sask., s. to N. C., Mich. and Minn. Intr. 1760. Zone II. Cult. for its fr., which is extensively used for jellies and preserves.

## Fam. 88. DIAPENSIACEAE Lindl. DIAPENSIA FAMILY

Suffruticose plants or perennial herbs, evergreen: lvs. alternate or opposite, simple, estipulate: fls. perfect, 5-merous, gamopetalous or petals separate, solitary or racemose; stamens 5, adnate to corolla or sometimes monadelphous; anthers opening by longitudinal slits; staminodes sometimes present; disk absent; fr. a loculicidal caps. with several or numerous seeds; ovary 3-celled; style 1, with 3-lobed stigma.—Six genera with about 10 circumpolar species, s. to Ga. and to Himal. in Asia.

A. Fls. on 1-fld. peduncle; densely tufted plant.....1. *Diapensia*  
AA. Fls. sessile: creeping plant.....2. *Pyxidanthra*

1. *DIAPENSIA* L. Evergreen suffruticose plants forming dense convex tufts: lvs. crowded, narrow-spatulate, mostly opposite, entire: fls. solitary on

a terminal peduncle, 3-bracted under the calyx; sepals coriaceous, broad; corolla campanulate, 5-lobed with rounded lobes; filaments broad, adnate to the corolla up to the sinus; anther-cells ovoid, divergent below, obtuse; caps. inclosed in the calyx, cartilaginous; cells few-seeded. (Ancient Greek name of uncertain meaning.) Four species in N. Am., N. Eu. and Asia.

*D. lappônica* L. Tufts, up to 10 cm. high: lvs. obtuse, 5-15 mm. long, obtuse: fls. white, 1.5-2 cm. across, on a peduncle finally 1.5-3 cm. long: fr. ovoid, 4-6 mm. long. Fl.vi-vii. B.M.1108(c). E.P.IV.1:82. S.H.2:f.370a-e. Circumpolar, in N. Am. s. to alpine summits of N. H. and N. Y. Intr. 1801. Zone I. Interesting plant adapted for the alpine rock garden.

2. *PYXIDANTHÈRA* Michx. Evergreen prostrate and creeping plant: lvs. mostly alternate, narrow-oblongate: fls. solitary, sessile; sepals thin, obtuse; corolla campanulate, 5-lobed with broad lobes; stamens short, inserted at base of sinus; anthers short, opening transversely, pointed at base; ovary 3-celled: caps. globose. (Greek *pyxis*, small box, and *anthera*; the anthers opening as if by a lid.) One species.

*P. barbulata* Michx. FLOWERING MOSS. Lvs. awl-pointed, 3-8 mm. long, slightly hairy near base: fls. 4-6 mm. broad, white or pink. Fl.lv-v. B.M. 4592(c). M.M.8:t.33(c). Gn.27:209. B.B.2:583. N. J. to N. C.; in sandy pine barrens. Intr. 1806. Zone VI. Dotted with white or pink fls. in early spring; adapted for the rock garden.

#### Fam. 89. MYRSINACEAE Lindl. MYRSINE FAMILY

Trees or shrubs: lvs. usually alternate, coriaceous, glandular-dotted, estipulate: fls. perfect or unisexual, regular; calyx 4-5-parted, persistent; corolla gamopetalous, 4-5-lobed, rarely petals distinct; stamens 5, mostly epipetalous, separate or monadelphous; staminodes often present; ovary superior or inferior, 1-celled, with basal or central placenta; ovules few or numerous; style and stigma 1; fr. usually a drupe, 1- or few-seeded, rarely many-seeded; seeds albuminous. More than 30 genera with about 550 species, chiefly trop.

*ARDÍZIA* Swartz. Evergreen trees or shrubs; lvs. entire or dentate: fls. usually in cymes or panicles; corolla rotate, 5-, rarely 4- or 6-parted, the divisions dextrorsely convolute in bud; calyx 4-6-parted, small, persistent; stamens inserted on throat of corolla, with very short filaments and large sagittate anthers opening by longitudinal slits: fr. a 1-seeded drupe, with thin flesh. (Greek *ardis*, point; referring to the pointed anthers.) About 200 species, chiefly in trop. and sub trop. regions.

*A. japónica* (Thunb.) Bl. Upright shrub to 0.4 m.; lvs. crowded at end of stems, elliptic, 4-10 cm. long, acute at ends, lustrous bright green, glabrous except the puberulous midrib; petiole 5-10 mm. long, puberulous: racemes 2-6-, rarely many-fld. and paniculate; corolla about 1.2 cm. across, with spreading ovate acute lobes, white: fr. globose, 6 mm. across, red. Fl.viii-ix; fr.ix-xi. B.R.1892(c). N.T.1:278. S.H.2:f.371a-e. (*Bladhia j.* Thunb.) Japan, China. Intr. about 1830. Zone (V) or VI.

The related family of PRIMULACEAE which differs chiefly in its dehiscent many-seeded capsular fr. contains mostly herbs and only few suffruticose plants of which none seem to be in cult. A suffruticose genus worth trying within our area is *Dionysia* Fenzl with about 15 species from the high mts. of Persia and Afghanistan; the species are plants of the habit of *Diapensia* with salver-shaped usually yellow fls.; they would find their proper place in the alpine rock garden.

Fam. 90. **PLUMBAGINACEAE** Lindl. **LEADWORT FAMILY**

Herbs or shrubs: lvs. alternate, linear to elliptic, usually entire: fls. perfect, regular, in panicles, spikes or heads, 5-merous; calyx scarious, persistent, plicate, angled or winged, often colored, bracted at base: corolla gamopetalous or petals nearly separate, convolute in bud; stamens 5, epipetalous; ovary superior, 1-celled, with 1 basal ovule; styles or stigmas 5: fr. a caps. or utricle surrounded by the calyx.—About 10 genera with 250 species chiefly in the Mediterr. region and C. Asia.

**CERATOSTIGMA** Bge. Shrubs or perennial herbs: lvs. alternate, lanceolate to obovate, ciliate: fls. usually in terminal and axillary bracted heads; calyx tubular, 5-parted, with narrow lobes, 10-nerved at base, eglandular: corolla salver-shaped with long tube and spreading obovate lobes, rose or violet; stamens inserted at the middle of the corolla-tube; style slender, with 5 stigmas: caps. 5-valved, inclosed in the calyx. (Greek, *keras*, *keratos*, horn, and *stigma*; referring to the shape of the stigmas.) Syn. *Valoradia* Hochst. About 8 species in C. Africa, Himal. and W. China.

*C. Willmottianum* Stapf. Much-branched shrub to 1.5 m.; brts. grooved, strigillose; young brts. scaly at base: lvs. subsessile, rhombic or rhombic-obovate to rhombic-lanceolate, 3-5 cm. long, acute, gradually narrowed at base, ciliate, strigose above, more densely beneath and glandular-scurfy: fl. heads surrounded by stiff lanceolate acuminate bracts rigidly ciliate, 8-14 mm. long; corolla salver-shaped, tube rosy-red, limb bright blue, 1.5-2 cm. across, the lobes truncate-obovate; anthers purple; style exserted. Fl.vii-xi. B.M.8591. W. China. Intr. 1908. Zone VII? Loosely branched rather sparingly leafy shrub with handsome bright blue fls.

Closely related species: *C. minus* Prain. Smaller plant, with generally obovate obtuse and mucronulate lvs. and smaller terminal and axillary heads forming spikes at end of the brts. (*C. Polhillii* Bulley.) W. China. Intr. about 1900.—The best known species, *C. plumbaginoides* Bge. (*Plumbago Larpentae* Lindl.), is an herbaceous perennial to 0.3 m. tall with deep blue fls. in dense heads or clusters. B.M.4487 (c). Add.5:t.183(c).

Related genus: *Acantholimon* Boiss. Low tufted subshrubs or herbs with linear rigid lvs.: calyx funnelform; corolla white or rose; stamens inserted at base. More than 80 species from the e. Mediterr. region to C. Asia.—*A. venustum* Boiss. Subshrub to 25 cm.: lvs. crowded, subulate, about 3 cm. long, nearly pungent, concave above, rounded at back; peduncles 7-10 cm. long; spikes 5-8 cm. long, curved; fls. about 1.5 cm. across, rose; calyx yellow-brown. Fl.vii-viii. Asia Minor. Cult. 1866. Zone VII?

Fam. 91. **SAPOTACEAE** Dumort. **SAPODILLA FAMILY**

Trees or shrubs with milky juice: lvs. alternate, entire, more or less coriaceous, exstipulate: fls. usually perfect, regular, axillary; sepals 5, or in 2 whorls of 2, 3 or 4; corolla gamopetalous, lobes as many as sepals or twice as many, imbricate, sometimes with appendages; stamens as many as corolla-lobes and opposite them; staminodes often present; ovary superior, 4- to many-celled; 1 basal ovule in each cell; style and stigma 1: fr. a drupe.—More than 30 genera with about 400 species chiefly in trop. and subtrop. regions.

**BUMELIA** Swartz. Deciduous or evergreen trees and shrubs with milky or gummy sap and very hard wood; brs. often thorny; winter-buds ovoid, small, with several outer scales: fls. minute, usually perfect, in axillary clusters, slender-pedicelled; calyx 5-lobed, persistent, with obtuse lobes; corolla campanulate, 5-lobed, lobes longer than tube, with a small appendage on

each side; stamens 5, adnate to corolla, with short filaments, alternating with petaloid staminodes; ovary 5-celled, pubescent: fr. 1-seeded, berry-like. (Ancient Greek name of an ash tree.) About 25 species in Am. from the S. States to the W. Indies and Brazil.

- A. Lvs. beneath, pedicels and calyx pubescent.....1. *B. lanuginosa*  
 AA. Lvs., pedicels and calyx glabrous.....2. *B. lycioides*

1. *B. lanuginosa* Pers. CHITTIMWOOD. Shrub or small tree to 8 m., with rigid spreading brs. usually spiny; young brts. tomentose: lvs. oblong-obovate to cuneate-obovate, 3-8 cm. long, rounded and often apiculate at apex, cuneate, lustrous dark green above, with rusty or pale woolly tomentum beneath, subcoriaceous, falling late in autumn or during the winter in the S.; petiole 4-16 mm. long: fls. white, 3 mm. across; in many-fl. clusters; pedicels 2-8 mm. long: fr. ellipsoid or obovoid, about 1 cm. long, black. Fl.vi-vii; fr.x. S.S.5:t.247. H.H.376. B.B.2:720. (SHITTIMWOOD, GUM ELASTIC, WOOLLY BUCKTHORN.) Va. to Ill., Mo., Tex. and Fla. Intr. 1747. Zone (V). Lvs. remaining green until very late in fall.

2. *B. lycioides* Gaertn. f. SOUTHERN BUCKTHORN. Shrub or small tree to 8 m., with spreading unarmed or spiny brs.: lvs. elliptic or narrow-obovate to lanceolate, 5-13 cm. long, acute or obtusish, sometimes acuminate, cuneate, bright green above, lighter green beneath and silky-villous at first, usually soon glabrous, reticulate, firm, falling late in autumn: petiole 1-2 cm. long, slender: fls. in many-fl. clusters; pedicels 4-10 mm. long, glabrous: fr. subglobose or ellipsoid, about 1 cm. long, black. Fl.vi-viii; fr.x. S.M.816. N.S. 3:t.91(c). N. C. to s. Ind. and Mo., s. to Fla. and Tex. Intr. 1720. Zone (V). —*B. l. virginiana* Fern., var. Lvs. oblanceolate, rounded at apex. S.S.5:t.248. Va. Intr. ?

## Fam. 92. EBENACEAE Juss. EBONY FAMILY

Trees or shrubs with watery juice and hard wood: lvs. alternate, entire, exstipulate: fls. dioecious or polygamous, regular, axillary, articulate with the 2-bracteolate pedicel; calyx 3-7-lobed, persistent; corolla gamopetalous, 3-7-lobed, lobes involute in bud; disk wanting; stamens 2 to 3 times as many as corolla-lobes, inserted on the tube, usually some imperfect ones in the pistillate fl.; anthers introrse; ovary several-celled, with usually 2 suspended ovules in each cell; styles 2-8, distinct or united at base: fr. a several-seeded berry; seeds with copious albumen; embryo small, with large foliaceous cotyledons.—About 6 genera with nearly 300 species, chiefly trop.

**DIOSPYROS** L. PERSIMMON. Deciduous or evergreen trees and shrubs; winter-buds ovoid, with about 3 outer scales, the terminal bud wanting: fls. dioecious, white or whitish, the pistillate usually solitary; the staminate ones cymose; calyx and corolla usually 4-lobed, rarely 3-7-lobed; stamens usually 8-16, ovary 4-12-celled; styles 2-6: fr. a large juicy berry, 1- to 10-seeded, usually with the enlarged calyx at base; seeds large, flattened. (Greek *Dios*, Jove's, and *pyros*, grain; in allusion to the edible fr.) About 200 species chiefly in trop. and subtrop. regions.

- A. Lvs. acuminate, large.  
 B. Young brts. glabrous or grayish pubescent: fr. pale orange or yellowish, rarely nearly black, 1-3.5, rarely to 7 cm. across.  
 C. Petioles 1.5-2 cm. long: fls. 1-1.5 cm. long.....1. *D. virginiana*  
 CC. Petioles 1-1.5 cm. long: fls. 5-10 mm. long.....2. *D. Lotus*  
 BB. Young brts. brownish pubescent: fr. orange-red to golden-yellow, 4-7 cm. across.  
 3. *D. Kaki*  
 AA. Lvs. obtuse, 2-6 cm. long.....4. *D. armata*

1. *D. virginiana* L. COMMON P. Tree to 15, rarely to 30 m., with round-topped head and spreading, often pendulous brs.; brts. pubescent at least when young; bark dark, deeply divided into square scaly thick plates: lvs. ovate to elliptic, 6-14 cm. long, usually rounded at base, lustrous dark green above, paler beneath and usually glabrous at maturity: corolla campanulate, with 4 reflexed lobes; staminate fls. usually in 3's, about 1 cm. long, with 16 stamens; the pistillate short-stalked, solitary, 1.5 cm. long, with 4 2-lobed styles: fr. globose or obovoid, 2-3.5 cm. across, yellowish to pale orange, often with red cheek, edible; seeds oblong, about 1 cm. long. Fl.v-vi; fr.ix-xi. Add.3:t.85(c). S.S.6:t.252,253. G.F.8:265. Gn.57:146. M.M.4:21(b). G.W. 16:230(h). Conn. to Fla., w. to Kans. and Tex. Intr. 1629. Zone IV. Sometimes planted for its edible fr.—*D. v. pubescens* (Pursh) Dipp., var. Brts. densely pubescent: lvs. pubescent beneath. Cult. 1889.—*D. v. platycarpa* Sarg., var. Lvs. broader, rounded or cordate at base, pubescent beneath: fr. depressed-globose, 4-7 cm. across. Mo. and Ark. Intr. 1904. Zone V.

2. *D. Lotus* L. DATE-PLUM. Round-headed tree to 14 m.; bark furrowed; brts. pubescent, later gray-brown; winter-buds glabrous, acute: lvs. elliptic to oblong, 6-12 cm. long, rounded to broad-cuneate at base, pubescent above at first, later usually glabrous, grayish or glaucescent and pubescent beneath at least on the veins: fls. reddish or greenish white; staminate fls. 2-3, about 5 mm. long, with 16 stamens; pistillate subsessile, 8-10 mm. long: fr. globose, about 1.5 cm. across, yellow, often bloomy and sometimes becoming blue-black. Fl.vi; fr.x-xi. S.I.1:t.79(c). R.I.17:t.38(c). N.D.6:t.27(c). Gn.32:68. U. S. Im. 113:t.(fr.) W. Asia to N. W. Himal., China and Japan. Cult. 1597. Zone (V). Similar to the preceding species; fr. of inferior quality.

3. *D. Kaki* L. f. KAKI P. Round-headed tree to 14 m.; bark scaly; winter-buds pubescent, obtuse: lvs. elliptic-ovate to oblong-ovate or obovate, 6-18 cm. long, usually broad-cuneate, soon glabrous and lustrous, dark green above, lighter green and pubescent beneath; petiole 1-1.5 cm. long, pubescent: fls. yellowish white; staminate fls. in 3's, about 1 cm. long, with 16-24 stamens; pistillate 1.5-1.8 cm. long; styles divided to base, pubescent: fr. ovoid to depressed-globose, 3.5-7 cm. across, orange to bright yellow, edible. Fl.vi; fr.viii-xi. B.M.8127(c). N.K.13:t.7. G.C.41:22. Gn.49:171. Gn.M.34:102(h). U. S. Inv. 38:t.10(h). (*D. chinensis* Bl., *D. Schitze* Bge., *D. Roxburghii* Carr.) Cult. in China and Japan for its fr.; intr. to Eu. in 1796, but little known before 1870. Zone VII.—*D. K. costata* (Carr.) Mouillef., var. Fr. large, depressed-globose, with 4 furrows, orange-red. R.H.1870:410,t(c). G.C.III.9:171;13:51. Gn.49:171.—*D. K. Mazèlii* (Carr.) Mouillef., var. Fr. depressed-globose, with 8 furrows, orange-yellow. R.H.1874:70,t(c).—*D. K. silvestris* Mak., var. Brts. and petioles more densely fulvous-pubescent, lvs. usually smaller, broad-ovate to lanceolate, pubescent beneath: fls. smaller; ovary pubescent: fr. 1.5-5 cm. across, golden-yellow. China, Korea. Intr. 1907. Zone VII? The wild type of the cult. kaki.

4. *D. armata* Hemsl. Half-evergreen or deciduous tree, to 8 m., with wide-spreading spiny brs.; young brts. tomentose: lvs. short-petioled, elliptic or obovate to oblong, 1.5-6 cm. long, obtuse, cuneate, dark lustrous green above, minutely pubescent beneath; staminate fls. in small corymbs, creamy white, fragrant, tomentose, 4-5 mm. long: fr. subglobose about 2 cm. across, yellow, setose, on a pedicel about 1 cm. long. Fl.v. C. China. Intr. 1904. Zone VII.

Related species: *D. sinensis* Hemsl. Shrub or small tree; brts. pubescent: lvs. oblong-lanceolate, 4-6, rarely 10 cm. long, obtuse or obtusish, narrowed at

ends, glabrous: pistillate fls. solitary; pedicels 3-6 cm. long; sepals ovate, 1.5 cm.; fr. globose, 1.5 cm. across, yellow. H.I.29:2804. C., W. and S. China. Intr. 1907. Zone VII?

Fam. 93. SYMPLOCACEAE Miers. SWEETLEAF FAMILY

Contains only the following genus.

**SÝMPLOCOS** Jacq. SWEETLEAF. Deciduous or evergreen trees or shrubs; winter-buds usually several, superposed, small, with several outer scales: lvs. alternate, simple, estipulate: fls. perfect or sometimes unisexual, regular, in axillary clusters or in racemes or panicles; calyx with 5, rarely 4 imbricate lobes; corolla 5- or 10-, rarely 4-lobed, sometimes divided nearly to the base, lobes imbricate; stamens 15 to many, rarely 4-10, often in several series, distinct or united in fascicles, usually adnate to the corolla; ovary inferior or half-inferior, 2-5-celled, with usually 2 ovules in each cell; style 1, with 1-5 stigmas: fr. a drupe with a 1-5-seeded stone. (Greek *symplokos*, connected, in reference to the often united stamens.) Includ. *Hopea* L., *Bobua* DC., *Palura* D. Don. About 290 species widely distributed in trop. and subtrop. regions except Africa, in Am. n. to Del.

A. Lvs. sharply serrulate: fls. in panicles.....1. *S. paniculata*  
AA. Lvs. obscurely toothed, half-evergreen: fls. in axillary clusters.....2. *S. tinctoria*

1. *S. paniculata* (Thunb.) Miq. ASIATIC *S.* Shrub or tree to 12 m., with slender spreading brs.; young brts. pubescent: lvs. short-petioled, elliptic or obovate to oblong-obovate, 3-7 cm. long, acute or acuminate, usually broad-cuneate, bright green and glabrous or nearly so above, conspicuously veined beneath and usually pubescent, rarely glabrous: fls. white, fragrant, 8-10 mm. across, with spreading elliptic-oblong, nearly distinct petals, in panicles 4-8 cm. long, terminal and axillary on short lateral brts.; stamens distinct, numerous; fr. ellipsoid, about 8 mm. long, bright blue; stone 1-seeded. Fl.v-vi; fr.ix. S.I.2:t.68(c). G.F.5:89. G.C.74:263;75:38,t(h). M.G.16:100(h),101. S.L.361(h). (*S. crataegoides* D. Don, *Palura* p. Nakai.) Himal. to China and Japan. Intr. 1875. Zone V. With conspicuous white fls. in spring and attractive bright blue frs. in fall.

Related species: *S. chinensis* (Lour.) Merr. Lvs. elliptic, acute, pubescent on both sides: fls. in short panicles; calyx-teeth acute. B.R.710(c). (*S. sinica* Ker.) E. China. Intr. 1823, apparently not now in cult. Zone VII?

2. *S. tinctoria* L'Hérit. SWEETLEAF (HORSE-SUGAR). Half-evergreen shrub or small tree to 10 m.; young brts. rufous-pubescent or nearly glabrous: lvs. elliptic to oblong-oblongeolate, 7-15 cm. long, acute or acuminate, cuneate, obscurely serrate or nearly entire, lustrous above at maturity, paler and pubescent beneath, thickish, turning yellow-green in drying: fls. yellowish, 1 cm. across, fragrant, short-stalked, in sessile, dense axillary clusters; petals oblong, obtuse, nearly distinct; stamens numerous in 5 clusters; ovary glabrous, 3-celled: fr. ellipsoid, 6 mm. long, orange or brown. Fl.v; fr.viii-ix. S.S.6:t.255,256. Del. to Fla. and La. Cult. 1780. Zone VII.

Fam. 94. STYRACACEAE A. DC. STORAX FAMILY

Shrubs or trees usually with stellate pubescence: lvs. alternate, simple, exstipulate: fls. perfect, regular, solitary or in racemes or panicles; calyx 4-5-lobed or -cleft, free or adnate to ovary; petals 4-8, usually united only at base, imbricate or valvate; stamens twice as many or as many as petals: ovary superior or inferior; 3-5-celled below, with 1 or rarely several ovules in each cell; style with 1-5 stigmas: fr. dry or drupaceous; seeds albuminous.

—Six genera and about 100 species from N. to S. Am., in E. Asia and the Mediterr. reg.

- A. Ovary superior: fr. neither ribbed nor winged: fls. racemose or solitary.....1. *Styrax*
- AA. Ovary inferior.
  - B. Corolla 4-lobed; fls. fascicled: fr. 2-4-winged.....2. *Halesia*
  - BB. Corolla 5-7-parted, divided nearly to base.
    - C. Fls. in lateral leafless racemes or panicles: fr. 4-8 cm. long.....3. *Rehderodendron*
    - CC. Fls. in racemes or panicles terminating lateral leafy brts.: fr. 1-2.5 cm. long.
      - D. Fls. slender-stalked, in 3-5-fld. racemes: fr. not ribbed.....4. *Sinojackia*
      - DD. Fls. short-stalked, in large many-fld. panicles.....5. *Pterostyrax*

1. **STYRAX** L. SNOWBELL (STORAX). Deciduous or evergreen shrubs or trees; winter-buds usually several superposed, with 1 outer scale: lvs. short-stalked, entire or serrate: fls. white, in racemes or clusters terminal on short lateral brts., sometimes axillary and solitary; calyx campanulate, obscurely 5-toothed or truncate, persistent; corolla deeply 5-, rarely 8-lobed; stamens 10, rarely to 16, inserted at base of corolla; ovary superior, but adnate at base to calyx, 3-celled below, 1-celled above; style slender: fr. a usually subglobose dry or fleshy drupe with irregularly dehiscent pericarp; seeds 1-2, large, subglobose. (Ancient Greek name of *Styrax officinalis*.) About 100 species in trop. to warm-temp. regions of Am., Asia and Eu.—Ornamental shrubs or trees with showy white fls.

- A. Tube of corolla shorter than lobes.
  - B. Fls. in few-fld. clusters or racemes.
    - C. Pedicels about as long as calyx, puberulous.
      - D. Lvs. 3-9 cm. long.....1. *S. americana*
      - DD. Lvs. 1-2.5 cm. long.....2. *S. Wilsonii*
    - CC. Pedicels 1.5-2.5 cm. long, glabrous.....3. *S. japonica*
  - BB. Fls. in many-fld. racemes.
    - C. Lvs. tomentose or densely pubescent beneath, 6-20 cm. long.
      - D. Base of petiole not enlarged: infl. 6-10 cm. long.....4. *S. grandiflora*
      - DD. Base of petiole sheath-like and enclosing the bud: infl. 9-20 cm. long.....5. *S. Obassia*
    - CC. Lvs. glabrous or sparingly pubescent beneath, 5-14 cm. long.
      - D. Petiole 5-15 mm. long: corolla-lobes imbricate in bud.....6. *S. Hemsleryana*
      - DD. Petiole 1-3 mm. long: corolla-lobes valvate in bud.....7. *S. dasycantha*
- AA. Tube of corolla longer than lobes: lvs. broad-elliptic to suborbicular, coarsely dentate.
  - 8. *S. Shiraiana*

1. **S. americana** Lam. Shrub to 3 m.; brts. nearly glabrous: lvs. elliptic to oblong, 2-7 cm. long, acute or acuminate, cuneate, entire or serrulate, bright green and sparingly stellate-pubescent; petiole 2-4 mm. long: fls. 1-4, nodding, at end of short brts.; pedicels 6-12 mm. long, puberulous; calyx with minute triangular lobes; corolla about 1.5 cm. long, with spreading or reflexed oblong-lanceolate lobes: fr. obovoid, 8 mm. long. Fl. iv-vi. B.M.921(c). L.B. 906(c). (*S. laevigata* Ait.) Va. to Fla., w. to Mo., Ark. and La. Intr. 1765. Zone (V).—**S. a. pulverulenta** (Michx.) Perk., var. Lvs. sparingly stellate-pubescent above, more densely beneath: calyx and pedicels tomentose. B.B. 2:723. (*S. p.* Michx.) Va. to Fla. and Tex. Intr. 1794. Zone VI?

2. **S. Wilsonii** Rehd. Much-branched shrub to 3 m.; young brts. stellate-tomentose: lvs. rhombic-ovate to elliptic, 1-2.5 cm. long, obtuse or acutish, sparingly toothed or denticulate, usually entire below the middle, sparingly pubescent above, more densely so or tomentose beneath, or the first lvs. glabrate: fls. 3-5, short-stalked, 1.5-1.8 cm. across; calyx stellate-pubescent; corolla-lobes oblong: fr. globose-ovoid, 8 mm. long. Fl. v-vi. B.M.844(c). R.H.1914:33. G.M.56:369. W. China. Intr. 1908. Zone VII. Shrub of dense habit, blooming when only a few inches high.

3. **S. japonica** Sieb. & Zucc. Shrub or small tree to 10 m., with slender spreading brs.; young brts. and lvs. with quickly disappearing stellate pubescence: lvs. broad-elliptic to elliptic-oblong, 2-8 cm. long, acute to acuminate, cuneate, remotely denticulate, glabrous except axillary tufts beneath:

fls. 3-6, on short lateral brts., pendulous on slender stalks 2-3.5 cm. long; calyx glabrous, with 5 short rounded teeth; corolla with spreading elliptic-oblong lobes, 1.5-2 cm. across: fr. ovoid, 1.2-1.4 cm. long. Fl.vi-vii. S.Z.1:t.23(c). M.K.t.83(c). Add. 7:t.231(c). B.M.5950(c). G.C.65:279. Gn.76:588. S.L.358(h). China, Japan. Intr. 1862. Zone V. Very handsome in bloom with its numerous gracefully pendulous white fls.

4. *S. grandifolia* Ait. Shrub to 4 m.; young brts. yellowish pubescent: lvs. elliptic to obovate, 6-18 cm. long, short-acuminate, usually narrowed toward the base, denticulate or nearly entire, grayish tomentose or pubescent beneath; petiole 5-10 mm. long: fls. fragrant, in slender sometimes leafy stellate-tomentose racemes 5-12 cm. long: corolla with spreading oblong lobes, 2-2.5 cm. across. Fl.v. W.D.129(c). L.D.5:t.310(c). B.B.2:723. Va. to Fla. Intr. 1765. Zone VII.

5. *S. Obássia* Sieb. & Zucc. Shrub or small tree, to 10 m., with ascending brs.; young brts. at first floccose-tomentose, soon glabrous: lvs. suborbicular to broad-obovate or elliptic, 7-20 cm. long, abruptly acuminate, usually rounded at base, remotely denticulate above the middle and sometimes tricuspidate at apex, glabrous and deep green above, densely pubescent beneath; petiole 6-20 mm. long: fls. fragrant, in slender glabrate racemes 10-20 cm. long; pedicels 8-10 mm. long, pubescent; calyx pubescent 5-9-toothed: corolla about 2 cm. across, with slightly spreading lobes: fr. ovoid, about 2 cm. long. Fl.v-vi. S.Z.1:t.46(c). B.M.7039(c). M.K.t.82(c). S.I.1:t.80(c). N.K.13:t.13. A.F.12:30(h). S.L.360(h). Japan. Intr. 1879. Zone V. The handsome fls. partly hidden by the large lvs.

6. *S. Hemsleyana* Diels. Shrub to 10 m.; brts. stellate-pubescent at first, soon glabrous: lvs. obliquely ovate to obovate, 7-13 cm. long, acuminate, cuneate or rounded at base, remotely serrulate, glabrous above, sparingly stellate-pubescent beneath; petiole 6-15 mm. long; fls. in pubescent racemes 8-15 cm. long, sometimes branched at base; pedicels solitary 3-4 mm. long: corolla 1.5-2 cm. long, with elliptic-oblong lobes imbricate in bud: fr. obovoid 1.5 cm. long. Fl.vi. B.M.8339(c). G.C.72:35. Gn.79:205;88:583. C. and W. China. Intr. 1900. Zone VII? Handsome in bloom.

Related species: *S. Veitchiorum* Hemsl. Shrub or small tree to 5 m.; lvs. elliptic-lanceolate to lanceolate, 7-11 cm. long, acuminate, cuneate, denticulate, sparingly pubescent or glabrous: racemes 10-20 cm. long, often branched; pedicels 2-3 together on the lower part of raceme: corolla 1.5 cm. long. C. China. Intr. 1900. Zone VII?

7. *S. dasyantha* Perk. Shrub or small tree to 8 m.; brts. pubescent at first: lvs. elliptic-oblong to obovate, 6-10 cm. long, acuminate, cuneate, minutely toothed above the middle, glabrous above, sparingly pubescent beneath, finally glabrous: fls. in slender racemes 5-10 cm. long, sometimes branched, pedicels 6-8 mm. long, 2-3 together on lower part of raceme; corolla 1-1.5 cm. long, with lanceolate lobes valvate in bud; style longer than corolla. Fl.vii. C. China. Intr. 1900. Zone (V).

8. *S. Shiraiana* Mak. Small tree; brts. tomentose when young: lvs. alternate, the upper ones subopposite, orbicular-ovate to rhombic-orbicular, 4-8 cm. long, acute, cuneate or rounded at base, coarsely dentate, particularly above the middle, sparingly pubescent on both sides when young, finally nearly glabrous; petiole 8-20 mm. long, the upper ones dilated and sheath-like at base, enclosing the bud: fls. very short-stalked, in 8-10-fld. racemes 6-7 cm. long; calyx campanulate, with often denticulate lobes; corolla-tube 12 mm. long, lobes ovate, 6 mm. long, slightly spreading, imbricate in bud: fr. ellipsoid, 1.5 cm. long. Fl.vi; fr.viii-ix. E.P.IV.241:71. N.T.1:340.

(*Strigilia* S. Nakai.) Japan. Intr. 1915. Zone VI? Distinct and handsome species.

**HALESIA** L. SILVERBELL-TREE. Deciduous trees; winter-buds ovoid, sometimes superposed, with several outer scales: lvs. petioled, serrate: fls. pendulous, in axillary clusters on brts. of the previous season, white, rarely pale rose; calyx-tube obconical, with 4 minute teeth, slightly 4-ribbed; corolla broad-campanulate, 4-lobed, open before attaining full size; stamens 8-16; style slender; ovary inferior, 2-4-celled, with 4 ovules in each cell; style filiform: fr. an oblong dry drupe with 2 or 4 longitudinal wings; stone 1-3-seeded; seeds oblong. (After Stephen Hale, author of a famous work on "Vegetable statics"; 1677-1761.) Syn: *Mohrodendron* Britt. Three or 4 species in E. N. Am. and 1 in E. China.

- A. Fr. 4-winged; corolla with shallow lobes (except a var. of No. 1).  
 B. Corolla 1-1.5 cm. long; fr. 2.5-3.5 cm. long; shrub or small tree.....1. *H. carolina*  
 BB. Corolla 1.5-2.5 cm. long; fr. 3.5-5 cm. long; tree to 30 m. ....2. *H. monticola*  
 AA. Fr. 2-winged; corolla deeply lobed.....3. *H. diptera*

1. *H. carolina* L. Large shrub or tree to 10 m.; bark separating into small, closely appressed scales; with spreading brs. and usually of irregular habit: young brts. stellate-pubescent: lvs. ovate or elliptic to ovate-oblong, 5-10 cm. long, acute or acuminate, cuneate or rounded at base; serrulate, tomentose at first, soon glabrous above, pubescent beneath; petiole 6-15 mm. long; fls. 2-5; pedicels 1-2 cm. long, puberulous; corolla 1-1.5 cm. long; stamens 10-16, filaments villous; ovary 4-celled: fr. oblong or obovoid-oblong, 2-3.5 cm. long. Fl. iv-v. B.M.910(c). G.O.t.35(c). S.S.6:t.257. Gn.86:499(h). G.C.51:73,t(h). B.S.1:602,t(h),603. (*H. tetraptera* Ellis.) W. Va. to Fla. and E. Tex. Intr. 1756. Zone IV. Ornamental tree covered in early spring with white fls.; the lvs. turning yellow in fall.—*H. c. dialypétala* (Rehd.) Schneid., f. *Corolla* divided nearly to the base.—*H. c. mollis* (Lange) Perkins, var. Lvs. usually broader and short-acuminate, pubescent above and densely villous or tomentose beneath.—*H. c. Meehanii* (Meeh.) Perkins, var. Bushy shrub or small tree with upright brs.: lvs. smaller, thicker, rugose, darker green, distinctly serrate, pubescent beneath: fls. short-stalked, smaller, cup-shaped, more deeply divided; ovary slightly superior; filaments glabrous, slightly longer than anthers; style 10 mm. long, with much swollen base: fr. unknown. G.F.5:535. B.C.3:1429. (*H. M. Meehan.*) Orig. before 1890 as seedling of the type; suggests a hybrid.

2. *H. monticola* (Rehd.) Sarg. Tree to 30 m., pyramidal when young, later round-topped; bark separating into large loose plate-like scales; brts. soon glabrous: lvs. elliptic to oblong-obovate, acuminate, cuneate to rounded at base, 8-16 cm. long, remotely serrate, soon glabrous except on the veins beneath; petiole 1-2 cm. long; fls. 2-5; pedicels 1-2.5 cm. long, glabrous or pubescent like the calyx; corolla 1.5-2.5 cm. long; stamens 10-16; filaments villous at base: fr. oblong-obovoid, 4-5 cm. long. Fl.v. S.M.827. (*H. carolina* var. *m.* Rehd.) N. C. to Tenn. and Ga. Intr. about 1897. Zone V. Similar to the preceding species, but more vigorous and upright.—*H. m. vestita* Sarg., var. Lvs. often rounded at base, tomentose at first, pubescent beneath, more densely on the veins. N. C., Ark. Intr. 1912.—*H. m. rosea* Sarg., f. A form of the preceding var. with pale rose fls.

3. *H. diptera* Ell. Shrub or small tree to 10 m.; young brts. pubescent, becoming glabrous: lvs. elliptic to obovate, 6-12 cm. long, abruptly long-acuminate, cuneate or rounded at base, remotely sinuate-serrulate with minute callous teeth, tomentose at first, becoming glabrous above, pubescent

beneath at least on the veins; fls. 3-6 in clusters or short racemes; pedicels 1.5-3 cm. long, tomentose like the calyx; corolla 2-2.5 cm. long, with very short tube and oval to obovate lobes; stamens usually 8, filaments villous; ovary 2-celled, rarely 4-celled: fr. oblong or oblong-obovate, 3.5-5 cm. long, with 2 broad wings, often with 1 or rarely 2 very narrow wings between them. Fl.v. L.B.1172(c). S.S.6:t.259. E.P.IV.241:98. M.G.32:281(h).282. S. C. and Tenn. to Fla. and Tex. Intr. 1758. Zone VI. Similar to the first species, but usually not as free-flowering.

3. **REHDERODENDRON** Hu. Deciduous trees; winter-buds with 2-3 outer scales: lvs. petioled, serrulate, exstipulate: fls. white, in axillary leafless panicles or racemes; calyx-lobes 5, short; petals 5, connate only at base, imbricate in bud; stamens 10, unequal, about as long as petals; filaments connate only at base and adnate to corolla; ovary inferior except the conical apex, 3-4-celled; cells 4-ovuled; style slender, slightly longer than stamens; fr. oblong or ellipsoid, large, with the calyx-limb at apex, 5-10-ribbed, woody, indehiscent, with thin corky exocarp and fibrous-spongy endocarp; seeds 1-3, cylindric. (After Alfred Rehder of the Arnold Arboretum, and Greek *dendron*, tree.) Eight species in S. and W. China.

**R. macrocarpum** Hu. Tree to 9 m.; brts. glabrous: lvs. elliptic or elliptic-ovate to oblong-ovate, 8-11 cm. long, acute or acuminate, broad-cuneate, minutely serrulate, stellate-pilose on veins beneath; petiole 1-1.5 cm. long; racemes 6-7-fld., before the lvs., tomentulose, 4-5 cm. long; pedicels 3-10 mm. long, articulate below calyx; calyx-lobes triangular; petals elliptic-oblong, 12 mm. long, pubescent on both sides; filaments glabrous: fr. oblong, 6-7 cm. long, 8-10-ribbed, glabrous. Fl.iv-v; fr.ix-xi. I.S.t.245. W. China. Intr. 1934. Zone VII?

4. **SINOJACKIA** Hu. Deciduous trees; winter-buds with 2 outer pubescent scales: lvs. short-petioled, serrulate, exstipulate: fls. white, in lateral leafy racemes; pedicels slender; calyx turbinate, with 5-7 short lobes; petals 5-7, cohering at base, imbricate in bud; stamens 10-14, stellate-pilose; filaments distinct, adnate to base of corolla; ovary 3-4-celled, cells 8-ovuled; style slender, exceeding the stamens; fr. ovoid to cylindric-oblong, woody, usually 1-seeded, with the calyx-limb about  $\frac{1}{4}$  below the conical apex; seed cylindric. (After J. G. Jack of the Arnold Arboretum; the prefix in reference to his connection with Chinese botany.) Three species in China.

**S. xylocarpa** Hu. Small tree to 6 m.; brts. and pedicels sparsely stellate-pilose: lvs. elliptic to elliptic-obovate, 3-7 cm. long, short-acuminate, rounded at base, ovate and cordate on flowering brts., denticulate, glabrous except slightly stellate at first on midrib beneath; petiole 3-5 mm. long; fls. 3-5, about 2.5 cm. across; pedicels to 3 cm. long; calyx-tube turbinate, stellate-pubescent; lobes triangular-lanceolate; petals usually 6-7, elliptic-oblong, 12 mm. long: fr. ovoid, 1.5-2 cm. long, 1-1.3 cm. across, with broad-conical, obtuse apex. Fl.iv-v; fr.ix-x. I.S.t.98. E. China. Intr. 1934. Zone VII?

Related species: **S. rehderiana** Hu. Tree to 5 m.: lvs. elliptic to elliptic-obovate, 2-9 cm. long, acuminate, cuneate to rounded or subcordate at base, minutely serrulate, sparsely pubescent on the veins: pedicels 2 cm. long; petals 5-6: fr. cylindric-oblong, 2.5 cm. long including the 1 cm. long beaked apex. I.S.t.199. E. China. Intr. 1930. Zone VII.

5. **PTEROSTYRAX** Sieb. & Zucc. Deciduous trees or shrubs; winter-buds with 2 outer scales: lvs. petioled, serrate: fls. in large panicles terminating short lateral brts.; calyx 5-toothed; petals 5, distinct or sometimes slightly

cohering at base, imbricate in bud; stamens 10, exserted, connate below into a tube or nearly free; ovary 3-, rarely 4-5-celled, nearly inferior or not more than  $\frac{1}{2}$  superior; each cell 4-ovuled; style slender, slightly longer than stamens: fr. an oblong dry drupe, ribbed or winged, 1-2-seeded. (Greek *pteron*, wing, and *styrax*; referring to the winged fr. of one species.) Four species in E. Asia.

*P. hispida* Sieb. & Zucc. EPAULETTE-TREE. Tree to 15 m., with slender spreading brs. forming an open head; brts. sparingly pubescent: lvs. oblong to obovate-oblong, 7-17 cm. long, acute or short-acuminate, rounded or cuneate at base, minutely denticulate, glabrous and bright green above, sparingly pubescent beneath at least on the veins and grayish green; petiole 1-2 cm. long; panicle 12-25 cm. long, pendulous, stellate-pubescent; fls. creamy-white, fragrant, subsessile or short-stalked; petals 8-10 mm. long, narrow-oblong; stamens subequal, nearly free: fr. cylindric, about 1 cm. long, 10-ribbed, densely bristly. Fl.vr. B.M.8329(c). Ad.5:t.290(c). G.C.58:6. G.F. 5:389. F.E.14:t.21(h). (*Halesia h.* Mast.) Japan. Intr. 1875. Zone V. With large pendulous panicles of creamy-white fragrant fls.

Related species: *P. corymbosa* Sieb. & Zucc. Shrub or tree: lvs. elliptic or ovate, 6-12 cm. long, serrulate with bristly teeth, sparingly stellate-pubescent; panicle corymbose, 8-12 cm. long; stamens unequal, connate below: fr. obovoid, 1-1.5 cm. long, 5-winged, stellate-tomentose. S.Z.1:t.47(c). S.I.2:t.65(c). N.T. 1:331. E.P.IV.241:101. (*Halesia c.* Nichols.) Japan. Intr. 1850. Zone VI?

#### Fam. 95. OLEACEAE Lindl. OLIVE FAMILY

Trees or shrubs: lvs. opposite, rarely alternate, simple or pinnate, exstipulate: fls. perfect or unisexual, regular; calyx 4-lobed or 4-parted, rarely 5-16-lobed; corolla gamopetalous, 4-lobed or rarely 6-12-lobed, sometimes of distinct petals or wanting; stamens 2, rarely 3-5, adnate to corolla and alternate with the lobes; ovary superior, 2-celled, with usually 2 ovules in each cell; style 1 or wanting with simple or 2-lobed stigma: fr. a drupe or berry, caps. or samara; seeds anatropous, with large straight embryo, with or without albumen.—More than 20 genera with over 400 species in temp. and trop. regions.—Many ornamental species; a few are of economic importance and some are valuable timber-trees.

- A. Fr. a winged samara.
  - B. Lvs. simple, entire: fr. suborbicular, winged all around; fls. perfect.
    - c. Corolla of 4 distinct small petals.....1. *Fontanesia*
    - cc. Corolla gamopetalous, 4-lobed.....2. *Abeliophyllum*
  - BB. Lvs. pinnate, rarely simple and serrate: fr. elliptic to linear, with elongated apical wing: fls. apetalous or with 2 or 4 narrow petals.....3. *Frazinus*
- AA. Fr. a caps. or drupe.
  - B. Fr. a caps.: lvs. simple, rarely 3-foliolate or pinnate, deciduous.
    - c. Fls. yellow, with imbricate lobes: brs. hollow or with lamellate pith: lvs. usually serrate .....4. *Forsythia*
    - cc. Fls. never yellow, with valvate lobes: brs. with solid pith: lvs. entire or pinnate.
      - 5. *Syringa*
  - BB. Fr. a drupe or berry.
    - c. Lvs. simple, opposite: fls. white; fr. never 2-lobed.
    - d. Corolla-lobes short or corolla wanting.
      - e. Fls. in terminal panicles or spikes: corolla-lobes valvate: lvs. entire, deciduous or evergreen .....6. *Ligustrum*
    - EE. Fls. axillary; corolla with imbricate lobes or wanting.
      - f. Corolla present: lvs. evergreen, entire or serrate.
        - g. Fr. with crustaceous fragile endocarp; fls. fasciated.
          - h. Stamens exserted; corolla-tube short, shorter than lobes.....7. *Phillyrea*
        - HH. Stamens included; anthers slightly exceeding the tube.
          - i. Corolla-tube about as long as lobes; fls. slender-stalked.
            - 7a. *Osmarea*
            - fls. very short-stalked.....8. *Siphonosmanthus*
        - gg. Fr. with bony endocarp: fls. fasciated or paniculate.....9. *Osmanthus*
      - FF. Corolla wanting: lvs. deciduous: fls. minute, before the lvs....10. *Forestiera*

- no. Corolla-lobes linear, many times longer than tube, valvate: fls. in pendulous panicles: lvs. deciduous.....11. *Chionanthus*  
 cc. Lvs. pinnate, opposite or alternate, rarely simple and entire: fls. yellow, rarely white or pink: fr. often 2-lobed.....12. *Jasminum*

1. **FONTANÈSIA** Labill. Deciduous shrubs; winter-buds globose-ovoid, with 2 or 3 pairs of outer scales: brts. quadrangular: lvs. opposite, short-petioled, entire or minutely serrulate: fls. perfect, small, in short axillary racemes and terminal panicles forming leafy panicles on lateral brts.; calyx minute, 4-parted; petals 4, narrow, small; stamens exceeding the petals; ovary superior, 2-celled; stigma 2-lobed: fr. a flat nutlet winged all around; seeds albuminous. (After René Louiche Desfontaines, French botanist; 1752-1833.) Two species in W. Asia and China.

**F. Fortunei** Carr. Shrub to 5 m., with slender upright brs., glabrous: lvs. lanceolate or ovate-lanceolate, 3-11 cm. long, acuminate, cuneate, entire, lustrous bright green; petiole 1-3 mm. long: fls. greenish white, 3 mm. long, short-pedicel; terminal panicle 3-5 cm. long, the axillary much shorter: fr. oval, 8 mm. long. Fl.v-vi. R.H.1859:43. S.H.2:f.511a-d. (*F. phillyreoides* var. *sinensis* Debeaux, *F. californica* Hort.) China. Intr. 1845. Zone IV. Upright graceful shrub with bright green foliage.

Closely related species: *F. phillyreoides* Labill. Shrub to 3 m., densely branched and more spreading: lvs. ovate-lanceolate or elliptic-oblong, 2-7 cm. long, minutely serrulate or scabrid on the margin, grayish green; petiole 2-5 mm. long; fr. suborbicular to oval, 6-8 mm. long. L.B.1308(c). G.O.t.91(c). D.H.f.104. (*F. angustifolia* Dipp.) Asia Minor. Intr. 1787. Zone VII?

2. **ABELIOPHYLLUM** Nakai. Deciduous shrub; winter-buds usually 2, superposed, with 2 or 4 outer scales: pith lamellate: lvs. opposite, simple, entire: fls. perfect, in short racemes from axillary buds on last year's brs.; calyx 4-lobed, with imbricate lobes; corolla with broad spreading imbricate lobes about as long as tube; stamens 2, filaments short; ovary 2-celled; ovules solitary, pendulous; style short: fr. compressed, suborbicular, winged all around. (*Abelia* and Greek *phyllon*, leaf; referring to the *Abelia*-like lvs.) One species in Korea.

**A. distichum** Nakai. Shrub to 1 m.; brts. quadrangular, glabrous: lvs. spreading in 2 ranks, ovate to elliptic-ovate, 2-5 cm. long, acuminate, broad-cuneate or rounded at base, appressed-pilose on both sides; petiole 2-5 mm. long: racemes 5-10 mm. long; corolla 1.5 cm. across, white: fr. 2-2.5 cm. broad. Fl.v; fr.viii. N.K.10:t.26. C. Korea. Intr. 1924. Zone V.

3. **FRÁXINUS** L. ASH. Deciduous trees, rarely shrubs: winter-buds often superposed, with 1 or 2 pairs of outer scales, usually brown or black and scurfy, the outer pair sometimes foliar, i.e., obscurely pinnate at apex (cf. J.A.15:t.87-89): lvs. opposite, pinnate, rarely reduced to 1 lft.: fls. perfect or unisexual, small, in panicles; calyx small, 4-parted or 4-lobed or wanting: corolla of 2-6, usually 4 distinct petals, rarely connate at base, or wanting; stamens usually 2; ovary 2-celled; stigmas 2: fr. a 1-seeded nutlet with a usually elongated wing at the apex; seed oblong, albuminous. (Ancient Latin name of the ash.) About 65 species in the n. hemisphere, in Am. s. to Mex., in Asia s. to Java.—Ornamental trees with handsome foliage, some with conspicuous fls.; several species are important timber-trees.

A. Fls. in terminal panicles on leafy shoots, perfect or polygamous, with or after the lvs. Sect. ORNUS

B. Corolla present.

C. Corolla divided to the base or nearly to the base; stamens with long filaments.

D. Lowest pair of lfts. not or only slightly smaller than others.

E. Lfts. pubescent along the midrib beneath at least near base.

- F. Lfts. stalked, usually 7, 5-8 cm. long.....1. *F. Ornus*  
 FF. Lfts. sessile, 7-9, 12-18 cm. long.....2. *F. Paziana*  
 EE. Lfts. quite glabrous, generally 5, 2-4 cm. long.....3. *F. Bungeana*  
 DD. Lowest pair of lfts. much smaller than others, only occasionally nearly as long.  
 E. Petiole not conspicuously enlarged at base; lfts. usually more or less stalked.  
 F. Lfts. quite glabrous beneath, 5-7, 5-8 cm. long.....3. *F. Mariessi*  
 FF. Lfts. pubescent beneath along the midrib, at least near base.  
 G. Petiole and rachis grooved above; lfts. pubescent along the midrib and on the lateral veins.....4. *F. pubinervis*  
 GG. Petiole and rachis not or slightly grooved; lfts. pubescent only along midrib or nearly glabrous.....7. *F. longicuspis*  
 EE. Petioles conspicuously enlarged at base: lfts. sessile.....6. *F. Spaethiana*  
 CC. Corolla connate into a tube exceeding the sepals; anthers subsessile: lfts. 3-6 cm. long, lanceolate.....8. *F. cuspidata*  
 BB. Corolla wanting: lfts. 5-7, stalked, pubescent along the midrib beneath.....9. *F. chinensis*  
 AA. Fls. from leafless axillary buds, unisexual, before the lvs.; corolla wanting or with 2 petals in *F. dipetala* (see under No. 10). .....Sect. FRAXINASTER  
 B. Fls. with a calyx persistent on the fr.; anthers linear or linear-oblong: lfts. usually 5-7; buds brown.  
 C. Lvs. with winged rachis; lfts. 5-9, 1-4 cm. long: fls. perfect....Subsect. SCIADANTHUS  
 CC. Lf.-rachis not winged; lfts. 5-15 cm. long: fls. dioecious.....Subsect. MELIODES  
 D. Fr. lanceolate or oblanceolate, its body terete or nearly so: lvs. pinnate: brts. terete.  
 E. Wing of fr. terminal, not or slightly decurrent: lfts. slender-stalked, papillose beneath.  
 F. Lvs. and brts. glabrous.....11. *F. americana*  
 FF. Lvs. and brts. pubescent.....12. *F. biltmoreana*  
 EE. Wing of fr. decurrent to or below the middle, hence body margined (scarcely to the middle in No. 15).  
 F. Fr. 2-7 cm. long; wing much longer than body: lfts. 5-9.  
 G. Lfts. stalked, 7-9, usually 9.  
 H. Fr. 5-7 cm. long; brts. and petioles tomentose.....13. *F. tomentosa*  
 HH. Fr. 2.5-6 cm. long; brts. and petioles pubescent or glabrous.....14. *F. pennsylvanica*  
 GG. Lfts. sessile or nearly sessile.  
 H. Petioles not dilated at base: lfts. 5-7, rarely 9; brts. and lvs. pilose.  
 HH. Petioles dilated at the tomentose base; lfts. 7-11: brts. glabrous.....16. *F. oregona*  
 FF. Fr. 1-2 cm. long; wing as long or shorter than body: lfts. 3-7, short-stalked or nearly sessile; lvs. and brts. pubescent or glabrous.....15. *F. velutina*  
 DD. Fr. obovate or elliptic to oblong-elliptic, compressed, winged to the base.  
 E. Brts. terete: lfts. 5-7.....18. *F. caroliniana*  
 EE. Brts. quadrangular.  
 F. Lfts. usually 5, ovate, acute.....19. *F. Lowellii*  
 FF. Lfts. reduced to 1, ovate to suborbicular.....20. *F. anomala*  
 BB. Fls. without calyx (or a deciduous minute calyx in No. 21); anthers cordate, rarely broad-oblong: lfts. usually 7 or more.....Subsect. BUMELIODES  
 C. Brts. 4-angled and usually winged: lfts. 7-11: fls. perfect, with minute deciduous calyx.....21. *F. quadrangulata*  
 CC. Brts. terete or nearly so: fls. without calyx.  
 D. Rachis at base of lfts. with thick rufous tomentum: fls. dioecious.  
 E. Lfts. sessile, nearly rounded at base.....22. *F. nigra*  
 EE. Lfts. narrowed into a very short stalk.....23. *F. mandshurica*  
 DD. Lfts. without conspicuous tomentum at base of lfts.: fls. perfect or polygamous, rarely dioecious.  
 E. Lfts. sessile or subsessile.  
 F. Lfts. glabrous or pubescent only along the midrib beneath: ovary glabrous.  
 G. Lfts. 7-13.  
 H. Winter-buds black or nearly black: lfts. appressed-serrate or serrate, usually villous along the midrib beneath.....24. *F. excelsior*  
 HH. Winter-buds brown: lfts. sinuate-dentate or serrate, usually remotely so.  
 I. Lfts. elliptic to broad-elliptic or obovate, obtuse to acute, 4-13.....25. *F. rotundifolia*  
 II. Lfts. lanceolate or narrow-oblong.  
 J. Lfts. 9-13, rarely 7, glabrous beneath: fr. rounded at base.  
 JJ. Lfts. 7-9, rarely 5, pubescent along the midrib beneath: fr. narrow-rowed at base.....26. *F. angustifolia*  
 CC. Lfts. 3-5, rarely 7, lanceolate, glabrous.....27. *F. oycarpa*  
 FF. Lfts. pubescent on both sides or at maturity only beneath.....28. *F. syriaca*  
 EE. Lfts. distinctly stalked: brts. and lvs. glabrous.....30. *F. potanophila*  
 Sect. ORNUS DC. Fls. in terminal and lateral panicles on leafy brs., with or after the lvs., perfect or polygamous. (*Ornus* Pers.)

Subsect. *EUORNUS* Koehne & Lingelsh. Corolla present: scales of terminal bud entire.

1. *F. Ornus* L. **FLOWERING A.** Round-headed tree to 20 m.; bark smooth, gray; winter-buds grayish or brownish: lfts. usually 7, stalked, oblong to ovate, the terminal one obovate, 3-7 cm. long, abruptly pointed, usually broad-cuneate, irregularly serrate, glabrous except pubescent along the base of the midrib beneath: fls. white, fragrant, in dense terminal panicles 7-12 cm. long; petals linear, 6 mm. long: fr. narrow-oblong, 2-2.5 cm. long, truncate or emarginate at apex. Fl.v-vi. R.I.17:t.31,f.1-2(c). H.W.3:120(h),t.60(c). Gn.48:286;79:362(h). F.E.22:61(h). B.S.1:572,t(h). (*Ornus europaea* Pers., *F. floribunda* Hort., not Wall.) S. Eu., W. Asia. Intr. before 1700. Zone V. Round-headed tree attractive when in bloom.—*F. O. juglandifolia* Ten., var. Lfts. ovate-oblong, 5-10 cm. long and 2.5-5 cm. broad. D.H.1:70(l). —*F. O. rotundifolia* Ten., var. Lfts. broad-elliptic to orbicular-obovate. S.H.2:513c(l). (*F. r. Lam.*, not Mill.)

2. *F. Bungeana* DC. Small tree to 5 m. or shrub; winter-buds nearly black: brts. puberulous: lfts. usually 5, rarely 3 or 7, slender-stalked, ovate or orbicular-ovate, 2-4 cm. long, obtusish to short-acuminate, broad-cuneate, serrate, glabrous: panicles 5-7 cm. long, puberulous, filaments longer than the linear petals: fr. narrow-oblong, 2.5-3 cm. long, obtuse or emarginate. Fl.v. G.F.7:5. B.C.3:1274. (*F. B. var. parvifolia* Wenz., *F. Dippeliana* Lingelsh., *F. parvifolia* Lingelsh.) N. China. Intr. 1881. Zone III. Distinct species handsome in bloom.

Related species: *F. raibocarpa* Reg. Small tree: lfts. 3-5, elliptic to obovate or oblong-obovate, 2-6 cm. long, obtuse or acute; petiole wing-margined: fr. curved, 2.5 cm. long, with rhombic wing. E.P.IV.243,1:20. D.H.1:93. Turkest. Cult. 1884. Zone V?

3. *F. Mariësii* Hook. f. Shrub or small tree to 8 m.; winter-buds grayish; young brts. puberulous: lfts. 3-5, rarely 7, usually closely set, subsessile, elliptic to ovate-lanceolate, 3-8 cm. long, acute or acuminate, crenate-serrulate or nearly entire, pale beneath, subcoriaceous; petiole and petiolules purple near base; panicle 8-14 cm. long; calyx minute; petals sometimes 5-6: fr. 1.5-3 cm. long, oblanceolate. Fl.vi. B.M.6678(c). B.S.1:570. I.T.4:t.158. N.F.9:f.13(h). C. China. Intr. 1878. Zone VII? Free-flowering; frs. attractive in summer by their purple color.

Related species: *F. retusa* Champ. Lfts. 3-7, slender-stalked, ovate to oblong, 5-15 cm. long, acuminate, dentate or entire, quite glabrous, subcoriaceous and reticulate beneath: calyx large. E. China. Not in cult.—*F. r. Henryana* Oliv., var. Tree to 12 m.: lfts. on stalks 4-15 mm. long, oblong to lanceolate, serrulate; panicle dense, 10-15 cm. long: fr. 2-2.5 cm. long, emarginate. H.I.1930. C. China. Intr. 1900. Zone VII?—*F. Griffithii* C. B. Clarke. Trees to 15 m.: lfts. 5-11, ovate to elliptic-oblong, 5-14 cm. long, acuminate, entire: fls. in large loose bracted puberulous panicles. (*F. bracteata* Hemsl.) China to Philipp. and Mal. Intr. 1900 from China. Zone VII?

4. *F. pubinervis* Bl. Tree; lfts. 5-11, stalked, elliptic to ovate-oblong, 5-10 cm. long, acuminate, broad-cuneate, crenate-serrate, dark green and glabrous or nearly so above, hairy along the midrib and on the primary veins beneath: fr. oblanceolate, 3-3.5 cm. long. N.T.1:401. (*F. Bungeana* var. *p. Wenzig.*) Japan. Intr. before 1900. Zone V.

Related species: *F. floribunda* Wall. Tree to 40 m.; brts. glabrous: lfts. 7-9, short-stalked, ovate-oblong to oblong, 10-15 cm. long, long-acuminate, sharply serrate, with prominent pubescent veins beneath; rachis slightly winged: panicles 20-30 cm. long: fr. linear-spatulate, 3 cm. long, obtuse or emarginate. E.P.IV.243,1:21. Himal. Intr. 1822 and 1876. Zone VII?

5. *F. Paxiana* Lingelsh. Tree to 20 m.; winter-buds rusty-tomentose: lfts. 7-9, short-stalked, ovate to oblong-lanceolate, 8-18 cm. long, acuminate.

rounded or broad-cuneate at base, crenulate, glabrous: panicle large; calyx large; petals linear-spatulate, as long as stamens: fr. linear-spatulate, 2.5-3 cm. long. Fl.vi. B.M.9024(c). M.G.51:381. S.H.2:f.515d(l). China, Himal. Intr. about 1904. Zone V. Handsome tree with large lvs.

6. *F. Spaethiana* Lingelsh. Tree: lfts. 5-9, sessile, oblong to oblong-obovate, 8-16 cm. long, the lowest pair much smaller, short-acuminate, irregularly and rather coarsely crenate-serrate, dark green above, lighter beneath and glabrous except along the midrib near base; petiole grooved, much enlarged near base and reddish brown: fr. oblanceolate, 3-3.5 cm. long, obtuse. S.H.2:f.516g(l). N.T.1:400. (*F. stenocarpa* Koidz.) Japan. Cult. 1873. Zone V. Handsome tree with large lvs.

7. *F. longicuspis* Sieb. & Zucc. Small tree to 15 m.; winter-buds rufous-pubescent; brts. glabrous, slightly quadrangular, slender: lfts. usually 5, rarely 7, stalked, elliptic to ovate-lanceolate, 5-10 cm. long, long-acuminate, cuneate, serrate or crenate-serrate, glabrous or nearly glabrous; petiole grooved above: fls. in panicles 6-12 cm. long; calyx minute; petals linear-oblong, as long as stamens: fr. linear-oblong or oblanceolate, 2-3.5 cm. long, obtuse. Fl.vi. S.I.1:t.81(c). N.T.1:404. Japan. Intr. about 1870. Zone V. Graceful tree with white fls. and lvs. turning purple in fall.—*F. l. Sieboldiana* (Bl.) Lingelsh., var. Lfts. acuminate, sometimes short-acuminate, 3.5-8 cm. long, the lowest pair sometimes ovate, crenate-serrulate, sometimes nearly entire, pubescent along the midrib beneath. M.K.t.84(c). N.T.1:392. N.K. 10:t.7. (*F. s. Bl.*) Japan, Korea.

8. *F. cuspidata* Torr. Shrub or rarely small tree, with slender brs.; winter-buds dark reddish brown, glutinous: lfts. usually 7, slender-stalked, lanceolate or oblong-lanceolate, 3-6 cm. long, acuminate, cuneate, coarsely serrate, glabrous with obscure veins; petiole slender, sometimes wing-margined: fls. fragrant, in panicles 6-10 cm. long; corolla about 1.5 cm. long, divided to below the middle into linear-oblong lobes; anthers subsessile, not exceeding the tube: fr. spatulate-oblong, 2-2.5 cm. long. Fl.iv-v. S.S.6:t.260. E.P.IV. 243.1:27. (*Ornus c. Nieuwl.*) Ariz. and N. Mex. to Tex. and Mex. Intr. 1914. Zone VII.—*F. c. macropétala* (Eastw.) Rehd., var. Lfts. usually 3-5, often ovate and usually entire. (*F. m. Eastw.*) N. Ariz. Intr. ?

Subsect. 2. *ORNASTER* Koehne & Lingelsh. Corolla wanting: outer scales of terminal bud foliar.

9. *F. chinensis* Roxb. Tree to 15 m.; winter-buds brownish black: lfts. 5-9, short-stalked to subsessile, elliptic to elliptic-ovate, 3-10 cm. long, acuminate, serrate to crenate-serrate, pubescent along the midrib beneath and on the primary veins; petiole enlarged at base: panicle large and loose, 8-15 cm. long; calyx campanulate, irregularly lobed; anthers ovoid to oblong-ovoid, about as long as filaments: fr. oblanceolate, 3-4.5 cm. long and 4-6 mm. broad. Fl.v. C.C.280. E.P.IV.243.1:29. China. Intr. 1891. Zone V. One of the trees on which the wax insect lives.—*F. c. acuminata* Lingelsh., var. Lfts. usually 3-5, stalked, ovate-lanceolate to lanceolate, to 12 cm. long, long-acuminate, more sharply serrate. E.P.IV.243.1:f.8d(l). (*F. Koehneana* Lingelsh.) China. Intr. 1910.—*F. c. rhynchophylla* (Hance) Hemsl., var. Lfts. usually 5, broad-ovate or obovate, rarely oblong-obovate, 6-15 cm. long, acuminate, rarely obtusish, coarsely crenate-serrate, rarely subentire, usually pubescent on the veins beneath, rarely glabrous; rachis usually rufous-pubescent at the nodes: panicle shorter. G.F.6:485. S.H.2:f.516c, 518a-e. N.K. 10:t.4. (*F. r. Hance*, *F. obovata* Schneid., not Bl., *F. Bungeana* Hance, not D.C.) N. E. Asia. Intr. 1892.

Sect. II. FRAXINASTER DC. Panicles from leafless lateral buds; fls. usually apetalous, appearing before the lvs.

Subsect. 1. *SCIADANTHUS* Coss. & Dur. Fls. with calyx, polygamous, in dense panicles; lvs. with winged rachis; lfts. 3-13, small, not exceeding 4 cm., obtuse: outer scales of terminal bud foliar.

10. *F. xanthoxyloides* (Don) DC. Shrub or small tree with spreading brs.; brts. minutely puberulous at first: lf.-rachis narrowly winged, slightly pubescent; lfts. 5-9, subsessile, the lower short-stalked, oval to oblong or oblong-ovate, 2-4 cm. long, acute to obtusish, crenate-serrate, slightly pilose on midrib beneath: fls. in short dense panicles; anthers large, subsessile: fr. narrow-oblong to spatulate, 3-4 cm. long, 6-7 mm. broad, obtuse or emarginate; body with a furrow in the middle. D.L.1:f.34. S.H.2:f.518k. (*Ornus* x. Don.) Himal. to Afghan. Cult. 1870. Zone VII?—*F. x. dimiôpha* (Coss. & Durieu) Wenz., var. Brts. and lvs. glabrous or nearly so; lfts. subsessile, oval or ovate, 1-2.5 cm. long, obtuse or obtusish, on sterile brts. 7-11, shorter and broader: fr. 4-5 cm. long, obtuse or acutish. M.A.t.18B(c). D.L.1:f.35. S.H.2:f.518g. E.P.IV.243:f.9e. (*F. d.* Coss. & Durieu.) N. Afr. Intr. 1855? Zone (V) or VI.—*F. x. dumôsa* (Carr.) Lingelsh., var. A shrubby dense form of the preceding with suborbicular to ovate lfts. 5-15 mm. long. Cult. 1865.

A species of the subsect. DIPETALAE with axillary fls. and with petals is *F. dipétala* Hook. & Arn. Shrub or small tree; brts. quadrangular: lfts. usually 5, stalked, broad-elliptic to ovate, 1.5-4 cm. long, usually obtuse, serrate, glabrous: fls. with the lvs., in panicles 5-10 cm. long; petals 2, oval, 4-5 mm. long: fr. oblanceolate, 2.5 cm. long. S.S.6:t.261. (*Petlomeia d.* Nieuwl.) Calif. Intr. 1878. Zone VII?

Subsect. MELIOIDES Endl. Fls. with calyx, usually dioecious: lfts. large; rachis not winged: terminal bud-scales entire. (Sect. *Leptalis* Koehne, sect. *Ornus* subs. *L.* Wesmael, *Calycomelia* Kostel.)

11. *F. americana* L. WHITE A. Tall tree to 40 m.; young brts. dark green or brownish, glabrous and lustrous: lfts. 5-9, usually 7, stalked, ovate to ovate-lanceolate, 6-15 cm. long, acuminate, cuneate or rounded at base, usually entire, or slightly dentate toward the apex, dark green above, glaucous beneath and usually glabrous; petiolules 5-15 mm. long; anthers oblong, apiculate: fr. 3-5 cm. long, with terete body, the wing narrow-oblong to spatulate, not decurrent, emarginate or obtuse. S.S.6:t.268,269. E.H.4:t.246(h). G.F.7:405(h). F.E.23:427(h). (*F. acuminata* Lam., *F. Novae-Angliae* Mill., *F. alba* Marsh.) N. S. to Minn., s. to Fla. and Tex. Intr. 1724. Zone III. Vigorous tree with the lvs. turning deep purple or yellow in fall.—*F. a. asciidiata* Meunissier, var. Lfts. pitcher-shaped at base. G.C.76:335. Intr. about 1910.—*F. a. iodicarpa* Fern., f. Fr. red-purple, conspicuous in summer.—*F. a. subcoriacea* Sarg., var. Lfts. oblong-ovate, thicker, 7.5-13 cm. long, entire or slightly serrate, silvery white beneath. (*F. a.* var. *crassifolia* Sarg.) Intr. 1874.—*F. a. juglandifolia* (Lam.) Rehd., var. Lfts. more or less serrate or crenate-serrate, less lustrous above, more or less pubescent beneath and less glaucous. (*F. j.* Lam.) More common north. Cult. 1800.

Related species: *F. texensis* Sarg. Tree to 15 m.; lfts. usually 5, elliptic to nearly obovate, 3-8 cm. long or larger on young trees, acute or obtuse, crenulate-serrate chiefly above the middle, reticulate beneath: fr. 1.5-3 cm. long. S.S.6:t.270. Tex. Intr. 1901. Zone VII?

12. *F. biltmoreana* Beadle. Tree to 15 m.; brts. and petioles densely short-pubescent: lfts. 7-9, rarely 11, stalked, ovate-oblong to lanceolate and often falcate, 8-15 cm. long, acuminate, broad-cuneate or rounded at base, entire or obscurely toothed, dark green and glabrous above, glaucous and pu-

bescent beneath, more densely on the veins; petiolules 3-5 mm. long; panicles pubescent; anthers oblong, acute: fr. 3-4 cm. long; body terete; wing not decurrent, linear-oblong, emarginate. S.S.14:t.716. E.H.4:t.247(h). N. J. to Ga., Ala. and Mo. Cult. about 1800. Zone V. Handsome Ash similar to the preceding species.

13. *F. tomentosa* Michx. f. PUMPKIN A. Tree to 40 m.; brts. and petioles tomentose: lfts. usually 7-9, stalked, elliptic or lanceolate, 10-25 cm. long, acuminate, broad-cuneate or rounded at base, entire or slightly serrate, nearly glabrous above at maturity, soft-pubescent beneath; petiolules 5-10 mm. long; anthers oblong, apiculate, on slender filaments: fr. 5-7 cm. long; wing oblong, rounded or emarginate, decurrent to below the middle or nearly to the base of the thick terete body. S.S.14:t.714-5. (*F. profunda* (Bush) Britt., *F. Michauxii* Britt.) W. N. Y. to Ill., La. and n. w. Fla. Intr. 1913. Zone V. Handsome large-leaved Ash.

14. *F. pennsylvanica* Marsh. RED A. Tree to 20 m.; brts. and petioles densely pubescent: lfts. 5-9, stalked, ovate to oblong-lanceolate, 8-14 cm. long, acuminate, broad-cuneate, crenate-serrate or entire, pubescent beneath; petiolules 3-6 mm. long; panicle rather compact, tomentose; anthers linear-oblong, on short filaments: fr. 3-6 cm. long; wing lanceolate to oblong-obovate, rounded to acuminate, rarely emarginate, decurrent to below the middle or nearly to base. S.S.6:t.271. (*F. pubescens* Lam.) N. S. to Man., s. to Ga., Ala. and Miss. Intr. 1783. Zone III. A variable species, the type gradually passing into the var. *lanceolata*.—*F. p. aucubaefolia* (K. Koch) Rehd., var. Lfts. mottled with yellow.—*F. p. lanceolata* (Borkh.) Sarg., var. GREEN A. Brts. and petioles glabrous; lfts. elliptic-oblong to lanceolate, 5-12 cm. long, irregularly serrate, bright green above, glabrous on both sides or pubescent along the midrib beneath; panicles glabrous. S.S.6:t.272. (*F. l. Borkh.*, *F. viridis* Michx.) Me. to Fla., w. to Sask., Mont. and Tex. Intr. 1824. Zone II.

Related species: *F. Berlandieri* DC. Tree to 10 m., rarely more: lfts. 3-5, slender-stalked, lanceolate or elliptic to obovate, 7-10 cm. long, acuminate, broad-cuneate, remotely serrate or nearly entire, hairy in the axils of the veins beneath or glabrous: fr. oblong-obovate to spatulate, 2.5-3.5 cm. long; wing decurrent to near the base. S.S.6:t.273. Tex. to n.e. Mex. Intr. 1879. Zone VII?

15. *F. velutina* Torr. Tree to 15 m.; brts. velvety-pubescent: lfts. 3-5, short-stalked or subsessile, elliptic to ovate, 2-4 cm. long, acute, rarely obtusish, broad-cuneate, crenate-serrulate above the middle, pubescent beneath and somewhat reticulate: panicles pubescent; anthers oblong, apiculate: fr. 1-1.8 cm. long, wing oblong-obovate to elliptic, shorter than the terete body and decurrent scarcely to the middle. S.M.848. Ariz. and N. Mex. to Mex. Intr. ? Zone VII? Recommended as a street tree for a dry climate, particularly the var. *Toumeyii*.—*F. v. coriacea* (S. Wats.) Rehd., var. Lfts. more coriaceous and more reticulate, less pubescent or glabrescent. Rep. N. S. Geog. Surv. West 100th Mer. 6:t.22. (*F. c. S. Wats.*) Utah, Calif. Cult. 1900. Zone VII?—*F. v. glabra* Rehd., var. Lfts. 3-7, glabrous like brts. (*F. v. var. glabrata* Lingelsh.—MODESTO ASH.) Intr. 1916. Ariz. to Mex. Zone VII?—*F. v. Toumeyii* (Britt.) Rehd., var. Young brts. pubescent or glabrescent: lfts. 5-7, elliptic to lanceolate, 3-7 cm. long, acuminate, cuneate, serrulate above the middle, finely pubescent beneath; petiolules 3-10 mm. long; fr. 1.5-2.5 cm. long; wing spatulate or oblong, about as long or rarely slightly longer than the terete body. S.S.6:t.267. S.M.849. B.T.803. M.G.28:556(h). (*F. T. Britt.*) Ariz., N. Mex. and Mex. Intr. 1891. Zone VI?

16. *F. orégona* Nutt. Tree to 25 m.; brts. usually pilose: lfts. 5-9, usually 7, sessile, rarely stalked, elliptic or obovate to oblong, 8-16 cm. long, acute, broad-cuneate, entire or remotely and slightly serrate, pubescent above at first, becoming glabrous, pubescent beneath, light green: panicles glabrous; anthers oblong, on short filaments: fr. 3-5 cm. long; wing elliptic-oblong to oblanceolate, decurrent nearly to the base of the slightly compressed body. S.S.6:t.276. (*F. californica* Hort.) Wash. to s. Calif. Cult. 1870. Zone VI?

17. *F. platypoda* Oliv. Tree to 22 m.: petiole enlarged and tomentose at base: lfts. 7-11, sessile, elliptic-oblong or ovate-lanceolate, 5-10 cm. long, short-acuminate, serrulate, gray-green and quite glabrous above, pale and papillose and pilose on the veins beneath: panicle 12-15 cm. long; fr. oblong. 4-5 cm. long, narrowed at ends, compressed, winged to the base. H.I.1229. C.C.282. China. Intr. 1909. Zone V.

18. *F. caroliniæna* Mill. WATER A. Tree to 15 m.; winter-buds chestnut-brown; brts. glabrous or pubescent: lfts. 5-7, stalked, elliptic or ovate to oblong, 5-12 cm. long, acuminate, broad-cuneate or sometimes rounded at base, serrate, rarely entire, glabrous or sparingly pilose on the veins, rarely pubescent (var. *pubescens* [M. A. Curtis] Fern.) beneath: anthers linear, apiculate, on slender filaments: fr. elliptic to oblong-obovate, 3-5 cm. long, acute to emarginate; body compressed and surrounded by the wing, sometimes 3-winged. S.S.6:t.274,275. (*F. platycarpa* Michx.) Va. to Fla., w. to Ark. and Tex. usually in swamps. Intr. 1724. Zone VII?

19. *F. Lowellii* Sarg. Tree to 8 m.: brts. quadrangular and winged: lfts. 5, rarely 3 or 7, short-stalked, ovate or elliptic-ovate, 5-8 cm. long, acute or acuminate, broad-cuneate, remotely and slightly toothed, yellow-green, glabrous or slightly pubescent: fr. oblong-obovate or elliptic-oblong, 2.5-3.5 cm. long, usually rounded at apex; body compressed, winged to the base. S.M.836. Ariz. Intr. 1914. Zone VII.

20. *F. anomala* S. Wats. SINGLE-LEAF A. Shrub or tree to 7 m.; brts. quadrangular, slightly winged, glabrous: lvs. simple or occasionally with 2-3 lfts. broad-ovate or suborbicular, 3-6 cm. long, rounded or acutish at apex, entire or sparingly crenate-serrate, glabrous and dark green above, paler beneath and pubescent when young; petiole 1-3 cm. long, rusty-pubescent when young: fls. in short panicles, with the lvs., perfect or unisexual; anthers linear-oblong, on slender filaments: fr. obovate-oblong, 2 cm. long, rounded or emarginate. S.S.6:t.266. E.P.IV.243,1:39. Colo. to Utah, S. Calif. Cult. 1890. Zone VI. Distinct and interesting Ash.

Subsect. 3. *BTMELIOIDES* Endl. Fls. without calyx and corolla; only in No. 21 a minute deciduous calyx: fls. dioecious or polygamous; anthers broad-oblong to cordate: lfts. usually more than 7: outer scales of terminal bud foliar.

21. *F. quadrangulata* Michx. BLUE A. Tree to 25, rarely to 40 m.; brts. 4-angled and usually slightly winged, glabrous: lfts. 7-11, short-stalked, ovate to lanceolate, 6-12 cm. long, acuminate, broad-cuneate or rounded at base, sharply serrate, yellow-green, glabrous except along midrib near base beneath: fls. perfect, in short panicles: anthers short-oblong, obtuse, nearly sessile: fr. oblong, 3-5 cm. long, emarginate, winged to the base. S.S.6:t.263. Mich. to Ark. and Tenn. Intr. 1823. Zone III. Lvs. turning pale yellow in autumn; a valuable timber tree.

22. *F. nigra* Marsh. BLACK A. Tree to 25 m.; winter-buds dark brown; brts. terete, glabrous: lfts. 7-11, sessile, oblong to oblong-lanceolate, 7-12 cm. long, long-acuminate, obliquely cuneate or rounded at base, serrate with small incurved teeth, dark green above, lighter green beneath, glabrous

except the rusty tomentum at base and along the midrib beneath: fls. dioecious; anthers oblong, apiculate, on short filaments: fr. narrow-oblong to oblong-obovate, 2.5-3.5 cm. long, rounded or emarginate; body flat; wing decurrent to base. S.S.6:t.264-5. Em.382. Am. For. 21:728(h). (*F. sambucifolia* Lam.) Nfd. to Lake Winnipeg, s. to W. Va., Iowa and Ark.; in moist places. Intr. 1800. Zone II.

23. *F. mandshurica* Rupr. MANCHURIAN A. Tree to 30 m.; brts. obtusely quadrangular, glabrous; winter-buds dark brown: lfts. 9-11, sessile, oblong-ovate to oblong-lanceolate, 7-12 cm. long, long-acuminate, cuneate, sharply serrate, dull green above and often sparingly hispid, usually pilose or hispid on the veins beneath, rufous-tomentose at base; rachis slightly winged: fls. dioecious: fr. oblong-lanceolate, 2.5-3.5 cm. long. M.K.t.85(c). N.K.10:t.8. N.T.1:406. (*F. m.* var. *japonica* Maxim.) N. E. Asia. Intr. 1882. Zone III. Like the preceding species usually not satisfactory under cult.

24. *F. excelsior* L. EUROPEAN A. Tree to 30 or 40 m.; winter-buds black or nearly so: brts. glabrous: lfts. 7-11, sessile, ovate-oblong to ovate-lanceolate, 5-11 cm. long, acuminate, cuneate, serrate, dark green above, lighter green beneath, glabrous except villous along the midrib beneath: fls. polygamous; anthers ovoid, apiculate, shorter than filaments: fr. lanceolate to narrow-oblong, 2.5-4 cm. long, obtuse or emarginate to acute. H.W.3:115(h), 116,t.59(c). R.I.17:t.31,f.3-6(c). S.E.6:t.902(c). F.E.24:395(h). E.H.4:t.239-244(h). Eu., Asia Minor. Cult. for centuries. Zone III.—*F. e. argenteo-variegata* West., var. Lfts. variegated or margined white. (*F. e. albo-variegata* Hayne, *F. e. f. argentea* Lingelsh.)—*F. e. aureo-variegata* West., var. Lvs. variegated or margined yellow. (*F. e. var. lutea* Loud.)—*F. e. aurea* Willd., var. With yellow brts.—*F. e. diversifolia* Ait., var. Lvs. simple or sometimes 3-parted and usually incised-dentate. S.E.6:t.903(c). Gn.22:273. S.H.2:f.523h-l. M.D.1915:294,t(h). (*F. simplicifolia* Willd., *F. monophylla* Desf., *F. heterophylla* Vahl, *F. e. simplicifolia laciniata* Kirchn.)—*F. e. erosa* (Willd.) Loud., var. Lfts. very narrow, incisely serrate or erose-dentate.—*F. e. asplenifolia* Kirchn. Lfts. linear, slightly serrulate. S.H.f.523g(l).—*F. e. crispa* Willd., var. With small very dark green, curled and twisted lfts.; of slow growth. S.H.2:f.523f(l). (*F. e. atrovirens* Hort., *F. e. cucullata* Hort.)—*F. e. nana* (Pers.) Hayne, var. A dwarf compact slow-growing form with very small lfts. S.H.2:f.523k(l). M.G.19:380(h). (*F. nana* Pers., *F. polemoniifolia* Poir., *F. e. globosa* Hort.)—*F. e. pendula* Ait., var. With pendulous brs. Gn. 68:400(h). E.H.4:t.238(h). L.A.6:t.153(h). (*F. e. Wentworthii* Hort.)—*F. e. "aurea pendula"* Loud., var. With yellow pendulous brs.—*F. e. horizontalis* (Desf.) Poir., var. With horizontally spreading limbs and pendulous brs. forming a broad flat head. Gn.39:451(h). G.W.20:53(h).

Related species: *F. Hookeri* Wenzig. Tree; buds nearly black, with conspicuous margin of pale fulvous tomentum: lfts. 5, elliptic to oblong, 6-12 cm. long, acuminate, denticulate or nearly entire, usually villous along the midrib beneath: fls. dioecious: fr. lanceolate, 4-4.5 cm. long, sulcate in the middle. N. W. Himal. Intr. 1920. Zone V?

25. *F. rotundifolia* Mill. Shrub or small tree to 5 m., with slender often purplish brs.: lfts. 7-13, sessile, orbicular-ovate to elliptic or obovate, rarely elliptic-oblong, 1-3 cm. long, acute or rounded at apex, serrate, glabrous or pubescent along the midrib beneath near base: fr. oblong, about 3 cm. long. S.H.2:f.524h-i(l). D.H.1:95(l). (*F. parvifolia* Lam., *F. p.* var. *minor* Dipp., *F. oxycarpa* var. *parvifolia* Wenz.) S. Eu., W. Asia. Cult. 1750. Zone VI.—*F. r. pendula* (Loud.) Rehd., var. Brs. pendulous. (*F. parvifolia* f. *p.* Dipp., *F. lentiscifolia* var. *p.* Loud.)

Related species: *F. numídica* Dipp. Lfts. 7-9, elliptic, 2-3 cm. long, acute, cuneate, serrate, sparingly hairy above and on the veins beneath; rachis and petiole narrowly winged, sparingly short-pilose. D.H.1:96(1). Mediterr. reg. Cult. 1890.

26. *F. angustifolia* Vahl. Tree to 25 m.; winter-buds dark brown; brts. glabrous: lfts. 7-13, sessile, oblong-lanceolate to narrow-lanceolate, 3-7 cm. long, acuminate, cuneate, sharply and remotely serrate, dark green above, lighter beneath, glabrous; rachis with closed groove open only at nodes: panicles short, few-fl.; anthers ovoid, cordate, about as long as filaments: fr. elliptic-oblong to oblanceolate, 3-4 cm. long, acute or obtuse, rounded at base. D.H.1:91. E.H.4:t.245(h), 262,f.8(1). (*F. oxycarpa* var. *a.* Lingelsh., *F. tamariscifolia* Vahl.) S. Eu., N. Afr., W. Asia. Cult. 1800. Zone VI?—*F. a. lentiscifolia* (Desf.) Henry, var. Lfts. more spreading and more remote, lf. sometimes to 25 cm. long. (*F. l.* Desf.)—*F. a. monophylla* Henry, var. Lvs. simple or with 2-3 lfts., lanceolate, 5-12 cm. long, glabrous. (*F. Velt-heimii* Dieck.) E.H.4:t.262,f.3(1). Cult. 1885.—*F. a. australis* (Gay) Schneid., var. Lfts. beneath near midrib and rachis hairy. (*F. a.* Gay, ? *F. tamariscifolia* Dipp., not Vahl.) S. Eu., N. Afr. Cult. 1890. Zone VI.

Related species: *F. Elónza* Kirchn. Small tree; brts. gray-green or yellowish, with whitish warts: lfts. 9-13, elliptic-ovate to ovate-lanceolate, 2.5-6 cm. long, acute, broad-cuneate, villous beneath along the midrib: fr. narrow-oblong. D.H.1:87. Origin unknown; cult. 1864. Zone V.—*F. obliqua* Tausch. Small tree: lfts. 9-11, subsessile, elliptic-ovate to ovate-lanceolate, 4-8 cm. long, the terminal to 12 cm. long, acuminate, broad-cuneate, glabrous; rachis with continued open groove: fr. oblong-obovate, 2.5-3 cm. long, acute. S.H.2:f.424c(1). (*F. Willdenowiana* Koehne, *F. rotundifolia* Hort., not Mill.) W. Asia. Cult. 1834.

27. *F. oxycarpa* Willd. Tree; winter-buds dark brown: lfts. 7-9, rarely 5 or 11, sessile, ovate-oblong to lanceolate, 4-7 cm. long, acuminate, cuneate or broad-cuneate, sharply serrate, light green on both sides and glabrous except villous along the midrib beneath: fr. obovate-oblong to lanceolate, 3-4 cm. long, acute or obtusish, narrowed at base of the compressed body. S.H.2:f.522f-g, 525n-p. D.H.1:89. (*F. oxyphylla* Bieb.) S. Eu. to Persia and Turkestan. Intr. 1815. Zone V.

28. *F. syriaca* Boiss. SYRIAN A. Small tree, brs. often with shortened internodes and crowded whorled lvs.: lfts. 3-5, rarely 7, lanceolate, 3-10 cm. long, acuminate, cuneate, sharply serrate, bright green, quite glabrous, stomatiferous on both sides: fls. in short panicles: fr. obovate-oblong, 3-4 cm. long, obtuse or acute. D.H.1:92. S.H.2:f.524e, 525a-d. (*F. sogdiana* Dipp., not Bge., *F. turkestanica* Carr.) W. and C. Asia. Cult. 1880. Zone V.

29. *F. holótricha* Koehne. Small tree; brts. and petioles pubescent: lfts. 9-13, short-stalked or subsessile, ovate or oblong-lanceolate, 3-8 cm. long, acuminate, sharply serrate, pubescent on both sides when young; ovary pubescent; anthers oval, subsessile. M.D.1910:114; 1925:281,f.1.4. S.H.2:f.524b(1). E. Balkan Pen. Cult. 1870. Zone V.

Related species: *F. Pallisae* Wilmott. Lfts. 5-9, rarely 11, sessile, ovate-lanceolate, rounded to broad-cuneate at base, remotely crenate-serrate: anthers on short filaments: fr. oblong, obtuse, 4-5 cm. long. M.D.1925:281,f.2,3,5. Balkan Pen. Intr. about 1840? Zone V?

30. *F. potamóphila* Herd. Tree to 10 m.; brts. green, glabrous: lfts. 9-11, sometimes 7 or 13, stalked, broad-elliptic or elliptic-ovate, 2-5 cm. long, acute, narrowed into a stalk 5-10 mm. long, serrate, glabrous or pubescent along midrib beneath, stomatiferous on both sides: fr. elliptic-oblong, 3-5 cm. long, acute or obtuse. D.H.1:97,98. S.H.2:f.522b, 523c(1). E.H.4:t.262,f.8. U. S. Inv. 50:t.4(h). (*F. Regelii* Dipp.) Turkestan. Cult. 1890. Zone V.

Related species: *F. sogdiana* Bge. Small tree: lfts. 7-11, ovate-lanceolate, 3-6 cm. long, spinulose-dentate, quite glabrous; fr. oblong-obovate, 3 cm. long, obtuse or emarginate. S.H.2:f.524d(1). Turkest. Cult. 1890. Zone V.

4. **FORSYTHIA** Vahl. GOLDEN-BELL. Deciduous shrubs, glabrous, rarely lvs. pubescent; winter-buds with several outer scales, superposed and often laterally branching; brs. hollow or with lamellate pith: lvs. opposite, petioled, serrate or entire, occasionally 3-parted or 3-foliolate, thickish: fls. 1-6, axillary, heterostylous, before the lvs.; calyx deeply 4-lobed, persistent; corolla yellow, with 4 oblong lobes, longer than the campanulate tube usually striped orange within; stamens 2, inserted at the base of corolla, not or slightly exserted; style slender; with 2-lobed stigma, in the macrostyle form longer, in the microstyle form shorter than the stamens: fr. a 2-celled dehiscent caps. with many winged seeds. Six or 7 species in E. Asia, one in S. E. Eu. (After Wm. Forsyth, prominent English horticulturist; 1737-1800.)—Ornamental shrubs very showy in early spring with profuse yellow fls.; the lvs. remaining green until late in fall and are not attacked by insects.

- a. Brs. hollow, with solid pith at the nodes: lvs. often 3-foliolate or 3-parted; fr. ovate, narrowed at base, warty.....1. *F. suspensa*
- aa. Brs. with lamellate pith (often only partly so in No. 2).
- b. Pith solid at the nodes, lamellate or partly so between, rarely hollow: lvs. often 3-parted on shoots.....2. *F. intermedia*
- bb. Pith lamellate throughout, only at base of vigorous shoots sometimes wanting: lvs. never 3-parted or exceptionally so in No. 4).
- c. Lvs. usually entire or with few shallow teeth, ovate to ovate-lanceolate; fr. smooth, narrowed at base.....3. *F. europaea*
- cc. Lvs. serrate, only occasionally nearly entire: fr. smooth, rounded at base.
- d. Lvs. elliptic-oblong to lanceolate, cuneate at base, serrate usually only above the middle; brts. quadrangular, green.....4. *F. viridissima*
- dd. Lvs. ovate, usually rounded at base and serrate nearly to base: brts. terete or nearly so, yellowish.....5. *F. ovata*

1. ***F. suspensa*** (Thunb.) Vahl. Shrub to 3 m., with upright stems and spreading or pendulous brs.; brts. slightly 4-angled: lvs. ovate to oblong-ovate, serrate, 6-10 cm. long, acute, broad-cuneate or rounded at base: fls. 1-3, sometimes to 6, golden yellow, about 2.5 cm. long; calyx-lobes oblong, about as long as corolla-tube: fr. narrow-ovoid, slightly compressed, 1.5 cm. long. Fl. iv-v. S.Z.1:t.3(c). (*Syringa* s. Thunb.) China, cult. in Japan. Zone V. Very showy in spring; the var. *Sieboldii* may be used like a climbing shrub for covering arbors, trellises, etc., and is very effective hanging down over rocks and walls.—*F. s. Sieboldii* Zabel, var. Shrub with very slender pendulous brs., often trailing on the ground and rooting at the tips: lvs. usually simple, ovate or broad-ovate: fls. usually solitary; corolla-lobes rather broad, flat, slightly spreading. B.M.4995(c). F.S.12:t.1253(c). G.F.4:79. Gt.55:205. Gn.86:370(h). Gn.M.29:115(h). (*F. Sieboldii* Dipp.) Intr. from Japan in 1833. Zone V. The type of the species.—*F. s. Fortunei* (Lindl.) Rehd., var. Vigorous upright shrub with arching or spreading brs.: lvs. ovate to oblong-ovate, on long shoots often 3-foliolate or 3-parted: corolla with narrow, spreading usually twisted lobes. Ad.4:t.129(c). R.H.1861:291. F.E.31:421. Gn.73:243(h);78:182(h). (*F. Fortunei* Lindl.) China. Intr. about 1860.—Forms of this var. are: *F. s. variegata* Butz. Lvs. variegated with yellow: fls. deep yellow. (*F. s. f. aureo-variegata* Koehne.)—*F. s. decipiens* Koehne, f. Fls. solitary, deep yellow, macrostyle; pedicels 1-2 cm. long. Gt.55:203.—*F. s. pallida* Koehne, f. Fls. solitary, pale yellow.—*F. s. atrocaulis* Rehd., f. Young growth purplish and brts. dark purple: corolla-lobes 13-15 mm. broad. R.H.1930:206,t.f.2(c). G.C.71:167. Intr. 1908. Zone VI?—*F. s. pubescens* Rehd., f. Young brts. and lvs. on both sides or only beneath short-pubescent, purplish when young. Intr. 1908. Zone VI.

2.  $\times$  *F. intermedia* Zab. (*F. suspensa*  $\times$  *viridissima*). Shrub to 3 m.; similar in habit to *F. s.* var. *Fortunei*: lvs. usually ovate-oblong to oblong-lanceolate, sometimes 3-parted on vigorous shoots, 8–12 cm. long; fls. usually several; calyx shorter than corolla-tube. Fl.v–v. Gt.34:t.1182;40:397. Gn. W.22:181. Gn.86:No.2622(h). (*F. i. divaricata* Koehne.) Orig. before 1880. Zone IV.—*F. i. vitellina* Koehne. Corolla about 2.5 cm. long, deep yellow, macrostyle. R.H.1930:206,t.f.1(c). Gt.55:227,228. (*F. v.* Koehne.)—*F. i. primulina* Rehd., var. Fls. crowded at base of brts., pale yellow, with revolute lobes, microstyle.—*F. i. densiflora* Koehne. With spreading and pendulous brs.: fls. much crowded, rather pale, with rather flat, slightly recurved lobes, macrostyle. Gt.55:230,231. (*F. d.* Koehne.)—*F. i. spectabilis* (Koehne) Spaeth. Corolla more than 3 cm. long, bright yellow, sometimes 5- or 6-merous; fls. crowded, microstyle. Gt.55:229. G.C.71:167. Gn.79:176. B.H. 37:85(h). (*F. s.* Koehne.) This is perhaps the most showy of all Forsythias.

3. *F. europaea* Deg. & Bald. Upright shrub to 2 m., with upright brts., green: lvs. ovate to ovate-lanceolate, 5–8 cm. long, acute, rounded or broad-cuneate at base, usually entire or at end of brts. with shallow teeth, rather thick, glabrous or slightly pubescent beneath; petiole 4–6 mm. long; fls. usually solitary, short-stalked; calyx shorter than corolla-tube; corolla yellow, about 2 cm. long, with narrow-oblong lobes 5–6 mm. wide: fr. ovoid, about 1.2 cm. long. Fl.v. B.M.8039(c). Gt.54:291. G.C.36:123. F.E.18:348. Albania. Intr. 1899. Zone V. Less ornamental than other species

*F. europaea*  $\times$  *ovata* has been raised at the Arnold Arboretum in 1935.

Related species: *F. Giraldisiana* Lingelsh. Lvs. elliptic-oblong to lanceolate-oblong, 6–10 cm. long, long-acuminate, usually sparingly pilose at veins beneath: fls. short-stalked: fr. ovoid, broad at base, rostrate. E.P.IV.243:111. N. China. Cult. 1938. Zone V.

4. *F. viridissima* Lindl. Shrub with upright stems and brs., to 3 m.; brts. green: lvs. elliptic-oblong to lanceolate, rarely obovate-oblong, broadest about or above the middle, 8–14 cm. long, acute, cuneate, usually serrate only above the middle, sometimes nearly entire, dark green; petiole 6–12 mm. long: fls. 1–3, calyx-lobes oval, about half as long as corolla-tube; corolla 2–2.5 cm. long, bright yellow with a slight greenish tinge, the lobes narrow-oblong, revolute: fr. ovoid, rostrate, 1.5 cm. long. Fl.v. B.M.4587(c). F.S.3:t.261. B.R.33:39(c). Gn.33:563. B.S.1:560. China. Intr. 1844. Zone (V), VI. Less handsome than *F. suspensa*, but var. *koreana* is about as showy.—*F. v. koreana* Rehd., var. Upright shrub with more or less spreading brs.: lvs. elliptic-ovate to ovate-oblong or oblong-lanceolate, broadest below the middle, 5–12 cm. long, usually serrate from about the middle, sometimes nearly entire, broad-cuneate; fls. bright yellow; calyx more than half as long as corolla-tube, corolla about 2.5 cm. long. N.K.10:t.2. (*F. k.* Nakai.) Korea. Intr. 1917. Zone V.

5. *F. ovata* Nakai. Shrub to 1.5 m., with spreading brs.; brts. grayish yellow or yellowish, gray when older: lvs. ovate or broad-ovate, 5–7 cm. long, abruptly acuminate, truncate or sometimes subcordate or broad-cuneate, serrate or sometimes nearly entire; petiole 8–12 mm. long: fls. solitary, short-stalked; sepals broad-ovate, half as long as corolla-tube; corolla amber-yellow, 1.5–2 cm. long, with broad-oblong lobes. Fl.v–v. B.M.9437(c). N.K. 10:t.3. Gn.88:273. G.C.95:225. Korea. Intr. 1917. Zone IV. Distinct species, the earliest to bloom.

Related species: *F. japonica* Mak. Shrub with spreading brs.: lvs. ovate to broad-ovate, 5–12 cm. long, rounded at base, short-acuminate, rather closely serrate from near base, pubescent beneath; petiole pubescent: fls. solitary,

about 1.5 cm. long. N.T.1:360. C. Japan. Intr. ?—*F. j. saxatilis* Nakai, var. Brts. brownish or yellowish gray: lvs. ovate to oblong-ovate, 3–6 cm. long, pilose on veins below when young; petiole 5–10 mm. long, pubescent: calyx-lobes ovate, acutish, 3 mm. long, scarious, brown, whitish at apex; corolla pale yellow, lobes narrow-oblong. Korea. Intr. 1924. Zone V.

5. **SYRINGA** L. LILAC. Deciduous shrubs or small trees; winter-buds ovoid, with several outer scales, the terminal bud often wanting: lvs. opposite, petioled, entire or sometimes lobed or pinnate: fls. perfect, in terminal or lateral panicles on the brs. of the previous season; calyx small, campanulate, 4-toothed, irregularly dentate or nearly truncate, small, persistent; corolla salver-shaped, with cylindric tube and 4 spreading valvate lobes; stamens 2, included or exserted; style with 2-lobed stigma, not exceeding the stamens; ovary 2-celled: fr. an oblong, leathery loculicidal caps. with 2 winged seeds in each cell. (Probably from Greek *syrinx*, pipe, in reference to the stems of Philadelphus to which the name originally had been applied, until Lobel transferred it to this genus.) Including *Ligustrina* Rupr. Monograph by S. D. McKelvey, The Lilacs, with 171 pl. (1928). About 28 species in Asia and S. E. Eu.—Ornamental shrubs with large and showy panicles of often fragrant fls. in spring and early summer.

a. Corolla-tube much longer than calyx; anthers subsessile.

Subgen. I. **EUSYRINGA** K. Koch.

b. Panicles from terminal buds, leafy at base (sometimes lateral in No. 9).

Ser. 1. **VILLOSAE** Schneid.

c. Lvs. papillose, glaucous and glabrous beneath.

d. Anthers exserted  $\frac{1}{2}$ ; corolla-lobes finally reflexed.....1. *S. emodi*

nn. Anthers not or slightly exserted; corolla-lobes upright-spreading.

2. *S. yunnanensis*

cc. Lvs. not papillose, green to glaucous and usually pilose at least along the midrib.

d. Corolla-tube funnelform, gradually widened above the middle, lobes more or less upright; anthers below the mouth.

e. Panicles upright; anthers not reaching the mouth.

f. Lvs. 6–12 cm. long, glaucous beneath.....3. *S. Josikaea*

ff. Lvs. 10–16 cm. long, grayish green beneath.....4. *S. Wolfi*

ee. Panicles pendulous or nodding, dense; anthers reaching the mouth.

f. Fls. whitish inside, pink outside, carmine in bud; panicles slender, 12–25

cm. long.....5. *S. reflexa*

ff. Fls. purple-pink, lighter outside; panicles compact, cylindric, 5–15 cm. long.

6. *S. Komarovi*

dd. Corolla-tube cylindric or nearly so, lobes spreading.

e. Anthers reaching the mouth; infl. with 2 pairs of lvs.: lvs. cuneate at base.

f. Lvs. pilose along the veins beneath or nearly glabrous, glaucous: infl.

compact.....7. *S. villosa*

ff. Lvs. soft-pubescent beneath: infl. loose.....8. *S. tomentella*

ee. Anthers below the mouth: infl. with 1 pair of small lvs. or none, often with

lateral panicles below: lvs. rounded or broad-cuneate at base.9. *S. Sweginzowii*

bb. Panicles from lateral buds; terminal bud usually wanting...Ser. 2. **VULGARES** Schneid.

c. Lvs. pubescent at least on midrib beneath: anthers usually violet or bluish gray;

corolla about 6 mm. across.

d. Anthers inserted slightly below the mouth, equaling  $\frac{1}{2}$ – $\frac{3}{4}$  of the tube: brts.

usually short-pubescent.

e. Infl. and pedicels short-pilose: lvs. short-pubescent above, villous beneath.

10. *S. Julianae*

ee. Infl. puberulous; pedicels glabrescent: lvs. slightly pubescent or glabrous

above, pubescent at least on veins beneath.....11. *S. velutina*

dd. Anthers inserted above the middle of the tube, much below the mouth, equalling

$\frac{1}{4}$  or  $\frac{1}{2}$  of the tube.

e. Corolla-tube 1 cm. or less long; lvs. usually pubescent beneath.

12. *S. microphylla*

ee. Corolla-tube slender, over 1 cm. long.

f. Lvs. with 3–5 pairs of veins, abruptly contracted at base, pubescent at least

on veins near base: fls. pale lilac.....13. *S. pubescens*

ff. Lvs. with 2–3 pairs of veins, cuneate, glabrous beneath or only pubescent

near base: fls. purple-lilac.....14. *S. Meyeri*

cc. Lvs. glabrous, or if pubescent broad-ovate and truncate or subcordate at base.

d. Lvs. entire, or 3–7-lobed in No. 18: corolla about 1 cm. across: flowering brs.

without terminal bud.

e. Lvs. broad-ovate or ovate, subcordate to abruptly broad-cuneate at base:

infl. large.

- F. Lvs. broad-ovate, subcordate at base, changing orange to purple in fall; anthers slightly above middle of tube.....15. *S. oblata*  
 FF. Lvs. ovate, subcordate to broad-cuneate at base, remaining green; anthers just below throat.....16. *S. vulgaris*  
 EE. Lvs. oblong-ovate to oblong-lanceolate, cuneate.  
 F. Lvs. always entire, 4-7 cm. long; infl. large and loose.....17. *S. chinensis*  
 FF. Lvs. often 3-7-lobed, 2-4 cm. long; infl. 5-8 cm. long.....18. *S. persica*  
 DD. Lvs. pinnate, with 7-9 lfts.; infl. 3-7 cm. long; flowering brs. usually with terminal bud developing into a leafy shoot.....Ser. 3. *PRYNNATIFOLIAE* Rehd.  
 19. *S. pinnatifolia*  
 AA. Corolla-tube not or little longer than calyx; anthers exserted on slender filaments; fls. white.....Subgen. II. *LIGUSTRINA* (Rupr.) K. Koch.  
 B. Lvs. narrowed at base, ovate to ovate-lanceolate, glabrous; veins not or slightly elevated; petiole 1.5-2.5 cm. long, slender.....20. *S. pekinensis*  
 BB. Lvs. rounded or subcordate at base, veins elevated; petiole 1-2 cm. long.  
 21. *S. amurensis*

1. *S. emodi* G. Don. HIMALAYAN L. Shrub to 5 m., with upright rather stout brs.; brts. brownish or dark olive-green, dotted with pale lenticels: lvs. elliptic to oblong, 8-15, rarely to 20 cm. long, dark green above, glaucous beneath, glabrous; petiole 1-1.5 cm. long; fls. pale lilac or whitish, not pleasantly scented, in puberulous or glabrescent rather broad and dense panicles 8-15 cm. long; calyx puberulous; corolla with narrow tube 8 mm. long and lanceolate acute lobes: fr. cylindric-oblong, about 1.5 cm. long, acuminate, smooth or nearly so. Fl.vi. B.R.31:6(c). R.H.1876:368. Gn.39:106. B.S.2:567. E.P. IV.243.1:S2.f.3a-b. (*S. villosa* var. *emodi* Rehd.) Afghan., W. Himal. to Kumaon. Intr. about 1840. Zone VI.—*E. e. aureo-variegata* Lav. ex Rehd., var. Lvs. variegated with yellow. (*S. e. variegata* Nichols., not Van Kleeef.)—*S. e. aurea* Carr. Lvs. yellow.

2. *S. yunnanensis* Franch. YUNNAN L. Upright shrub to 3 m., with rather slender brs.; young brts. glabrous, red-brown, with conspicuous lenticels: lvs. elliptic-oblong to elliptic-lanceolate, 3-8 cm. long, short-acuminate, cuneate, minutely ciliolate, glaucous beneath; petiole 5-10 mm. long, glabrous, purple; fls. pink, in puberulous slender panicles 8-15 cm. long; calyx glabrous with short teeth; corolla with slender tube about 5 mm. long and acute upright-spreading lobes; anthers reaching the mouth: fr. about 1.5 cm. long, pointed, smooth. Fl.vi. S.H.2:f.488p-r, 489g. Yunnan. Intr. 1906. Zone V. Loosely branched shrub, one of the less showy species.

3. *S. josikaea* Jacq. HUNGARIAN L. Shrub to 4 m., with rather stout brs. slightly pubescent at first, sparingly lenticellate: lvs. broad-elliptic to elliptic-oblong, 6-12 cm. long, acute to acuminate, broad-cuneate to rounded at base, ciliolate, dark green and lustrous above, glaucescent beneath, and sparingly hairy on the veins or nearly glabrous; petiole about 1 cm. long; fls. lilac-violet, slightly fragrant, subsessile or short-stalked, in rather narrow panicles 10-18 cm. long; calyx pubescent; corolla 1-1.5 cm. long, with ovate upright-spreading lobes; anthers inserted much below the mouth: fr. acute, smooth, about 1 cm. long. Fl.vi. B.M.3278(c). B.R.1733(c). Hungary, Galicia. Intr. about 1830. Zone V. Similar to *S. villosa* but less handsome.—*S. J. eximia* Froebel. Fls. reddish rose, changing to light pink, in large compact panicles. G.C.42:280. M.G.16:561. M.D.1907:262.—*S. J. "H. Zabel"* is similar but fls. purplish lilac.

*S. J. × villosa*; see under No. 7.—*S. J. × reflexa*; see under No. 5.

4. *S. W61f* Schneid. Upright shrub to 6 m.; brts. glabrous, sparingly lenticellate: lvs. elliptic-oblong, 10-16 cm. long, acute, or short-acuminate, cuneate or broad-cuneate, grayish green beneath, glabrous except slightly villous along the veins beneath and on margin; petiole 1-1.5 cm. long; fls. lilac, fragrant, stalked, in large slightly pubescent panicles 20-30 cm. long; their lower brs. often recurved; calyx glabrous or short-pilose; corolla 1.5-1.8

cm. long; lobes ovate-oblong, with a conspicuous incurved point; anthers inserted much below the mouth: fr. obtuse, 1.4 cm. long, smooth. Fl.vi. N.K. 10:t.24. S.H.2:f.489i-k,490o-r. (*S. formosissima* Nakai, *S. robusta* Nakai.) Manch., Korea. Cult. 1910. Zone IV.—*S. W. hirsuta* (Schneid.) Rehd., var. Brts., infl. and calyx densely pilose; lvs. pilose beneath. N.K.10:t.25. N. Korea, Manch. Cult. 1938.

5. *S. reflexa* Schneid. NODDING L. Shrub to 4 m., with rather stout brs.; bark smooth, lenticellate; brts. gray or purple-gray, lenticellate; older brs. pale gray, not fissured: lvs. ovate-oblong to oblong-lanceolate, sometimes elliptic-obovate, 8–15 cm. long, acuminate, cuneate, glabrous above, villous beneath, chiefly along the veins; petioles 1–2 cm. long: infl. narrow, often nearly cylindric, nodding or pendulous, 10–25 cm. long, and 4–5 cm. through, sparingly villous; corolla pinkish outside, white inside, usually carmine in bud, about 1 cm. long; lobes slightly spreading, with incurved tips; anthers reaching the mouth or slightly exerted: fr. oblong, 1.2 cm. long, obtusish and mucronate, smooth or slightly warty, reflexed on the pendulous infl. Fl.vi. B.M.8869(c). G.W.28:409(h). M.G.40:398(h). C. China. Intr. 1901. Zone V. Distinct and handsome species with the fls. in long pendulous panicles.

*S. r.* × *villosa* = *S. Prestonae* McKelvey. Lvs. pubescent beneath: infl. rather loose with spreading brs.; fls. purple-lilac; corolla-tube funnel-form, slender. McKelvey, Lilacs, t.45–47. G.C.97:193(h). Orig. before 1925.—*S. r.* × *Josikaea* = *S. josifexa* Preston. Similar to the preceding, but infl. slenderer and slightly nodding. Cult. 1938.—*S. r.* × *Sweginzowii* = *S. sweginfexa* Hesse. Infl. large, dense: fls. deep red in bud, changing to pink. M.G.51:393. Cult. 1935.

6. *S. Komarowi* Schneid. Shrub to 5 m.; young brts. pubescent, older brs. with gray-brown fissured bark becoming scaly: lvs. ovate-oblong to oblong-lanceolate, 10–16 cm. long, acuminate, cuneate, nearly glabrous above, pubescent beneath, at least on the veins; petiole 1–2 cm. long: panicles nodding, compact, cylindric to oblong-ovoid, 8–14 cm. long; calyx and pedicels slightly pubescent to glabrous; corolla purple-pink, lighter outside, lobes upright, not incurved; anthers usually slightly exerted: fr. usually smooth. Fl.vi. S.H. 2:f.489b-c,490s-u. McKelvey, Lilacs, t.29–33. (*S. Sargentiana* Schneid.) W. China. Intr. 1911. Zone V.

7. *S. villosa* Vahl. Bushy shrub of dense habit, to 3 m.; brts. stout, lenticellate, glabrous or slightly pubescent when young: lvs. broad-elliptic to oblong, 5–18 cm. long, acute at ends, dull dark green above, glaucescent beneath and usually pubescent near the midrib, rarely glabrous; petiole 1–2 cm. long: fls. rosy-lilac to whitish, short-stalked, in pyramidal rather dense usually pubescent panicles 8–18 cm. long; calyx slightly pubescent or glabrous; corolla-tube about 1.2 cm. long, with spreading obtuse lobes; anthers inserted near mouth; fr. 1–1.5 cm. long, obtuse or acutish, smooth or nearly so. Fl.v–vi. R.H.1888:492,t(c); 1914:332(h). G.F.1:521. Gn.39:91. Gt.44:500. H.B.3:279(h). (*S. Bretschneideri* Lemoine, *S. Emodi* var. *rosea* Cornu.) N. China. Cult. 1882. Zone II. Valued for its dense habit and late and profuse fls.

*S. v.* × *Josikaea* = *S. Henryi* Schneid. Similar to *S. villosa*, but panicle larger and looser; corolla pale violet-purple; tube gradually widened above the middle. B.M.8292(c, as *S. villosa*). R.H.1902:40,t(c). J.L.27:800. Orig. 1890. "Lutèce" is the type of this hybrid.—*S. Henryi* × *Sweginzowii* = *S. nanceiana* McKelvey. In the form of fl. and infl. it resembles the second parent, in the color *S. Henryi*. Orig. before 1925. "Floréal" is the type of this hybrid.—*S. v.* × *reflexa*; see under No. 5.

8. *S. tomentella* Bur. & Franch. Slender shrub to 3 m.; brts. brownish, thinly pubescent, later brown, lenticellate: lvs. elliptic to oblong-lanceolate,

3-10 cm. long, acute or acuminate, cuneate, dark green and slightly pubescent above chiefly on the veins, paler beneath and soft-pubescent, rarely only on the veins, ciliolate; petiole about 1 cm. long, pubescent; fls. lilac or whitish, subsessile or short-stalked in a loose pubescent panicle, 10-16 cm. long, its lateral brs. forming dense spikes of subsessile fls. in crowded whorls; calyx pilose; corolla-tube about 1 cm. long, with oblong-lanceolate acute lobes; anthers slightly exserted; fr. 1-1.2 cm. long, acuminate, smooth. Fl.vi. B.M. 8739(c). Gn.84:35;87:51. (*S. albo-rosea* N. E. Br., *S. Adamiana* Balf. f. & W. W. Sm., *S. Wilsonii* Schneid.) W. China. Intr. 1904. Zone V.

9. *S. Sweginzowii* Koehne & Lingelsh. Shrub to 3 m.; young brts. purple-brown, glabrous; lvs. oblong or ovate, 5-10 cm. long, usually abruptly acuminate, broad-cuneate to nearly rounded at base, deep green above, light green beneath and pilose on the veins near base or nearly glabrous, thin; petiole 7-10 mm. long; fls. reddish lilac or pale lilac, fragrant, in glabrous or finely puberulous panicles 15-20 cm. long; corolla-tube 8 mm. long, with acutish ovate-oblong lobes; anthers near the mouth; fr. about 1 cm. long, acute, smooth. Fl.vi. G.C.57:344;64:27. M.D.1910:112. G.W.28:411. M.G.40:399. N. W. China. Intr. 1894. Zone V.—*S. S. superba* Lemoine is scarcely different.

*S. S. × reflexa*; see under No. 5.

10. *S. Julianae* Schneid. Spreading shrub to 2 m.; brts. densely short-pilose; lvs. elliptic-ovate, 3-6 cm. long, acute or acuminate, broad-cuneate, dark green and short-pubescent above, paler and villous-pubescent beneath, more densely on the veins; petiole 4-8 mm. long, pubescent; fls. lilac-purple, pale inside, fragrant, in slightly pubescent panicles 5-10 cm. long, purplish-violet like the glabrous calyx; corolla-tube 6-8 mm. long, with ovate-oblong spreading lobes; anthers light brown, not reaching the mouth; fr. about 1 cm. long, acuminate, verrucose. Fl.v-vi. B.M.8423(c). B.S.2:568. Gn.79:194. (*S. verrucosa* Schneid.) W. China. Intr. 1900. Zone V. Graceful species with fragrant fls.

Related species: *S. Potanini* Schneid. Shrub to 3 m.: lvs. ovate or elliptic-ovate, 3-6 cm. long, rather densely pubescent above, densely villous-pubescent beneath, usually short-acuminate; petiole 2-5 mm. long; infl. 6-10 cm. long; calyx often pilose; anthers yellow; fr. 10-15 mm. long, short-acuminate, smooth. B.M.9060(c). W. China. Intr. 1905.—*S. pinetorum* W. W. Sm. Young brts. densely pilose; lvs. ovate to ovate-lanceolate, 2-3.5 cm. long, sparingly pilose or glabrous above, pilose on the veins beneath, petiole 2-5 mm. long; panicle 10-18 cm. long; calyx glabrous, with ciliolate teeth; anthers yellow. S. W. China. Intr. about 1923? Zone VI?

11. *S. velutina* Komar. Shrub to 3 m.; brts. slightly pubescent or puberulous to nearly glabrous, often glandular; lvs. elliptic to ovate-oblong, acuminate, broad-cuneate or rounded at base, slightly pubescent to glabrous above, densely pubescent beneath or pilose only on midrib or veins; petiole 5-10 mm. long; fls. lilac, in pubescent panicles 6-20 cm. long; calyx pubescent or nearly glabrous; corolla-tube slender, 8-10 mm. long, with short, obtuse or acute, usually cucullate lobes; anthers violet, not reaching the mouth; fr. oblong, 1 cm. long, warty, acute. Fl.v. N.K.10:t.20. McKelvey, Lilacs, t.67-73. (*S. Koehneana* Schneid., *S. Palibiniana* Nakai, *S. Kamibayashii* Nakai.) N. China, Korea. Cult. 1902. Zone III.

12. *S. microphylla* Diels. Small shrub; young brts. more or less pilose; lvs. orbicular-ovate to elliptic-ovate, 1-4 cm. long, obtuse or abruptly acuminate, broad-cuneate to rounded at base, slightly pilose above, grayish green and pubescent beneath, at maturity only on the veins, ciliolate, or nearly glabrous; petiole 5-10 mm. long; fls. pale lilac, in loose pubescent panicles 3-7

cm. long; calyx pubescent or glabrescent; corolla-tube slender, 1 cm. long, with ovate-lanceolate acute lobes: fr. slender, 1-1.5 cm. long, acuminate, often curved, warty. Fl.vi. S.H.2:f.486z-z<sup>2</sup>,487n-p. E.P.IV.243,1:87. N. China. Intr. 1910. Zone V.

13. *S. pubescens* Turcz. Shrub to 2 m.; brts. slender, slightly quadrangular, glabrous: lvs. orbicular-ovate to rhombic-ovate or ovate, 3-7 cm. long, short-acuminate, broad-cuneate, ciliolate, dark green and glabrous above, pubescent beneath chiefly on the veins; petiole 6-12 mm. long: fls. pale lilac, fragrant, in rather dense glabrous panicles 7-12 cm. long; corolla-tube slender, 1.2-1.5 cm. long, with spreading narrow lobes; anthers inserted much below the mouth: fr. about 1 cm. long, obtusish, warty. Fl.iv-v. B.M.7064(c). G.F.1:415;6:266. G.C.38:123. Gn.M.34:43(h). H.B.3:233(h). (*S. villosa* Dene., not Turcz.) N. China. Intr. 1880. Zone V. Handsome lilac valued for its early fragrant fls.

14. *S. Meyeri* Schneid. Small dense shrub; young brts. slightly quadrangular, glabrous or puberulous: lvs. elliptic-ovate to sometimes elliptic-obovate, 2-4 cm. long, acute or obtusish, broad-cuneate, glabrous above, scarcely paler beneath and pubescent on the veins near base, with 2-3 pairs of veins from base nearly to apex; petiole 5-10 mm. long: fls. violet, in dense puberulous panicles 3-8 cm. long, usually several pairs at end of brs.; calyx dark violet, glabrous; corolla-tube very slender, about 1.5 cm. long, scarcely dilated at apex, with spreading acute lobes 3-4 mm. long; anthers inserted below the mouth: fr. verrucose. Fl.v-vi. N. China. Intr. 1908. Zone V. Compact low shrub, flowering when not more than 25 cm. tall, distinct with its dense panicles of violet fls.

15. *S. oblata* Lindl. Shrub or small tree to 4 m.; brts. rather stout, glabrous: lvs. orbicular-ovate or reniform, often broader than long, 4-10 cm. broad, abruptly acuminate, cordate to subcordate, glabrous; petiole 1-2 cm. long: fls. pale to purple-lilac, in dense rather broad panicles 6-12 cm. long; calyx slightly glandular; corolla-tube 10-12 mm. long, with spreading obtuse lobes: fr. compressed, 1-2 cm. long, acuminate, smooth. Fl.iv-v. B.M.7806(c). G.F.1:221. G.W.5:549. (*S. vulgaris* var. *o.* Franch.) N. China. Intr. 1856. Zone III. The type is a compact early blooming shrub with handsome foliage turning vinous-red in autumn; the vars. are taller and more loosely branched.—*S. o. alba* Rehd., var. Lvs. smaller, minutely pubescent beneath, on flowering brts. often glabrous, ciliolate: fls. white. R.H.1908:301. (*S. affinis* L. Henry, *S. o.* var. *affinis* Lingelsh.) Intr. 1880.—*S. o. Giraldii* (Lemoine) Rehd., var. Lvs. more gradually acuminate, minutely puberulous or sometimes pubescent beneath, ciliolate, or glabrous on flowering brs.: fls. purple-lilac, in slender panicles 10-15 cm. long; rachis and calyx purple-violet. R.H. 1909:335. (*S. G.* Lemoine.) N. China. Intr. about 1895.—*S. o. dilatata* (Nakai) Rehd., var. Lvs. ovate, to 12 cm. long, long-acuminate, usually truncate at base, quite glabrous: infl. loose; corolla-tube slenderer, 12-15 mm. long. N.K.10:t.18. (*S. d.* Nakai.) Korea. Intr. 1917.

*S. o. × vulgaris* = *S. hyacinthiflora* Lemoine. Intermediate between the parents, with broad-ovate lvs. turning purplish in autumn; only known in the double form, var. *S. h. plena* Lemoine. There are also hybrids of var. *Giraldii* and *S. vulgaris*, as "Lamartine" and "Mirabeau" of taller, slenderer habit and with single fls.—*S. o. × pinnatifolia*; see under No. 19.

16. *S. vulgaris* L. Upright shrub or small tree to 7 m.; brts. glabrous: lvs. ovate or broad-ovate, 5-12 cm. long, acuminate, truncate or subcordate to broad-cuneate, glabrous; petiole 1.5-3 cm. long: fls. very fragrant, usually lilac, in panicles 10-20 cm. long; corolla-tube slender, about 1 cm. long,

with spreading ovate obtuse lobes: fr. 1-1.5 cm. long, acute, smooth. Fl.v-v. B.M.183(c). R.I.17:t.32(c). F.E.22:5(h). M.G.14:205(h). S. E. Eu. Cult. 1563. Often escaped from cult. Zone III. One of the most popular ornamental shrubs with numerous horticultural forms mostly of French origin.—*S. v. alba* West., var. Fls. white: brts. yellowish gray; winter-buds yellowish green. Blooms a week earlier than other vars.—*S. v. coerúlea* West., var. Fls. blue, in rather loose panicles. This is the typical form.—*S. v. purpúrea* West., var. Fls. purplish red, in rather dense panicles.—*S. v. violácea* Ait., var. Fls. violet-lilac, in rather loose panicles.—*S. v. pléna* Oudin. Fls. blue, double.

*S. v. × oblata*; see under No. 15.—*S. v. × persica*; see No. 17.

Related species: *S. rhodópea* Velenovsky. Lvs. broad-ovate, subcordate: panicle to 20 cm. long, spreading; corolla-tube about 8 mm. long, lobes mostly 5: fr. acuminate. Bulgaria. Cult. 1922. Zone V. Intermediate between the two preceding species.

17. *S. chinénsis* Willd. (*S. persica* × *vulgaris*.) Shrub to 5 m., with slender spreading and often arching brs., glabrous: lvs. ovate-lanceolate, 4-8 cm. long, acuminate, cuneate; petiole about 1.5 cm. long; fls. purple-lilac, in large and rather loose glabrous panicles; corolla-tube 7-8 mm. long, with 4 ovate obtuse or acutish lobes. Fl.v. R.H.1883:8. (*S. rothomagensis* Mord. de Laun., *S. dubia* Pers., *Lilac media* and *L. varina* Dum.-Cours.) Orig. about 1777. Zone V.—*S. c. alba* (Kirchn.) Rehd., var. Fls. white. (*S. rothomagensis alba* Kirchn., *S. correlata* A. Br.)—*S. c. meténsis* (Simon-Louis) Dieck. Fls. rosy-lilac.—*S. c. Saugeana* (Loud.) Rehd., var. Fls. lilac-red. (*S. dubia rubra* Lodd., *S. rothomagensis* var. *S. Loud.*)—*S. c. dúplex* (Lemoine) Rehd., var. Fls. purplish lilac, double.

18. *S. persica* L. PERSIAN L. Shrub to 2 m., with upright or arching brs., glabrous: lvs. lanceolate, 3-6 cm. long, acuminate, cuneate, sometimes 3-lobed or pinnatifid; petiole 5-12 mm. long; fls. pale lilac, fragrant, in loose broad glabrous panicles 5-8 cm. long; pedicels as long or longer than calyx; corolla-tube slender, about 1 cm. long, with ovate acutish lobes: fr. 4-angled, 8-10 mm. long, obtusish, smooth. Fl.v. B.M.486(c). S.H.2:f.485k-s, 486n-q. W.A.50:t(h). Persia to N. W. China. Intr. about 1614. Zone V.—*S. p. integrifolia* Vahl., var. Lvs. all or almost all undivided. The typical form.—*S. p. alba* West., var. Fls. white or whitish. (*S. Steencruysii* Hort.)—*S. p. laciniata* (Mill.) West., var. Lvs. all or partly 3-9-lobed; of dwarfer habit and usually with smaller panicles. R.H.1901:40,41. L.B.1107(c). B.S.2:570. (*S. pteridifolia* Hort., *S. filicifolia* Hort., *S. p.* var. *pinnata* Jacques.) Spontaneous in N. W. China.

19. *S. pinnatifolia* Hemsl. PINNATE L. Upright shrub to 3 m.: lvs. pinnate, 4-8 cm. long; lfts. 7-11, ovate to ovate-lanceolate, 1-3 cm. long, only the upper pairs decurrent, the lower ones contracted at base, acute, ciliate; petiole 1-2 cm. long; fls. white, tinged pale lilac, in panicles 3-7 cm. long; corolla-tube slender, about 1 cm. long, with recurved obtusish lobes. Fl.v-vi. G.C.55:369. E.P.IV.243,1:91. W. China. Intr. 1904. Zone IV. Interesting for its pinnate lvs., but fls. not conspicuous.

*S. p. × oblata* var. *Giraldii* = *S. diversifolia* Rehd. Brts. with or without terminal bud: lvs. partly entire and ovate-oblong, rounded at base, or pinnatifid with 3-5 acuminate lobes: inf. to 11 cm. long, usually 1 pair at end of brts.; anthers just reaching the mouth. Orig. 1929.

20. *S. pekinénsis* Rupr. Large shrub to 5 m., with slender spreading brs. brownish red when young: lvs. ovate to ovate-lanceolate, 5-10 cm. long and 2-3.5 cm. broad, acuminate, cuneate, dark green above, grayish green beneath and scarcely veined, quite glabrous; petiole 1.5-2.5 cm. long; fls. yellowish

white, in large glabrous panicles 8–15 cm. long: corolla 6 mm. across; stamens about as long as limb: fr. oblong, acute, 1.5–2 cm. long, warty or smooth. Fl.vi. G.F.3:165;7:385. M.G.14:425. S.L.366(h). (*S. amurensis* var. *p.* Maxim., *Ligustrina* p. Reg.) N. China. Intr. 1881. Zone IV. Handsome large shrub with profuse yellowish white fls.—*S. p. pëndula* (Temple) Dipp., f. With slender pendulous brs. W. Am. Sci. 4:39(h).

21. *S. amurénsis* (Rupr.) Rupr. AMUR L. Shrub or small tree to 6 m., with upright or spreading brs.: lvs. broad-ovate to ovate, 5–12 cm. long and 3.5–6.5 cm. broad, abruptly to gradually acuminate, usually rounded or truncate at base, bright green above, grayish green and reticulate beneath and glabrous or slightly pubescent; petiole 1–2 cm. long: panicles rather loose, large, 10–15 cm. long; stamens almost twice as long as limb: fr. oblong, 1.5 cm. long, obtusish, smooth or slightly verrucose. Fl.vi. Gt.12:t.396;45:64. G.F.2:271. Gn.12:623,624. R.H.1877:453–5. (*S. rotundifolia* Dene., *S. ligustrina* Leroy, *S. sibirica* Hort. partly, *Ligustrina* a. var. *mandshurica* Maxim., *L. a.* Reg.) Manch., N. China. Intr. about 1855. Zone IV. Similar to the preceding, but of more upright and stouter habit.—*S. a. japónica* (Maxim.) Fr. & Sav., var. Tree to 10 m.: lvs. to 14 cm. long, often broad-ovate and subcordate, pubescent beneath at least when young: fr. to 2 cm. long, warty. Fl.vi–vii. B.M.7534(c). M.K.t.86(c, as *S. amurensis*). G.C.II.25:561. G.F.2:293(h). Gn.76:356(h). M.G.14:424(h);40:398(h). (*S. japonica* Dene., *Ligustrina amurensis* var. *j.* Maxim.) Japan. Intr. 1876. Zone IV. Valuable for its late blooming season.

6. **LIGÚSTRUM** L. PRIVET. Deciduous or evergreen shrubs or rarely trees; winter-buds ovoid, with about 2 outer scales: lvs. opposite, short-petioled, entire: fls. perfect, white, small, in terminal panicles, rarely from lateral leafless buds; calyx campanulate, 4-toothed: corolla salver-shaped, with usually short or sometimes elongated tube and with 4 spreading lobes; stamens 2, enclosed or exerted; style cylindric, not exceeding the stamens; ovary 2-celled; cells 2-ovuled: fr. a 1–4-seeded berry-like drupe, normally black or bluish black; endocarp in one species dehiscent. (The ancient Latin name of the privet.) About 50 species, chiefly in E. Asia and Malaysia to Australia, one in Eu. and N. Afr.—Ornamental shrubs or small trees mostly grown for their handsome foliage or for their often profusely produced white fls.

A. Corolla-tube shorter than limb or only slightly longer.

B. Lvs. deciduous or only half-evergreen.

C. Fls. pedicelled.

D. Brts. minutely puberulous or glabrous: lvs. glabrous: anthers not exceeding the corolla-lobes.

E. Lvs. with 4–5 pairs of indistinct veins, 3–6 cm. long, obtuse or acute.

EE. Lvs. with about 10 pairs of veins, 5–12 cm. long, acuminate.... 1. *L. vulgare*

DD. Brts. densely pubescent; lvs. pubescent on midrib beneath: anthers exceeding the corolla-lobes ..... 2. *L. compactum*

CC. Fls. sessile in long narrow spikes forming panicles; anthers exceeding the corolla-lobes ..... 3. *L. sinense*

BB. Lvs. persistent, coriaceous: brts. and infl. glabrous (except in *L. indicum* under No. 3).

C. Corolla-lobes about as long as tube: lvs. 6–12 cm. long, acuminate.... 5. *L. lucidum*

CC. Corolla-lobes slightly shorter than tube: lvs. 4–8 cm. long, short-acuminate or obtusish ..... 6. *L. japonicum*

AA. Corolla-tube 2 or 3 times as long as lobes.

B. Lvs. persistent; corolla-tube about 2 times as long as lobes.

C. Infl. cylindric, short, leafy at base: lvs. broad-cuneate to rounded at base, 1–3 cm. long ..... 7. *L. Delavayanum*

CC. Infl. pyramidal: lvs. usually rounded at base, 2–5.5 cm. long ..... 8. *L. Henryi*

BB. Lvs. deciduous or half-evergreen: corolla-tube about 3 times as long as lobes.

C. Brts. and lvs. glabrous; lvs. half-evergreen ..... 9. *L. ovalifolium*

- cc. Brts. pubescent and lvs. usually on midrib beneath.  
 d. Calyx and pedicels glabrous, or pedicels slightly pubescent.  
 e. Anthers exserted, equaling the lobes or slightly longer.....10. *L. acuminatum*  
 ee. Anthers exserted about  $\frac{1}{2}$ , not exceeding the middle of the corolla-lobes.  
 f. Infl. few-fl., to 1.5 cm. long; anthers nearly included.....11. *L. Ibota*  
 ff. Infl. many-fl., to 3 cm. long.  
 g. Lvs. acuminate to acute, pubescent on midrib beneath: shrub with spreading brs. ....12. *L. acutissimum*  
 gg. Lvs. obtusish to acute, finally glabrous or glabrate: shrub with upright brs. ....13. *L. amurense*  
 dd. Calyx and pedicels pubescent; anthers nearly as long as lobes: shrub with spreading brs. ....14. *L. obtusifolium*

1. *L. vulgare* L. COMMON P. Deciduous or half-evergreen shrub to 5 m., with slender spreading brs.; young brts. and panicles minutely puberulous: lvs. oblong-ovate to lanceolate, 3-6 cm. long, obtuse to acute, glabrous; petiole 3-10 mm. long; fls. pediceled, in rather dense panicles, 3-6 cm. long; anthers exceeding the tube, shorter than limb: fr. subglobose or ovoid, 6-8 mm. long, black, lustrous. Fl.vi-vii; fr.ix-x(-iii). S.O.3:t.147(c). R.I.17:t.33(c). H.W.3:122(c). F.E.33:1273(h). Eu., N. Afr.; naturalized in E. N. Am. Cult. since ancient times. Zone IV. Much used as a hedge plant.—Many garden forms; the most important are:—*L. v. aureum* Jaeg., var. Lvs. yellow.—*L. v. aureo-variegatum* West., var. Lvs. blotched yellow. S.O.3:t.147,f.(c).—*L. v. argenteo-variegatum* West., var. Lvs. variegated with white. S.O.3:t.147,f.(c).—*L. v. glaucum* Mouillef., var. Lvs. bluish green with narrow white margin. G.W.2:495. (*L. v. glaucum albo-variegatum* Spaeth.)—*L. v. buxifolium* Nichols. Lvs. ovate to oblong-ovate, obtuse, 1.5-2.5 cm. long, half-evergreen.—*L. v. sempervirens* Ait., var. Lvs. lanceolate to narrow-lanceolate, nearly evergreen. (*L. v. italicum* Hayne, *L. italicum* Mill., *L. foliosum* Hord.)—*L. v. chlorocarpum* Loud., var. Fr. greenish.—*L. v. leucocarpum* Sweet, var. Fr. white.—*L. v. xanthocarpum* G. Don, var. Fr. yellow.—*L. v. pendulum* Carr. With pendulous brs. Orig. 1854.—*L. v. pyramidale* Spaeth. Of pyramidal habit, with upright brs.—The form distributed as "Polish Privet" is apparently not different from the typical form; "Lodense" is a dwarf compact form.

Closely related species: *L. insulare* Dcne. Brts. more velvety-pubescent: lvs. narrow-oblong or lanceolate, 5-10 cm. long, acuminate, often pendulous, yellow-green: infl. larger; fr. larger. D.H.1:122. Cult. 1878. Orig. uncertain.

2. *L. compactum* Hook. f. & Thoms. Half-evergreen shrub or small tree to 10 m.; brts. and petioles glabrous or minutely puberulous: lvs. elliptic-lanceolate to lanceolate, 8-15 cm. long, acuminate, occasionally coarsely toothed, bright green and lustrous above, light green beneath, with 8-15 pairs of veins; petiole 6-15 mm. long; fls. small, in large panicles 10-16 cm. long; anthers about as long as corolla-lobes: fr. ellipsoid, 7-10 mm. long, bluish black. Fl.vi-vii; fr.x. R.H.1902:498-500. M.D.1915:t.3(1). (*L. yunnanense* L. Henry, *L. longifolium* Hort, *L. salicifolium* Carr.) Himal., S. W. China. Cult. 1877. Zone VII.

Closely related species: *L. Chenaütii* Hiekel. Deciduous; brts. with conspicuous white lenticles; winter-buds acute: lvs. lanceolate, rounded at base, to 25 cm. long. B.D.1925:51(1). S. W. China. Intr. 1908.

3. *L. sinense* Lour. CHINESE P. Shrub to 4 m., with spreading brs., or small tree to 7 m.; brts. densely pubescent: lvs. elliptic to elliptic-oblong, 3-7 cm. long, acute to obtuse, usually broad-cuneate, dull green above, pubescent on the midrib beneath; petiole 3-6 mm. long; fls. distinctly stalked, in loose pubescent panicles 6-10 cm. long; calyx pubescent; corolla-tube shorter than lobes; stamens exceeding the lobes: fr. subglobose, about 4 mm. across. Fl.vii; fr.ix-x(-i). M.D.1915:t.1,2. G.C.66:142(h). B.S.2:28,t(h). (*L. villosum*

May, *L. sinense* var. *villosum* Rehd., *L. Fortunei* Hort.) China. Intr. 1852. Zone VII. One of the most graceful and handsomest Privets when covered with its numerous large panicles.—*L. s. multiflorum* (Bowles) Bean, var. *Anthers* reddish brown. G.C.50:237(h). (*L. ovalifolium multiflorum* Bowles.)—*L. s. Stauntonii* (DC.) Rehd., var. Less high and more spreading; brts. less pubescent: lvs. elliptic to ovate, usually obtuse: panicles broader and looser. G.C.II.10:365. G.F.3:213. S.L.212. (*L. S. DC.*, *L. chinense nanum* Carr.)

Related species: *L. indicum* (Lour.) Merr. Half-evergreen tree: brts. short-villous: lvs. ovate-elliptic to ovate-lanceolate, 4–8 cm. long, acuminate, cuneate, pubescent beneath or only on midrib: infl. loose, pyramidal, to 12 cm. long, pubescent; calyx glabrous: fr. subglobose, 5 mm. across. Wall. Pl. As. Rar. 3:t.270(c). (*L. nepalense* Wall.) Himal., Indochina. Cult. 1933. Zone VII.

4. *L. Quihoii* Carr. Shrub to 2 m., with spreading, rather rigid brs.; brts. and panicles finely pubescent: lvs. elliptic to elliptic-oblong or obovate to obovate-oblong, 2–5 cm. long, obtuse, sometimes slightly emarginate, glabrous, subcoriaceous; petiole 1–3 mm. long, puberulous: fls. sessile, in small clusters forming long cylindric spikes collected into panicles 10–20 cm. long: corolla-tube as long as lobes; anthers exceeding the lobes. Fl.viii–ix; fr.x–xi. G.C.II.18:277;70:157(h). Gn.66:292(h);89:669(h). (*L. brachystachyum* Dcne.) China. Intr. 1862. Zone VI. Distinct Privet valuable on account of its late fls.

Closely related species: *L. Purpusii* Hoefker. Lvs. broader, usually elliptic, thinner; panicle shorter and broader, more pyramidal; corolla-lobes less spreading. M.D.1915:t.5. China. Cult. 1904.

5. *L. lucidum* Ait. Glossy P. Large shrub or tree to 10 m., with spreading glabrous lenticellate brs.: lvs. ovate to ovate-lanceolate, 8–12 cm. long, acuminate or acute, usually broad-cuneate, with 6–8 pairs of veins usually distinct above and beneath, veinlets beneath often impressed; petiole 1–2 cm. long: panicles 12–20 cm. long and nearly as wide; fls. subsessile; corolla-tube about as long as calyx; stamens about as long as corolla-lobes: fr. oblong, about 1 cm. long, blue-black. Fl.viii–ix; fr.ix–x(–xi). B.M.2565(c),2921(c). G.C.II.10:753. M.D.1915:t.14. N.T.1:388. (*L. japonicum macrophyllum* Hort., *L. magnoliaefolium* Hort., *L. sinense latifolium robustum* Hort., *L. spicatum* Hort.) China, Korea, Japan. Intr. 1794. Zone VII. Planted as street tree in warmer regions; one of the white-wax trees in China.

6. *L. japonicum* Thunb. JAPANESE P. Shrub to 3, rarely to 6 m.; glabrous except young brts. and infl. minutely puberulous at first, lenticellate: lvs. broad-ovate to ovate-oblong, 4–10 cm. long, obtusely short-acuminate or acute to obtusish, usually rounded at base, with reddish margin and midrib, with 4–5 pairs of indistinct veins; petiole 6–12 mm. long: panicles 6–15 cm. long, pyramidal; fls. short-stalked, corolla-tube exceeding the calyx; stamens slightly longer than lobes. Fl.vii–ix; fr.x–xi. R.B.25:84(c). S.I.1:t.82(c). B.S.2:26. N.T.1:386. G.W.2:567. Japan, Korea. Intr. 1845. Zone VII? Handsome evergreen shrub.—*L. j. variegatum* Nichols. Lvs. margined and blotched with creamy-white.—*L. j. rotundifolium* Bl., var. Compact shrub to 2 m., with stiff short brs.: lvs. crowded, broad-ovate or suborbicular, 3–6 cm. long, obtuse or emarginate, dark lustrous green, thick, often curved; panicle compact, 5–10 cm. long; fls. sessile: fr. subglobose, about 5 mm. across. B.M.7519(c). G.C.53:265. R.H.1874:418;1888:440. (*L. coriaceum* Carr., *L. jap. coriaceum* Lav.) Intr. 1860.

Another evergreen species is *L. sempervirens* (Franch.) Lingelsh. Glabrous shrub to 2 m.: lvs. suborbicular or broad-elliptic to ovate, 1.5–4 cm. long, obtuse or short-acuminate, lustrous, thick: infl. dense, 4–7 cm. long; fls. sessile or sub-

sessile; tube of corolla scarcely twice as long as lobes; filaments much shorter than lobes: fr. ellipsoid, 8 mm. long; endocarp finally dehiscent with 2 valves. (*Syringa* s. Franch. *Parasyringa* s. W. W. Sm.) W. China. Intr. 1922. Zone VII? It forms the sect. *SARCOCARPION* Mansfeld characterized by the dehiscent endocarp.

7. *L. Delavayanum* Hariot. Evergreen shrub to 2 m., with slender spreading brs.; brts. pubescent: lvs. ovate or elliptic, rarely oblong-obovate, 1-3 cm. long, acute, broad-cuneate to rounded at base, dark lustrous green above, glabrous except downy on midrib above; petiole 1-2 mm. long; panicle pubescent, narrow, 2-5 cm. long, leafy at base; pedicels 1-4 mm. long, glabrous or nearly so; calyx glabrous; corolla-tube 5 mm. long; anthers nearly as long as lobes, violet. Fl.vi; fr.x. R.H.1901:496. S.H.2:f.509k-l,510b. G.C.71:179 (h). J.L.49:t.5(h). (*L. Pratii* Koehne, *L. ionandrum* Diels.) W. China. Intr. 1890. Zone VII? Low shrub with small lvs.

8. *L. Hénryi* Hemsl. Shrub to 4 m.; brts. pubescent: lvs. orbicular-ovate or ovate to ovate-lanceolate, 1.5-5 cm. long, obtusely short-acuminate, usually rounded at base, dark green and lustrous above; petiole 1-2 mm. long; panicle pubescent, pyramidal, short-stalked, 4-12 cm. long; calyx glabrous; corolla 6-7 mm. long; anthers nearly as long as corolla-lobes: fr. ovoid-oblong, 8 mm. long. Fl.viii. B.S.2:25. S.H.2:f.509f-i,510a. C. China. Intr. 1901. Zone VII. Similar to the preceding species but lvs. and infl. larger.

Related species: *L. strongylophyllum* Hemsl. Shrub or small tree: brts. minutely pubescent: lvs. suborbicular to broad-ovate, 1-2.5 cm. long, dark green, glabrous; panicle pyramidal, rather loose, 5-10 cm. long; corolla about 7 mm. long; tube about 1½ as long as lobes; anthers shorter than lobes. B.M.8069 (c). C. China. Intr. 1879. Zone VII.—*L. Massalóngianum* Vis. Shrub to 1 m.; brts. pilose: lvs. linear-lanceolate, 3-8 cm. long, gradually narrowed at ends, glabrous; panicle 6-8 cm. long, pilose; fls. pediceled; anthers about ½ as long as corolla-lobes. G.C.II.16:149. Rep. Sp. Nov. 1:10. Himal. Intr. 1877. Zone VII?

9. *L. ovalifolium* Hassk. CALIFORNIA P. Deciduous or half-evergreen upright shrub to 5 m.; brts. glabrous: lvs. elliptic-ovate to elliptic-oblong, 3-6 cm. long, acute, broad-cuneate, dark lustrous green above, yellowish green beneath, glabrous; petiole 3-4 mm. long; fls. creamy-white, rather unpleasantly scented, subsessile, in compact glabrous panicles 5-10 cm. long; corolla 8 mm. long; anthers as long as lobes: fr. subglobose, 5-7 mm. across, black. Fl.vii; fr.x-xi. S.I.1:t.84(c). F.E.33:1223(h). (*L. medium* Fr. & Sav., *L. californicum* Hort., *L. japonicum* Hort., not Thunb.) Japan. Cult. 1847. Zone (V). Upright shrub of rather stiff habit with lustrous lvs.; much used for hedges.—*L. o. variegatum* T. Moore. Lvs. variegated with pale yellow. (*L. o. robustum variegatum* Hort., *L. o. aureum* Carr.)—*L. o. aureo-marginatum* Rehd., var. Lvs. with broad yellow margin or almost entirely yellow. (*L. o. var. aureum* Bean.)

*L. o. × obtusifolium* = *L. ibolium* Coe. Upright shrub; brts. puberulous: lvs. pubescent on midrib beneath: infl. puberulous; calyx glabrous; anthers about as long as corolla-lobes. Orig. about 1910. Zone V.—Useful as a hedge plant, hardier than the preceding species.

10. *L. acuminatum* Koehne. Shrub to 2 m., with upright and spreading brs.: lvs. rhombic-ovate to ovate-lanceolate, 3-8 cm. long, acute to acuminate, cuneate, appressed-pubescent near margin above and ciliolate, pubescent on midrib beneath; petiole 2-5 mm. long, pubescent: panicle 3-6 cm. long, pubescent: fls. subsessile; corolla 9-10 mm. long; anthers exerted: fr. ovoid, 8 mm. long, lustrous black. Fl.vi; fr.ix-x. S.T.1:t.71. M.D.1904:74. N.T.1:383. (*L. ciliatum* Rehd., not Bl., *L. medium* Hort., not Franch. & Sav.) Japan. Intr. 1888. Zone IV. Lvs. turn yellow in fall and drop rather

early.—*L. a. macrocárpum* (Koehne) Schneid., var. More strictly upright: lvs. larger: fr. to 12 mm. long. N.T.1:281. M.D.1904:75. (*L. m.* Koehne.) Japan. Intr. before 1900.

11. *L. Ibota* Sieb. & Zucc. Shrub to 2 m., with spreading brs.; brts. slightly pubescent, the shoots usually glabrous: lvs. rhombic-ovate to elliptic-oblong, 1.5–5 cm. long, acute, cuneate, ciliolate, light green beneath and pubescent on midrib: infl. nearly capitate, 1–1.5 cm. long, 4–8-fid., slender-peduncled; corolla 8 mm. long; anthers slightly exceeding the tube: fr. globose-ovoid, 7–8 mm. long. Fl.vi; fr.ix–x. N.T.1:368. M.D.1904:73. S.H. 2:f.507n–q.508f. (*L. ciliatum* Sieb., *L. ibota* var. *ciliatum* Dipp.) Japan. Cult. 1870. Zone V. One of the least ornamental species.

12. *L. acutissimum* Koehne. Shrub to 3 m., with spreading brs.; brts. pubescent: lvs. elliptic- or ovate-oblong to lanceolate, 1–7 cm. long, acute or acuminate, cuneate or broad-cuneate, dark green above, light green beneath and pubescent on midrib and often sparingly on the face; petiole 1–2 mm. long; panicles narrow, nearly cylindric, 2–5 cm. long; anthers reaching the middle of the lobes: fr. globose-ovoid or ovoid, 8–9 mm. long, bluish black. Fl.vi; fr.ix–x. S.H.2:f.505m–n<sup>2</sup>, 506a–d. Rep. Sp. Nov. 1:8. C. China. Intr. about 1900. Zone V. Similar to *L. obtusifolium*, but less graceful.

13. *L. amuréense* Carr. AMUR P. Shrub to 5 m., with upright brs., nearly pyramidal; brts. pubescent: lvs. elliptic to oblong, 2.5–6 cm. long, obtuse to acute, rounded or broad-cuneate at base, ciliolate, sometimes lustrous above, glabrous except pubescent on midrib beneath; petiole 2–4 mm. long, usually pubescent: panicle 3–5 cm. long, pubescent; calyx glabrous or slightly pubescent near base; corolla 7–9 mm. long; anthers slightly exserted, not reaching the middle of the lobes: fr. globose-ovoid, 6–8 mm. long, black, slightly bloomy. Fl.vi–vii; fr.ix–x. S.T.1:t.72. M.D.1904:72. R.H.1861:352. (*L. ibota* var. *a.* Hort.) N. China. Cult. 1860. Zone III. Somewhat similar to *L. ovalifolium*; hardier.

14. *L. obtusifolium* Sieb. & Zucc. Shrub to 3 m., with spreading or arching brs.; brts. pubescent: lvs. elliptic to oblong or oblong-obovate, 2–6 cm. long, acute or obtuse, cuneate or broad-cuneate, glabrous above, pubescent beneath or only on midrib: petiole 1–4 mm. long, pubescent; panicles nodding, 2–3.5 cm. long, usually numerous on short brts. along the brs.; calyx pubescent; corolla 8–10 mm. long; anthers nearly as long as lobes: fr. subglobose, about 6 mm. long, black, slightly bloomy. Fl.vii; fr.ix–x. S.I.1:t.83(c). G.F.6:425. B.C.4:1861. Gn.M.29:225(h). S.L.213(h). (*L. ibota* Sieb.) Japan. Intr. about 1860. Zone III. Graceful floriferous shrub.—*L. o. Regelianum* (Koehne) Rehd., var. Low shrub with almost horizontally spreading brs.: lvs. usually more pubescent, oblong to obovate: panicle shorter; anthers broader. M.D.1904:70. R.H.1904:434(h), 435. N.T.1:365. S.L.214(h). (*L. R.* Koehne.) Japan. Cult. 1885. Zone V.

7. **PHILLYREA** L. Evergreen shrubs or small trees: lvs. opposite, short-petioled, serrate or entire: fls. small, whitish, dioecious, in axillary short, usually clustered, racemes; calyx 4-toothed; corolla 4-lobed, the lobes imbricate in bud, longer than tube; stamens 2, exserted, on short filaments; style shorter than stamens; ovary 2-celled, with 2 pendulous ovules in each cell: fr. a 1-seeded black drupe. (The ancient Greek name of the plant.) Four species in the Mediterr. region.

A. Lvs. 1–6 cm. long: fr. subglobose to ovoid.....1. *P. latifolia*  
 AA. Lvs. 7–12 cm. long: fr. oblong, about 1 cm. long.....2. *P. decora*

1. *P. latifolia* L. Spreading shrub or small tree to 10 m.; young brts. puberulous: lvs. ovate or elliptic-ovate, rarely ovate-oblong, 2-6 cm. long, acute, subcordate or rounded to broad-cuneate, usually sharply or sometimes indistinctly serrate, dark green and lustrous above, light green beneath and usually pubescent on midrib, with 5-12 pairs of veins; petiole very short, puberulous: fls. greenish white, about 5 mm. across, in small clusters; pedicels 2-5 mm. long; corolla-lobes ovate: fr. subglobose, about 6 mm. across, blue-black. Fl.v-vi. R.I.17:t.34.f.1-III(c). H.W.3:123. S.H.2:f.4931-s. S. Eu., Asia Minor. Cult. 1597. Zone VII. Densely branched shrub or tree; very variable in the shape of its lvs.—*P. l. spinosa* West., var. Lvs. spinulose-serrate. (*P. ilicifolia* Willd.)—*P. l. media* (L.) Schneid., var. Usually shrubby or tree to 6 m.; lvs. elliptic-ovate to oblong-ovate or ovate-lanceolate, 1.5-5 cm. long, crenate-serrulate or entire: fr. often ovoid and pointed. R.I.17:t.34.f.3(c). G.O.t.116(c). N.D.2:t.27(c). (*P. m. l.*) S. Eu., Asia Minor. Intr. before 1597.—*P. l. rotundifolia* Rehd., var. Lvs. broad-obovate to elliptic, 3-5.5 long, to 3.5 cm. broad, obtuse or obtusish, slightly serrulate. Cult. 1896.

Closely related species: *P. angustifolia* L. Shrub to 3 m.; brts. glabrous; lvs. oblong-lanceolate to linear-lanceolate, 2-6 cm. long, acute, cuneate, usually entire, yellowish green and glabrous beneath, with 5-6 pairs of veins: fr. globose or globose-ovoid, pointed. R.I.17:t.35.f.3.4(c). G.O.t.115(c). (*P. vulgaris* var. *a.* Caruel.) S. Eu., N. Afr. Cult. 1597. Zone VII?

2. *P. decora* Boiss. & Bal. Shrub to 3 m., with upright-spreading brs.; brts. glabrous: lvs. oblong to oblong-lanceolate, acuminate, broad-cuneate, entire, rarely remotely serrate, dark green and lustrous above, yellowish green beneath, glabrous: petiole 1-1.5 cm. long: fls. white, in dense clusters; pedicels 3-15 mm. long; corolla 6-7 mm. across, with narrow-oblong lobes: fr. oblong-ovoid, purplish black, about 1.5 cm. long. Fl.iv-v; fr.viii-ix. B.M. 6800(c). G.C.III.4:673;16:369. M.G.13:349(h). Gs.2:7(h).80. (*P. Vilmosriniana* Boiss. & Bal., *P. laurifolia* Hort.) W. Asia. Intr. 1867. Zone VI or (V). The handsomest and hardiest species of the genus.

*P. d.* × *Siphonosmanthus Delavayi*; see 7a. *Osmarea*.

7a. × *OSMAREA* Burkwood (*Phillyrea* × *Siphonosmanthus*). Differs from the former in the corolla-tube about as long as lobes and in the only slightly exerted anthers, from the latter in the slender pedicels and the corolla-tube about as long as lobes. (Name an abbreviated compound of *Osmanthus* and *Phillyrea*).

O. *Burkwoodii* Burkwood (*P. decora* × *S. Delavayi*). Evergreen shrub; brts. puberulous: lvs. short-petioled, elliptic or elliptic-ovate to oblong-ovate, 2-4 cm. long, acute, broad-cuneate or nearly rounded at base, serrulate, sometimes very slightly so, glabrous: fls. white, fragrant, in terminal and axillary 5-7-fld. fascicles; pedicels 5-8 mm. long; calyx-lobes 2 mm. long, acute and dentate at apex, greenish white; corolla-tube 4-5 mm. long, lobes oblong, as long or slightly shorter; anthers slightly exceeding the mouth; style as long as calyx. Fl.iv-v. Orig. before 1928. Zone VI.

8. *SIPHONOSMANTHUS* Stapf. Evergreen shrubs; winter-buds with 2 outer pubescent scales: lvs. opposite, short-petioled, serrate: fls. polygamous, in terminal and lateral fascicles, short-stalked; calyx 4-lobed, whitish; corolla-tube cylindric, with 4 short, spreading lobes; stamens 2, inserted just below the mouth; anthers slightly exerted, introrse; ovary 2-celled: fr. a small 1-seeded drupe with crustaceous endocarp. (Greek *siphōn*, tube, and *Osmanthus*.) Syn.: *Osmanthus* sect. *Siphosmanthus* Franch. Two species in S. W. China and India.

**S. Delavayi** (Franch.) Stapf. Shrub to 2 m.; young brts. puberulous: lvs. ovate to elliptic-ovate, 1-2.5 cm. long, acute or acutish, broad-cuneate at base, sharply or indistinctly toothed, gland-dotted beneath, glabrous: fls. short-stalked or sessile, white, fragrant, in 4-8-fld. fascicles; calyx-lobes ciliate; corolla-tube about 1 cm. long, lobes oval, about 4 mm. long: fr. ovoid, mucronulate, about 1.2 cm. long, bluish black. Fl. v. B.M.8459(c). Gn.79:232 (h); 83:185; 88:757(h). B.S.2:112. (*Osmanthus* D. Franch.) W. China. Intr. 1890. Zone VII.

Closely related species: *S. suavis* (Clarke) Stapf. Lvs. lance-oblong to lanceolate, 3-7 cm. long, acuminate, crenate-dentate: petiole 5-7 mm. long: corolla-tube 6-9 mm. long. B.M.9176(c). N. E. India. Cult. 1929. Zone VII?

**9. OSMANTHUS** Lour. Evergreen shrubs or small trees; winter-buds with 2 outer scales, sometimes superposed: lvs. opposite, short-petioled, entire or serrate: fls. perfect, polygamous or dioecious, in axillary or terminal cymes or panicles; calyx short, 4-toothed; corolla with short, rarely long tube and 4 imbricate lobes; stamens 2, rarely 4, included; style cylindric, with capitate stigma, usually about as long as tube; ovary 2-celled, each cell with 2 ovules: fr. an ovoid drupe with a one-seeded stone. (Greek *osme*, fragrance, and *anthos*, flower, in reference to the fls. of *O. fragrans*.) About 15 species in E. and S. Asia, Polynesia and 2 in N. Am.

A. Fls. slender-stalked, fascicled: lvs. often serrate. .... 1. *O. ilicifolius*  
 AA. Fls. subsessile, paniculate; corolla-tube about as long as lobes: lvs. entire.

2. *O. americanus*

**1. O. ilicifolius** (Hassk.) Mouillef. Shrub or small tree to 6 m.: lvs. elliptic or ovate to elliptic-oblong, 2-6 cm. long, spiny-pointed, cuneate or broad-cuneate, with 1-4 pairs of strong spiny teeth, rarely entire, lustrous and dark green above, yellowish green and veined beneath; petiole 8-12 mm. long: fls. fragrant, in axillary clusters; pedicels 3-8 mm. long; sepals triangular, entire; corolla divided nearly to base, with reflexed lobes: fr. ovoid, about 1.5 cm. long, bluish black. Fl. vi-vii. S.I.1:t.82(c). G.C.II.7:239,f.38. K.B. 1911:177,t. S.L.242(h). (*O. Aquifolium* Benth. & Hook., *Olea Aquifolium* Sieb. & Zucc., *Olea ilicifolia* Hassk.) Japan. Intr. 1856. Zone VI. Evergreen shrubs with handsome lustrous lvs.—*O. i. variegatus* (Standish) Rehd., f. Lvs. variegated with white. (*O. i. argenteo-marginatus* Bean.)—*O. i. aureo-marginatus* Bean. Lvs. variegated with yellow. (*O. i. aureus* Rehd.)—*O. i. purpurascens* Bean. Lvs. purple at first, later green with purple tinge. (*O. i. f. purpureus* Rehd., *O. A. var. atropurpureus* Schneid.)—*O. i. myrtifolius* (Dipp.) Mouillef., var. Lvs. elliptic to elliptic-oblong, 2.5-4.5 cm. long, entire, acute or acuminate. Gn.50:86. (*O. Aquifolium* var. *m.* Dipp.)—*O. i. rotundifolius* (Jaeg.) Rehd., f. Lvs. broad-elliptic, often obovate, about 2.5 cm. long, entire or with short obtusish teeth; like the preceding a dwarf slow-growing form. S.H.2:f.496k-l. (*O. Aquifolium* var. *r.* Dipp.)

*O. i. × fragrans* = *O. Fortunei* Carr. Shrub to 2, rarely to 6 m.; lvs. elliptic-ovate to oblong-ovate, 6-10 cm. long, with usually 6-10 pairs of spiny teeth, rarely entire: fls. very fragrant; sepals denticulate. R.H.1864:70. K.B. 1911:177,t. (*O. japonicus* Mak.) Intr. from Japan in 1856.—*O. fragrans* Lour. is not hardy within our area.

Related species: *O. armatus* Diels. Shrub to 5 m.; young brts. densely puberulous: lvs. lance-oblong to lanceolate, 8-14 cm. long, broad-cuneate to subcordate, remotely spiny-toothed, reticulate; petiole 3-6 mm. long, puberulous, reddish: fls. fragrant, slender-stalked; corolla 4-5 mm. long, divided to the middle. Fl. ix-x. B.M.9232(c). Gs.20:53. G.C.68:117(h). W. China. Intr. 1902. Zone VII?—*O. Forrestii* Rehd. Shrub to 8 m.; brts. glabrous: lvs. lance-ovate to oblong-lanceolate, 6-20 cm. long, acuminate, broad-cuneate to rounded at base, entire or spiny-toothed, reticulate beneath and with 10 to 16 con-

spicuous veins: fls. creamy-white, fragrant; pedicels to 1 cm. long, slender; corolla 5 mm. long, divided nearly to base, about 8-10 mm. across: fr. ovoid, 1-1.5 cm. long. W. China. Intr. 1923. Zone VII.—*O. serrulatus* Rehd. Shrub to 4 m.; young brts. puberulous: lvs. elliptic-oblong to obovate- or lance-oblong, 6-12 cm. long, slender-acuminate, cuneate, sharply serrulate or serrate to entire: fls. fragrant; pedicels 8-18 mm. long; corolla divided nearly to base, 10-12 mm. across: fr. oblong, about 1 cm. long. W. China. Intr. 1910. Zone VII.

2. *O. americanus* (L.) Gray. Shrub or tree to 15 m., glabrous: lvs. lance-oblong to obovate, 5-15 cm. long, acute to obtuse, rarely emarginate, cuneate, entire and somewhat revolute at the margin; petiole 1-2 cm. long; fls. white, fragrant, short-stalked or sessile, in short panicles; calyx-lobes acute; corolla-tube 3-4 mm. long, lobes ovate, spreading; anthers slightly exserted or included: fr. ovoid, 10-14 mm. long, dark blue. Fl. iv. fr. ix-iii. S.S.6:t.279. S.M.857. N. C. to Fla. and Miss. Cult. 1758. Zone VI.

10. **FORESTIÈRA** Poir. Deciduous, rarely evergreen trees or shrubs: lvs. opposite, short-petioled, entire or serrate: fls. polygamo-dioecious, apetalous, small, in lateral clusters or racemes on brts. of the previous season; sepals 4-6, unequal, fugacious, sometimes wanting; stamens 2-4; ovary 2-celled, with 2 pendulous ovules in each cell; style slender, with capitate, sometimes 2-lobed stigma: fr. a small, usually black, 1-, rarely 2-seeded drupe. (After Charles Le-Forestier, French physician and naturalist; about 1800.) Syn. *Adelia* Michx., not L., *Borya* Willd., not Lab. About 20 species from N. Am. and the W. Indies to Brazil.—Shrubs of little ornamental value.

A. Lvs. acuminate, 3-10 cm. long.....1. *F. acuminata*  
 AA. Lvs. obtusish or acute, 1-4 cm. long.....2. *F. neo-mexicana*

1. *F. acuminata* (Michx.) Poir. Deciduous shrub to 3 m. or small tree sometimes to 10 m.; glabrous: lvs. ovate-oblong to ovate-lanceolate, acuminate, cuneate, slightly serrate, principally above the middle, light green; petiole 5-15 mm. long: fls. greenish, minute; the staminate in dense bracted clusters, the pistillate in short panicles: fr. narrow-oblong, 1.2-1.5 cm. long, dark purple. Fl. iv-v; fr. vi-vii. S.M.854. B.B.2:728. (*Adelia a.* Michx.) III. and Mo. to Ga. and Tex. Intr. 1812. Zone V.

2. *F. neo-mexicana* Gray. Deciduous shrub to 3 m., with spreading brs. sometimes spinescent: lvs. oblong-obovate to oblanceolate, 1.5-4 cm. long, narrowed into a short petiole, slightly crenulate-serrate, grayish green, glabrous: pistillate and staminate fls. in clusters; the pistillate with 2-4 usually sterile stamens; pedicels 3-4 mm. long: fr. short-ellipsoid, 4-5 mm. long. Fl. iv-v; fr. viii. M.D.1919:72. (*F. acuminata* var. *parvifolia* Gray, *Adelia parvifolia* Cov.) Tex. to N. Mex. and Colo. Cult. 1913. Zone V.

Closely related species: *F. pubescens* Nutt. Brts. pubescent: lvs. elliptic to oblong-obovate, slightly serrate, pubescent; pistillate fls. stalked: fr. oblong, 6-7 mm. long; stone ribbed. (*Adelia p.* Ktze.) Ark. to Fla. and Tex. Cult. 1900. Zone V.—*F. ligustrina* (Michx.) Poir. Shrub to 3 m.; brts. pubescent or glabrescent: lvs. petioled, elliptic to oblong or oblong-obovate, obtuse, cuneate, appressed-serrulate, pubescent beneath: fls. sessile or subsessile: fr. ellipsoid, 7-8 mm. long. Fl. viii. S.H.2:f.407f-h, 408d-e. (*Adelia l.* Michx.) Tenn. to Ga. and Fla. Cult. 1810. Zone VI?

11. **CHIONANTHUS** L. FRINGE-TREE. Deciduous trees or shrubs; winter-buds with several outer acute scales: lvs. opposite, petioled, entire: fls. dioecious or functionally dioecious, white, in loose panicles from lateral buds near the end of year-old brs.; calyx 4-cleft; corolla divided nearly to the base into 4 narrow petals; anthers 2, subsessile, or on very short filaments; style very short, with 2-lobed stigma; ovary 2-celled; cells 2-ovuled: fr. a

1-seeded oval dark blue drupe. (Greek *chion*, snow, and *anthos* flower; in reference to the abundant white fls.) Two species in N. Am. and China.

- A. Lvs. generally oblong, 8-20 cm. long.....1. *C. virginicus*  
 AA. Lvs. elliptic or ovate 4-10 cm. long.....2. *C. retusus*

1. *C. virginicus* L. Large shrub or tree to 10 m.; brts. stout, pubescent when young: lvs. narrow-elliptic to oblong or obovate-oblong, 8-20 cm. long, acute or acuminate, cuneate, dark green and lustrous above, paler and pubescent at least on the veins beneath, usually becoming glabrate; petiole 1-2.5 cm. long, pubescent; panicles 10-20 cm. long, usually with leafy bracts at base; calyx-lobes triangular; petals 1.5-3 cm. long, about 2 mm. broad, sometimes 5 or 6 in the staminate fl.; staminate fl. with sterile pistil: fr. ellipsoid, 1.5-2 cm. long, dark blue. Fl.v-vi; fr.ix. S.S.6:t.267. S.M.855. G.F.7:325(h). M.G.14:412,413(h);15:413(h). Am. For. 24:157(h). N. J. to Fla. and Tex. Intr. 1736. Zone IV. Striking shrub when covered with feathery white fls.; the staminate plant has larger panicles and large fls., but lacks the ornamental fr.; the lvs. turn bright yellow in fall.—*C. v. maritimus* Pursh, var. Lvs. beneath and panicles pubescent. Gt.16:t.564. (*C. v. var. pubescens* Dipp.)

2. *C. retusus* Lindl. & Paxt. Shrub with spreading brs. or small tree to 6 m.; young brts. pubescent: lvs. elliptic or ovate to elliptic-oblong or sometimes obovate, 3-10 cm. long, acute to obtuse or sometimes emarginate, broad-cuneate to rounded, entire, serrulate on young plants, pubescent on the veins beneath at least when young, reticulate: fls. in broad panicles 6-10 cm. long, at end of lateral leafy shoots; calyx-lobes lanceolate; petals 1.2-2 cm. long, about 3 mm. broad; staminate fl. without pistil: fr. ellipsoid, 1.2-1.5 cm. long, dark blue. Fl.vi-vii; fr.ix-x. N.K.10:t. N.T.1:346. G.C.47:328(h),329. G.F.7:327. B.S.1:339,t(h),340. A.G.22:363(h). China, Korea, Japan. Intr. 1845, reintr. 1879. Zone V. Almost as handsome as the preceding species, blooming later.

12. **JASMINUM** L. JASMINE. Deciduous or evergreen, twining or upright shrubs, with usually green angled brs.; pith lamellate or solid: lvs. opposite or alternate, odd-pinnate or simple; lfts. entire: fls. usually in terminal cymes or lateral on year-old brts., perfect, regular, yellow or white, rarely pink, salver-shaped, with slender tube and 4-9 lobes convolute in bud; calyx campanulate, with 4-9 minute or subulate lobes; stamens 2, included; ovary 2-celled, each cell with 1-4 usually upright ovules: fr. a 2-lobed, usually black berry, each carpel 1-2-seeded; seed with little albumen. (The latinized Arabic name.) About 200 species chiefly in trop. and subtrop. regions; in Am. only 1 species.

- A. Lvs. opposite.  
 B. Fls. lateral, solitary, yellow: lfts. 3.....1. *J. nudiflorum*  
 BB. Fls. terminal, usually several.  
 C. Lvs. simple: fls. pink.....2. *J. Beesianum*  
 CC. Lvs. pinnate: fls. white.....3. *J. officinale*  
 AA. Lvs. alternate, pinnate or pinnatifid.  
 B. Lfts. and brts. glabrous.  
 C. Calyx-teeth subulate, as long or longer than calyx-tube.  
 D. Infl. many-fl.; lfts. 3-5.....4. *J. floridum*  
 DD. Infl. 2-5-fl.; lfts. 3.....5. *J. fruticans*  
 CC. Calyx-teeth shorter than calyx-tube (except in var.).....6. *J. humile*  
 BB. Lfts. and brts. pubescent: calyx-teeth pilose, subulate.....7. *J. Giraldii*

1. *J. nudiflorum* Lindl. WINTER J. Deciduous shrub with slender upright and arching brs., to 5 m.; brts. angled, glabrous: lfts. 3, ovate to oblong-ovate, 1-3 cm. long, narrowed at ends, mucronulate, ciliate; petiole 5-10 mm. long: fls. bright yellow, solitary and axillary along last year's brs., on

stalks about 6 mm. long and covered with narrow green bracts; calyx-lobes linear, green, as long or longer than calyx-tube; corolla 2-2.5 cm. across, with usually 6 often wavy obovate lobes about half as long as tube. Fl. II-IV. B.M. 4649(c). B.R.32:48(c). G.C.III.11:181. Gs.2:248(hc). Gn.89:537(h). (*J. Sieboldianum* Bl.) China. Intr. 1844. Zone (V). Valued for its early fls.—*J. n. aureum* Dipp., f. Lvs. variegated with yellow.

Closely related species: *J. Mésnyi* Hance. PRIMROSE *J.* Evergreen shrub to 3 m.: lfts. elliptic-oblong to lanceolate, 2-7 cm. long; fls. sometimes on elongated leafy brts.; corolla about 4 cm. across with 6-10 lobes, sometimes double; calyx-lobes lanceolate, much longer than calyx-tube. B.M.7981(c). R.H.1906:472.t(c). Gn.71:270.t(c):87:195. G.C.33:197. (*J. primulinum* Hemsl.) W. China. Intr. 1900. Zone VII?

2. *J. Beesianum* Forrest & Diels. ROSY *J.* Slender shrub to 1 m. or climbing to 2 m.; brts. grooved, slightly pubescent, chiefly near the nodes: lfts. solitary, ovate-lanceolate to lanceolate, 3-5 cm. long, acuminate, slightly pubescent on both sides; petiole 1-3 mm. long; fls. 1-3, pink or deep rose, fragrant; calyx-teeth subulate, 6 mm. long; corolla about 1.5 cm. across, with broad-elliptic to suborbicular lobes about half as long as tube. Fl. V. G.C.77:131. W. China. Intr. about 1910. Zone VI.—Remarkable for its pink fls. though less showy than those of most other species.

*J. B. × officinale* f. *grandiflorum* = *J. stephanense* Lemoine. Lvs. simple or with 3-5 lfts., the terminal usually ovate-lanceolate, 2-4 cm. long, acuminate, slightly pubescent beneath: fls. pale pink, fragrant, in 3-5-fld. corymbs; corolla-tube 1 cm. long, limb about as wide. Orig. about 1918, also found in W. China. Zone VII.

3. *J. officinale* L. COMMON WHITE *J.* Deciduous or half-evergreen climbing or sarmentose shrub, sometimes to 10 m.; brts. slender, angled, glabrous or nearly so: lfts. 5-7, rarely 9, elliptic-ovate to oblong-ovate, 1-6 cm. long, acute or acuminate, sessile, the terminal larger and stalked, glabrous: fls. white, fragrant, slender-pedicelled in 2-10-fld. terminal cymes; calyx-teeth linear, 6-10 mm. long, corolla about 2.5 cm. across with 4-5 oblong lobes about as long as tube. Fl. VI-X. S.O.3:t.150(c). B.M.31(c). B.C.3:1718. Persia to Kashmir and China. Cult. since ancient times. Zone VII. With fragrant white fls.—*J. o. aureo-variegatum* West., var. Lvs. blotched yellow. (*J. o.* var. *aureum* Bean.)—*J. o. affine* (Lindl.) Nichols. Corolla pink outside. B.R.31:26(c). R.H.1878:428. (*J. a.* Carr.)—*J. o. grandiflorum* (L.) Kobuski. Fls. about 4 cm. across; tube 1.5-2 cm. long. B.R.91(c). (*J. g.* L.)

Related species: *J. polyanthum* Franch. Lfts. 5-7, oblong-ovate to lance-ovate, 3-7 cm. long, acuminate or long-acuminate, usually rounded or subcordate and 3-nerved at base: infl. many-fld., paniculate; calyx-teeth subulate, as long or shorter than calyx-tube; corolla pink outside, white inside, fragrant; tube about 2 cm. long, lobes half as long. R.H.1891:270. W. China. Intr. 1906? Zone VII.

4. *J. flōridum* Bge. Half-evergreen shrub, with upright or spreading flexuose brs.; brts. angled, glabrous: lfts. usually 3, sometimes 5, elliptic-ovate to ovate-oblong, 1-3.5 cm. long, acute: fls. yellow in terminal many-fld. cymes; calyx-teeth subulate, as long as tube. Fl. VII-IX. B.M.6719(c). S.H.2:f.527h-i, 528a-c. China. Intr. 1850. Zone VII.

5. *J. frūticans* L. Evergreen or half-evergreen shrub with slender upright or spreading weak brs., to 3 m.; brts. angled, glabrous: lfts. 3, rarely 1, obovate-oblong or oblong to spatulate, 8-20 mm. long, obtuse, cuneate, ciliolate: fls. yellow, in 2-5-fld. cymes on short lateral brts.; calyx campanulate, with subulate teeth; corolla about 1.5 cm. across, with 5 ovate obtuse lobes. Fl. VI-VII. B.M.461(c). S.O.3:t.148(c). S.H.2:f.527f-g, 528k-n. S. Eu., N. Afr., W. Asia. Intr. about 1570. Zone VII.

6. *J. humile* L. Evergreen or nearly evergreen shrub, to 1.5 m. high, glabrous; brts. slightly angled: lfts. 3, sometimes 5, rarely 7, ovate or elliptic to oblong, obtuse or acute, dark green above, pale beneath: infl. 2-6-fld.; calyx-teeth minute, triangular to subulate; corolla yellow; tube about 1 cm. long, limb about 1 cm. across. Fl.vi-vii. B.R.350(c). S.O.3:t.149(c). W. China; naturalized in Persia and elsewhere. Cult. 1650. Zone VII.—*J. h. kansuense* Kobuski, var. Lfts. usually 3, rarely 5, sometimes 1, ovate to oval or elliptic or obovate, 8-15 mm. long: infl. 3-7-fld.; calyx-teeth subulate, about as long as tube. N. W. China. Intr. 1926. Zone VI?—*J. h. siderophyllum* (Lévl.) Kobuski, var. Brts. strongly angled: lfts. 5, often 3, ovate to ovate-lanceolate, acute to acuminate, the terminal subcaudate, short-setose above along the revolute margin: infl. 3-7-fld.: corolla-tube 1 cm. long, limb. 1-1.5 cm. across. W. China. Intr. 1923.—*J. h. revolutum* (Sims) Kobuski, var. Lfts. 5-7, ovate to ovate-lanceolate, rarely oval, 2-6 cm. long, acute to acuminate: infl. many-fld.; corolla-tube 1.5 cm. long, limb 2-2.5 cm. across. B.M.1731(c). L.B.966(c). (*J. r.* Sims.) W. Himal. to Kashmir. Cult. 1814.—*J. h. glabrum* (DC.) Kobuski, var. Brts. strongly angled: lfts. 7-13, ovate to lanceolate, 2-5 cm. long, acute to acuminate, the terminal usually caudate-acuminate: infl. 1-3-fld.; corolla-tube 1-1.5 cm. long, limb about 1.5 cm. across. B.R.1409(c). (*J. pubigerum* var. *g.* DC., *J. Wallichianum* Lindl.) Nepal. Intr. 1912.

Related species: *J. diversifolium* Kobuski. Brts. subterete, glabrous: lvs. subcoriaceous, simple or 3-foliolate; lfts. ovate-lanceolate, 8-14 cm. long, lustrous above, glabrous: fls. yellow, in many-fld. corymbs 10 cm. across, puberulous; calyx-teeth minute; corolla-tube 8-10 mm. long, lobes about 6 mm. long. Wall. Pl. As. Rar. 3:t.275(c). (*J. heterophyllum* Roxb., not Moench.) E. Himal. Intr. 1820. Zone VII?—*J. d. glabricymosum* (W. W. Sm.) Kobuski, var. Lfts. 4-9 cm. long: corymbs smaller, glabrous. Cult. 1933. W. China. Cult. 1915. Zone VII.

7. *J. Giraldii* Diels. Deciduous shrub to 2 m., with spreading brs.; brts. angled, pilose: lfts. 3, rarely 5, elliptic or ovate or oblong-ovate, 1-4 cm. long, obtuse and mucronate to acute, sparingly hairy above, glaucescent and pilose beneath, densely so on the veins; petiole 5-10 mm. long, hairy: fls. yellow, in 3-9-fld. cymes; calyx-teeth subulate, pilose, slightly shorter, rarely longer than tube; corolla 1.2-1.5 cm. across, with slightly spreading ovate lobes. Fl. v-vi. C. China. Intr. 1907. Zone VII.

Related species: *J. Parkeri* Dunn. Low shrub to 30 cm.; brts. angled, like lvs. and calyx puberulous: lfts. 3-5, ovate, 3-6 mm. long, obtuse: fls. solitary, terminal and axillary; calyx-teeth subulate, half as long as tube: corolla yellow, about 1.5 cm. across with 6 lobes half as long as tube. N. W. Himal. Intr. 1923. Zone VII?—Close to *J. humile* is *J. Farreri* Gilmour. Brts. pubescent when young; lfts. usually 3, narrow-lanceolate to lanceolate or sometimes broad-lanceolate, the terminal 2-8 cm. long, the lateral 1-4 cm., acuminate, pubescent on both sides: calyx-teeth triangular, apiculate. B.M.9351(c). Burma. Intr. 1919. Zone VII.

#### Fam. 96. LOGANIACEAE Lindl. LOGANIA FAMILY

Herbs, shrubs or trees: lvs. usually opposite, simple, stipulate: fls. usually perfect and regular, usually in cymes or panicles; calyx 4- or 5-lobed or -parted; corolla 4- or 5-lobed, rarely with 8-16 lobes; lobes imbricate or convolute in bud; stamens as many as corolla-lobes and usually alternate with them, rarely reduced to 1; ovary superior, 2-celled; ovules usually many; style with 2 or rarely 4 stigmas: fr. a caps., rarely a berry or drupe; seed albuminous, sometimes winged.—More than 30 genera and about 400 species, mostly trop. or subtrop., few in N. Am.

- A. Habit climbing; glabrous: fls. solitary or few, yellow.....1. *Gelsemium*  
 AA. Habit not climbing, pubescent: fls. in panicles or heads, small.....2. *Buddleia*

1. **GELSEMIUM** Juss. Evergreen twining glabrous shrubs; winter-buds with several pairs of pointed scales: lvs. opposite or sometimes verticillate, short-petioled, entire; stipules reduced to a stipular line: fls. axillary, 1 or few or in dense cymes, fragrant; calyx 5-parted; corolla funnelform, with 5 short imbricate lobes; style slender, 4-cleft at apex: caps. ovoid or oblong, septicial, with flattened and winged seeds. (From *gelsomino*, the Italian name of the true Jasmine.) Two species in E. N. Am. and in E. Asia.

**G. sempervirens** (L.) Ait. CAROLINA YELLOW JESSAMINE. Climbing to 6 m.: lvs. lanceolate or oblong-lanceolate, rarely ovate, 2-9 cm. long, acute or acuminate, dark green and lustrous above: fls. bright yellow, 1 or few on short scaly stalks; corolla about 3 cm. long; caps. 1-1.5 cm. long, compressed. Fl. iv-vi. B.M.7851(c). E.N.IV.2:29. G.W.9:494. Va. to Fla. and Tex. and to C. Am. Intr. 1640. Zone VII. Used for covering porches and banks and valued for its yellow, fragrant fls. and lustrous lvs.

2. **BÜDDLEIA** L. BUTTERFLY-BUSH. Deciduous or evergreen shrubs or trees, rarely herbs, with stellate, glandular or scaly pubescence; winter-buds acute, with usually 2 outer scales, superposed: lvs. opposite, rarely alternate, short-petioled, entire or serrate; stipules reduced to a stipular line, occasionally developed: fls. variously colored, in clusters, panicles or spikes; calyx campanulate, 4-lobed; stamens 4, included; corolla tubular or campanulate, 4-lobed; styles with a 2-lobed stigma: fr. a 2-valved septicidal caps.; calyx and usually corolla persistent; seeds numerous, minute. (After Adam Buddle, an English botanist; 1660-1715.) Also spelled *Buddleja* or *Buddlea*. About 100 species in trop. and temp. regions of Am., Asia and S. Afr.—Ornamental shrubs, planted chiefly for their showy fls.

- A. Lvs. alternate: fls. in short dense clusters on last year's brs.....1. *B. alternifolia*  
 AA. Lvs. opposite.

B. Corolla-tube curved; stamens inserted near base of corolla-tube.

c. Panicles upright; corolla glandular outside.....2. *B. Lindleyana*

cc. Panicles pendulous; corolla gray-tomentose outside.....3. *B. japonica*

BB. Corolla-tube straight; stamens inserted near the middle or near the mouth of the tube.

c. Fls. in panicles, lilac to purple or white.

d. Stamens inserted immediately below the mouth: infl. spike-like.....4. *B. nivea*

DD. Stamens inserted about the middle of the corolla-tube.

e. Fls. in slender spike-like panicles on elongated brts.

f. Ovary glabrous; corolla glabrous outside.....5. *B. Davidi*

FF. Ovary tomentose; corolla tomentose outside.....6. *B. stenostachya*

EE. Fls. in pyramidal terminal panicles on short brts., or in short lateral dense

panicles.....7. *B. crispa*

cc. Fls. in long-peduncled globose heads, yellow.....8. *B. globosa*

1. **B. alternifolia** Maxim. Shrub to 4 m. or small tree with widespread arching brs.; brts. scurfy, soon glabrous: lvs. alternate, lanceolate, 3-10 cm. long, narrowed toward the acute or obtusish apex, cuneate, dull dark green above, with grayish white scurfy tomentum beneath; petiole 5-20 mm. long: fls. borne along last year's brs. in dense short-stalked clusters 1-2 cm. long, leafy at base; calyx grayish tomentose, with broad-ovate lobes: corolla bright lilac-purple; tube 8 mm. long, nearly glabrous outside; ovary glabrous: caps. oblong-ovoid, 4 mm. long. Fl.vi. B.M.9085(c). G.C.78:27. Gn.87:52; 88:757. J.L.47:192,t(h). N. W. China. Intr. 1914. Zone V. With long arching brs. covered with clusters of lilac-purple fls.; the hardiest species and the earliest to bloom.

2. **B. Lindleyana** Fort. Upright shrub to 2 m.; brts. 4-angled and usually slightly winged: lvs. ovate to oblong-lanceolate, 5-10 cm. long, acuminate,

remotely denticulate, pale green beneath and slightly puberulous or nearly glabrous: fls. purplish violet in upright rather dense spikes 7–20 cm. long; calyx scurfy, with triangular-ovate lobes; corolla slightly curved, 1.5 cm. long, scurfy outside. Fl.vii–viii. B.R.32:4(c). F.S.2:t.112(c). R.H.1846:201,t(c). E. China; sometimes naturalized in the S. E. States. Intr. about 1840. Zone VII.

*B. L. × japonica* = *B. intermedia* Carr. Lvs. oblong-ovate, 8–15 cm. long: fls. violet in arching or pendulous panicles; calyx-teeth ovate-lanceolate. R.H. 1873:151,t(c). Orig. about 1870.—*B. i. insignis* (Carr.) Rehd., var. Brts. 4-winged: lvs. oblong-lanceolate, often in 3's: fls. rosy-violet in erect fairly dense spikes 10–15 cm. long. R.H.1878:330,t(c). (*B. i.* Carr., *B. japonica* var. *i.* Wils.)

3. *B. japonica* Hemsl. JAPANESE B. Shrub to 2 m., with spreading 4-winged brts.: lvs. ovate- or oblong-lanceolate, 8–20 cm. long, acuminate, cuneate, remotely denticulate, rarely coarsely toothed, glabrous above, grayish tomentose at first beneath, later usually glabrate: fls. pale lilac, in dense pendulous panicles 10–20 cm. long; calyx woolly, with lanceolate lobes; corolla 1.5–1.8 cm. long, slightly curved, tomentose outside, with slightly spreading short lobes: caps. ovoid, about 6 mm. long, surrounded by the persistent calyx and corolla. Fl.vi–ix; fr.viii–ix. I.H.17:t.25(c). N.T.1:428. R.H.1870:337;1878:330. (*B. curviflora* of André, not Hook. & Arn., *B. insignis* of Nakai, not Carr.) Japan. Intr. about 1866. Zone (V). One of the least ornamental species.

4. *B. nivea* Duthie. Upright shrub to 3 m.; brts., under side of lvs. and inf. densely covered with white fluffy tomentum becoming tawny: lvs. ovate-lanceolate, 10–25 cm. long, acuminate, nearly rounded at base, rather coarsely toothed, finally glabrous above and dark green: fls. lilac or purple in dense narrow spikes 8–15 cm. long, usually several at end of brts.: corolla tomentose outside; tube 6 mm. long; stamens inserted below the mouth; caps. oblong-ovoid, pubescent. Fl.viii–ix. G.C.38:275. B.S.1:273. Gt.73:156(h). W. China. Intr. 1901. Zone VII. Conspicuous on account of the fluffy tomentum; the fls. almost hidden by the white wool.—*B. n. yunnanensis* (Dop) Rehd. & Wils., var. Tomentum less fluffy, yellowish: lvs. pubescent above: fls. larger and spikes usually solitary. W. China. Intr. 1908. Zone VII?

Related species: *B. Forrestii* Diels. Brts. glabrous: lvs. crenate-serrate, 10–20 cm. long, with close cinnamon-colored tomentum beneath, short-petioled: inf. paniculate, 6–12 cm. long, upright, glabrescent; corolla 8–10 mm. long, reddish-maroon, nearly glabrous outside, tube 3.5 mm. wide. W. China. Cult. 1928. Zone VII?—*B. albiflora* Hemsl. Shrub to 4 m., similar to the following; brts. pubescent, soon glabrous: lvs. lanceolate, cuneate, closely white-tomentose beneath: fls. usually lilac, orange at throat, in spikes 20–50 cm. long; calyx slightly pubescent; corolla glabrous or glabrescent outside. G.27:501. (*B. Hemslayana* Koehne.) C. and W. China. Intr. 1900. Zone (V).

5. *B. Davidi* Franch. ORANGE-EYE B. Shrub to 5 m., with spreading brs., rarely weak and prostrate; brts. slightly angled, pubescent: lvs. ovate-lanceolate to lanceolate, 10–25 cm. long, acuminate, cuneate, closely serrate or serrulate, dark green and soon glabrous above, white-tomentose beneath: fls. fragrant, in upright or nodding spikes 10–25 cm. long; calyx pubescent, with ovate lobes; corolla usually lilac, orange at the mouth; tube about 1 cm. long, glabrous or slightly pubescent outside; stamens inserted about the middle of the tube; caps. oblong, pointed, 6–8 mm. long. Fl.vii–x. B.M. 7609(c). Ad.2:t.45(c). R.H.1898:132,t(c). G.C.III.24:139. Gn.55:428,t(c); 88:67(h). (*B. variabilis* Hemsl.) China. Cult. 1890. Zone (V). Handsome and valued for its late blooming season.—*B. D. Veitchiana* (Veitch) Rehd., var. More robust, with dense large spikes of mauve-colored fls. with bright orange eye; the earliest to bloom. J.L.27:182. G.W.16:538. Gn.84:499. Intr.

1893.—*B. D. magnifica* (Wils.) Rehd. & Wils., var. Similar to the preceding var., with larger deep rose-purple fls. in very dense spikes, with deep orange eye and the margins of the corolla-lobes reflexed. Gn.69:288,t(c). R.B.33:281,t(c). S.L.109(h). Intr. 1900.—*B. D. superba* (De Corte) Rehd. & Wils., var. Similar to the preceding, but corolla-lobes not reflexed and panicles larger. R.B.35:12,t(c). Intr. 1900.—*B. D. Wilsonii* (Wils.) Rehd. & Wils., var. Tall and arching, with longer and narrower lvs. and looser drooping spikes, sometimes to 70 cm. long; corolla smaller, rose-lilac, the lobes with reflexed margin. Intr. 1900.—*B. D. nanhoensis* (Chittenden) Rehd., var. Shrub to 1.5 m., with slender spreading brs.: lvs. lanceolate, up to 12 cm. long and 2-4.5 cm. broad. Kansu. Intr. 1914. (*B. variabilis* var. *n.* Chittenden.)

*B. D. × asiatica* = *B. hybrida* Farquhar. Lvs. densely white-tomentose beneath, serrulate; spikes slender; corolla pubescent outside; in the form "Eva Dudley" pale lavender-pink with orange throat. Orig. before 1918. Zone VII. *B. asiatica* Lour. is not hardy in our area.—*B. D. × globosa*; see under No. 8.

6. *B. stenostachya* Rehd. & Wils. Shrub to 3 m.; brts. terete, like infl. and lvs. beneath densely white-tomentose; lvs. lance-oblong to oblong-ovate, 12-20 cm. long, acuminate, cuneate, crenate-serrate or nearly entire, dull green and glabrescent above; petiole 4-8 mm. long; spikes usually 3 at end of brs., narrow-cylindric, 15-45 cm. long; corolla lilac, tube 8 mm. long, pubescent without and within; stamens inserted above the middle of tube; caps. cylindric-oblong, 8-12 mm. long. Fl.viii-ix. W. China. Intr. 1908. Zone VII.

Related species: *B. candida* Dunn. Young brts. terete, tomentose; lvs. lanceolate or lance-oblong, 12-17 cm. long, rugulose and pubescent above, densely woolly beneath; petiole 1 cm. long; spikes 10-12 cm. long, slender; corolla-tube 6 cm. long, tomentose outside, lobes small, violet. E. Himal. Intr. 1928. Zone VII?—*B. Fallowiana* Balf. f. & W. W. Sm. Brts. terete, tomentose; lvs. ovate-lanceolate, 6-14 cm. long, crenate-denticulate, dull above, densely white- or fulvous-tomentose beneath; petiole 5-10 cm. long, sometimes with auriculate stipules at base; infl. dense, spike-like, 8-14 cm. long; corolla about 8 mm. long, lavender, tomentose outside. B.M.9564(c). N.F.1:f.30(h). G.C.80:489 (as *B. Forrestii*). Gs.14:154(h). W. China. Cult. 1921. Zone VII?—*B. myriantha* Diels. Brts. quadrangular, slender, thinly tomentose, glabrescent; lvs. lanceolate, 8-15 cm. long, acuminate, auriculate, serrate, closely white or yellowish tomentose beneath; petiole short; spikes 10-20 cm. long, slender; corolla purple, tomentose outside. W. China, Burma. Cult. 1933. Zone VII?

7. *B. crispa* Benth. Shrub to 5 m.; brts. white or tawny villous-tomentose; lvs. oblong-lanceolate to lanceolate, 5-12 cm. long, acuminate, truncate to subcordate or subhastate at base, coarsely toothed, pubescent above and white- or tawny-tomentose beneath; petiole 8-20 mm. long; fls. fragrant, in narrow-pyramidal dense panicles 5-10 cm. long, with leaf-like bracts at base, and usually also with short and dense lateral panicles below; corolla lilac, with white throat; tube about 8 mm. long, pubescent outside, glabrous inside above the middle. Fl.vi-ix. B.M.4793(c). F.S.9:958(c). (*B. paniculata* Clarke, not Wall., *B. tibetica* W. W. Sm.) N. W. Himal. and Afghan. Cult. 1854. Zone VII.—*B. c. Farreri* (Balf. f. & W. W. Sm.) Hand.-Mazz., var. Lvs. to 30 cm. long; petiole to 5 cm. long; terminal panicles to 20 cm. long; the lateral ones to 5 cm. long; corolla-tube glabrous outside, 7-8 mm. long, pale rose-lilac with yellow throat. B.M.9027(c). (*B. F.* Balf. f. & W. W. Sm.) N. W. China. Intr. about 1918. Zone VI?

Related species: *B. heliophila* W. W. Sm. Lvs. short-petioled, elliptic-ovate to ovate-oblong, 5-8 cm. long, acuminate, broad-cuneate to rounded at base, yellowish tomentulose beneath, slightly pubescent above; fls. fragrant, in panicles 6-15 cm. long, mostly from short lateral brts., rather loose, puberulous or nearly glabrous; calyx tomentulose; corolla rose-lavender, tube about 12 mm. long, tomentulose outside. W. China. Intr. 1913. Zone VII.—Very distinct is *B. salvifolia* Lam. Half-evergreen shrub to 5 m.; young brts. tomentose, quad-

angular: lvs. very short-stalked, stipulate, lanceolate, 2.5–10 cm. long, acuminate, cordate to hastate at base, crenulate, rugose above, reticulate and brown-tomentose beneath: panicles terminal, pyramidal, 6–15 cm. long, 3.5–8 cm. wide, tomentose: fls. pale lilac with orange throat, brown-tomentose outside. Sim., For. Fl. Cape Col. t.114. S. Afr. Cult. 1873. Zone VII?

8. *B. globosa* Hope. Half-evergreen shrub to 5 m. or more; brts. and lvs. beneath yellowish-tomentose: lvs. elliptic-ovate to lanceolate, 8–20 cm. long, acuminate, cuneate, crenate, rugose and glabrous above: fls. small, fragrant, bright yellow, in dense long-peduncled axillary heads 2 cm. across forming terminal panicles 10–20 cm. long. Fl.vi. B.M.171(c). Gn.33:369. F.R.3:335(h). (*B. capitata* Jacq.) Peru. Intr. 1774. Zone VII? Very distinct.

*B. g.* × *Davidii* = *B. Weyeriana* Weyer. Fls. grayish yellowish, grayish to violet in subglobose heads crowded into dense terminal panicles: in "Golden Glow" buff-colored; G.C.68:181; 74:208. Gn.87:526,679; in "Moonlight" creamy buff; Gn.87:526. Orig. about 1915.

### Fam. 97. APOCYNACEAE Lindl. DOGBANE FAMILY

Herbs, shrubs or trees, often climbing, with milky juice: lvs. opposite or verticillate, rarely alternate, entire, exstipulate, rarely with minute interpetiolar stipules or lines: fls. perfect, regular, in cymes, panicles or solitary; calyx 4–5-parted, with imbricate lobes, persistent: corolla usually with appendages in the throat, 4–5-lobed, lobes convolute in bud, rarely valvate; stamens 5, rarely 4, adnate to the tube; anthers usually sagittate and acute; pollen granular; carpels usually 2, mostly superior, distinct, rarely more or less united, usually many-ovuled, with an entire or lobed disk at base; style 1, simple or divided: fr. usually of 2 dehiscent follicles, sometimes berry-like or drupe-like; seeds usually compressed and often with a tuft of hairs; albumen usually scanty, sometimes wanting.—About 130 genera and 1100 species chiefly in trop. and subtrop. regions.

- A. Fls. solitary, axillary; trailing plant.....1. *Vinca*  
 AA. Fls. in cymes: climbing shrub.....2. *Trachelospermum*

1. **VINCA L. PERIWINKLE.** Evergreen or deciduous subshrubs or herbs, trailing, the flowering shoots upright: lvs. decussate: fls. rather large, usually blue; calyx small, 5-parted, with narrow acuminate teeth; corolla salverform, the lobes twisted to the left; stamens adnate to the middle of the tube; anthers free; filaments curved and thick; connective dilated, large; disk of 2 glands; carpels with 6–8 ovules; stigma large, with 5 tufts of hairs: follicles cylindric; seeds cylindric. (The ancient Latin name of the plant.) About 5 species in Eu. and W. Asia.—Evergreen trailing subshrubs, chiefly used as ground-cover and for window-boxes.

- A. Lvs. and calyx-lobes glabrous; lvs. narrowed at base.....1. *V. minor*  
 AA. Lvs. at base and calyx-lobes ciliate; lvs. truncate or subcordate at base.....2. *V. major*

1. **V. minor L. SMALL P.** Flowering stems to 15 cm.: lvs. elliptic-ovate to elliptic-lanceolate, 2–4 cm. long, acutish or obtuse, lustrous dark green above; petiole 2–5 mm. long: fls. lilac-blue, about 2.5 cm. across; pedicels 1–3 cm. long; calyx-lobes lanceolate, 3 mm. long: follicles 7–8 cm. long. Fl.iv-ix. R.I.17:t.21(c). F.D.16:t.1577(c). S.E.6:t.906(c). Eu. and W. Asia. Often escaped from cult. Cult. since ancient times. Zone V.—*V. m. argenteo-variegata* West., var. Lvs. blotched with white.—*V. m. aureo-variegata* West., var. Lvs. blotched with yellow.—*V. m. alba* West., var. Fls. white.—*V. m. atropurpurea* Sweet, var. Fls. purple.—*V. m. multiplex* Sweet, var. Fls. purple, double. (*V. m. var. purpurea plena* West.)—*V. m. azurea* Bean, var. Fls. sky-blue.

2. *V. maior* L. Flowering stems to 30 cm.: lvs. ovate, 2-7 cm. long, acute or obtusish, dark lustrous green, ciliate, at least near base; petiole 8-1.2 mm. long, ciliate; fls. bright blue, 3-3.5 cm. across; pedicels 3-5 cm. long; calyx-lobes linear, about 1 cm. long; fr. 4-5 cm. long. Fl.v-ix. R.I.17:t.22,f.3(c). F.D.16:t.1576(c). S.E.6:t.905(c). S. Eu., W. Asia. Cult. 1789. Zone VII.—*V. m. variegata* Loud., var. Lvs. blotched and margined yellowish white. (*V. m. elegantissima* Nichols.)

Related species: *V. difformis* Pourr. Quite glabrous: lvs. ovate, 2-7 cm. long, broad-cuneate to truncate: fls. 3-3.5 cm. across, pale lilac-blue, with rhombic, acute lobes. Fl.ix-xii. B.M.8506(c). Gn.84:569(h). (*V. media* Hoffmanns. & Link, *V. acutiflora* Bertol.) S. W. Eu., N. Afr. Cult. 1880. Zone VII?

2. **TRACHELOSPERMUM** Lem. Evergreen twining shrubs; winter-buds minute, densely pubescent: lvs. opposite, short-petioled, distinctly veined, usually with minute interpetiolar stipules; fls. white in terminal or axillary cymes; calyx small, 5-parted, with 5-10 glands or scales inside at base; corolla salverform, tube cylindric, lobes ovate to oblong, twisted to the left and overlapping to the right; disk annular, truncate or 5-lobed; stamens inserted above the middle of the tube; filaments short, anthers united and adhering to the large stigma; style filiform; carpels 2, many-ovuled: fr. of 2 terete follicles; seeds linear with long tuft of hairs. (Greek *trachelos*, neck, and *sperma*, seed; though seed without neck.) About 16 species in trop. and subtrop. E. Asia.

*T. asiaticum* (Sieb. & Zucc.) Nakai. Climbing to 5 m. or more; brts. densely pubescent, red-brown: lvs. elliptic or ovate to elliptic-oblong, 2-5 cm. long, usually obtuse, lustrous dark green above; petiole about 5 mm. long: fls. yellowish white, fragrant, in peduncled terminal several-flid. cymes; pedicels 5-10 mm. long; buds long-acuminate; corolla 2 cm. across, tube about 8 mm. long; calyx-lobes narrow, pointed; anthers slightly exserted: follicles 12-22 cm. long, nearly parallel or spreading at acute angle. Fl.iv-vi. N.T.1:420. N.K.14:t.2. (*T. divaricatum* Kanitz, *T. crocostemon* Stapf, *Malouetia asiatica* Sieb. & Zucc.) Japan, Korea. Cult. 1880. Zone VII.

The closely related *T. jasminoides* Lem. has narrower lvs., pure white fls., acute in bud, included anthers, sepals reflexed at apex and spreading follicles. B.M.4737(c). China. Tender, often grown as a greenhouse plant.

## Fam. 98. ASCLEPIADACEAE Lindl. MILKWEED FAMILY

Herbs or shrubs, often twining, rarely trees, with milky juice: lvs. opposite, sometimes verticillate or alternate, usually entire, exstipulate: fls. perfect, regular, in terminal or axillary umbels, cymes or racemes; calyx 5-parted, imbricate; corolla 5-lobed, with usually reflexed lobes; corona usually present, either an outgrowth of the corolla or of the stamens or of both; stamens 5, the filaments more or less united and the anthers adhering to the stigma; pollen in groups of 4 (tetrads) and granular, or cohering into waxy masses (pollinia) attached to glandular appendages of the stigma: carpels 2, many-ovuled; styles 2, united into a discoid stigma; disk absent: fr. of 2 follicles; seeds usually with a long tuft of hairs.—About 220 genera and 2000 species in trop. and subtrop. regions of both hemispheres.

- A. Fls. brown-purple inside; lvs. rounded to cuneate at base: twining shrub: pollen granular ..... 1. *Periploca*  
 AA. Fls. white: lvs. cordate to rounded at base: pollen cohering into pollinia.  
 B. Corolla-lobes narrow-oblong, more or less upright, white: upright or slightly climbing shrub ..... 2. *Marsdenia*  
 BB. Corolla-lobes ovate or elliptic-ovate, dotted red inside, spreading: twining shrub. .... 3. *Wattakaka*

1. **PERÍPLOCA** L. Deciduous or evergreen twining shrubs, glabrous; winter-buds small, hairy, with few outer scales: lvs. opposite, entire: fls. in axillary or terminal cymes; calyx 5-lobed, glandular within; corolla rotate, 5-parted, with a 5 or 10-lobed crown at base of corolla; lobes overlapping to the right, often hairy above; stamens with very short free filaments and the anthers connected at apex and villous on back; pollen granular; style short, with a broad stigma: fr. of 2 follicles with numerous small winged seeds. (Greek *peri*, around, and *plokein*, to twine.) About 12 species from S. Eu. to trop. Afr., E. Asia and India.

- A. Lvs. generally elliptic, up to 5 cm. broad.....1. *P. graeca*  
 AA. Lvs. generally lanceolate, up to 2.5 cm. broad.....2. *P. sepium*

1. **P. graeca** L. SILK-VINE. Deciduous twining shrub to 15 m.: lvs. ovate or elliptic to oblong-lanceolate, 4-10 cm. long, acuminate, dark green and glossy above; petiole 6-12 mm. long: fls. about 2.5 cm. across, greenish yellow at the margin and outside, brown-purple inside, in loose long-peduncled 8-12-fld. cymes; corolla-lobes spreading, oblong, villous above; crown of 5 slender thread-like corona-lobes recurved at apex: follicles cylindric, 10-12 cm. long, usually cohering at apex. Fl.vii-viii; fr.ix-x. B.M.2289(c) B.R.303(c). L.B. 1389(c). Gn.84:78. S.Eu., W. Asia. Cult. 1597. Zone VI. Climber with dark green lustrous lvs. remaining green until late in fall.

2. **P. sepium** Bge. Similar to the preceding species; less high: lvs. lanceolate to oblong-lanceolate, 4-10 cm. long, long-acuminate; petiole 10-15 mm. long: fls. about 2 cm. across, in few-fld. cymes; corolla-lobes revolute: follicle 10-15 cm. long. Fl.vi-vii; fr.ix-x. Yabe, Icon. Fl. Manch.1:t.9(c). B.C.5: 2553. N. China. Intr. 1905. Zone IV. Slenderer than the preceding species and foliage less dense, turning yellow in fall; hardier.

2. **MARSDÈNIA** R. Br. Twining or upright shrubs: lvs. opposite, usually broad: fls. usually small, in panicles or umbels; sepals small, usually ovate and obtuse, glandular or glandless; corolla campanulate or urceolate to rotate or salverform, the lobes overlapping to the right; corona-lobes 5, scaly, adnate to the stamens and to the gynostegium; pollen cohering into pollinia one in each anther-cell; stigma flat to rostrate: follicle thick, smooth or winged, often fleshy. (After William Marsden, author of a history of Sumatra; 1754-1836.) About 80 species in subtrop. and trop. regions.

**M. erecta** (L.) R. Br. Deciduous twining shrub to 8 m., or low with prostrate brs.; young brts. slightly pubescent, green, becoming light gray-brown: lvs. ovate, 3.5-8 cm. long, acuminate, cordate, bright green and glabrous above, minutely pubescent on the veins at first, later glabrous, petiole 1-4 cm. long: fls. white, fragrant, 8 mm. across, in terminal and axillary peduncled cymes 3-7 cm. across; corolla-lobes narrow-oblong, obtuse; stamens with small petaloid appendages on the back: fr. conic-oblong or spindle-shaped, 7-8 cm. long; each seed with a tuft of hairs about 2.5 cm. long. Fl.v-vii; fr. viii-ix. D.H.1:161. S.H.2:f.535e-k,536c-d. (*Cynanchum erectum* L.) S. E. Eu., W. Asia. Cult. 1597. Zone (V). Of little ornamental merit.

3. **WATTAKAKA** (Dcne.) Hassk. Twining shrubs: lvs. cordate or rounded at base: fls. in axillary peduncled umbels; calyx 5-parted with small ovate to oblong lobes and 5 small glands between; corolla rotate, with very shallow cup-like tube, the lobes overlapping to the right; corona-lobes fleshy, knob-shaped, star-like, spreading; anthers with membranous tips appressed to the style-head; pollinia erect, narrowly club-shaped, with clavate trans-

lators: follicles horizontally spreading, slightly longitudinally ribbed to nearly smooth or with transverse corrugations. (Wattakaka-Rodi is the native Malabar name of *W. volubilis* (L. f.) Stapf.) Three species in S. Asia and Malaysia.

*W. sinensis* (Hemsl.) Stapf. Twining shrub to 3 m.; brts., pedicels and infl. pubescent: lvs. ovate or broad-ovate, 4-9 cm. long, acuminate or acute, cordate or rounded at base, bright green above, densely grayish pubescent beneath, usually 5-nerved at base; petiole 1-4.5 cm. long, pubescent: fls. 8-25 in umbels on a stalk 3-6 cm. long; corolla star-shaped, 1.5 cm. across; lobes ovate to elliptic, ciliolate, white with red dots; corona-lobes white: follicles attenuated upwards, 5.5-7 cm. long, finely pubescent, with faint ribs or rough with transverse corrugations. Fl.vi-vii; fr.x-xi. B.M.8976(c). (*Dregea* s. Hemsl.) C. and W. China. Intr. 1908. Zone VII?

#### Fam. 99. POLEMONIACEAE Juss. PHLOX FAMILY

Herbs, rarely shrubby: lvs. alternate or opposite, simple, pinnate or digitate, exstipulate: fls. perfect, regular or nearly so; calyx 5-cleft: corolla 5-lobed, the lobes convolute; stamens 5, inserted on the corolla-tube; ovary superior, 2-5-celled, with a disk at base; cells with many, rarely 1 ovule; style 1, 3-fid, rarely 5-fid at apex: fr. a loculicidal, rarely septicidal caps.; seed with copious albumen and a straight embryo.—About 12 genera and 270 species in Eu., Asia and Am.

*GILIA* Ruiz & Pav. Herbs or subshrubs: lvs. divided or entire, alternate or opposite: fls. solitary or in panicles; calyx tubular or campanulate, teeth of equal length: corolla salver- to funnelform or campanulate; stamens inserted in tube or at the mouth; filaments naked; style glabrous, with 3 filiform stigmas: caps. ovoid or oblong, 3-celled and 3-valved, few- to many-seeded; seeds small, not winged. (After Felipe Luis Gil, Spanish botanist; wrote on exotic plants about 1790.) Including *Leptodactylon* Hook. & Arn. More than 100 species in W. N. Am., few in S. Am.

*G. californica* (Hook. & Arn.) Benth. Subshrub with decumbent or upright much-branched villous stems to 80 cm.: lvs. alternate, crowded, palmately pinnatifid into 3-7 subulate pungent pilose segments 3-8 mm. long: fls. rose-pink, 1 or several on short brts. along the stems; calyx pilose, tubular with subulate teeth; corolla salver-shaped, tube 1.5 cm. long, limb 3 cm. across. Fl.vii. B.M.4872(c). G.C.80:11. N.F.1:102. (*Leptodactylon californicum* Hook. & Arn.) Calif. Cult. 1855. Zone VII.

#### Fam. 100. BORAGINACEAE Lindl. BORAGE FAMILY

Herbs, rarely shrubs or trees: lvs. usually alternate, usually rough-hairy, simple, usually entire, exstipulate: infl. cymose or usually scorpioid and spike-like, simple or forked: fls. perfect, usually regular: calyx 5-parted; corolla 5-lobed, with imbricate, rarely convolute lobes, rarely 4-lobed, often appendaged in the throat; stamens 5, inserted on the corolla-tube; ovary superior, of two 2-ovuled carpels, often deeply 4-lobed as if consisting of 4 1-ovuled carpels, with the style basal between the lobes: fr. usually of 4 nutlets, rarely berry-like; seed with straight or curved embryo and scant albumen.—About 85 genera and 1500 species in temp. and trop. regions.

- A. Fr. a drupe; style terminal; fls. in panicles: trees or tall shrubs.....1. *Ehretia*  
 A. Fr. of nutlets; style basal: fls. in scorpioid spikes or solitary: low shrubs or subshrubs.  
 a. Stamens exerted .....2. *Moltkia*  
 aa. Stamens included .....3. *Lithospermum*

1. **EHRETIA** L. Deciduous or evergreen trees or shrubs; winter-buds subglobose, with imbricate scales: lvs. alternate, entire or serrate: fls. small, usually white, in terminal, rarely axillary panicles or corymbs; calyx small, 5-parted; corolla short-funnelform to rotate, with 5 spreading obtuse lobes imbricate in bud; stamens 5, usually exserted, with oblong or ovate anthers; filaments slender: ovary 2- or 4-celled: fr. a usually globose drupe with 4 1-celled or two 2-celled nutlets. (After G. D. Ehret, botanical painter, born in Germany about 1710; died in England 1770.) About 50 species in trop. and subtrop., few extending into temperate regions.

- A. Lvs. glabrous or nearly so.....1. *E. thyrsoflora*  
 A. Lvs. pubescent beneath, rough-hairy above.....2. *E. Dicksoni*

1. **E. thyrsoflora** (Sieb. & Zucc.) Nakai. Deciduous tree, to 15 m.; brts. glabrous: lvs. obovate to oblong-obovate, 5-18 cm. long, acute or short-acuminate, broad-cuneate or sometimes rounded at base, serrate, glabrous except axillary tufts of hairs beneath; petiole 1-2.5 cm. long: fls. white, subsessile, in panicles 8-20 cm. long; sepals rounded, ciliate; corolla rotate, about 6 mm. across, with oblong lobes longer than tube; stamens about as long as corolla-lobes: fr. globose, 4 mm. across, first orange, later brownish black. Fl.vi-vii; fr.viii. N.K.14:t.4. N.T.1:443. I.S.2:t.99. (*E. acuminata* of Hemsl., not R. Br., *E. serrata* Fr. & Sav., not Roxb.) China, Japan, Korea. Formosa. Intr. 1900. Zone V. Small tree with upright brs. and large panicles of white fls., interesting as the only arborescent representative of the family, hardy as far north as Mass.

2. **E. Dicksoni** Hance. Deciduous tree to 10 m.; brts. slightly pubescent at first: lvs. broad-elliptic to elliptic, 8-20 cm. long, short-acuminate, rounded at base to subcordate or broad-cuneate, serrate, rough-pubescent above, more or less densely pubescent beneath, rarely glabrescent; petiole 1-3 cm. long: fls. white, fragrant, subsessile, in corymbose panicles 5-10 cm. long and nearly as broad; calyx pubescent, with ovate to ovate-oblong ciliate lobes; corolla about 1 cm. across, with short-funnelform tube as long or longer than lobes: fr. subglobose, beaked, 1-1.5 cm. across, yellowish. Fl.v-vi; fr.ix. R.H.1914: 174(h), 175. M.O.362. (*E. macrophylla* Hemsl., not Wall.) China, Formosa, Liukiu Isls. Intr. 1897. Zone VII?

2. **MÓLTZIA** Lehm. Herbs or half-evergreen subshrubs: lvs. alternate, narrow, entire: fls. purple, blue or yellow in dense scorpioid terminal inf.; calyx 5-cleft, with linear lobes; corolla tubular-funnelform, sometimes pubescent in the throat, with 5 upright lobes; stamens with slender filaments, exserted; anthers linear-oblong, often curved; style filiform, with small stigma: nutlets often only 1 or 2, oblique or curved, smooth or rugose. (After Count Joachim Gadske Moltke, of Denmark; died 1818.) Six species in Mediterr. region to Himal.

**M. petraea** (Tratt.) Griseb. Upright subshrub, to 30 cm. tall, stems densely grayish strigose: lvs. sessile, linear to oblanceolate, 1-3 cm. long, recurved at margin, appressed-pubescent on both sides: fls. pinkish purple at first, becoming violet-blue, in forked scorpioid cymes 2-3 cm. long and about as wide: corolla tubular, 8 mm. long, with 5 short rounded lobes; stamens exceeding the corolla-lobes: nutlets smooth. Fl.vi. B.M.5492(c). B.R.29:26 (c). Gn.89:140(h). (*Lithospermum petraeum* A. DC.) S. E. Eu. Intr. 1840. Zone VI? Attractive subshrub; suited for a sunny place in the rockery.

Closely related species: **M. coerulea** (Pers.) Lehm. Stems erect, rigid: lvs. oblong-spatulate, obtuse, those of the stem linear-lanceolate, acutish, canescent: fls. blue; calyx-lobes linear-lanceolate; stamens exserted: nutlets rugose. Leh-

mann. Icon. Asperifol. t.43. Asia Minor. Intr. 1829.—*M. suffruticosa* (L.) Brand. Subshrub with ascending stems, to 50 cm. high: lvs. linear, 5-12, on flowering brs. 2-6 cm. long, revolute, appressed-pubescent above, white-tomentose beneath, setulose on midrib: fls. purple-blue, pink in bud; stamens not exceeding the corolla-lobes: nutlets rugose. R.I.18:t.114.f.2(c). G.C.47:213(h). Gn.65:147(h). (*Lithospermum suffruticosum* Kern., *L. graminifolium* Viv.) Italy. Cult. 1895.

**3. LITHOSPÉRMUM L.** Herbs or subshrubs, hairy: lvs. alternate, entire: fls. white, yellow or violet, in scorpioid leafy infl. or the lower ones axillary: calyx 5-parted; corolla funnelform or salver-shaped, with 5 spreading lobes, tube cylindric, appendaged in throat; stamens included, on usually short filaments; style with 2 stigmas; nutlets upright, straight, smooth or rugose. (Greek *lithos*, stone, and *sperma*, seed; referring to the shape of the nutlets.) About 50 species in the temp. regions of both hemispheres.

*L. diffusum* Lag. Evergreen prostrate subshrub 15 to 30 cm. high; stems strigose and hirsute: lvs. sessile, linear-oblong to lanceolate, 1-2 cm. long, obtuse, appressed-setose on both sides, slightly revolute: fls. deep blue, faintly striped reddish violet, purple in bud; sessile in the axils of leafy bracts: corolla 1.5 cm. long, with broad rounded lobes and cylindric tube about 3 times as long as calyx, pubescent outside, villous in throat; stamens inserted above the middle. Fl.v-vi. M.B.G.1:t.13.f.2(c). G.C.30:238(h). Gn.88:41(h). (*L. prostratum* Lois., *L. fruticosum* Brot., not L.) S. Eu. Intr. 1825. Zone VII. Forming large mats; calciphobe, while *L. fruticosum* is calciphile.

Closely related species: *L. oleifolium* Lapeyr. Prostrate shrub: lvs. elliptic-oblong, 1-1.8 cm. long, on shoots to 4 cm. long: fls. dimorphous; calyx-lobes as long or half as long as corolla-tube; whitish tomentose beneath: corolla 1.5-1.8 cm. long, glabrous inside, limb campanulate; stamens inserted on throat. B.M. 8994.9559(c). Pyrenees. Intr. about 1900. Zone VII?—*L. fruticosum* L. Upright, to 50 cm.: lvs. narrow, strongly revolute, white-tomentose beneath except strigose midrib, pubescent above: corolla glabrous outside and glabrous in throat, tube about twice as long as calyx; stamens inserted near middle of tube. R.I.18:t.114.f.1(c). S. Eu. Intr. 1683. Zone VII?

#### Fam. 101. VERBENACEAE Juss. Vervain Family

Herbs, shrubs or trees: lvs. opposite, rarely whorled and very rarely alternate, simple or compound, exstipulate: fls. perfect, usually oblique or 2-lipped, rarely regular, usually in cymes or panicles; calyx 4-5-, rarely 6-8-toothed; corolla 4-5-lobed, with imbricate lobes; stamens 4, didynamous, sometimes equal, rarely 5 or 2, adnate to the corolla; disk usually small: ovary superior, of 2, 4 or 5 carpels, entire or 2-4-lobed, 2-5-celled, with 2 ovules in each cell or 5-10-celled by false partitions and cells 1-ovuled; style slender: fr. a drupe or berry, often separating into drupelets; seed with straight embryo and with or usually without albumen.—About 70 genera and 750 species chiefly in trop. and subtrop. regions of both hemispheres.

- a. Stamens included; corolla 5-lobed; fls. in racemes: lvs. 4-20 mm. long.
  - b. Fr. 4-seeded ..... 1. *Verbena*
  - bb. Fr. 2-seeded ..... 2. *Diostea*
- aa. Stamens exserted: fls. in cymes: lvs. larger.
  - b. Corolla regular, 4-lobed, with short tube; stamens equal..... 3. *Callicarpa*
  - bb. Corolla oblique; tube usually long; stamens didynamous.
    - c. Lvs. compound ..... 4. *Vitex*
    - cc. Lvs. simple.
      - d. Fr. drupe-like: fls. white to red: lvs. 8-20 cm. long..... 5. *Clerodendron*
      - dd. Fr. a caps.: fls. blue: lvs. 2-8 cm. long..... 6. *Caryopteris*

**1. VERBÈNA L.** Herbs or shrubs: lvs. usually opposite, toothed or lobed, rarely entire: fls. in racemes, sometimes in panicles or umbels; calyx tubular, 5-toothed, 5-ribbed; corolla slightly 2-lipped with straight or curved

tube and 5 spreading lobes; stamens 4, didynamous, included, inserted above the middle; ovary 4-celled, 4-ovuled; style short, 2-lobed at apex: fr. enclosed by the calyx, dry, separating into 4 stones. (Ancient Latin name for sacred herbs; as *Verbenaca* the name for *Verbena officinalis*.) About 80 species chiefly in trop. and extratrop. Am., few in the Old World.

**V. tridens** Lag. MATE NEGRA. Evergreen shrub to 2 m.; brs. erect, virgate: lvs. dimorphous; lvs. of shoots opposite, crowded, puberulous, sessile, 3-lobed, 2-4 mm. long, lobes stout, pointed, grooved beneath; lvs. of axillary brts. decussate and closely packed, short, thick, blunt: fls. sessile, white to rosy-lilac, very fragrant, in short terminal, 6-12-fl. spikes; corolla pubescent outside and in throat; tube 6-8 mm. long and about as wide. Fl.vii. Princeton Univ. Exp. Patag.t.23(c). G.C.90:378(h). (*V. Carroo* Spegazz.) Patag. Intr. 1928. Zone VII.

**2. DIÓSTEA** Miers. Deciduous shrubs: lvs. opposite or whorled, sessile, entire or sparingly toothed; fls. in terminal or axillary short racemes: calyx campanulate or short-tubular, with 4-5 short teeth; corolla slightly 2-lipped, with cylindric straight or curved tube, 5-lobed; stamens 4, didynamous, included or slightly exserted, with a small staminode; ovary 2-celled, 2-ovuled; style included or slightly exserted: fr. a drupe inclosed in the persistent calyx, with 2 1-seeded stones; seeds without albumen. (Greek *di-*, double, *osteon*, pl. *ostea*, bone, here nutlet.) Two species in S. Am.

**D. júncea** (Schau.) Miers. Shrub or small tree to 6 m., with slender rush-like brs.: lvs. distant, 8-20 mm. long, ovate-oblong, with few coarse teeth, slightly downy: fls. pale lilac, in dense spikes 2-3 cm. long, terminal on short lateral brts.; calyx cylindric, puberulous; corolla about 8 mm. long, with 5 short rounded lobes. Fl.vi. B.M.7695(c). B.S.1:495. (*Baillonia* j. Briq.) Andes of Chile and Peru. Intr. 1890. Zone VII? Distinct shrub, resembling *Spartium junceum* in habit.

**3. CALLICÁRPA** L. Deciduous or evergreen shrubs or trees, often with stellate or scurfy pubescence; winter-buds naked, superposed: lvs. opposite, usually serrate: fls. small, in axillary cymes; calyx short-campanulate, truncate or slightly 4-toothed, rarely 4-parted; corolla with short tube, 4-lobed; stamens 4, of equal length, exserted: ovary 4-celled, 4-ovuled; style slender, with simple small stigma: fr. a subglobose, small berry-like drupe, with 2-4 stones. (Greek *kallós*, beauty, and *karpós*, fruit.) About 40 species, chiefly in the trop. and subtrop. regions of E. Asia, Mal., Australia and N. and C. Am. —Ornamental shrubs chiefly grown for the attractive fls. and handsome frs. late in autumn; rather tender, but even if killed back, the young shoots usually flower and fruit the same season.

- A. Peduncles longer than petioles: lvs. glabrous or sparingly pubescent beneath.
- B. Lvs. crenate-serrate above the middle: anthers opening by a slit.....1. *C. dichotoma*
- BB. Lvs. serrulate from near base: anthers opening by a terminal pore.....2. *C. japonica*
- AA. Peduncles as long or shorter than petioles.
- B. Lvs. fasciculate-pubescent or glabrescent beneath; peduncles about half as long or as long as petioles.....3. *C. Bodinieri*
- BB. Lvs. tomentose beneath: infl. subsessile.....4. *C. americana*

**1. C. dichótoma** (Lour.) K. Koch. Upright shrub to 1.5 m.; brts. scurfy-pubescent: lvs. elliptic or obovate, 3-8 cm. long, acuminate, cuneate, coarsely serrate except toward the base and at the apex, glandular beneath and light green; petiole 2-4 mm. long: cymes few- to many-fl., 1.2-2 cm. broad, on slender peduncles 5-12 mm. long; fls. pink, with the stamens 5 mm. long; fr. lilac-violet, 3-4 mm. across. Fl.viii; fr.x-xi. Gn.23:540,t(c). N.K.14:t.5.

N.T.1:451. S.H.2f.382k-1,385m. (*C. purpurea* Juss., *C. gracilis* Sieb. & Zucc., *C. koreana* Hort. Vilm.) E. and C. China, Korea, cult. in Japan; rarely escaped in the E. States. Intr. 1857. Zone (V).

2. *C. japonica* Thunb. Shrub to 1.5 m.; brts. tomentulose at first, soon glabrous: lvs. elliptic to ovate-lanceolate, 6-12 cm. long, long-acuminate, cuneate, serrulate, glandular beneath; petiole 2-5 mm. long; cymes many-flid., 1.5-3 cm. across, on peduncles 5-10 mm. long; calyx shallowly lobed; fls. pink or whitish, with the stamens about 6 mm. long; style nearly glabrous; anthers opening by a pore at apex: fr. violet, 4 mm. across. Fl.viii; fr.x-xi. Ad.3:t. 103(c). S.I.1:t.70(c). N.T.1:453. H.F.1861:12,t(c). B.C.2:628. Japan. Intr. about 1845. Zone (V).—*C. j. leucocarpa* Sieb., var. Fr. white. Intr. 1845.—*C. j. angustata* Rehd., var. Lvs. oblong-lanceolate to oblanceolate, 5-12 cm. long and 1.2-3.5 cm. broad. N.T.1:456. C. China. Intr. 1907.

*C. j. × mollis* = *C. Shirasawana* Mak. Lvs. elliptic to ovate-lanceolate or obovate-oblong, serrate, sparingly fasciculate-pubescent and glandular beneath: calyx distinctly lobed; fls. lilac. N.T.1:462. Orig. before 1895 in Japan.

3. *C. Bodinièri* Lévl. Shrub to 3 m.; brts. scurfy-pubescent: lvs. broad-elliptic or elliptic-ovate to lance-oblong, 5-12 cm. long, acuminate, cuneate or broad-cuneate, denticulate or dentate, slightly pubescent above, fasciculate-pilose beneath, particularly on the veins; petiole 5-15 mm. long; cymes dense, 2-3 cm. across, densely fasciculate-pilose; peduncles 3-15 mm. long; fls. lilac, with the exerted stamens about 7 mm. long; lobes rounded, shorter than stamens: fr. lilac-violet, 3-4 mm. across (*C. Giraldiviana* var. *subcanescens* Rehd.) C. and W. China.—*C. B. Giráldii* (Rehd.) Rehd., var. Lvs. glabrous above; sparingly fasciculate-pubescent and glandular beneath: cymes less pubescent. Fl.vii-ix; fr.ix-x. B.M.8682(c). M.D.1912:366. R.H.1923:391,t. (c). G.W.29:51. (*C. G.* and *C. Giraldiviana* Hesse ex Rehd.) E. to W. China. Cult. 1900. Zone (V).

Related species: *C. mollis* Sieb. & Zucc. Lvs. elliptic to oblong-lanceolate, tomentose beneath; petiole 5-8 mm. long, peduncle about as long; calyx deeply lobed; corolla glandular outside; stamens not exceeding the lobes: fr. dull purple. N.T.1:457. N.K.14:t.9. Japan, Korea. Cult. 1870. Zone VII?—*C. m. × japonica*; see under No. 2.

4. *C. americana* L. Shrub to 2 m.; brts. tomentose: lvs. elliptic-ovate to ovate-oblong, 7-14 cm. long, acuminate, cuneate, crenate-serrate, pubescent above, tomentose and glandular beneath; petiole 1-3 cm. long; cymes short-stalked or nearly sessile, shorter than petiole, dense; calyx obscurely toothed; corolla bluish, glabrous outside; filaments exceeding the corolla-lobes: fr. violet, 4 mm. across. Fl.v-vii; fr.x. B.B.3:99. Gr.M.690. Va. to Tex. and W. Ind. Intr. 1724. Zone VII.—*C. a. lactea* F. J. Muller, var. Fr. white. (*C. a.* var. *alba* Rehd.)

4. *VITEX* L. Deciduous or evergreen shrubs or trees; winter-buds with indistinct scales, superposed: lvs. opposite, digitate, rarely reduced to 1 lft.: fls. small, white, blue or yellowish in often paniced cymes; calyx campanulate, often 5-toothed; corolla tubular-funnelform, with 5-lobed oblique or slightly 2-lipped limb; stamens 4, didynamous, usually exerted; ovary 4-celled, 4-ovuled; style bifid at apex: fr. a small drupe with a 4-celled stone surrounded by the persistent calyx; seed without albumen. (Ancient Latin name of *V. Agnus-castus*.) About 60 species in trop. and sub trop. regions of both hemispheres, few in temp. regions.

A. Infl. a dense spike: lfts. 5-7, entire or serrate.....1. *V. Agnus-castus*  
AA. Infl. a loose wide panicle: lfts. 3-5, usually incised-serrate to pinnatifid....2. *V. Negundo*

1. *V. Agnus-castus* L. CHASTE-TREE. Shrub to 3 m.; grayish tomentose and of aromatic pungent odor; brts. 4-angled: lfts. 5-7, short-stalked, lanceolate or narrow-lanceolate, 5-10 cm. long, entire or with few coarse teeth, grayish tomentose beneath; petiole 1.5-5 cm. long: fls. lilac or pale violet, fragrant, in dense usually sessile clusters forming dense, often paniced spikes 10-18 cm. long; calyx-teeth triangular, very short; corolla about 8 mm. long, pubescent outside and in throat; stamens and style about as long as lobes: fr. globose 3-4 mm. across, of pungent flavor. Fl.vi-ix. Ad.1:t.18(c). G.C.51:52(h). Gn.83:587. M.M.2:44. (*Agnus-castus vulgaris* Carr.—HEMP-TREE, MONKS' PEPPER-TREE.) S. Eu., W. Asia. Intr. 1570. Zone (VI) or VII. Valued for its late fls.; if killed back the young shoots flower the same season.—*V. A. alba* West., var. Fls. white. (*V. albiflora* Hort.)—*V. A. rosea* Rehd., f. Fls. pink.—*V. A. latifolia* (Mill.) Loud., var. Lfts. mostly oblong-lanceolate, up to 2.5 cm. broad: plant more vigorous and hardier. H.B.11:290. (*V. macrophylla* Hort.)

2. *V. Negundo* L. Shrub or small tree to 5 m.; brts. 4-angled: lfts. usually 5, sometimes 3, stalked, elliptic-ovate to lanceolate, 3-10 cm. long, entire or serrate, grayish tomentulose beneath; petiole 1.5-5 cm. long: fls. lilac or lavender, in rather loose clusters, at least the lower ones stalked, forming slender spikes collected into terminal panicles 12-20 cm. long; corolla 5-6 mm. long; style and stamens shorter than lobes: fr. about 2 mm. across. H.T.5:t.199. China, India. Intr. about 1697. Probably not hardy within our area.—*V. N. incisa* (Bge.) Clarke, var. Lfts. incisely serrate or nearly pinnatifid, 2-8 cm. long, in extreme forms deeply pinnatifid with narrow remote segments (f. *multifida* Rehd.) Fl.vii-viii. B.M.364(c). B.C.6:3481. N.K.14:t.12. N. China, Mong., Korea. (*V. i.* Bge., *V. chinensis* Mill.) Intr. about 1750. Zone (V). Shrub of loose open habit, with small fls.

5. *CLERODENDRON* L. Deciduous or evergreen trees or shrubs, often climbing; winter-buds conical, superposed: lvs. opposite or verticillate, entire or toothed, sometimes lobed: fls. in usual terminal cymes or panicles; calyx campanulate, rarely tubular, 5-toothed or 5-lobed, persistent; corolla-tube usually slender, cylindric, the limb spreading, with 5 nearly equal or unequal lobes; stamens 4, inserted on the corolla-tube, long-exserted and curved; style exserted, 2-cleft at apex: ovary incompletely 4-celled, 4-ovuled: fr. a globose or obovoid drupe often enclosed in the calyx, with juicy exocarp, the stone splitting into 4 or 2 parts. (Greek *kleros*, chance, fortune, and *dendron* tree; in reference to 2 species in Ceylon called by early botanists *arbor fortunata* and *arbor infortunata*.) About 100 species in trop. and sub-trop. regions.

*C. trichotomum* Thunb. Upright shrub or small tree to 8 m.; young brts. puberulous: lvs. ovate to elliptic, 10-20 cm. long, acuminate, broad-cuneate to truncate, entire or sometimes remotely toothed, pubescent beneath; petiole 3-10 cm. long, pubescent: fls. fragrant, white, in long-stalked cymes in the axils of the upper lvs., forming a loose terminal infl. 12-24 cm. across; calyx reddish, deeply 5-parted with ovate to ovate-oblong acute lobes; corolla about 3 cm. across, with 5 oblong lobes; stamens and style much exserted: fr. blue, 6-8 mm. across, subtended by the spreading crimson calyx. Fl.viii-ix; fr.ix-x. B.M.6561(c). Ad.1:t.15(c). N.T.1:468. Gn.75:67(h), 447. F.E.29:653(h). Gs.4:27(h). (*C. serotinum* Carr., *Volkameria japonica* Hort., not Thunb.) E. China, Japan. Cult. 1880. Zone VI? Large-leaved, rather coarse shrub valued for its late fls. and conspicuously colored frs.—*C. t. Fargesii* (Dode)

Rehd., var. Brts. glabrous or glabrescent: lvs. smaller, glabrous or nearly so; calyx-lobes narrower, green. R.H.1911:522,523;1923:390,t(c). M.O.371. (C. F. Dode.) China. Intr. 1898. Zone (V).

Related species: *C. Bungei* Steud. Shrub to 2 m.: lvs. broad-ovate, 10–20 cm. long, cordate, pubescent beneath, of fetid odor when bruised: fls. rosy-red, fragrant, in dense capitate cymes 10–15 cm. across; sepals triangular-ovate, acute. B.M.4880 (c). Gn.77:560;84:524. (*C. foetidum* Bge., not D. Don.) China. Intr. 1844. Zone VII? When killed to the ground, the young shoots bloom the same season.

**6. CARYOPTERIS** Bge. Deciduous small shrubs, subshrubs or herbs: lvs. opposite, short-petioled, serrate to entire: fls. in axillary cymes; calyx campanulate, deeply 5-lobed, with ovate to lanceolate teeth, enlarged in fr.: corolla with short tube and 5 lobes, one larger and fringed; stamens 4 didynamous, exserted, style slender, 2-cleft at apex: fr. dry, separating into 4 slightly winged nutlets. (Greek *karyon*, nut, and *pteryx* or *pteron*, wing.) About 6 species in E. Asia.

A. Lvs. serrate, ovate to oblong-ovate.....1. *C. incana*  
AA. Lvs. entire, linear-oblong to linear.....2. *C. mongholica*

1. *C. incana* (Thunb.) Miq. BLUE-BEARD. Shrub to 2 m., usually much lower; young brts., infl. and leaves beneath grayish tomentose; lvs. ovate to oblong-ovate, 2–7 cm. long, acute or obtusish, broad-cuneate to rounded at base, serrate with 3–8 pairs of coarse, acute to obtuse teeth, dull green and slightly pubescent above; petiole 5–20 mm. long: fls. violet-blue, in dense peduncled cymes in the axils of the upper lvs.: corolla 8–10 mm. long, pubescent outside; ovary and fr. pilose or glabrous. Fl.ix-x. B.M.6799(c). R.H. 1892:324,t(c). G.C.42:409. Gn.81:477. (*C. Mastacanthus* Schau., *C. sinensis* (Lour.) Dipp., *C. tangutica* Maxim.) Japan to N. W. China. Intr. 1844. Zone VII. Valued for its late fls.

*C. i. × mongholica* = *C. clandonensis* Simmonds. Lvs. ovate-lanceolate to lanceolate, broad-cuneate at base, entire or occasionally with few triangular teeth: fls. bright blue in many-fld. slender-stalked cymes. G.C.94:231. Cult. 1933. Zone V. Handsome floriferous shrub.

2. *C. mongholica* Bge. Shrub to 1 m.; young brts., lvs. beneath and infl. whitish appressed-pubescent: lvs. linear to narrow-lanceolate, 1.5–4.5 cm. long, attenuate at ends, rarely with few teeth, dull green above; petiole 5–10 mm. long: cymes loose, 3–7-fld., slender-peduncled; calyx-lobes lanceolate to narrow-oblong, 3–4 mm. long; corolla blue, about 1 cm. long, pubescent outside and at the mouth, lower lip longer than tube: caps. compressed, glabrous. Fl.viii-ix. B.M.9219(c). R.H.1872:450,t(c). Morton Arb. Bull. 5:50(h). N. China, Mongolia. Intr. 1844 and 1866. Zone II.

Related species: *C. glutinosa* Rehd. Shrub to 1.5 m.: lvs. short-petioled, lanceolate, 1.5–2.5 cm. long, thickish, entire and revolute on margin, dark green and viscid above, whitish tomentose beneath with dark glabrescent veins: fls. blue, in dense many-fld. cymes; corolla 6 mm. long, grayish pubescent outside, densely pilose at mouth; ovary pubescent. Mem. Sci. Soc. China 1,3:t.31. N. W. China. Cult. 1933. Zone VII.

## Fam. 102. LABIATAE Juss. MINT FAMILY

Herbs or shrubs, usually containing a volatile oil; stems usually 4-angled: lvs. opposite or whorled: fls. perfect, rarely unisexual, irregular and usually 2-lipped, rarely regular; calyx 5-toothed or 5-cleft, regular or 2-lipped; corolla 5-lobed, rarely 4-lobed, usually 2-lipped, one lip sometimes obsolete, the lobes imbricate; stamens 4, didynamous, or only 2, adnate to the corolla; ovary superior, usually with a well developed disk at base, of 2 carpels, 4-

celled and deeply 4-lobed, the cells 1-ovuled; style slender, with 2 stigmas, basal or nearly so: fr. of 4 1-seeded nutlets, rarely with fleshy exocarp; seed without or scant albumen. Syn.: *Lamiaceae* Lindl.—About 160 genera and 3000 species, distributed over the whole earth and especially abundant in the Mediterr. region and W. Asia.

- A. Upper lip deeply 2-cleft, therefore corolla apparently 1-lipped; stamens exerted from between the lobes of the upper lip.....1. *Teucrium*
- AA. Upper lip undivided or slightly lobed.
  - B. Perfect stamens 2; calyx 2-lipped.
    - C. Lvs. entire, with revolute margin, persistent.....2. *Rosmarinus*
    - CC. Lvs. crenate or serrate, deciduous.
      - D. Anther-cells widely separated on a long connective, articulated with the filament: infl. a spike .....3. *Salvia*
      - DD. Anther-cells contiguous, pendulous: infl. a large panicle; upper lip 4-lobed. ....6. *Perovskia*
  - BB. Perfect stamens 4.
    - C. Stamens ascending under the upper lip, spreading or straight.
      - D. Fls. in long-peduncled spikes.....3. *Lavandula*
      - DD. Fls. at least the lowest whorls in the axils of lvs.
        - E. Upper lip concave; corolla yellow, 2.5-3 cm. long.....4. *Phlomis*
    - EE. Upper lip flat; corolla not yellow, smaller.
      - F. Lvs. entire.
        - G. Calyx 2-lipped, 10-13-nerved.
          - H. Stamens ascending under the upper lip.
            - I. Anther-cells diverging, glabrous; lvs. narrow-oblong to oblanceolate: fls. in elongated spikes.....7. *Satureja*
            - II. Anther-cells parallel, with a tuft of hairs at base: lvs. linear, revolute: fls. in axillary loose cymes.....8. *Conradina*
          - HH. Stamens diverging and spreading; fls. in axillary whorls, heads or short spikes .....10. *Thymus*
          - GG. Calyx equally 5-toothed, 15-nerved.....9. *Hyssopus*
          - FF. Lvs. serrate: fls. in dense spikes.....11. *Elsholtzia*
      - CC. Stamens appressed to the lower lip of the corolla; fls. in axillary loose cymes: lvs. usually dentate or crenate.....12. *Plectranthus*

1. **TEUCRIUM** L. GERMANDER. Herbs, subshrubs or shrubs: lvs. opposite, entire, dentate or incised, floral lvs. similar or reduced to bracts: fls. in 2- to many-fld. whorls forming spikes or terminal heads; calyx tubular or campanulate, rarely inflated, 10-nerved, with 5 subequal lobes or the posterior one larger; corolla-tube usually included, limb apparently 1-lipped, the upper lip being small and deeply cleft, the 4 stamens exerted between its lobes; style not basal: nutlets obovoid, rugose and reticulate, centrally attached below, with oblique base. (Ancient Greek name of an herb, possibly of this genus.) About 160 species in the warmer and temp. regions of both hemispheres.—Summer-blooming and calciphile, not often planted.

- A. Lvs. entire .....1. *T. montanum*
- AA. Lvs. crenate-serrate .....2. *T. Chamaedrys*

1. **T. montanum** L. Subshrub with prostrate stems and tomentose ascending brs., to 30 cm.: lvs. narrow-oblong to linear-lanceolate, 8-20 mm. long, acutish, cuneate, revolute, pubescent above, gray-tomentose beneath, floral whorls few, crowded into a hemispherical head; corolla 1.2 cm. long, yellow, the tube scarcely longer than the calyx. Fl.vii-viii. R.I.18:t.37, f.1-3(c). F.D. 18:t.1878(c). C. and S. Eu., W. Asia. Intr. 1711. Zone V.

Related species: *T. Marum* L. Much-branched shrub to 0.5 m.; brts. and lvs. beneath closely whitish tomentose: lvs. petioled, ovate or oval, 4-8 mm. long, acute to obtuse, dull green and pubescent above: fls. in terminal second racemes 1.5-5 cm. long; calyx woolly; corolla purple, 8 mm. long, glandular-pubescent outside, tube exceeding the calyx. R.I.18:t.1736(c). H.M.5:2524. S. Eu. Cult. 1640. Zone VII?

2. **T. Chamaedrys** L. Procumbent and ascending subshrub to 25 cm.; brts. villous: lvs. ovate to oblong-ovate, 5-25 mm. long, acute, broad-cuneate, crenate-serrate, floral lvs. entire, green on both sides, pubescent: fls. purple

or rose, usually in whorls of 4 forming a loose terminal secund spike; calyx and bracts usually red-brown; corolla nearly 1.5 cm. long, the tube exceeding the calyx. Fl.vii-ix. R.I.18:t.38,f.4(c). F.D.18:t.1875(c). C. and S. Eu., W. Asia. Cult. 1750. Zone V.

Related species: *T. Pólium* L. Subshrub to 0.5 m.; brts. and lvs. closely white-tomentose: lvs. subsessile, narrow-oblong to oblong, 1-2.5 cm. long, obtuse, crenate, revolute: fls. in usually several terminal heads; calyx densely white-tomentose: corolla white to yellowish, about 6 mm. long, tube enclosed in the calyx. F.D.18:t.1877(c). Mediterr. reg. Cult. 1562. Zone VII.—*T. flavum* L. To 50 cm. high, with ascending brs.: lvs. ovate, crenate-serrate, velutinous: fls. yellow, 1.8 cm. long in whorls of 4-6 forming spikes. S. Eu. Intr. 1640. Zone VII?

**2. ROSMARINUS** L. ROSEMARY. Evergreen aromatic shrub: lvs. opposite, sessile, narrow, entire: fls. subsessile, in short axillary racemes; calyx campanulate, 2-lipped, the upper lip minutely 3-toothed, the lower 2-toothed: corolla with the upper lip emarginate or 2-lobed, the lower lip 3-lobed with the middle lobe large, concave, declined; stamens 2 and 2 minute staminodes; style not basal: nutlets smooth, globose-ovoid, with an oblique base. (*Ros marinus*, sea dew, the ancient Latin name of the plant.) One Mediterranean species.

*R. officinális* L. Upright shrub to 2 m.; young brts. pubescent: lvs. linear, 1.5-2.5 cm. long, revolute, lustrous dark green above, white-tomentose beneath, thick: fls. violet-blue, rarely white, about 1 cm. long. Fl.iv-v. R.I. 18:t.43(c). F.D.18:t.1784(c). B.S.2:449. Gn.74:620(h);89:458(h). S. Eu., Asia Minor.. Cult. for centuries. Zone (VI).

**3. LAVÁNDULA** L. LAVENDER. Perennial herbs, subshrubs or shrubs: lvs. opposite, entire, toothed or dissected: fls. blue, violet or lilac, in 2-10-fld. whorls forming stalked cylindric spikes with often imbricate bracts, sometimes branched at base; calyx tubular, 13-15-nerved, 5-toothed; corolla tubular, with short, 2-lipped limb, upper lip 2-, lower 3-lobed; stamens 4, included, declined; style basal, nutlets smooth. (Latin *lavare*, to wash; referring to its use by the Romans in the bath.) About 20 species chiefly Mediterranean, from the Canary Isls. to India.

*L. officinális* Chaix. Subshrub to 1 m.; brts. tomentulose: lvs. linear to lanceolate, 2-4 cm. long, obtuse, revolute, white-tomentose, finally usually glabrate: fls. lavender, 8-10 mm. long, in spikes 3-6 cm. long borne on peduncles 5-15 cm. long; floral bracts triangular-ovate, acuminate, shorter than calyx, scarious. Fl.vii-viii. R.I.18:t.26,f.1(c). F.D.18:t.1772(c). (*L. Spica* L. in part, *L. vera* DC., *L. angustifolia* Moench.) S. Eu., N. Afr. Cult. since ancient times. Zone V.—*L. o. alba* (Sweet) Rehd., f. Fls. white.

Closely related species: *L. latifolia* L. Lvs. broader, oblanceolate to oblong, to 5 cm. long, flat; floral bracts linear, longer, herbaceous. R.I.18:t.26,f.2(c). (*L. Spica* DC., *L. Spica* var. *l. l. f.*) H.A.t.38(c). S. Eu. Cult. 1568. Zone V?

**4. PHLÓMIS** L. Herbs, subshrubs or shrubs, mostly pubescent or tomentose: lvs. opposite, rather large, rugose: fls. sessile, in dense many-fld., axillary bracted whorls; calyx tubular or campanulate, truncate or 5-toothed, 5-10-nerved; corolla-tube slightly exserted or enclosed, upper lip large, hooded, lower lip 3-lobed with the middle lobe much larger; stamens 4, with diverging anther-cells; style 2-lobed at apex, the posterior lobe shorter; nutlets triangular-ovoid, glabrous, rarely slightly pubescent. (Greek *phlōmis*, a woolly plant, probably *Verbascum*.) About 70 species in the Mediterranean reg. to China.—Coarse plants with yellow, purple or white fls. in dense whorls.

*P. fruticosa* L. JERUSALEM SAGE. Evergreen shrub to 1.5 m.; brts. stout, calyx densely villous; corolla 8-10 mm. long. Fl.viii-ix. B.M.8441(c). R.H. 4-angled, tomentose: lvs. thickish, oblong-ovate to oblong-lanceolate, 5-12 cm. long, obtuse, rounded to broad-cuneate, rugose and pubescent above, reticulate and densely whitish tomentose beneath; petiole 6-25 mm. long: fls. in dense terminal woolly heads, sometimes with axillary whorls below, with numerous ovate bracts; calyx funnel-form, 1.5 cm. long, woolly, with 5 spreading subulate tips; corolla 2.5-3 cm. long, yellow, densely pubescent outside, middle lobe of lower lip emarginate. Fl.vi-vii. B.M.1843(c). Gn.79:114 (h);87:428(h). S. Eu. Cult. 1597. Zone VII. Demands a sheltered and dry position.

5. *SÁLVIA* L. SAGE. Herbs, subshrubs or shrubs: lvs. opposite, entire, toothed or pinnatisect: fls. variously colored, in 2-many-fld. whorls forming racemes, spikes or panicles, rarely solitary; calyx usually 2-lipped, the upper lip entire or 3-toothed, the lower 2-toothed; corolla usually 2-lipped, upper lip entire or emarginate, concave; stamens 2, inserted on the throat of the corolla; anther-cells widely separated on a long and slender connective articulate with the filament, the upper end of the connective bearing a perfect anther-cell, the lower end an imperfect one or none; nutlets triangular-ovoid, smooth. (Ancient Latin name of *S. officinalis*, from *salvere*, to be well; referring to the medicinal properties of the plant.) About 500 species in the temp. and warmer regions of both hemisphere. Many of them highly ornamental plants with showy fls., but the following chiefly grown as a pot-herb.

*S. officinalis* L. GARDEN S. Upright aromatic subshrub, to 50 cm.; young brts. grayish tomentulose, 4-angled: lvs. oblong, 3-5 cm. long, obtuse to acute, crenulate, rugose above, grayish tomentulose beneath; petiole 1-4 cm. long: fls. bluish purple in many-fld. whorls forming an interrupted spike: calyx campanulate, the lower lip longer than the upper one: corolla about 1.5 cm. long, pubescent outside; tube with a hairy ring inside. Fl.vi-vii. R.I.18:t. 44(c). F.D.18:t.1785(c). S. Eu. Cult. since ancient times, chiefly for its medicinal properties. Zone V.—*S. o. albiflora* Alef. Fls. white: lvs. larger.—*S. o. rubriflora* Alef. Fls. red. (*S. o.* var. *purpurea* Bean.)—*S. o. variegata* Sweet, var. Lvs. variegated.

An ornamental species is: *S. Greggii* Gray. Shrub to 1 m., glabrescent; brts. slender, puberulous: lvs. oblong to oblong-obovate or oblanceolate, 1.5-3 cm. long, obtuse, cuneate, dull pale green, gland-dotted: racemes 6-12-fld., slender, glandular and puberulous; calyx narrow-campanulate, glandular outside, purplish, lobes about equal; corolla carmine, 2.5-3 cm. long, lower lip about 2 cm. broad, upper lip smaller, paler. Fl.vii-x. B.M.6812(c). R.H.1927:496,t(c). Tex., Mex. Cult. 1882. Zone VII.

6. *PERÓVSKIA* Karel. Herbs or subshrubs: lvs. opposite, serrate or pinnatifid: fls. in distant whorls forming terminal spikes; calyx 2-lipped, tubular-campanulate, upper lip 3-toothed or entire, lower lip 2-toothed; corolla with short funnel-form tube, upper lip 4-lobed, lower lip undivided, deflexed: fertile stamens 2, exserted, with 2 pendulous, distinct, but contiguous anther-cells; staminodes 2, small: nutlets oblong-ovoid, smooth. (After Vasilí Aleksievich Perovski, governor of the Russian prov. Orenburg; 1794-171857.) Four species from W. Asia to the Himal. and W. Tibet.

*P. atriplicifolia* Benth. Upright subshrub to 1.5 m., of aromatic sage-like odor when bruised; stems hoary-tomentulose: lvs. ovate-lanceolate to lanceolate, 3-6 cm. long, acutish, unequally and coarsely serrate, pubescent at first, finally glabrescent, glandular; petiole 3-8 mm. long: fls. blue, in 2-6-fld. re-

mote whorls in slender spikes forming terminal panicles 30-45 cm. long; 1905:344.t.(c). Gn.80:562(h);88:725. S.L.252(h). Afghan. to W. Himal. and Tibet. Cult. 1904. Zone (V). Valued chiefly for its late blue fls.

Related species: *P. scrophulariaefolia* Bge. Brts. 4-angled, grayish tomentulose; lvs. ovate-oblong to elliptic-oblong, to 4 cm. long, obtuse, cuneate, doubly crenate-dentate, rugose above, puberulous on the veins beneath when young, glandular; fls. pink. Turkest. Cult. 1935. Zone VI.—*P. abrotanoides* Karel. Lvs. pinnatifid to bipinnatifid, 3-6 cm. long, segments linear, puberulous; fls. pink. Bull. Soc. Nat. Mosc. 14:t.1(c). Transcaspia to W. Himal. Cult. 1935. Zone VI.

**7. SATURĖJA L. SAVORY.** Herbs or subshrubs of aromatic odor: lvs. opposite, narrow and entire or broader and toothed; fls. in few- to many-fl. whorls in the axils of foliage lvs. or forming terminal panicles or racemes, calyx tubular-campanulate, 5-toothed or sometimes 2-lipped; corolla 2-lipped, the upper lip flat, emarginate or entire, the lower lip 3-parted with flat lobes, the middle one usually larger and emarginate; stamens 4; nutlets ovoid, smooth. (Ancient Latin name of the plant.) About 130 species in the warmer regions of both hemispheres.

*S. montana* L. WINTER S. Half-evergreen upright subshrub, to 35 cm., of pleasant aromatic odor; stems minutely pubescent: lvs. sessile, narrow-oblong to oblanceolate, 1-2.5 cm. long, acute, the lower obtuse, entire, glandular, hispid-ciliate: floral whorls few- to many-fl., forming terminal leafy panicles; calyx setulose and glandular, campanulate, 10- or 13-nerved, with unequal subulate lobes, slightly 2-lipped; corolla white or purplish, about 1 cm. long; tube little or not exerted. Fl.vii-viii. R.I.18:t.72(c). F.D.18:t. 1800(c). S.L.333(h). Gs.6:191(h). (*Calamintha m.* Lam., *Micromeria m.* Reichenb.) S. Eu. and N. Afr. to Cauc. Cult. since ancient times. Zone VI? Chiefly grown as a pot-herb.

An American species is *S. caroliniana* (Michx.) Briq. Subshrub to 0.6 m., fragrant; brts. puberulous: lvs. ovate or elliptic to oblong-ovate, 1-3 cm. long, obtusish, broad-cuneate, shallowly serrate: fls. axillary, 3-6; calyx 2-lipped, glabrous and glandular outside, villous inside; lower lip 2-parted with 2 subulate lobes, the upper shorter, 3-toothed; corolla white to purple, 10-12 mm. long, lobes of lower lip subequal. Fl.vii-x. B.M.997(c. as *Thymus grandiflorus*). (*Calamintha c.* Nutt., *Clinopodium carolinianum* Heller, not Mill., *C. georgianum* Harper.) N. C. to Fla. and Miss. Cult. 1807. Zone VII.

**8. CONRADĖNA Gray.** Shrubs: lvs. opposite, entire, revolute, crowded, often with axillary fascicles of smaller lvs.: fls. axillary in 2-6-fl. cymes; calyx 2-lipped, 13-nerved; corolla 2-lipped, tube longer than calyx, upper lip upright, entire or refuse, lower lip 3-parted, with emarginate middle lobe; stamens 4, ascending; anther-cells parallel, with a tuft of hairs at base: nutlets globose, smooth. (After Solomon W. Conrad of Philadelphia, professor of botany; 1779-1831.) Three species in s. e. U. S.

*C. verticillata* Jennison. Shrub to 0.5 m.; brts. 4-angled, puberulous: lvs. linear, 1-2 cm. long, obtuse, green and glandular above, white-tomentose beneath with prominent pubescent midrib: fls. lavender; pedicels short; calyx hirsute; corolla 1.5 cm. long, pilose outside, lower lip 3-lobed, 8-10 mm. long. Fl.v. (*C. montana* Small.) Tenn. Cult. 1935. Zone VII.

**9. HYSSŖPUS L. HYSSOP.** Subshrub of aromatic odor: lvs. opposite, narrow, entire: fls. in many-fl. whorls forming leafy spikes; calyx tubular, 15-nerved, equally 5-toothed; corolla 2-lipped, with flat lobes, upper lip 2-lobed, lower 3-lobed; stamens 4, exerted, divergent; nutlets ovoid and

slightly 3-sided, smooth. (Ancient Greek name of uncertain application.) One Mediterranean species.

**H. officinalis** L. Slender upright subshrub to 45 cm., nearly glabrous; brts. quadrangular: lvs. subsessile, linear to oblong, 2-4 cm. long, acute or the lower obtuse, minutely ciliate, glandular-dotted on both sides: floral whorls in terminal secund spikes 6-12 cm. long; corolla usually blue, about 1 cm. long. Fl.vi-ix. B.M.2299(c). R.I.18:t.58(c). F.D.18:t.1812(c). Mediterranean region to C. Asia. Cult. since ancient times. Zone V. Grown chiefly as a pot-herb.—**H. o. albus** West., var. Fls. white.—**H. o. ruber** West., var. Fls. red. F.D.18:t.1812,f.B(c).

10. **THÝMUS** L. **THÝME**. Small evergreen or half-evergreen shrubs and subshrubs, of aromatic odor: lvs. opposite, small, entire: floral whorls usually few-fl., axillary and distant or forming terminal clusters or short spikes; calyx ovoid to cylindric, hairy in throat, 10-13-nerved, 2-lipped, upper lip 3-toothed, the lower lip cut into 2 ciliate teeth; corolla somewhat 2-lipped, upper lip nearly flat, emarginate, the lower 3-lobed; tube exserted or included: nutlet ovoid or oblong, smooth. (Ancient Greek name.) About 35 species in Eu., W. Asia and Afr.

A. Stems upright: lvs. tomentulose beneath.....1. *T. vulgaris*  
 AA. Stems prostrate: lvs. glabrous or slightly pubescent beneath.....2. *T. Serpyllum*

1. **T. vulgaris** L. **COMMON T.** Upright subshrub, to 20 cm. high; brs. usually whitish pubescent: lvs. subsessile, ovate-oblong to linear, 4-15 mm. long, tomentulose beneath, revolute: floral whorls in head-like clusters or in interrupted spikes; pedicels slender, as long as calyx-tube; corolla lilac or purplish, about 6 mm. long; tube little or not exserted; stamens scarcely exserted. Fl.v-vi. R.I.18:t.63,f.1(c). F.D.18:t.1796(c). S. Eu. Cult. since ancient times. Zone V. Grown as a pot-herb.

2. **T. Serpyllum** L. **MOTHER-OF-THÝME**. Prostrate subshrub or nearly herbaceous, caespitose or trailing, with rooting stems: ascending at the ends, pubescent all around or on opposite sides: lvs. short-petioled, ovate or elliptic to oblong, 5-12 mm. long, obtuse, broad-cuneate, glabrous beneath or pubescent and ciliate, floral lvs. similar: floral whorls in dense terminal heads or the lower ones distant; calyx pubescent; corolla purplish, about 6 mm. long; tube scarcely exserted; stamens exserted. Fl.vi-ix. R.I.18:t.63,f.2,64-67(c). F.D.18:t.1797(c). S.St.245(h). H.B.4:7(h). Eu., W. Asia, N. Afr. Cult. for centuries. Zone IV. Adapted for the rock garden and rocky slopes; also used as an edging plant.—An exceedingly variable species divided into many spontaneous subspecies and varieties often considered distinct species; there are also a number of garden forms; one of the most distinct vars. sometimes cult. is **T. S. lanuginosus** (Mill.) Sweet, var. Stems pubescent all around: lvs. on both sides and infl. pubescent with long white hairs. F.D.18:t.1997,n,f.B(c). Gn.87:264(h). (*T. l.* Mill.)

Closely related species: **T. gláber** Mill. Stems ascending to 20 cm., without trailing and rooting stems: lvs. oval to elliptic-oblong, 6-15 mm. long, glabrous except sparingly ciliate at base: fls. in terminal spikes, usually 2-3 cm. long; calyx hirsute, upper lip much shorter than lower. S.E.7:t.1044(c). H.M.5:2324. (*T. Chamaedrys* Fries, *T. Serpyllum* subsp. *Ch.* Vollmann.) Eu. Cult. for centuries. Zone V.

11. **ELSHOLTZIA** Willd. Herbs or subshrubs, usually aromatic: lvs. opposite, short-petioled, serrate, often glandular-punctate: fls. small, in many-fl. whorls forming one-sided spikes; calyx tubular or campanulate, 5-toothed; corolla 2-lipped or slightly so, upper lip emarginate, concave, lower

3-lobed; stamens 4, usually exserted; anther-cells diverging; anterior part of disk developing into a nectary often longer than ovary: nutlets ovoid to ovoid-oblong, smooth or rugose. (After Johann Sigismund Elsholtz, Prussian physician and botanical writer; 1623-1688.) About 20 species in E. and C. Asia, south to Java; 1 in Eu. and 1 in Abyssinia.

**E. Stauntoni** Benth. Subshrub to 1.5 m., with terete pubescent brts.: lvs. ovate-oblong to oblong-lanceolate, 6-12 cm. long, acuminate, serrate, bright green and glabrous above, lighter green and densely glandular beneath: fls. lilac-purple, in dense one-sided spikes 10-20 cm. long, usually panicked at end of brs.; stamens and style long exserted; nutlets smooth. Fl.ix-x. B.M.8460(c). R.H.1914:60,t(c). G.C.51:21. Gn.75:533. M.G.25:541(h),542. S.L.169(h). N. China. Intr. 1905. Zone IV. Chiefly valued for its late-appearing profusely produced spikes of lilac-purple fls.

Related species: **E. fruticosa** (D. Don) Rehd. Subshrub to 2 m.: lvs. elliptic-oblong to lanceolate, pubescent on the veins beneath and glandular: fls. white, in slender spikes 5-14 cm. long. L.B.487(c). Wallich, Pl. As. Rar. 1:t.33(c). (*E. polystachya* Benth.) Himal., W. China. Intr. about 1903? Zone VII?

**12. PLECTRANTHUS** L'Hérit. Herbs, subshrubs or shrubs: lvs. opposite, usually toothed: fls. mostly small, in axillary loose cymes, spikes or panicles, rarely in dense whorls; calyx campanulate, equally 5-toothed or 2-lipped, enlarged in fr.; corolla-tube exserted, often gibbous or spurred, curved or straight, upper lip 3-4-lobed, lower lip elongated, entire; stamens 4, free, spreading along the lower lip; disk on the anterior side elongated, longer than ovaries: nutlets ovoid or oblong, smooth or punctulate. (Greek *plēktron*, spur, and *anthes*, flower.) About 100 species in trop. and sub trop. regions of Afr., Asia and Austral.

**P. discolor** Dunn. Shrub to 1 m.; brts. slender, 4-angled, puberulous at first: lvs. ovate, 6-15 mm. long, obtuse, rounded or broad-cuneate at base, crenulate or dentate to entire, minutely puberulous above, white-tomentose beneath; petiole 1-4 mm. long: cymes few-fl'd.; peduncle longer than petiole; pedicels 2-3 mm. long; calyx campanulate, 10-nerved, tomentulose; corolla 6-8 mm. long, pale lavender, tube gibbous at base, longer than limb, upper lip upright, 3-lobed, lower spreading; stamens slightly exserted. Fl.vii-x. (*P. parvifolius* (Batal.) P'ei, not Talbot.) W. China. Intr. 1911. Zone VI?

### Fam. 103. SOLANACEAE Pers. NIGHTSHADE FAMILY

Herbs or shrubs, sometimes climbing, or small trees: lvs. usually alternate, entire or toothed to pinnate, exstipulate: fls. mostly perfect and regular, solitary or cymose, often seemingly extra-axillary; calyx 5-lobed; corolla rotate or campanulate to tubular, sometimes irregular, the 5 lobes valvate or plicate in bud; stamens usually as many as corolla-lobes, often connivent by their anthers, sometimes 1 or more sterile; ovary superior, usually with a disk at base, mostly 2-celled, with usually many ovules on axile placentae; style 1; stigma simple or lobed: fr. a berry or caps.; seeds albuminous, rarely without albumen; embryo straight or curved.—About 75 genera and more than 2000 species in trop. and temp. regions of both hemispheres.

A. Corolla rotate; anthers connivent around the stigma: climbing plant.....1. *Solanum*  
 AA. Corolla salverform; anthers distinct: upright or sarmentose shrubs.

B. Stamens exceeding the tube: brs. often spiny.....2. *Lycium*  
 BB. Stamens included: brs. unarmed.....3. *Cestrum*

**1. SOLANUM** L. NIGHTSHADE. Herbs or shrubs, many climbing, sometimes trees: brs. sometimes spiny: lvs. alternate, simple or compound: infl.

mostly supra-axillary or opposite the lvs., cymose, rarely fls. solitary; calyx 5-10-toothed or -parted, persistent; corolla rotate or shallow-campanulate, the lobes plicate in bud, variously colored, often showy; stamens 5, with short filaments, inserted on the throat of the corolla; anthers connivent, opening at apex by a pore or short slit; ovary usually 2-celled, many-ovuled: fr. a berry. (Ancient Latin name, probably from *solari*, to quiet; referring to its medicinal properties.) More than 1200 species chiefly in trop. and subtrop. regions of both hemispheres.

**S. Dulcamàra** L. BITTER-SWEET (CLIMBING NIGHTSHADE) Suffrutescent climber, to 2.5 m.; brts. glabrous or pubescent: lvs. entire, ovate to ovate-oblong, or with 1-3 pairs of lobes at base, 4-10 cm. long, acuminate, usually cordate, bright green and usually sparingly pubescent; petiole 1-3 cm. long: fls. violet in long-peduncled cymes; corolla-lobes oblong-lanceolate, reflexed, with 2 green spots near base: fr. ovoid, about 1 cm. long, scarlet. Fl.vi-viii; fr.viii-x. S.O.3:t.146(c). R.I.20:t.12,f.1,2(c). F.D.16:t.1600(c). Eu., N. Afr. to E. Asia; often naturalized in N. Am. Cult. 1561. Zone IV. The scarlet fls. are conspicuous and ornamental, but poisonous.—**S. D. album** West., var. Fls. white.—**S. D. variegatum** West., var. Lvs. variegated with white.—**S. D. villosissimum** Desv., var. Brts. and lvs. densely pubescent. (*S. D. var. litorale* (Raab) Brand, var. *tomentosum* Koch.)—**S. D. indivisum** Boiss., var. All lvs. undivided, ovate-oblong: fr. larger. (*S. persicum* Roem. & Schult., *S. D. var. p.* Dipp.)

**2. LŶCIUM** L. BOX-THORN. Deciduous or evergreen shrubs, thorny or unarmed; winter-buds small, superposed, with few outer scales: lvs. alternate, often fasciated, short-petioled, entire: fls. axillary, solitary or clustered, usually slender-stalked; calyx campanulate, 5-toothed or irregularly 3-5-toothed; corolla funnelform or salver-shaped, with usually 5-lobed limb; stamens usually 5, usually exserted; ovary 2-celled: fr. a berry with few to many seeds, usually red. (*Lykion*, ancient Greek name for a thorny shrub.) About 100 species in temp. and subtrop. regions of both hemispheres.—Ornamental shrubs chiefly valued for their showy scarlet berries.

A. Fls. violet or purplish; limb not less than  $\frac{1}{2}$  as long as tube; filaments pubescent at base.  
B. Lvs. and brts. glabrous; calyx-teeth short and irregular.

C. Corolla-tube shorter than limb, rather wide: lvs. rhombic-ovate to ovate-lanceolate.  
1. *L. chinense*

CC. Corolla-tube longer than limb, narrowed below the middle: lvs. usually lanceolate.  
2. *L. halimifolium*

BB. Lvs. and brts. puberulous: corolla-tube shorter than limb; calyx-lobes 5, lanceolate.  
3. *L. Grevilleianum*

AA. Fls. greenish white; limb about  $\frac{1}{2}$  as long as tube; filaments glabrous....4. *L. pallidum*

**1. L. chinense** Mill. CHINESE MATRIMONY-VINE. Rambling shrub with arching and often prostrate brs. to 4 m. long, usually unarmed; brts. light yellowish gray: lvs. rhombic-ovate to ovate-lanceolate, 3-8 cm. long, acute or obtusish, broad- to narrow-cuneate, bright green; petioles rarely exceeding 1 cm.: fls. 1-4; pedicels 3-8, rarely 12 mm. long; calyx 3-5-toothed, usually divided less than  $\frac{1}{2}$ , with acute lobes; corolla purple, about 1 cm. long: fr. ovoid to oblong, 1.5-2.5 cm. long, scarlet to orange-red. Fl.vi-ix; fr.viii-x. R.I.20:t.14,f.2,3(c). G.F.4:102. N.D.1:t.30(c). F.E.28:641(h). G.W.15:346(h). (*L. barbarum* Lour., not L.) E. Asia. Intr. before 1709. Zone IV. Handsome with its long brs. laden with scarlet fr.; lvs. remaining green until very late in fall.—**L. ch. ovatum** (Poir.) Schneid., var. Lvs. rhombic-ovate, to 10 cm. long; fr. very obtuse and impressed at apex, large. (*L. rhombifolium* Dipp., *L. ch. var. rh.* Bean.)

2. *L. halimifolium* Mill. COMMON MATRIMONY-VINE. Upright or spreading shrub with arching or recurving brs., to 3 m., usually spiny; brts. light gray: lvs. oblong-lanceolate to lanceolate, rarely elliptic-lanceolate, 2-6 cm. long, acute or obtusish, narrowed into a slender petiole 5-20 mm. long, grayish green, thickish: fls. 1-4; pedicels 8-20 mm. long; calyx usually 1-3-lobed, divided about  $\frac{1}{2}$ , with obtuse lobes: corolla dull lilac-purple: fr. ovoid or short-oblong, 1-2 cm. long, scarlet to orange-red. Fl.vi-ix; fr.viii-x. R.I.20: t.14.f.1,2(c). F.D.16:t.1595(c). B.B.3:168. (*L. barbarum* Ait., not L., *L. vulgare* Dun., *L. flaccidum* K. Koch.) S. E. Eu. to W. Asia; sometimes escaped from cult. Long cult. Zone IV. Sometimes used for hedges.—*L. h. lanceolatum* (Poir.) Schneid., var. Lvs. lanceolate: fr. ellipsoid. N.D.1:t. 32(c)—*L. h. subglobosum* (Dun.) Schneid., var. Dwarfier: lvs. lanceolate: fr. subglobose.

Related species: *L. turcomanicum* Turcz. Slender spiny shrub: lvs. lanceolate, 2-7 cm. long, thickish, with obsolete veins: fls. short-stalked, pink, small, with slender tube nearly twice as long as limb; calyx irregularly 5-toothed: fr. small, globose, red. Miers, Ill. S. Am. Pl. 2:t.69E. Turkest. Intr. before 1890. Zone V?—*L. ruthenicum* Murr. Upright spiny shrub: lvs. linear or linear-lanceolate, 1-3 cm. long, thickish: fls. about 1.2 cm. long; calyx usually 3-toothed with broad obtuse teeth: fr. black. Intr. 1804. Miers, Ill. S. Am. Pl. 2:t.70A. D.H.1:27. S. Russia to Persia and W. Siberia. Intr. 1804. Zone VI?—*L. barbarum* L. and *L. europaeum* L. which are not hardy within our area are sometimes confused with *L. halimifolium*, but are easily distinguished by the glabrous filaments and the narrower and smaller lvs. and the second also by the slenderer corolla-tube.

3. *L. Grevilleanum* Miers. Much-branched shrub to 2 m., with unarmed spreading or decumbent brs.; brts. puberulous when young: lvs. obovate to oblanceolate, 1-2 cm. long, on vigorous shoots to 5 cm. long, narrow-cuneate, ciliate and puberulous, rather fleshy: fls. solitary or 2, about 1 cm. across; calyx-teeth lanceolate, ciliate; corolla funnelform, yellowish white, with purplish limb, lobes longer than tube; filaments hairy at base: fr. globose, about 8 mm. across, orange-red. Fl.vi-viii. Miers, Ill. S. Am. Pl. 2:t.73F. S.H. 2:f.396h-k. Argentine. Cult. 1890. Zone VII?

The similar *L. chilense* Bert. differs chiefly in its glandular pubescence and the broader more obtuse lvs. and is still tenderer. Chile.

4. *L. pallidum* Miers. Much branched upright shrub to 2 m., with spreading, often tortuous, spiny brs.: lvs. partly fascicled, lanceolate to oblanceolate, 1.5-5 cm. long, narrow-cuneate, glaucous, somewhat fleshy: fls. 1 or 2, nodding; calyx-lobes 5, triangular-ovate, acute: corolla funnelform, about 2 cm. long, greenish yellow, tinged purplish, tube about 3 times as long as the short rounded lobes: fr. subglobose, 1.2 cm. across, scarlet, usually sparingly produced. Fl.v-vi; fr.vii-viii. B.M.8440(c). G.C.46:232. G.F.1:341. B.S.2:63. M.G.23:209. S. Utah to N. Mex. and Mex. Cult. 1878. Zone (V). Distinct shrub, attractive in bloom.

3. CÉSTRUM L. Deciduous or evergreen shrubs or small trees: lvs. simple and entire: fls. in axillary or terminal cymes; calyx 5-toothed, short; corolla salver-shaped, variously colored, with long slender tube, enlarged or contracted at the mouth, with short spreading limb; stamens inserted about the middle of the tube, included; ovary 2-celled, with 3-6 ovules in each cell; style slender: fr. a few- or 1-seeded small berry; seed albuminous. (*Kestron*, Greek plant name of uncertain application.) About 150 species in trop. and subtrop. Am.

C. Parqui L'Hérit. WILLOW-LEAVED JESSAMINE. Upright shrub to 2 m., glabrous: lvs. lanceolate, 5-14 cm. long, acuminate, cuneate, bright green,

slightly paler beneath; petiole 5-10 mm. long: fls. in axillary and terminal cymes forming panicles at end of brs.; corolla yellowish green, fragrant at night; tube slender, dilated at mouth, about 2 cm. long, with spreading acute lobes: fr. violet-brown, 3-4-seeded. Fl.vii-ix. B.M.1770(c). S.O.3:t.133(c). Chile. Intr. 1787. Zone VII. Grown chiefly for its fragrant fls.; when killed to the ground the young shoots will bloom the same season.

# Fam. 104. SCROPHULARIACEAE Lindl. FIGWORT FAMILY

Herbs, shrubs or trees: lvs. alternate, opposite or verticillate, exstipulate: fls. perfect, usually irregular, in cymes, racemes or panicles, or solitary and axillary: calyx 4-5-toothed or -parted: corolla rotate to campanulate, or with cylindric tube, 4-5-lobed with subequal lobes or 2-lipped; stamens usually 4, didynamous, inserted on the corolla-tube, sometimes 2 or 5; ovary superior, perfectly or imperfectly 2-celled, with central placentae and usually many ovules: fr. a caps. or berry; seeds albuminous.—About 180 genera and 3000 species widely distributed in both hemispheres.

## A. Stamens 4.

B. Lvs. not exceeding 6 cm., usually narrow: low shrubs or subshrubs: caps. septicidal.

1. *Penstemon*

BB. Lvs. large and broad: trees: caps. loculicidal.....2. *Paulownia*

## AA. Stamens 2.

B. Caps. loculicidal, laterally compressed: subshrubs or herbs.....3. *Veronica*

BB. Caps. septicidal, dorsally compressed or turgid: evergreen shrubs or trees.....4. *Hebe*

1. **PENSTEMON** Schmidel. Perennial herbs or small shrubs: lvs. opposite or whorled, the lower ones petioled, upper sessile, entire or serrate: fls. in terminal racemes or panicles; calyx 5-parted, with imbricated segments; corolla tubular, usually dilated at throat, 2-lipped, upper lip 2-lobed, lower 3-lobed; fertile stamens 4, the 5th sterile and sometimes bearded; style filiform, with capitate stigma: fr. a septicidally dehiscent caps., with numerous wingless seeds. (Greek *pente*, five, and *stemon*, stamen; the 5th stamen being present, though sterile.) Syn.: *Penstemon* Ait., *Pentastemon* Batsch. About 150 species in N. Am. and Mex., one in E. Asia.—Handsome low shrubs or subshrubs best suited for well-drained positions in the rock garden.

A. Anther-cells opening their whole length or nearly their whole length, diverging: lvs. usually serrate.

B. Corolla blue, purple or yellowish, shallowly 2-lipped, with funnelliform tube.

C. Anthers bearded: infl. racemose.....Sect. *ERIANATHERA* Benth.

D. Lvs. lanceolate to oblong, acute, rarely obtuse: stems upright or ascending.

1. *P. Scouleri*

DD. Lvs. oval, to suborbicular or spatulate, obtuse: stems procumbent.2. *P. Menziesii*

CC. Anthers glabrous or ciliate: infl. paniculate.....Sect. *EUPENTSTEMON* Benth.

2. *P. Lemmonii*

BB. Corolla scarlet, tubular and strongly 2-lipped.....Sect. *ELMIGERA* Benth.

3. *P. cordifolius*

AA. Anther-cells opening only on the upper part by short confluent slits, horseshoe-shaped: lvs. entire.....Sect. *SACCANTHERA* Benth.

4. *P. heterophyllus*

1. **P. Scouleri** Dougl. Shrub with upright or ascending stems, 20-50 cm. tall; young brts. puberulous: lvs. lanceolate to spatulate or linear-lanceolate, 2-4 cm. long, acute, narrowed into a short petiole, sharply serrulate except at base: racemes 5-11-fld., sparingly and minutely glandular-pubescent; sepals subulate-lanceolate, 1-1.5 cm. long, glandular-hairy; corolla tubular-funnel-form, lilac-purple, 3.5-4 cm. long; sterile filament long and glabrous. Fl.v-vii. B.M.6834(c). B.R.1277(c). D.H.1:41. G.C.III.7:204;65:39(h). (*P. Menziesii* var. *Scouleri* Gray.) B. C. to Idaho and n. Calif. Intr. 1828. Zone V.

Related species: *P. fruticosus* (Pursh) Greene. Upright shrub to 1 m.: lvs. obovate or elliptic-oblong to lanceolate, obtuse or acute, serrulate: corolla

purple, about 3 cm. long; sepals lanceolate, 5-10 mm. long. Wash. and Ore. to Wyo. and Mont. Cult. 1924. Zone V?—*P. f. crassifolius* (Lindl.) Krautter, var. Lvs. narrower, entire or nearly so. B.R.24:16(c). (*P. c.* Lindl.) Wash. to Wyo. and Mont. Cult. 1838. Zone V?

2. *P. Menziessii* Hook. Suffrutescent, with procumbent stem and ascending brs. to 20 cm. high: lvs. obovate to broad-spatulate or suborbicular, 5-15 mm. long, obtuse or rounded at apex, dentate, thickish; racemes 3-7-flid.; calyx 8 mm. long, slightly viscid, lobes lanceolate; sterile filament short, sometimes hairy. Henshaw, Mtn. Wild Fl. Am. t.70. B. C. to Alb. and Wash. Cult. 1902. Zone V.

Related species: *P. Davidsonii* Greene. Lvs. obovate or elliptic, 6-10 mm. long, entire; racemes 1-5-flid.; corolla 2.5 cm. long, lilac-purple. (*P. Menziessii* D. Piper.) N. Calif. Cult. 1898. Zone VII?—*P. Cardwellii* Howell. Subshrub to 30 cm.: lvs. elliptic-ovate to lanceolate, 1-2.5 cm. long, serrate, petioled, the upper sessile and oval to obovate; sepals narrow-lanceolate; corolla purple, 2.5-3.5 cm. long. (*P. fruticosus* C. Piper.) Ore. Cult. 1930. Zone VI.—*P. Newberryi* Gray. Subshrub to 40 cm.; lvs. ovate-elliptic to elliptic or ovate-oblong, 1-3 cm. long, acute or acutish, serrulate; sepals lanceolate, long-acuminate; corolla rosy-purple or carmine, 2-3 cm. long. G.C.1872:969. B.C.5:2539. (*P. Menziessii* var. *N.* Gray.) Wash. to Calif. Cult. 1872. Zone VI?

3. *P. Lémmonii* Gray. Upright shrub to 1 m.: lvs. subsessile, the pairs distant, ovate to oblong-lanceolate, 1-3 cm. long, acute, subcordate or truncate, serrulate; infl. paniculate; axis and peduncles glabrous; sepals ovate-lanceolate, like pedicels glandular-hairy; corolla 1.2 cm. long, pinkish yellow, upper lip red-violet inside, lower lip striped red-violet. Calif. Cult. 1898. Zone VII?

4. *P. cordifolius* Benth. Sarmentose shrub; brts. obscurely quadrangular: lvs. short-petioled, ovate, 2-5 cm. long, acute, cordate to truncate, serrate or denticulate; fls. in glandular-hairy terminal panicles; sepals ovate-lanceolate, glandular-hairy; corolla scarlet; tube straight, 2-2.5 cm. long; limb 1.2 cm. long, upper lip erect, lower deflexed. Fl.vi-viii. B.M.4497(c). G.C.70:102. Calif. Intr. 1848. Zone VII?

Related species: *P. corymbosus* Benth. Upright shrub to 50 cm.: lvs. elliptic to oblong, 1.2-2.5 cm. long, obtusish, cuneate or broad-cuneate, dentate, often obscurely so: fls. in corymbiform racemes. Calif. Cult. 1898. Zone VII?

5. *P. heterophyllus* Lindl. Upright shrub to 1.5 m., with slender brs.; glabrous: lvs. sessile or subsessile, lanceolate to linear, 2-6 cm. long, acute, narrow-cuneate; racemes elongated, sometimes paniculate at base, usually many-flid.; pedicels 3-10 mm. long; sepals ovate, acuminate, 3-4 mm. long, glabrous; corolla purple to lilac, 2.5-3 cm. long, both lips slightly recurving, tube much narrowed below the middle. Fl.vi-vii. B.M.3853(c). B.R.1899(c). Calif. Intr. 1828. Zone VII?

Related species: *P. Bridgesii* Gray. Subshrub to 60 cm.: lvs. spatulate to linear, obtuse or acutish, petioled, the upper sessile; fls. in panicles; sepals glandular-pubescent; corolla scarlet, tube 2.5 cm. long, slightly narrowed below the middle, upper lip erect. Calif. to Ariz. and Utah. Cult. 1898. Zone VII?

2. **PAULOWNIA** Sieb. & Zucc. Deciduous trees; winter-buds with several outer scales, superposed: lvs. opposite, petioled, entire or shallowly lobed, toothed on young plants: fls. in terminal panicles; calyx deeply 5-lobed; corolla tubular-funnelform, with spreading oblique 5-lobed limb; stamens 4, with distinct spreading anther-cells, sterile stamen wanting: caps. loculicidally dehiscent by 2 valves; seeds very numerous, small, winged. (After Anna Paulowna, princess of the Netherlands; 1795-1865.) About 10 species in China.

**P. tomentosa** (Thunb.) Steud. PAULOWNIA. Round-headed tree to 15 m., with stout spreading brs.; brts. densely soft-pubescent when young, becoming glabrous: lvs. broad-ovate to ovate, 12–25 cm. long, or on vigorous shoots to 50 cm. long, acuminate, cordate, entire or sometimes shallowly 3-lobed, pubescent above, densely so or tomentose beneath; petiole 8–20 cm. long; panicle pyramidal, 20–30 cm. long; calyx broad-campanulate, with 5 ovate obtuse lobes, rusty-tomentose like the pedicels; corolla funnellform-campanulate, 5–6 cm. long, pale violet, with darker spots and yellow stripes inside, glandular-pubescent outside; caps. ovoid, beaked, 3–4 cm. long, woody. Fl. iv–v; fr. ix–xi. S.Z.1:t.10(c). B.M.4666(c). G.C.51:430(h), 431; 56:150. Gn.60:130; 80:406(h). (*P. imperialis* Sieb. & Zucc.) China, cult. in Japan; escaped in the E. States from s. N. Y. to Ga. Intr. 1834. Zone (V). Strikingly handsome in spring with its large violet slightly fragrant fls. appearing just before the lvs.; the fl.-buds which are formed the previous season often winter-killed in the N. The large lvs. are also a prominent feature of the tree.—**P. t. pallida** (Dode) Schneid., var. Fls. pale, whitish violet: lvs. dull green above. (*P. t. flore albo* Hort.)—**P. t. lanata** (Dode) Schneid., var. Lvs. more densely yellowish tomentose beneath; calyx more tomentose, with longer acutish lobes. G.C.72:167(h). Intr. 1908.

Related species: **P. coreana** Uyeki. Similar to *P. tomentosa*: lvs. remotely serrate or entire, fulvous-tomentose beneath: corolla violet, without darker spots, yellow in throat. Bull. Agr. For. Coll. Suigen, 1:t.16(c). M.D.1932:t.53(h). Korea. Intr. 1928. Zone VI?—**P. lilacina** Sprague. Lvs. never lobed, less pubescent beneath: upper calyx-lobe obtuse, the others apiculate or acute; corolla pale violet, striped pale yellow in throat, with wide-spreading, strongly 2-lipped limb. B.M.8927(c). G.C.86:51 (as *P. Fargesii*). ? W. China. Cult. 1908. Zone VI?—**P. Fargesii** Franch. Tree to 20 m.; bark smooth; young brts. usually pilose or villous, soon glabrous: lvs. smaller, sparingly pubescent and glandular above, slightly pubescent beneath, entire or with few coarse teeth; panicle smaller; calyx tomentose with triangular acutish lobes; corolla whitish or lavender, slightly pubescent or glabrescent outside, 6 cm. long. W. China. Intr. about 1896. Zone VII?

**3. VERONICA L. SPEEDWELL.** Herbs or subshrubs: lvs. opposite, rarely alternate or whorled, the floral lvs. often alternate: fls. in terminal or axillary racemes, sometimes solitary and axillary; calyx 4–5-parted; corolla with usually short tube and spreading 4–5-lobed limb, the lateral lobes or the lower usually narrower; stamens 2, exserted: caps. compressed, usually obtuse or emarginate, 2-grooved, loculicidally dehiscent; seeds few to many. (Probably named in honor of St. Veronica, or possibly misprint for Betonica.) About 150 species in the colder and temperate regions of both hemispheres.

**V. fruticans** Jacq. Procumbent, with ascending pubescent stems, to 20 cm. high, woody only at base: lvs. elliptic to oblong, 6–12 mm. long, crenulate or entire, glabrous: racemes 2–6-fld.; corolla blue, 1.2 cm. across; sepals elliptic, pubescent, eglandular: caps. ovoid, scarcely emarginate. Fls. vii–viii. R.I.20:t.96,f.1,2(c). F.D.17:t.1649(c). E.P.IV:3b84. (*V. saxatilis* Scop.) Eu. Intr. 1768. Zone V.

Closely related species: **V. fruticulosa** L. Stems finely strigillose: lvs. oblong, 1–2 cm. long, obtuse, crenulate, sparingly hairy, finally glabrous, ciliate: fls. pink, in loose racemes; sepals glandular-pubescent. R.I.20:t.96:f.3(c). F.D.17:t.1648(c). (*V. frutescens* Scop.) S. Eu. Cult. 1796.

**4. HÈBE** Commers. ex Juss. Evergreen shrubs or trees; brts. with conspicuous lf.-scars: lvs. opposite, coriaceous, entire, rarely serrate: fls. in axillary racemes; calyx 4-, rarely 3- or 5-parted; corolla-tube longer or shorter than calyx, spreading limb, 4-, rarely 3- or 5–6-lobed; stamens 2, exserted;

ovary 2-celled: caps. dorsally compressed or turgid, septicidally dehiscing; seeds few or many. (Greek mythological name.) Syn.: *Veronica* subgen. *Hebe* Benth. About 100 species chiefly in New Zeal., few in Austral. and S. Am.—Ornamental shrubs with showy fls., for warmer regions.

- A. Lvs. not scale-like.
- B. Lvs. not imbricate: fls. in racemes.
  - c. Lvs. elliptic to oblong.....1. *H. Traversii*
  - cc. Lvs. narrow-oblong to elliptic-lanceolate.....2. *H. anomala*
- BB. Lvs. imbricate, rounded or cordate at base: fls. in spikes.
  - c. Lvs. keeled, very short-petioled.....3. *H. buxifolia*
  - cc. Lvs. not keeled, sessile.....4. *H. amplexicaulis*
- AA. Lvs. scale-like, each pair connate at base.
  - B. Lvs. densely imbricate.....5. *H. Hectori*
  - BB. Lvs. in distant pairs.....6. *H. cupressoides*

1. *H. Traversii* (Hook. f.) Cockayne & Allan. Wide-spreading shrub to 2 m.; brts. minutely downy at first: lvs. crowded, short-stalked, elliptic-oblong to oblong-obovate, 1-2.5 cm. long, acute, cuneate, rather dull dark green: racemes near end of brts. 3-6 cm. long; sepals ovate, minutely ciliate; corolla white, 6-8 mm. across; tube twice as long as sepals. Fl.vii. B.M. 6390(c). G.C.53:172. Gn.83:172(h),384(h). B.S.2:640,t(h). N. Zeal. Intr. 1868. Zone VII.

Related species: *H. Balfouriana* (Hook. f.) Cockayne. Shrub to 1 m.: lvs. elliptic, 8-16 mm. long, scarcely stalked: racemes stalked, 5-7 cm. long; corolla purple-blue, about 1 cm. across; tube as long as sepals. B.M.7556(c). N. Zeal. Cult. 1895. Zone VII?—*H. vernicosa* (Hook. f.) Cockayne & Allan. Low shrub, to 50 cm.; brts. minutely downy: lvs. elliptic to obovate, 4-12 mm. long, lustrous dark green: racemes usually in pairs, 1-2.5 cm. long, 4-8-fld.; corolla white; sepals narrow-oblong, obtuse. B.S.2:640. (*V. canterburyensis* Armstr.) New Zeal. Cult. 1894. Zone VII.—*H. elliptica* (Forst. f.) Pennell. Shrub or small tree to 6 m., glabrous: lvs. short-stalked, elliptic-oblong, 1-2.5 cm. long, apiculate, truncate or rounded at base, margin with white pubescence, midrib prominent beneath: fls. white with purple lines, 1.2-1.5 cm. across, in 4-12-fld. racemes 2-3.5 cm. long. B.M.242(c). (*V. decussata* Ait.) New Zeal. Intr. 1776.—*H. speciosa* (R. Cunn.) Cockayne & Allan. Shrub to 2 m.; brts. 2-edged at first, glabrous: lvs. very short-stalked, obovate to obovate-oblong, 5-10 cm. long, glabrous; racemes 3-7 cm. long; fls. dark reddish purple, 8 mm. across. B.M.4057(c). New Zeal.—Scarcely hardy in our area, but some of its hybrids are hardier.

2. *H. anomala* (Armstr.) Cockayne. Shrub to 2 m., of upright narrow habit; brts. slender, nearly glabrous: lvs. elliptic-lanceolate or narrow-oblong, 8-20 mm. long, acute, narrowed into a broad short stalk, slightly keeled, dark lustrous green: fls. white or pale pink, in spikes about 3 cm. long, panicked at end of brs.; corolla 6-8 mm. across, the slender tube twice as long as calyx; anthers blue; caps. ovate-oblong, glabrous. Fl.vi-vii. B.M.7360(c). B.S.2:634. New Zeal. Intr. 1883. Zone VII.

3. *H. buxifolia* (Benth.) Cockayne & Allan. Stout shrub to 1.5 m.: lvs. imbricate, oblong-obovate, 8-12 mm. long, acute, truncate at base, lustrous dark green above, paler and usually minutely dotted beneath, keeled: fls. white, sessile, 6-8 mm. across, in spikes 1.5-2.5 cm. long, in the axils of the upper lvs. forming a corymbose head: caps. nearly twice as long as the narrow-oblong sepals. New Zeal. Cult. 1885. Zone VII.

4. *H. amplexicaulis* (Armstr.) Cockayne & Allan. Upright or decumbent shrub, to 1 m., with spreading brs.: lvs. imbricate, sessile, oblong to elliptic-oblong, 1-2.5 cm. long, obtuse, cordate and somewhat clasping at base, glaucous: fls. white, sessile, 6 mm. across, in dense spikes about 3 cm. long, in the axils of the upper lvs.; ovary pubescent. B.M.7370(c). New Zeal. Intr. about 1880. Zone VII.

Related species: *H. pinguifolia* (Hook. f.) Cockayne & Allan. Shrub with stout decumbent brs.: lvs. sessile, narrow-oblong to suborbicular, 1-2 cm. long,

obtuse, cuneate, usually with red margin, dull bluish green, thick: fls. white in short dense spikes; ovary pubescent. B.M.6147,6587(c). Gn.28:293,t(c). (*V. carnosula* Hort., not Hook. f.) New Zeal. Intr. about 1868. Zone VII.—*H. carnosula* (Hook. f.) Cockayne. Usually prostrate: lvs sessile, obovate, 8–20 mm. long, acute, narrowed at base, glaucous: fls. white: ovary glabrous. New Zealand. Cult. 1914. Zone VII.

5. *H. Héctori* (Hook. f.) Cockayne & Allan. Stout shrub to 0.75 m.; brts. terete, upright, stiff: lvs. broad-ovate, 2–3 mm. long, obtuse, the pairs united below the middle, lustrous, puberulous on the margin: fls. pinkish or white, 6 mm. across, crowded at ends of brts., forming small ovoid heads; sepals narrow-oblong, as long as corolla-tube. B.M.7415(c). M.G.27:505(h). New Zeal. Cult. 1895. Zone VII.

Related species: *H. lycopodioides* (Hook. f.) Cockayne & Allan. Lvs. triangular, about 2 mm. long, strongly keeled, therefore brts. 4-angled; lvs. of young plants larger and sometimes lobed: fls. white, 6 mm. across, in small heads 1–1.5 cm. across; anthers blue. B.M.7338(c). New Zeal. Cult. 1894. Zone VII?

6. *H. cupressoides* (Hook. f.) Cockayne & Allan. Globose shrub to 2 m., with very slender brts.: lvs. scale-like, about 1.5 mm. long, obtuse, in distant pairs; on young plants larger, to 6 mm. long, oblong to ovate, entire or lobed: fls. pale blue, 4 mm. across, in small 3–8-fld. heads: caps. obovoid. B.M.7348(c). G.C.III.3:20,21;9:38. Gn.89:471(h). (*V. salicornioides* Hort., not Hook. f.) New Zeal. Cult. 1888. Zone VII? Distinct species; the brts. resemble those of a cypress.

Other species in cult. which may be hardy in our area are: *H. angustifolia* (A. Rich.) Cockayne & Allan, B.M.6955(c); *H. Armstrongii* (T. Kirk) Cockayne & Allan; *H. Bidwillii* (Hook.) Wall, H.I.814; *H. brachysiphon* Summerhayes, B.M.6390(c, as *V. Traversii*); *H. Colensoi* (Hook. f.) Cockayne; *H. decumbens* (Armstr.) Cockayne & Allan; *H. Dieffenbachii* (Benth.) Cockayne & Allan, B.M.7656(c); *H. Lavidiana* (Raoul) Cockayne & Allan, B.M.7210(c); *H. loganioides* (Armstr.) Wall, B.M.7404(c); *H. macrocarpa* (Vahl) Cockayne & Allan; *H. macroura* (Hook. f.) Cockayne & Allan; *H. monticola* (Armstr.) Andersen; *H. subalpina* (Cockayne) Cockayne & Allan; *H. tetragona* (Hook. f.) Cockayne & Allan, H.I.580; *H. tetrasticha* (Hook. f.) Cockayne & Allan.

## 105. BIGNONIACEAE Pers. BIGNONIA FAMILY

Trees, shrubs or herbs, often climbing, usually by tendrils: lvs. opposite, rarely alternate, simple or compound, exstipulate: fls. perfect, irregular, usually large and showy, in terminal or axillary racemes or panicles; calyx tubular or campanulate, 5-toothed or truncate, sometimes spathe-like; corolla campanulate, funnelliform or tubular, with 5-lobed, usually oblique limb, rarely 2-lipped; fertile stamens usually 4, didynamous, with one sterile stamen, sometimes two with 3 sterile stamens, rarely 5 fertile stamens, inserted on the corolla-tube; ovary superior with a disk at the base, 1- or 2-celled; ovules numerous on parietal placentae; style slender with 2-lobed stigma: fr. a loculicidally or septifragally (the valves separating from the central septum) dehiscent caps., rarely fleshy and indehiscent; seeds numerous, compressed, winged.—About 100 genera and 600 species, in trop. and subtrop. regions of both hemispheres, few extending into temp. regions.

- A. Lvs. compound, climbing plants, rarely shrubby.
- B. Plants with tendrils.
  - c. Lvs. with 1 pair of lfts.; ovary 2-celled.....1. *Bignonia*
  - cc. Lvs. bipinnate; ovary 1-celled.....2. *Eccremocarpus*
- BB. Plants without tendrils: lvs. pinnate.....3. *Campsis*
- AA. Lvs. simple; trees or upright shrubs.
  - B. Fertile stamens 2: lvs. ovate.....4. *Catalpa*
  - BB. Fertile stamens 4: lvs. linear.....5. *Chilopsis*

1. **BIGNONIA** L. Evergreen high climbing vine: lvs. opposite, 2-foliate, the rachis ending in a branched tendril clinging by small disks: fls. in axillary cymes; calyx campanulate, shallowly 5-lobed or truncate; corolla funnelform-campanulate, with spreading, slightly 2-lipped limb; stamens 4, included, inserted near base of corolla: disk annular; ovary linear, many-ovuled: caps. linear, flattened parallel to the partition, septifragally dehiscent, with leathery valves; seeds elliptic, winged. (After Abbé Jean Paul Bignon, court librarian to Louis XIV; 1662-1743.) Syn.: *Anisostichus* Bur., *Doxantha* Schum., Miers in part. One species in N. Am.

**B. capreolata** L. CROSS-VINE. Climbing to 20 m.; glabrous: petiole 1-2 cm. long: lfts. 2, stalked, oblong-ovate to oblong-lanceolate, 5-15 cm. long, obtusely acuminate, cordate, entire: cymes short-stalked, 2-5-fld., pedicels 2-4 cm. long: corolla red-orange, lighter within, 4-5 cm. long, lobes rounded, about  $\frac{1}{4}$  as long as tube: caps. 10-17 cm. long, compressed. Fl.v-vi. B.M. 864(c). Gng.1:370-1. (*Doxantha* c. Miers, *Anisostichus* c. Bur., *B. crucigera* L., partly.—TRUMPET-FLOWER, QUARTER-VINE.) Va. and S. Ill. to Fla. and La. Cult. 1653. Zone (V). With showy large fls.—**B. c. atrosanguinea** Hook. f., var. Lfts. longer and narrower; fls. dark red-purple. B.M.6501(c).

2. **ECCREMOCARPUS** Ruiz & Pav. Vines climbing by tendrils or twining: lvs. opposite, pinnate or bipinnate: fls. yellow, orange or scarlet, in terminal racemes; calyx campanulate, with 5 valvate lobes; corolla with elongated tube and small, 5-lobed or 2-lipped limb; stamens 4, included; disk annular: caps. ovoid or ellipsoid, 1-celled, loculicidal; seeds orbicular, with broad wing. (Greek *ekkrēmes*, pendulous, and *karpos*, fruit.) Three or 4 species in Peru and Chile.

**E. scaber** Ruiz & Pav. Climbing to 4 m.; glabrous; stems grooved: lvs. bipinnate, the primary pinnae with 3-7 lfts.; lfts. ovate to oblong-ovate, 8-30 mm. long, acute or obtuse, often cordate, entire or serrate: racemes 10-15 cm. long; corolla orange-red, 2-2.5 cm. long, tubular, ventricose above the middle, constricted at mouth, with small rounded lobes: caps. 3-3.5 cm. long. Fl.vi-ix. B.M.6408(c). B.R.939(c). S.H.2:f.405a-g. (*Calampelis scabra* Don.) Chile. Intr. 1824. Zone VII. With showy fls. in summer; where it is not hardy, it may be treated as an annual or perennial.

3. **CAMPISIS** Lour. TRUMPET-CREEPER. Deciduous shrubs usually climbing by aerial rootlets: lvs. opposite, odd-pinnate; lfts. serrate: fls. orange to scarlet, in terminal cymes or panicles; calyx tubular-campanulate, 5-lobed; corolla funnelform, enlarged above the calyx, with large, spreading, 5-lobed, oblique limb, lobes rounded; stamens 4, didynamous, included; ovary 2-celled, with large disk at base; caps. elongated, stipitate, loculicidally dehiscent, with leathery valves separating from the septum; seeds numerous, compressed, with 2 large wings. (Greek *kampsis*, curvature; referring to the curved stamens.) One species in N. Am. and 1 in E. Asia.

A. Lfts. pubescent beneath at least along the midrib: calyx-teeth short, triangular-ovate.

AA. Lfts. glabrous beneath: calyx 5-lobed to the middle..... 1. *C. radicans*  
2. *C. grandiflora*

1. **C. radicans** (L.) Seem. TRUMPET-VINE. Climbing to 10 m. or more, with aerial rootlets: lfts. 9-11, short-stalked, elliptic to ovate-oblong, 3-6 cm. long, acuminate, cuneate, serrate: fls. usually orange outside, with scarlet limb; calyx-lobes triangular, much shorter than the tube; corolla tubular-funnelform, 6-9 cm. long, the tube almost 3 times as long as the calyx, limb 4-5 cm. broad: caps. cylindric-oblong, 8-12 cm. long, beaked, keeled along the

sutures. Fl.vii-ix. B.M.485(c). M.N.II.2:t.1(c). B.C.2:651. (*Bignonia* r. L., *Tecoma* r. Juss.—TRUMPET-HONEYSUCKLE.) Pa. to Mo., Fla. and Tex. Intr. 1640. Zone IV. Firmly clinging to walls and tree-trunks; with large brilliantly colored fls. in summer.—*C. r. praecox* (Jaeg.) Schneid., f. Fls. scarlet, appearing in June.—*C. r. flava* (Bosse) Rehd., f. Fls. orange-yellow. (*C. r. var. aurea* Rehd., *T. r. var. lutea* Kirchn.) Cult. 1842.—*C. r. speciosa* (Parsons) Rehd., var. Scarcely climbing, usually a bush with long slender stems: lfts. smaller, elliptic, abruptly long-acuminate: fls. orange-red, with rather straight tube, limb about 3 cm. across.

2. *C. grandiflora* (Thunb.) Loisel. CHINESE T. Climbing, with few or no aerial rootlets: lfts. 7-9, ovate to ovate-lanceolate, 3-6 cm. long, acuminate, serrate, glabrous: fls. in larger and looser terminal cymes or panicles; corolla scarlet, funnelform-campanulate, shorter and broader; tube little or not exceeding the lanceolate calyx-lobes, limb 7-8 cm. across: caps. obtuse at apex. Fl.viii-ix. B.M.1398(c). N.T.1:496. Gn.47:373. G.F.3:393. B.C.2:652. (*Bignonia chinensis* Lam., *Tecoma* c. K. Koch, *C. ch.* Voss.) China, cult. in Japan. Intr. 1800. Zone VII? Less high climbing and showier than the preceding species; blooms when quite small.—*C. g. Thunbergii* (Carr.) Rehd., f. Fls. orange, with very short tube and reflexed lobes. (*Tecoma* T. Sieb.)

*C. g.* × *radicans* = *C. Tagliabuana* (Vis.) Rehd. Intermediate: lfts. 7-11, usually pubescent on the veins beneath: fls. in loose panicles; calyx divided about ½ into acuminate lobes much shorter than the corolla-tube; corolla about 8 cm. long and 5-6 cm. across. S.T.1:t.47. M.G.19:123. (*C. hybrida* Zab., *T. intermedia* Schelle, *Bignonia Princei grandiflora* Hort., *B. radicans grandiflora atropurpurea* Hort.) Orig. before 1858. Zone (V). Almost as showy as No. 2, hardier.

4. **CATÁLPA** Scop. Deciduous, rarely evergreen trees; winter-buds with several outer scales, terminal bud wanting: lvs. opposite, sometimes whorled, long-petioled, entire or coarsely lobed, 3-5-veined at base, usually with purple glandular spot in the axils of the veins beneath: fls. in terminal panicles or racemes; calyx irregularly splitting or 2-lipped; corolla campanulate, 2-lipped, with 2 small upper and 3 larger lower lobes; fertile stamens 2, included; style slightly longer than stamens: caps. cylindric, very long and narrow, separating into 2 valves, with numerous oblong seeds bearing a tuft of long white hairs on each end. (The Indian name of the tree.) About 10 species in N. Am., the West Indies and in E. Asia.

A. Fls. yellowish, 1.5-2 cm. long: lvs. usually lobed and usually nearly glabrous beneath.

AA. Fls. white or rosy pink, 3-5 cm. long: lvs. not or rarely lobed.

B. Infl. glabrous: lvs. glabrous beneath or pubescent with simple hairs.

C. Lvs. pubescent beneath, to 30 cm. long: fls. in a large panicle.

D. Lvs. abruptly acuminate: fls. 4-5 cm. across; panicle many-fld. 2. *C. bignonioides*

DB. Lvs. long-acuminate; fls. about 6 cm. across; panicle several-fld. 3. *C. speciosa*

CC. Lvs. quite glabrous beneath, to 15 cm. long: fls. in a 3-12-fld. raceme. 4. *C. Bungei*

BB. Infl. pubescent: lvs. tomentose or densely pubescent beneath, with branched hairs.

5. *C. Fargesii*

1. *C. ovata* Don. Tree to 10, or sometimes to 15 m., with spreading brs.; brts. glabrous, rarely sparingly hirsute: lvs. broad-ovate, 10-25 cm. long, abruptly acuminate, often shallowly 3-5-lobed, with broad abruptly acuminate lobes, dull green above, light green beneath and pubescent on the veins and veinlets or nearly glabrous; petiole 6-14 cm. long: panicle pyramidal, 10-25 cm. long: fls. yellowish white, striped orange inside and spotted dark violet: pod 20-30 cm. long, about 8 mm. wide. Fl.v. B.M.6611(c). S.I.2:t.71(c). L.I.t.10. (*C. Kaempferi* Sieb., *C. Henryi* Dode.) China, cult. in

Japan. Intr. 1849. Zone IV.—*C. o. flavescens* Bean, var. Fls. yellow. Cult. 1879.

2. *C. bignonioides* Walt. COMMON *C.* Tree to 15, rarely 20 m. tall, with widespread brs. forming a broad roundish head; bark light brown, separating into thin scales: lvs. often whorled, ovate, 10–20 cm. long, abruptly acuminate, truncate to subcordate at base, sometimes with a pair of small lobes, light green and nearly glabrous above, pubescent beneath, especially on the veins, of unpleasant odor when crushed; petiole 8–16 cm. long; panicle broad-pyramidal 15–20 cm. high; fls. 4–5 cm. across, white, with 2 yellow stripes inside and thickly spotted purple-brown, with oblique limb and entire lower lobes: fr. 20–40 cm. long, 6–8 mm. thick, with thin walls. Fl.vi–vii. B.M. 1094(c). L.B.1285(c). S.S.6:t.288–9. G.C.44:10,t(h),312,t(h). B.S.1:312,t(h). G.F.3:537,539. (*C. Catalpa* Karst., *C. syringaeifolia* Sims, *C. cordifolia* Moench.) Ga. to Fla. and Miss.; naturalized n. to N. Y. Intr. 1726. Zone IV. Handsome tree, very showy when in bloom.—*C. b. aurea* Bur., var. Lvs. yellow. G.M.53:709.—*C. b. Koehnei* Dode, var. Lvs. yellow with a dark green blotch below the middle and green veins. G.W.19:445.—*C. b. nana* Bur., var. Dwarf; usually grafted high and forming a standard with dense broad head. Gng.3:195(h). M.G.18:616. (*C. Bungei* Hort., not *C. A. Mey.*)

*C. b. × ovata* = *C. hybrida* Spaeth. HYBRID *C.* Intermediate; lvs. resembling more those of *C. ovata* and purplish when unfolding, larger and usually more pubescent beneath, the fls. more like those of *C. bignonioides*, but smaller. Gt.47:t.1454(c). G.F.2:305. G.W.3:569(h). Jour. Hered. 11:16–24. (*C. Teasii* Penh., *C. Teasiana* Dode.) Orig. about 1874. Handsome floriferous tree of rapid growth.—*C. h. japonica* (Dode) Rehd., var. Lvs. broader and more abruptly acuminate, nearly glabrous beneath. (*C. j.* Dode.) B.D.1907:198.—*C. h. purpurea* (Rehd.) Rehd., var. Young lvs. and shoots dark purple, nearly black when quite young, becoming finally green. (*C. h. atropurpurea* Spaeth, *C. ovata* var. *purpurea* Bean.)

3. *C. speciosa* Warder. WESTERN *C.* Tree to 30 m., of pyramidal habit; bark red-brown, broken into thick scales: lvs. ovate to ovate-oblong, 15–30 cm. long, long-acuminate, truncate to cordate, bright green and glabrous above, densely pubescent beneath, scentless: petiole 10–15 cm. long: panicle comparatively few-fl., about 15 cm. high: fls. about 6 cm. across, with slightly oblique limb, the lower lobe emarginate, inside with 2 yellow stripes and inconspicuously spotted purple-brown: caps. 20–45 cm. long, and about 1.5 cm. thick, with a thick wall. Fl.vi. R.H.1895:136,t(c). S.S.6:t.290–1. G.C. 66:34(h). M.G.18:229–30(h). (*C. cordifolia* Jaume St.-Hil., not Moench.) S. Ill. and Ind. to W. Tenn. and N. Ark.; naturalized elsewhere. Cult. 1754. Zone IV. Handsome pyramidal tree more vigorous and harder than the preceding species; the wood very durable in soil and in water.

4. *C. Bungei* C. A. Mey. Small tree: lvs. triangular-ovate to ovate-oblong, 6–15 cm. long, long-acuminate, truncate to broad-cuneate, sometimes with 1 or few pointed teeth near base; dark green above, lighter beneath; petiole 2–8 cm. long: raceme corymbose, 3–12-fl.; corolla white, with purple spots inside, 3–3.5 cm. long; caps. 25–35 cm. long. S.H.2:403g–h,404e–g. N. China. Cult. 1877. Zone V. Pyramidal tree, apparently not as floriferous as the other species.—*C. B. heterophylla* C. A. Mey., var. Lvs. with several pointed teeth near base; raceme 3–5-fl. Nouv. Arch. Mus. Paris, II.6:t.4. B.D.1907: 198b(l). (*C. h.* Dode.)

5. *C. Fargesii* Bur. Tree to 20 m.; young shoots stellate-pubescent: lvs. ovate, 8–14 cm. long, long-acuminate, rounded or subcordate, 3-lobed on young plants, slightly pubescent above, densely so beneath; petiole 4–10 cm. long: raceme corymbose, 7–15-fl.; fl. about 3.5 cm. long, rosy pink or rosy

purple, with purple-brown dots on throat. Nouv. Arch. Mus. Paris, II.6:t.3. (*C. vestita* Diels.) W. China. Cult. 1900. Zone V.—*C. F. Ducloixii* (Dode) Gilmour, f. Glabrous. B.M.9458(c). B.D.1907:198. (*C. D.* Dode.) Intr. about 1900.

5. **CHILÓPSIS** Don. Deciduous shrub or small tree; brts. without terminal bud; winter-buds with several imbricate scales, rusty-pubescent: lvs. opposite or alternate, narrow, entire: fls. in terminal racemes or panicles; calyx 2-lipped, upper lip with 3, the lower with 2 teeth; corolla funnellform-campanulate, slightly 2-lipped, the upper lip 2-lobed, the lower 3-lobed; stamens 4, included, and 1 staminode: caps. elongated, 2-valved; seeds numerous, winged, with a fringe of hair at the ends. (Greek *cheilos*, lip, and *opsis*, likeness, referring to the distinct corolla-lip.) One species in N. Am.

*C. linearis* (Cav.) Sweet. DESERT-WILLOW. Shrub or tree to 10 m.: lvs. short-petioled or sessile, linear to linear-lanceolate, 15-30 cm. long, gradually narrowed at ends, glabrous, often viscid: infl. 7-10 cm. long; calyx pubescent; corolla white, tinged pale purple, 2-3.5 cm. long and nearly as wide: fr. slender, 16-30 cm. long, 6 mm. thick. Fl.vi-viii. S.S.6:t.292. S.M.870. (*C. saligna* Don.) S. Calif. to Tex., s. to Mex. Cult. before 1800. Zone VII.

#### Fam. 106. GLOBULARIACEAE DC. GLOBULARIA FAMILY

Herbs or shrubs: lvs. alternate, simple, entire or toothed, exstipulate: fls. perfect, on a chaffy receptacle in involucrate heads; calyx usually 5-parted, regular or 2-lipped; corolla 2-lipped, with imbricate lobes; stamens 4, didynamous, exserted; the hypogynous disk reduced to a lateral gland; ovary superior, 1-celled, 1-ovuled; style filiform, with 1 or 2 stigmas: fr. a nutlet enclosed by the persistent calyx; seeds albuminous, with straight embryo.—Three genera and about 20 species in the Mediterr. reg.

**GLOBULARIA** L. Herbs, subshrubs or shrubs: fls. in globose heads terminal on the main axis; corolla exceeding the calyx. (Name referring to the globular fl.-heads.) About 18 species in S. Eu. and W. Asia.

*G. cordifolia* L. Procumbent subshrub to 10 cm. high; glabrous: lvs. obovate, 2-3 cm. long, emarginate and mucronate to 3-toothed at apex, gradually narrowed at base: fls. blue, in peduncled heads about 1 cm. across; corolla 2-lipped, upper lip 2-, lower lip 3-lobed with linear to linear-oblong lobes. Fl.v-viii. R.I.20:t.195,f.1,2(c) F.D.18:t.1770(c). S.H.2:f.405h-i. Mts. of S. Eu. Intr. before 1759. Zone V. Suited for the rock garden.

#### Fam. 107. PLANTAGINACEAE Juss. PLANTAIN FAMILY

Herbs, rarely shrubby: lvs. alternate or opposite, exstipulate: fls. perfect, rarely unisexual, usually in heads or spikes; calyx 4-cleft; corolla 4-lobed, with scarious imbricate lobes; stamens 4, exserted: ovary superior, 1-2-, rarely 4-celled; cells with 1 to many ovules: style and stigma 1: fr. a circumcissile caps. or nutlet inclosed by the persistent calyx; seeds often peltate, albuminous.—Three genera and about 200 species distributed over the world.

**PLANTAGO** L. PLANTAIN. Herbs, subshrubs or shrubs: lvs. alternate, rarely decussate: fls. perfect or polygamous, in dense head-like or cylindric spikes; corolla small, with 4 scarious reflexed lobes; stamens 4, rarely 2, with long filaments and cordate anthers; ovary 2-, rarely 3-4-celled; each cell with 1 to many ovules; style filiform: caps. 2-many-seeded, opening transversely

with the top falling off like a lid; seeds peltate, with straight embryo. (Ancient Latin name of the plant.) About 200 species mostly in the temp. regions.

**P. Cynops** L. Ascending subshrub to 40 cm. high, slightly pubescent: lvs. opposite, linear, 3-7 cm. long, thickish and slightly triangular, with scabrid margins: fls. whitish, in small ovoid heads about 1 cm. long, on slender axillary peduncles 3-10 cm. long; bracts broad-ovate, acuminate, with broad hyaline margin. Fl.vi-vii. F.D.20t.2021(c). S.H.2:f.628k. S. Eu. Cult. 1596. Zone V. Of interest as a woody representative of the genus.

#### Fam. 108. RUBIACEAE Juss. MADDER FAMILY

Trees, shrubs or herbs: lvs. opposite or whorled, usually entire, stipulate; the stipules of the opposite lvs. usually connate, sometimes reduced to a stipular line: fls. perfect, rarely unisexual, regular, sometimes slightly irregular, usually 4- or 5-merous; calyx with open, rarely imbricate lobes; corolla with cylindric to campanulate tube, rarely rotate, lobes usually valvate; stamens 4-6, inserted on the tube; ovary inferior, usually 2-celled, rarely 1- to many-celled; ovules 1 to many in each cell; style filiform, with capitate or branched stigma: fr. a caps., berry or drupe; seeds usually albuminous.—About 350 genera and 4500 species distributed over the whole world, mostly in the tropics.

A. Fls. in dense globose peduncled heads: fr. a dry achene: lvs. 6-15 cm. long.

1. *Cephalanthus*

AA. Fls. not in globose heads: lvs. usually smaller.

B. Plant twining: lvs. 5-12 cm. long: fls. in panicles; style deeply 2-parted: fr. berry-like, dry.....2. *Paederia*

BB. Plants upright or prostrate shrubs.

CC. Fr. 3 caps.

D. Style 2-lobed at apex; inf. a terminal large panicle; fls. white, some with one calyx-lobe large and lf.-like: tree.....3. *Emmenopterys*

DD. Style 4-parted at apex; fls. in dense bracted clusters; calyx equally 5-toothed; shrubs.....4. *Leptodermis*

CC. Fr. berry-like.

D. Style 2-parted to base: fls. 1-4: prostrate shrub.....5. *Coprosma*

DD. Style 4-parted at apex; fls. in peduncled pairs; trailing subshrub.....6. *Mitchella*

**1. CEPHALÁNTHUS** L. BUTTONBUSH. Deciduous or evergreen shrubs or small trees; winter-buds small, often superposed, terminal bud wanting: lvs. opposite or whorled, entire, with triangular interpetiolar stipules: fls. small, 4-merous, sessile, in axillary globose heads; calyx-lobes short, ovate, obtuse; corolla with long slender tube and 4-lobed limb; stamens included; style long-exserted, with capitate stigma: fr. separating into 2 1-seeded nutlets. (Greek *kephalē*, head, and *anthos*, flower.) About 6 species in Asia, Afr. and Am.

**C. occidentális** L. Deciduous shrub or rarely small tree to 5 m.: lvs. ovate to elliptic-lanceolate, 6-15 cm. long, acuminate, lustrous bright green above, lighter and glabrous or somewhat pubescent beneath; petiole 6-20 mm. long: fls. creamy-white, in globose heads without the projecting styles 2.5-3 cm. across, on peduncles 3-6 cm. long. Fl.vii-ix. Ad.5:t.169(c). Em.394.t. S.S. 14:t.711. B.C.2:714. R.H.1889:280. N. B. and Ont. to Fla., Tex. and Calif.; also E. Asia. Intr. 1735. Zone IV. Attractive in late summer with its slender-stalked fl.-heads.—**C. o. angustifolius** André. Lvs. oblong-lanceolate, usually in 3's. R.H.1889:281.—**C. o. pubescens** Raf., var. Brts. and lvs. soft-pubescent beneath. Ill. to Ga., La. and Tex. Tenderer.

**2. PAEDERIA** L. Twining shrubs: lvs. opposite, rarely whorled, petioled, entire; stipules small, deciduous: fls. perfect or polygamo-dioecious, small, in axillary cymes forming usually terminal panicles; calyx 4-5-toothed,

corolla tubular or funnellform, with 4-5 small valvate crisped lobes; stamens included; style deeply 2-parted, twisted; ovary 2-celled; cells 1-ovuled: fr. dry, the exocarp fragile, breaking away and freeing the 2 compressed nutlets. (Latin *paedor*, bad smell; referring to the foliage when bruised.) About 20 species in trop. and subtrop. Asia and Am.

**P. scandens** (Lour.) Merr. Deciduous shrub climbing to 5 m., emitting a disagreeable odor when bruised: lvs. ovate to ovate-lanceolate, 5-12 cm. long, acuminate, rounded or truncate, rarely subcordate or cuneate, dark green above, lighter green beneath and pubescent or nearly glabrous; petiole 1-5 cm. long: fls. in axillary cymes forming long terminal panicles; corolla 1-1.5 cm. long, 4-6 mm. across, scurfy-pubescent and whitish outside, with purple eye: fr. globose, 5-6 mm. across, orange. Fl.vii-viii; fr.ix-x. N.K.14: t.21. N.T.1:531. R.H.1919:298. M.O.281. (*P. chinensis* Hance, *P. tomentosa* Maxim., not Bl., *P. foetida* Thunb., not L., *P. Wilsonii* Hesse.) China, Japan, Korea. Intr. 1907. Zone VI. Of little ornamental merit.

**3. EMMENÓPTERYS** Oliv. Deciduous tree, glabrous; terminal winter-bud with one outer convolute scale, conical, pointed: lvs. opposite, petioled, entire; stipules deciduous: fls. in many-fld. terminal glabrous panicles; calyx with 5 rounded, short, ciliate lobes, some fls. with 1 lobe lf.-like, petioled, large, ovate to oblong, whitish, persistent in fr.; corolla funnellform-campanulate, tomentulose outside, tube narrow at base, pubescent within, lobes 5, ovate, spreading tomentulose within; stamens 5, included; style not exceeding the stamens, 2-lobed at apex; ovary 2-celled: fr. an oblong caps. with numerous irregularly winged seeds. (Greek *emmeno*, persist, and *pteryx*, wing; referring to the persistent wing-like calyx-lobe.) Two species in China, Siam and Burma.

**E. Hénryi** Oliv. Tree to 30 m.: lvs. chartaceous, elliptic, 10-15 cm. long, acute, cuneate, slightly pubescent beneath, at least on veins and midrib; petiole 2-5 cm. long; panicle 10-18 cm. long; the enlarged calyx-lobe 3-5 cm. long, on a stalk about as long; corolla about 2.5 cm. long: caps. 3-6 cm. long. Fl.vii. H.I.19:1823. I.S.1:t.47. G.C.86:267(h). China. Intr. 1907. Zone VII. Showy in bloom.

Related genus: **PINCKNEYA** Michx. Infl. corymbose: calyx-lobes lanceolate, in some fls. 1 or 2 lobes leaf-like, petioled, rose-colored; corolla light yellow, salver-form with narrow tube, lobes 5, oblong, reflexed, marked with red lines and pilose inside; stamens 5, exserted: caps. subglobose, 2-valved. (After Charles C. Pinckney, revolutionary patriot; 1746-1825.) Two species in S. E. N. Am. and Colombia.—**P. pubens** Michx. **GEORGIA-BARK.** Shrub or tree to 10 m.: lvs. elliptic to oblong-ovate, 5-20 cm. long, acute or short-acuminate, tomentulose at first, later puberulous: infl. 15-20 cm. across; corolla-tube 1.5-2 cm. long, lobes shorter: caps. about 2 cm. across. F.S.19:t.1937(c). S.S.5:t.227,228. S.M.876. S. C. to Fla. Intr. 1786. Zone VII.

**4. LEPTODÉRMIS** Wall. Deciduous shrubs: lvs. opposite, entire, with triangular interpetiolar stipules: fls. heterostylous, in axillary head-like bracted clusters; calyx 5-toothed, persistent; corolla tubular-funnelform, with spreading 5-lobed limb; stamens 5; style 5-parted at apex; either style or stamens exserted; ovary 5-celled, cells 1-ovuled: fr. a caps., the outer wall splitting into 5 valves, the inner wall net-like, closed, enveloping the seeds. (Greek *leptos*, thin, and *derma* skin; referring to the inner wall of the fr.) About 30 species in E. Asia and the Himal.

**L. oblóna** Bge. Shrub to 1 m.; brts. finely pubescent: lvs. elliptic-ovate to oblong, 1-2 cm. long, acute, narrowed into a short petiole, usually scabrid

above, sparingly pubescent beneath, with 3-5 pairs of veins: fls. in sessile few-fl. clusters; bractlets connate to the middle, longer than calyx; corolla violet-purple, with slender tube 1.5-1.8 cm. long, pubescent outside, hairy in throat, lobes oblong-lanceolate. Fl.vii-x. N. China. Intr. 1905. Zone V. With attractive fls. in later summer and fall.

Related species: *L. Rehderiana* Winkl. Slender shrub; brts. pilose with long white hairs: lvs. sparingly pilose above and beneath, chiefly on midrib; corolla slenderer and more densely pubescent; bractlets connate to near apex. China. Intr. 1914. Zone VII?—*L. pilosa* Diels. Lvs. ovate, 1-2.5 cm. long, pilose; lower stipules long-pointed: fls. lilac, in dense axillary and terminal clusters; calyx-lobes short, subtruncate; corolla 1 cm. long, tomentulose outside, with suberect short lobes. C. and W. China. Cult. 1924. Zone VII.—*L. kumaonensis* Parker. Lvs. ovate to ovate-lanceolate, 3-5 cm. long, with 6-9 pairs of veins: fls. on very short lateral brts. in small clusters. N. W. Himal. Intr. 1923. Zone VI?—*L. Purdomii* Hutch. Slender shrub; brts. puberulous at first; lvs. mostly fascicled, linear-oblongate, 5-10 mm. long, obtuse, revolute, glabrous: fl.-clusters crowded toward the end of brts.; bracts connate at base; calyx-lobes oblong-ovate; corolla-tube about 1 cm. long. N. W. China. Intr. 1914. Zone VI?

5. **COPRÓSM**a Forst. Evergreen procumbent or upright shrubs or small trees: lvs. opposite, rarely whorled, with interpetiolar stipules: fls. usually dioecious, rarely bisexual, small, white or greenish; calyx campanulate and slightly toothed; corolla funnelform or campanulate, 4-9-lobed; stamens 4-9 inserted at base of tube, exserted; style 2-parted to base, pubescent; ovary 2-, rarely 4-celled, cells 1-ovuled: fr. an ovoid or globose drupe. (Greek *kopros*, dung, and *osme*, odor; referring to the fetid odor of the plant.) About 60 species in New Zealand and Australia, 1 in Chile.

*C. Pétriei* Cheesem. Prostrate, forming patches to 8 cm. high: lvs. linear-oblong to obovate, 3-6 mm. long, hairy and ciliate, rigid and thickish: fls. solitary at end of short brts.; staminate with 4-lobed corolla and without calyx; pistillate fls. with irregularly lobed corolla and with calyx: fr. globose, bluish purple, 8-12 mm. across. M.G.30:365(h). N. Zeal. Intr. about 1910. Zone VII? Attractive in fr.; suitable for the rock garden.

Related species: *C. acerōsa* A. Cunn. Prostrate; brts. puberulous: lvs. linear, 6-15 mm. long, dark green, glabrous; staminate fls. in clusters of 1-4, pistillate solitary: fr. globose, pale blue, 6-8 mm. across. Chesem., Ill. New Zeal. Fl. t.84. N. Zeal. Intr. about 1890.

6. **MITCHÉLLA** L. PARTRIDGE-BERRY. Evergreen trailing subshrub or herb, glabrous: lvs. opposite, short-petioled, with minute stipules: fls. in short-peduncled pairs, their ovaries united, heterostylous, either style or stamens exserted; calyx 4-toothed; corolla funnelform, with 4 spreading recurved lobes bearded inside; stamens inserted on throat; ovary 4-celled, cells 1-ovuled; stigma 4-lobed: fr. a berrylike united drupe crowned by the 2 persistent calyxes, with usually 8 roundish nutlets. (After John Mitchell, botanist in Virginia, a correspondent of Linnaeus; 1680?-1772.) One species in N. Am.

*M. repens* L. Stems slender, rooting, to 30 cm. long, glabrous or slightly pubescent: lvs. petioled, orbicular-ovate, 6-20 mm. long, obtuse, subcordate or rounded, dark green and lustrous above, often variegated with whitish lines: corolla 1-1.2 cm. long, white, often tinged purple, fragrant; fr. globose, scarlet, broader than high, 5-8 mm. across. Fl.vi-vii; fr.ix(-iii). L.B.979(c). B.B.3:255. N. S. to Ont. and Minn., s. to Fla., Ark. and Tex. Intr. about 1761. Zone III. Attractive little plant for the rock garden.—*M. r. leucocarpa* Bissell, f. Fr. white.

## Fam. 109. CAPRIFOLIACEAE Vent. HONEYSUCKLE FAMILY

Shrubs or sometimes small trees, rarely herbs: lvs. opposite, simple or pinnate, normally without stipules: fls. bisexual, regular or irregular; calyx 4-5-toothed; corolla 4-5-lobed, tubular to rotate; stamens 5, sometimes 4, inserted on the tube: ovary inferior, 1-5-, rarely to 8-celled, each cell with 1 to many ovules; style 1 or wanting: fr. a berry or berry-like drupe, or an achene or a dehiscent caps.—Fourteen genera and about 400 species chiefly in the n. temp. zone, few on the mts. in the tropics and in the s. hemisphere.

- A. Corolla rotate, with regular limb (rarely tubular and fr. a 1-seeded drupe): style short or wanting.
  - B. Lvs. pinnate: fr. berry-like, 3-5-seeded.....1. *Sambucus*
  - BB. Lvs. simple, sometimes lobed: fr. a 1-seeded drupe.....2. *Viburnum*
  - AA. Corolla tubular to campanulate, limb often irregular; style elongated.
    - B. Cells of ovary partly sterile, the fertile one 1-ovuled; stamens 4-5.
      - C. Fr. a berry-like 2-seeded drupe; corolla regular; stamens 4-5, equal or subequal; ovary 4-celled, 2 cells sterile.....3. *Symphoricarpos*
      - CC. Fr. an achene; stamens 4, didynamous.
        - D. Ovary enclosed between 2 large bracts, 4-celled; corolla 2-lipped; 2 cells sterile.
          - 4. *Dipelta*
        - DD. Ovary not enclosed between bracts, 3-celled.
          - E. Ovary and fr. elongated, narrow; sepals 2-5, persistent, enlarged in fr.: fls. solitary, in cymes or sometimes in pairs.....5. *Abelia*
          - EE. Ovary and fr. ovoid or globose-ovoid, glandular or bristly: fls. in pairs.
            - F. Fl.-pairs on a long terminal peduncle; trailing subshrub.....6. *Linnaea*
            - FF. Fl.-pairs axillary forming terminal corymbs: upright shrub.....7. *Kolkwitzia*
      - BB. Cells of ovary all fertile, 2-many-ovuled; stamens 5.
        - C. Fr. a dehiscent caps.: fls. 1-several in axillary cymes.
          - D. Fls. 2-lipped, yellow, about 1 cm. long.....8. *Diervilla*
          - DD. Fls. nearly regular, white to pink or crimson, larger.....9. *Weigela*
        - CC. Fr. a berry: fls. in axillary pairs or in whorls.
          - D. Ovary 2-3-, rarely 4-5-celled; corolla usually 2-lipped; fls. in pairs or whorls.
            - 10. *Lonicera*
          - DD. Ovary 5 (-3-celled); corolla nearly regular; fls. in whorls.....11. *Leycesteria*

1. **SAMBUCUS L. ELDER.** Deciduous shrubs or small trees, rarely herbs, with stout pithy brs.; winter-buds with several pairs of scales: lvs. opposite, odd-pinnate; lfts. serrate; with or without stipules and stipels: fls. small, white, in terminal compound corymbs or panicles, 5-merous, rarely 3-4-merous; calyx-limb minute or nearly obsolete; corolla rotate, with ovate to oblong-lanceolate lobes; stamens with short filaments; ovary 3-5-celled; style short, 3-5-lobed: fr. a berry-like drupe with 3-5 1-seeded nutlets. (Ancient Latin name of the Elder.) About 20 species in temp. and subtemp. regions of both hemispheres.—*Sambucus Ebulus* L., *S. Schweriniana* Rehd. and *S. chinensis* Lindl. (*S. javanica* Hemsl., not Reinw.) are herbaceous and not included in the following account.

- A. Cyme flat, umbel-like; pith white: fr. black or dark purple, rarely whitish or greenish.
  - B. Fr. not glaucous.
    - C. Lfts. usually 5: fr. black; brts. strongly lenticellate.....1. *S. nigra*
    - CC. Lfts. usually 7: fr. dark purple; brts. slightly lenticellate.....2. *S. canadensis*
  - BB. Fr. glaucous.....3. *S. coerulescens*
  - AA. Cyme paniculiform, with opposite or alternate brs.: pith usually brown.
    - B. Fr. black, rarely reddish brown; cyme corymbiform, about as broad as high.
      - 4. *S. melanocarpa*
    - BB. Fr. scarlet or red, rarely yellow.
      - C. Inf. corymbiform, about as broad as high, its brs. ascending: pith at first white or very light brown.....5. *S. microbotrys*
      - CC. Inf. paniculiform, ovoid, its brs. spreading or reflexed: pith brown.
        - D. Cyme compact, its lower brs. usually reflexed, 5 mm. or less long: plant glabrous.
          - 6. *S. racemosa*
        - DD. Cymes rather loose, its lower brs. spreading, 5-15 mm. long.
          - E. Plant more or less pubescent or puberulous: lfts. rather coarsely serrate: fr. 4-5 mm. across.....7. *S. pubens*
          - EE. Plant glabrous: lfts. closely and more finely serrate, long-acuminate: fr. about 3 mm. across.....8. *Sieboldiana*

1. *S. nigra* L. EUROPEAN E. Large shrub or tree to 10 m., with deeply furrowed bark; brts. gray, strongly lenticellate: lfts. 3-7, usually 5, short-stalked, elliptic to elliptic-ovate, 4-12 cm. long, acute, sharply serrate, dark green above, lighter and sparingly hairy on the vein beneath, of disagreeable odor when bruised: fls. yellowish white, of heavy odor, in 5-rayed flat cymes, 12-20 cm. across; ovary usually 3-celled: fr. lustrous black, 6-8 mm. across, Fl.v-vi; fr.viii-ix. R.I.12:t.730(c). S.E.4:t.637(c). M.D.1920:213(h). G.W. 19:345(h). Eu., N. Afr., W. Asia. Cult. since ancient times. Zone V.—*S. n. albo-variegata* West., var. Lvs. variegated with white. S.O.3:t.144a(c). J.L. 33:f.47(h).—*S. n. aureo-variegata* West., var. Lvs. variegated with yellow.—*S. n. aurea* Sweet, var. Lvs. golden yellow. G.W.2:565.—*S. n. laciniata* L., var. Lfts. regularly and deeply dissected. S.O.3:t.144b(c). R.I.13:730.f.1436 (c). S.H.2:f.408a.—*S. n. heterophylla* Endl., var. Lfts. irregularly cut and erose, partly reduced almost to the midrib.—*S. n. rotundifolia* Endl., var. Lfts. broad-ovate to suborbicular, usually 3. S.H.2:f.408b.—*S. n. viridis* West., var. Fr. greenish. S.O.3:t.143a(c). M.D.1909:8.t.f.2(c). (*S. n. var. chlorocarpa* Hayne.)—*S. n. alba* West., var. Fr. whitish. (*S. n. var. leuocarpa* Hayne.)—*S. n. pyramidalis* Jaeg., var. Of upright columnar habit.—*S. n. pendula* Dipp., f. Brs. prostrate or pendulous.

*S. n.* × *corulea*; see under No. 3.

2. *S. canadensis* L. AMERICAN E. Stoloniferous shrub to 4 m.; brts. pale yellowish gray, slightly lenticellate: lfts. usually 7, short-stalked, elliptic to lanceolate, 5-15 cm. long, acuminate, sharply serrate, bright green, slightly puberulous on the veins beneath or nearly glabrous: fls. white, in 5-rayed, slightly convex cymes, to 25 cm. across; ovary usually 4-celled: fr. purple-black, 4-5 cm. across. Fl.vi-vii; fr.ix. M. Am. 1:t.75(c). B.C.6:3068,t. Gg.6: 88(h). M.G.14:169(h). M.D.1909:36a(h). N. S. and Man. to Fla. and Tex. Intr. 1761. Zone III.—*S. c. rubra* Palmer & Steyer., f. Fr. bright red. Intr. 1932.—*S. c. aurea* Cowell, var. Lvs. golden-yellow: fr. cherry-red. F.E.22: 433. (*S. c. f. delicatissima* Schwer.)—*S. c. maxima* (Hesse) Schwer., f. Lvs. larger; cymes to 35 cm. across; a very vigorous form. G.M.51:451. G.W.11: 397(h). S.L.335(h).—*S. c. acutifolia* Ellw. & Barry. Lfts. much dissected, the lower ones pinnatifid, the upper ones incisely serrate and narrow. F.S.R.1:151. (*S. c. var. laciniata* Cowell, not Gray.)—*S. c. chlorocarpa* Rehd., f. Fr. greenish; lvs. pale green.—*S. c. submollis* Rehd., var. Lfts. beneath grayish green and soft-pubescent. Ill. to Ark. and Tex.

3. *S. coerulea* Raf. Large shrub or small tree occasionally to 15 m.; brts. rather slender, bloomy when young: lfts. 5-7, oblong to oblong-lanceolate, 6-15 cm. long, coarsely serrate, bright green, glabrous: fls. yellowish white, in convex 5-rayed cymes, 10-15 cm. across: fr. blue-black, whitened by a heavy bloom. Fl.vi-vii; fr.viii-ix. S.S.5:t.222. Gs.5:181,t(c). (*S. glauca* Nutt.) B. C. to Calif., e. to Mont. and Utah. Cult. 1850. Zone V. Conspicuous when covered with its bluish white frs.—*S. c. neo-mexicana* (Wooton) Rehd., var. Lfts. 3-5, narrow-lanceolate, grayish green, slightly pubescent beneath. (*S. intermedia* Carr., *S. n.* Wooton.) Ariz. and N. Mex. Cult. 1875. Zone V.—*S. c. velutina* (Durand) Schwer., var. Young brts. and lvs. densely short-pubescent. (*S. v.* Durand, *S. californica* K. Koch.) Calif. Intr. before 1870. Zone VII?

*S. c.* × *nigra* = *S. fontenaysii* Carr. Intermediate between the parents: lvs. bluish green: fr. black, bloomy. Orig. before 1870.

4. *S. melanocarpa* Gray. Shrub to 4 m.; brs. red-brown; pith white or light brown at first, darker the 2d year: lfts. 5-7, short-stalked, oblong-

lanceolate, 8-15 cm. long, long-acuminate, coarsely serrate, dark green, pubescent beneath when young, later glabrate: fls. yellowish white, in a broad-ovoid to hemispherical cyme 5-7 cm. across and about as high, its brs. often alternate: fr. 6 mm. across; nutlets rugulose. Fl.vii-viii; fr.viii-ix. I.T.5: t.173. G.F.10:135. M.D.1909:8,t.f.4(c).45. B. C. to Idaho and Calif. Intr. 1894. Zone V.—*S. m. Fuerstenbergii* Schwer., f. Fr. reddish brown. Intr. 1903.

5. *S. micróbotrys* Rydb. Low shrub, rarely to 2 m.; bark light brown; pith white, at least at first: lfts. 5-7, subsessile or short-petioled, ovate-lanceolate, 5-10 cm. long, long-acuminate, sharply and rather coarsely serrate, light green, glabrous: fls. whitish, in short, nearly hemispherical cymes about 5 cm. high and as broad: fr. scarlet or orange-red, 4 mm. across, nutlets finely rugulose. Fl.vi-vii; fr.viii-ix. M.D.1909:44. Calif. to Nev. and Colo. Cult. 1900. Zone V.

Related species: *S. callicarpa* Greene. Taller and larger: lfts. pubescent along the midrib: cymes larger. M.D.1909:8,t.f.5(c).45. (*S. racemosa* var. *c.* Jeps.) Calif., Ore. Intr. about 1900.

6. *S. racemosa* L. EUROPEAN RED E. Shrub to 4 m.; brs. light brown; young brts. and lvs. glabrous: lfts. 5-7, subsessile, ovate or elliptic to ovate-lanceolate, 4-8 cm. long, acuminate, sharply and rather coarsely serrate: fls. yellowish white in a dense ovoid or oblong-ovoid panicle 3-6 cm. long, its lower brs. usually reflexed with stalks 5 mm. or less long: fr. scarlet, about 5 mm. across; nutlets finely rugulose. Fl.iv-v; fr.vi-vii. R.I.12:t.731(c). F.D.28:t.2909(c). S.O.3:t.141(c). Eu., W. Asia. Cult. 1596. Zone IV. Attractive in fr. and some of the forms with handsome foliage.—*S. r. plumosa* Carr. Lfts. incisely serrate to about the middle, with long and narrow teeth, purplish when unfolding. S.H.2:f.410b(l).—*S. r. plumosa-aurea* Schwer. Lfts. like in the preceding, but golden yellow.—*S. r. laciniata* Koch, var. Lfts. regularly and deeply dissected, green when unfolding. R.I.12:t.731,f.1438. (*S. r. serratifolia* Carr.)—*S. r. tenuifolia* (Carr.) Schwer., f. Lfts. finely and deeply dissected, with very narrow segments, purplish when unfolding.—*S. r. ornata* (Carr.) Schwer., f. The first lvs. like those of *S. r. plumosa*, the later ones like those of the preceding form. (*S. plumosa pteridifolia* Carr.)—*S. r. purpurea* Sweet, var. Fls. purplish or pinkish outside, purple in bud.—*S. r. flavescens* Schwer. Fr. yellow or sometimes with red cheek. M.D. 1909:8,t.f.6(c). (*S. r. xanthocarpa* Hort.)

Closely related species: *S. kamtschatica* E. Wolf. Lower: lfts. elliptic, rounded and usually acuminate at apex, finely serrate: infl. pubescent, usually broader than high: petals much longer than calyx-tube, dentate. M.D.1923:32, f.1-3,33,f.1. Kamchatka. Cult. 1923. Zone II.

7. *S. pùbens* Michx. RED-BERRIED E. Shrub to 4 or sometimes to 8 m.; brts. pale yellow-brown; brts. and lvs. finely pubescent when young: lfts. 5-7, stalked, ovate-oblong to oblong-lanceolate, 5-10 cm. long, serrate, pubescent beneath or sometimes finally glabrous: infl. ovoid or pyramidal, to 10 cm. long, loose, stalks of lower brs. 5-15 mm. long; fls. yellowish white: fr. scarlet, about 5 mm. across; nutlets rugulose. Fl.v; fr.vi-vii. M.N.II.2:t. 21(c). B.B.3:268. M.D.1909:44. (*S. racemosa* of Gray, not L., *S. rac.* var. *p. S.* Wats.) N. B. to Minn., s. to Ga. and Colo. Intr. 1812. Zone IV. Shrub with attractive scarlet fr.—*S. p. dissécta* Britt. Lfts. deeply and regularly dissected. (*S. rac.* var. *laciniata* Gray, not Koch.)—*S. p. leucocarpa* (Bernh.) Torr. & Gr., var. Fr. white. (*S. p. albicocca* Britt.)—*S. p. xanthocarpa* (Cock.) Nieuwl., var. Fr. and amber-yellow. (*S. rac.* f. *xanthocarpa* Cock., *S. r.* var. *chrysocarpa* Eames & Godfr.)

The western form has been separated as *S. leiosperma* Leib. Brts., lvs. and infl. glabrous or nearly glabrous: nutlets faintly rugulose or nearly smooth. G.F.10:174. S.M.886. (*S. callicarpa* Sarg., not Greene, *S. pubens* var. *dimidiata* Schwer.) Alaska to Wash. and Wyo. Intr. 1904.

8. *S. Sieboldiana* Graebn. Shrub or small tree to 6 m.: brts. yellowish, glabrous when young, with 2 blue rings at the nodes; winter-buds acute: lfts. usually 7, on shoots sometimes 11, oblong to oblong-lanceolate, 6-20 cm. long, long-acuminate or caudate, sharply and closely serrate, light green, glabrous: fls. yellowish white, small, in ovoid panicles about 7 cm. long and 5 cm. across, its brts. often slightly reflexed; fr. scarlet, 3-4 mm. across, nutlets rugulose. Fl.v-v; fr.vi-vii. S.I.2:t.74(c). H.N.3:t.1. N.T.1:571. M.D.1920:206 (1). (*S. racemosa* of Shiras., not L., *S. rac.* var. *S. Miq.*) Japan, China. Intr. 1907. Zone V?

Closely related species: *S. Williamsii* Hance. Winter-buds obtuse: lvs. sometimes whorled, dark green; lfts. oblong-ovate to elliptic-oblong, rather coarsely serrate: infl. looser; fr. 5-5.5 mm. across, purple-black. H.N.3:t.2. N. China. Intr. 1938. Zone V.

2. **VIBURNUM** L. Deciduous or sometimes evergreen shrubs or small trees; winter-buds naked or scaly: lvs. opposite, rarely whorled, entire, dentate or lobed, exstipulate or sometimes with small stipules adnate to the petiole: fls. small, white or pinkish, in umbel-like or paniculate compound cymes; calyx minutely 5-toothed; corolla rotate to campanulate or tubular, 5-lobed; stamens 5; ovary 1-celled: fr. a drupe with a 1-seeded usually compressed stone. (The ancient Latin name of *V. Lantana*.) About 120 species in N. and C. Am., in Eu., N. Afr. and in Asia s. to Java.—Many species are highly ornamental with showy fls. and attractive frs.

Lvs. not lobed, penninerved, sometimes 3-nerved at base.

A. Cyme paniculate, pyramidal to subglobose, its brs. opposite.

B. Corolla tubular.

c. Fls. before the lvs.; panicle 3-5 cm. long.....1. *V. fragrans*  
cc. Fls. after the lvs.: panicles 6-12 cm. long.....2. *V. erubescens*

BB. Corolla rotate.

c. Lvs. acuminate, with 5-7 pairs of veins.....3. *V. Henriri*

cc. Lvs. rounded or acute, with 7-10 pairs of veins.....4. *V. Sieboldii*

AA. Cyme umbel-like, usually flat (globose in the snowball forms of Nos. 15, 17 and 43).

B. Winter-buds naked; shrubs with stellate tomentum.

c. Infl. without enlarged and sterile marginal fls.: seed with solid albumen.

d. Lvs. dentate or denticulate, deciduous.

E. Veins of lvs. straight, ending in the teeth.

f. Corolla salver-shaped, with a tube nearly 1 cm. long.....5. *V. Carlesii*

FF. Corolla rotate or wide-funnelform.

g. Corolla-lobes shorter than tube; cymes usually with 5 rays.

gg. Corolla-lobes longer than tube; cymes usually 7-rayed.  
h. Calyx stellate-tomentose: lvs. remotely toothed.....7. *V. Veitchii*

hh. Calyx glabrous or slightly stellate-pubescent: lvs. closely denticulate.

8. *V. Lantana*

EE. Veins of lvs. anastomosing before reaching the margin, rarely partly ending in the teeth.

f. Corolla rotate or rotate-campanulate.

g. Lvs. usually obtuse: fls. mostly on rays of the 3d order; ovary glabrous.

9. *V. schensianum*

gg. Lvs. usually acute: fls. mostly on rays of the 2d order; ovary pubescent.

10. *V. burejaeticum*

FF. Corolla with cylindric tube, much longer than limb.

g. Lvs. obtuse to acute, pubescent.....11. *V. mongolicum*

gg. Lvs. acuminate, nearly glabrous.....12. *V. urceolatum*

DD. Lvs. entire or sometimes obscurely and remotely denticulate, evergreen: corolla rotate.

e. Lvs. smooth above, 3-6 cm. long.....13. *V. utile*

EE. Lvs. rugose above, 10-18 cm. long.....14. *V. rhytidophyllum*

cc. Infl. with sterile and enlarged marginal fls. (except in *V. cordifolium* under No. 16).

d. Lvs. rounded at base; veins anastomosing before reaching the margin: albumen solid

.....15. *V. macrocephalum*

DD. Lvs. cordate at base; veins straight, ending in the teeth: albumen ruminate.

16. *V. alnifolium*

- BB. Winter-buds scaly with 1 or 2 pairs of scales.
- c. Cymes with enlarged sterile marginal fls.: veins of lvs. straight, ending in the teeth; tomentum stellate .....17. *V. tomentosum*
- cc. Cymes without sterile fls.: tomentum not stellate.
- d. Veins of lvs. curving and anastomosing before reaching the margin.
- e. Lvs. deciduous: stone compressed, with solid albumen.
- f. Cyme peduncled.
- g. Lvs. usually entire: peduncle as long or longer than cyme.....18. *V. nudum*
- gg. Lvs. usually denticulate: peduncle shorter than cyme.....19. *V. cassioides*
- ff. Cyme sessile: lvs. finely and sharply serrate.
- g. Petiole with broad wavy margin: brs. slender.....20. *V. Lentago*
- gg. Petiole with narrow, not wavy margin: brs. rather rigid.
- h. Winter-buds and petioles rusty-tomentose.....21. *V. rufidulum*
- hh. Winter-buds and petioles not rusty-tomentose.....22. *V. prunifolium*
- ee. Lvs. evergreen: stone not compressed, ruminant.
- f. Corolla rotate: lvs. 3-nerved at base.....23. *V. Davidi*
- ff. Corolla cylindric-campanulate: lvs. not 3-nerved.....24. *V. cylindricum*
- dd. Veins of lvs. straight, ending in the teeth.
- e. Fr. red; stone flattened.
- f. Petiole without stipules.
- g. Lvs. evergreen, glabrous.....25. *V. japonicum*
- gg. Lvs. deciduous.
- h. Lvs. 3-nerved at base, 2-8 cm. long.....26. *V. foetidum*
- hh. Lvs. not 3-nerved, usually larger.
- i. Infl. and brts. glabrous.
- j. Lvs. generally ovate-oblong, broadest below the middle: stamens as long or shorter than corolla.....27. *V. setigerum*
- jj. Lvs. broader, at least partly broadest above the middle: stamens longer than corolla.....28. *V. Wrightii*
- ii. Infl. and brts. pubescent.
- j. Lvs. at least those below the infl. broadest above the middle.
- jj. Lvs. broadest below the middle.....29. *V. dilatatum*
- ff. Petiole with subulate stipules.
- g. Petiole 1-3 cm. long.
- h. Corolla glabrous.
- i. Cyme short-stalked: fr. globose-ellipsoid, 6 mm. long: lvs. usually rhombic-ovate to elliptic-oblong.....31. *V. betulifolium*
- ii. Cyme long-stalked: fr. subglobose, 8 mm. long: lvs. broad-ovate or obovate .....32. *V. lobophyllum*
- hh. Corolla pubescent outside.....33. *V. dasycarpum*
- gg. Petiole 3-6 mm. long.....34. *V. erosum*
- ee. Fr. blue-black; stone scarcely flattened or flattened in Nos. 37-38.
- f. Fr. globose-ovoid, stone with a deep groove on one side, round on back: petioles usually without stipules.
- g. Brts. glabrous: lvs. glabrous except bearded in the axils of the veins beneath .....35. *V. dentatum*
- gg. Brts. slightly pubescent and lvs. pubescent, sometimes slightly so beneath. 36. *V. pubescens*
- ff. Fr. ellipsoid; stone flattened, with grooves on both sides; petioles with stipules.
- g. Petiole 2-12 mm. long: lvs. rounded to subcordate at base: bark close. 37. *V. Rafinesquianum*
- gg. Petiole 1.5-3 cm. long; lvs. deeply cordate: bark exfoliating. 38. *V. molle*
- Lvs. palmately 3-5-nerved at base, lobed, rarely not lobed; petioles stipulate.
- a. Fr. purple-black; stone grooved; cymes with all the fls. perfect, on elongated upright brs. ....39. *V. acerifolium*
- aa. Fr. scarlet or orange-red; stone not or scarcely grooved; cymes on short lateral brts.
- b. Cyme without sterile marginal fls.: petiole not glandular.
- c. Lvs. shallowly 3-lobed or undivided, 5-8 cm. long.....40. *V. pauciflorum*
- cc. Lvs. deeply 3-5-lobed, 2-5 cm. long.....41. *V. kansuense*
- BB. Cymes with enlarged sterile marginal fls.; petiole with glands near apex.
- c. Anthers yellow; bark of stems thin.
- d. Petiole with a shallow groove and small glands: lvs. usually glabrous. 42. *V. trilobum*
- dd. Petiole with a narrow groove and large disk-like glands: lvs. pubescent beneath. 43. *V. Opulus*
- cc. Anthers purple, rarely yellow: bark of stems thick and slightly corky: upper lvs. usually with elongated entire middle lobe.....44. *V. Sargentii*

Sect. 1. THYRSOSMA (Raf.) Rehd. Petiole without stipules; cymes paniculate, with opposite brs.: drupe ovoid to ellipsoid, blue-black or purple; stone slightly compressed, with a deep ventral furrow; albumen solid or ruminant.

1. *V. fragarum* Bge. Shrub to 3 m.; brts. slightly pubescent; brs. brown: lvs. elliptic, 4-7 cm. long, acute, broad-cuneate or cuneate, serrate with

triangular teeth, sparingly pubescent above and pubescent on veins beneath, finally glabrous or nearly so, with 5-6 pairs of veins and the veinlets impressed above and below, thickish; petiole 1-1.5 cm. long, purplish; panicle 3-5 cm. long, glabrous or nearly so; corolla salver-shaped, white, pinkish in bud, tube about 8 mm. long, limb spreading about 1 cm. across; stamens inserted above the middle, unequally high. Fl. iv-v. B.M.8887(c). H.N.3:t.26. Gn.85:118;88:221. G.C.69:109;88:267,t(c),340(h). B.A.1931:3. N. China. Intr. 1910. Zone V. The fragrant and attractive fls. appear before the lvs.

Closely related species: *V. grandiflorum* Wall. Shrub to 2 m.: lvs. elliptic-oblong, 6-9 cm. long, acuminate, pubescent beneath on the veins and in their axils, pairs of veins 7-8; panicle short and dense, pubescent; corolla-tube over 1 cm. long; stamens inserted at and below the middle. B.M.9063(c). (*V. foetens* Dene., *V. nervosum* Hook. f. & Thoms., not D. Don.) Himal. Intr. 1914. Zone VII?

2. *V. erubescens* Wall. Deciduous shrub or small tree: lvs. elliptic or ovate to oblong, 5-10 cm. long, acuminate, cuneate or rounded at base, pubescent on the veins beneath or glabrous, with 5-7 pairs of veins; petiole 1-2.5 cm. long; panicle loose, pendulous, 4-8 cm. long, slightly pubescent or glabrate, on a peduncle 2-6 cm. long; corolla white, tinged with pink, about 1 cm. long, with spreading round lobes; fr. broad-ellipsoid, 6 mm. long, first red, then black. Wallich, Pl. As. Rar. 2:t.134(c). Himal. W. China. Intr. ? —*V. e. gracilipes* Rehd., var. Lvs. usually elliptic, rounded at base, glabrous or nearly so; infl. loose, 7-12 cm. long; fls. partly slender-pediceled. Fl. vi; fr. ix. C. China. Intr. 1910. Zone (V). Distinct with its pendulous panicles.

3. *V. Hénryi* Hemsl. Evergreen or half-evergreen shrub or small tree to 3 m.; brts. stiff, glabrous; lvs. elliptic-oblong to oblong-obovate, 5-12 cm. long, acuminate, cuneate to rounded at base, shallowly toothed, lustrous dark green above, glabrous except sparingly stellate-pubescent on midrib beneath; petiole 1-2 cm. long; panicle broad-pyramidal, 5-10 cm. long; fls. about 6 mm. across; fr. ovoid, 6 mm. long, first red, then black. Fl. viii. B.M. 8393(c). S.T.2:t.116. B.S.2:649. G.C.48:264,265,t(h);60:193(h). S.L.384(h). C. China. Intr. 1907. Zone VII. Handsome in fruit.

4. *V. Sieböldii* Miq. Shrub or tree to 10 m.; brts. stout, pubescent when young; lvs. elliptic or obovate to oblong-obovate, 6-12 cm. long, acute to rounded, broad-cuneate, coarsely crenate-serrate, dark lustrous green above, stellate-pubescent chiefly on the veins beneath, with 7-10 pairs of prominent veins; petiole 8-15 mm. long; panicle 7-10 cm. long and as broad; corolla rotate-campanulate, 8 mm. across, creamy white; fr. oblong-ovoid, 1 cm. long, changing from pink to blue-black. Fl. v-vi; fr. vii-ix. Ad.5:t.178(c). S.I.1:t.86(c). G.F.2:559. F.E.23:345. Japan. Cult. 1880. Zone IV. With lustrous large lvs. of disagreeable odor when bruised; attractive in fl. and fr. —*V. S. reticulatum* (Hort.) Rehd., var. Smaller in every part; lvs. glabrescent.

SECT. 2. *LANTANA* Spach. Shrubs with stellate tomentum and naked winterbuds: lvs. deciduous, rarely persistent, usually denticulate; stone much flattened, with 3 ventral and 2 dorsal grooves sometimes obsolete; albumen solid.

5. *V. Carlésii* Hemsl. Shrub to 1.5 m., with spreading brs.; young brts., petioles and infl. stellate-tomentose; lvs. broad-ovate to elliptic, 3-10 cm. long, acute, usually rounded at base, irregularly toothed, dull green and stellate-pubescent above, densely so and paler beneath; petiole 5-10 mm. long; fls. with the lvs., very fragrant, in dense hemispherical cymes 5-7 cm. across; corolla 1-1.4 cm. across, with a cylindric tube 6-10 mm. long, white, pink outside; stamens included, inserted above the middle, filaments shorter

than anthers: fr. ellipsoid, 10 mm. long, blue-black. Fl.iv-v; fr.ix-x. B.M. 8114(c). G.C.43:346;45:340(h). B.S.2:644. Gn.84:154;88:222. J.L.35:f.85(h). S.L.375(h). Korea. Intr. 1902. Zone IV. Broad round bush, valued for its very fragrant handsome early fls.

*V. C. × bitchiuense* = *V. Juddii* Rehd. Lvs. ovate to ovate-oblong; petiole 4-9 mm. long; infl. 6-8 cm. across, rather loose; rays 1.5 cm. long; filaments about 1½ as long as anthers, inserted about or slightly below the middle of the tube. Orig. in 1920. Zone V.—*V. C. × utile* = *V. Burkwoodii* Burkwood. Lvs. glabrous above, tomentose beneath, with brown veins: infl. about 6 cm. across; corolla 1 cm. across, tube as long as lobes; stamens inserted at base, as long as tube. G.C.85:291. Orig. 1924. Zone V.

Closely related species: *V. bitchiuense* Mak. Slenderer, more straggling shrub: lvs. smaller, usually obtuse, often subcordate: fls. in smaller cymes; anthers inserted below the middle; filaments about twice as long as anthers. G.C.69:247. N.T.1:588. B.S.3:497,t. (*V. Carlesii* var. *b.* Nakai, *V. C.* var. *springiflorum* Hutch.) Japan. Cult. 1909. Zone V.—*V. b. × Carlesii*; see under No. 5.

6. *V. cotinifolium* D. Don. Shrub to 4 m., with spreading brs. stellate-tomentose when young: lvs. orbicular-ovate to ovate, 5-12 cm. long, obtuse or abruptly acuminate, rounded or cordate, crenulate-dentate or nearly entire, grayish stellate-tomentose beneath, slightly so above and finally often glabrescent: cymes 5-8 cm. across; corolla funnelform-campanulate, about 6 mm. long, white, tinged pink: fr. ovoid, 8-10 mm. long, red, finally black. Fl.v; fr.ix. B.R.1650(c). G.F.5:245. G.W.13:141(h). (*V. multratum* K. Koch.) Himal. Intr. 1830. Zone (V).

7. *V. Veitchii* C. H. Wright. Shrub to 2 m.; young brts. and petioles stellate-tomentose: lvs. ovate, 7-12 cm. long, acuminate, cordate or rounded at base, remotely dentate, sparingly stellate-pubescent above, densely so beneath: petiole 1-2.5 cm. long: fls. white, 6 mm. across, in dense short-stalked stellate-tomentose cymes 5-12 cm. across, on a peduncle 6-50 mm. long: fr. short-ellipsoid, 8 mm. long, red, finally black. Fl.v-vi; fr.ix. C. China. Intr. 1901. Zone V. Handsome shrub.

Closely related species: *V. buddleifolium* C. H. Wright. Shrub to 2 m.; lvs. oblong-lanceolate, 8-15 cm. long, rounded or subcordate at base, shallowly toothed, grayish stellate-tomentose beneath: cyme about 8 cm. across; corolla 8 mm. across. C. China. S.H.2:f.419i(l). Intr. 1900. Zone (V).—*V. b. × rhytidophyllum*; see under No. 14.

8. *V. Lantana* L. WAYFARING-TREE. Upright shrub sometimes to 5 m. tall and tree-like; brts. scurfy-pubescent: lvs. ovate to oblong-ovate, 5-12 cm. long, acute or obtuse, cordate to rounded at base, rather closely denticulate, sparingly stellate-pubescent and wrinkled above, stellate-tomentose beneath; petiole 1-3 cm. long: cyme 6-10 cm. across, stellate-pubescent: fr. ovoid-oblong, 8 mm. long, changing from red to black. Fl.v-vi; fr.vii-ix. Ad.4:t.148(c). R.I.17:t.120,f.1-2(c). A.G.18:453(as *V. lantanoides*). Gn.61:324(h). Eu., W. Asia. Long cult. and occasionally escaped in the E. States. Zone III. With attractive fls. and frs.; the lvs. turning red in fall.—*V. L. variegatum* Bull. Lvs. variegated with yellow.—*V. L. rugosum* Lange, var. With larger, more wrinkled lvs. and larger cymes.—*V. L. discolor* Huter, var. Lvs. smaller and of firmer texture, white-tomentose beneath. S.H.2:f.419n-o(l). (*V. maculatum* Pantocsek.)

*V. L. × rhytidophyllum*; see under No. 14.

9. *V. schensiænum* Maxim. Slender-branched shrub; young brts. stellate-pubescent: lvs. ovate-elliptic, 2-5 cm. long, obtuse or acutish, rounded at base, sometimes broad-cuneate, denticulate, sparingly pubescent or glabrous above, stellate-pubescent beneath, with 5-6 pairs of veins usually anastomos-

ing, or partly ending in the teeth; petiole 5–10 mm. long; cyme 5-rayed, 5–8 cm. across, stellate-pubescent, on a stalk 5–25 mm. long, sometimes sessile; corolla rotate-campanulate, 6 mm. long; ovary glabrous; drupe short-ellipsoid, 8 mm. long, blue-black; stone with convex back. Fl.v-vi; fr.ix. S.T. 2:t.140. H.N.3:t.28. N. W. China. Intr. 1910. Zone V.

10. *V. burejaeticum* Reg. & Herd. Shrub to 5 m.; young brts. stellate-pubescent, glabrous and light gray the 2d year: lvs. ovate or elliptic to elliptic-obovate, 4–10 cm. long, acute to obtuse, rounded or subcordate, sinuately denticulate, sparingly hairy above, sparingly stellate-pubescent beneath chiefly on the veins, becoming glabrous; petiole 3–8 mm. long, scurfy-pubescent: fls. white, in dense 5-rayed usually pubescent cymes 4–5 cm. across: fr. ellipsoid to ellipsoid-oblong, 1 cm. long, bluish black; stone grooved on both sides. Fl.v; fr.ix. Gt.11:47,t. H.N.3:t.30. D.H.1:186. Manch., N. China. Cult. 1900. Zone V or IV.

11. *V. mongolicum* (Pall.) Rehd. Shrub to 2 m., with spreading brs.; young brts. stellate-pubescent, glabrous and yellowish gray the 2d year: lvs. broad-ovate to elliptic, 3–6 cm. long, acute to obtuse, rounded at base, shallowly dentate, sparingly pubescent above, sparingly stellate-pubescent beneath; petiole 3–8 mm. long; cymes stalked, with rather few fls., 2–4 cm. across; fls. mostly on rays of the 1st order; corolla tubular-campanulate, 6–7 mm. long, with short, slightly spreading lobes; ovary glabrous: fr. ellipsoid, black. Fl.v; fr.ix. D.H.1:198. H.N.3:t.29. (*V. davuricum* Pall.) E. Siberia, N. China. Intr. 1785. Zone V.

12. *V. urceolatum* Sieb. & Zucc. Straggling shrub to 1 m., with procumbent rooting stems; brts. glabrous or sparingly scurfy, becoming reddish or yellowish brown: lvs. ovate to ovate-lanceolate, 6–12 cm. long, acuminate, rounded at base, rarely broad-cuneate, crenate-serrate, glabrous above, scurfy on the veins beneath; petiole 1–2 cm. long: cymes usually 5-rayed, glabrous or nearly so, 3–6 cm. across, on long slender peduncles; corolla pinkish white, cylindric-campanulate, 3–4 mm. long, with short erect lobes; anthers exserted: fr. ovoid, 6 mm. long, black; stone much compressed, grooved on both sides. Fl.v; fr.ix. S.T.2:t.141. N.T.1:583. Japan. Intr. 1916. Zone V. Distinct species, but scarcely ornamental.

13. *V. utile* Hemsl. Evergreen shrub to 2 m., of open habit, with slender brs. stellate-pubescent when young: lvs. elliptic-ovate to ovate-oblong, 2–7 cm. long, obtuse, rarely acutish, broad-cuneate or rounded, entire, lustrous dark green above, whitish stellate-tomentose beneath with 5–6 pairs of veins elevated beneath; petiole 4–8 mm. long: fls. white, in dense stellate-pubescent 5-rayed cymes 5–8 cm. across: fr. broad-ellipsoid, 6–8 mm. long, bluish black. Fl.v. B.M.8174(c). S.T.2:t.143. R.H.1919:264,t(c). S.L.382(h). C. China. Intr. 1901. Zone VI.

*V. u.* × *Carlesii*; see under No. 5.

14. *V. rhytidophyllum* Hemsl. Evergreen shrub to 3 m., with stout upright brs. stellate-tomentose when young: lvs. ovate-oblong to ovate-lanceolate, 7–18 cm. long, acute or obtuse, rounded or subcordate at base, entire or obscurely denticulate, lustrous dark green, glabrous and strongly wrinkled above, prominently reticulate beneath and gray or yellowish tomentose; petiole 1–3 cm. long: fls. yellowish white, 6 mm. across, in stellate-tomentose cymes formed in autumn and remaining naked through the winter, 10–20 cm. across, 7–11-rayed, on a stout peduncle 2–4 cm. long; ovary pubescent: fr. short-ellipsoid, 8 mm. long, first red, then lustrous black. Fl.v-vi; fr.ix-x. B.M.8382(c). G.C.42:220;68:277(h). Gn.78:283(h). C. and W. China. Intr.

1900. Zone (V). Very distinct species with bold lustrous lvs.—*V. r. roseum* Gard. Chron. Fls. bright pink in bud. G.C.104:171,t(c).

*V. r. × Lantana* = *V. rhytidophyloides* Suring. Lvs. elliptic-ovate or oblong-ovate, 8–20 cm. long, similar to *V. rhytidophyllum*, but broader and less rugose: infl. stout; stamens about as long as corolla. (*V. lantanophyllum* Lemoine.) Cult. 1927. Zone V.—*V. r. × buddleifolium* = *V. rhytidocarpum* Lemoine. Lvs. intermediate between the parents: fr. rugose. Cult. 1936. Zone VI.

15. *V. macrocéphalum* Fort. CHINESE SNOWBALL. Deciduous or half-evergreen shrub to 4 m., with spreading brs. scurfy-pubescent at first: lvs. ovate or elliptic to ovate-oblong, 5–10 cm. long, acute or obtusish, rounded at base, denticulate, dark green and nearly glabrous above, stellate-pubescent beneath; petiole 8–20 mm. long: fls. white, about 3 cm. wide, in large globose heads 8–15 cm. across. Fl.v-vi. B.R.33:43(c). F.S.3:t.263(c). Gn.79:336(h); 88:205(h). A.F.16:1547(h). Gn.M.30:8(h). China. Intr. 1844. Zone VI. Very showy, with larger heads than the European and Japanese Snowballs, distinguished as *V. m. stérile* Dipp., f. (*V. Fortunei* Hort.) from the wild form with only the marginal fls. sterile and enlarged: *V. m. Keteleéri* (Carr.) Nichols. R.H.1863:270. Gn.45:423.

Set. 3. *PSEUDOTINUS* Clarke. Deciduous shrubs with denticulate lvs. and stellate tomentum; winter-buds naked: cymes terminal, usually with radial fls.: fr. purple-black; stone compressed, with a deep ventral furrow; albumen ruminant.

16. *V. alnifolium* Marsh. HOBBLE-BUSH. Shrub to 3 m., with forked brs., sometimes procumbent and rooting; brs. scurfy-pubescent: lvs. in distant pairs, broad-ovate or suborbicular, 10–20 cm. long, short-acuminate, cordate, irregularly denticulate, stellate-pubescent above at first, later glabrous, more densely pubescent beneath, chiefly on the veins; petiole 3–6 cm. long, scurfy: fls. white, in sessile stellate-pubescent cymes 8–12 cm. across; sterile fls. 2–2.5 cm. wide; stamens as long as corolla-lobes: fr. broad-ellipsoid, 8 mm long, first red, then purple-black. Fl.v-vi; fr.ix. L.B.1570(c). G.F.2:535. B.B.3:269. (*V. lantanoides* Michx.—AMERICAN WAYFARING-TREE.) N. B. and Mich. to N. C.; in the mts. Intr. 1820. Zone III. With large foliage turning deep claret-red in autumn; prefers half-shady and moist situations.—*V. a. praecox* Hesse. Fls. 3 weeks earlier. M.D.1912:370. G.W.16:495(h).

Related species: *V. furcatum* Bl. Of more upright habit; stamens about half as long as corolla; stone with the ventral furrow broader and more open. S.I.2:t.74(c). S.T.2:119. Japan. Intr. 1892. Zone V.—*V. sympodiale* Graebn. Lvs. narrow-ovate to elliptic-ovate, rounded or subcordate at base and more finely serrulate; petiole stipulate: cymes 6–9 cm. across. S.T.2:t.139. China. Intr. 1900? Zone V?—*V. cordifolium* Wall. ex DC. Lvs. ovate, cordate or rounded at base: infl. without sterile fls.; stamens about half as long as corolla. S.T.2:t.138. W. China, E. Himal. Intr. 1932. Zone VII?

Set. 4. *PSEUDOPULUS* Dipp. Deciduous shrubs with dentate lvs. and stellate tomentum; winter-buds with 2 scales; cymes with radiant fls., on short lateral brs.: fr. blue-black; stone compressed, with broad ventral furrow; albumen solid.

17. *V. tomentosum* Thunb. Shrub to 3 m., with almost horizontally spreading brs. stellate-tomentose when young: lvs. broad-ovate to oblong-ovate, sometimes elliptic-obovate, 4–10 cm. long, acute or abruptly acuminate, rounded to broad-cuneate, dentate-serrate, dark green and nearly glabrous above, stellate-pubescent beneath, with 8–12 pairs of nearly straight veins; petiole 1–2 cm. long: cymes long-peduncled, stellate-pubescent, usually 7-rayed, 6–10 cm. across, with sterile marginal fls. about 3 cm. wide: fr. ellipsoid, red, then blue-black. Fl.v-vi; fr.viii-ix. S.Z.1:t.38(c). S.I.1:t.86(c). G.C.36:234. G.F.4:594. Gg.5:311(h). S.L.377(h). B.C.6:3458,t(h). (*V. plica-*

*tum* Miq., not Thunb.) Japan, China. Intr. about 1865. Zone IV. Distinct shrub, with showy fls. and attractive frs. red before maturity; lvs. changing to vinous red in fall. The snowball form is one of the showiest shrubs.—*V. t. Mariessii* Veitch. Cymes and sterile fls. larger, otherwise not different from the type. Gn.88:222(h). S.L.376(h). J.L.27:863(h).—*V. t. stérile* K. Koch, var. JAPANESE SNOWBALL. All fls. sterile, pure white, forming globose cymes 6-8 cm. across: lvs. less pubescent. G.C.29:72(h). Gn.78:427(h), 472(h); 88:125(h). Gg.1:263(h). (*V. t.* var. *plicatum* Maxim., *V. t. f. plenum* Rehd., *V. plicatum* Thunb.) Cult. in China and Japan. Intr. 1814.—*V. t. rotundifolium* Rehd., var. Much like the preceding form, but blooming about 2 weeks earlier and lvs. broader.—*V. t. parvifolium* (Miq.) Rehd., var. Lvs. elliptic to oblong, 3-5 cm. long, long-acuminate: dwarfier and of slower growth. (*V. t.* var. *cuspidatum* Maxim.)—*V. t. lanceatum* Rehd., var. Similar to the preceding, but lvs. narrower, lanceolate on the shoots, more gradually acuminate, more pubescent beneath: infl. smaller, with fewer sterile fls. Intr. 1892.

Sect. 5. LENTAGO DC. Deciduous shrubs: lvs. entire or serrulate, with curving and anastomosing veins: winter-buds with 1 pair of scales: cymes without sterile marginal fls.: fr. blue-black or black; stone convex on back and with 3 shallow ventral grooves; albumen solid.

18. *V. nudum* L. SMOOTH WITHE-ROD. Upright shrub, sometimes to 5 m.; brts. slightly scurfy: lvs. elliptic or ovate to obovate-elliptic or elliptic-lanceolate, 5-12 cm. long, acute or obtuse, broad-cuneate, entire or obscurely crenulate, slightly revolute, scurfy on both sides when young, glabrous above at length: fls. white or yellowish white, in cymes 6-12 cm. across, on slender stalks as long or longer than the cyme: fr. subglobose, about 8 mm. long, blue-black. Fl.vi-vii; fr.ix-x(-xii). B.M.2281(c). B.B.3:273. L. I. to Fla., w. to Ky. and La. Intr. 1752. Zone VI.—*V. n. angustifolium* Torr. & Gr., var. Lvs. smaller and narrower, more lustrous above and of firmer texture. (*V. n.* var. *nitidum* Zab., *V. anglicum* Hort.)

*V. n.* × *Lentago*; see under No. 20.

19. *V. cassinoides* L. WITHE-ROD. Upright shrub to 2 m., occasionally to 4 m., similar to the preceding species: lvs. elliptic or ovate to oblong, 3-10 cm. long, acute or bluntly acuminate, obscurely dentate or denticulate, dull green above, nearly glabrous: peduncle usually shorter than the cyme. Fl. vi-vii; fr.ix. Ad.7:t.233(c). Em.2:411,t(c). G.F.9:305. S.L.383(h). N.F.9:f.71. Gn.M.29:223(h). (*V. nudum* var. *c.* Torr. & Gr.—APPALACHIAN TEA.) Nfd. to Man. and Minn., s. to N. C. Intr. 1761. Zone III.

20. *V. Lentago* L. SHEEP-BERRY (NANNY-BERRY). Shrub or small tree to 10 m., with slender brs.; brts. slightly scurfy: winter-buds gray, the terminal long-pointed: lvs. ovate to elliptic-obovate, 5-10 cm. long, acuminate, broad-cuneate to rounded at base, finely toothed, glabrous or scurfy on the veins beneath; petiole 1-2.5 cm. long, mostly winged with wavy margin: cymes 6-12 cm. broad, sessile: fr. ellipsoid, 1.2-1.5 cm. long, blue-black, bloomy. Fl.v-vi; fr.ix-x. S.O.3:t.176(c). G.O.t.102(c). S.S.5:t.223,224. Hudson Bay to Man., s. to Ga. and Miss. Intr. 1761. Zone II. Handsome often arborescent shrub.—*V. L. sphaerocarpum* Gray, var. Fr. subglobose.

*V. L.* × *nudum* = *V. Vetteri* Zabel. Similar to No. 19, but lvs. more closely and distinctly denticulate and more distinctly acuminate, petioles below infl. narrowly winged. Orig. before 1879.—*V. L.* × *prunifolium* = *V. Jackii* Rehd. Differing chiefly in the broader, less acuminate lvs., more finely serrate, less pale beneath, in the less broadly winged petiole, the shorter winter-buds and denser habit. Orig. before 1900. Similar to *V. prunifolium* var. *Bushii* Palm. & Steyerl., which has narrower lvs. and the petioles not winged.

21. *V. rufidulum* Raf. SOUTHERN BLACK-HAW. Large shrub or small tree to 10 m., with rather stout rigid brs.; winter-buds scarcely pointed, obtuse, like the young brts. and petioles rusty-pubescent: lvs. elliptic to elliptic-obovate, 5-10 cm. long, usually obtuse, serrulate, lustrous and glabrous above, rusty-pubescent beneath, chiefly toward the base: petiole usually narrowly winged, 6-12 mm. long: fls. pure white, in cymes 8-12 cm. across: fr. ellipsoid, dark blue, bloomy, 1.2-1.5 cm. long. Fl.v-vi; fr.ix-x. S.S.5:t.225(partly). S.M.890. (*V. rufotomentosum* Small, *V. ferrugineum* Small, *V. prunifolium* var. *ferrugineum* Torr. & Gr.) Va. to Fla., w. to Ill. and Tex. Intr. 1883. Zone V. Handsome arborescent shrub with lustrous dark green lvs. and attractive fls. and frs.

22. *V. prunifolium* L. BLACK-HAW. Large shrub or small tree to 5 m., with rigid spreading brs.; winter-buds short-pointed, reddish pubescent; brts. glabrous: lvs. broad-elliptic to ovate, 3-8 cm. long, acute or obtuse, rounded at base or broad-cuneate, serrulate, glabrous or nearly so; petiole not or narrowly winged, 8-16 mm. long: fls. pure white, in sessile cymes 5-10 cm. across: fr. short-ellipsoid to subglobose, 8-12 mm. long, blue-black and bloomy. Fl.iv-v; fr.ix-x. Ad.3:t.110(c). D.H.1:195. Gng.5:310(h). A.F. 12:1100(h). (*V. pyrifolium* Poir.—STAG-BUSH.) Conn. to Fla., w. to Mich. and Tex. Intr. 1727. Zone III. Similar to the preceding.

*V. p.* × *Lentago*; see under No. 20.

Sect. 6. *TINUS* Maxim. Evergreen usually glabrous shrubs: lvs. entire or obscurely toothed, often 3-nerved at base, with curving and anastomosing veins; petiole exstipulate; winter-buds with 1 pair of scales: corolla rotate: drupe subglobose to ellipsoid, blue or blue-black; stone without grooves; albumen ruminate.

23. *V. Davidi* Franch. Evergreen compact shrub to 1 m.; brts. warty: lvs. elliptic to elliptic-obovate, 5-14 cm. long, short-acuminate, broad-cuneate to nearly rounded at base, distinctly 3-nerved, sometimes obscurely toothed, chiefly above the middle, dark green above, paler below, glabrous except axillary tufts of hairs beneath; petiole 6-25 mm. long: fls. dull white, in dense cymes 5-8 cm. across, on a stalk 1.5-3 cm. long; fr. ovoid or globose-ovoid, 6 mm. long, blue. Fl.vi; fr.ix-x. J.L.38:f.44. R.H.1926:69(h). Gn.86:633. G.C. 72:225. W. China. Intr. 1904. Zone VII. Shrub with attractive fr.

Related species: *V. cinnamomifolium* Rehd. Taller, sometimes tree to 6 m.: lvs. elliptic-oblong, 8-13 cm. long, 3-nerved, nearly entire, glabrous; cymes loose, 12-17 cm. across: fr. ovoid, 4 mm. long, blue-black, lustrous. S.T.2:t.114. W. China. Intr. 1904. Zone VII?—*V. propinquum* Hemsl. Shrub with red-brown lustrous brts.: lvs. elliptic or ovate to elliptic-oblong or ovate-lanceolate, 4-9 cm. long, acuminate, broad-cuneate, 3-nerved, remotely denticulate, lustrous above: fls. greenish white, in slender-stalked cymes 4-7 cm. across: fr. globose-ovoid, 5-6 mm. long. S.T.2:t.115. C. and W. China. Intr. 1901. Zone VII.—*V. Harryanum* Rehd. Shrub to 3 m.; young brts. minutely stellate-tomentose: lvs. orbicular-ovate to obovate, 8-25 mm. long, obtuse, broad-cuneate, entire or obscurely toothed, dark dull green above, glabrous; cymes 3-3.5 cm. across: fr. ovoid, 4 mm. long, black. W. China. Intr. 1904. Zone VII.—*V. calvum* Rehd. Shrub to 3 m.: lvs. narrow-ovate or rhombic-elliptic, 3-8 cm. long, acute or obtusish, cuneate, entire or serrulate, with 5-8 pairs of veins: infl. 3-5 cm. across; stamens shorter than corolla: fr. globose-ovoid, 5-6 mm. long, lustrous blue-black. (*V. Schneiderianum* Hand.-Mazz.) W. China. Cult. 1933. Zone VII?

Sect. 7. *MEGALOTINUS* Maxim. Lvs. usually evergreen, entire or denticulate, penninerved with anastomosing veins; petiole exstipulate: corolla rotate or cylindric-campanulate; drupe blue-black or purple; stone compressed, with dorsal and ventral grooves; albumen usually solid; winter-buds with 1 pair of scales.

24. *V. cylindricum* D. Don. Evergreen shrub or tree to 13 m.; brts. warty: lvs. elliptic to oblong, 8-18 cm. long, acuminate, cuneate, entire or remotely and obscurely toothed above the middle, dark dull green above and

covered with a thin waxy layer, with 3-4 pairs of veins; petiole 1-3 cm. long; cyme usually 7-rayed, 8-12 cm. across, on a stalk 2-6 cm. long; corolla white, tubular-campanulate, 4-5 mm. long, with short erect lobes; anthers exserted, lilac; fr. ovoid, 4-5 mm. long; stone slightly compressed, with shallow grooves, 1 ventral and 2 dorsal. Fl.vii-ix; fr.x-xii. S.T.2:t.143. G.C.52:371. M.O. 254(h). (*V. coriaceum* Bl.) W. China, Himal. Intr. 1881. Zone VII. Distinct on account of its small cylindric fls.

Sect. 8. *ODONTOTINUS* Rehd. Lvs. deciduous, rarely evergreen, dentate, with straight veins ending in the teeth, very rarely anastomosing, sometimes 3-nerved and lobed; petioles with or without stipules; corolla rotate; stone with 3 or 1 ventral and 2 often obsolete dorsal grooves; shrubs with fascicled pubescence or glabrous; winter-buds with 2 pairs of outer scales.

25. *V. japonicum* Spreng. Evergreen shrub to 2 m.; brts. glabrous; lvs. broad- or rhombic-ovate, 8-14 cm. long, acute or short-acuminate, broad-cuneate or rounded at base, remotely and shallowly dentate above the middle, dark lustrous green above, glabrous; petiole 1-3 cm. long; fls. fragrant, in short-peduncled cymes 6-10 cm. across; fr. globose-ovoid, 8 mm. long, red. Fl.vi; fr.x. Ann. Hort. Bot. Pays-Bas, 2:97,t(c). N.T.1:600. D.H.1:193. (*V. macrophyllum* Bl., *V. Buergeri* Miq.) Japan. Intr. 1859. Zone VII. Handsome shrub with large lustrous lvs. and fragrant fls.

26. *V. foetidum* Wall. Half-evergreen shrub to 3 m.; young brts. stellate-pubescent; lvs. elliptic to oblong, 4-10 cm. long, acute to acuminate, cuneate, 3-nerved at base and with 1-2 pairs of lateral veins, toothed above the middle or nearly entire, glabrous above, pubescent on the veins beneath; petiole 5-10 mm. long, pubescent; fls. small, in pubescent cymes 5-8 cm. across, on lateral spreading brs.: fr. broad-ellipsoid, 6-8 mm. long, scarlet. Fl.vi; fr.ix. Wall. Pl. As. Rar. 1:t.61(c). Himal., Burma. Intr. ?—*V. f. rectangulatum* (Graebn.) Rehd., var. Slender shrub with long lateral brts. spreading at a right angle; lvs. lanceolate or lance-obovate; infl. usually subsessile. B.M. 9509(c). W. China. Cult. 1927. Zone VII?—*V. f. ceanothoides* (C. H. Wright) Hand.-Mazz., var. Upright shrub to 2 m., with usually short lateral brts.: lvs. obovate to elliptic-oblong, 2-5 cm. long, acute to rounded at apex, cuneate; petiole 2-6 mm. long; peduncle 5-15 mm. long. G.C.96:313. (*V. c. C. H. Wright*.) W. China. Intr. 1901. Zone VII?

27. *V. setigerum* Hance. Upright shrub to 4 m.; brts. glabrous; lvs. ovate-oblong, 7-12 cm. long, acuminate, rounded at base, remotely denticulate, dark green above, glabrous except silky hairs on the veins beneath, with 6-9 pairs of veins; petiole 1-2 cm. long, glabrous; cymes 5-rayed, 3-5 cm. across, on a peduncle 1-2.5 cm. long; calyx purple, glabrous; stamens about half as long or as long as corolla; fr. ovoid, 8 mm. long, red. Fl.v-vi; fr.x. S.T. 2:t.121. (*V. theiferum* Rehd.) C. and W. China. Intr. 1901. Zone (V). With large lvs. and bright red fr. in autumn.—*V. s. aurantiacum* Rehd., f. Fr. orange-yellow. Intr. 1907.

Related species: *V. phlebótrichum* Sieb. & Zucc. Shrub to 2 m.: lvs. ovate to elliptic-ovate, 3-6 cm. long; petiole 2-5 mm. long; cymes slender-stalked, nodding, 2-4 cm. across; stamens very short, the filaments shorter than anthers. S.I.2:t.73(c). S.T.2:t.120. N.T.1:607. Japan. Cult. 1890. Zone VII?

28. *V. Wrightii* Miq. Upright shrub to 3 m.: brts. nearly glabrous; lvs. usually suborbicular to broad-obovate on flowering brts., ovate or broad-ovate on sterile shoots, 8-14 cm. long, abruptly acuminate, rounded or broad-cuneate at base, coarsely dentate, nearly glabrous except slightly pubescent on the veins beneath and with axillary tufts of hairs; petiole 6-20 mm. long; cymes 5-rayed, 5-10 cm. across, glabrous or slightly pubescent, on a stalk

6-20 mm. long; stamens longer than corolla: fr. globose-ovoid, 8 mm. long, red. Fl.v-vi; fr.ix-x. S.I.1:t.19. N.T.1:604. Japan. Intr. 1892. Zone V. With showy fr.; the lvs. turning crimson in autumn.—*V. W. Hessei* (Koehne) Rehd., var. Of dwarfer habit, lvs. ovate with fewer and shallower teeth: cymes smaller; stamens about as long as corolla. (*V. H. Koehne*.) Gt.58:91(l). Japan. Intr. before 1809.

29. *V. dilatatum* Thunb. Upright bushy shrub to 3 m.; young brts. pilose: lvs. suborbicular to broad-ovate or obovate, 6-12 cm. long, abruptly short-acuminate, rounded or subcordate at base, coarsely toothed, hairy on both sides, with 5-8 pairs of veins; petiole 6-16 mm. long; cymes very numerous, 8-12 cm. across, pilose, on a peduncle 1-3 cm. long; stamens longer than the pubescent corolla: fr. broad-ovoid, 8 mm. long, scarlet. Fl.v-vi; fr.ix-x. Ad.5:t.161(c). B.M.6215(c). G.F.4:150. A.F.15:123(h). S.L.379(h). E. Asia. Intr. before 1845. Zone V. Free-flowering shrub, with showy fls. and decorative fr. in fall remaining a long time on the brs.—*V. d. xanthocarpum* Rehd., f. Fr. yellow. Gn.90:8(h). Cult. 1919.

Related species: *V. corylifolium* Hook. f. & Thoms. Similar to *V. dilatatum*, but brts., petioles and peduncles with long spreading fulvous hairs. E. Himal., C. and W. China. Intr. 1907. Zone VI.

30. *V. Wilsónii* Rehd. Shrub to 3 m.; brts. and petioles fasciculate-pilose: lvs. ovate to oblong-ovate, 4-8 cm. long, long-acuminate, rounded to broad-cuneate at base, serrate from near base, loosely pilose above and below or nearly glabrous below, with 6 or 7 pairs of veins; petiole 1-1.5 cm. long; cymes about 5 cm. across, yellowish velvety-pubescent; peduncle about 2 cm. long; rays usually 6: stamens about as long as the pubescent corolla; ovary pubescent: fr. ovoid, 8 mm. long, bright red, with scattered hairs. Fl.vi; fr.x. W. China. Intr. 1908. Zone VII?

31. *V. betulifolium* Batal. Shrub to 4 m.; brts. glabrous, becoming red-brown: lvs. ovate or rhombic-ovate, sometimes elliptic-oblong, 3-8 cm. long, acute or short-acuminate, broad-cuneate, coarsely dentate except near base, glabrous above, lighter beneath and sparingly hairy on the veins and bearded in the axils, often glandular, with 4 or 5 pairs of veins; petioles slender, 1-1.5 cm. long; cymes 6-10 cm. across, short-stalked, rather loose, usually 7-rayed, sparingly hairy or nearly glabrous; ovary glandular and sparingly hairy or nearly glabrous; stamens longer than corolla: fr. globose-ellipsoid, about 6 mm. long, red. Fl.vi-vii; fr.ix-x. B.M.8672(c). S.T.2:t.147. G.C.106:301. C. and W. China. Intr. 1901. Zone V. Shrub with attractive fr.

32. *V. lobophyllum* Graebn. Shrub to 5 m.; brts. glabrous or sparingly hairy at first, becoming dark red-brown: lvs. ovate to orbicular-ovate or broad-obovate, 5-11 cm. long, acuminate, often abruptly so, truncate or broad-cuneate at base, dentate with shallow mucronate teeth, glabrous except pubescent on the midrib above and slightly hairy on the veins beneath, with 5 or 6 pairs of veins; petiole 1-3 cm. long; cyme 7-rayed, 5-10 cm. across, on a stalk 1-2.5 cm. long, minutely pubescent and glandular, rarely glabrescent; ovary glandular and sparingly hairy; stamens longer than the corolla: fr. subglobose, 8 mm. long, bright red. Fl.vi-vii; fr.ix-x. S.T.2:t.148. G.C.60:197. Gn.89:614. C. and W. China. Intr. 1901. Zone V.

Related species: *V. ovatifolium* Rehd. Lvs. ovate to oblong-ovate, acuminate, rounded at base, 5-7 cm. long, with 7-8 pairs of veins slightly hairy beneath: cymes 4-6 cm. across, 5-7 rayed; ovary stellate-pubescent; stamens shorter than corolla. W. China. Intr. 1904 or 1908? Zone V.

33. *V. dasyanthum* Rehd. Shrub to 2.5 m.; brts. glabrous, becoming red-brown or dark purple: lvs. ovate or elliptic to oblong, 6-12 cm. long, acu-

minate, rounded at base, rarely broad-cuneate, remotely denticulate, dark green and glabrous above, bearded in the axils beneath, with 6-7 pairs of veins; petiole 1.5-2 cm. long, glabrous, usually purplish, stipulate: cyme 7-, rarely 5-rayed, 8-10 cm. across; peduncle 1-3 cm. long, purplish, like the rays of the 1st order glabrous, those of the 2d order villous; ovary densely villous; corolla villous outside; stamens longer than corolla: fr. short-ellipsoid, 8 mm. long, bright red. Fl.vi-vii; fr.ix-x. S.T.2:t.149. C. China. Intr. 1907. Zone VI?

Related species: *V. hupehense* Rehd. Brts. stellate-pubescent, later glabrescent: lvs. broad-ovate or ovate, 5-7 cm. long, truncate or subcordate at base, coarsely dentate, pubescent on both sides; petiole 8-15 mm. long: cyme 4-5 cm. across, villous, usually 5-rayed; corolla pubescent outside. C. China. Intr. 1907. Zone V.

34. *V. eròsum* Thunb. Upright shrub to 2 m.; brts. pubescent when young, slender: lvs. elliptic-ovate or oblong-ovate to oblong-obovate, 4-8 cm. long, acuminate, rounded or broad-cuneate at base, sharply dentate, with 7-10 pairs of veins, glabrous except on the veins and in their axils beneath, or slightly pubescent above and beneath; petiole 2-6 mm. long, stipulate: cymes 6-8 cm. across, usually 5-rayed, rather loose, on a slightly pubescent stalk 1-2.5 cm. long; stamens slightly longer than corolla; ovary glabrous: fr. globose-ovoid, 6 mm. long, red. Fl.v-vi; fr.ix. G.F.9:85. N.T.609. Japan, China. Intr. 1844. Zone V.—*V. e. Taquéti* (Lévl.) Rehd., var. Lvs. oblong-lanceolate, coarsely dentate or incisedly dentate, often with 2 lobes near base. Korea. Intr. ?

Closely related species: *V. ichangense* Rehd. Lvs. ovate to ovate-lanceolate, 3-6 cm. long, scabrid above, pubescent beneath, rarely glabrescent: cymes 2.5-4 cm. across; ovary densely villous; stamens shorter than corolla. S.T.2:t.150. C. and W. China. Intr. 1901. Zone VI?

35. *V. dentatum* L. ARROW-WOOD. Upright bushy shrub to 5 m.; brts. glabrous, becoming gray: lvs. suborbicular to ovate, 3-8 cm. long, short-acuminate, rounded or subcordate, coarsely dentate, glabrous and lustrous above, glabrous beneath or bearded in the axils of the veins, with 6-10 pairs of veins; petiole 1-2.5 cm. long: cymes slender-stalked, 5-8 cm. across, glabrous; stamens longer than corolla: fr. globose-ovoid, 6 mm. long, blue-black. Fl.v-vi; fr.x. G.O.t.103(c). W.D.1:25(c). G.F.10:332. Em.2:414,t. N. B. to Minn., s. to Ga. Intr. 1736. Zone II. With conspicuous fls.

36. *V. pubescens* Pursh. Shrub to 3 m.; young brts. stellate-pubescent, becoming grayish brown: lvs. ovate to suborbicular, 5-10 cm. long, acute or short-acuminate, rounded or subcordate, coarsely dentate, glabrous or sparingly hairy above, stellate-pilose beneath chiefly on the veins, with 7-9 pairs of veins; petiole 1-2 cm. long, pubescent, exstipulate: cymes slender-stalked, 6-10 cm. across, slightly pubescent: fr. globose-ovoid, 6 mm. long, blue-black. Fl.vi-vii; fr.ix-x. S.T.1:t.43. G.F.4:29. B.C.6:3462. S.O.3:t.179(c, as *V. dentatum*). (*V. venosum* Brit., *V. dentatum* var. *p.* Ait., *V. molle* of auth., not Michx., *V. nepalense* Hort.) Mass. to Va. Intr. 1739. Zone V. Similar to the preceding, blooming later.—*V. p. Cánbyi* (Rehd.) Blake. Lvs. thinner, larger and broader, those below the infl. often 5-8 cm. broad, less pubescent beneath: cymes larger. W.A.20,t(h). S.L.380(h). (*V. venosum* var. *C.* Rehd., *V. C.* Sarg.) Del. to Pa. Cult. 1884.—*V. p. indianense* Rehd. Similar to the preceding, but brts. glabrous, lvs. more coarsely dentate, and petioles usually with subulate stipules. Ind. Intr. 1923. Zone V.—*V. p. Deamii* Rehd. Lvs. usually orbicular-ovate, sparingly pubescent above, rather soft-pubescent beneath, with 9-11 pairs of veins; petioles often with subulate stipules.

(*V. Deamii* Bush.) Ind. Intr. 1923. Zone V.—*V. p. longifolium* (Dipp.) Blake, var. Lvs. narrower and longer, usually ovate-oblong, pubescent on both sides, more densely beneath; petiole exstipulate: infl. glabrous or pubescent. S.H.2:f.415k(l). (*V. dentatum* var. l. Dipp., *V. venosum* var. l. Rehd.) Cult. 1830?

Related species: *V. scaberrimum* Chapm. Brts. scabrid: lvs. ovate to oblong-ovate, rarely broad-ovate, remotely dentate, with shallow, often rounded teeth, with 5-7 pairs of veins; petiole 5-15 mm. long; cyme densely stellate-pubescent on a stalk 2-4 cm. long; fr. short-ellipsoid, 6-8 mm. long. B.B.3:271. (*V. molle* of auth., not Michx., *V. semitomentosum* Rehd.) Pa. to Fla. and Tex. Cult. 1830. Zone VI.

37. *V. Rafinesquianum* Schult. Shrub to 2 m.; brts. glabrous, later gray-brown: lvs. ovate to nearly elliptic, 3-5 cm. long, acute or acuminate, rounded or subcordate at base, coarsely dentate, glabrous or slightly pubescent above, densely soft-pubescent beneath, with 4-6 pairs of veins; petiole 2-6 mm. long; cymes 3-6 cm. across, dense, on a glabrous stalk 1-3 cm. long; rays 5-7: fr. ellipsoid, 7-9 mm. long, bluish black. Fl.v-vi; fr.ix. G.F.3:125. B.C.6:3463. Gng.5:311(h). (*V. pubescens* auth., not Pursh, *V. affine* var. *hypomallacum* Blake.) Que. to Ga., w. to Man. and Ill. Cult. 1830. Zone II. Dense shrub, very floriferous.—*V. R. affine* (Schneid.) House, var. Lvs. glabrous or slightly pubescent on the veins beneath, 3-8 cm. long; petiole 2-10 mm. long. S.L.381(h). (*V. a.* Bush ex Schneid., *V. pubescens* var. *a.* Rehd.) Va. to Minn., Mo. and Ark.

Related species: *V. bracteatum* Rehd. Shrub to 3 m.: lvs. orbicular-ovate, 5-12 cm. long, cordate or subcordate, obtusely sinuate-dentate, pubescent on the veins beneath; petiole 1.5-2 cm. long; cyme 4-8 cm. across, with conspicuous bractlets: fr. 1 cm. long. S.T.1:t.68. Ga. Cult. 1904. Zone V.

38. *V. molle* Michx. Shrub to 4 m.; bark exfoliating in thin flakes; brts. glabrous, becoming light gray: lvs. suborbicular to broad-ovate, 6-12 cm. long, short-acuminate, deeply cordate, coarsely dentate, glabrous and dark green above, paler and pubescent beneath; petiole 1.5-3 cm. long, stipulate: cymes long-stalked, puberulous, 5-8 cm. across: fr. ellipsoid, 1 cm. long, flattened, blue-black. Fl.vi; fr.viii-ix. B.B.3:272. Bot. Gaz. 22:t.8. (*V. Demetronis* Deane & Robins.) Ind. to Ky. and Mo. Intr. 1923. Zone V. Distinct shrub easily recognized by the flaky bark and the light gray young brts.—*V. m. leiophyllum* Rehd., f. Lvs. glabrous or nearly so beneath. Intr. 1900.

39. *V. acerifolium* L. DOCKMACKIE. Upright shrub to 2 m.; young brts. pubescent: lvs. suborbicular to ovate, 3-lobed, sometimes slightly so, 6-10 cm. long, rounded to cordate at base, the lobes acute to acuminate, coarsely dentate, slightly pubescent above, more densely so and with black dots beneath; petiole 1-2.5 cm. long: fls. yellowish white, in long-stalked cymes 3-8 cm. broad: fr. ellipsoid, 6-8 mm. long, nearly black. Fl.v-vi; fr.ix. G.O.t. 104(c). W.D.t.118(c). Em.2:414,t. N. B. to Minn., s. to N. C. Intr. 1736. Zone III. The lvs. turn bright crimson in fall.—*V. a. glabrescens* Rehd., var. Lvs. glabrous or nearly so. N. C. Intr. 1912.—*V. a. ovatum* Rehd., f. Lvs. ovate, remotely dentate, subcordate. Cult. 1920.

Related species: *V. orientale* Pall. Lvs. suborbicular, 3-lobed, 6-15 cm. long, cordate to subcordate, glabrescent except bearded in the axils beneath and without black dots. Gt.17:8,t. S.L.374. W. Asia, Cauc. Intr. 1827. Zone V.—*V. ellipticum* Hook. Shrub to 2.5 m.: lvs. broad-elliptic, sometimes suborbicular, to elliptic-oblong, 3-7 cm. long, obtuse or acute, subcordate, 3-nerved at base, coarsely dentate above the middle, pubescent beneath at least on the veins; petiole 6-20 mm. long; cymes 4-5 cm. across, long-stalked, pubescent: fr. ellipsoid, about 12 mm. long. D.H.1:182. S.H.2:f.415p-r(l). Wash. to Calif. Intr. 1908. Zone (V).

Sect. 9. *OPULUS* DC. Lvs. deciduous, 3-5-nerved at base, lobed, rarely without lobes, stipulate; drupe red; stone flattened, not or scarcely grooved: winter-buds with 2 connate outer scales: glabrous shrubs, or pubescent with simple hairs.

40. *V. pauciflorum* Raf. MOOSEBERRY. Straggling shrub, to 1.5 m.; brts. glabrous: lvs. suborbicular to broad-elliptic, 5-8 cm. long, with 3 short acute lobes at apex, rounded or truncate at base, unequally serrate, glabrous or slightly pubescent beneath; petiole 1-2.5 cm. long: cyme 1.5-2.5 cm. across; stamens shorter than corolla: fr. globose-ellipsoid, about 8 mm. long, red. Fl.v; fr.viii-ix. G.F.3:5. (*V. eradiatum* House.) Nfd. and Lab. to Alaska, s. to N. H., Vt., Colo. and Wash.; N. E. Asia. Intr. 1880 Zone. II. Rarely cultivated; succeeds best in a half-shady, moist and cool situation.

41. *V. kansuense* Batal. Shrub to 3 m., with gray brs.; brts. glabrous: lvs. broad-ovate to oblong-ovate in outline, deeply 3-5-lobed, 2.5 cm. long, acuminate, broad-cuneate to subcordate, the lobes acuminate to acute, coarsely toothed with mucronulate teeth, sparingly pubescent above, at least on veins, bearded in the axils beneath: petiole slender, 1-2.5 cm. long: fls. pinkish white, in 5-7-rayed cymes about 3 cm. wide; stamens longer than corolla: fr. ellipsoid, 8-10 mm. long, red. Fl.vi-vii; fr.ix. W. China. Intr. 1908. Zone V?

42. *V. trilobum* Marsh. CRANBERRY-BUSH. Shrub to 4 m., with gray brs.; brts. glabrous: lvs. broad-ovate, 5-12 cm. long, rounded or truncate at base, lobes acuminate, coarsely dentate, sometimes the middle lobe elongated and entire, pilose on the veins beneath or nearly glabrous: petiole 1-3 cm. long, with shallow groove and small, usually stalked glands: cyme 7-10 cm. across, on a stalk 1.5-3 cm. long; stamens about twice as long as corolla: fr. subglobose or short-ellipsoid, 8-10 mm. long, scarlet. Fl.v-vii; fr.viii-ii. G.O.t. 20(c). B.B.3:270. (*V. americanum* auth., not Mill., *V. Opulus* var. *a.* Ait., *V. O.* var. *pimina* Michx., *V. edule* Pursh, *V. Oryccoccus* Pursh, *V. Opulus* Am. auth., not L.—HIGH CRANBERRY.) N. B. to B. C., s. to N. Y., Mich., S. D. and Ore. Intr. 1812. Zone II. With ornamental fr. beginning to color end of July and remaining on the brs. all winter.

43. *V. Opulus* L. EUROPEAN CRANBERRY-BUSH. Shrub to 4 m., with rather smooth light gray brs. and stems; brts. smooth and glabrous: lvs. similar to those of No. 42, with rather shorter, more-toothed lobes, pubescent beneath or sometimes glabrous; petiole 1-2 cm. long, with narrow groove and a few large disk-like glands: cyme on a stalk 1-3.5 cm. long: fr. subglobose, 8 mm. across, red. Fl.v-vi; fr.viii-ix. S.E.4:t.639. F.D.28:t.2912(c). Eu., N. Afr., N. Asia. Cult. for centuries. Zone III.—*V. O. variegatum* West., var. With variegated lvs.—*V. O. xanthocarpum* Endl., var. Fr. yellow. Gn.88:204.—*V. O. nanum* David. Dwarf compact form with small lvs., rarely flowering.—*V. O. roseum* L., var. COMMON SNOWBALL. All fls. sterile, forming a globose head 5-6 cm. across. Gng.1:9(h). Gn.M.39:146(h). Gn.76:35(h);88:204. (*V. O.* var. *sterile* DC., *V. roseum* Hort.—GUELDER-ROSE.) The Snowball-tree is often planted for its large globose fl.-heads; the lvs. turn deep red in autumn.

44. *V. Sargentii* Koehne. Similar to the preceding, but bark darker, fissured and somewhat corky: brts. with prominent lenticels, pilose or glabrous when young: lvs. of thicker texture, often larger, the upper ones usually with much elongated entire middle lobe and short spreading lateral lobes, sometimes oblong-lanceolate and without lobes; petiole 2-3.5 cm. long, with large disk-like glands: cymes on a stalk 2-6 cm. long; stamens with purple anthers; sterile fls. larger, to 3 cm. across: fr. subglobose, 8-10 mm. long, scarlet. Fl.

v-vi; fr.viii-x. S.I.2:t.73(c). S.T.1:t.42. H.N.3:t.27. N.T.1:611. Gn.M.33:39 (h). (*V. Opulus* var. *S. Takeda*.) N.E. Asia. Intr. 1892. Zone V or IV.—*V. S. calvoscens* Rehd., var. Lvs. glabrous or nearly so beneath. Intr. 1892.—*V. S. flavum* Rehd., f. With yellow fr.; fls. with yellow anthers: lvs. pubescent on the veins beneath. Intr. 1904.

**3. SYMPHORICARPOS** Duham. Deciduous upright or sometimes prostrate shrubs; winter-buds with about 2 pairs of outer scales: lvs. opposite, short-petioled, entire or occasionally on vigorous shoots, lobed, exstipulate: fls. perfect, axillary, usually forming axillary or terminal clusters or terminal spikes; calyx 4-5-toothed: corolla campanulate to tubular, 4-5-lobed; stamens 4-5, inserted on the tube, included or slightly exerted; style slender, with capitate stigma: ovary with 2 fertile 1-ovuled and 2 sterile several-ovuled cells: fr. a berry-like drupe with 2 nutlets. (Greek *symphorein*, to bear together, and *karpos*, fruit; referring to the clustered fr.) Syn.: *Symphoria* Pers. About 15 species in N. Am., s. to Mex. and 1 in China.—Ornamental shrubs chiefly cultivated for their showy frs.

- A. Fr. white or pinkish; corolla usually pubescent inside.
- B. Fls. campanulate, often slightly ventricose at base.
- C. Style and stamens exerted.....1. *S. occidentalis*
- CC. Style and stamens included.
- D. Corolla 6-8 mm. long: upright shrub.....2. *S. albus*
- DD. Corolla 4-5 mm. long: prostrate shrub.....3. *S. hesperius*
- BB. Fls. tubular to funnelliform; style and stamens included.
- C. Anthers reaching to about the middle of the corolla-lobes.
- DD. Corolla 6-8 mm. long, tube pubescent within: lvs. pubescent....4. *S. rotundifolius*
- DD. Corolla 8-12 mm. long, glabrous or nearly so within: lvs. often glabrous.
- 5. *S. oreophylus*
- CC. Anthers as long as corolla-lobes.....6. *S. microphyllus*
- AA. Fr. red or bluish black: corolla campanulate.
- B. Fls. in leafy spikes or axillary dense clusters: fr. red: pubescent shrub.7. *S. orbiculatus*
- BB. Fls. in peduncled terminal spikes: fr. bluish black: glabrous shrub.....8. *S. sinensis*

1. *S. occidentalis* Hook. WOLFBERRY. Shrub to 1 or 1.5 m., with upright rather stiff brs.: lvs. oval or ovate, 2-7 cm. long, obtuse, cuneate to rounded at base, entire or undulate-crenate, grayish green and pubescent beneath or glabrate: fls. in clusters or spikes 1-3 cm. long; corolla pinkish, 6 mm. long, densely hairy within; stamens and style slightly longer than corolla-lobes: fr. subglobose, white, about 1 cm. across. Fl.vi-vii; fr.ix. G.F.3:297. G.C.49:104,t. B.B.3:277. Mich. to B. C., s. to Ill., Colo. and Kans. Cult. 1880. Zone II.—*S. o. Heyeri* Dieck, var. Lvs. thinner, less distinctly veined beneath; style and stamens somewhat shorter. D.L.1:281(l). (*S. Heyeri* Dipp.) Colo. Cult. 1888. Zone II.

2. *S. albus* Blake. SNOWBERRY. Shrub to 1 m., with upright slender brs.; brts. usually slightly puberulous: lvs. oval to elliptic-oblong, 2-5 cm. long, obtuse, on shoots often sinuately lobed, pubescent beneath: fls. in terminal spikes or clusters; corolla pinkish, about 6 mm. long, pubescent inside: fr. globose or ovoid, 8-12 mm. long. Fl.vi-ix; fr.ix-xi. (*S. racemosus* Michx.—WAXBERRY.) N. S. to Alb., s. to Minn. and Va. Intr. 1879? Zone III. The shrub chiefly planted for its white fr. conspicuous in fall and early winter is *S. a. laevigatus*; typical *S. albus* is sometimes grown as *S. rac.* var. *pauciflorus*; the true *S. a.* var. *pauciflorus* (Gray) Blake has smaller lvs. and 1-3 fls. at end of brts.; it is apparently not in cult.—*S. a. laevigatus* (Fern.) Blake, var. Taller, to 2 m.; brts. glabrous: lvs. usually larger and broader, 3-7 cm. long, glabrous: fr. larger, in terminal spikes. Ad.3:t.94(c). B.M.2211(c). Gn.77:527;84:17(h); 86:477. (*S. rivularis* Suksd.) Alaska to Calif., e. to Mont. and Colo.; often escaped from cult. Intr. 1806.—*S. a. ovatus* (Spaeth) Rehd., var. A form of

the preceding var. with broad-ovate, bluish green lvs., rounded or nearly truncate at base. (*S. o. Spaeth.*) Intr. about 1888.

3. *S. hesperius* G. N. Jones. Stems prostrate or trailing, with erect brs.; young brts. puberulous: lvs. oval or ovate, 1-3 cm. long, obtuse to acute, broad-cuneate to rounded at base, dark green and glabrous above, grayish beneath and pilose on the veins, reticulate, on shoots usually sinuately lobed: fls. 2-6 in the axils of the upper lvs.; calyx-lobes ciliolate; corolla pink, campanulate, 4-5 mm. long, lobes sparsely pilose at base, about as long as tube; stamens as long as corolla; style as long as tube: fr. white, subglobose, 6-8 mm. across. Fl.vi-vii; fr.viii-ix. D.L.1:280(1). (*S. acutus* Dipp., in part, *S. mollis* Macoun, not Torr. & Gr., *S. mollis* var. *acutus* Rehd., in part.) B. C. to Ore. Cult. 1885. Zone V.

Related species: *S. mollis* Nutt. ex Torr. & Gr. Low shrub; brts. velutinous: lvs. suborbicular to elliptic, 1-3 cm. long, pubescent above, soft-pubescent and grayish white beneath: stamens shorter than corolla. Calif. Intr. ?

4. *S. rotundifolius* Gray. Upright shrub to 1 m.; brts. minutely pubescent at first: lvs. suborbicular to oval or ovate, 1-2.5 cm. long, obtuse or acute, sometimes sinuately dentate, usually puberulous above, pubescent and grayish beneath: fls. usually in 2-5-fld. terminal spikes and axillary; corolla pinkish, tubular-campanulate, 6-8 mm. long; tube pubescent within except near mouth: fr. ellipsoid, 1 cm. long, white; nutlets blunt at ends. Fl.v-vi. S.H.2:f.430q-r.431f-k. Wash. to Calif. and N. Mex. Cult. 1896. Zone VI?

Related species: *S. vaccinioides* Rydb. Intricately branched low shrub: lvs. elliptic, 1-2 cm. long, acute at ends, dark green above, glaucescent beneath, glabrous or puberulent; corolla 6-8 mm. long. U. S. Dept. Agric. Misc. Pub. 101: 151. (*S. mollis* var. *acutus* Gray, in part. Alb. to Wash., Nev. and Wyo. Intr. about 1896. Zone V.—*S. utahensis* Rydb. Shrub to 1 m. or more: lvs. broad-ovate, 2-4 cm. long, obtuse and often mucronulate, pubescent when young, later glabrescent: fls. partly in terminal drooping short spikes; corolla 8 mm. long. Utah to Colo. Cult. 1908. Zone VI.

5. *S. oreophilus* Gray. Upright shrub to 1.5 m., with slender spreading brs.; young brts. glabrous or puberulous: lvs. elliptic, 1-4 cm. long, usually acutish, slightly puberulous above or glabrous, grayish pubescent beneath or glabrescent: fls. mostly in axillary pairs, or in few-fld. terminal spikes: corolla pinkish, tubular-funnelform, about 1 cm. long, tube 4-5 times as long as lobes, nearly glabrous within: fr. ellipsoid, about 8 mm. long; nutlets pointed at one end. Fl.vi-vii. I.T.3:t.98. Ore. to Calif. and Ariz. Intr. 1894. Zone V.

6. *S. microphyllus* Kunth. Upright shrub to 3 m.; brts. glabrous or puberulous: lvs. ovate, 1-3 cm. long, acute, rounded at base, bluish gray and pubescent beneath: fls. in terminal clusters and axillary: corolla pinkish, about 1 cm. long, pubescent inside; style about as long as tube: fr. pink or white and tinged pink. Fl.viii-ix. B.M.4975(c). Mex. Intr. 1829. Zone VII?

*S. m. × orbiculatus* = *S. Chenaültii* Rehd. Lvs. more pubescent beneath: fls. spicate: corolla-tube only twice as long as lobes, less pubescent within; style pilose, shorter: fr. subglobose, red, with minute pale dots, usually on one side whitish with red dots. Gs.16:36. Orig. before 1912. Zone V. Neat little shrub, handsome in fr.

7. *S. orbiculatus* Moench. INDIAN CURRANT (CORALBERRY). Shrub to 2 m., with slender upright brs. pubescent when young: lvs. elliptic or ovate, 1.5-3.5 cm. long, obtuse or acutish, rounded at base, dull green above, glaucescent and pubescent beneath: fls. in dense and short axillary clusters and terminal spikes; corolla campanulate, 4 mm. long, yellowish white, flushed rose, sparingly bearded inside; stamens and the pilose style included: fr. subglobose,

4-6 mm. across, purplish red. Fl.vii; fr.x-xii(-m). Ad.3:t.111(c). S.O.2:t.115(c). G.C.28:413. Gn.34:280. M.M.1:84. (*S. vulgaris* Michx., *S. Giraldui* Hesse, *Symphoria glomerata* Pursh.) N. J. to Ga., Kans. and Tex., w. to S. Dak., sometimes escaped. Intr. 1727. Zone II. Attractive in fall, with the slender brs. furnished almost their whole length with red frs.; the lvs. turn crimson in fall and persist a long time.—*S. o. leucocarpus* (D. M. Andrews) Rehd. f. Fls. pale greenish yellow: fr. white or whitish.—*S. o. variegatus* (Cowell) Schneid., var. Lvs. variegated with yellow. (*S. o. f. aureo-reticulatus* Zab.)

8. *S. sinensis* Rehd. Upright shrub to 1.5 m., quite glabrous; the slender brts. becoming red-brown: lvs. elliptic to rhombic-ovate, 1.5-2.5 cm. long, acute or obtusish, cuneate, glaucescent beneath: fls. sessile, solitary, forming a peduncled slender terminal 6-12-fld. spike: corolla campanulate, 7 mm. long, white, glabrous inside, with slightly ventricose tube; style glabrous, as long as stamens: fr. ovoid, 7 mm. long, bluish black, bloomy. Fl.vii-ix. C. China. Intr. 1907. Zone V?

4. **DIPÉLTA** Maxim. Deciduous shrubs; winter-buds with several pairs of pointed scales, glabrous: lvs. opposite, short-petioled, entire or denticulate, exstipulate: fls. solitary or in leafy few-fld. racemes, with several conspicuous unequal bracts at base, the 2 larger ones covering the ovary; calyx-lobes linear to lanceolate; corolla tubular-campanulate, slightly 2-lipped; stamens 4, didynamous, included; style slender, shorter than corolla: ovary elongated, 4-celled, 2 cells with 1 fertile ovule each and 2 with several sterile ovules: fr. a caps. enclosed by the persistent bracts. (Greek *dis*, twice, and *pelle*, shield; in reference to the shape of the floral bracts.) Four species in C. and W. China.—Ornamental shrubs with very handsome fls., resembling Weigela.

A. Bracts shield-like, attached by their centre: corolla narrowed into a slender base.

AA. Bracts auriculate, attached by their deeply cordate base: corolla wide and gibbous at base ..... 1. *D. floribunda*  
..... 2. *D. ventricosa*

1. *D. floribunda* Maxim. Shrub to 5 m.; bark peeling; young brts. glandular-pubescent: lvs. ovate to elliptic-lanceolate, 5-10 cm. long, acuminate, rounded or cuneate at base, entire, or on vigorous shoots remotely denticulate, puberulous at first, soon glabrous; petiole 4-6 mm. long: fls. fragrant, on slender nodding pedicels in 1-6-fld. racemes; sepals linear, 5-6 mm. long; corolla tubular-campanulate, 3 cm. long, pale rose, orange-yellow in throat; the largest bract 1.8-2.5 cm. across in fr. Fl.v-vi. B.M.8310(c). R.H.1936:132, t(c). H.N.3:t.36. G.C.60:38;71:321. Gn.88:582. J.L.40:f.54. C. China. Intr. 1902. Zone V.—*D. f. parviflora* Rehd., var. Lvs. 3.5-6 cm. long, less pubescent: fls. usually solitary, about 2 cm. long. N. W. China. Intr. 1914.

2. *D. ventricosa* Hemsl. Shrub to 6 m.; young brts. puberulous: lvs. elliptic to lanceolate, 5-14 cm. long, long-acuminate, usually rounded at base, remotely glandular-denticulate or entire, sparingly hairy above, villous on the veins beneath: fls. on drooping slender pedicels, 1-4 axillary and terminal on short brts.; sepals subulate, 8 mm. long; corolla campanulate, cup-shaped at base, 3 cm. long, deep rose outside, paler within, orange in throat; the largest bract about 2 cm. across in fr. Fl.v-vi. B.M.8294(c). G.C.44:401. B.S.1:497. W. China. Intr. 1904. Zone VI.

Related species: *D. yunnanensis* Franch. Shrub to 4 m.: lvs. oblong-ovate to lance-ovate, 5-10 cm. long, rounded to broad-cuneate at base, entire, usually slightly pubescent above and pubescent on the veins beneath: pedicels puberulous; sepals subulate, pubescent; corolla campanulate, narrowed at base, 2-2.5 cm. long, creamy-white, flushed pink. W. China. Intr. 1910. Zone VII?

5. **ABELIA** R. Br. Deciduous, rarely evergreen shrubs; winter-buds small, ovoid, with several pairs of outer scales: lvs. opposite, short-petioled, small or medium-sized, entire or dentate: fls. on 1 or 2-fld. peduncles axillary or terminal, sometimes forming terminal panicles or clusters; sepals 2-5, conspicuous, accrescent, persistent; corolla tubular or salver-shaped to campanulate, 5-lobed; stamens 4, didynamous, inserted at base of corolla-tube; ovary 3-celled, only 1 cell fertile and 1-ovuled; style elongated: fr. a 1-seeded leathery achene, crowned by the persistent sepals. (After Dr. Clarke Abel, physician and author on China; 1780-1826.) About 25 species in E. Asia, 1 in the Himal., and 2 in Mex.—Ornamental shrubs planted chiefly for their handsome fls.

a. Corolla campanulate-funnelform; brts. pilose, villous or glabrous, slender; sepals 2 or 5.  
Sect. 1. *EUABELIA* Rehd.

b. Sepals 2.

c. Corolla 1.5-2 cm. long.....1. *A. Engleriana*

cc. Corolla 2.5-3 cm. long.....2. *A. Schumannii*

BB. Sepals 5 or 2-5.

c. Sepals 2-5 on the same plant.....3. *A. grandiflora*

cc. Sepals 5.....4. *A. chinensis*

AA. Corolla salver-shaped with cylindric tube; brts. with reflexed setose hairs, rarely glabrate, thickened at the nodes; sepals 4 or 5; bark of stem thick, fluted with 6 grooves.

Sect. 2. *ZABELIA* Rehd.

b. Sepals 5: infl. subcapitate.....5. *A. triflora*

BB. Sepals 4: fls. usually 2 at end of short brts.....6. *A. Zanderi*

1. **A. Engleriana** (Graebn.) Rehd. Bushy shrub to 2 m., with spreading slender brs.; young brts. puberulous: lvs. ovate to elliptic-ovate or elliptic-lanceolate, 2-3.5 cm. long, acute to acuminate, cuneate, sparingly serrulate, lustrous green, sparingly hairy on the veins beneath: fls. several on short lateral brts.; sepals oblong-elliptic, 8 mm. long; corolla rosy pink, tubular below the middle, campanulate above, gibbous at base. Fl.vi-vii. (*Linnaea* E. Graebn.) C. and W. China. Intr. 1908. Zone V.

Related species: *A. serrata* Sieb. & Zucc. Lvs. rhombic-ovate, 1.5-2.5 cm. long, entire or with few shallow teeth; peduncles 2-fld.; corolla funnelform, gradually widened toward the apex. S.Z.1:t.34(c). N.T.1:453. Japan. Intr. before 1900? VII.

2. **A. Schumannii** (Graebn.) Rehd. Slender shrub; young brts. dark purple and puberulous: lvs. ovate or elliptic-ovate, 1.5-2.5 cm. long, obtusish and mucronulate, cuneate, entire or slightly serrulate, ciliate, villous along the midrib beneath: fls. several on 1-fld. axillary stalks near end of short brts.; sepals elliptic, 6-10 mm. long; corolla rosy pink, campanulate, tubular at the lower third, gibbous at base, minutely glandular-puberulous outside; filaments hirsute. Fl.vi-viii. (*Linnaea* S. Graebn.) B.M.8810(c, as *A. longituba*). W. China. Cult. 1915. Zone VII.

Related species: *A. Graebneriana* Rehd. Shrub to 3 m.: lvs. ovate to oblong-ovate, 3-5 cm. long, acuminate, remotely serrate, pubescent on the midrib beneath: fls. on 1-fld. peduncles, few at end of short lateral brts.; corolla campanulate, 2.5 cm. long, pink, yellow in throat. C. China. Intr. 1910. Zone VI or VII.—*A. uniflora* R. Br. Evergreen shrub to 2 m.; lvs. ovate, 2-5 cm. long, acuminate, sparingly serrulate, lustrous dark green above, paler beneath and pubescent on the midrib: fls. on 1-3-fld. peduncles, several at end of brts.; corolla campanulate, 2.5 cm. long, white, tinged pink, orange in throat. B.M.4694(c). G.C.37:323. F.S.8:t.824(c). Gn.27:425. E. China. Intr. 1845. Zone VII?

3. **A. grandiflora** (André) Rehd. (*A. chinensis* × *uniflora*). Half-evergreen shrub to 2 m.; brts. puberulous: lvs. ovate, 1.5-3.5 cm. long, acute, rounded or cuneate at base, lustrous dark green above, paler beneath and glabrous except bearded near base of midrib: fls. in leafy panicles at end of lateral brts.; sepals varying from 2-5, often partly connate, purplish; corolla

campanulate, about 2 cm. long, white, flushed pink. Fl.vi-xi. Ad.2:t.49(c). Gt.41:113,t(c). Gn.76:528(h). (*A. rupestris* var. *g.* André, *A. rupestris* Hort., not Lindl., *Linnaea Spaethiana* and *L. Perringiana* Graebn.) Orig. before 1880. Zone (V). Handsome shrub planted for its long flowering season and its lustrous half-evergreen lvs.

4. *A. chinensis* R. Br. Deciduous spreading shrub, to 1.5 m.; young brts. puberulous, reddish: lvs. ovate, 2-3.5 cm. long, acute or short-acuminate, rounded at base, serrate or serrulate, villous beneath near base of midrib and lateral veins, sometimes with scattered hairs above: fls. fragrant, in dense axillary and terminal cymes forming terminal dense and short panicles; sepals oblong-obovate, 6 mm. long, puberulous; corolla funnellform, about 1 cm. long, white; stamens exserted. Fl.vii-viii. B.R.32:8(c). P.F.2:t.201(c). Gn. 27:424. C. and E. China. Intr. 1844. Zone VII?

Related species: *A. spatulata* Sieb. Shrub to 1 m.: lvs. elliptic-lanceolate to ovate, 2-5 cm. long, unequally serrate, sparingly hairy above, downy on veins beneath: fls. in pairs at end of short brts.: corolla funnellform-campanulate, 2-2.5 cm. long, white with yellow throat; stamens shorter than corolla. B.M. 6601(c). S.Z.1:t.34(c). N.T.1:618. Japan. Intr. 1880. Zone VII?

5. *A. triflora* R. Br. Shrub of upright habit, to 4 m.; bark of stems corrugated; young brts. reflexed-setose: lvs. lanceolate to ovate-lanceolate, 3-7 cm. long, long-acuminate, entire or with few coarse teeth, ciliate and sparingly hairy on both sides or nearly glabrous: fls. fragrant, in terminal clusters about 5 cm. across; sepals linear, 1-1.5 cm. long, hairy; corolla rosy-white, with pubescent tube about 1.5 cm. long and with spreading rounded lobes, limb about 1.2 cm. across. Fl.vi. B.M.9131(c). R.H.1870:511,t(c). G.C.II. 16:34. (*Linnaea t.* A. Br. & Vatke.) N. W. Himal. Intr. 1847. Zone VII.

6. *A. Zánderi* (Graebn.) Rehd. Upright shrub to 3 m.; brts. glabrous, except scattered reflexed bristles near base: lvs. ovate-oblong to ovate-lanceolate, 3-7 cm. long, acuminate, broad-cuneate, rarely rounded at base, sparingly dentate or entire, sparingly hairy above, sparingly pilose beneath, more densely so on veins; petiole 2-4 mm. long: peduncles 2-fld., 2-6 mm. long, terminal on short lateral brts.; pedicels short; ovary glabrous; sepals oblanceolate to oblong, 7-10 mm. long, glabrous or minutely ciliolate; corolla salver-shaped, glabrous outside, tube 8-10 mm. long, with rounded spreading lobes; style as long as tube; stamens slightly shorter. Fl.vi. H.N.3:t.35. (*Linnaea Z.* Graebn.) C. and N. W. China. Intr. 1910. Zone V. Very variable.

Related species: *A. biflora* Turcz. Lvs. usually narrower and usually incisely serrate: fls. in terminal pairs; peduncle wanting; pedicels short; ovary setose, usually curved. H.N.3:t.32. N. China, Manch. Intr. 1923. Zone V.—*A. umbellata* (Graebn. & Buchw.) Rehd. Lvs. elliptic or elliptic-lanceolate, 3-8 cm. long, acute or acuminate, coarsely dentate to entire, pubescent on the veins beneath or glabrous: fls. 4-7 on a slender peduncle 1-1.5 cm. long; corolla-tube 10-12 mm. long. C. and W. China. Intr. 1907. Zone VII?

6. **LINNAEA** Gronov. ex L. **TWINFLOWER**. Evergreen trailing subshrub: lvs. opposite, small, petioled, crenate, exstipulate: fls. in pairs on slender upright peduncles terminal on short brts.; calyx 5-parted; corolla campanulate, 5-lobed; stamens 4, ovary 3-celled, stipitate-glandular: 1 cell fertile and 1-ovuled: fr. ovoid, dry, indehiscent, 1-seeded. (Named by Gronovius for Linnaeus at his own request.) One circumpolar very variable species.

*L. borealis* L. Stems slender, sparingly pubescent: lvs. roundish or obovate, 6-25 mm. long, acute or obtuse, with few crenate teeth, usually ciliate and with scattered hairs above: fls. fragrant, pediceled, on slender peduncles 4-7 cm. long; sepals lanceolate, 1.5-3 mm. long: corolla campanulate, 6-9 mm. long, white, tinged and striped rose-purple: fr. yellow, about 3 mm.

long. Fl.vi-viii. R.I.17:t.119.f.1(c). S.E.4:t.644(c). Gn.24:177. M.G.25:138 (h). Act. Hort. Berg. 4,7:t.1-13. (*L. serpyllifolia* Rydb.) N. Eu., N. Asia, N. Am. (Alaska). Cult. 1762. Zone II. Handsome trailing plant; suited for a moist and half-shady position in the rock garden.—*L. b. americana* (Forbes) Rehd., var. Lvs. usually glabrous, ciliate near base: corolla 8-15 mm. long, the tubular portion exceeding the calyx; sepals 1.5-3 mm. long. B.B.3:276. (*L. a.* Forb.) Lab. to Alaska, s. to W. Va., Ind., Colo., Utah and N. Calif. Intr. 1800.—*L. b. longiflora* Torr., var. Lvs. slightly larger; corolla more funnel-form, 10-16 mm. long, the tubular portion exceeding the calyx; sepals 3-5 mm. long. Act. Hort. Berg. 4,7:t.13.f.12. B. C. to Calif.

7. **KOLKWITZIA** Graebn. Deciduous upright shrub; winter-buds with several pairs of pointed pubescent scales: lvs. opposite, short-petioled, exstipulate: fls. in pairs forming terminal corymbs on short lateral brts.; sepals 5, narrow, pilose, spreading; corolla campanulate, 5-lobed; stamens 4, about as long as tube; the two ovaries inserted one above the other, sometimes partly connate, ellipsoid, narrowed into a long beak, hispid, with adnate bractlets, 3-celled, 1 cell fertile and 1-ovuled, the other sterile, several-ovuled: fr. dry, hispid like the pedicels and sepals. (After Richard Kolkwitz, professor of botany, Berlin; b. 1873.) One species in China.

*K. amabilis* Graebn. BEAUTY-BUSH. Shrub to 2 m.; young brts. pilose, older with brown flaky bark: lvs. broad-ovate, 3-7 cm. long, acuminate, rounded at base, remotely and shallowly toothed or nearly entire, ciliate, dull green above and sparingly hairy, pilose on the veins beneath; petiole pilose, 2-3 mm. long: fls. in corymbs 5-7 cm. across; peduncles 6-10 mm. long, pilose; corolla about 1.5 cm. long, pink, yellow in throat, puberulous: fr. ovoid, 6 mm. long, bristly. Fl.v-vi. B.M.8563(c). H.I.2937. H.N.3:t.37. G.C. 74:4,5,7;106:55t(h). H.B.2:487(h). C. China. Intr. 1901. Zone V.—Graceful shrub, very handsome in spring with its profuse pink fls.

8. **DIERVILLA** Adans. Deciduous low stoloniferous shrubs; winter-buds with several pairs of pointed scales: lvs. opposite, serrate, exstipulate: fls. in 3- to many in terminal or subterminal cymes, yellow or greenish yellow; calyx-lobes 5, subulate, distinct; corolla 2-lipped, with funnel-form tube; the 5 stamens and the style exserted; stigma capitate; ovary elongated, 2-celled: caps. thin-walled, beaked, crowned by the shriveled calyx, indehiscent or imperfectly splitting, valves not separating; core hollow; seeds many, minute, reticulate, not winged. (After Diereville or Dierville, French surgeon; traveled in Canada 1699-1700 and intr. *D. Lonicera* to France.) Three species in N. Am.—Fls. not conspicuous and therefore not much planted.

A. Brts. and lvs. glabrous or nearly so.

B. Lvs. petioled ..... 1. *D. Lonicera*

BB. Lvs. subsessile ..... 2. *D. sessilifolia*

AA. Brts. and lvs. pubescent; lvs. subsessile ..... 3. *D. rivularis*

1. *D. Lonicera* Mill. Shrub to 1 m.; brts. nearly terete: lvs. ovate to ovate-oblong, 4-10 cm. long, acuminate, subcordate to broad-cuneate, serrate and ciliolate; petiole 3-6 mm. long: fls. yellow, in usually 3-fld. peduncled cymes; limb of corolla nearly as long as tube: caps. about 8 mm. long. Fl.vi-vii. B.M.1796(c). (*D. Diervilla* Macm., *D. canadensis* Willd., *D. trifida* Moench.) Nfd. to Sask., s. to N. C. and Mich. Intr. 1720. Zone III.

2. *D. sessilifolia* Buckl. Shrub to 1.5 m.; brts. 4-angled: lvs. subsessile, ovate-lanceolate, 6-15 cm. long, acuminate, cordate or rounded at base, sharply serrate: fls. sulphur-yellow, in 3-7-fld. cymes often crowded into a

dense terminal panicle; limb of corolla shorter than tube: caps. 9-12 mm. long. Fl.vi-viii. G.C.42:427. L.Lt.8. N. C. to Ga. and Ala. Intr. 1844. Zone IV.

*D. s. × Lonicera* = *D. splendens* (Carr.) Kirchn. Similar to No. 2, but lvs. short-petioled. (*Weigela s.* Carr.) Orig. about 1850.

3. *D. rivularis* Gatt. Shrub to 2 m.; brts. terete, densely short-pilose: lvs. subsessile, ovate to oblong-lanceolate, 4-8 cm. long, acuminate, cordate to truncate, doubly serrate, pubescent on both sides: cymes few- to many-fld., crowded into terminal panicles; corolla lemon-yellow; limb about as long as tube: fr. 6 mm. long. Fl.vii-viii. G.C.38:339. N. C. to Ga. and Ala. Cult. 1898. Zone V.

9. **WEIGELA** Thunb. Deciduous shrubs; winter-buds with several pointed scales: lvs. opposite, petioled, rarely subsessile, serrate, exstipulate: fls. rather large, 1 to several in axillary cymes on short brts. lateral on last year's brs., white to pink, purple or crimson; calyx-lobes 5, connate below or distinct; corolla tubular-campanulate or funnelform, zygomorphous, tube much longer than the 5 broad lobes; stamens 5, shorter than corolla; style sometimes exserted; stigma capitate; ovary 2-celled, elongated: caps. generally oblong, beaked, opening with 2 valves, leaving a central column; seeds many, angular, minute, often winged. (After C. E. von Weigel, professor in Greifswald, Germany; botanical author; 1748-1831.) Including *Macrodier-villa* Nakai (*Calyptristigma* Trautv. & Mey., not Klotzsch) and *Weigel-astrum* Nakai. About 12 species in E. Asia.—Ornamental shrubs with showy fls.; many garden forms and hybrids.

A. Anthers not cohering nor connivent; calyx not 2-lobed; central column of fr. exserted.

B. Calyx divided to base into linear, usually pilose lobes: seeds with narrow wing.

Sect. 1. *UTSUGIA* (A. DC.) Bailey

C. Lvs. and brts. pubescent.

D. Fls. peduncled, pink, carmine or white; style not or slightly exceeding the corolla.

E. Lvs. pubescent beneath chiefly on the veins: corolla funnelform-campanulate, gradually widening.....1. *W. japonica*

EE. Lvs. gray-tomentose or densely soft-pubescent beneath: corolla cylindric below, campanulate above.....2. *W. hortensis*

DD. Fls. sessile, dark crimson (except in var.); style much exserted; ovary pubescent.

3. *W. floribunda*

CC. Fls. sessile: lvs. and brts. glabrous.....4. *W. coraeensis*

BB. Calyx divided to about the middle; lobes lanceolate: seeds not winged.

Sect. 2. *CALYSPHYRUM* (Bge.) Bailey

C. Lvs. glabrous above, pubescent on veins beneath or only on midrib.....5. *W. florida*

CC. Lvs. pubescent above, soft-pubescent beneath.....6. *W. praecox*

AA. Anthers pilose, connected in a ring about the style or only connivent and partly free; stigma calyptrate; calyx 2-lipped; central column of fr. not exceeding the valves.

B. Valves separating at apex from the persisting central column; seeds with narrow lateral wing.....Sect. 3. *WEIGELASTRUM* (Nakai) Rehd.

7. *W. Maximowiczii*

BB. Valves cohering at apex; seeds winged at ends.Sect. 4. *CALYPTROSTIGMA* (Koehe) Rehd.

8. *W. Middendorffiana*

1. *W. japonica* Thunb. Shrub to 3 m.; young brts. glabrous or with 2 rows of hairs: lvs. elliptic to oblong-obovate, 5-10 cm. long, acuminate, rounded or cuneate at base, serrate, slightly pubescent above, pilose-pubescent on veins beneath; petiole 2-5 mm. long: peduncles 3-fld., several on short lateral brts.; corolla campanulate-funnelform, 2.5-3 cm. long, whitish at first, changing to carmine, slightly pubescent or nearly glabrous outside; style slightly exserted; ovary glabrous or sparingly pilose: caps. glabrous. Fl.v-vi. S.I.2:t.74(c). G.F.9:405. B.C.2:1008. (*Diervilla j.* DC.) Japan. Intr. 1892. Zone V.—*W. j. sinica* (Rehd.) Bailey, var. Shrub to 6 m.: lvs. soft-pubescent beneath; petiole 8-10, rarely 5-7 mm. long: corolla abruptly contracted below the middle into a narrow tube, pale pink; ovary densely pubescent. (*D. j.* var. *s.* Rehd.) C. China. Intr. 1908. Zone VI.

Related species: *W. decora* (Nakai) Nakai. Lvs. villous beneath on the veins; fls. short-peduncled; ovary nearly glabrous; corolla changing from greenish to white and finally pink; style somewhat exserted. Japan. Cult. 1933. Zone V?

2. *W. hortensis* (Sieb. & Zucc.) C. A. Mey. Shrub to 3 m.; young brts. pilose; lvs. ovate or obovate to oblong, 5-10 cm. long, acuminate, serrulate, slightly pubescent above at first, later glabrate, densely grayish pubescent or tomentose beneath; petiole 2-5 mm. long; fls. on elongated 3-fld. pubescent peduncles; corolla tubular-campanulate, carmine; style exserted, as long or slightly longer than lobes; ovary pilose; caps. glabrous. Fl.v-vi. S.Z.1:t.29,30 (c). N.T.1:701. (*Diervilla h.* Sieb. & Zucc., *D. japonica* var. *h.* Rehd.) Japan. Cult. 1870. Zone VI.—*W. h. nivea* Bonard. Fls. white. G.C.II.10:80. Gn.22:185;34:352. (*W. h. var. albiflora* Nakai, *D. japonica* var. *nivea* Rehd., *D. japonica* var. *alba* Mak.) Intr. about 1864.

3. *W. floribunda* (Sieb. & Zucc.) C. A. Mey. Shrub to 3 m., with slender brs.; young brts. pubescent or at least with 2 rows of hairs: lvs. elliptic to oblong-ovate or oblong-obovate, 7-10 cm. long, acuminate, broad-cuneate, serrate, sparingly pubescent above, villous-pubescent beneath chiefly on the veins; petiole 2-5 mm. long; fls. sessile, crowded on short lateral brts.; corolla tubular-funnelform, 2.5-3 cm. long, pubescent outside, dark crimson, brownish crimson in bud, the lobes about 5 times shorter than tube; stamens as long as corolla; style exserted, often exceeding the lobes by 1 cm.: caps. pubescent. Fl.v-vi. S.Z.1:t.32(c). I.H.10:t.383(c). N.T.1:696. (*Diervilla f.* Sieb. & Zucc., *D. multiflora* Lem.) Japan. Intr. 1860. Zone V.—*W. f. grandiflora* (Dipp.) Rehd., f. Fls. larger, brownish crimson. (*W. arborescens* Hort.) —*W. f. versicolor* (Sieb. & Zucc.) Rehd., var. Fls. greenish white at first, changing to red or crimson: lvs. pilose on the veins beneath. S.Z.1:t.33(c). (*D. v.* Sieb. & Zucc.)

Related species: *W. subsessilis* (Nakai) Bailey. Lvs. subsessile, broad-ovate to obovate-oblong, subcordate to rounded at base, pilose on the veins beneath: fls. sessile; corolla greenish yellow or yellowish pink; style about as long as corolla; caps. sparingly pilose. N.K.11:t.41. Korea. Intr. ?

4. *W. coraeensis* Thunb. Shrub to 5 m.; brts. stout, glabrous; lvs. broad-elliptic or elliptic to obovate, 8-12 cm. long, abruptly acuminate, broad-cuneate, crenate-serrate, lustrous above and glabrous except on the veins, sparingly hairy on the veins beneath or quite glabrous; petiole 5-10 mm. long; fls. in peduncled cymes, several on short lateral brts.; corolla campanulate-funnelform, abruptly narrowed below the middle, 2.5-3 cm. long, glabrous, pale rose or whitish at first, changing to carmine; sepals linear-lanceolate, glabrous or ciliate; ovary glabrous. Fl.v-vi. S.Z.1:t.31(c). S.I.2:t.74(c). F.S. 8:t.855(c). (*Diervilla c.* DC., *D. grandiflora* Sieb. & Zucc., *D. amabilis* Carr.) Japan. Cult. 1850. Zone V.—*W. c. alba* (Voss) Rehd., f. Fls. yellowish white, changing to pale rose. (*D. c.* var. *arborea* Rehd., *Weigela grandiflora alba* and *W. arborea grandiflora* Hort.)

Related species: *W. suavis* (Komar.) Bailey. Shrub to 2 m.; young brts. with 2 rows of curly hairs: lvs. subsessile, ovate to oblong-lanceolate, 2-5 cm. long, acute or acuminate, obtusely serrate, sparingly ciliate and sometimes with a few hairs on midrib beneath, membranous: corolla purple-pink, 2-2.5 cm. long, puberulous outside. Manch. Intr. about 1910?

5. *W. florida* (Sieb. & Zucc.) A. DC. Shrub to 3 m.; brts. with 2 rows of hairs: lvs. short-petioled to subsessile, elliptic to ovate-oblong, or obovate, 5-10 cm. long, acuminate, rounded to cuneate at base, serrate, glabrous above except on midrib, pubescent or tomentose on veins beneath; sepals nearly

glabrous, connate about  $\frac{1}{2}$ ; ovary slightly pubescent; corolla funnelform-campanulate, about 3 cm. long, abruptly narrowed below the middle, rosy pink outside, pale within, with rounded spreading lobes; stigma 2-lobed: caps. glabrous. Fl.v-vi. B.M.4396(c). F.S.3:t.211(c). R.H.1849:381,t(c). (*Diervilla* f. Sieb. & Zucc., *W. rosea* Lindl., *W. amabilis* Hort., *D. pauciflora* Carr.) N. China, Korea. Intr. 1845. Zone V. One of the handsomest species and particularly the var. *venusta* is one of the most graceful and hardiest of the Weigelas.—*W. f. alba* (Moore) Rehd., f. Fls. white, changing to light pink. R.H.1861:331,t(c). (*D. f. f. candida* Voss, *Weigela rosea alba* Moore.)—*W. f. variegata* (Bean) Bailey, var. Lvs. edged with pale yellow; fls. deep rose. B.S.1:490.—*W. f. venusta* (Rehd.) Nakai, var. Lvs. smaller, usually obovate, 3-6 cm. long, usually nearly glabrous; fls. in dense clusters with small lvs. at base; corolla rosy-pink, about 3.5 cm. long, rather gradually narrowed toward the base, lobes oval. Fl.v. B.M.9080(c). N.K.11:t.39. (*W. v.* Bailey, *D. f. var. v.* Rehd., *D. v.* Stapf.) Korea. Intr. 1905. Zone IV.

6. *W. praecox* (Lemoine) Bailey. Shrub to 2 m.; brts. glabrous or pilose: lvs. short-petioled or subsessile, elliptic or elliptic-ovate to obovate, 5-8 or on vigorous shoots to 12 cm. long, acuminate, serrate, hairy above, soft pubescent beneath: fls. nodding, 3-5 on short lateral brts.; calyx and ovary pilose or the latter glabrate toward the base; corolla funnelform-campanulate, abruptly narrowed below the middle, rosy pink or purplish pink, yellow in throat, pubescent outside: caps. glabrous. Fl.v. Gt.46:t.1441(c). R.H.1905:314,315. H.B.3:73(h). N.K.11:t.38. (*Diervilla praecox* Lemoine, ?*D. Wolfiana* Schneid.) Korea. Cult. 1894. Zone V. The earliest of all species to bloom.

7. *W. Maximowiczii* (S. Moore) Rehd. Shrub to 1.5 m.; brts. with 2 rows of hairs: lvs. subsessile, elliptic-ovate or obovate to ovate-oblong, 4-8 cm. long, acuminate, broad-cuneate, with scattered hairs above, pilose on the veins beneath: fls. usually 2, sessile; calyx 2-lipped, the upper lip 3-lobed, the 2 lower lobes distinct, sparingly pilose; corolla funnelform-campanulate, the tubular portion exceeding the calyx, greenish yellow, about 3.5 cm. long; stamens and style shorter than corolla; anthers connivent; ovary nearly glabrous: caps. about 2 cm. long. N.T.1:692. (*Diervilla Middendorffiana* var. *M. S. Moore*, *D. Maximowiczii* Mak., *Weigelastrum M. Nakai*.) Japan. Intr. 1915. Zone V.

8. *W. Middendorffiana* (Carr.) Lem. Shrub to 1.5 m.; young brts. with 2 rows of hairs: lvs. subsessile or sessile, ovate-oblong to ovate-lanceolate, 5-8 cm. long, acuminate or acute, cuneate or rounded at base, serrulate, bright green, pilose on veins above and below, rarely nearly glabrous: peduncles 1-3-fld. in terminal cyme; corolla campanulate-funnelform, 3-3.5 cm. long, glabrous, sulphur-yellow, dotted orange on lower lobes; calyx 2-lipped, longer than the narrow portion of corolla, its upper lip with spreading lobes; anthers coherent; caps. glabrous. Fl.v-vi. B.M.7876(c). Gt. 6:t.183(c). F.S.11:t.1137(c). N.T.1:690. G.C.III.7:581. (*Diervilla M. Carr.*, *Macrodiervilla M. Nakai*, *Calyptristigma M. Trautv. & Mey.*) Manch., N. China, Japan. Intr. 1850. Zone IV. Shrub with handsome fls.; like the preceding it demands a sheltered, cool and moist situation.

*W. M. × (florida × coraeensis) = W. Wagneri* (Kusnetz.) Bailey. Lvs. ovate-oblong, glabrous except on veins beneath; sepals lanceolate, distinct or partly connate; corolla pink, tinged yellow. Gt.48:t.1461(c). Orig. about 1890.

A large number of garden forms, mostly of hybrid origin, are in cult, for which the untenable name *W. hybrida* Jaeg. (*D. h. Dipp.*) has been used. They are hybrids between the species Nos. 2-5 and the best known are enumerated

below under their probable parents, though some are probably ternary or even quaternary hybrids.

- 2 × 3. *W. hortensis* × *floribunda*: Desboisii.

10. **LONICERA** L. HONEYSUCKLE. Deciduous, rarely half-evergreen or evergreen shrubs, rarely tree-like, upright or climbing; winter-buds with several or 2 outer scales: lvs. opposite, usually short-petioled, sometimes sessile, entire, rarely lobed, exstipulate, rarely with intrapetiolar stipules: fls. in axillary peduncled pairs, each pair with 2 bracts and 4 bractlets, the latter often connate, rarely wanting, or fls. in sessile whorls; calyx 5-toothed, corolla with slender or short, often gibbous tube, 2-lipped or nearly equally 5-lobed; stamens 5; ovary inferior, 2-3- rarely 5-celled; the pairs sometimes partly or wholly connate; style slender with capitate stigma: fr. few- to many-seeded. (After Adam Lonicer or Lonitzer, a German physician and botanist; 1528-1586.) Including *Caprifolium* Adans., *Periclymenum* Mill., *Xylostemum* Mill., *Chamaecerasus* Med., *Distegia* Raf., *Nintooa* Sweet. About 180 species throughout the n. hemisphere; in Am. s. to Mex., in the Old World to N. Afr., Java and the Philippines.—Ornamental shrubs, grown for their attractive fls. and frs.; about 100 species have been intr. into cult.

Fls. in pairs, rarely solitary: lvs. always distinct.

- a. Brs. with solid white pith.  
 b. Corolla with regular or nearly regular 5-lobed limb, lobes shorter than tube.  
 c. Corolla equal at base, not ventricose; bractlets connate, at least half as long as ovary: lvs. not or slightly exceeding 3 cm. in length, conduplicate or flat in bud.  
 d. Stamens and style included.  
 e. Style half as long as corolla-tube: fr. red.  
 f. Ovaries connate, 2-celled.....1. *L. Myrtillus*  
 ff. Ovaries distinct, 3-celled.  
 g. Corolla outside and lvs. beneath glabrous.....2. *L. syringantha*  
 gg. Corolla pubescent outside: lvs. pubescent or tomentose beneath, rarely glabrous on sterile shoots.....3. *L. tibetica*  
 ee. Style as long as corolla-tube: fr. black.....4. *L. tomentella*  
 dd. Stamens and style exerted: fr. whitish or pale purple, bloomy: lvs. linear.  
 5. *L. spinosa*  
 cc. Corolla ventricose or saccate at base: lvs. convolute.  
 d. Bracts narrow, usually subulate.  
 e. Ovaries not inclosed by a cupula.  
 f. Bractlets connate or wanting; ovary usually 2-celled.  
 g. Ovaries connate or partly connate.  
 h. Bractlets present: fr. bluish black.  
 i. Corolla purple, 1.5 cm. long: lvs. pubescent beneath.  
 6. *L. purpurascens*  
 ii. Corolla whitish, 1 cm. long: lvs. glabrous.....7. *L. obovata*  
 hh. Bractlets wanting (except in *L. trichopoda* under No. 8): fr. red.  
 i. Corolla ventricose at base; lvs. to 3 cm. long, glabrous beneath.  
 8. *L. tangutica*  
 ii. Lvs. saccate at base: lvs. to 5 cm. long, pubescent beneath.  
 9. *L. saccata*  
 gg. Ovaries distinct or nearly so: corolla gibbous at base.  
 h. Style exceeding the limb: fls. whitish, in pairs.....11. *L. canadensis*  
 hh. Style shorter than limb; fls. red, solitary.  
 i. Lvs. and fls. glabrous.....12. *L. gracilipes*  
 ii. Lvs. and fls. glandular-pubescent.....13. *L. tenuipes*  
 ff. Bractlets distinct, acute, half as long as ovaries.....25. *L. pyrenaica*  
 ee. Ovaries and fr. distinct, enclosed by a persistent cupula.  
 f. Fr. blue, bloomy, consisting of a fleshy cupula, tightly enclosing the ovaries, these therefore seemingly connate: lvs. deciduous.....14. *L. coerulesa*

- FF. Fr. pale purple, splitting at maturity the dry cupula: lvs. half-evergreen, lustrous.....13. *L. pileata*
- DD. Bracts large, more or less enveloping the ovaries.
- E. Bractlets wanting: fls. white: fr. red: terminal winter-bud wanting.
- F. Winter-buds with 2 outer scales, acute.
- G. Ovaries glabrous or glandular: corolla with slender tube.....22. *L. hispida*
- GG. Ovaries setose and glandular-pilose; corolla-tube stout, saccate: lvs. pubescent beneath.....23. *L. chaetocarpa*
- FF. Winter-buds with several outer scales, small, obtuse.....24. *L. strophophora*
- EE. Bractlets large: fls. yellow to scarlet: fr. purple-black.
- F. Stamens as long as limb: lvs. glabrous or slightly pubescent.
26. *L. involucreata*
- FF. Stamens not exceeding the mouth of the tube: lvs. pubescent beneath.
27. *L. Ledebourii*
- BB. Corolla 2-lipped.
- C. Winter-buds with 2 outer scales: fls. white or yellowish.
- D. Ovaries enclosed by a cupula: terminal winter-bud present.
- E. Lvs. acuminate, to 10 cm. long.....17. *L. Ferdinandi*
- EE. Lvs. obtuse, to 4 cm. long.....18. *L. iberica*
- DD. Ovaries not inclosed by a cupula: terminal bud wanting.
- E. Ovaries more or less connate.
- F. Lvs. acuminate: brts. setose.....19. *L. Standishii*
- FF. Lvs. obtusish or acute: brts. glabrous.....20. *L. fragrantissima*
- EE. Ovaries distinct.....21. *L. Altmannii*
- CC. Winter-buds with several outer scales.
- D. Tube of corolla about as long as limb: lvs. 1-2.5 cm. long.....10. *L. microphylla*
- DD. Tube much shorter than limb: lvs. larger.
- E. Winter-buds ovoid, terete, with ovate obtuse rarely lanceolate scales: peduncles long (except in No. 16); calyx with obtuse or obsolete teeth: fr. red, rarely whitish.
- F. Bractlets connate into a cupula as high as ovaries.....16. *L. gynochlamydea*
- FF. Bractlets distinct or wanting.
- G. Ovaries partly or wholly connate.
- H. Corolla finely pubescent outside, yellowish: lvs. obtusish.
28. *L. oblongifolia*
- HH. Corolla glabrous or pilose outside, usually tinged purple: lvs. acuminate.....29. *L. alpigena*
- GG. Ovaries distinct.
- H. Corolla yellowish, tinged purplish: lvs. more or less glandular, to 12 cm. long.....30. *L. Webbiana*
- HH. Corolla dark purple: lvs. pilose, not glandular, 3-6 cm. long.
31. *L. tatsienensis*
- EE. Winter-buds oblong-ovoid, acute, 4-angled, with acute lanceolate scales, persistent at base of brts.: fls. yellowish to lilac.
- F. Fr. red.
- G. Peduncles much longer than petioles.
- H. Bracts caducous, bractlets, minute or indistinct.....32. *L. conjugialis*
- HH. Bracts persistent; bractlets at least  $\frac{1}{4}$  as long as ovaries.
- I. Lvs. distinctly petioled, acute to acuminate.
- J. Lvs. green and glabrescent or pubescent beneath.
33. *L. Maximoviczii*
- JJ. Lvs. grayish tomentulose beneath.....34. *L. Tatarinovii*
- II. Lvs. subsessile, rounded at base, obtuse, rarely acute.
35. *L. Chamissoi*
- GG. Peduncles shorter than petioles: fls. 4-merous, whitish.....36. *L. subsessilis*
- FF. Fr. black or bluish black.
- G. Ovaries connate; bractlets connate into distinct pairs; peduncles often shorter than petioles.....37. *L. orientalis*
- GG. Ovaries distinct, rarely connate  $\frac{1}{2}$ ; bractlets connate into a short cupula; peduncles longer than petioles.
- H. Peduncles not exceeding 1.5 cm.: lvs. glabrous.....38. *L. nervosa*
- HH. Peduncles 1.5-4 cm. long: lvs. pubescent beneath at least along midrib.
39. *L. nigra*
- AA. Brts. hollow: ovaries distinct.
- B. Habit upright.
- C. Peduncles much longer than petioles.
- D. Corolla light pink to rosy red, sometimes white, but not changing to yellow.
- E. Bractlets distinct or nearly so; the 2 outer lobes of upper lip of corolla divided to base of limb.....40. *L. tatarica*
- EE. Bractlets of each fl. connate at base; lateral lobes of upper lip divided to the middle or slightly beyond: lvs. 1-4 cm. long.....41. *L. Korolkowii*
- DD. Corolla white, sometimes slightly tinged pinkish, changing to yellow or yellowish.
- E. Winter-buds elongated, pointed, with long-ciliate pubescent scales.
- F. Lvs. broad-ovate to obovate or elliptic, acute, soft-pubescent to glabrescent: fls. often tinged pink.....42. *L. Xylosteum*
- FF. Lvs. rhombic-ovate to ovate-lanceolate, acuminate, pilose or glabrescent: fls. yellowish white.....43. *L. chrysantha*

- EE. Winter-buds small, obtusish, glabrescent.  
 F. Ovary sparingly glandular and pilose; lvs. 1.5-3 cm. long, acute to obtusish. 44. *L. demissa*
- FF. Ovary glabrous; lvs. 3-10 cm. long.  
 G. Bractlets about as long as ovary, pubescent; upper lip of corolla divided to base, with spreading lobes; lvs. acute to obtusish. 45. *L. Morrowii*  
 GG. Bractlets small, glabrous or glandular-ciliate; upper lip divided about ½, upright; lvs. acuminate. 46. *L. Ruprechtiana*
- CC. Peduncles shorter or slightly longer than petioles; bractlets connate into pairs; calyx cup-shaped or campanulate, often splitting.  
 D. Fr. red.  
 E. Calyx divided to about the middle into ovate to lanceolate lobes; upper lip of corolla divided to about the middle into oblong lobes. 47. *L. Maackii*  
 EE. Calyx campanulate, with short, often indistinct teeth, becoming scarious, splitting; upper lip with short ovate lobes.  
 F. Lvs. acuminate, pubescent, 4-8 cm. long. 48. *L. deflexicalyx*  
 FF. Lvs. obovate to ovate, obtuse to acutish, glabrate, 3-5 cm. long. 49. *L. trichosanthes*
- DD. Fr. white, translucent, with blackish seeds; calyx cup-shaped, not splitting. 50. *L. quinquelocularis*
- BB. Habit twining; fr. black; corolla-tube slender, not or only slightly ventricose.  
 C. Bracts, subulate.  
 D. Tube of corolla as long or slightly longer than limb; corolla 1.5-3 cm. long, yellowish red to purple red.  
 E. Corolla glabrous outside; lvs. glabrate. 51. *L. Henryi*  
 EE. Corolla densely pilose outside; lvs. pilose. 52. *L. Giraldii*  
 DD. Tube of corolla much longer than limb, not ventricose; corolla 4-8 cm. long, deeply 2-lipped, white, changing to yellow.  
 E. Ovary glabrous; lvs. white-tomentose beneath, 4-9 cm. long. 53. *L. similis*  
 EE. Ovary pubescent; lvs. grayish pubescent beneath, 3-6 cm. long. 54. *L. confusa*  
 CC. Bracts leafy ovate; corolla white, changing to yellowish, often purplish outside. 55. *L. japonica*
- Fls. in usually 6-fld. sessile whorls at end of brts.; the pairs of lvs. below the whorls usually connate; fr. red; habit twining, rarely sarmentose or suberect.
- A. Corolla with short, nearly regular or short-lipped limb, tube ventricose below the middle; stamens inserted below the mouth.  
 B. Floral whorls remote, forming a peduncled spike; lvs. not ciliate. 56. *L. sempervirens*
- BB. Floral whorls 1-3, close, forming a peduncled head; lvs. ciliate. 57. *L. ciliosa*
- AA. Corolla deeply 2-lipped; stamens inserted at mouth.  
 B. Corolla 1.5-2.5, rarely to 3.5 cm. long, ventricose or gibbous below the middle, pubescent inside (glabrous in No. 63); style usually pubescent.  
 C. Bractlets half as long as ovaries; corolla 1.2-1.8 cm. long, gibbous. 58. *L. hispidula*  
 CC. Bractlets not more than ½ as long as ovaries.  
 D. Lvs. ciliate and pubescent beneath; brts. pubescent; corolla glandular outside. 59. *L. hirsuta*
- DD. Lvs. not ciliate; brts. glabrous; corolla glabrous outside or sparingly pilose.  
 E. Disk of connate lvs. elliptic to oblong, pointed at ends, concave.  
 F. Corolla gibbous, 1.5-2 cm. long. 60. *L. dioeca*  
 FF. Corolla with slender tube, 2-3 cm. long. 61. *L. yunnanensis*  
 EE. Disk of connate lvs. suborbicular to oval, rounded at ends, nearly flat; corolla 2.5-3 cm. long.  
 F. Corolla inside and style pubescent; disk of lvs. glaucous above. 62. *L. prolifera*
- FF. Corolla inside and style glabrous; disk bright green or slightly glaucous above. 63. *L. flava*
- BB. Corolla 3.5-8 cm. long; tube slender; glabrous inside and style glabrous (except No. 64).  
 C. Floral whorls all or the lower ones in the axils of connate lvs., more or less remote.  
 D. Corolla-tube 3 to 4 times as long as limb; stamens much shorter than limb. 64. *L. implexa*
- DD. Corolla-tube not more than 1½ as long as limb; stamens at least as long as limb. 65. *L. Caprifolium*
- CC. Floral whorls in the axils of small bract-like lvs.  
 D. Lvs. below the infl. connate into a disk, rarely distinct and subsessile.  
 E. Infl. an elongated spike with remote whorls. 66. *L. Heckrottii*  
 EE. Infl. a dense head or short spike, or only of 1 or 2 whorls.  
 F. Bractlets rarely more than ½ as long as ovaries.  
 G. Floral whorls 1 or 2, glabrous, short-peduncled; corolla 7-8 cm. long. 67. *L. tragophylla*  
 GG. Floral whorls 3-5, sessile, glandular; corolla 4-5 cm. long. 68. *L. splendida*  
 FF. Bractlets about as long as ovaries; floral heads long-peduncled, often in 3's. 69. *L. etrusca*
- DD. Lvs. below the inflorescence distinct, petioled; whorls forming a dense head. 70. *L. Periclymenum*

Subgen. I. CHAMAE CERASUS L. Upright or twining shrubs; lvs. always distinct; fls. in axillary pairs, sometimes reduced to 1 fl.

Sect. 1. *ISOXYLOSTEUM* Rehd. Upright, rarely prostrate shrubs; axillary buds solitary: lvs. usually small, conduplicate or nearly flat in bud: corolla regular, tubular or campanulate, 5-lobed, with 5, rarely 3 nectaries at base inside; bracts usually leafy; bractlets always present, usually connate into a cupula.

1. *L. Myrtillos* Hook. f. & Thoms. Small shrub with slender brs. glabrous or slightly pubescent when young: lvs. very short-petioled, oval or ovate to oblong, 6-25 mm. long, dark green above, grayish green beneath, glabrous: peduncle upright, short; bracts narrow-oblong, longer than calyx; corolla tubular-campanulate, 6-8 mm. long, yellowish white, glabrous; tube about twice as long as limb; cupula half as long as ovary: fr. orange-red, 6 mm. across. Fl.v-vi; fr.vii-viii. S.T.1:t.44. (*L. parvifolia* var. *M. Clarke.*) Afghan. to Sikkim. Cult. 1879. Zone (V).—*L. M. depréssa* (Royle) Rehd., var. Peduncle longer, sometimes as long as lf.; bractlets larger and broader, usually elliptic. S.L.219(h). (*L. d. Royle, L. parvifolia* Hook. f. & Thoms., not Hayne, nor Edgew.) Himal. Cult. 1910.

Related species: *L. myrtilloides* Purpus. Young brts. glandular-pubescent: lvs. elliptic to ovate-oblong or narrow-oblong, 1-3 cm. long, sparingly pubescent at least on midrib: peduncles 1 cm. long, nodding; bracts narrow-oblong; cupula about as long as ovaries; corolla pubescent outside, fragrant. M.D.1907:255.t. S.H.2:f.436a-c,437b-c. Himal. Cult. 1907. Zone (V). Possibly a hybrid between *L. Myrtillos* and *L. angustifolia*.—*L. angustifolia* Wall. ex DC. Shrub to 3 m.; brts. pubescent: lvs. oblong to oblong-lanceolate, 2-5 cm. long, acuminate, pubescent beneath; peduncles 1-2 cm. long, nodding; bracts linear to lanceolate; corolla pinkish white, fragrant, glabrous or pubescent outside, often 4-merous; tube 3 times longer than limb. F.S.4:407,408b. S.H.2:f.436f-g,437d. Kashmir to Sikkim. Intr. about 1849. Zone VII?

2. *L. syringantha* Maxim. Upright slender-branched shrub, to 2 or 3 m., glabrous: lvs. short-petioled, often in whorls of 3's, elliptic to oblong, 1-2.5 cm. long, obtusish or acutish: peduncle to 5 mm. long; bracts linear oblong, exceeding the calyx; cupula shorter than ovaries; calyx-teeth lanceolate, often longer than ovary; corolla tubular-campanulate, 1.2-1.5 cm. long, pinkish white to rosy lilac, fragrant, tube 3-4 times as long as limb: fr. red. Fl.v-vi; fr.viii. B.M.7989. R.H.1907:281. H.N.3:t.8. Gn.89:126(h). N. W. China. Intr. about 1890. Zone IV. With profusely produced fragrant fls.—*L. s. Wölfii* Rehd., var. Much branched shrub with partly prostrate brs.: lvs. narrower and more acute, to 3.5 cm. long; calyx-teeth more connate at base, ciliate; corolla carmine. S.H.2:f.436n-o,437h. (*L. W. Hao.*) Cult. 1900.

3. *L. thibetica* Bur. & Franch. Spreading shrub to 1.5 m., with slender partly prostrate brs. loosely tomentose when young: lvs. often in 3's, oblong-lanceolate, 1-3 cm. long, acute, rarely obtusish, dark green and lustrous above, white-tomentose beneath: peduncle to 1 cm. long; bracts linear-lanceolate, about as long as calyx, bractlets about half as long as ovaries, glandular-ciliate; corolla tubular-campanulate, 1-1.5 cm. long, pale purple, pubescent outside, tube 2 or 3 times as long as limb; style half as long as corolla-tube: fr. red, ellipsoid, about 6 mm. long. Fl.v-vi; fr.viii-ix. S.T.1:t.45. H.N.3:t.7. R.H.1902:449. B.S.2:57. (*L. rupicola* var. *t. Zab.*) W. China. Intr. 1897. Zone IV. Suited for planting on rocky slopes.

Closely related species: *L. rupicola* Hook. f. & Thoms. Young brts. slightly villous or glabrous: lvs. ovate-oblong to oblong, 1.2-2.5 cm. long, obtuse or acutish, bluish green above, grayish green and pubescent beneath or nearly glabrous: fls. pale purple, pubescent outside. S.H.2:f.436k-l,437f. Himal. Cult. 1888. Zone VI.

4. *L. tomentella* Hook. f. & Thoms. Upright shrub to 2 m.; brts. pubescent: lvs. elliptic to ovate-oblong, 1-3.5 cm. long, obtusish or acute, dull green above, pubescent beneath: fls. short-stalked, nodding; bracts linear-oblong; bractlets about half as long as the partly or wholly connate ovaries; calyx-

lobes triangular-ovate, short; corolla tubular-funnelform, about 1.5 cm. long, pinkish white, pubescent outside; style as long as corolla-tube: fr. blue-black. Fl.vi. B.M.6486(c). Sikkim. Intr. 1849. Zone VII?

5. *L. spinōsa* Walp. Low shrub with rigid spinescent brs.; glabrous lvs. linear-oblong, 1.5-2.5 cm. long, often with 2 teeth at base: peduncles upright to 1 cm. long; bracts linear; ovaries usually connate only at base; cupula about half as long; corolla tubular-funnelform, glabrous outside, with slender tube, lobes ovate; filaments about as long as anthers. Jacquemont, Voy. Inde, 4:t.86. N. W. Himal. Not in cult.—*L. s. Albērti* (Reg.) Rehd., var. Low shrub with slender arching or often prostrate brs.: lvs. to 3 cm. long, often with 2-4 teeth at base, glaucous or bluish green: corolla rosy-pink, fragrant, tube slender, about 1 cm. long; stamens nearly as long as lobes; filaments much longer than anthers: fr. pale bluish red or whitish, bloomy, about 8 mm. across. Fl.vi; fr.viii. B.M.7594(c). Gt.30:t.1065(c). (*L. A. Reg.*) Turkest. Intr. about 1880. Zone III. Graceful shrub with narrow bluish green lvs. and rosy pink fls.

Sect. 2. *ISIKA* DC. Upright or nearly prostrate shrubs; accessory superposed buds often present; pith solid or evanescent: lvs. involute or convolute in bud: corolla more or less irregular, usually 2-lipped, sometimes with regular limb, but tube ventricose or gibbous with 1-3 nectaries; bractlets either distinct or connate, sometimes wanting: ovary 2-3-, rarely 5-celled.

6. *L. purpurāscens* Walp. Shrub to 3 m.; brts. pubescent: lvs. ovate to oblong or obovate-oblong, 2-4 cm. long, obtuse or acute, sparingly pubescent or nearly glabrous above, pubescent beneath: fls. nodding, on slender stalks; bracts linear-lanceolate, longer than ovaries; bractlets glandular-ciliate,  $\frac{1}{2}$  as long as ovaries; corolla tubular-funnelform, 1.5 cm. long, dull purple, pubescent outside, gibbous at base: ovaries  $\frac{1}{2}$  connate; stamens as long, style longer than limb: fr. blue-black. Fl.v. Jacquemont, Voy. Inde, 4:t.87. Sikkim to Afghan. Cult. 1894. Zone VI?

7. *L. obovāta* Royle. Shrub to 2 m., glabrous: lvs. obovate, 5-12 mm. long, obtuse or acutish, cuneate, whitish beneath: fls. nodding on short stalks; bracts about as long as ovaries; bractlets  $\frac{1}{2}$  as long as the connate ovaries; corolla 1 cm. long, glabrous outside, whitish; stamens as long, style longer than limb: fr. blue-black, short-ellipsoid. Fl.v. S.H.2:f.439a-d,440e. (*L. parvifolia* Edgew., not Hayne.) Sikkim to Kashmir and Afghan. Cult. 1894. Zone V.

8. *L. tangūtica* Maxim. Low shrub, with slender spreading brs.; brts. glabrous: lvs. obovate to elliptic- or obovate-oblong, 1.5-3 cm. long, acute or obtusish, cuneate, ciliate, usually sparingly hairy above, whitish beneath and glabrous: fls. pendulous on slender stalks 1.5-3 cm. long; bracts subulate, about as long as ovaries; corolla tubular-funnelform, 1-1.4 cm. long, slightly ventricose at base, glabrous outside, yellowish white, tinged pink; stamens shorter than limb, style longer, usually glabrous; ovaries usually connate  $\frac{1}{2}$ : fr. scarlet. Fl.v-vi; fr.vii. Gt.40:581. H.N.3:t.21. S.H.2:f.439m-o,440i. W. China. Cult. 1890. Zone IV? The pendulous scarlet frs. are attractive.

Related species: *L. szechuānica* Batal. Lvs. obovate, 8-25 mm. long, obtuse, quite glabrous: peduncles 5 mm., rarely 2 cm. long; bracts subulate, slightly longer than the connate ovaries; style glabrous. S.H.2:f.439h-i,440g. W. China. Intr. 1908. Zone V.—*L. Schneideriana* Rehd. Lvs. obovate to oblong-obovate 1-2.5 cm. long, obtuse, quite glabrous: peduncles about 2.5 cm. long; bracts subulate, scarcely half as long as ovaries; corolla slightly gibbous; stamens slightly exceeding the limb; style pubescent. S.H.2:f.439k-l,440h. W. China. Intr. 1911. Zone V.—*L. trichōpoda* Franch. Brts. pubescent: lvs. pubescent on both sides: peduncle 1-1.5 cm. long; bracts as long as the wholly connate ovaries;

bractlets present,  $\frac{1}{4}$ – $\frac{1}{2}$  as long as ovaries; corolla-tube slender, scarcely gibbous. W. China. Cult. 1925. Zone VI?

9. *L. saccata* Rehd. Upright shrub to 1.5 m.; brts. glabrous: lvs. oblong-elliptic to oblong, 1.5–5 cm. long, obtuse, cuneate, glabrous above or sparingly pubescent at first, pubescent beneath, becoming glabrous except on the veins: fls. nodding on slender stalks 1–2.5 cm. long; bracts narrow-oblong, exceeding the calyx; corolla tubular-funnelform, 1.2–1.5 cm. long, whitish tinged pink, saccate at base; stamens about as long as limb, style longer, pubescent below the middle: fr. scarlet. Fl.v; fr.vi. S.T.1:t.20. C. and W. China. Intr. 1910. Zone V.

10. *L. microphylla* Willd. Much-branched shrub, to 1 m.; brts. glabrous or puberulous: lvs. obovate to elliptic or oblong, 1–2.5 cm. long, obtuse or acutish, puberulous on both sides, sometimes glabrate: fls. upright or nodding, on stalks 5–15 mm. long; bractlets subulate, usually slightly longer than calyx; bractlets wanting; calyx indistinctly 5-toothed; corolla 2-lipped, about 1 cm. long, yellowish white, glabrous or puberulous; limb about as long as the gibbous tube; upper lip divided to the middle; stamens and style scarcely as long as limb: berries usually wholly connate, orange-red. Fl.v; fr.vi–vii. Ledebour, Ic. Pl. Ross. t.213. H.N.3:t.17. S.H.2:f.441a–c, 440l. (*L. Sieversiana* Bge.) C. Asia. Intr. 1818. Zone V.

11. *L. canadensis* Marsh. Fly-H. Shrub with spreading brs., to 1.5 m.; brts. glabrous: lvs. ovate to ovate-oblong, 4–8 cm. long, acute, rounded to cordate at base, ciliate, slightly pubescent beneath at first or glabrous; petiole 5–8 mm. long: fls. nodding on slender stalks 2–2.5 cm. long; bracts subulate, not exceeding the calyx; bractlets ciliate, small, sometimes obsolete; corolla tubular-funnelform, 1.5–2 cm. long, yellowish white, often tinged reddish, glabrous outside, strongly gibbous at base; stamens slightly, style much exceeding the limb: berries red, connate only at base. Fl.iv–v; fr.vi. Torrey, Fl. N. Y. t.42(c). Ad.21:677(c). B.B.2:381. (*L. ciliata* Muhlenb.) Que. to Sask., s. to Pa., Mich., Wisc. and Minn. Intr. 1641. Zone III.

Closely related species: *L. utahensis* S. Wats. Lvs. broad-ovate to oblong, obtuse, usually rounded at base, not or only slightly ciliate near base: corolla shorter, slightly gibbous. S.H.2:f.440n(1). B. C. to Ore., Utah and Wyo. Intr. 1904. Zone V.

12. *L. gracilipes* Miq. Upright shrub to 2 m., with spreading brs.; young brts. glabrous or slightly pubescent: lvs. short-petioled, broad-ovate or rhombic-ovate to elliptic, 3–7 cm. long, acute or acutish, rounded at base, bright green above and usually with reddish margin, slightly ciliate when young, light bluish green and slightly pubescent beneath at first; vigorous brs. often with interpetiolar roundish stipules: fls. usually solitary, pendulous on slender stalks 2–3 cm. long; bracts subulate, unequal; bractlets minute; corolla funnelform, enlarged above the middle, 1.5 cm. long, pink to carmine, glabrous outside; stamens about half as long as the ovate-oblong lobes; style slightly shorter than lobes: berries ellipsoid, scarlet. Fl.iv–v; fr.vi. S.I.2:t. 73(c). G.F.10:265. N.T.1:654,f.D. B.C.3:1907. (*L. uniflora* Bl., *L. Philomelae* Carr.) Japan. Intr. about 1870. Zone V. The form described is var. *glabra* Miq.; the typical form has ciliate lvs. pubescent beneath, particularly on the midrib and is apparently not in cult. N.T.1:654,f.a. Handsome and distinct species, one of the earliest to bloom; very attractive in fr.—*L. g. albiflora* Maxim., var. Fls. white.

13. *L. tentipes* Nakai. Shrub to 2 m.; brts. pilose or nearly glabrous, changing to red- or yellow-brown: lvs. elliptic or elliptic-ovate to ovate- or obovate-oblong, 3–6 cm. long, pilose above, densely pilose beneath with brown

hairs; petiole pilose and glandular: fls. usually solitary on slender pedicels 1-2 cm. long and pilose and stipitate-glandular; bracts pilose and sparingly glandular, usually only one developed; calyx glandular-ciliate; corolla 1.2-1.8 cm. long, red, pilose outside, gibbous at base; ovary glandular; stamens shorter, the pilose style nearly as long as lobes: fr. ellipsoid, red. Fl.iv-v; fr.vi. N.T.1:657. (*L. gracilipes* var. *glandulosa* Maxim.) Japan. Intr. 1915. Zone V.

14. *L. coerulea* L. Much-branched upright or spreading shrub, to 1.5 m.: brts. glabrous or pubescent, later yellowish or red-brown, with flaky bark; winter-buds spreading, with 2 outer scales; vigorous brs. often with interpetiolar stipules: lvs. roundish ovate or oval to ovate-oblong or oblong, 2-8 cm. long, acute to obtusish, usually rounded at base, at least slightly pubescent when young, rarely quite glabrous, bright green: fls. on short nodding stalks; bracts subulate, exceeding the short-ciliate calyx; corolla tubular-funneliform, 1.2-1.5 cm. long, yellowish white, usually pubescent outside, with gibbous tube usually longer than the oblong upright-spreading lobes; stamens longer than limb; style longer than stamens, glabrous: fr. subglobose to ellipsoid, 6-12 mm. long, dark blue, bloomy. Fl.iv-v; fr.vi. B.M.1965(c). R.I.17:t.124,f.1(c). F.D.28:t.2819(c). N. and C. Eu., N. Asia to Japan. Long cult. Zone II. Very variable.—*L. c. glabræscens* Rupr., var. Brts. glabrous or puberulous, yellowish brown: lvs. usually oblong, 3-6 cm. long, pubescent when young or at least ciliate; corolla with rather short thick tube glabrous outside. (*L. c. var. praecox* Dipp.) Eu. to N. E. Asia. This is the typical var.—A form of it is *L. c. salicifolia* Dipp., var. Lvs. oblong to lanceolate. D.H.1:266. N.T. 1:664.—*L. c. dépendens* Reg. ex Dipp., var. Brts. red-brown, glabrous or nearly so: lvs. elliptic, 1.5-3 cm. long, ciliate, pubescent when young; corolla with slender pubescent tube. Turkest.—A form of this is *L. c. graciliflora* Dipp., var. Upright shrub with red-brown brs.: lvs. ovate to ovate-oblong, 2-4 cm. long, bluish green, finely pubescent on both sides; corolla with slender tube: fr. oblong. Turkest. (*L. Karelini* Hort., not Bge.)—*L. c. viridifolia* Dipp., var. Similar, but lvs. ovate to obovate, 1.5-3 cm. long, bright green: corolla with rather short tube. (*L. Kirilowii* Hort.)—*L. c. angustifolia* Reg., var. Brts. finely velutinous: lvs. oblong to oblong-lanceolate, 2-4 cm. long, finely pubescent when young; corolla small, slightly pubescent; cupula sometimes divided at apex and not closely appressed. S.H.2:f.442c(1). Turkest.—*L. c. altaica* (Pall.) Sweet, var. Upright shrub with hirsute brts.: lvs. elliptic to oblong, 4-7 cm. long, pilose on both sides; stamens slightly or not exceeding the limb; corolla pubescent outside: fr. subglobose. Ledebour, Icon. Pl. Ross. 2:t.131. (*L. Pallasii* Ledeb.) N. Eu. to Japan.—*L. c. edulis* Reg., var. Brts. pubescent: lvs. oblong to lanceolate, pubescent; stamens longer than limb: fr. oblong. Bull. Soc. Nat. Mosc. 53,1:t.3,f.1-2. E. Siberia. Tibet.

Related species: *L. villosa* (Michx.) Roem. & Schult. Low shrub, with upright or ascending brs. and winter-buds; accessory buds and stipules wanting; brts. tomentose or densely short-pilose: lvs. densely villous on both sides: corolla tubular-campanulate, villous or pilose outside; tube as long or shorter than limb: fr. blue, edible. (*L. coerulea* var. *v.* Torr. & Gr., *L. coerulea* Am. auth., not L.) Lab. to Pa., Minn. and Man. Intr. ? Zone II.—The type occurs from Lab. and Que. to N. H. and is probably not in cult.; the following vars. are less pubescent and have a glabrous or rarely pilose corolla: *L. v. Solonis* (Eat.) Fern., var. Young brts. pilose and puberulous: lvs. pilose beneath, Cult. 1871.—*L. v. calvescens* (Eat.) Fern., var. Brts. puberulent: lvs. pilose to glabrate beneath.—*L. v. tonsa* (Fern. & Wieg.) Fern., var. Brts. glabrous: lvs. sparingly pilose to glabrous beneath. Cult. 1889.—*L. cauriana* Fern. Shrub to 1.5 m., with upright or ascending brs.: lvs. narrow-obovate to oblong, 2-9 cm. long, villous.

ciliate on margin and veins beneath: corolla slightly 2-lipped, pilose: fr. red. Wyo. to Wash. and Calif. Intr. ?

15. *L. pileata* Oliv. Evergreen or half-evergreen low shrub, with spreading sometimes prostrate brs.; brts. pubescent: lvs. ovate to oblong-lanceolate, 5-40 mm. long, obtusish, cuneate, dark green and lustrous above, pale green and sparingly pubescent on midrib beneath or glabrous, sparingly ciliate: fls. short-stalked, upright, fragrant; bracts subulate, as long as ovaries or longer and oblong; calyx with a cap-like downward production at base covering the rim of the cupula; corolla funnellform, 8 mm. long, whitish, glandular-pubescent or glabrous outside, gibbous at base; stamens and style exceeding the limb: fr. violet-purple or amethyst color. Fl.v-v; fr.x. B.M.8060(c). G.C. 47:236;68:195(fr.). H.I.16:1585. C. and W. China. Intr. 1900. Zone (V). Low shrub with handsome evergreen foliage.—*L. p. yunnanensis* (Franch.) Rehd., f. Spreading shrub: lvs. suborbicular to ovate, usually rounded at base. Gs.19:16,t.f.3(c).

Closely related species: *L. nitida* Wils. Upright shrub to 2 m.: lvs. broad-ovate to ovate-oblong, 6-12 mm. long, subcordate to broad-cuneate: fls. slightly larger. B.M.9352(c). G.C.71:137(h). Gn.89:163(h). H.B.2:517(h). W. China. Intr. 1908. Zone VII.

16. *L. gynochlamydea* Hemsl. Deciduous upright shrub; brts. glabrous, usually purplish: lvs. oblong-lanceolate to narrow-lanceolate, 5-10 cm. long, acuminate, cuneate or rounded at base, pubescent on the midrib on both sides or sometimes villous beneath along the midrib: fls. upright, short-stalked; bracts subulate, about as long as ovaries; calyx and cupula as in No. 15; corolla 2-lipped, 8-12 mm. long, white, tinged pink, pubescent outside; tube stout, gibbous at base, shorter than limb; stamens longer than limb, style shorter, pilose: berries pale purple to white, distinct; seeds nearly black. Fl.v; fr.ix-x. S.H.2:f.441p,r.442g. W. China. Intr. 1907. Zone V.

17. *L. Ferdinandi* Franch. Upright shrub, to 3 m., with spreading brs.; brts. usually setose; interpetiolar stipules often present on vigorous brs.: lvs. ovate to lanceolate, 3-5.5 cm. long, acuminate, rounded to broad-cuneate at base, ciliate, dark green and sparingly strigose or nearly glabrous above, lighter green beneath and hirsute along the veins: fls. on short stalks; bracts ovate, short-petioled, about 1 cm. long, ciliate; cupula urceolate, villous, adhering by matted hairs to the base of the calyx; corolla 2-lipped, 1.5-2 cm. long, glandular-pubescent and usually reflexed-setose outside; tube gibbous at base, about as long as limb: berries distinct, bright red, surrounded by the split cupula. Fl.v-vi; fr.ix. H.N.3:t.12. N. China. Intr. 1910. Zone V.—*L. F. leycesterioides* (Graebn.) Zabel, var. Brts. nearly glabrous: lvs. oblong-ovate to lanceolate, 4-7 cm. long: corolla not or slightly setose. S.H.2:f.443c-e. (*L. l.* Graebn.) Cult. 1900. Zone V.—*L. F. induta* Rehd., var. Brts. densely villous and pilose: lvs. 3-7 cm. long, rounded to cordate at base, soft-pubescent beneath: corolla not setose, with rather slender, scarcely gibbous tube. N. China. Intr. 1923.

Closely related species: *L. vesicaria* Komar. Brts. stout, setose, otherwise glabrous: lvs. subcoriaceous, ovate to ovate-oblong, 5-10 cm. long, truncate or rounded at base, glabrous except sparingly setose above, setose on midrib and veins beneath and ciliate; petiole 3-10 mm. long: bracts ovate to oblong, acuminate, 1.5 cm. long; corolla reflexed-setose; cupula split finally by the red berries. R.Mo.14:t.10. Korea. Cult. 1924. Zone V?

18. *L. ibérica* Bieb. Densely branched shrub to 2 m.; brts. pubescent: lvs. orbicular-ovate to ovate, 2-3.5 cm. long, acute or acutish, rounded to cordate at base, ciliate, hairy on both sides: fls. short-stalked, at end of short brts. bracts elliptic to ovate-oblong, about twice as long as ovary; cupula

urceolate, glandular-pubescent; corolla 2-lipped, yellowish white, 1.2 cm. long, finely pubescent; tube gibbous at base, about as long as limb, upper lip with short broad lobes; stamens and the pubescent style as long as limb: berries distinct, 6-7 mm. across, bright red, surrounded by the split cupula. Fl.vi; fr.ix. Bieb. Cent. Pl. Ross. 1:t.13. S.H.2:443f-i.444b. Transcauc., Persia. Intr. 1824. Zone V. Dense round shrub, attractive in fr.—*L. i. microphylla* Dipp. Lower: lvs. 1.5-2 cm. long. S.H.2:f.444c.

19. *L. Standishii* Jacques. Half-evergreen upright shrub to 2 m., with short spreading brs.; brts. reflexed-setose, rarely nearly glabrous; winter-buds with 2 outer acuminate scales: lvs. ovate-oblong to lanceolate, 4.5-10 cm. long, acuminate, rounded at base, setose-ciliate, setose on both sides, more densely so and lighter green beneath, sometimes glabrescent above: fls. fragrant, on setose stalks 5-10 mm. long; bracts linear-lanceolate, ciliate, pubescent, about twice as long as ovaries; bractlets obsolete; ovaries connate about  $\frac{1}{2}$ , with short indistinctly toothed calyx; corolla 2-lipped, 1.5 cm. long, white, pilose, upper lip divided beyond the middle into oblong lobes longer than the gibbous tube; stamens and style shorter than limb: berries oblong, red, partly connate. Fl.iii-iv; fr.vi. B.M.5709(c). G.C.III.5:245;64:224. R.H.1873:148. (*L. Fortunei* Hort.) China; rarely escaped (L. I.). Intr. about 1845. Zone (V). Chiefly valued like the following species for its early fragrant fls.—*L. S. lancifolia* Rehd., f. Brts. glabrous: lvs. narrow-lanceolate, 4-8 cm. long and 1-2.2 cm. broad. G.C.67:101. R.H.1916:24. (*L. pseudoproterantha* Pamp.) Intr. 1907.

*L. S. × fragrantissima* = *L. Purpusii*; see under No. 20.

20. *L. fragrantissima* Lindl. & Paxt. Half-evergreen shrub, closely related to the preceding species: with more spreading, longer, sometimes recurving brs.; brts. glabrous or nearly so, usually bloomy when young: lvs. very short-petioled, elliptic to broad-ovate or obovate, 3-7 cm. long, acute, setose-ciliate, dark green and glabrous above, pale bluish green and setose on the midrib beneath: pedicels glabrous; bracts glabrous or slightly pubescent; corolla glabrous outside, with somewhat shorter, more gibbous tube. Fl.iii-iv. fr.vi. B.M.8585(c). G.C.III.5:245. R.H.1873:169. (*L. caprifolioides* K. Koch, *L. Magnevilleae* Hort., *L. odoratissima* Hort.) E. China. Intr. about 1845. Zone (V).

*L. f. × Standishii* = *L. Purpusii* Rehd. Brts. glabrous or slightly setose on vigorous shoots: lvs. more like those of No. 19, but glabrous or nearly so: fls. glabrous or nearly so. Gt.75:165,166 (h). S.L.220. Orig. before 1920.

21. *L. Altmännii* Reg. Shrub to 2 m., with spreading brs.; brts. pubescent and hispid; winter-buds with 2 outer scales: lvs. broad-ovate to ovate-elliptic, 1.5-5 cm. long, acute, rarely obtusish, rounded to subcordate at base, ciliate, hirsute to glabrous above, paler, soft-pubescent and hirsute beneath; petiole 5 mm. long, pubescent: fls. on upright pubescent stalks 3-5 mm. long; bracts ovate-lanceolate, 2 to 3 times as long as the glandular and sometimes hairy ovary; calyx-teeth short, triangular; corolla 2-lipped, 1.5 cm. long, sparingly hairy and glandular; tube gibbous, as long or slightly longer than limb, upper lip divided about  $\frac{1}{2}$ ; style and stamens glabrous, as long or nearly as long as limb; berries distinct, globose-ellipsoid, 7-8 mm. across, orange-red. Fl.v; fr.vi-vii. S.H.2:f.445a-b,446a. (*L. tenuiflora* Reg. & Winkl.) Turkest. Intr. ? Attractive in fr.—*L. A. pilosiuscula* Rehd., var. Lvs. only sparingly hirsute; ovaries glabrous and corolla often glabrous. Intr. about 1900.—*L. A. hirtipes* (Wolf) Rehd., var. Brts. and petioles densely setose: lvs. larger, more densely hirsute. Isv. St. Peterb. Lesn. Inst. 3:t.11,f.4. Cult. 1910. Zone V.

Related species: *L. Olgae* Reg. & Schmalh. Brts. glabrous; lvs. ovate to lanceolate, 1.5–6 cm. long, setose-ciliate, glabrous beneath, sometimes sparingly appressed-setose above, bluish green, thickish; corolla glabrous; stamens and style shorter than limb. S.H.2:f.445c-e, 446b. Turkest. Cult. 1907. Zone V.—*L. bracteolaris* Boiss. & Buhse. Brts. glabrous; lvs. short-stalked, ovate to ovate-oblong, 2.5–6 cm. long, obtuse or acutish, glabrous or sparingly ciliate; corolla glabrous, tube as long or nearly as long as limb; stamens slightly shorter, style longer. S.H.2:f.445f-h, 446c. Transcauc. Cult. 1910. Zone V.—*L. praeflorens* Batal. Shrub to 2 m.; lvs. short-petioled, broad-ovate to ovate-elliptic, 4–6.5 cm. long, acute, pilose on both sides; fls. before the lvs., very short-stalked; bracts ovate to lanceolate, pilose; corolla 1–1.2 cm. long, divided below the middle, scarcely 2-lipped, quite glabrous, with short, scarcely gibbous tube; stamens and style slightly longer than the oblong lobes; anthers purple; ovary glabrous. Fl. III–IV. N.K.11:28. N.T.1:668. Korea, Manch. Intr. 1917. Zone IV.

22. *L. hispida* Pall. Upright shrub to 1.5 m.; brts. hispid, rarely glabrate; winter-buds large, with 2 outer scales: lvs. elliptic to ovate-oblong or oblong, 3–8 cm. long, acute or acuminate, rounded or broad-cuneate at base, setose-ciliate, dark green and glabrous above or sparingly hirsute, lighter green or glaucescent beneath, usually glabrous or hispid on veins; fls. nodding, on hirsute stalks 1–1.5 cm. long; bracts ovate, 2–2.5 cm. long, ciliate, whitish; ovary oblong, usually glandular, rarely glabrous; corolla tubular-funnelform, 2.5–3 cm. long; rather abruptly enlarged above the middle, pilose, white or yellowish white; tube saccate at base, several times longer than the ovate spreading lobes of the regular limb; stamens nearly as long, style longer than limb; berries oblong, 1.5 cm. long, bright red. Fl. IV–V; fr. VI–VII. H.N.3:t.10. Turkest. to W. China. Intr. 1878. Zone III.—*L. h. hirsutior* Reg., var. Lvs. hirsute on both sides, usually ovate-oblong, mostly rounded at base. Turkest.—*L. h. bracteata* (Royle) Airy-Shaw, var. Lvs. oblong-lanceolate or oblong, attenuate at apex, usually rounded at base, soft-pubescent. B.M.9360(c). N. W. Himal. and S. E. Tibet. Cult. 1933. Zone V.

Related species: *L. subdentata* Rehd. Brts. glabrous; lvs. oblong-ovate, 5–9 cm. long, occasionally with a few coarse teeth, sparingly hirsute; peduncles short, setose; fr. ovoid, sparingly setose; calyx-lobes setose-ciliate; fls. unknown. W. China. Intr. 1908. Zone V.

23. *L. chaetocarpa* (Rehd.) Rehd. Upright shrub to 2 m.; brts. hispid and glandular; winter-buds to 1 cm. long; lvs. oblong-ovate to oblong, rarely elliptic-ovate, 3.5–7.5 cm. long, acute or obtusish, hirsute above, more densely so and reticulate and grayish green beneath; fls. nodding on hirsute stalks 1–2 cm. long; bracts about 2.5 cm. long, acuminate, ciliate, hirsute on back; corolla tubular-funnelform, 3–4 cm. long, yellowish white, sparingly hirsute and glandular outside; tube stout, strongly saccate at base and gradually widened into the upright limb; ovaries densely stipitate-glandular and setose; fr. short-ellipsoid. Fl. V; fr. VII. BS.2:45. S.H.2:f.445n-p, 446e. (*L. hispida* var. c. Batal. ex Rehd.) W. China. Intr. 1904. Zone V.

24. *L. strophiphora* Franch. Shrub to 2 m.; brts. slender, pilose and glandular; winter-buds ovoid, with several outer scales: lvs. ovate to elliptic-ovate, 4–8 cm. long, acuminate, usually rounded at base, bright green, pilose on both sides, more densely beneath, sometimes glabrate above; fls. before the lvs., nodding, on pilose and glandular stalks 5–7 mm. long; bracts ovate, 1–1.5 cm. long, acuminate, ciliate, pilose on back; corolla tubular-funnelform, rather slender, about 2 cm. long, white, glabrous without and within; tube gibbous; stamens slightly shorter, style longer than limb; ovary hirsute and glandular; fr. subglobose, red, pilose. Fl. III–IV; fr. VII. N.T.1:671. S.H.2:f.447 d-f, 446g. (*L. pilosa* Maxim., not Willd.) Japan. Intr. 1915. Zone V.

25. *L. pyrenáica* L. Upright shrub to 1 m.; glabrous; lvs. oblong-obovate to oblong-oblancoate, 2–4 cm. long, obtusish or acute, narrowed into the

very short petiole, bluish green above, pale beneath: fls. nodding, on slender stalks 2.5-4 cm. long; bracts oblong-lanceolate, usually twice as long, bractlets ovate to oblong-ovate, acute,  $\frac{1}{2}$  as long as ovaries; corolla funnelform-campanulate, 1.5-2 cm. long, white, often flushed pink, gibbous at base, glabrous outside, with oval spreading lobes; stamens shorter, style slightly longer than limb: berries distinct, subglobose, red. Fl.v; fr.vii. B.M.7774(c). L.B. 1361(c). B.S.2:53. Pyrenees and Balear. Isls. Intr. 1739. Zone (V). Attractive in bloom.

26. *L. involucrata* (Richards.) Banks ex Spreng. Upright shrub to 3 m.; brts. glabrous, slightly angled: lvs. elliptic-ovate to oblong-lanceolate, 5-12 cm. long, acuminate, cuneate, bright green, glabrous or slightly pubescent beneath when young; petiole 3-12 mm. long: fls. on upright glabrous stalks 1.5-3 cm. long; bracts ovate or broad-ovate, acute, glandular-pubescent, reaching to the middle of the corolla; bractlets large, exceeding the ovaries; corolla tubular 1-1.5 cm. long, with upright ovate lobes, yellow or slightly tinged red, glandular-pubescent outside; stamens as long as limb; style glabrous, slightly longer: berries globose, lustrous purple-black, surrounded by the enlarged bractlets and bracts, the latter finally reflexed. Fl.v-vi; fr.vi-vii. B.R.1179(c). B.B.3:252. (*Distegia i.* Cock.) Que. to Alaska and in the Rockies s. to Mex. Cult. 1828. Zone III. Chiefly valued for its conspicuous fr.; var. *serotina* is distinct in bloom.—*L. i. serotina* Rehd., f. Lvs. nearly glabrous; corolla to 2 cm. long, orange-yellow flushed scarlet; bracts not reflexed in fr. Fl.vi-viii. Colo. Intr. 1903.—*L. i. humilis* Rehd., f. Dwarf, not exceeding  $\frac{1}{2}$  m.; brts. sparingly pubescent: lvs. ovate-oblong, 4-6 cm. long, sparingly pubescent beneath; bracts green; stamens slightly longer than limb. Colo. Cult. 1903.—*L. i. flavescens* (Dipp.) Rehd., var. Lvs. oblong- or ovate-lanceolate, 7-12 cm. long, light green, glabrous or nearly so: corolla gibbous, not saccate at base. Gt.37:7. D.H.1:260. (*L. f.* Dipp., *L. Webbiana* Hort., not Wall.) B. C. to Ore., Wyo. and Utah. Cult. 1880.

27. *L. Ledebourii* Eschsch. Upright shrub, sometimes with sarmentose brs. to 5 m. long, closely related to the preceding species; brts. glabrous or sparingly pubescent: lvs. oblong or ovate-oblong to ovate-lanceolate, 6-12 cm. long, acuminate, broad-cuneate to rounded at base, dark green and slightly lustrous above, paler and pubescent beneath, thickish; petiole 3-5 mm. long: fls. on upright glabrous or pubescent stalks 2-4 cm. long; bracts broad-ovate, yellow or reddish, covering the base of the corolla; corolla 1.5-2 cm. long, orange and scarlet outside, with slightly spreading short lobes; stamens not exceeding the tube; style longer than limb. Fl.vi-vii; fr.vii-ix. B.M.8555(c). Gt.2:289,t(c). (*Distegia L.* Greene.) Calif. Intr. 1838. Zone (V).—Handsome than No. 26, with dark green lvs. and showier fls.

*L. L. × alpigena* = *L. propinqua* Zabel. Known in two forms; one more like the first, the other like the second parent: corolla yellowish brown, 2-lipped, strongly gibbous; bracts slightly longer, bractlets half as long as the partly connate ovaries, glandular-pubescent. Orig. 1884.

28. *L. oblongifolia* (Goldie) Hook. SWAMP FLY-H. Upright shrub to 1.5 m.; brts. minutely pubescent: lvs. sessile, elliptic-oblong to oblong-lanceolate, 3-8 cm. long, obtusish, abruptly narrowed at base, short-pubescent on both sides or glabrate above, bluish green above, grayish green beneath: fls. upright on slender stalks about 2.5 cm. long; bracts small and caducous, bractlets obsolete; ovaries wholly or  $\frac{1}{2}$  connate; corolla deeply 2-lipped, 1-1.5 cm. long, yellowish white, upper lip with short lobes, longer than the gibbous tube; stamens shorter, style about as long as limb: fr. red. Fl.v; fr.vii.

Hooker, Fl. Bor. Am. 1:t.100. B.B.3:231. N. B. to Man., s. to Pa., Mich. and Minn. Intr. 1823. Zone II.—*L. o. altissima* (Jennings) Rehd., var. Glabrous or nearly so. Ann. Carnegie Mus. 4:t.20. (*L. a.* Jennings.) Pa.

29. *L. alpigena* L. Upright shrub to 3 m., with gray brs.; young brts. slightly pubescent and glandular or glabrous: lvs. elliptic to oblong-obovate or oblong, 5–10 cm. long, acuminate, rounded to cuneate at base, dark green and glabrous above, lighter beneath and often slightly pubescent when young; petiole 1–1.5 cm. long: fls. upright on slender stalks 2–4.5 cm. long; bracts linear, about twice, and bractlets about  $\frac{1}{4}$  as long as ovaries, glandular-ciliate; corolla 2-lipped, 1–1.5 cm. long, yellowish or greenish yellow, tinged dull red or brown-red, glabrous outside; tube strongly gibbous, much shorter than limb; stamens about as long as limb, style slightly longer; anthers red; ovaries more or less connate: fr. globose-ovoid, scarlet. Fl.v; fr.viii–ix. G.H.1:t.10 (c). R.I.17:t.1175.f.34(c). Mts. of C. and S. Eu. Cult. 1600. Zone V. Attractive in summer with its drooping scarlet frs.—*L. a. nana* (Carr.) Nichols. Dwarf form: lvs. beneath and peduncles pubescent.

*L. a. × Ledebourii*; see under No. 27.

Related species: *L. Gléhnii* Fr. Schmidt. Brts. peduncles and petioles glandular-pubescent: lvs. usually rounded or subcordate at base, pubescent beneath: corolla yellowish; anthers yellow. N.T.1:675. (*L. alpigena* var. *G.* Nakai.) Japan, Saghal. Intr. ?

30. *L. Wébbiana* Wall. Shrub to 3 m., with stout brs.; brts. glandular-pubescent or nearly glabrous: lvs. elliptic to ovate-oblong or oblong-lanceolate, 5–12 cm. long, acuminate, usually cuneate, pilose and glandular on both sides, sometimes nearly glabrous above; petiole 5–10 mm. long, glandular-pubescent: peduncles glandular-pubescent, 2.5–3 cm. long; bracts slightly or not longer than ovaries, glandular-ciliate like the ovate bractlets; corolla 1.5 cm. long, yellowish, tinged with red, sparingly pilose-glandular outside; tube thick, strongly gibbous, much shorter than limb; stamens about as long as limb, style shorter, pubescent: berries distinct, short-ellipsoid, scarlet. Fl.iv–v; fr.viii–ix. S.T.1:t.69. (*L. alpigena* W. Nichols.) S. E. Eu., Afghan., Himal. Cult. 1885. Zone (V).

Related species: *L. heterophylla* Dcne. Brts. glabrous: lvs. glabrous, sometimes irregularly lobed: corolla yellowish, tinged reddish, usually glandular and pilose outside. Himal.—In cult. only *L. h. Karelini* (Bge.) Rehd., var. Lvs. usually not lobed, glandular on midrib on both sides. (*L. K.* Bge.) C. Asia. Cult. 1906. Zone V.

31. *L. tatsienénsis* Franch. Shrub to 2.5 m.; brts. glabrous; scales of winter-buds becoming reflexed: lvs. ovate or elliptic-ovate to oblong-lanceolate, 4–7 cm. long, acuminate, rounded to cuneate at base, on sterile vigorous shoots often deeply lobed, pilose on both sides or nearly glabrous; petiole 3–10 mm. long: peduncles glabrous, 2.5–4 cm. long; bracts and the small bractlets glandular-ciliate; corolla dark purple, about 1.2 cm. long, glabrous outside or sparingly hairy, with very short, scarcely gibbous but abruptly widened tube; stamens about as long as limb, filaments pubescent at base, longer than anthers: fr. red. Fl.v–vi; fr.viii. W. China. Intr. 1910. Zone V.—Distinct on account of its often lobed lvs. and dark fls.

Related species: *L. heteróloba* Batal. Similar to No. 31, but lvs. smaller, more pilose, densely so on midrib: stamens shorter than limb; filaments glabrous, shorter than anthers. N. W. China. Intr. 1911. Zone V.—*L. mupinénsis* Rehd. Shrub to 3 m.; brts. glandular or glabrous; winter-buds with lanceolate, acuminate upright scales persisting at base of brts.: lvs. oblong-obovate to oblong-lanceolate, 6–12 cm. long, abruptly acuminate, pilose on veins beneath or sometimes nearly glabrous; petiole glandular: peduncles to 6 cm. long; corolla dark purple, glabrous. W. China. Intr. 1908. Zone V.—*L. adenóphora* Franch.

Shrub to 6 m.: lvs. elliptic-obovate, 4-12 cm. long, short-acuminate, ciliate, glandular beneath, otherwise glabrous: corolla glandular outside, dark purple; bractlets ovate-lanceolate, half as long as the glandular ovaries. W. China. Cult. 1933. Zone VI?

32. *L. conjugialis* Kell. Upright much-branched shrub to 1.5 m.; brts. glabrous or sparingly pubescent: lvs. short-petioled, elliptic or ovate to obovate, 2.5-5 cm. long, acute or short-acuminate, cuneate, ciliate, pubescent or nearly glabrous beneath; peduncles 1.5-2.5 cm. long; bracts small, deciduous; bractlets minute or obsolete; corolla dark red, about 1 cm. long, glabrous outside; tube gibbous, shorter than limb; stamens about as long as limb, pubescent below the middle; style pubescent to apex; ovaries connate: fr. subglobose, 8 mm. across, red. Fl.vi; fr.viii. S.H.2:f.450g,451k-m. Wash. to Calif. and Nev. Intr. 1896. Zone (V).

33. *L. Maximowiczii* Reg. Shrub to 3 m.; brts. glabrous, purplish: lvs. elliptic or ovate to ovate-oblong, 3-7 cm. long, acute to acuminate, usually rounded at base, dark green and glabrous above, lighter green and pubescent beneath; peduncles 1.5-2.5 cm. long, glabrous; bracts subulate, about  $\frac{1}{3}$  as long as ovaries; bractlets shorter, roundish, ciliate; corolla about 1 cm. long, glabrous outside, violet-red; limb longer than the gibbous tube; stamens slightly longer than limb; style as long as limb; ovaries connate: fr. ovoid, red. Fl.v-vi; fr.viii. Gt.17:t.597. H.N.3:t.20. Manch., Korea. Intr. about 1855. Zone IV. Attractive in fruit; flowers of the var. more conspicuous.—*L. M. sachalinensis* Fr. Schmidt, var. Lvs. broader, less acuminate, glabrous or nearly so and glaucescent beneath, red when unfolding; fls. dark purple. N.K.11:t.37. N.T.1:686. (*L. s.* Nakai.) Saghal., Korea. Intr. 1917.

34. *L. Tatarinowii* Maxim. Upright shrub to 1.5 m.; brts. glabrous: lvs. oblong-lanceolate, 3-7 cm. long, acuminate, glabrous above, grayish or whitish tomentulose beneath; petiole 2-5 mm. long; peduncle 1-2 cm. long; bracts and bractlets  $\frac{1}{3}$  to  $\frac{1}{2}$  as long as the connate ovaries; corolla about 8 mm. long, dark purple, glabrous outside; tube gibbous, shorter than limb; stamens and the pubescent style shorter than limb; fr. subglobose, red. Fl.v-vi; fr.vii-ix. N.K.11:t.35. H.N.3:t.19. N. China, Korea. Intr. 1913. Zone V. —*L. T. leptantha* Nakai, var., is scarcely different.

35. *L. Chamissoi* Bge. Upright shrub to 1 m.; brts. glabrous: lvs. subsessile, ovate to elliptic, 2.5-5 cm. long, obtuse, rarely acute, rounded at base, glabrous, conspicuously veined; peduncles slender, subterminal, 6-14 mm. long; bracts and bractlets about  $\frac{1}{4}$  as long as ovaries, glabrous; calyx-teeth triangular; corolla 1.2 cm. long, dark violet, glabrous outside, with short gibbous tube; stamens and style shorter than limb, glabrous; berries connate, red. Fl.v-vi; fr.viii. N.T.1:680. S.H.2:f.450m,452c-e. N. E. Asia, Japan. Cult. 1909. Zone IV.

36. *L. subsessilis* Rehd. Shrub to 2 m., glabrous; brts. purplish; lvs. ovate or elliptic-ovate, 3-5.5 cm. long, acute or short-acuminate, broad-cuneate, the lower ones sometimes obtusish and rounded at base, bright green above, pale beneath, distinctly veined; petiole 2-5 mm. long; fls. slightly fragrant, subsessile or on stalks shorter than the petioles, bracts shorter than bractlets, the latter connate into a cupula  $\frac{1}{3}$  as long as the wholly or partly connate ovaries; corolla white to yellowish, 1.2 cm. long, upper lip 3-lobed, much longer than the gibbous tube; stamens 4, as long as limb; style slightly longer: fr. bright red, 6-8 mm. long. Fl.vi; fr.viii-ix. N.K.11:t.34. (*L. diamantiaca* Nakai.) Korea. Intr. 1917. Zone V. Differing from all related species in its 4-merous fls.

37. *L. orientalis* Lam. Shrub to 3 m.; brts. glabrous: lvs. ovate to ovate-lanceolate, rarely elliptic, 4-10 cm. long, usually acuminate, rounded to broad-cuneate, pubescent and light green beneath; petiole 6-10 mm. long; peduncles shorter or as long as petioles (in some vars. longer); bracts subulate, not exceeding the ovaries; bractlets connate into small distinct pairs; calyx-teeth lanceolate; corolla about 1.2 cm. long, dull pink to violet, glabrous outside, tube gibbous, much shorter than limb; stamens and style shorter than limb; ovaries connate: fr. black. Jaubert & Spach, Ill. Pl. Or. 1:t.71. Asia Minor. Not intr.—*L. o. caucásica* (Pall.) Zab., var. Lvs. elliptic to elliptic-oblong, 3-7 cm. long, 1.5-5 cm. broad, broad-cuneate at base, glaucescent and glabrous beneath: corolla-tube less gibbous. Fl.v-vi; fr.viii-ix. Gt.11:t.359. Transcauc., Armenia. Intr. about 1825. Zone III.—*L. o. longifolia* Dipp., var. Lvs. oblong to lanceolate, 2.5-6 cm. long, about 1-2 cm. broad: fls. smaller, reddish, with slightly or scarcely gibbous tube. Gt.40:124. (*L. Kesselringii* Reg., *L. kamtschatica* and *L. savranica* Hort.) Intr. 1888, supposedly from Kamchatka.

Closely related species: *L. discolor* Lindl. Shrub to 2 m., glabrous: lvs. elliptic to elliptic-oblong, glaucous beneath: fls. yellowish white, often tinged red, on slender stalks 1.5-3 cm. long. B.R.33:t.44(c). (*L. orientalis* var. *d.* Clarke.) Kashmir to Afghan. Cult. 1847. Zone (V).

38. *L. nervosa* Maxim. Shrub to 3 m., with upright and spreading slender brs., glabrous: lvs. red when unfolding, elliptic to ovate-oblong, 2.5-6 cm. long, acute at ends, bright green, usually with red midrib and reddish veins, bluish green beneath; petiole 3-5 mm. long; peduncles about 1 cm. long; bracts subulate, scarcely as long as ovaries: bractlets connate into a lobed cupula half as long as ovaries, sometimes in distinct pairs, ovate-lanceolate, glandular-ciliate or glabrous: corolla about 1 cm. long, light pink; limb somewhat longer than the gibbous tube; stamens about as long as limb; style shorter, pubescent to near the apex: berries distinct, black. Fl.v-vi; fr.viii-ix. H.N.3:t.14. S.H.2:f.452m-o,453l. N. W. China. Intr. about 1890. Zone V.

Related species: *L. lanceolata* Wall. Shrub to 4 m.; brts. glandular-puberulous: lvs. ovate to ovate-lanceolate, 4-10 cm. long, acuminate, pubescent beneath on the veins and sparingly glandular on both sides: peduncles 1-1.5 cm. long; cupula as long or somewhat shorter than ovaries, glandular-ciliate; corolla pale violet, strongly gibbous at base. S.H.2:f.452p-r,453c-d. (*L. decipiens* Hook. f. & Thoms.) Himal. and W. China. Intr. about 1904 from China. Zone (V).

39. *L. nígra* L. Shrub to 1.5 m.; brts. glabrous: lvs. elliptic to ovate-lanceolate, 4-6 cm. long, acute or obtusish, broad-cuneate or rounded at base, bright green and glabrous above, light bluish green beneath and villous along the midrib, finally often glabrous; petiole 2-5 mm. long; peduncles 3-4 cm. long, glabrous; bractlets connate into a glandular-ciliate cupula, like the bracts about  $\frac{1}{2}$  as long as ovaries: berries nearly distinct, bluish black. Fl.v-vi; fr.viii-ix. R.I.17:t.123,f.3(c). F.D.28:2918(c). Eu., Korea. Cult. 1683. Zone V.

The supposed hybrid with *L. orientalis* is probably a form of  $\times$  *L. xylostoides* and that with *L. Xylosteum* a form of the latter species.

Sect. 3. COELOXYLOSTEUM Rehd. Brs. with quickly evanescent pith, fistulose: ovaries always distinct, 3-celled; bractlets distinct or connate into pairs above the bracts; corolla always 2-lipped; fr. red, yellow or white.

40. *L. tatarica* L. TATARIAN H. Upright shrub to 3 m., glabrous; older brs. gray: lvs. ovate to ovate-lanceolate, 3-6 cm. long, acute to acuminate, rarely obtusish, rounded or subcordate at base, dark green above, light to bluish green beneath; petiole 2-6 mm. long; peduncles slender, 1.5-2 cm.

long; bracts usually linear-lanceolate, not or slightly longer than calyx; bractlets distinct, roundish to broad-oblong,  $\frac{1}{2}$ – $\frac{1}{2}$  as long as ovaries; corolla pink to white, 1.5–2 cm. long; tube slightly gibbous at base, shorter than limb, lateral lobes of upper lip divided to the base, spreading; stamens and style shorter than limb: berries globose, red. Fl.v–vi; fr.vii–viii. B.M.8677(c). B.R. 31(c). G.O.t.87(c). S. Russia to Altai and Turkest.; occasionally escaped from cult. Cult. 1752. Zone IV. Popular ornamental shrub, much planted for the profusely produced fls. and the attractive red frs. Very variable and many forms are cult. in gardens.—*L. t. latifolia* Loud., var. Lvs. large, to 10 cm. long and to 5 cm. broad: fls. large, pink. Gt.18:t.627,f.1(c). (*L. t. var. splendens* Reg.)—*L. t. sibirica* Pers., var. Lvs. smaller: fls. deep pink. B.M. 2469(c). F.D.17:t.123,f.4–5(c).—*L. t. rósea* Reg., var. Fls. rosy pink outside, light pink inside. Gt.18:t.627,f.4(c).—*L. t. alba* Loisel., var. Fls. pure white. (*L. t. var. albiflora* DC.)—*L. t. angustifolia* (Wender.) Kirchn. Lvs. narrow, ovate-lanceolate, 4–6 cm. long and 1–2 cm. wide: fls. light pink.—*L. t. lutea* Loud., var. Fr. yellow. (*L. t. var. xanthocarpa* Endl.)—*L. t. Leroyana* (Zab.) Rehd., f. Low compact shrub: lvs. oblong-lanceolate, to 7 cm. long, rounded at base, ciliolate: fls. sparingly produced, pink. G.W.19:203 (h).—*L. t. nana* Alphand, var. Dwarf shrub: lvs. oblong-ovate, 2–5 cm. long, broad-cuneate: fls. small, pinkish, numerous; bracts usually leafy.—*L. t. parvifolia* (Hayne) Jaeg., var. Lvs. ovate-elliptic to ovate-oblong, 2–5 cm. long, obtusish, often bluish green: fls. small, white, upper lip with broad and short lobes: fr. orange-red. (*L. p.* Hayne.) Turkest.—*L. t. pallens* Rehd., var. Lvs. small and narrow, pale bluish green: fls. pinkish, finally nearly white. Turkest.

*L. t.* × *Korolkowii* = *L. amoëna* Zab. Very floriferous shrub with small ovate lvs. and slender-stalked fls.; bractlets connate into pairs. Orig. before 1895.—*L. a. rósea* Zab., f. with rose-colored fls.—*L. a. alba* Zab., f. with white fls.—*L. a. arnoldiana* Rehd., var. Lvs. oblong-lanceolate, 2–3.5 cm. long: fls. white, flushed pink; very floriferous and graceful. A.B.1931:35. Orig. 1899.—*L. t.* × *Xylosteum* = *L. xylosteoides* Tausch. Lvs. usually rhombic-ovate, broad-cuneate at base, bluish green, slightly pubescent: fls. small, pinkish. D.H.1:233. (*L. nepalensis* Kirchn., *L. coerulescens* Dipp., *L. micrantha* Zab., not Reg.) Orig. before 1838.—*L. micranthoides* Zab. supposed to be a hybrid of *L. tatarica* and *L. nigra* probably belongs here: lvs. glabrate, elliptic to elliptic-obovate: fls. small and usually malformed.—*L. x.* × *Ruprechtiana*; see under No. 46.—*L. t.* × *Morrowii*; see under No. 45.—*L. t.* × *Ruprechtiana*; see under No. 46.

41. *L. Korolkowii* Stapf. Shrub to 4 m., with spreading brs.; young brts. finely pubescent: lvs. ovate to elliptic, 1–2.5 cm. long, usually acute, cuneate to rounded at base, slightly pubescent above, more densely so beneath, rarely glabrate, bluish green; petiole 3–6 mm. long; peduncles 1–2.5 cm. long, puberulous; bracts about as long and bractlets about  $\frac{1}{2}$  as long as ovaries, connate into pairs, ciliate or glabrous; corolla rose-colored, rarely white, about 1.5 cm. long; lateral lobes of upper lip divided to the middle or slightly beyond, tube slightly gibbous; stamens and style shorter than limb: fr. bright red. Fl.v–vi; fr.viii. G.F.7:35. H.B.1929:377(h). (*L. floribunda* var. *K.* Zab.) Turkest. Cult. 1880. Zone IV.—*L. K. aurora* Koehne, var. Lvs. ovate to elliptic: corolla to 1.8 cm. long, with slender tube, rosy pink; bractlets  $\frac{1}{2}$  as long as ovaries. M.D.1910:117,f.c.—*L. K. floribunda* Nichols. Lvs. broad-ovate, usually rounded or sometimes subcordate at base. Gt.42:103,f.4–6. (*L. f.* Zab., not Boiss. & Buhse.)—*L. K. Zabëlii* (Rehd.) Rehd., var. Lvs. usually broad-ovate, rounded to subcordate at base, glabrous. Gt.42:103,f.1–3. (*L. Z.* Rehd.)

*L. K.* × *tatarica*; see under No. 40.

42. *L. Xylósteum* L. EUROPEAN FLY-H. Shrub to 3 m.; brts. glabrous or pubescent: lvs. broad-ovate or elliptic-ovate to obovate, 3-6 cm. long, acute, broad-cuneate to rounded at base, dark or grayish green and sparingly pubescent or glabrous above, paler and pubescent, rarely glabrate beneath; petiole 3-8 mm. long: peduncles 1-2 cm. long, pubescent; bracts subulate, not exceeding the ovaries; bractlets broad, about half as long as ovaries, pubescent and glandular; ovaries glandular; corolla about 1 cm. long, whitish or yellowish white, often tinged reddish, pubescent outside; tube short, gibbous; stamens nearly as long as limb, style shorter; filaments pubescent at base: fr. dark red. Fl.v-vi; fr.viii-ix. R.I.17:t.123,f.1-2(c). F.D.28:t.2917(c). B.B.3:282. Eu. to Altai; sometimes escaped. Long cult. Zone IV. The fls. are rather insignificant, but the frs. are attractive.—*L. X. mollis* Reg., var. Lvs. densely pubescent on both sides.—*L. X. glabréscent* Zab., f. Lvs. elliptic-oblong, glabrous or nearly so above; peduncles about as long as the yellowish white corolla.—*L. X. lutea* Loisel., var. Fr. yellow: lvs. pubescent. (*L. X.* var. *xanthocarpa* DC.)—*L. segreziensis* Lav. supposed to be a hybrid with *L. quinquelocularis* is probably only a form of *L. Xylósteum*.

*L. X. × chrysantha* = *L. pseudochrysantha* A. Br. Similar to *L. chrysantha*, but bractlets broad and about half as long as ovaries and ciliate. (*L. Regelian* Dipp., in part, not Kirchn.)—*L. X. × tatarica*; see under No. 40.

43. *L. chrysantha* Turcz. Upright shrub to 4 m.; young brts. pilose, rarely nearly glabrous: lvs. rhombic-ovate to rhombic-lanceolate or ovate-lanceolate, 6-12 cm. long, acuminate, rounded to broad-cuneate at base, dark green and nearly glabrous above, lighter green and pilose at least on the veins beneath; petiole 3-5 mm. long: peduncles pilose, 1.5-2.5 cm. long; bracts as long or longer than ovaries; bractlets ovate-oblong to suborbicular,  $\frac{1}{3}$ - $\frac{1}{2}$  as long as ovaries, glandular and sparingly long-ciliate; corolla yellowish white, changing to yellow, 1.5-2 cm. long, sparingly pubescent outside, upper lip divided about  $\frac{1}{2}$ ; tube strongly gibbous, short; stamens about as long as limb, pubescent below the middle; ovaries usually oblong-ovoid, glandular; berries coral-red. Fl.v-vi; fr.viii-ix. Gt.12:t.404(c). N.T.1:642. H.N.3:t.16. N. E. Asia to C. Japan. Intr. about 1854. Zone III.—*L. c. Regelian* (Kirchn.) Zab. Differs in the smaller more yellowish fls.—*L. c. latifolia* Korsh., var. Lvs. broad-elliptic to ovate-elliptic, usually rounded at base, only sparingly pilose beneath, somewhat thickish. (*L. c. f. turkestanica* Rehd.)—*L. c. villósa* Rehd., f. Lvs. elliptic to elliptic-ovate, sparingly pubescent above, villous beneath, chiefly on the veins.—*L. c. longipes* Maxim., var. Lvs. more sparsely pubescent with longer hairs: peduncles 2-3 cm. long. N. W. China, Japan. Intr. 1926.

*L. c. × Xylósteum*; see under No. 42.

Related species: *L. Koehneana* Rehd. Lvs. densely soft-pubescent beneath and grayish green; bractlets connate into pairs, about half as long as ovaries, upper lip of corolla divided about  $\frac{1}{2}$ ; ovaries subglobose, glandular and pilose; anthers with pilose connective: fr. dark red. S.T.1:t.21. H.N.3:t.15. W. China. Intr. about 1904. Zone V.

44. *L. demissa* Rehd. Much-branched shrub to 4 m., with spreading brs.; brts. short-villous; winter-buds small, ovoid: lvs. obovate or elliptic-obovate, or on vigorous shoots elliptic, 1.5-3 cm. long, acute or obtusish and mucronulate, broad-cuneate, dull-green and appressed-pilose above, more densely so and pale green beneath; petiole 1-2 mm. long; peduncle 6-12 mm. long, pilose; bracts twice as long, bractlets half or nearly as long as ovaries, ciliate and sparingly pilose; corolla whitish changing to yellowish, about 1 cm. long; upper lip with short oval lobes; stamens slightly longer than limb: berries globose, 6-9 mm. across, scarlet. Fl.v-vi; fr.ix. N.T.1:646. (*L. ibotaeformis*

Nakai.) Japan. Intr. 1914. Zone V. Dense small-leaved shrub, handsome in fr.

45. *L. Morròwii* A. Gray. Shrub to 2 m., with wide-spreading brs.; young brts. soft-pubescent: lvs. elliptic to ovate-oblong or obovate-oblong, 3-5 cm. long, acute or obtusish and mucronulate, rounded at base, sparingly pubescent above at least when young, soft-pubescent beneath; petiole 2-3 mm. long: peduncles 5-15 mm. long, pubescent; bracts pubescent, usually exceeding the calyx; bractlets about as long as ovaries, pubescent; corolla white, changing to yellow, 1.5 cm. long, pubescent outside; upper lip divided to base into spreading oblong lobes; tube rather slender, gibbous; stamens shorter than limb, glabrous: fr. dark red, rarely yellow. Fl.v-vi; fr.vii-viii. S.I.2:t.73(c). N.T.1:644. Gs.10:215(h). J.L.35:362(h). Japan; naturalized occasionally in the E. States. Intr. about 1875. Zone III. Distinct shrub of widespreading habit, handsome in bloom and in fr.—*L. M. xanthocarpa* Teuscher. Fr. yellow. Ad.17:t.563(c).

*L. M. x Ruprechtiana* = *L. muscaviensis* Rehd. Differs from No. 45 in the acuminate lvs. and from No. 46 in the longer pubescent bracts and bractlets. Gt.42:101,f.1-3. Orig. before 1888.—*L. M. x tatarica* = *L. bella* Zab. Lvs. glabrescent, more acute: fls. pink or pinkish, fading to yellowish. A.B.1929:54. Orig. before 1878.—*L. b. candida* Zab., f. Fls. pure white.—*L. b. rosea* Zab., f. Fls. rose-pink.—*L. b. atrorosea* Zab., f. Fls. dark pink.—*L. bella x Ruprechtiana* = *L. muendeniënsis* Rehd. Similar to *L. bella*, but lvs. more acuminate and darker green. Gt.42:101,f.4-6. Orig. before 1883.—*L. M. x aylostoides* = *L. minutiflora* Zab. Lvs. oblong, rather small, nearly glabrous: fls. small. Orig. 1878.

46. *L. Ruprechtiana* Reg. Shrub to 3 m., with upright and spreading brs.; young brts. slightly pubescent: lvs. oblong-obovate to lanceolate, 6-10 cm. long, acuminate, cuneate, dark green above and glabrous or nearly so, paler beneath and pubescent; petiole about 5 mm. long, pubescent; peduncle 1-2 cm. long, slightly pubescent; bracts subulate, pubescent, usually exceeding the calyx; bractlets usually ovate,  $\frac{1}{4}$ - $\frac{1}{2}$  as long as the glabrous ovaries, glabrous or glandular-ciliate; corolla 1.5-1.8 cm. long, white, changing to yellow, glabrous outside; tube thick, strongly gibbous; upper lip divided about  $\frac{1}{2}$ ; stamens about  $\frac{2}{3}$  as long as limb: fr. coral- or orange-red. Fl.v-vi; fr.viii-ix. Gt.19:t.645. H.N.3:t.18. Manch. to N. China. Intr. about 1860. Zone II.—*L. R. xanthocarpa* Rehd., var. Fls. smaller, yellowish: fr. yellow.—*L. R. calvéscens* Rehd., var. Lvs. almost glabrous, only sparingly hairy on the veins beneath: fr. dark dull red. Cult. 1910.

*L. R. x tatarica* = *L. notha* Zab. Lvs. usually ovate-oblong, acuminate, glabrate: fls. more or less pinkish, fading to yellowish. Orig. 1878. A few unimportant color forms have been described.—*L. R. x aylostoides* = *L. salicifolia* Zab. Lvs. narrow, acuminate: fls. small, similar to a small-flowered form of *L. aylostoides*. (*L. Ruprechtiana* var. s. Dieck, *L. R. x micranthoides* Zab.) Orig. before 1880.—*L. R. x Morròwii*; see under No. 45.—*L. R. x bella*; see under No. 45.

47. *L. Maackii* Maxim. Shrub to 5 m.; brts. short-pubescent; winter-buds small, ovoid: lvs. ovate-elliptic to ovate-lanceolate, 5-8 cm. long, acuminate, broad-cuneate, rarely rounded at base, dark green above, lighter beneath, usually pubescent only on the veins on both sides; petiole 3-5 mm., glandular-pubescent; peduncles shorter than petiole, glandular-pubescent; bracts linear, longer than ovaries; bractlets connate into pairs,  $\frac{1}{2}$  or as long as ovaries; calyx-limb campanulate, divided to the middle into ovate to lanceolate teeth: corolla to 2 cm. long, white, changing to yellowish, usually glabrous outside, fragrant; tube thin, not gibbous,  $\frac{1}{3}$ - $\frac{1}{2}$  as long as limb; stamens and style  $\frac{1}{2}$ - $\frac{2}{3}$  as long as limb: fr. dark red. Fl.vi; fr.ix-x. Gt.33:t.1162(c). N.T.1:641.

G.C.62:252;96:312. R.H.1920:122. U. S. Im. 74:t(h). Manch., Korea. Intr. 1855 or 1860. Zone II. Valued for its conspicuous fragrant white fls. and the attractive late fr.; the var. retains its dark green lvs. until November.—*L. M. podocarpa* Rehd., f. Habit more spreading: lvs. usually elliptic-ovate or elliptic, abruptly acuminate, more pubescent and darker green: fls. slightly smaller, pubescent outside; ovaries raised above the bracts on a very short, but distinct stalk; stamens sometimes as long as limb. H.N.3:t.13. Gn.81:549(fr.) Gn.M.33:40(h). China. Intr. 1900. Zone IV.—*L. M. erubescens* Rehd., f. A form of the preceding var. with larger fls. flushed pink.

48. *L. deflexicalyx* Batal. Upright shrub to 3 m., with spreading or arching brs.; brts. finely pubescent: lvs. oblong-lanceolate to lanceolate, 4-8 cm. long, acuminate, broad-cuneate or rounded at base, bright green and sparingly pubescent above, light grayish green and pubescent on the veins beneath; petiole 3-5 mm. long: peduncles usually slightly longer than petioles, pubescent or nearly glabrous; bracts subulate, scarcely longer than calyx; bractlets about  $\frac{3}{4}$  as long as ovaries, glabrous; calyx campanulate, 2-3 mm. long, shallowly or indistinctly toothed, scarious and usually splitting to the base in 1 or 2 places; corolla yellowish, later yellow, 1.5 cm. long, appressed-pubescent outside; tube short, strongly gibbous; lobes of upper lip short: fr. brick-red. Fl.vi; fr.vii-viii. B.M.8536(c). B.S.2:42. W. China, Tibet. Intr. 1904. Zone V. Floriferous shrub of distinct appearance.—*L. d. xerocalyx* (Diels) Rehd., var. Lvs. lanceolate to narrow-lanceolate, 6-10 cm. long, rounded or truncate at base, glaucescent beneath; bractlets connate into a truncate or 2-lobed cupula, longer than ovaries; calyx about 4 mm. long. (*L. x.* Diels). S. W. China. Cult. 1915. Zone (V).

*L. d. x quinquelocularis*; see under No. 50.

49. *L. trichosantha* Bur. & Franch. Spreading shrub to 1.5 m., with slender sometimes sarmentose brs.; brts. glabrous or slightly pubescent: lvs. ovate to obovate, 2.5-5 cm. long, obtuse and usually mucronulate, rounded or truncate at base, bright green, glabrous above, pilose beneath at least on the veins and reticulate: peduncles shorter than petioles: fls. like those of No. 48: fr. bright red. Fl.vi; fr.viii. S.H.2:f.456r-s,457a-b. (*L. ovalis* Batal.) W. China, Tibet. Intr. 1904.—*L. t. glabrata* Rehd., f. Lvs. generally broad-oval or -ovate, rounded and usually without mucro at apex, sometimes subcordate at base, glabrous beneath and not reticulate.—*L. t. acutiuscula* Rehd., f. Lvs. usually elliptic or elliptic-ovate, acute or acutish, rounded to broad-cuneate at base, usually 2-2.5 cm. long on flowering brts., slightly pilose at least on veins beneath. Zone V.

Related species: *L. prostrata* Rehd. Prostrate shrub forming dense mats, or sometimes a low depressed shrub with sarmentose brs.: lvs. ovate or elliptic, 1-2 cm. long, acute or acutish: fls. smaller. W. China. Intr. 1904. Zone V.

50. *L. quinquelocularis* Hardw. Upright shrub with spreading brs.; brts. short-pubescent: lvs. broad-ovate to elliptic or oblong-ovate, 3-7 cm. long, acute or short-acuminate, broad-cuneate to rounded at base; slightly pubescent above, more densely and grayish green beneath; petiole 3-5 mm. long; peduncles very short; bracts subulate, not exceeding the calyx; bractlets  $\frac{3}{4}$  to nearly as long as ovaries; calyx-limb cup-shaped with broad short teeth; corolla 1.5-2 cm. long, yellowish, densely appressed-pubescent outside; tube slender, slightly or scarcely gibbous, usually only slightly shorter than limb; stamens and style about as long as limb: berries whitish, translucent, with blackish violet seeds. Fl.vi; fr.ix-x. B.R.30:33(c). H.I.9:807. Gt.55:t.1551, f.1(c, fr.) (*L. diversifolia* Wall., *L. Royleana* Wall.) Himal. to Afghan. and

Baluch. Cult. 1840. Zone (V).—*L. q. translucens* (Carr.) Zab., f. Lvs. ovate to ovate-oblong, usually subcordate to rounded at base; corolla smaller; tube rather short, stouter and distinctly gibbous. Gs.9:376. G.C.89:7. (*L. t.* Carr.) Cult. 1870.

*L. q. × deflexicalyx* = *L. Vilmorinii* Rehd. Similar to No. 48: lvs. smaller, broader and less acuminate; calyx distinctly 5-toothed; peduncles shorter: fr. yellowish pink, minutely dotted red. Orig. about 1900. Zone (V).

Related species: *L. arborea* Boiss. Shrub to 3 m.: lvs. broad-ovate to ovate-oblong, 2-4 cm. long, obtuse or acutish, pubescent beneath; peduncles short; bractlets about  $\frac{1}{2}$  as long as ovaries; calyx with ovate to ovate-lanceolate teeth: corolla reddish white; tube gibbous, half as long as limb. S.H.2:f.453o-p,458d-f. Spain, N. Afr. Cult. 1900. Zone VI?—*L. a. persica* (Jaub. & Spach) Rehd., var. Lvs. smaller, often acute, less pubescent to nearly glabrous: corolla-tube not gibbous, longer than half the limb. S.F.3:t.223(c). Jaubert & Spach, Ill. Pl. Or. t.69,70. (*L. p.* and *L. nummulariifolia* Jaub. & Spach, *L. turcomanica* Fisch. & Mey.) S. E. Eu. to Afghan. and Turkest. Cult. 1880. Zone V.

Sect. 3. NINTROA DC. Twining shrubs with usually hollow brs. and with usually evergreen or half-evergreen lvs.: fls. in axillary pairs often forming terminal spikes or panicles: bracts usually subulate; bractlets and ovaries distinct (except in *L. calcarata*); calyx distinctly toothed; corolla 2-lipped, with slender tube: fr. black, rarely white or yellow.

51. *L. Hénryi* Hemsl. Half-evergreen twining or prostrate shrub; brts. densely strigose: lvs. oblong-lanceolate to lanceolate, 4-8 cm. long, acute to acuminate, rounded to subcordate at base, ciliate, usually pubescent on mid-rib beneath: fls. on pubescent or glabrous stalks 2-10 mm. long, often forming short spikes at the end of brts.; calyx-teeth triangular-ovate, ciliate or glabrous; corolla 1.5-2 cm. long, yellowish red to purple-red; tube slightly ventricose, usually slightly longer than limb: fr. black. Fl.vi-viii; fr.ix-x. B.M. 8375(c). W. China. Intr. 1908. Zone V.—*L. H. subcoriacea* Rehd., var. Lvs. ovate-oblong, 5-10 cm. long, not ciliate, subcoriaceous; corolla slightly longer, with longer tube. Intr. 1910.

Related species: *L. alseuosmoides* Graebn. Brts. glabrous: lvs. lanceolate to narrow-lanceolate, 3-6 cm. long, 8-15 mm. broad: corolla 1.5 cm. long; tube longer than limb. S.H.2:f.457h,458m-o. W. China. Intr. 1908.

52. *L. Giraldii* Rehd. Twining shrub; brts. like petioles and peduncles densely clothed with spreading yellowish hairs: lvs. oblong-lanceolate to lanceolate, 3.5-8 cm. long, acuminate, truncate or subcordate at base, pilose on both sides; petiole 2-4 mm. long: fls. on short stalks crowded at end of brts.; bracts longer than calyx, like bractlets and calyx-teeth pilose; corolla purplish red, about 2 cm. long, yellowish hairy outside; tube slightly ventricose, longer than limb; stamens and style slightly exceeding the limb: fr. purple-black. Fl.vi-viii. B.M.8236(c). N. W. China. Intr. 1899. Zone V. Distinct in the yellowish pubescence of the red fls.

53. *L. similis* Hemsl. Half-evergreen climbing shrub; brts., petioles and peduncles hirsute: lvs. oblong-lanceolate to lanceolate, 4-9 cm. long, acuminate, truncate to subcordate at base, ciliate, bright green and glabrous above, whitish tomentose and hirsute beneath; petiole about 5 mm. long: fls. racemose at end of brs.; lower peduncles to 4 cm. long, decrescent toward the apex; corolla white, changing to pale yellow, 4-6 cm. long, hirsute and glandular outside; tube slender, longer than limb; stamens and style exceeding the limb: fr. black. Fl.viii. H.N.3:t.5. S.H.2:f.457o-p,458i-k. C. and W. China. Only the following var. in cult.—*L. s. Delavayi* (Franch.) Rehd., var. Glabrous or nearly so in all parts except the white-tomentose under side of the slightly ciliate lvs.: corolla to 8 cm. long. B.M.8800(c). M.O.267. (*L. D.* Franch.) W. China. Intr. 1901. Zone VII?

Related species: *L. affinis* Hook. & Arn. Brts. usually glabrous; lvs. ovate to ovate-lanceolate, acuminate, glabrous; lower peduncles to 1.5 cm. long; corolla 3.5–4.5 cm. long, white, glabrous. N.T.1:637. S.H.2:f.457u-v,461a. China, Japan. Intr. ?—*L. a. pubescens* Maxim., var. Brts. usually pubescent or pilose; lvs. pubescent and usually glandular beneath; corolla pilose and glandular. S.H.2:461b-c. (*L. hypoglauca* Miq.) Cult. 1930. Zone (V).

54. *L. confusa* DC. Half-evergreen twining shrub; brts. pubescent; lvs. ovate to ovate-oblong, 3–6 cm. long, acute, usually rounded at base, dark green above and finally glabrous, short-pubescent and grayish green beneath; petiole about 5 mm. long; fls. short-stalked in short and dense panicles at end of brts.; bracts, bractlets and ovaries pubescent; corolla about 4 cm. long, white, changing to yellow, very fragrant, pubescent and glandular outside; tube slender, slightly longer than limb; stamens and style longer than limb: fr. black. Fl.vi–rx. B.R.70(c). L.D.t.132(c). (*L. japonica* Andr., not Thunb.) E. China. Intr. 1805. Zone VII?

Closely related species: *L. biflora* Desf., readily distinguished by the glabrous ovaries. Desfontaines, Fl. Atl. t.52. S. W. Eu., N. Afr. Cult. 1889. Zone VII?

55. *L. japonica* Thunb. Half-evergreen twining shrub; brts. pubescent; lvs. ovate to oblong-ovate, 3–8 cm. long, acute to short-acuminate, rounded to subcordate at base, pubescent on both sides when young, later glabrate above; petiole about 5 mm. long; peduncle usually solitary, axillary, longer, rarely shorter than petioles; bracts leafy, broad-ovate to elliptic; bractlets  $\frac{1}{4}$ – $\frac{1}{2}$  as long as ovaries; corolla 3–4 cm. long, pubescent and glandular outside, white, tinged purple, very fragrant; tube about as long as limb; style and stamens longer than limb: fr. black. Fl.vi–rx; fr.ix–x. N.T.1:635. H.N. 3:t.6. E. Asia, often naturalized in the E. States. Intr. 1806. Zone IV. Valued for its handsome fragrant fls. appearing during the summer; also used as ground-cover.—*L. j. Halliana* (Dipp.) Nichols., var. Similar to the type, but fls. pure white at first, changing to yellow; upper lip divided nearly to the middle into oblong lobes. Gng.3:293. M.G.16:609(h).—*L. j. chinensis* (Wats.) Baker, var. Lvs. nearly glabrous, but usually ciliate and often slightly pubescent on the veins beneath, usually tinged more or less red purple when young; corolla carmine outside, upper lip divided more than  $\frac{1}{2}$ . B.R.712(c). B.M.3316(c). (*L. c.* Wats., *L. flexuosa* Ker, not Thunb.) Cult. 1825.—*L. j. repens* (Sieb.) Rehd., var. Lvs. oval or ovate to oblong-ovate or elliptic-oblong, acute or obtusish, rounded to broad-cuneate at base, nearly glabrous, veins often purplish; the basal lvs. sometimes lobed; corolla white or tinged pale purple; limb longer than tube; upper lip divided about  $\frac{2}{3}$ ; bractlet rounded or truncate, often as long as ovaries. Jaarb. Maatsch. Amnoed. Tuinb.1845:t.7(c). Baker, Ref. Bot.4:t.224(c, as var. *chinensis*). (*L. j.* var. *flexuosa* Nichols., *L. fl.* Thunb., *L. brachypoda* DC.) Intr. 1843.—A form with usually smaller lvs. netted with yellow is *L. j. albreo-reticulata* (T. Moore) Nichols., var. I.H.9:t.337(c). B.H.21:59,t(c). (*L. brachypoda reticulata* Witte.) Intr. about 1860.

Subgen. II. PERICLYMENUM L. Twining, rarely dumose shrubs; brs. hollow; lvs. deciduous or persistent, usually one or several pairs below the infl. connate into a disk; fls. at end of brts. in 3-fld. sessile cymes, rarely reduced to 1 or 2 fls., forming whorls in the axils of bracts or connate lvs.; bractlets distinct or sometimes wanting (connate in *L. Griffithii*), calyx-lobes short, sometimes inconspicuous; corolla 2-lipped or sometimes nearly regular: fr. red.

56. *L. sempervirens* L. TRUMPET H. High-climbing glabrous shrub: lvs. very short-petioled or subsessile, elliptic or ovate to oblong, 3–8 cm. long, obtuse or acutish, usually cuneate, dark green above, glaucous beneath and

sometimes pubescent, 1 or 2 pairs below the infl. connate into a suborbicular to oblong disk, rounded and mucronate at ends: infl. a slender peduncled spike with remote whorls; corolla about 5 cm. long; tube slender, slightly ventricose below the middle, 5 to 6 times as long as the ovate nearly equal upright lobes, orange yellow and scarlet; stamens and style slightly exceeding the limb. Fl.v-viii; fr.ix-x. B.M.781(c). R.H.1856:351,t(c). Gn.45:307. Conn. to Fla., w. to Neb. and Tex.; sometimes escaped from cult. Intr. 1686. Zone III. Handsome summer-blooming vine, valued for its brightly colored fls.—*L. s. superba* Reg., var. Fls. of bright scarlet color. F.S.11:t.1128(c). (*L. s. speciosa* Carr.)—*L. s. sulphurea* Jaques. Fls. yellow. Gt.2:t.38(c). (*L. s. var. flava* Reg.)—*L. s. minor* Ait., var. Lvs. elliptic to oblong-lanceolate, often half-evergreen; corolla usually 4 cm. long. B.M.1753(c). B.R.556(c). Gn.34:300,t(c).

*L. s. × hirsuta* = *L. Brönnii* (Reg.) Carr. Similar to No. 56, but corolla more or less 2-lipped and tube slightly gibbous at base: lvs. sometimes sparingly ciliate and slightly pubescent beneath and petiole sparingly glandular. Gt.2:t.38(c). F.S.11:t.1133(c). (*L. sempervirens Brönnii* André.) Orig. before 1850. Zone V.—Cult. in several forms: *L. B. punicea* (Kirchn.) Rehd., var. Fls. orange-red.—*L. B. Youngii* (K. Koch) Rehd., var. More vigorous: fls. deeper orange-red.—*L. B. fuchsoides* (Nichols.) Rehd., var. Fls. scarlet outside, distinctly 2-lipped. G.F.9:496.—*L. B. plantierensis* (André) Rehd., var. Fls. coral-red, lobes orange. I.H.18:t.86(c). (*L. p. André*).—Also *L. Hendersonii* Hort. belongs here.—*L. s. × americana*; see No. 66.—*L. s. × tragophylla*; see under No. 67.

57. *L. ciliosa* Poir. Twining or procumbent: lvs. short-petioled or subsessile, ovate or elliptic to oblong-elliptic, 5–10 cm. long, obtuse or acutish, broad-cuneate, rarely rounded at base, ciliate, bluish green beneath, sometimes pubescent when young; the upper pair connate into an elliptic disk usually acute at ends; petioles to 6 mm. long; fls. in short-stalked heads of one or few whorls; corolla 3–4 cm. long, usually sparingly hairy outside, yellow, sometimes tinged purple, tube ventricose at base, 3–4 times as long as the 2-lipped limb; style pubescent and like the stamens longer than limb. Fl.vi; fr.viii-ix. S.H.2:f.460h,462d-e. B. C. to Calif., Mont. and Utah. Intr. 1825. Zone V.—*L. c. occidentalis* (Hook.) Nichols. More vigorous, with larger more brightly colored fls. glabrous outside. B.R.1457(c). D.H.1:214. (*L. o. Hook., L. ciliosa volubilis* Zab.) Intr. 1824.

Closely related species: *L. arizonica* Rehd. Lvs. ovate to oval, 2–4, rarely to 7 cm. long, ciliate; petiole 6–12 mm. long; corolla with nearly regular limb, 3.5–4.5 cm. long, tinged scarlet outside, glabrous. S.T.1:t.23. Ariz., N. Mex. Cult. 1900.—Another species with subregular limb is *L. subaequalis* Rehd. Lvs. elliptic to obovate-oblong, 6–10 cm. long, obtuse, the upper pair connate, elliptic, pointed at ends, bearing the sessile fl.-whorl; corolla funnelform, 2.5–3 cm. long, sparingly glandular outside; stamens about as long as limb, style longer, glabrous. R.Mo.14:t.4,f.5–9. W. China. Intr. 1908. Zone VI?

58. *L. hispídula* (Lindl.) Torr. & Gr. Bushy shrub with sarmentose brs., rarely twining; brts. usually hirsute and glandular: lvs. ovate to ovate-oblong, 3–6 cm. long, acute or abruptly acuminate, rarely obtuse, rounded to subcordate at base, ciliate, glabrous to sparingly pilose above, pubescent beneath, the upper pair usually connate into a usually acute disk; the pair below often with foliaceous stipules; petiole to 8 mm. long; fl.-whorls usually several, approximate, forming long-peduncled spikes; bractlets  $\frac{1}{2}$  as long as ovaries; corolla 2-lipped, about 1.5 cm. long, pilose or glabrous outside, whitish, tinged purple; tube about as long as limb; stamens and style as long as limb. Fl.vi-vii; fr.viii-ix. B.R.1761(c). D.H.1:211. (*L. h. var. Douglasi* Gray.) B. C. to n. Calif. Intr. about 1830. Zone VI.—*L. h. vacillans* Gray,

var. More vigorous; lvs. ovate-oblong, 3-8 cm. long, usually acute, usually glabrous above, glabrous or pubescent beneath: infl. longer, sometimes paniculate; corolla to 1.8 cm. long. (*L. h. californica* Rehd.) B.C. to s. Calif. Intr. about 1880.

59. *L. hirsuta* Eaton. High climbing shrub; brts. usually hirsute: lvs. short-petioled, elliptic, 5-11 cm. long, dark green and often pilose above, grayish green and pubescent beneath, 1 or 2 pairs connate into an elliptic acute disk: fls. in short usually peduncled glandular-pubescent spikes; corolla 2-2.5 cm. long, orange-yellow, glandular-pubescent outside; tube longer than limb, ventricose below the middle; style and stamens exceeding the limb. Fl.vi-vii; fr.ix-x. B.M.3103(c). G.F.9:344. S.L.223(h). (*L. pubescens* Sweet.) Que. to Sask., s. Pa., Ohio, Mich., Neb. Intr. about 1825. Zone III. Attractive vine.

*L. h. × sempervirens*; see under No. 56.—*L. h. × prolifera*; see under No. 62.—Hybrids of *L. h.* with *L. dioica* and *L. flava* have been recorded.

60. *L. dioica* L. Slightly twining or bushy shrub with sarmentose brs.; glabrous: lvs. very short-petioled or subsessile, elliptic to oblong, 4-8 cm. long, obtuse or acutish, cuneate, with cartilaginous, transparent, often wavy margin, glaucous beneath, the upper pair connate: fls. in sessile or short-stalked spikes of usually several whorls; corolla about 1.5 cm. long, greenish or whitish yellow, often tinged purplish, glabrous outside; stamens as long as limb, style longer, usually glabrous. Fl.v-vi; fr.vii-ix. B.R.138(c). S.O.2:t. 109(c). Gs.13:193. (*L. glauca* Hill, *L. media* Muir., *L. parviflora* Lam.) Que. to Sask., s. to N. C., Ohio and Iowa. Intr. 1636? Zone II.

Hybrids of *L. d.* with *L. hirsuta*, *L. prolifera* and *L. flava* have been recorded. Closely related species: *L. glaucescens* Rydb. Lvs. pubescent beneath; corolla about 2 cm. long, often pubescent outside; tube slightly longer than limb; style usually pubescent; ovary sometimes glandular. (*L. hirsuta glaucescens* Rydb., *L. Douglasii* Koehne, not DC.) B.B.3:279. S.H.2:f.460n-o, 463 a-c. Que. to Alb., s. to Va., Ohio and Neb. Cult. 1890? Zone III.—*L. g. dasygyna* Rehd., var. Ovaries densely glandular and hirsute. Cult. 1928.

61. *L. yunnanensis* Franch. Twining shrub; brts. glabrous: lvs. very short-stalked, oblong to oblong-obovate or oblong-lanceolate, 4-8 cm. long, acutish, glabrous above, glaucous and glabrous or slightly pubescent beneath, the upper pair or 2 pairs connate: fls. in a short-peduncled head of one to several whorls; corolla 2-2.5 cm. long, yellow, glabrous; tube slightly ventricose, longer than limb, pubescent inside. S. W. China. Intr. ?—*L. y. tenuis* Rehd., var. Smaller and slenderer: lvs. oblong, about 3 cm. long, sparingly pilose beneath on veins: infl. of 1 whorl; corolla scarcely 2 cm. long, white, changing to yellow. M.O.270. S. W. China. Intr. about 1900. Zone VII?

Related species: *L. albiflora* Torr. & Gray. Bushy or somewhat climbing shrub: lvs. elliptic or ovate, 2-3.5 cm. long, obtuse, glabrous: infl. of 1 or 2 sessile whorls; corolla 2-3 cm. long, with slender tube, yellowish white. Ark. and Tex. Intr. about 1850. Zone V.

62. *L. prolifera* (Kirchn.) Rehd. Twining or almost bushy shrub; brts. glabrous: lvs. sessile or very short-petioled, elliptic to oblong-obovate, 5-9 cm. long, obtuse rarely acute, bright green and often bloomy above, glaucous beneath and usually short-pubescent, usually more than 2 pairs connate into suborbicular or oval flat disks obtuse or emarginate at the ends, thickish and densely bloomy above: fls. in peduncled spikes of 2-4 whorls, often with 2 smaller spikes at base; corolla 2.5-3 cm. long, pale yellow, glabrous outside, with slender tube pubescent inside and slightly ventricose below the middle; style pubescent. Fl.vi-vii; fr.ix-x. R.H.1856:222,t(c). G.F.3:191. Gn.60:

285. (*L. Sullivantii* Gray, *Caprifolium proliferum* Kirchn.) Ohio to Tenn., Mo., Iowa and Wis. Cult. 1840. Zone IV.

*L. p.* × *hirsuta* = *L. Sargentii* Rehd. Lvs. more pubescent beneath and sparingly ciliate; disk slightly or not bloomy above: fls. orange-yellow, usually slightly pubescent outside. G.F.9:345. Orig. 1880.—Also hybrids of *L. p.* with *L. dioica* and *L. flava* have been recorded.

63. *L. flava* Sims. Slightly twining, glabrous: lvs. short-petioled, broad-elliptic to elliptic, 4–8 cm. long, obtuse or acutish, bright green above, bluish green beneath, the upper or 2 upper pairs connate into a suborbicular or oval disk rounded and usually mucronulate or acuminate at ends, green or slightly bloomy above, rather thin: fl.-whorls 1–3 on a short, sometimes to 1.5 cm. long peduncle; corolla about 3 cm. long, orange-yellow, fragrant, with slender not ventricose tube, glabrous or nearly so inside; style glabrous. Fl. v–vi; fr. viii–ix. B.M.1318(c). LD.3:162(c). G.F.3:190. N.C. to Mo., Ark. and Okl. Cult. 1810. Zone V.—One of the handsomest of the American species, with fragrant fls.

64. *L. impléxa* Ait. Evergreen, much-branched twining or sometimes bushy shrub, glabrous: lvs. usually sessile, elliptic or ovate to narrow-oblong, 2.5–8 cm. long, acute to rounded and mucronulate, cuneate to subcordate at base, glaucous beneath, glabrous or pubescent, the upper pairs connate into concave, usually pointed disks; fl.-whorls several, all or the lower ones in the axils of connate lvs.; bractlets wanting; corolla 3.5–4.5 cm. long, yellowish white, often tinged red, glabrous or pubescent outside; tube much longer than the short limb, pubescent inside; stamens and the pubescent style slightly exceeding the tube. Fl.vi–viii. B.M.640(c). R.I.17:t.122.f.4(c). F.D.28:t.2914(c). Mediterr. reg. Intr. 1772. Zone (VII). Very variable.

Hybrids with *L. Caprifolium* and *L. etrusca* are known.

65. *L. Caprifolium* L. Twining shrub, glabrous: lvs. short-petioled, broad-elliptic to elliptic, 4–10 cm. long, obtuse, dark green above, bluish green beneath, sometimes slightly pubescent when young, the 2 or 3 upper pairs connate into elliptic acutish disks: usually 1 or 2 fl.-whorls in the axils of connate lvs.; bractlets minute or wanting; corolla 4–5 cm. long, white or yellowish white, sometimes slightly purplish, very fragrant, glabrous or sparingly pilose; tube slightly longer than limb; stamens and the glabrous style as long as limb: fr. orange-red. Fl.v–vi; fr.viii–ix. R.I.17:t.122.f.3(c). F.D.28:2913(c). Gs.9:241(h);15:109(h). (*L. pallida* Host.) Eu. and W. Asia. Cult. for centuries; occasionally naturalized in the E. States. Zone V.—*L. C. pauciflora* Carr. Corolla tinged purple outside. R.I.17:t.122.f.1–2(c). (*L. C. var. rubra* Tausch, not West.)

*L. C.* × *etrusca* = *L. americana* K. Koch. Lvs. broad-elliptic to obovate, glabrous: several fl.-whorls at end of brts.; the lower in the axils of connate lvs., the upper in the axils of bracts, close; bractlets about half as long as ovaries, those of upper fls. smaller; corolla 4–5 cm. long, yellowish, usually purple outside and glandular-pubescent or glandular, fragrant. Fl.vi–vii. S.O.2:t.106(c). F.S.11:t.1120(c, as *L. Caprifolium major*). G.C.102:441,t(c). Gn.45:307(as *L. etrusca* and *L. Caprifolium*); 54:26. (*L. italica* Schmidt, *L. grata* Ait.) Orig. before 1750. Zone V.—*L. a. rubella* (Tausch) Rehd., var. Fls. pale purple. —*L. a. atrosanguinea* (Carr.) Rehd., var. Fls. dark purple.

66. *L. Heckrottii* Rehd. (? *L. americana* × *sempervirens*). Shrub with sarmentose or upright brs., glabrous: lvs. subsessile, elliptic to elliptic-oblong, 3–6 cm. long, acute or acutish, glaucous beneath: fls. in elongated peduncled spikes, with several remote whorls; bractlets about half as long as ovaries; corolla 3.5–5 cm. long, sparingly glandular and purple outside, yellowish and sparingly hairy within. Fl.vi–ix. Gn.85:502;89:638. B.H.3:89(h). Origin unknown, before 1895. Zone V. Floriferous handsome plant.

67. *L. tragophýlla* Hemsl. High climbing; brts. glabrous: lvs. short-petioled, oblong, rarely elliptic, 5-12 cm. long, acute to obtuse, cuneate, glabrous and bright green above, glaucous beneath and pubescent at least along the midrib, the upper pair connate: fls. in terminal short-peduncled glabrous heads of usually 2 whorls; corolla 7-8 cm. long, bright yellow, glabrous outside, sparingly pubescent within; tube nearly 3 times as long as limb. Fl.vi. B.M.8064(c). S.T.1:t.46. H.N.3:t.4. G.C.71:271(h);78:7,t(h). W. China. Intr. about 1900. Zone (V). Remarkable for its large yellow fls.

*L. t. × sempervirens* = *L. Tellmanniana* Spaeth. Lvs. oblong, obtuse: fls. in peduncled heads of usually 2 whorls; corolla deep yellow, 2-lipped, tube about 3 cm. long, limb about half as long. G.C.90:421,t(c). Orig. about 1920. Zone V.

68. *L. spléndida* Boiss. Evergreen twining shrub: lvs. of flowering brts. sessile or connate at base, obovate-oblong to oblong, 2-5 cm. long, obtuse, grayish green, glaucous beneath, glabrous, usually more than 2 pairs connate; sterile brs. with smaller, petioled, oval or ovate, usually pilose lvs.: fls. fragrant in dense sessile glandular-pubescent spikes of 3-5 whorls; bractlets  $\frac{1}{2}$ - $\frac{1}{3}$  as long as ovaries; corolla 4-5 cm. long, yellowish white, purple and glandular outside; tube about  $1\frac{1}{2}$  times as long as limb. Fl.vii. F.S.11:t.1130(c). B.M.9517(c). Gt.39:65. Spain. Cult. 1880. Zone VII. Handsome species, but tender.

69. *L. etrusca* Santi. Evergreen or half-evergreen, high-climbing; young brts. glabrous, usually tinged purple: lvs. short-petioled, obovate to broad-oval or elliptic, 3-8 cm. long, obtuse or acutish, usually glabrous above, pubescent beneath and glaucous, rarely glabrous, the upper ones connate: fls. fragrant, in dense spikes of several whorls on stalks to 4 cm. long, often in 3's at end of brs., glabrous or glandular; bractlets nearly as long as ovary, suborbicular; corolla 4-5 cm. long, yellowish white, often tinged purple, glabrous or glandular-pubescent outside; tube very slender, about  $1\frac{1}{2}$  times as long as limb. Fl.vi-vii. R.I.17:t.121,f.5(c). F.D.28:t.2915(c). Mediterr. reg. Cult. 1750. Zone VII.—*L. e. supérba* W. Wats. Vigorous form: fl-heads forming large terminal panicles. B.M.7977(c). (*L. gigantea* Carr.)—*L. e. pubéscens* Dipp., var. Lvs. soft-pubescent on both sides, large. Gartenzeit. 1886:557. (*L. gigantea* Zab., not Carr.)—*L. e. viscidula* Boiss., var. Lvs. 3-4 cm. long, densely glandular above like the brts., glaucous and less glandular beneath. Asia Minor.

*L. e. × Caprifolium*; see under No. 65.—There is also a hybrid with *L. implexa*.

70. *L. Periclymenum* L. WOODBINE. Climbing or scrambling over bushes; young brts. pubescent or glabrous: lvs. all distinct, petioled or the upper pair sessile, ovate or elliptic to ovate-oblong, 4-6 cm. long, acute, sometimes obtuse, dark green above, bluish green beneath, glabrous or slightly pubescent when young: fls. fragrant, in peduncled spikes of 3-5 whorls; bractlets at least half as long as ovary, glandular; corolla 4-5 cm. long, yellowish white, often slightly tinged purple, glandular outside; tube slender, longer than limb; stamens and style as long as limb. Fl.vi-viii; fr.viii-ix. R.I.17:t.121,f.3,4(c). F.D.28:t.2916(c). Eu., N. Afr., Asia Minor. Long cult. Zone IV. The two last named vars. most frequently cult.—*L. P. aurea* Lind. & André. Lvs. variegated with yellow. I.H.18:t.59(c).—*L. P. quercina* West., var. Lvs. sinuately lobed and often with narrow white margin.—*L. P. belgica* Ait., var. DUTCH W. Of more shrubby habit: lvs. glabrous, somewhat thickish: fls. purple outside, usually fading to yellowish.—*L. P. serôtina* Ait., var. Fls. dark purple outside, fading to pale purple, yellow within. Fl.vii-ix. Gn.45:307,t(c). (*L. semperflorens* Goldring.)

Another species with distinct lvs. is *L. Griffithii* Hook. f. & Thoms. Climbing: lvs. broad-ovate to ovate-oblong, glabrous, the pair below the infl. suborbicular, petioled: fls. in a dense peduncled sparingly pilose and glandular head; bractlets of each whorl connate into a cupula as high as ovaries; corolla about 2.5 cm. long, glandular and pilose outside, glabrous inside; tube about as long as limb. S.T.1:t.24. G.C.60:43. Afghan. Intr. about 1900. Zone VII?

11. **LEYCESTÈRIA** Wall. Deciduous shrubs: lvs. opposite, petioled, with or without stipules: fls. in whorls in the axils of leafy bracts, forming terminal spikes; calyx unequally 5-lobed, persistent; corolla funnelform, nearly equally 5-lobed, ventricose above the base; stamens 5; style slender with capitate stigma; ovary 5-8-celled: fr. a many-seeded berry. (After Wm. Leycester, judge in Bengal.) Incl. *Pentaptyxis* Hook. f. Three species in the Himal. and S. China.

*L. formosa* Wall. Shrub to 2 m., with hollow stems, glabrous and bloomy when young: lvs. broad-ovate to ovate-lanceolate, 5-18 cm. long, acuminate, cordate, entire or toothed, finely pubescent when young; petiole 5-15 mm. long: spikes drooping, 3-10 cm. long, terminal and axillary: fls. sessile in the axils of purplish bracts 1.5-3.5 cm. long; corolla 1.5-2 cm. long, purplish; calyx with subulate hairy lobes about  $\frac{1}{2}$  as long as corolla: fr. subglobose, about 1 cm. across, glandular-pubescent, red-purple. Fl.viii-ix. B.M.3699 (c). Gt.28:181. M.G.23:330(h). Himal., S. W. China. Intr. 1824. Zone VII. Conspicuous in bloom on account of its colored bracts.

#### Fam. 110. DIPSACACEAE Lindl. TEASEL FAMILY

Herbs or dwarf shrubs: lvs. opposite, rarely whorled, usually lobed, exstipulate: fls. perfect, small, sessile, mostly irregular, surrounded by a cup-shaped scarious involucre and crowded into involucre heads; calyx various; corolla 4-5-lobed with imbricate lobes; stamens 4, rarely 2-3, adnate to the corolla; ovary inferior, 1-celled and 1-ovuled; style with 2 stigmas: fr. an achene; seed albuminous with straight embryo.—Ten genera and about 150 species in the warm-temp. regions of the Old World.

**PTEROCÉPHALUS** Adans. Annual or perennial herbs, rarely shrubs: lvs. opposite: scales of the receptacle small or wanting; involucre with 8 grooves extending to the base and with spreading limb; calyx-limb of 12-24 bristles; corolla 5-fid.; stigma simple or divided. (Greek *pteron*, wing, and *kephale*, head; referring to the feathery appearance of the heads after flowering.) About 20 species chiefly in the Mediterr. reg.

*P. parnassi* Spreng. Tufted subshrub, densely gray-pubescent: lvs. ovate, 1-2 cm. long, obtuse, broad-cuneate to truncate at base, incisely crenate-dentate and often pinnatifid at base; petiole often nearly as long as blade; fls. lilac-pink, in depressed-hemispherical heads, 2-3 cm. across; disk-fls. nearly regular; ray-fls. 2-lipped, upper lip with 2 rounded lobes, the lower with 3 ovate obtuse lobes. Fl.vii. B.M.6526(c). G.C.104:142(h). (*Scabiosa pteroccephala* L.) S. E. Eu. Cult. 1880. Zone VI. Suited for the rock garden; the fl.-heads conspicuous on account of the long plumose bristles of the calyx.

#### Fam. 111. COMPOSITAE Adans. COMPOSITE FAMILY

Herbs, shrubs or rarely trees, sometimes twining, often with milky juice: lvs. alternate, rarely opposite or whorled, exstipulate: fls. bisexual or unisexual, regular or irregular, sessile on a flat or conical axis (receptacle) and forming small or large involucre heads, sometimes reduced to 1 fl.; calyx

reduced to scales, awns or hairs (pappus) or wanting; corolla gamopetalous, 4-5-lobed, regular or ligulate (with an elongated limb on one side), rarely 2-lipped; stamens 4-5; anthers connate into a tube around the style; style 1, with 2, rarely 1 stigma; ovary inferior, 1-celled and 1-ovuled; fr. an achene, often crowned by the persistent pappus; seed exalbuminous. Includ. *Carduaceae* Neck. and *Cichoriaceae* Reichb.—About 800 genera with about 20,000 species in all parts of the world, the woody species chiefly confined to trop. and sub trop. regions.

A. Heads with ray-fls.

B. Involucre of several series of imbricate bracts.

C. Lvs. linear: heads small, yellow, with 3-4 rays.....1. *Gutierrezia*

CC. Lvs. lanceolate to elliptic: rays many.

D. Lvs. entire or slightly serrulate, tomentose beneath: heads about 8 mm. across.

E. Lvs. evergreen, 0.5-2.5 cm. long.....3. *Olearia*

EE. Lvs. deciduous, lanceolate, 5-12 cm. long.....4. *Microglossa*

DD. Lvs. toothed or lobed, glabrous or pubescent beneath: heads larger.

10. *Chrysanthemum*

BB. Involucre of one series of bracts, often with small linear bracts at base: ray-fls. yellow.....13. *Senecio*

AA. Heads without ray-fls.

B. Lvs. pinnate.

C. Heads solitary, slender-peduncled: lvs. pectinately pinnate, evergreen.....9. *Santolina*

CC. Heads in panicles, small: lvs. usually twice pinnate, deciduous.....11. *Artemisia*

BB. Lvs. entire or dentate.

C. Infl. corymbose.

D. Fls. white: lvs. evergreen.

E. Lvs. glabrous: receptacle not scaly.....6. *Ozothamnus*

EE. Lvs. tomentose beneath: receptacle usually scaly.....7. *Cassinia*

DD. Fls. yellow: lvs. deciduous.

E. Involucral bracts in several series: lvs. 3-7 cm. long.....2. *Chrysanthemum*

EE. Involucral bracts 4-6, in one series: lvs. 1-2 cm. long.....12. *Tetradymia*

CC. Infl. not corymbose.

D. Heads paniculate or spicate: lvs. toothed, rarely entire.

E. Pappus present: lvs. glabrous, entire or toothed, penninerved.

F. Involucral bracts in several series, imbricate; fls. white: lvs. deciduous.

5. *Baccharis*

FF. Involucral bracts in one series; fls. yellow: lvs. evergreen.....13. *Senecio*

EE. Pappus wanting.

F. Lvs. at least partly opposite, serrate, 3-nerved: involucre with about 5 bracts.....8. *Iva*

FF. Lvs. alternate, entire or toothed at apex: involucre with many imbricate bracts.....11. *Artemisia*

DD. Heads solitary: lvs. entire.....14. *Pertya*

Tribe 1. **ASTEREAE**: Lvs. usually alternate, entire or toothed, rarely pinnate; heads radiate or discoid; involucral bracts usually unequal and in many series; receptacle usually naked; disk-fls. usually yellow; anthers without tail at base; style-brs. of pistillate fls. flattened, with marginal stigmatic lines and a hairy triangular to lanceolate appendage; pappus various or none.

1. **GUTIERREZIA** Lag. Shrubs or subshrubs, much-branched, usually glabrous, often glutinous: lvs. alternate, linear, entire: heads small, yellow, forming paniculate or fastigate cymes, of few to several fls.; ray-fls. 1-6, pistillate; disk-fls. usually perfect or a few staminate; involucre oblong to narrow-campanulate, with several imbricated coriaceous bracts; receptacle naked; achenes short, terete, ribbed or angled; pappus of chaffy scales. (After Pedro Gutierrez, correspondent of the botanical garden of Madrid.) About 20 species in W. N. Am., Mex. and S. Am.

**G. Saróthrae** (Pursh) Brit. & Rusby. BROOM-WEED. Much-branched subshrub to 60 cm., with upright or ascending brs., glabrous or minutely pubescent; heads few-fld., forming rather loose corymbose panicles usually 4-8 cm. across; rays usually 3-4, 1.5-2 mm. long; involucre oblong, about 5 mm. long; scales of pappus linear-oblong; achenes pubescent. Fl.viii-ix. B.B.3:370. S.H.2:f.472g-k. S.L.186(h). (*G. Euthamiae* Torr. & Gr.) Minn. and Man. to Nev., Calif. and Tex. and n. Mex. Cult. 1900. Zone IV.

2. **CHRYSOTHAMNUS** Nutt. Shrubs: lvs. alternate, rarely opposite, linear to oblanceolate, entire, 1-3-nerved: fls. yellow, tubular, perfect, in small, 3(-20)-fld. heads; involucre oblong to narrow-campanulate, with narrow appressed and densely imbricated bracts, often forming vertical rows; corolla with upright lobes; style-brs. exserted; achenes narrow, angled, pubescent; pappus a single row of capillary roughened bristles. (Greek *chrysos*, gold, and *thamnos*, shrub; referring to the color of the fls.) About 25 species in western N. Am.

**C. graveolens** (Nutt.) Greene. Much-branched shrub to 1.5 m., of aromatic odor when bruised, with very leafy upright brs. white-tomentulose when young: lvs. narrow-linear, 3-7 cm. long, glabrous at maturity: heads 1-1.5 cm. high, very numerous, in terminal corymbs 3-10 cm. across; involucre narrow-campanulate, of oblong or linear-oblong acute glabrous or nearly glabrous bracts in about 4 series; achenes appressed-pubescent; pappus with copious soft bristles. Fl.viii-x. B.M.8155(c). B.B.3:376. (*C. nauseosus* var. *graveolens* Piper, *Bigelowia g.* Gray.) Mont. and Neb. to Utah and N. Mex. Cult. 1886. Zone III. With large corymbs of golden-yellow fls.; suited for well drained sunny positions. It contains rubber, though not in sufficient quantity for commercial exploitation.

Related species: **C. nauseosus** (Pursh) Brit. Shrub to 1 m.; brts. permanently white-tomentose: lvs. 3-6 cm. long, tomentose; bracts of involucre strongly carinate on back, tomentose: achenes hirsute-strigose. (*Bigelowia graveolens* var. *albicaulis* Gray.) B. C. and Ore. to Mont., Wyo. and Utah. Intr. ?—**C. viscidiflorus** (Hook.) Nutt. Shrub to 1 m.; brts. glabrous or nearly so: lvs. linear-lanceolate, 2-4 cm. long, 2-3 mm. wide, glabrous: involucre glabrous. (*Bigelowia Douglasii* Gray.) Wyo. to Colo., Ariz. and Utah. Cult. 1886. Zone V?—**C. v. tortifolius** (Gray) Greene, var. Lvs. linear, serrulate, ciliate, twisted. Cult. 1933.

3. **OLEARIA** DC. Evergreen shrubs or subshrubs, sometimes small trees: lvs. alternate, rarely opposite, usually tomentose beneath: heads heterogamous, small, with several to many usually white to purple short ray-fls., rarely without; involucre of several rows of bracts with scarious margin; anthers often pointed or minutely caudate at base; achenes terete or slightly compressed, usually 5-ribbed; pappus with several rows of bristles, the outer row often short. (Name referring to the similarity of some species to those of *Olea*.) Syn.: *Shawia* Forst. About 100 species in Australia and N. Zeal.

**O. Haastii** Hook. f. Bushy shrub to 3 m.; young brts. whitish tomentose: lvs. alternate, short-stalked, crowded, elliptic or ovate, 1-2.5 cm. long, obtuse, entire, lustrous dark green above, white-tomentose beneath, leathery: heads about 8 mm. across, in axillary peduncled cymes at end of brs. and forming a flattened corymb 5-8 cm. across; ray-fls. 3-5, white; disk yellow: achenes ribbed, pubescent. Fl.vii. B.M.6592(c). G.C.49:52(h). Gn.78:473(h). S.L. 241(h). N. Zeal. Intr. 1858. Zone VII? One of the most ornamental of the harder shrubby Compositae.

Related species probably hardy in Zone VII: **O. nummulariifolia** Hook. f. Lvs. orbicular to oblong, 5-12 mm. long, thick, with recurved margins: heads about 1 cm. long, solitary or few on peduncles longer than the lvs. Laing & Blackwell Pl. N. Zeal. ed. 2:411. N. Zeal. Intr. 1889.—**O. albidula** Hook. f. Shrub or small tree to 6 m.: lvs. oblong or ovate-oblong, 4-10 mm. long, obtuse, rounded or narrowed at base: heads many, in corymbs about 5 cm. across; fls. 3-6; ray-fls. 1-3. J.L.60:f.168(h). N. Zeal. Cult. 1928.—**O. odorata** Petrie. Shrub to 4 m.: lvs. opposite or fascicled, linear-spatulate to linear-obovate, 0.6-2.5 cm. long: heads in axillary fascicles, fragrant; bracts and corolla of disk-fls. viscid; disk-fls. 20-35; ray-fls. 8-18. N. Zeal. Intr. 1908.—**O. lineata** (Kirk) Cockayne. Shrub to 3 m., with slender often pendulous brs.: lvs. opposite with

fascicles of lvs. in the axils, narrow-linear, 1-2.5 cm. long, strongly revolute: heads fascicled; bracts villous; disk-fls. 6-12; ray-fls. 8-14. N. Zeal. Cult. 1933.

4. **MICROGLÓSSA** DC. Climbing or upright shrubs: lvs. alternate, usually entire: heads rather small, in panicles or corymbs; ray-fls. pistillate, with short rays, white or bluish; disk-fl. perfect; receptacle flat, naked or nearly so; involucre of narrow bracts in many rows, membranous, the outer shorter: achenes not compressed, with slender pappus-hairs in 1 or 2 rows. (Greek *micros*, small, and *glosse*, tongue; referring to the short rays.) About 10 species in trop. Asia and Himal., also in Afr.

**M. albescens** (DC.) C. B. Clarke. Shrub or subshrub to 1 m.; brs. slightly grooved, grayish pubescent, with ample white pith: lvs. lanceolate, 5-12 cm. long, acute at ends, entire or slightly serrulate, grayish tomentulose beneath: heads about 8 mm. across, in terminal compound corymbs 7-15 cm. across; ray-fls. about 14, narrow, pale lilac-blue or nearly white; disk yellow. Fl.vii-viii. B.M.6672(c). R.H.1907:523. S.L.237(h). (*Amphirhaphis* a. DC., *Aster* a. Koehne, *A. cabulicus* Lindl.) Temp. Himal. and China. Intr. about 1840. Zone VII.

Related genus: *Aster* L. Heads rather large, with conspicuous rays and yellow disk; anthers obtuse at base: fr. usually compressed, without or with 1 or few ribs on the faces. More than 200 species mostly herbaceous.—*A. staticifolius* Franch. Much-branched shrub to 50 cm. tall: lvs. spatulate, 1.5-8 cm. long, obtuse or slightly emarginate, glabrous or puberulous, ciliolate, minutely glandular-punctate: heads solitary on slender stalks to 10 cm. high; involucre with 15-18 linear glabrous bracts; disk to 1 cm. across; ray-fls. 15-18, with purple-blue linear limb 1-1.5 cm. long: fr. silky, smooth on one side, obscurely ribbed on the other. B.M.9081(c). G.C.60:116. J.L.48:f.25. W. China. Intr. 1906. Zone VII?

5. **BÁCCHARIS** L. Deciduous or evergreen shrubs or herbs; glabrous, sometimes viscid or lepidote: lvs. alternate, usually toothed: heads small, many-fl., in terminal panicles or corymbs or axillary, dioecious, white or yellowish, without ray-fls.; involucre of many imbricate bracts; receptacle flat, naked; pistillate fls. with filiform corolla; achenes compressed, usually 10-ribbed; pappus of pistillate fls. of long bristly hairs. (*Bakkharis*, ancient Greek name for different shrubs.) More than 250 species in N. to S. Am.

A. Lvs. petioled, deciduous.....1. *B. halimifolia*  
AA. Lvs. sessile, evergreen.....2. *B. patagonica*

1. **B. halimifolia** L. GROUNDSEL-BUSH. Shrub to 4 m., much-branched: lvs. short-stalked, obovate to oblong, 2-7 cm. long, acute, cuneate, coarsely toothed, the upper ones entire, resinous; heads 4-6 mm. long, in peduncled clusters of 3-5 forming large panicles: achenes about 1 mm. long; pappus about 8 mm. long. Fl.viii-ix; fr. x-xi. Ad.2:t.55(c). Gg.7:113(h). Mass. to Fla. and Tex. Intr. 1683. Zone IV. Conspicuous in fr. with its white pappus.

Related species: *B. salicina* Torr. & Gray. Shrub to 1 m.: lvs. subsessile, narrow-oblong to linear-lanceolate, 2-4 cm. long, obtuse or obtusish, slightly toothed or nearly entire. Fl.v-vii; fr.viii. B.B.3:445. Kansas and Colo. to W. Tex. Cult. 1894. Zone V.—*B. pilularis* DC. Ascending shrub to 1 m.: lvs. subsessile, elliptic to obovate, 1-2.5 cm. long, toothed. Ore. to Calif. Intr. before 1910. Zone VII?

2. **B. patagonica** Hook. & Arn. Much-branched evergreen shrub to 3 m.; brts. angled, viscid when young: lvs. sessile, obovate to oblong, 8-20 mm. long, obtuse, cuneate, with few coarse teeth, deep green above, scurfy on both sides: heads axillary, sessile, usually solitary, yellowish white: pappus about 1 cm. long. Fl.v-vi; fr.viii. Dumont d'Urville, Voy. Pole Sud, Bot. 2:t.26. Patag. Cult. 1880. Zone VII.

Tribe 2. INULEAE. Lvs. usually alternate, entire or nearly so: heads usually discoid; involucre bracts usually dry and scarious, in several series, sometimes foliaceous or petaloid; receptacle naked or scaly; anthers tailed at base; style various, pappus usually capillary.

6. **OZOTHÁMNUS** R. Br. Evergreen shrubs: lvs. alternate, entire: heads few- to many-fld., in terminal or lateral corymbs, without ray-fls.; involucre with several rows of imbricate bracts; receptacle without scales; fls. tubular, usually all perfect; pappus of numerous slender bristles, thickened or barbellate at apex. (Greek *ozo*, to be scented, and *thamn*os, shrub.) More than 20 species in Tasmania, N. Zeal. and Australia.

**O. Antennária** (DC.) Hook. f. Shrub to 1 m.; young brts. puberulous, soon glabrous: lvs. petioled, narrow-obovate, 1-2.5 cm. long, rounded or slightly emarginate at apex, cuneate, whitish pubescent at first, soon glabrous, pale gray beneath: corymbs about 3 cm. across, pubescent; heads cylindric-campanulate, 4-5 mm. long; bracts up to 20, the inner with hyaline white tips; fls. 16-18, the 3 or 4 outer pistillate; pappus of about 24 scaberulous white bristles. Fl.vi. B.M.9152(c). (*Helichrysum antennarium* F. v. Muell.) Tasmania. Cult. 1885. Zone VII?

6. **CASSÍNIA** R. Br. Evergreen shrubs: lvs. alternate, entire: heads small, in panicles or corymbs, with perfect or a few pistillate fls., without ray-fls.; involucre with scarious colored bracts, the inner often with spreading appendage; receptacle usually with long deciduous scales: achenes with setose pappus. (After Count A. H. G. Cassini, French botanist; 1781-1832.) About 18 species in Australia, N. Zeal., and S. Afr.

**C. fúlvida** Hook. f. Shrub to 2 m., with upright brs. viscid when young, yellowish pubescent: lvs. crowded, oblong-obovate to linear-spatulate, 4-8 mm. long, with revolute margin, dark green and slightly viscid above, yellowish tomentulose beneath: heads 5 mm. long, with 5-8 fls., white, in terminal dense corymbs 2-5 cm. across; outer bracts glabrous; receptacle with few or no scales; achenes puberulous. Fl.vi-vii. Gt.39:241. S.L.115(h). (*Diplopappus chrysophyllus* Koehne.) N. Zeal. Cult. 1880. Zone VI? Shrub of heath-like habit.

Related species, all with scaly receptacle and glabrous achenes: **C. leptophylla** R. Br. Brts. grayish pubescent: lvs. linear or linear-spatulate, 3-5 mm. long, dark green above, yellowish or whitish tomentose beneath: heads in terminal corymbs 3-5 cm. across; outer bracts glabrous. P.F.3:16. N.H.14:12. N. Zeal. Intr. 1824. Zone VII?—**C. Vauvilliersii** (Dcne.) Hook. f. Shrub to 2 m.; brts. yellowish or whitish tomentose: lvs. linear-obovate to linear-oblong, 6-10 mm. long, usually glutinous above, fulvous or whitish beneath: heads in terminal rounded corymbs; outer bracts tomentose or glabrate. Laing & Blackwell, Pl. N. Zeal. ed. 2:431. New Zeal. Cult. 1902. Zone VII?—**C. retorta** DC. Shrub to 5 m.: lvs. spreading and recurved, linear-obovate to linear-oblong, 3-5 mm. long, white-tomentose beneath: heads numerous, in small corymbs; outer bracts tomentose. N. Zeal. Cult. 1933. Zone VII?

Tribe 3. **HELIANTHEAE**. Lvs. usually opposite, at least the lower ones: heads mostly radiate; involucre bracts usually herbaceous, in 1 to many series; receptacle usually scaly; anthers not tailed; style-brs. truncate or appendaged, usually with a ring of hairs below the brs.: pappus never capillary.

8. **IVA** L. Herbs or shrubs: lower lvs. opposite, upper alternate, serrate or entire, thickish; heads small, of staminate and a few marginal pistillate fls., not radiate, axillary; involucre with few roundish bracts; receptacle chaffy; anthers scarcely coherent: achenes glabrous or slightly pubescent, compressed, without pappus. (Medieval name of a medicinal plant [*Ajuga Iva*].) About 12 species in N. and C. Am. and in the W. Indies.

**I. frutescens** L. MARSH-ELDER. Shrub to 3.5 m.; brts. strigose: lvs. short-petioled, lanceolate, 10–15 cm. long, acute, serrate, cuneate, slightly strigose, 3-nerved, the upper ones smaller, nearly linear; heads greenish, hemispheric, 4 mm. across, with 5, rarely 4, orbicular-ovate bracts; pistillate fls. about 5. FL.VII–IX. Va. to Fla. and Tex. Cult. 1711. Zone VII?—**I. f. oraria** (Bartlett) Fern. & Griseb., var. Subshrub to 1 m.: lvs. elliptic-ovate or elliptic, acute or obtuse, on the flowering brts. nearly linear; heads 5–6 mm. across, with 5, rarely 6 bracts. B.B.339. K.D.564. (*I. o.* Bartlett.) Mass. to Md. Intr. 1880. Zone V.

Tribe 4. ANTHEMIDEAE. Usually aromatic or strong-scented: lvs. usually alternate and usually dissected: heads radiate or discoid; involucre bracts imbricate, in 2 to many series, wholly or in part dry and scarious; receptacle scaly, pubescent or naked; anthers not tailed at base: style-brs. of the perfect fls. usually truncate: pappus a short crown or none.

**9. SANTOLINA** L. Evergreen subshrubs or herbs, aromatic: lvs. alternate, pinnate: heads many-fl'd., discoid, yellow or rarely white, solitary on long peduncles; fls. all perfect; involucre campanulate, with appressed imbricate bracts; receptacle chaffy; stigmas truncate: achenes 3–5-angled, without pappus. (Derivation of name doubtful.) About 8 species in the Mediterranean.

**S. Chamaecyparissus** L. LAVENDER-COTTON. Much-branched subshrub, with procumbent stem and ascending brs., to 50 cm., whitish tomentose: lvs. pinnate, 1–4 cm. long, with short-oblong obtuse segments, 1–2 mm. long, often in 3 or 4 rows; heads yellow, hemispheric, 1–2 cm. across, long-peduncled. R.I. 16:t.121,f.2(c). F.D.29:t.3030(c). B.S.2:498. FL.VII–VIII. (*S. incana* Lam.) S. Eu. Cult. 1596. Zone VII.

Related species: *S. neapolitana* Jord. Whitish tomentose: lvs. 2–5 cm. long, segments 2–6 mm. long, obtusish to acute: heads yellow, 6–12 from each stem. Italy. Cult. 1930. Zone VII.—*S. virens* Mill. Green, glabrate: lvs. 2–5 cm. long, with acute teeth, 1–2 mm. long: fls. yellow. (*S. viridis* Willd.) S. Eu. Cult. 1727. Zone VII.—*S. pinnata* Viv. Glabrous or nearly so: lvs. 2–3.5 cm. long, segments 3–5 mm. long: fls. dull white; heads 1–1.5 cm. across, Gs.7:211. Italy. Cult. 1791. Zone VII.

**10. CHRYSANTHEMUM** L. CHRYSANTHEMUM. Herbs or subshrubs: lvs. alternate, entire, dentate or lobed: heads rather large and long-peduncled or small and corymbose; radiate disk-fls. perfect; ray-fls. pistillate; involucre of several series of imbricate appressed bracts with usually scarious margin: receptacle flat or convex, naked; achenes angled or ribbed; pappus wanting or reduced to a scale-like border. (Greek *chrysos*, golden, *anthemos*, flower.) About 150 species in Eu., Asia and Afr.

A. Lvs. lobed, deciduous.

B. Lvs. more or less pubescent.....1. *C. morifolium*

BB. Lvs. glabrate .....2. *C. sibiricum*

AA. Lvs. obtusely serrate, evergreen.....3. *C. nipponicum*

**1. C. morifolium** Ram. FLORISTS' C. Suffrutescent or nearly herbaceous: lvs. usually ovate in outline, 4–12 cm. long, pinnately lobed, with broad obtuse lobes dentate or lobulate, pubescent or tomentose; heads usually several in terminal corymbs, about 5 cm. across, or smaller or much larger, of various colors; involucre of oblong bracts; the wild form has white ray-fls. and yellow disk-fls.; in the garden forms the fls. are usually all changed into ray-fls. or sometimes into tubular fls. FL.IX–XII. B.M.327(c). G.C.31:302. B.C. 2:755. (*C. sinense* Sabine, *C. hortorum* Bailey.) Intr. from China 1790.—The hardier forms with smaller fl.-heads are hardy in zone V, the highly developed greenhouse forms with much larger fl.-heads are tender.

2. *C. sibiricum* Fisch. KOREAN *C.* Suffrutescent, to 30 cm., with upright stems from a procumbent woody base, glabrous or puberulous toward the end of the brs.: lvs. pinnatifid, 3-5 cm. long, with ovate or elliptic, incised-serrate to lobulate acutish lobes, truncate or broad-cuneate at base and decurrent into the margined petiole 3-5 cm. long in the lower lvs., upper lvs. smaller, short-petioled, with undivided lobes: heads 4-5 cm. across, with white or pinkish rays on solitary slender peduncles forming loose racemes or panicles at end of stems; bracts of involucre oblong, obtuse, scarious, with green midrib and fuscous margin. Fl.ix-x. (*C. coreanum* Hort.) N. E. Asia. Intr. 1905. Zone V. Valuable for its late blooming season.

Hybrids between this and garden forms of the preceding species with variously colored fls., the heads mostly with all ray-fls., are in cult. as HYBRID KOREAN *C.*

3. *C. nipponicum* (Franch.) Sprenger. Evergreen subshrub, to 50 cm., glabrous: lvs. subsessile, oblanceolate to oblong-obovate, 6-10 cm. long, obtuse, cuneate, irregularly dentate with small obtusish teeth, dark green above, paler beneath, thickish: heads solitary, 5-7 cm. across, on stalks 4-10 cm. long; involucre hemispherical, the oval, obtuse bracts with scarious margin; ray-fls. white, linear, minutely 5-toothed; disk pale greenish yellow. Fl.ix-x. B.M.7660(c). R.H.1905:47. G.C.III.24:349. (*Leucanthemum* n. Franch.) Japan. Cult. 1895. Zone VI. Chiefly valued for its late blooming season.

11. *ARTEMISIA* L. Herbs, subshrubs or shrubs, aromatic: lvs. alternate, entire, dentate, lobed or pinnatisect: heads small and inconspicuous, yellowish or whitish, without ray-fls., in terminal leafy spikes or panicles; involucre with imbricate bracts in few series, the outer shorter; receptacle not chaffy: fls. all or only the marginal ones fertile; stigmas truncate; achenes without pappus. (Mythological name, wife of Mausolus.) About 200 species chiefly in the n. hemisphere.

- A. Lvs. lobed or dissected.
- B. Lvs. finely dissected; receptacle usually glabrous.
- cc. Lvs. glabrous or slightly pubescent, with long filiform segments.....1. *A. Abrotanum*
- cc. Lvs. pubescent, at least beneath; pinnae pectinately pinnatifid.....2. *A. sacrorum*
- BB. Lvs. coarsely lobed; marginal fls. pistillate.
- c. Lvs. 5-12 cm. long, with oblong lobes.....3. *A. Absinthium*
- cc. Lvs. 1-4 cm. long, with short linear lobes.....4. *A. frigida*
- AA. Lvs. 3-toothed at apex or entire, cuneate: fls. all perfect and fertile.....5. *A. tridentata*

1. *A. Abrotanum* L. SOUTHERNWOOD. Subshrub to 1.5 m., with upright brs. glabrous or puberulous when young: lvs. 2-6 cm. long, simply to thrice pinnate, with linear obtuse lobes usually exceeding 1 cm., glabrous or slightly pubescent: heads very numerous, several-fld., 4-5 mm. across, yellow, with perfect fls. and marginal pistillate fls., all fertile: involucre nearly hemispherical, pubescent; outer bracts lanceolate, acute, inner obovate. Fl.viii-x. R.I.16:t.150.f.2(c). F.D.29:t.3006(c). B.B.3:526. S.L.2:104(h). S. Eu. Long cult. and often escaped. Zone V.—Grown for its aromatic odor.

Related species: *A. procera* Willd. Subshrub to 2.5 m., more spreading; lvs. 5-8 cm. long, thrice pinnate, dark green: fls. yellowish green, smaller; involucre glabrous. S. E. Eu. and Asia Minor. Cult. 1800; sometimes escaped. Zone V.—*A. camphorata* Vill. Subshrub to 70 cm.: lvs. green and glabrous or nearly so, dotted, lower ones thrice pinnate, with rather few pinnae, the upper entire; petioles auriculate; heads nodding, in narrow panicles; involucral bracts linear, obtuse. R.I.16:t.142.f.2. S. Eu., N. Afr. Intr. 1820. Zone V.—The closely related *A. suaveolens* Jord. differs chiefly in its naked receptacle: lvs. with few long linear segments: heads nodding, peduncled, 5 mm. across. Rouy, Ill. Pl. Eu. Rar. 8:t.186. S. France. Cult. 1904. Zone VII.—*A. Cina* K. Berg. Subshrub to 0.5 m., puberulous: lvs. slender-petioled, bipinnatifid, 1.5-2 cm. long; segments linear: heads 3-6-fld., about 3 mm. long, upright, sessile, in racemes

forming narrow panicles; bracts glabrous, grayish or yellowish brown. Koehler, Med.-Pl. 1:t.48(c). C. Asia. Cult. 1927. Zone VI.

2. *A. sacròrum* Ledeb. Subshrub to 1.5 m., gray-pubescent: lvs. slender-petioled, ovate in outline, 4-7 cm. long, twice pinnate, pinnae pectinately divided, with linear or linear-oblong acute segments, pubescent beneath; rachis and petiole winged: heads 15-20-fld., about 3 mm. across, with pistillate marginal fls., in slender racemes forming large terminal panicles 15-40 cm. long; involucre villous, outer bracts lanceolate, the inner elliptic with scarious margin. Fl.viii-ix. S. Russia, Siberia to N. E. Asia. Cult. 1828. Zone IV.—*A. s. viridis* Taylor, var. SUMMER-FIR. Green. Usually grown as an annual; of pyramidal habit with much dissected bright green foliage.—*A. s. latifolia* Ledeb., var. Pinnae of lvs. narrow-oblong and incisely serrate to pinnatisect with mostly incisely serrate narrow segments. N. E. Asia. Cult. 1927.

Related species: *A. pòntica* L. ROMAN WORMWOOD. Shrub to 1.5 m.: lvs. twice pinnatisect, 1.5-5 cm. long, pinnae pinnatifid with linear lobes, gray-pubescent; heads whitish yellow, small, in large and narrow panicles. R.I.16:t.150,f.3(c). F.D.29:t.3007(c). B.B.3:527(c). Eu.; escaped in the N. E. States. Cult. 1810. Zone V.—*A. austriaca* Jacq. Subshrub, grayish tomentulose; lvs. suborbicular in outline, 6-15 mm. long, twice pinnatisect, upper lvs. subsessile, almost digitately divided, the uppermost entire: heads small, in narrow dense panicles. R.I.16:t.143,f.2(c). S. E. Eu. to Altai Mts. Cult. 1810. Zone V.—*A. salina* Willd. Subshrub 0.3-1 m., whitish or grayish tomentose; lower lvs. stalked, twice or thrice pinnatifid, 1-2.5 cm. long, the upper sessile, smaller, pinnatifid; segments linear: heads ovoid, few-fld., 2-3 mm. long; the lower short-stalked, in racemes usually nodding at apex, forming panicles; bracts oblong, the outer pubescent, the inner with scarious margins. R.I.16:1039(c). (*A. maritima* var. *salina* Koch.) C. Eu. Cult. 1935. Zone V.

3. *A. Absínthium* L. WORMWOOD. Subshrub to 1.5 m., whitish silky; lvs. 5-12 cm. long, the lower long-petioled, twice or thrice pinnate, with lanceolate, obtuse lobes: heads short-stalked, hemispherical, 4-5 mm. broad, yellow, numerous in large leafy panicles; outer bracts of involucre linear; receptacle pubescent. Fl.vii-x. R.I.16:t.138,f.1(c). F.D.29:t.3001(c). B.B.3:525. Eu. Long cult. and often escaped. Zone V. Grown for medicinal use as a vermifuge; in Eu. it is also used for a liquor "absinth."

Related species: *A. arborèscens* L. Shrub to 1 m., with erect and angled brs., silvery white; lower lvs. to 10 cm. long and petioled, twice to thrice pinnate with linear lobes; heads about 7 mm. across, in 1-sided racemes. Fl.v-vi. R.I.16:t.138,f.2(c). S.H.2:f.478m-r,479c. S. Eu. Intr. 1640. Zone VII?—*A. Stelleriana* Bess. BEACH WORMWOOD (DUSTY MILLER). Subshrub, white-tomentose, with creeping stem and ascending brs. to 0.5 m.: lvs. obovate, 3-10 cm. long, pinnatifid with oblong, obtuse lobes: heads rather large, with oblong obtuse lobes oblong-campanulate, in a narrow panicle; receptacle glabrous. Gt.15:t.498. B.B.3:527. B.C.1:399. Que. to N. J., N. E. Asia. Cult. 1870. Zone II.

4. *A. frígida* Willd. Subshrub with procumbent stems and ascending brs., to 50 cm., silky-canescant: lvs. 1-4 cm. long, ternately or quaternately divided into linear entire lobes, the lower ones petioled and often auricled, the upper sessile: heads about 4 mm. across, numerous, in racemes or raceme-like panicles; involucre hemispherical, with oblong canescent bracts; receptacle pubescent. Fl.viii-ix. B.B.2:525. Yukon and Minn. to Idaho and w. Tex.; also in Siberia. Intr. 1597. Zone II.—Handsome plant for the rock garden.

5. *A. tridentàta* Nutt. SAGE-BRUSH. Much-branched shrub to 3 m.; silvery-canescant: lvs. sessile, narrowly cuneate, 1-4 cm. long, 3-7-toothed at the truncate apex: heads 5-8-fld., 2-3 mm. broad, very numerous, sessile or nearly so, in large dense panicles 30-50 cm. long; involucre oblong, the inner bracts oblong, obtuse, the outer shorter, ovate, tomentose; fls. all perfect and

fertile. Fl.viii-ix. B.B.3:530. S.L.52(h). B. C., Mont. and Neb. to Calif., Utah and Colo. Cult. 1894. Zone V.

Related species: *A. cana* Pursh. Shrub to 60 cm.; lvs. linear to narrow-lanceolate, 3-5 cm. long, acute and usually entire, rarely with 2 or 3 acute teeth; heads forming a narrow almost spike-like panicle; involucre campanulate, 3-5 mm. broad. B.B.3:530. Neb. to Colo., N. Dak. and Sask. Intr. before 1903. Zone V.—*A. arbuscula* Nutt. To 30 cm. tall: lvs. 3-lobed, with obovate often 2-lobed lobes: heads upright, in spike-like panicles. Colo. and Wyo. to Sask. Intr. ? Zone V?

Tribe 5. SENECEONEAE. Lvs. usually alternate; heads commonly radiate; involucre bracts mostly equal, not scarious, in 1 or 2 series, with or without accessory bracts at base; receptacle naked; anthers usually tail-less at base; style-brs. truncate or obtuse, with or without appendages, usually more or less hairy; pappus capillary.

12. **TETRADYMIA** DC. Low rigid shrubs, gray- or white-tomentose; lvs. alternate, entire: heads with few fls. usually all perfect and fertile, without ray-fls., in terminal corymbs; involucre oblong or cylindric, of one series of 4-6 concave overlapping bracts; receptacle flat; corolla with lanceolate spreading lobes; anthers with triangular tips, sagittate at base; style-brs. flat, obtuse: achenes terete, 5-nerved; pappus of numerous white, minutely scabrid bristles. (Greek *tetradymos*, fourfold; referring to the number of fls. and involucre bracts.) About 6 species in western N. Am.

*T. canescens* DC. Shrub to 1 m., densely white-tomentose: lvs. linear to narrow-lanceolate, 1.5-3 cm. long, acute and spinulose, silky-villous: heads 4-5-fl., 1.5 cm. high, yellow, peduncled, in terminal clusters of 3-5, usually forming broad corymbs at end of brs.; involucre cylindric, with 4 linear-oblong bracts; achenes densely silky-hirsute. Fl.vii-viii. S.H.2:f.480g-m,481 e-f. B. C. to Calif., Idaho and Utah. Intr. ? Zone V?

13. **SENECIO** L. Herbs, shrubs or trees: lvs. alternate, entire, serrate or pinnatifid; heads in terminal or axillary corymbs or panicles; involucre of many bracts in one series, usually with small bracts at base: fls. many; ray-fls. usually present, usually yellow; disk-fls. tubular; receptacle usually naked; achenes usually terete and ribbed; pappus of soft whitish bristles. (From Latin *senex*, *senecis*, old man, in reference to the white pappus.) About 1200 species in all parts of the world.

- A. Lvs. pinnatifid, white-tomentose: subshrub.....1. *S. Cineraria*
- AA. Lvs. undivided, entire or dentate, rarely with a few lobes at base.
- B. Climbing subshrub: lvs. membranous.....2. *S. scandens*
- BB. Upright shrubs: lvs. coriaceous.....3. *S. rotundifolius*

1. **S. Cineraria** DC. Subshrub to 0.5 m., white-tomentose: lvs. thickish, pinnatifid, with 4-6 obtuse 3-5-lobed segments, densely tomentose beneath, less so above: heads 8-12 mm. high, in large flat or convex corymbs; ray-fls. 10-12, oblong-elliptic, bright yellow: achenes nearly glabrous. Fl.vi-viii. R.I.16:t.968(c). H.M.6:728,729. B.C.3157. (*Cineraria maritima* L.) S. Eu., Algeria. Cult. 1633. Zone V.

2. **S. scandens** Don. Climbing subshrub to 5 m.; brts. slender, striate, slightly pubescent: lvs. ovate- or triangular-lanceolate, 4-9 cm. long, acuminate, hastate to broad-cuneate, dentate or denticulate, rarely with a few lobes at base, puberulous or nearly glabrous; petiole 4-15 mm. long: infl. terminal and axillary, paniculate or racemose; heads hemispheric, 4-8 mm. long, slender-stalked; bracts linear, acute, nearly glabrous; ray-fls. about 12, rays to 8 mm. long, 4-nerved, bright yellow: achenes cylindric, 5-ribbed, scabrous. Fl.ix-x. R.H.1909:407. S. Asia, S. China, Japan. Intr. 1895. Zone VII.

3. *S. rotundifolius* Hook. f. Shrub or tree to 10 m.; brts., petioles, lvs. beneath and inf. densely tomentose: lvs. coriaceous, orbicular to ovate-oblong, 5-12 cm. long, obtuse, rounded or subcordate at base, dark green and lustrous above, margin entire, revolute; petiole 2-7 cm. long: heads without ray-fls., campanulate, 8 mm. across, in large terminal panicles; bracts 9-12, linear-oblong; pistillate fls. 1-4: achenes grooved, hispid. Fl.vi-vii. Kirk, For. Fl. N. Zeal. t.116. N. Zeal. Cult. 1904. Zone VII.

Related species: *S. laxifolius* Buchan. Shrub to 1.5 m.; white-tomentose: lvs. lanceolate to elliptic-lanceolate, 2.5-6 cm. long, acute at ends; petiole 1-3.5 cm. long: heads with 12-15 narrow yellow ray-fls., 2-2.5 cm. across, in pyramidal panicles 10-20 cm. long; bracts 12-15: achenes glabrous. B.M.7378(c). G.C.68: 49;85:622. J.L.55:f.36. N. Zeal. Cult. 1894. Zone VII? More ornamental than the two preceding species, but tenderer.

Tribe 6. *MUTISIEAE*. Lvs. usually alternate and entire; heads with or without rays; involucre bracts imbricate, usually in many series: corolla bilabiate, deeply 5-cleft, or ligulate; receptacle usually naked; anthers long-tailed at base; style-brs. usually short, not appendaged: pappus usually capillary.

14. *PÉRTYA* Schultz Bip. Deciduous shrubs: lvs. alternate, often crowded under the fl.-heads, entire or serrulate: heads solitary, terminal on short brts., of 4-15 perfect fls.; involucre campanulate, with few large imbricate bracts; corolla tubular, deeply 5-lobed; style hairy on upper part, shortly 2-lobed: achenes pubescent, with conspicuous whitish or purplish pappus. (After J. A. Maximilian Perty, professor of natural history at Berne, Switzerland; 1804-1884.) Four species in E. and C. Asia.

*P. sinensis* Oliv. Slender upright shrub to 2 m.: lvs. ovate to oblong-lanceolate, 5-8 cm. long, acutish, entire, often with 1-3 sharp teeth, on year-old brs. fascicled, smaller and entire; heads pinkish, 10-12-fl., about 1 cm. across, on slender pedicels 1-2.5 cm. long; involucre nearly glabrous; achenes sericeous; pappus whitish. Fl.vi-vii. H.I.23:t.2214. C. China. Intr. 1901. Zone V. Botanically interesting, but of little ornamental merit.

## Class II. MONOCOTYLEDONEAE Juss. MONOCOTYLEDONS

Stems without central pith or annular layers: embryo with a single cotyledon, the first lvs. always alternate; lvs. mostly parallel-veined: parts of the fl. usually in threes or sixes, never in fives.

### 112. GRAMINEAE Juss. GRASS FAMILY

Herbaceous, sometimes shrubby or tree-like plants, with usually hollow stem (culm): lvs. alternate, 2-ranked, consisting of a sheath enveloping the stem and usually open on one side, and a parallel-veined usually linear blade, at the junction of blade and sheath inside a membranous appendage (ligula): fls. perfect, rarely unisexual, naked or with a perianth of 1-2 minute scales, borne in spikelets forming panicles, spikes or racemes; each spikelet consisting of 3 or more 2-ranked scales, the first 1-6, usually 2, are empty and are called glumes (or empty glumes), the others are called lemmas (lower paleas) or fertile glumes each bearing a fl. in its axil; the fl. is subtended and usually enveloped by a bract (palea or upper palea) with its back to the axis and bears usually 2 small scales or lodicules at the base; stamens usually 3, rarely 1, 2 or 6, exserted; pistil with a 1-celled, 1-ovuled ovary and usually 2 styles with mostly plumose stigmas: fr. a nutlet (caryopsis) with a starchy endosperm and a small embryo. Syn.: *Poaceae* R. Br.—About 400 genera with

more than 5000 species distributed all over the earth. Divided into many subfamilies of which only the following is of interest to us:

Subfam. **Bambuseae** Lindl. (*Bambusaceae* Link). Stems woody, at least at the base: leaf-blade often constricted into a distinct petiole, finally separating from the sheath: spikelets usually many-fld., rarely 1-fld.; glumes many-nerved, usually not aristate. About 250 species chiefly in the Tropics and Subtropics.—Most species bloom but rarely and many die after flowering, only some of the smaller kinds flower every year; of many species the flowers are yet unknown. Therefore in the following specific descriptions the floral characters have been omitted, as of little practical value for the determinations of the cultivated species.—Sometimes *Arundo* and *Phragmites* of the Subfam. *Festuceae* are included among the woody Gramineae, but their stems are annual, though stout and nearly ligneous at maturity.

- A. Culms terete: style short with 3 stigmas or styles 2.
- B. Brs. solitary, rarely 2 at the nodes: stem-sheaths persistent.
- C. Lf.-sheaths with rigid scabrous bristles; nodes more or less elevated: stamens 6.
- CC. Lf.-sheaths with smooth and flexuose bristles or without; nodes scarcely elevated: stamens 3, rarely 4-5.....2. *Pseudosasa*
- BB. Brs. several at each node.
- C. Infl. without conspicuous bracts enveloping the spikelets.
- D. Stem-sheaths persistent.
- E. Each node with 1 bud; br. branching from the very base; bristles of lf.-sheath rigid, scabrous.....3. *Arundinaria*
- EE. Each node with 2 or more buds; bristles of lf.-sheaths smooth.....4. *Pleioblastus*
- DD. Stem-sheaths caducous.
- E. Style 1 with 3 stigmas: stems to 4-15 m. tall.
- F. Lvs. 1.5-2.5 cm. broad, with 5-6 pairs of veins; lf.-sheaths with rigid bristles.....5. *Semiarundinaria*
- FF. Lvs. 0.6-1.5 cm. broad, with 2-4 pairs of veins; lf.-sheaths with flexuose bristles.....6. *Sinarundinaria*
- EE. Styles 2: stems to 2 m. tall; lvs. 0.6-1.5 cm. broad.....7. *Chimonobambusa*
- CC. Infl. with large bracts enclosing the spikelets; stems 10-15 m. tall; lvs. 7-15 cm. long, with 12-15 pairs of veins.....8. *Thamnochlamus*
- AA. Stems more or less flattened on one side of the node; each node with several brs.; style long, with 3 stigmas.
- B. Lvs. lanceolate to linear-lanceolate; stems straight, 3-8 m. tall.....9. *Phyllostachys*
- BB. Lvs. ovate-oblong to ovate-lanceolate, distinctly stalked; stems zigzag, 1-2 m. tall.
- 10. *Shibataea*

1. **SASA** Mak. & Shibata. Shrubs or subshrubs with creeping rootstock to 2 m.; stems terete, fistulose, not spotted, with 1, rarely 2 brs. at each node; sheaths persistent, appendiculate; lvs. crowded at end of brts.; sheaths with rigid scabrid bristles or without: infl. a lax panicle; spikelets 2-9-fld.; glumes 2, small; palea 2-keeled and 2-fld, shorter than the acuminate lemma; stamens 6; style short, with 3 stigmas; ovary glabrous; caryopsis oblong, often grooved at base, slightly exceeding the lemma. (Japanese name for the small bamboos.) About 70 species in E. Asia.

- A. Lvs. with 5-13 pairs of veins, 2-10 cm. wide.
- B. Pairs of veins 15-18; stem-sheaths with involute margin, loosely appressed.
- BB. Pairs of veins 5-13; stem-sheaths convolute, firmly appressed.
- C. Lf.-sheaths at apex without bristles; lvs. 7-8 cm. broad.....2. *S. senanensis*
- CC. Lf.-sheaths at apex with brown bristles; lvs. 3-6 cm. broad, discolored in fall along margin.....3. *S. Veitchii*
- AA. Lvs. with 2-6 pairs of veins, 0.5-2, rarely 3 cm. broad.....4. *S. chrysanthia*

1. **Sasa tessellata** (Munro) Mak. & Shib. Stems to 1.5 m. tall, slightly fistulose, soon arching; nodes 3-8 cm. distant; stem-sheaths persisting, each clasping also parts of the 2 or 3 sheaths above it, ciliate: lvs. to 60 cm. long and to 10 cm. broad, long-pointed, abruptly contracted at the base, sharply serrate, light green above, glaucous beneath and minutely pubescent, hairy on one side of the yellow midrib toward the base, with 15-18 pairs of veins, tessellate. G.C.III.18:189(h). C.Bat.3,f.s,t.7,f.b. B.S.1:78,t(h). (*Bambusa t.* Munro,

*Arundinaria* t. Bean, not Munro, *A. Ragamowskii* Pfitzer.) Japan. Intr. before 1845. Zone VI. Striking on account of its large lvs., forming broad rounded masses.

2. *S. senanensis* (Franch. & Sav.) Rehd. Stems to 2 m., waxy, particularly below the nodes, hollow; nodes 12–15 cm. distant; stem-sheaths terminated by a deciduous lanceolate, strongly tessellated, ciliate tongue; lvs. 15–32 cm. long, 7–8 cm. broad, long-pointed, abruptly contracted at base, serrulate, bright green and lustrous above, glaucous beneath and minutely puberulous, with 7–13 pairs of veins, minutely tessellate. C.Ba.t.2,c.D. I.B.t. 11,f.7–15. (*Arundinaria kurilensis* var. *paniculata* F. Schmidt, *Bambusa* s. Franch. & Sav., *S. paniculata* Mak. & Shib.) Japan. Cult. 1913. Zone VI. Handsome bamboo spreading by suckers.—*S. s. nebulosa* (Mak.) Rehd., var. Stems tinged with purple; sheaths of the brs. with small round spots. G.C. 35:280,t.(h). Gn.49:59(h). B.S.1:218,t.(h). (*Arundinaria paniculata* var. n. Mak., *A. palmata* Bean, *Bambusa metallica* Miq.) Intr. about 1889.

3. *S. Veitchii* (Carr.) Rehd. Stems 0.5, rarely to 1.2 m. tall, green, narrow-fistulose; nodes 8–12 cm. distant; stem-sheaths persistent, pubescent at first; leaf-sheaths with tufts of bristle at apex; lvs. 10–20 cm. long, 3–6 cm. broad, rather abruptly long-pointed, abruptly contracted at the base, dark green above, glaucous and minutely pubescent beneath, turning yellow along the margin in fall, midrib yellow beneath, with 6–9 pairs of veins. I.B.t.11,f.21–27(c). (*S. albo-marginata* Mak. & Shib., *Bambusa* V. Carr., *Arundinaria* V. N. E. Br.) Japan. Intr. 1880. Zone VI. Forms dense patches and spreads rapidly; the discolored edges of the lvs. give it an injured appearance in fall.

4. *S. chrysantha* (Miq.) E. G. Camus. Stems 0.5–2 m. tall, hollow; nodes 5–12 cm. distant; brs. several at one node; stem-sheaths ciliate on one margin; lvs. 8–12 cm. long, 1.2–2 cm. broad, rather abruptly long-pointed, rounded at base, bright green above or often more or less variegated with yellow, glabrous, with 4–6 pairs of veins. (*Arundinaria* c. Miq.) Japan. Intr. 1892. Zone VI. Spreading rapidly; of little ornamental value.

2. **PSEUDOSASA** Mak. Shrubs with creeping rootstock; stems terete, fistulose, to 5 m. tall; stem-sheaths persistent, hispid outside; each node with one br.; lf.-sheaths with flexuose smooth bristles or without: spikelets 2–8-fld.; lemma subaristate, curving, enveloping the palea; palea bifid at apex; stamens 3, rarely 4; style short, with 3 stigmas. (Greek *pseudos*, false, and Japanese *sasa*.) Three species in Eastern Asia.

**P. japonica** (Sieb. & Zucc.) Mak. Stems to 2 or 3, rarely to 5 m. tall, stout; stem-sheaths covered at first with compressed bristles, soon turning pale brown, very persistent, terminated by a persistent awl-shaped tongue to 7 cm. long; lvs. 8–24 cm. long and 2–4 cm. wide, long-pointed, narrowed at base, serrulate on one margin, lustrous dark green above, glaucescent beneath except a green strip on one margin, with 6–10 pairs of veins, minutely tessellate. G.C.III.18:185(h). Gs.3:38(h). I.B.t.4,f.1–3,t.13,f.4(c). C.Ba.t.5,f.a, t.13,f.a. (*Arundinaria* j. Sieb. & Zucc., *Sasa* j. Mak., *Bambusa metake* Sieb.) Japan. Intr. 1850. Zone VI.

3. **ARUNDINARIA** Michx. Shrubs to 10 or 15 m. tall, with caespitose or creeping rootstock; stems upright or arching; each node with 1 bud, the br. branching from the base: lf.-sheaths with scabrid rigid bristles: infl. lateral; spikelets 5–15-fld.; glumes small; lemma subaristate; stamens 3; style 1, with 3 stigmas. (Derived from Latin *arundo*, cane.) Six species in N. Am. and E. and S. Asia.

**A. gigantea** (Walt.) Chapm. CANE REED. Stems upright, to 9 m., with numerous short divergent branches: lvs. 10-30 cm. long, 2-3 cm. broad, rounded at base, denticulate, glabrous or pubescent, with 6-14 pairs of veins: fls. on old stems on leafy brs.; spikelets 3.5-7 cm. long, many-fl. B.B.1:295. C.Bat.14.f.c. (*A. macrosperma* Michx., *Arundo gigantea* Walt.) Va. to Fla., west to Ohio and La., along river banks. Intr. ? Zone VI.

The closely related *A. tecta* (Walt.) Muhl. (*A. macrosperma* var. *t.* Nees), from Md. and Ind. to Texas is smaller, only 1-4 m. tall and the fls. appear on leafless shoots of the year. In *A. tecta* var. *decidua* Beadle the lvs. turn yellow in autumn and drop.

**4. PLEIOBLASTUS** Nakai. Low, or tall shrubs to 10 m.; with caespitose or creeping rootstock; stems upright or arching; each node with 3-7 brts.; stem-sheaths persistent; lf-sheaths with smooth flexuose bristles at apex: spikelets with articulate rachis; lemma falcate-convolute, tessellate; palea 2-keeled; lodicules 3, one twice as large as the others; stamens 3; style with 3 stigmas. (Greek *pleios*, more, and *blastos*, bud; referring to the several buds at each node.) About 30 species in E. Asia.

- a. Lvs. glabrous or slightly hairy.
- b. Stems to 6 or 8 m. tall; lvs. quite glabrous.
- c. Lvs. rounded or broadly cuneate at base.....1. *P. Simoni*
- cc. Lvs. gradually narrowed at base.....2. *P. Hindsii*
- bb. Stems to 1.5 m. tall; lvs. usually slightly hairy.
- c. Lvs. distichous, 2-6 cm. long.....3. *P. distichus*
- cc. Lvs. not distichous, larger.
- d. Stems with waxy bloom; stem-sheaths with a ring of hairs at base. 4. *P. pumilus*
- dd. Stems without waxy bloom; stem-sheaths without ring of hairs at base. 5. *P. humilis*

- aa. Lvs. soft-pubescent beneath.
- b. Lvs. green or striped with yellow, sparingly puberulous or nearly glabrous above.
- 6. *P. viridi-striatus*
- bb. Lvs. striped with white, pubescent on both sides.....7. *P. variegatus*

1. *P. Simoni* (Riv.) Nakai. Stems to 8 m. tall, very hollow, 2-3 cm. thick at the base, the outer stems arching outward; rootstock creeping; stem-sheaths to 25 cm. long, purplish when young, rather persistent: lvs. 8-30 cm. long, 0.8-3 cm. broad, long-pointed, broadly cuneate at the base, bright green above, often striped white or whitish, glaucescent beneath on one side of the midrib, nearly green on the other, with 4-7 pairs of veins. G.C.III.15:301;18:181. N.K.20:t.6. I.B.t.7,f.1-5,t.13,f.2(c). (*Arundinaria* S. Riv.) Japan. Intr. 1862. Zone VI.—*P. S. variegatus* (Hook. f.) Nakai, var. Lvs. striped white. B.M.7156(c). (*Arundinaria* S. var. *v.* Hook. f., *A. S. var. striata* Mitf., *A. S. var. albo-striata* Bean.)

Related species: *P. Chino* (Franch. & Sav.) Mak. Stems 1-1.5 m. tall; lvs. 3.5-25 cm. long, 0.5-2 cm. broad, green beneath, with 3-7 pairs of veins. I.B.t.5, f.7-14(c). (*Arundinaria Simoni* var. *C.* Mak., *A. Maximowiczii* Riv.) Japan. Cult. 1876. Zone VI.—*P. C. Laydekeri* (Bean) Nakai, var. Lvs. with dark yellow stripes. (*Arundinaria* L. Bean.) Cult. 1894.—*P. angustifolius* (Mitf.) Nakai. Stems to 1, rarely 2 m. tall, narrow-fistulose; lvs. 2.5-15 cm. long, 3-6 mm. broad, green with white stripes, margin spinulose. Japan. Cult. 1895. Zone VI.

2. *P. Hindsii* (Munro) Nakai. Stems to 4 m. tall, quite erect, to 2.5 cm. thick, hollow, dark olive-green, bloomy at first, internodes to 20 cm. long; brs. erect, in dense clusters; lvs. mostly erect, 16-20 cm. long, 1-2 cm. broad, long-pointed, tapering at the base, denticulate on one side, dark green above, glaucescent beneath, with 3-6 pairs of veins, tessellate. I.B.t.5,f.4-6,t.14, fig. 2. R.H.1921:367(h). (*Thamnocalamus* H. E. G. Camus, *Arundinaria* H. Munro, *A. erecta* Hort., *Bambusa gracilis* Hort.) China, Japan. Intr. 1875. Zone VII.

Related species: *P. gramineus* (Bean) Nakai. Slenderer: lvs. much narrower, scarcely exceeding 1 cm. in width, with 2-4 pairs of veins. I.B.t.5,f.1-3,

t.14.f.5. (*Arundinaria Hindsii* var. *g.* Bean.) Japan. Intr. 1877. Zone VI. Hardier and handsomer than *P. Hindsii*. Cult. 1894.

3. *P. distichus* (Mitf.) Nakai. Stems slender, 25–75 cm. tall, green, hollow; nodes 3–8 cm. distant; stem-sheaths pubescent at first, ciliate; lvs. distichous, 2–6 cm. long, 5–8 mm. broad, slender-pointed, narrowed into a short petiole, setosely serrulate, bright green on both sides, with 2–3 pairs of veins. I.Ba.t.6.f.5–6. (*Bambusa disticha* Mitf., *B. nana* Hort., not Roxb., *Sasa disticha* E. G. Camus, *P. pygmaeus* var. *distichus* Nakai.) Japan. Cult. 1870. Zone V.

4. *P. pumilus* (Mitf.) Nakai. Stems slender, 30–60 cm. tall, fistulose, stem-sheaths tessellate, the upper ones tinged with purple; lvs. 7–15 cm. long, 0.8–2 cm. broad, usually abruptly long-pointed, rounded at base, serrulate, bright green, slightly hairy on both sides, with 4–5 pairs of veins. C.Ba.t.7.f.a. (*Arundinaria pumila* Mitf., *A. variabilis* var. *p.* Houzeau de Lehaie.) Japan. Cult. 1896. Zone VI.

5. *P. humilis* (Mitf.) Nakai. Stems 0.5–1 m. tall, very slender, narrowly fistulose, green, with usually 2 or 3 branches at one node, long in proportion to the stem; stem-sheaths purplish at first; leaf-sheaths with 2 clusters of bristles at the apex; lvs. 10–15 cm. long, 0.8–2 cm. broad, long-pointed, rounded at the base, scarcely hairy, pale green, with 3–5 pairs of veins. C.Ba.t.5.f.d. (*Arundinaria h.* Mitf., *A. Fortunei viridis* Hort., *A. gracilis* Hort.) Japan. Cult. 1896. Zone VII?

6. *P. viridi-striatus* (André) Mak. Root-stock somewhat creeping; stems to 1.25 m. tall, slender, dark purplish green, fistulose; lf.-sheaths minutely and irregularly ciliate, sparsely fimbriate or naked at apex; lvs. 8–20 cm. long, 1–3 cm. broad, abruptly long-pointed, rounded at base, serrulate, striped green and golden yellow, at first sparingly puberulous above, soft pubescent beneath, with 5–6 pairs of veins. I.H.19:t.108(c). H.I.27:2613. (*Bambusa viridi-striata* Sieb. ex André, *B. Fortunei aurea* Hort., *Arundinaria auricoma* Mitf., *Sasa a. E. G. Camus.*) Japan. Cult. 1870. Zone VI.—*P. v. vagans* (Gamble) Nakai, var. Root-stock creeping and spreading; lvs. green. I.Ba.t.6.f.7–8(c). (*Arundinaria v.* Gamble, *Bambusa pygmaea* Mitf., not Miq., *Sasa p.* E. G. Camus.) Japan. Cult. 1896. Zone VI. Spreading rapidly and forming dense thickets.

7. *P. variegatus* (Miq.) Mak. Stems 0.3–1 m. tall, very slender, narrowly fistulose, somewhat zigzag; lvs. 8–15 cm. long, 0.8–2 cm. broad, abruptly long-pointed, rounded at base, serrulate, green, striped with white, hairy on both sides; with 3–5 pairs of veins. F.S.15:t.1535(c). (*Arundinaria variegata* Mak., *A. Fortunei* Riv., *Sasa v.* E. G. Camus, *Bambusa v.* Miq.) Japan. Intr. before 1863. Zone VI? Spreading rapidly, forming large tufts.

5. SEMIARUNDINARIA Mak. Upright shrubs; stems terete; upper internodes flattened; stem-sheaths with appendages, deciduous; brs. several at each node; lf.-sheaths with rigid smooth bristles; lemma tessellate; stamens 3; style short, with 3 stigmas. (Latin *semi-*, half, and *Arundinaria*: referring to the close relation to that genus.) Three species in Japan and S. Asia.

*S. fastuosa* (Mitf.) Mak. Stems erect, to 7, rarely to 15 m. tall, very hollow, to 3.5 or to 8 cm. diam., terete, but the upper internodes flattened, dark green, marked with purplish brown; brs. erect; stem-sheaths to 22 cm. long, purplish and pubescent at first, early deciduous; lvs. 10–18 cm. long, 1.5–2.5 cm. broad, long-pointed, gradually narrowed into a rather long petiole,

lustrous dark green above, glaucous on one side beneath, puberulous, with 5-6 pairs of veins, tessellate. B.S.1:215,t(h). C.Ba.t.7.f.c.t.9.f.c.t.13.f.a. (*Bambusa* f. Mitf., *Phyllostachys* f. Nichols., *Arundinaria* f. Mak., *A. narihira* Mak.) Japan. Intr. 1892. Zone VI.

6. **SINARUNDINARIA** Nakai. Shrubs to 6 m. tall, with creeping rootstock, caespitose; stem-sheaths with appendages, deciduous; each node with several brs.; lvs. glabrous; lf.-sheaths with flexuose smooth bristles; infl. paniculate on leafy brts.; stamens 3; style short, with 3 stigmas. (Latin *Sina*, China, and *Arundinaria*; referring to the habitat of the genus.) Three species in China and Himal.

**S. nitida** (Mitf.) Nakai. Stems to 6 m., hollow, erect and leafless the first year, branching and arching the second year; stem-sheaths purplish, pubescent; lvs. 5-8 cm. long, 0.6-1.2 cm. broad, slender-pointed, rounded at the base, denticulate on one side, bright green above, glaucescent beneath, with 3-4 pairs of rather faint veins. G.C.III.18:179(h); 24:211(h). M.O.t.40. C.Ba.t.9.f.a.t.12.f.a. S.L.110(h). (*Arundinaria* n. Mitf.) C. & W. China. Intr. 1889. Zone V. Demands partial shade and abundant moisture.

Related species: **S. Murielae** (Gamble) Nakai. Stems yellow, with waxy bloom when young; stem-sheaths glabrous, ciliate; lvs. petiole, 7-12 cm. long, 1-1.5 cm. broad, long-acuminate into a setaceous point. (*Arundinaria* M. Gamble.) C. China. Intr. 1907. Zone VII?

7. **CHIMONOBAMBUSA** Mak. Shrubs with creeping rootstock; stems nearly solid, terete; stem-sheaths with conspicuous appendages, deciduous; each node with several brs.; lf.-sheaths with smooth bristles at apex: spikelets racemose; lemma not tessellate, with prominent nerves; stamens three; styles 2. (Greek *cheimon*, winter, and *Bambusa*; referring to the season of the innovation of the shoots.) 12 species in E. and S. Asia.

**C. marmorea** (Mitf.) Mak. Stems to 2 m. tall, slender, purplish, branching the second year; stem-sheaths at first purplish, mottled with pinkish gray; brs. usually 3 at each node; lvs. 6-12 cm. long, 6-15 mm. wide, constricted about 1 cm. below apex into a slender point, narrowed into a short petiole, minutely serrulate on both sides, with 4-5 pairs of veins. I.B.t.4,f.4-8,t.14,f.3 (c). C.Ba.t.10,f.b. (*Arundinaria* m. Mak.) Japan. Cult. 1893. Zone VII?

8. **THAMNOCALAMUS** Munro. Shrubs with creeping rootstock; stems terete, fistulose; stem-sheaths caducous; lvs. small, usually inconspicuously tessellate; infl. large, paniculate; brts. with conspicuous bracts enveloping the 1-4 spikelets in their axils; palea long-acuminate, as long or longer than lemma; lodicules 3, ciliate; stamens 3; stigmas 3, sessile. (Greek *thamnos*, thick, and *calamus*, cane; referring to its habit.) About 5 species in India.

**T. spathiflorus** (Trin.) Munro. Stems to 12 m. tall; internodes 15-35 cm. long; stem-sheaths glabrous, 15-20 cm. long, with a caducous blade 5-10 cm. long; lvs. 7-12 cm. long, 8-12 mm. broad, narrowed into a short petiole, with 12-15 pairs of veins; lf.-sheaths coriaceous, fimbriate at apex. C.Ba.t.30,f.a (c). (*Arundinaria* *spathiflora* Trin.) Himal. Cult. 1913. Zone VII?

9. **PHYLLOSTACHYS** Sieb. & Zucc. Usually tall shrubs with creeping rootstock, rarely caespitose; stems with rather short hollow internodes, flattened or grooved on one side or sometimes on two sides; nodes prominent; brs. usually 2-3 at each node, rebranched; stem-sheaths caducous; lvs. petioled, small or moderately large, articulated, tessellate; lf.-sheaths with sca-

brous bristles: fls. in terminal leafy panicles; spikelets 2-3, 1-4 fld., subtended by imbricated bracts: glumes usually unequal, many-nerved, glabrous; lemma ovate-lanceolate, acuminate; palea 2-keeled, often with 2 mucros; stamens 3, long-exserted; ovary glabrous; style long, with 3 long stigmas. (Greek *phyllos*, leaf, and *stachys*, spike; referring to the leafy inflorescence.) About 30 species in E. Asia and Himal.

- A. Stem-sheaths glabrous at the margin, as long or longer than the internodes; scales at base of brts. not divided or only to the middle, persistent.
- B. Stems dark-colored at maturity; lf.-sheaths without bristles.....1. *P. flexuosus*
- BB. Stems green or yellow; lf.-sheaths with bristles.
- C. Stems spaced; stem-sheaths striped with purple.....2. *P. viridi-glaucescens*
- CC. Stems tufted.
- D. Stem-sheaths without or with few small spots; stems yellow; lvs. 1-2 cm. broad.  
3. *P. aureus*
- DD. Stem-sheaths with large spots.
- E. Nodes at base of stem congested; sheaths spotted brownish.....4. *P. edulis*
- EE. Nodes not congested; sheaths mottled with purple.....5. *P. bambusoides*
- AA. Stem-sheaths with ciliate margin, at maturity shorter than internodes; scales at base of brts. deeply divided, soon shriveling.....6. *P. niger*

1. *P. flexuosus* (Carr.) Riv. Stems to 6 m. tall, usually lower, bright green at first, becoming darker with age, sometimes nearly black; brs. rather long, flexuose; lf.-sheaths without bristles: lvs. 5-10 cm. long, 0.8-1.5 cm. broad, slender-pointed, abruptly narrowed at base, serrulate on one margin, dark green above, glaucous beneath, with 4-6 pairs of veins. C.Ba.31,f.a. (*Bambusa* f. Carr., not Munro.) China. Intr. 1864. Zone VI.

2. *P. viridi-glaucescens* (Carr.) Riv. Stems to 6 m. or more, yellowish green, purplish at the nodes, very hollow; the outer stems arching; stem-sheaths scabrous, striped with purple, deciduous; lf.-sheaths purplish with tufts of bristles at apex: lvs. 5-10 cm. long, 0.8-2 cm. wide, long-pointed, abruptly narrowed at the base, denticulate on one margin, bright green above, glaucous beneath and pubescent near the base, with 4-7 pairs of rather indistinct veins. G.C.III.15:433(h). Gn.7:279(h). C.Ba.t.29,f.a. China. Intr. 1846. Zone VI.

3. *P. aureus* (Carr.) Riv. Stems 3-6 m. tall, erect, 2-2.5 cm. thick, yellow or yellowish, with slightly creeping rootstock; nodes often crowded at the base of stem, the upper internodes to 15 cm. long, with a swollen band beneath each node: stem-sheaths deciduous; lf.-sheaths with 2 tufts of bristles at apex: lvs. linear, 5-12 cm. long, 1-2 cm. broad, long-pointed, cuneate at the base, denticulate on one side, dark green above, glaucous beneath, glabrous, with 4-5 pairs of veins. B.F.69:233(fl.). Gn.8:206. A.F.5:41(h). I.B.t.3,f. 1-6(c). (*Bambusa* a. Carr.) China, Japan. Intr. before 1870. Zone VI.

4. *P. edulis* (Carr.) Houzeau de Lehaie. Stems to 20 m. or more, yellowish; stem-sheaths pubescent, spotted brownish; lf.-sheaths with tufts of bristles at apex; lvs. 6-12 cm. long, 0.8-2 cm. broad, slender pointed, round or cuneate at base, denticulate on one side, dark green above, glaucous beneath, with 3-6 pairs of rather indistinct veins. C.Ba.t.26,f.a. B.D.1909;t.257, 259. (*Bambusa mitis* Bean, not Riv., *P. pubescens* Houzeau de Lehaie.) China, Japan. Intr. 1877. Zone VI.

5. *P. bambusoides* Sieb. & Zucc. Stems to 6, or sometimes to 22 m., 2-3 cm. thick, bright green, bloomy below the nodes: brs. long; stem-sheaths mottled with purple; lf.-sheaths with tufts of bristles at apex; lvs. 8-15 cm. long, 1.2-3 cm. broad, rather abruptly long-pointed, narrowed into a short petiole, serrulate on one side, bright green above, glaucous beneath and pubescent near base, with 5-7 pairs of veins. Gamble, Ind. Bamb. t.27. I.B. t.1,f.5-8. Gs.3:37(h). (*P. reticulata* K. Koch in part, *P. Quiloi* Riv., *P.*

*Mazellii* Hort.) China. Intr. 1866. Zone VI.—*P. b. Castillòni* (Marliac) Mak., var. Smaller and slenderer; stems yellow, striped with green, and green on the flattened portion: lvs. shorter and narrower, usually striped more or less with pale yellow. I.B.t.2,f.1-4. (*P. C. Mitf.*) Japan. Intr. about 1890.—*P. b. marliaceus* (Mitf.) Mak., var. Stem wrinkled, particularly near the base; stem-sheaths dark green. (*P. m. Mitf.*, *P. Quiloi* var. *m.* Bean.) I.B.t.2,f.11-13,t.15,f.4(c). Tenderer.

Related species: *P. sulphureus* Riv. Stems yellow, often with 2 narrow green stripes; stem-sheaths glabrous, spotted; lvs. scabrous and puberulent toward the base beneath, sometimes with few whitish stripes. C.Ba.t.32,f.a. China. Intr. 1865. Zone VII?—*P. s. viridis* Young, var. Stems green: lvs. not striped. (*P. mitis* Riv.) Cult. 1878.

6. *P. niger* (Lodd.) Munro. Stems to 7 m., green at first, changing to purple-black, very hollow, very leafy; nodes conspicuously edged with white below; the brs. usually spotted; lvs. 5-10 cm. long, 0.6-1.5 cm. broad, very thin, denticulate, glabrous, glaucous beneath, with 3-6 pairs of veins. Zone VI. B.M.7994(c). G.C.III.15:369;18:185. Gs.3:36(h). (*P. puberula* v. *nigra* Houzeau de Lehaie.) China, Japan. Intr. 1827.—*P. n. punctatus* Bean, var. A more robust and harder form with yellow stems dotted with black. I.B.t.15,f.1(c). N.K.20:t.13. (*P. puberula* var. *nigro-punctata* Houzeau de Lehaie). —*P. n. Henonis* (Mitf.) Rendle, var. Stems green or greenish, finally yellowish, to 17 m. tall; stem-sheaths greenish or reddish brown, unspotted. H.I. 2614. B.D.1909:237.t. (*P. H. Mitf.*, *P. puberula* Mak.) China. Intr. 1890. Zone VI.—*P. n. Boryanus* (Mitf.) Mak. Form of the preceding var.; stems green at first, changing to pale yellow with purplish brown blotches. I.B.t.2, f.5-19,t.15, f.3(c).

10. *SHIBATAEA* Mak. Shrubs to 1.5 m. tall; stems zigzag, much flattened, nearly solid; brs. very short, 3-5 at each node: lvs. terminal on short brs., short-petioled; sheaths without bristles: infl. on leafless brs.; spikelets 1-2-fld.; lodicules 3; stamens 3; style long, with 3 stigmas. (After Keita Shibata, Japanese botanist.) Two species in E. Asia.

*S. Kumasasa* (Steud.) Mak. Stems 1, sometimes 2 m. tall, upright, very zigzag, much flattened, narrow fistulose, green; internodes 3-8 cm. long; brs. 2-5 at each node: lvs. distinctly stalked, ovate-oblong to ovate-lanceolate, 6-12 cm. long, 1.5-2.5 cm. broad, long-pointed, broadly cuneate at the base, lustrous dark green above, slightly glaucescent, and at first puberulous beneath, with 6-7 pairs of veins. G.C.III.15:369;18:189. I.B.t.11,f.1-6(c). (*S. kumasaca* Nakai, *Phyllostachys ruscifolia* Nichols.) Japan. Cult. 1870. Zone VI. Very distinct on account of its comparatively broad leaves; of low tufted habit.

### 113. LILIACEAE Adans. LILY FAMILY

Herbs, shrubs or trees, sometimes climbing: lvs. alternate, parallel-veined: fls. perfect, rarely unisexual, regular, solitary or in racemes, panicles or umbels; perianth of 6 similar parts in 2 series; stamens 6, rarely less; anthers 2-celled; ovary superior, usually 3-celled, rarely 3 free carpels; ovules 1 to many in each cell; style and stigma 1-3: fr. a usually dehiscent capsule or a berry; seeds with a small embryo and copious albumen. Incl. *Ruscaceae* Spreng., *Asparagaceae* Walp., *Philesiaceae* Lindl., *Smilacaceae* Vent., *Draconaceae* Link., and *Agavaceae* Hutchins., in part.—About 200 genera with 2000 species widely distributed through both hemispheres; mostly herbaceous.

- A. Fr. a berry; slender-branched climbing or upright shrubs.  
 B. Plants with scale-like lvs. and lf.-like brts. (cladodes): fls. small white.  
 C. Fls. in clusters in the middle of broad cladodes, dioecious; stamens 3.....1. *Ruscus*  
 CC. Fls. axillary or terminal.  
 D. Cladodes linear or filiform.....2. *Asparagus*  
 DD. Cladodes ovate-lanceolate or lanceolate.....3. *Danaë*  
 BB. Plants with normal lvs.  
 C. Fls. large, rosy-red, solitary or few; upright shrub.....4. *Philesia*  
 CC. Fls. small, white or greenish, in umbels: climbing shrubs, rarely low and upright, usually prickly.....5. *Smilax*  
 AA. Fr. a caps., sometimes indehiscent or fleshy: plants with thick cylindric stem, not or sparsely branched, or acaulescent, with a dense head of narrow evergreen lvs.  
 B. Fls. 3-6 cm. long; stamens shorter than perianth: lvs. with fibrous or serrulate margin.  
 BB. Fls. small; stamens longer than perianth: lvs. with spiny margin.....6. *Yucca*  
 BB. Fls. small; stamens longer than perianth: lvs. with spiny margin.....7. *Dasythirion*

1. **RUSCUS** L. Low evergreen shrubs or subshrubs with green stems, spreading by suckers: brs. bearing alternate leaf-like cladodes in the axils of minute, scale-like lvs.: fls. dioecious, small, borne in bracted clusters in the middle of the upper surface of the cladodes; perianth-segments 6, distinct; stamens 3 with the filaments connate into a tube: ovary 1-celled, 2-ovuled; style short: fr. a 1-2-seeded red berry. (The old Latin name of the plant.) Four or 5 species in the Medit. reg.—Valuable for planting in shady places.

- A. Cladodes spiny-pointed, stiff.....1. *R. aculeatus*  
 AA. Cladodes not spiny.....2. *R. Hypoglossum*

1. **R. aculeatus** L. BUTCHERS-BROOM. Rigid evergreen shrub, 0.5-1.2 m. tall, with grooved branched stems: cladodes sessile, ovate, 2-3.5 cm. long, 0.6-2 cm. broad, dark green: fls. 1 or 2 in the axils of a bract in the middle of the spiny-pointed cladode, short-stalked, white, 6 mm. across: fr. globose or ovoid, red, 1-1.5 cm. thick. Fl. III-IV; fr. X-III. R.I.10:t.437(c). P.B.1: t.20(c). Gn.34:231. R.H.1894:545. S. and W. Eu. north to S. Engl. Cult. before 1750. Zone VII?—*R. a. angustifolius* Boiss., var. with narrower cladodes.—*R. a. latifolius* Bean, var. Cladodes up to 5 cm. long and 2-2.5 cm. broad.

Related species: *R. hyrcanus* Woronow. Brs. in whorls of 3-5 at the end of the stems: fls. 2-5. Transcauc., N. Persia. Intr. 1911. Zone VI?

2. **R. Hypoglossum** L. Subshrub 25-40 cm. tall; stems unbranched: cladodes narrowly oval to oblanceolate, tapering at the ends, 7-11 cm. long, 2.5-3.5 cm. broad: fls. small, yellowish, borne in the axils of a leaf-like bract 2.5-3.5 cm. long, 6-8 mm. broad, on the upper surface of the cladodes: fr. globose, red, about 1 cm. thick. Fl. III-IV; fr. X-III. R.I.10:t.437(c). F.D.4:t. 29(c). S. Eu. Intr. before 1600. Zone VII.

Related species: *R. Hypophyllum* L. Cladodes oval or ovate, 3.5-7 cm. long; fls. slender-stalked, in the axil of a small bract. B.M.2049(c). Canary Is. to Cauc. Cult. 1625. Zone VII?

2. **ASPÁRAGUS** L. Shrubs, subshrubs or herbs, often climbing: lvs. scale-like, alternate, often spiny, subtending lf.-like, linear or sometimes broad cladodes: fls. polygamous or dioecious, small, greenish to white, axillary or in umbels or racemes; perianth-segments 6, connivent; stamens 6; ovary 3-celled: fr. a 1- or few-seeded berry. (*Asparagus*, the ancient Greek name of the plant.) About 150 species in Asia, Mediterr. reg. and Afr.

**A. cochinchinensis** (Lour.) Merr. Climbing subshrub to 3 m., rarely taller, with tuberous edible roots; stems and brs. terete or nearly so, with spiny lf.-scales; brts. angled; cladodes linear, 2-4, flat, 1-4 cm. long: fls. axillary, 1-3, campanulate, white; pedicels articulate about the middle: fr. globose, 4-7 mm. across, white to pinkish. A.G.13:78. (*A. lucidus* Lindl.) E. Asia: Korea to Indochina. Cult. 1844. Zone VI?

Related species: *A. verticillatus* L. Climbing subshrub; cladodes 3-8, filiform, angled, 2-5 cm. long; fls. subglobose; fr. about 6 mm. across, red. R.B.20:154. G.W.14:648. W. Mediterr. reg. Cult. 1894. Zone VI?—*A. aphyllus* L. Densely branched subshrub to 1 m.; brts. angled, scabrous; cladodes fascicled, rigid, pungent, 7-30 mm. long; fls. axillary, few; fr. bluish black. S.F.4:t.338 (c). S. Eu. Cult. 1640. Zone VII.

3. *DANAË* Medic. Evergreen much-branched shrub with alternate leaf-like cladodes borne in the axils of small scale-like lvs.: fls. in short terminal racemes, perfect; perianth gamopetalous, subglobose, 6-lobed; stamens 6, inserted below the limb of the perianth; filaments connate; style short, with capitate stigma; ovary 3-celled, cells 2-ovuled: fr. a globose red berry, 1-, rarely 2-seeded. (Danae, daughter of King Acrisius of Argos.) One species.

*D. racemosa* (L.) Moench. ALEXANDRIAN LAUREL. Upright shrub to 1 m.; cladodes ovate-lanceolate or lanceolate, acuminate, gradually narrowed into a short stalk, many-nerved, 6-10 cm. long, 1-2.3 cm. broad: fls. white, small; fr. red. W.D.t.145(c). S.H.2:860. G.W.2:99(h). (*Ruscus racemosus* L.) Fl.vi-vii. Syria, Transcauc., Persia. Intr. 1739. Zone VII.

4. *PHILESIA* Juss. Evergreen glabrous shrub, with erect stem and angled brts.: lvs. alternate: fls. terminal, solitary or few, perfect; perianth-segments 6, connivent, the inner whorl 2-3 times longer than the outer; stamens 6, with the filaments connate below the middle: ovary 1-celled, with numerous ovules; style elongated, stigma capitate: fr. a berry. (Greek proper name, from *philein*, to love.) One species from Chile to Strait of Magellan.

*P. magellanica* Gmel. Shrub to 1 m.: lvs. short-stalked, narrow-oblong, stiff, 2.5-3.5 cm. long, dark green above, glaucous beneath, with reflexed margins: fls. short-stalked, nodding, tubular-campanulate, 5 cm. long, rosy-red; sepals oblong, petals oblanceolate. Fl.ix-x. B.M.4738(c). G.C.55:398,t(c). Gn.87:86(h). (*P. buxifolia* Lam.) Intr. 1847. Zone VII?—Strikingly handsome; demands peaty soil and half-shady sheltered position.

5. *SMILAX* L. GREEN-BRIER. Deciduous, or evergreen, woody or herbaceous climbers, rarely upright; stems often prickly, little branched at base: the lower lvs. reduced to scales, the upper entire or slightly lobed, 3-9-nerved, often blotched with white or gray; stipules usually ending in long tendrils: fls. dioecious, rather small, greenish, yellowish or whitish, in axillary usually peduncled umbels, with the pedicels nearly uniform in length; perianth-segments 6, deciduous; stamens 6, rarely to 15; pistillate fl. with 6 or 3-1 staminodes: ovary 3-celled, cells 1-2-ovuled; stigmas nearly sessile: fr. a small berry, 1-several-seeded. (Ancient Greek name.) About 200 species in the temp. and trop. regions of both hemispheres.

A. Umbels in the axils of lvs.

B. Stipules distinct, with tendrils.

C. Stipules narrow.

D. Peduncles much longer than petioles.

E. Berries black.

F. Lvs. green or slightly glaucous beneath.

G. Lvs. ovate to ovate-oblong, quite entire.

H. Pedicels 5-10 mm. long.

I. Tendrils near base of petiole: fr. black.

J. Lvs. usually truncate or cuneate.....2. *S. hispida*

JJ. Leaves cordate to truncate.....3. *S. Sieboldii*

II. Tendrils near apex of petiole: lvs. ovate to ovate-oblong, 5-7 cm. long; fr. blue-black.....9. *S. menispermoides*

HH. Pedicels 1.5-2 cm. long: lvs. elliptic to ovate-oblong, rounded or broadly cuneate at base.....10. *S. longipes*

GG. Lvs. at least those of vegetative brs. hastate or 3-lobed, more or less spiny-toothed: fr. black.....7. *S. bona-nox*

FF. Lvs. very glaucous beneath: fr. blue-black, bloomy.....8. *S. glauca*

- EE. Berries red.  
 F. Lvs. broadly cuneate at base or rounded, ovate to oblong, sometimes reniform: prickles small, reflexed.  
 G. Lvs. glaucous beneath, generally oblong.....11. *S. megalantha*  
 G. Lvs. green beneath, generally ovate to suborbicular.....12. *S. China*  
 FF. Lvs. subcordate or truncate at base, triangular-ovate: prickles stout, straight.....13. *S. ezcelsa*  
 DD. Peduncles of the pistillate plant shorter than petioles (sometimes longer in No. 15).  
 E. Fruit red.  
 F. Lvs. deciduous: fr. coral-red.....14. *S. Walteri*  
 FF. Lvs. persistent: fr. dark red.....14. *S. lanceolata*  
 EE. Fr. black.  
 F. Lvs. oblong to oblong-lanceolate.  
 G. Lvs. coriaceous, 2-3.5 cm. broad: peduncle distinct.....15. *S. laurifolia*  
 G. Lvs. deciduous, 1-1.5 cm. broad: fls. in nearly sessile clusters.  
 1. *S. microphylla*  
 FF. Lvs. broad-ovate to ovate-oblong.  
 G. Prickles small, bristle-like: lvs. oblong-ovate.....4. *S. scobinicaulis*  
 G. Prickles stout: lvs. broad-ovate.....5. *S. rotundifolia*  
 CC. Stipules enlarged into a semicircular auricle as long as the very short petiole: lvs. usually cordate.....18. *S. discotis*  
 BB. Stipules not distinct from the petiole, without tendrils: plant unarmed.  
 C. Petiole glabrous, striate.....16. *S. vaginata*  
 CC. Petiole scabrous, papillose-pubescent.....17. *S. trachypoda*  
 AA. Umbels borne on special leafless brs.: lvs. evergreen, often blotched white.....19. *S. aspera*  
 Sect. 1. *COILANTHUS* A. DC. Perianth-segments of staminate fls. incurved, usually less than 3 mm. long.

1. *S. microphylla* C. H. Wright. Stems to 4 m. long: brs. angled, with short stout prickles: lvs. short-stalked, oblong to oblong-lanceolate, acute or abruptly acuminate, 2-6 cm. long, 5-18 mm. broad, glaucous beneath, 3-5-nerved: fls. yellowish, in very short-stalked or nearly sessile umbels; pedicels slender: fr. black, 5 mm. thick, 1-seeded. Fl.vi; fr.x-xi. C. and W. China. Intr. 1908. Zone VII?

Sect. 2. *EUSMILAX* A. DC. Perianth-segments spreading or reflexed, longer than 3 mm.

2. *S. hispida* Muellb. Deciduous: root-stock woody, not much spreading: stems to 15 m. long, densely prickly below; prickles straight, slender, blackish: lvs. ovate or broad-ovate, the larger cordate, pointed, slightly rough-margined, 7-12 cm. long, green beneath, 5-9-nerved: peduncle 2-5 cm. long: fr. black, 8 mm. across, usually many in one umbel. Fl.vi; fr.ix-x. G.F.5:53. B.B.1:529. (*S. pseudo-china* auth., not L.) Conn. to Ont. and Minn., s. to N. C. and Tex. Cult. 1688. Zone IV. Does not spread by stolons.

3. *S. Sieboldii* Miq. Deciduous, similar to the preceding species: stem armed with slender prickles; brs. angular: lvs. membranous, triangular-ovate, acuminate, cordate, rough-margined, 4-8 cm. long, green on both sides, 5-7-nerved: peduncle about 1.5 cm. long; fr. black, 8 mm. thick, usually few in one umbel. Fl.vi; fr.ix-x. Japan, Korea. Intr. 1905. Zone V.

4. *S. scobinicaulis* C. H. Wright. Deciduous: climbing to 3 m.: brs. grooved, often densely beset with small dark bristly prickles, sometimes unarmed: petioles 5-10 mm. long, with the tendrils above the middle: lvs. ovate to oblong-ovate, acute or acuminate, rounded or subcordate at base, 6-10 cm. long and 2.5-4.5 cm. broad, green beneath, 7-nerved: peduncles 4-10 mm. long; pedicels 2-5 mm. long: fr. black, 5-8 mm. thick, 1-3-seeded. Fl.vi; fr.x-xi. China. Intr. 1907. Zone V.

5. *S. rotundifolia* L. HORSE-BRIER (COMMON GREEN-BRIER). Deciduous: root-stock scarcely tuberous, long-creeping; stems and brs. terete, with few stout prickles never present on the nodes; brts. angled: lvs. ovate to suborbicular, acute or cuspidate, rounded or cordate at base, 3-15 cm. long: petioles 6-12 mm. long: peduncles 6-12 mm. long; pedicels 2-8 mm. long:

fr. bluish black, 6 mm. diam., 1-3-seeded. Fl.vi; fr.ix-x. B.B.1:528. N. S. to Ga., w. to Minn., Ill. and Tex. Intr. about 1760. Zone IV.—*S. r. quadrangulata* Wood, var. Brs. and brts. quadrangular.

Related species: *S. Cantab* Lynch. Evergreen; lvs. triangular, to 12 cm. long, cordate; peduncles as long or slightly longer than petioles. Origin unknown; probably hybrid. Cult. 1890.

6. *S. Wálteri* Pursh. Deciduous: stems slightly angled, prickly below, unarmed above; brts. angled: lvs. ovate to ovate-lanceolate or oblong, acuminate, cordate to broadly cuneate at base, 5-11 cm. long, 2-6 cm. broad, green beneath, 5-7-nerved: peduncles 4-10 mm. long; pedicels 4-6 mm. long: fr. coral-red, 6-8 mm. thick, 2-3-seeded. Fl.vi; fr.ix-x. B.B.1:530. N. J. and Tenn. to Fla. and La. Intr. before 1820. Zone VI.

7. *S. bona-nox* L. SAW-BRIER. Partially evergreen: underground stems spiny: stems green, densely prickly below: lower part of larger stems with a peculiar stiff stellate pubescence: lvs. at least of vegetative brs. hastate or 3-lobed, spiny on the margins and on the midrib below, the upper lvs. triangular-ovate, 4-12 cm. long, green and lustrous on both sides: peduncles 1.5-3 cm. long: fr. black, about 5 mm. thick, 1-seeded. Fl.vi; fr.ix-x. B.B.1:529. N. J. to Fla. west to Kans. and N. Mex. Intr. 1720. Zone VI.

8. *S. glauca* Walt. CAT-BRIER. Partially evergreen: underground stems spiny, tuberosus, with long rhizomes: stems and brs. terete, slender, with scattered stout prickles or unarmed; brts. slightly angular: lvs. ovate or broad-ovate, abruptly acuminate, rounded or subcordate at base, 5-7 cm. long, glaucous beneath (sometimes the whole plant glaucous): peduncle 1-2.5 cm. long; fr. blue-black, bloomy, 6-8 mm. thick. Fl.vi; fr.ix-x. G.F.5:425. B.M. 1846(c). W.D.2:t.111. Mass. to Fla. and Tex. Cult. 1664. Zone V.

9. *S. menispermoides* A. DC. Deciduous: climbing to 3 m., unarmed; brs. nearly terete, brts. slightly angled: petioles 7-10 mm. long, with the tendrils near the apex: lvs. ovate, rounded at base, 3-7 cm. long, 1.5-4 cm. broad, glaucescent beneath, 5-7-nerved; peduncle 2-3, in fr. to 4 cm. long; pedicels slender, 5-8 mm. long: fr. blue-black, 5-8 mm. thick. Fl.vi; fr.x. Himal., W. China. Intr. 1908. Zone VI?

10. *S. longipes* Warb. Deciduous: climbing to 5 m.; brs. nearly terete, with scattered short, slightly reflexed prickles: lvs. elliptic to ovate-oblong, abruptly pointed, rounded or broad-cuneate at base, 6-12 cm. long, 3.5-7 cm. broad, with cartilaginous margin, glaucescent beneath, 5-7-nerved; peduncle 2.5-8 cm. long; pedicels 1.5-2 cm. long: fr. blue-black, 6-7 mm. thick, usually 3-seeded. Fl.v; fr.x. C. China. Intr. 1907. Zone VII.

11. *S. megalántha* C. H. Wright. Evergreen: climbing to 6 m.; brs. with stout spines; brts. angled: lvs. ovate to narrow-oblong, acuminate or abruptly pointed, broadly cuneate or obtuse at base, 6-12 cm. long, 3-5 cm. wide, glaucescent beneath, 3-5-nerved; peduncles 1-3 cm. long; pedicels 0.5-2 cm. long: fr. red, 1.2 cm. across, often 1-seeded. G.C.68:251. Fl.v; fr.x. China. Intr. 1907. Zone VII? Handsome with its large coral-red frs. and evergreen lustrous lvs.

12. *S. China* L. Deciduous: climbing to 5 m.; brs. and brts. more or less angled, with few small spines or unarmed: lvs. usually elliptic, abruptly pointed, broad-cuneate or rounded, 5-7 cm. long, 2.5-3.5 cm. broad, sometimes roundish and subcordate and as broad as long, green beneath, 5-nerved; peduncle 1.5-3 cm. long; pedicels about 1 cm. long: fr. red, 8-10 mm. thick; seeds several. Fl.vi; fr.ix-x. C. and E. China. China, Japan, Korea. Intr. before 1759 and again 1907. Zone VI?

Related species: *S. biflora* Miq. Dwarf shrub to 30 cm.; stems zigzag, spiny or unarmed: lvs. broad-oval to elliptic-oblong, 2.5-5 cm. long; petiole short; stipules with abortive tendrils: peduncles 3-10 mm. long, usually 2-fld.; pedicels 2-5 mm. long; fr. 6-8 mm. across, red. Japan: Intr. 1864. Zone VII?

13. *S. excelsa* L. Deciduous: tall climber: brs. angled, with stout straight prickles to 7 mm. long: lvs. triangular-ovate to orbicular-ovate, acute or abruptly pointed, truncate or subcordate at base, 4-8 cm. long, 3.5-7.5 cm. wide, green beneath, 5-7-nerved: peduncle about 1.5 cm. long; pedicels 5-7 mm. long; fr. red, about 1 cm. thick; seeds 3-1. Fl.v-vi; fr.x-xi. N.D.1:t.54. S. E. Eu., W. Asia to Persia, Azores. Intr. 1739. Zone VI.

14. *S. lanceolata* L. Evergreen: climbing to 10 m.; with fleshy tubers; stems stout, glaucous when young, with stout recurved prickles below; brs. slightly angled: lvs. rather thin, ovate-lanceolate to lanceolate, acute or acuminate, cuneate at base, 5-8 cm. long, dull green or glaucescent beneath, 5-7-nerved; peduncle 6-15 mm. long; pedicels 5-14 mm. long; fr. dark red, 5-7 mm. thick, usually 2-seeded. Fl.vi; fr.x. B.B.1:530. Va. to Fla., w. to Ark. and Tex. Intr. 1737. Zone VII. Of vigorous growth with dense bright green foliage.

15. *S. laurifolia* L. FALSE CHINA-BRIER. Evergreen: high climbing; stem armed with stout straight prickles; brs. angled, unarmed: lvs. coriaceous, elliptic to oblong-lanceolate, acute or acuminate, cuneate at base, 6-12 cm. long, dark green above, glaucescent below, 3-nerved; peduncle 4-20 mm. long; pedicels 4-6 mm. long; fr. globose-ovoid, 4-6 mm. long, usually 1-seeded. Fl.vii-viii; fr. the following year. B.B.1:530. N. J. to Fla., w. to Ark. and Tex. Intr. 1739. Zone VII.

16. *S. vaginata* Dene. Deciduous: climbing to 3 m. or shrubby: stem and branches terete, unarmed; petioles 5-15 mm. long, vaginate below the middle and gradually narrowed into the slender upper part, without tendrils: lvs. thin, ovate, acute or short-acuminate, rounded or subcordate at base, 3-6.5 cm. long, 1.5-3 cm. wide, pale or glaucescent beneath, 3-5-nerved: peduncle slender, 1-3 cm. long; pedicels slender, to 1 cm. long; fr. black, 8-10 mm. thick, 1-2-seeded. Fl.vi; fr.x-xii. Himal., W. China. Intr. 1908. Zone VI?

17. *S. trachypoda* Norton. Deciduous: 1-4 m. tall, upright or climbing; stems terete, unarmed: petioles 1.5-3 cm. long, papillose-pubescent, gradually narrowed from a vaginate base, without tendrils: lvs. ovate, acuminate, cordate at base, 7-10 cm. long, 4-6 cm. wide, entire or slightly erose at the margin, veins 5-7, papillose-pubescent below toward the base: peduncles 3-5 cm. long; pedicels 3-10 mm. long, those of the staminate fls. 10-15 mm. long; fr. blue-black, bloomy, 6-8 mm. thick, 1-2-seeded. Fl.vi; fr.x. C. and W. China. Intr. 1908. Zone VII?

18. *S. discotis* Warb. Deciduous: climbing to 5 m.; stems nearly terete, like the angled or grooved brs. with scattered hooked prickles or unarmed; petioles usually 2-4 mm. long; stipules as long or longer, dilated into a broad auricle, rarely petiole about 5 mm. long and exceeding the auricle, without or with short tendrils: lvs. ovate to ovate-lanceolate, acute or acuminate, cordate or rarely rounded at base, 3-9 cm. long, 1.5-4 cm. broad, glaucous and coarsely reticulate beneath, 3-5-nerved; peduncle 1-4 cm. long; pedicels 5-10 mm. long; fr. blue-black, 6-8 mm. thick. Fl.vi; fr.x. C. & W. China. Intr. 1908?—*S. d. concolor* Norton, var. Lvs. larger, to 9 cm. long and to 5 cm. wide, green beneath; petioles 5-10 mm. long, stipules somewhat shorter, more often with tendrils. C. China. Intr. 1907. Zone VII?

19. *S. áspera* L. Evergreen: climbing: stems and the zigzag brs. angled, with short stout prickles or unarmed: lvs. deltoid-ovate to lanceolate, usually cordate at base, or broad-cuneate, 4-12 cm. long, often prickly on the margin and on the midrib below, often blotched with white, green below, 5-9-nerved: fls. greenish white, sweet-scented, in 5-7-fld. clusters forming axillary and terminal racemes 3-10 cm. long: fr. red, 6 mm. thick, usually 3-seeded. Fl. viii-ix; fr. i-iii. L.B.18:1799(c). Gt.46:t.1443(c). G.C.II:22:784. Gn.62:397. S. Eu. to India. Intr. about 1650. Zone VII.—*S. a. maculata* (Roxb.) A. DC., var. Lvs. blotched with white. Gt.20:t.683(c). (*S. a. var. punctata* Reg.)—*S. a. mauritânica* (Desf.) Gren. & Godr., var. A robust form with larger lvs. and fewer spines. F.S.10:t.1049. (*S. m. Desf.*) Medit. reg.

6. *YUCCA* L. *YUCCA*. Evergreen plants with thick, simple or branched stem, or acaulescent; the long sword-shaped lvs. crowded into dense terminal clusters; fls. perfect, cup- or saucer-shaped, large, usually pendent, white, sometimes tinged with violet, in large usually erect, terminal panicles or racemes; petals distinct or nearly so, thickish; stamens much shorter than the petals, with fleshy filaments and small sagittate anthers; style short, with 3 stigmas: fr. ovoid to oblong, more or less 6-angled, incompletely 6-celled, capsular and usually dehiscent, or fleshy and indehiscent; seeds compressed, subglobose to obovoid, black. (Yuca, the Carib name for the manihot, erroneously applied by Gerarde to this plant.) About 30 species in N. and C. Am.—Besides the species described below many hybrids are cult. in European gardens, but they are little known in this country. For monographs see Trelease in Rep. Mo. Bot. Gard. 13:42-116, 99 pl. (1902); Molon, Le Yucche (1914); and McKelvey, Yuccas of the S. W. U. S. 150 pp., 80 pl. (1938).

- A. Lvs. entire, with marginal threads.
- B. Lvs. nearly flat: fr. dehiscent, capsular.
- C. Lvs. 2-4 cm. wide.
- D. Lvs. upright ..... 1. *Y. filamentosa*
- DD. Lvs. flaccid, recurving ..... 2. *Y. flaccida*
- CC. Lvs. 8-12 mm. wide ..... 3. *Y. glauca*
- BB. Lvs. concave, thick and rigid, about 5 cm. wide: fr. fleshy, indehiscent ..... 6. *Y. baccata*
- AA. Lvs. denticulate at first, finally slightly filiferous, nearly flat: fr. dry, indehiscent.
- B. Lvs. stiff ..... 4. *Y. gloriosa*
- BB. Lvs. flaccid, recurving ..... 5. *Y. recurvifolia*

1. *Y. filamentosa* L. ADAMS NEEDLE. Acaulescent, spreading by short stolons: lvs. erect and spreading, linear-lanceolate, acute, 25-75 cm. long, slightly or scarcely glaucous, with numerous curly threads at the margin: panicle 1-3 m. tall, rather broad, usually glabrous; fls. pendulous, yellowish white, 5-7 cm. across: fr. 5 cm. long; carpels rounded on back. Fl. vii-viii. B.M.900(c). G.C.37:187. R. Mo. 13:t.8-12(h). S. C. to Miss. and Fla. Cult. 1675. Zone IV.—*Y. f. variegata* Carr. Lvs. striped with yellow or white. L.H.t.50(c).—*Y. f. concava* (Haw.) Bak., var. Lvs. stiff, concave, to 10 cm. broad. R. Mo. 13:t.10.

*Y. f. × glauca*; see under No. 3.

2. *Y. flaccida* Haw. Similar to the preceding species but lvs. gradually attenuate, recurving, with thinner straighter threads: panicle usually pubescent, shorter: carpels with angular back. Gn.58:447;78:433. R. Mo. 13:t.12-17(h). N. C. to Ala. Intr. 1816. Zone IV.—*Y. f. major* (Bak.) Rehd., var. Lvs. glaucous, broader: panicle pubescent; petals narrower. B.M.6316(c). (*Var. glaucescens* Trel., *Y. orchoides major* Bak.)—*Y. f. integra* Trel., f. Lvs. smaller, without fibres on the margin. B.M.2662(c, as *Y. glauca*).—*Y. f. orchoides* Trel., f. Lvs. stiffer, more erect, without fibres on the margin: infl. racemose. R.H.1861:370.

3. *Y. glauca* Nutt. Acaulescent or with prostrate short stem: lvs. narrow-linear, 30–70 cm. long, 6–12 mm. broad, grayish or glaucous green, with a narrow white margin, with few threads: fls. pendulous, greenish white, 6–7 cm. long, in a narrow, rarely branched inf. 1–2 m. tall; style swollen, green. Fl.vii–viii. B.M.2236(c). Gn.76:402. F.E.14:34(h). R. Mo. 13:t.25(h). (*Y. angustifolia* Pursh.) S. D. to N. Mex. Intr. about 1656. Zone IV.—*Y. g. stricta* (Sims) Trel. With a distinct erect stem and a larger branched inf. B.M.2222(c). Gn.8:130. R. Mo. 13:t.26(h). (*Y. stricta* Sims.)—*Y. g. rósea* D. M. Andrews. Fls. tinted rose-pink outside.

*Y. g. × filamentosa* = *Y. karlsruhénsis* Graebener. Lvs. about 2 cm. wide: inf. branched below the middle. G.W.10:83(h). M.G.50:296(h). Orig. 1899. Zone IV.

Related species: *Y. angustissima* Trel. Acaulescent; lvs. narrow-linear, 20–40 cm. long, 2–5 mm. broad, white-bordered, filiferous: inf. 1–1.5 m. tall, racemose with few short brs. at base; style oblong, white; fr. smaller. R.Mo.13:t.23, f.1,t.24,f.1. Utah, Nev. to Ariz. Cult. 1933. Zone VII?—*Y. rupicola* Scheele. Acaulescent; lvs. 30–60 cm. long, 2.5–3.5 cm. broad, finely denticulate, not filiferous on margin: inf. paniculate, 1.5–2 m. tall; fls. 5–6 cm. long. B.M.7172 (c). R.Mo.3:t.51. Tex. Intr. about 1850. Zone VII?—*Y. Harrimániae* Trel. Acaulescent: lvs. linear to spatulate-lanceolate, 20–40 cm. long, 6–15, rarely to 40 mm. broad, glaucous, with brown fibrous margin: inf. 25–50 cm. high, racemose; fls. greenish; style slender, oblong. R.Mo.13:t.28,29. Utah to Colo. Cult. 1936. Zone VI?—*Y. neomexicana* Woot. & Standl. Acaulescent, caespitose; lvs. linear-lanceolate, 25–30 cm. long, 8–10 mm. broad, with white filiferous margin: inf. 60–90 cm. high, racemose; fls. white, about 4 cm. long; style short, swollen. (*Y. Coloma* D. M. Andrews.) N. Mex. Cult. 1933. Zone VII?

4. *Y. gloriósa* L. With a short trunk and caespitose, or sometimes to 5 m. tall and branched: lvs. stiff, straight, 40–60 cm. long, 5–6 cm. broad, spine-tipped, nearly flat, smooth, glaucous green, usually with a few teeth while young and a few threads when old: panicle narrow, 1–1.5 m. tall; fls. pendulous, creamy white, often tinged with purple: fr. oblong-ovoid, 5–6 cm. long. Fl.vii–ix. S.S.10:503. G.C.28:262. R. Mo. 13:t.43,44(h). (*Y. acuminata* Sweet.) S. C. to Fla. Intr. about 1550. Zone VII.—*Y. g. robústa* Carr. The outer lvs. usually somewhat recurving. B.M.1260(c).—*Y. g. nobilis* Carr. Similar, but lvs. glaucous. Ref. Bot. 5:t.317. (*Y. gloriosa* var. *Ellacombei* Bak.)—*Y. g. plicáta* Carr. With glaucous lvs. plicate toward the end. Gn.49:332. G.C.III.8:692;15:304.—*Y. g. supérba* Bak., var. is similar, but taller and green.

5. *Y. recurvifolia* Salisb. To 2 m. tall and more or less branched: lvs. 0.5–1 m. long, 3.5–5.5 cm. broad, nearly plane, flexible, recurved, at first glaucous, narrowly yellow- or brown-margined: fls. 5–7 cm. across, creamy white, in narrow panicles to 1 m. tall: fr. 5–6 cm. long, erect. Gt.17:t.580(c). Gn.47:337(h). R. Mo. 13:t.46,47(h). B.S.1:58,t(h). (*Y. gloriosa* r. Engelm., *Y. recurva* Haw., *Y. obliqua* Reg., *Y. pendula* Groenl.) Coast of Ga. and Miss. Intr. 1794. Zone VI.—*Y. r. margináta* (Carr.) Trel., f. Lvs. bordered with yellow.—*Y. r. variegáta* (Carr.) Trel., f. Lvs. striped with yellow.

6. *Y. baccáta* Torr. Nearly acaulescent or with short prostrate trunk: lvs. rigid, spreading, about 60 cm. long, concave, rough, narrowly brown-bordered, coarsely filiferous: fls. pendulous, 7–8 cm. long, in an upright dense panicle about 1 m. tall: fr. conic-ovoid, very large, to 20 cm. long, fleshy. G.C.28:103. I.H.20:115. R.H.1887:368. McKelvey, t.8–12. Colo. to N. Mex. and Nev. Intr. about 1887. Zone VII.

7. **DASYLIRION** Zucc. Evergreen plants with thick simple stem or acaulescent; lvs. crowded, rigid, narrow, with spiny margin: fls. dioecious, small, white, rarely purplish, in crowded spikes forming long narrow panicles;

perianth campanulate, of 6 distinct segments, usually the outer whorl toothed, the inner entire; stamens 6, exserted; ovary 1-celled, stigmas 3: fr. 1-seeded, dry, indehiscent, 3-winged. (Greek *dasys*, dense, crowded, and *leirion*, lily; referring to the crowded lvs. and crowded fls.) About 15 species in Mexico, Texas and Ariz.

**D. texanum** Scheele. Stem to 40 cm. tall; lvs. linear, 50-90 cm. long, 1-3 cm. broad, margin with hooked prickles, splitting into fibres near apex: scape 3-5 m. tall, with conspicuous ovate to ovate-lanceolate bracts, often longer than the fl.-spikes; perianth 2-3 mm. long: fr. 6-7 mm. long. Tex. Cult. 1930. Zone VII.

## ADDITIONS AND EMENDATIONS

Page 240, between No. 43 and No. 44 insert:

Related species: *B. reticulata* Bihouwer. Brs. purple-brown the second year: lvs. obovate to oblong-obovate, 2-4 cm. long, spinulose-serrulate, grayish and reticulate beneath: racemes subumbellate, 3-8-fld., with the short peduncle 1.5-2 cm. long; fr. oval, 7-10 mm. long, red, slightly pruinose. N. China. Introduced 1910. Zone V.

Page 260, at end of *Lindera cercidifolia* insert:

Related genus: *Laurus* L. LAUREL. Evergreen, very aromatic: lvs. entire, penninerved: fls. dioecious, in axillary peduncled 4-bracted umbels; staminate with 8-14, usually 12, stamens; pistillate with 4 staminodes; sepals 4. Two species in the Mediterr. reg.—*L. nobilis* L. SWEET BAY. Shrub or tree to 10 m., glabrous, lvs. short-stalked, elliptic to elliptic-lanceolate, 5-10 cm. long, cuneate, acute to short acuminate, often with crisp margin, reticulate beneath: fls. greenish-white, about 1 cm. across: fr. ovoid 1.5-2 cm. long, dark green, finally black. R.I.12:t.673(c). F.D.10:t.938(c). H.M.4,1:t.122(c). Cult. since ancient times. Zone (VI). The laurel of history and poetry; often grown in tubs for decoration; easily trimmed into formal shapes. Lvs. used as condiment, the oil of the fr. in perfumery.

Page 441, under No. 34, after *Rosa Macounii* insert:

—*R. ultramontana* (S. Wats.) Heller. Prickles slender, straight: lvs. oval to oval-oblong, puberulent and dull green beneath; stipules narrow, except the upper ones: fls. several. B. C. to N. Calif., Utah and Wyo. Cult. 1888. Zone V.

Page 452, at end of *Maddenia hypoleuca*, add:

Closely related species: *M. hypoxantha* Koehne: Lvs. yellowish green and appressed-pubescent beneath, at least on the veins. W. China. Intr. ?

Page 535, insert before 4. *Daphniphyllum*:

Gen. 1-3 belong to the tribe PHYLLANTHOIDEAE Pax, Gen. 4 to DAPHNIPHYLLOIDEAE, the following to CROTONOIDEAE: *Sapium* P.Br. Shrubs or trees. deciduous or evergreen, glabrous: lvs. alternate, entire; petioles usually biglandular at apex: fls. monoecious, in terminal racemes or panicles; calyx 3-lobed or 3-fid.; male fls. several in the axils of bracts, with 2-3 stamens; pistillate fls. at base of inf.; ovary 2-3-celled, cells 1-ovuled; styles free or connate at base: fr. a crustaceous or fleshy caps. More than 100 species trop. or subtrop.—*S. sebiferum* Roxb. CHINESE TALLOW-TREE. Tree to 10 m.: lvs. broadly rhombic-ovate or suborbicular, 3.5-7 cm. long and about as broad, abruptly acuminate, broad-cuneate; petioles 2-5 cm. long, slender; racemes slender, 5-10 cm. long; caps. subglobose, 1-1.5 cm. across, seeds subglobose with waxy coat. E.N.R.19c:201. B.T.601 (*Ecoecaria sebifera* Muell.-Arg.) China; nat. in s.e. N.Am. Cult. 1850. Zone VII. The waxy seed coat used for candles in China. Lvs. turning red in fall.

Page 542, add at end of No. 1. *Rhus glabra*:

—*R. g. cismontana* (Greene) Daniels. Low: lfts. 11-13, 4-8 cm. long; infl. in fr. pyramidal, compact. Mont. and Neb. to Ariz. Cult. 1916.—*R. g. flavescens* (D. M. Andr.) Rehd., f. A form of the preceding var. with yellow fr.; lvs. turning yellow in fall. Cult. 1925.

Page 611, under No. 5 after Related species, before *Vitis Longii* insert:

*V. novae-angliae* Fern. Lvs. suborbicular or reniform-ovate, indistinctly 3-lobed, with broad deltoid teeth, pilose beneath at least on the veins and with

## ADDITIONS AND EMENDATIONS

cobwebby pubescence when young, usually rufescent at first: fr. 1.2-1.6 cm. across. Me. to Conn. Intr. 1918. Zone III.—

Page 634, after *Camellia cuspidata* add:

To the Sect. THEA (L.) Cohen Stuart, differing in its long-stalked fls., persistent calyx and pubescent ovary belongs *C. sinensis* (L.) Ktze. TEA. Shrub or tree to 15 m.: lvs. short-petioled, elliptic-lanceolate to elliptic, 4-12 cm. long, obtusish or obtusely short-acuminate, cuneate, crenate-serrate, glabrous: fls. 2.5-3.5 cm. across, white, nodding, 1-3 in the axils on stalks about 1 cm. long: ovary pubescent: seeds subglobose, 1.5 cm. across. B.M.988,3148(c). H.A.7:t. 28(c). E.P.R.21:130. (*C. Thea* Lk., *C. theifera* Griff., *Thea s. L.*, *Th. chinensis* Sims, *Th. Bohea* L., *Th. viridis* L.) Assam, much cult. in China. Intr. about 1770. Zone VII.

Page 751, after No. 8. *V. corymbosum* insert:

*V. c.* × *angustifolium* = *V. atlanticum* Bickn. Shrub to 1 m.: lvs. elliptic-oblong to elliptic-lanceolate, 3-5 cm. long, ciliolate-serrulate, usually pubescent only on the midrib beneath, rarely glabrous: corolla usually urceolate: fr. blue, glaucous. U. S. to N. Y. w. to Wis. Cult. 1905. Zone III.

Page 805, at end of 2. *Vitex Negundo* add:

Related species: *V. rotundifolia* L. f. Prostrate or ascending to 1 m.: lvs. simple, obovate to oval, 2-6 cm. long, rounded to obtusish at apex, broad-cuneate, entire, white tomentulose beneath: panicles 4-12 cm. long, 1.5-4 cm. wide at base, rather loosely branched; fls. blue, 1-1.5 cm. long, upper lip much longer than lower. N.K.14:t.11 (*V. orata* Thunb., *V. trifolia* var. *simplicifolia* Cham., *V. t.* var. *unifoliolata* Schau.) Mal. to E. Asia, n. to Shantung and Korea. Cult. 1930. Zone VII.

## GLOSSARY

**Abortive.** Imperfectly or not developed; barren.

**Achene.** A dry indehiscent, 1-celled and 1-seeded fruit or carpel.

**Acicular.** Needle-shaped.

**Actinomorphic or actinomorphic.** Capable of division by two or more planes into equal halves.

**Aculeate.** Prickly; beset with prickles.

**Acuminate.** Tapering at the end; long-pointed.

**Acuminulate.** Abruptly ending in a short point.

**Acute.** Sharp-pointed; ending in a point.

**Achnate.** United with another part, as the filament with the corolla-tube or an anther attached for its whole length to the filament.

**Aestivation.** The arrangement of the parts of the perianth in the bud.

**Albumen.** The nutritive material surrounding the embryo in the seed.

**Albuminous.** Having albumen.

**Alternate.** Not opposite to each other on the axis.

**Ament.** A catkin.

**Amphitropous (ovule).** Half-inverted and straight with the hilum lateral.

**Anastomosing (veins).** Connecting by cross-veins and forming a network.

**Anatropous (ovule).** Inverted and straight with the micropyle next to the hilum.

**Andro-dioecious.** Staminate and bisexual flowers on different plants.

**Androgynophore (or Androphore).** Stipe-like elongation of the floral axis between perianth and stamens.

**Androgynous.** With both staminate and pistillate flowers in the same inflorescence.

**Andro-monoecious.** Staminate and bisexual flowers on the same plant.

**Angiospermous.** Having the seeds borne within a pericarp.

**Annular.** In the form of a ring.

**Anterior.** On the front side of the flower toward the subtending bracts.

**Anther.** The pollen-bearing part of the stamen.

**Apetalous.** Having no petals.

**Apical.** At the apex or summit of an organ.

**Apiculate.** Contracted into a minute point.

**Apophysis (in Pinus).** The exposed, mostly swollen part of the cone-scales.

**Appressed.** Lying close and flat against.

**Aril.** An appendage growing out from the hilum and covering the seed partly or wholly.

**Aristate.** Awned; tipped by a bristle.

**Articulate.** Jointed; having a node or joint.

**Ascending.** Rising somewhat obliquely and curving upward.

**Attenuate.** Slenderly tapering.

**Auriculate.** Furnished with ear-shaped appendages (auricles), as the base of a petal or leaf.

**Avi-shaped.** Tapering from the base to a slender and stiff point.

**Azil.** The upper angle formed by a leaf or branch with the stem.

**Axile.** Belonging to the axis, chiefly used in reference to the position of the placenta.

**Axillary.** Situated in an axil.

**Azis.** The central line of an organ or the support of a group of organs.

**Baccate.** Berry-like; pulpy or fleshy.

**Basifixed.** Attached or fixed by the base.

**Beaked.** Ending in a beak or prolonged tip.

**Bearded.** Ending in a long awn or furnished with long or stiff hairs.

**Berry.** A fruit with the whole pericarp fleshy or pulpy.

**Bi- or bis-.** A Latin prefix signifying two or twice.

**Bifid.** Two-cleft.

**Bilabiate.** Two-lipped.

**Bipinnate.** Twice pinnate.

**Bisexual.** Having both stamens and pistils; hermaphrodite.

**Blade.** The expanded portion of the leaf.

**Bract.** A modified reduced leaf subtending a pedicel or peduncle or belonging to an inflorescence or occurring at the base of shoots.

**Bractlet.** A secondary bract, particularly as borne on the pedicel.

**Bracteate.** Having bracts.

**Branchlet.** A small branch, referring to the branches of the currant and usually also to those of the preceding year.

**Bullate.** Blistered or puckered.

**Caducous.** Falling off very early.

**Calyz.** The outer perianth of the flower.

**Campanulate.** Bell-shaped.

**Canaliculate.** Longitudinally channeled.

**Canescent.** Gray-pubescent and hoary.

**Capitate.** Head-like; collected into a dense cluster.

**Capsular.** Belonging to or of the nature of a capsule.

**Capsule.** A dry dehiscent fruit of more than one carpel.

**Carinata.** Keeled.

**Carpel.** A simple pistil or a member of a compound pistil.

**Catkin.** A scaly-bracted spike of usually unisexual flowers.

**Cell.** One of the minute vesicles of which plant tissues are formed; also a cavity of an anther or ovary.

**Chaff.** A small thin scale or bract; particularly on the receptacle of the Compositae.

**Channeled.** Deeply grooved longitudinally.

**Chartaceous.** Having the texture of stiff writing paper.

**Ciliate.** Fringed with hairs.

**Ciliolate.** Minutely ciliate.

**Circinate.** Involute from the top into a coil.

**Circumscissile.** Dehiscing by a transverse circular line; the upper part usually coming off as a lid.

## GLOSSARY

*Clasping.* Said of the base of a leaf partly or wholly surrounding the stem.  
*Clavate.* Club-shaped; gradually thickened upward.  
*Cleistogamous.* Closed, self-fertilized flowers.  
*Coalescent.* Two or more similar parts united.  
*Coetaneous.* Appearing or existing at the same time, as leaves and flowers in some trees and shrubs.  
*Coherent.* Two or more similar parts or organs joined.  
*Columnar.* Having the shape of a column.  
*Compound.* Composed of two or more similar parts as a compound leaf, or an inflorescence with the flowers on axes of the second or a higher order.  
*Conduplicate.* Folded together lengthwise.  
*Conelet.* The young cone in *Pinus* during the first season after fertilization.  
*Connate.* United; joined into one organ.  
*Connective.* The portion of the stamen which connects the cells of an anther.  
*Connivent.* Converging; coming together, but not connate.  
*Convolute.* Rolled up longitudinally.  
*Cordate.* Heart-shaped; usually referring to the base of a leaf with two rounded lobes and a sinus.  
*Coriaceous.* Of leathery texture.  
*Corolla.* The inner series of floral envelopes, consisting of either connate or distinct petals.  
*Corona.* An appendage on the inside of the corolla, usually near the throat.  
*Corymb.* A flat-topped or convex flower-cluster with the outer flowers opening first.  
*Cotyledon.* The primary leaf or leaves in the embryo.  
*Crenate.* Toothed with rounded, shallow teeth.  
*Crenulate.* Finely crenate.  
*Crested.* With an irregular or toothed ridge.  
*Crown.* Same as corona or an annular outgrowth at the top of an organ.  
*Cucullate.* Hooded or hood-shaped.  
*Culm.* The stem of grasses and sedges.  
*Cuneate.* Wedge-shaped; triangular, with the narrow end at point of attachment.  
*Cuspidate.* Sharp-pointed; ending in a sharp pointed cusp.  
*Cyme.* A convex or flat flower-cluster of the determinate type; the central flowers opening first.  
*Cymose.* Arranged in cymes; cyme-like.  
*Deciduous.* Falling, not persistent.  
*Decomound.* More than once compound.  
*Decumbent.* Reclining, but with the ends ascending.  
*Decurrent (leaf).* Extending down the stem below the insertion.  
*Decussate.* Alternating in pairs at right angles; opposite leaves forming four longitudinal rows.  
*Dehiscent.* Opening to emit the contents, as a capsule or anther.  
*Deliquescent.* Said of a trunk of a tree dividing into several stems or limbs, without main axis.  
*Deltaoid.* Triangular; delta-like.  
*Dentate.* Toothed with the teeth directed outward.  
*Denticulate.* Minutely dentate.  
*Depressed.* Flattened from above.  
*Di, dia.* Greek prefix, signifying two or twice.

*Diaphragm.* A cross-partition at the nodes of hollow or pithy stems or branches.  
*Dichotomous.* Forked regularly in pairs.  
*Didynamous.* With four stamens in pairs of unequal length.  
*Diffuse.* Loosely or widely spreading.  
*Digitate.* With the members arising from one point.  
*Dimorphous or dimorphic.* Occurring in two forms.  
*Dioecious.* Staminate and pistillate flowers on different plants.  
*Diplostemonous.* Flowers with twice as many stamens as petals, the outer opposite to the sepals.  
*Discoid.* Resembling a disk; discoid head (in *Compositae*), one without ray-flowers.  
*Disk.* A development of the receptacle at or around the base of the pistil.  
*Dissected.* Divided into many narrow segments.  
*Dissepiment.* A partition in an ovary or fruit.  
*Distichous.* Arranged in two vertical ranks; two-ranked.  
*Distinct.* Separate; not united with parts of the same series; not connate; also evident.  
*Divaricate.* Spreading; widely divergent.  
*Divided.* Separated to the base.  
*Dorsal.* Relating to the back or outer surface of an organ.  
*Double.* Said of flowers with more than the normal number of floral envelopes, particularly of petals.  
*Drupe.* A fleshy indehiscent fruit with a bony, usually one-seeded endocarp.  
*Drupelet.* A drupe in a fruit consisting of an aggregate of small drupes as in *Rubus*.  
*E, ex.* A Latin prefix usually denoting that parts are missing, as exstipulate, without stipules.  
*Ellipsoid.* A solid body elliptic in the longitudinal section.  
*Elliptic.* With an outline of an ellipse and about two times as long as wide.  
*Emarginate.* With a shallow notch at the apex.  
*Embryo.* The rudimentary plant within the seed.  
*Endocarp.* The inner layer of the pericarp.  
*Entire.* Without toothing or division.  
*Epigynous.* Borne on the top of the ovary.  
*Epiphytic.* Growing on other plants, but not parasitic.  
*Erose.* With jagged margin, as if gnawed.  
*Estipulate.* See exstipulate.  
*Exalbuminous.* Without albumen.  
*Excurrent.* With a projecting tip, as the nerve of a leaf projecting beyond the margin.  
*Exfoliating.* Peeling off in thin layers.  
*Ezocarp.* The outer layer of the pericarp.  
*Exserted.* Prolonged beyond the surrounding organs, as stamens from the corolla.  
*Exstipulate.* Without stipules.  
*Extrastaminal.* Like intrastaminal, chiefly used in reference to the disk, whether it is inside (intrastaminal) or outside (extrastaminal) of the stamens.  
*Extrorse.* Facing outward.  
*Eye.* The differently colored centre of a flower.  
*Falcate.* Sickle- or scythe-shaped.  
*Fascicle.* A dense cluster.

# GLOSSARY

**Fascicled.** Borne in dense clusters; said of several or many long hairs arising from a common base.

**Fastigate.** With stems or branches erect and near together.

**Ferrugineous.** Rust-colored.

**Fertile.** Capable of producing fruit or seeds; also said of pollen-bearing anthers.

**Fibro-vascular.** Composed of woody fibres and ducts.

**Filament.** The stalk of an anther.

**Filiform.** Thread-like; very slender and terete.

**Fimbriate.** Fringed.

**Flaccid.** Not rigid; lax and weak.

**Floccose.** Clothed with flocks of soft hair or wool.

**Floriferous.** Flower-bearing.

**Foliaceous.** Leaf-like in texture or appearance.

**Follicle.** A dry dehiscent fruit or carpel opening only along one suture.

**Foveolate.** Pitted.

**Free.** Not joined to other organs; not adnate.

**Fruit.** The seed-bearing product of a plant.

**Fruticose.** Shrubby; with woody persistent stems and branches.

**Frutescent.** Nearly shrubby.

**Fugacious.** Falling or withering away very early.

**Funicle.** The stalk of an ovule or seed.

**Funnelform.** Said of a corolla with the tube gradually widening upward into the spreading limb.

**Furrowed.** With longitudinal channels or grooves.

**Fuscous.** Grayish brown.

**Fusiform.** Spindle-shaped, narrowed toward the ends from a swollen middle.

**Gamopetalous.** Having the petals more or less united.

**Geniculate.** Bend abruptly like a knee.

**Gibbous.** Swollen on one side.

**Glabrate.** Nearly glabrous or becoming glabrous with age.

**Glabrescent.** Becoming nearly glabrous with age.

**Glabrous.** Not hairy.

**Gland.** A secreting part or appendage, but often used for gland-like organs.

**Glandular.** Bearing glands or gland-like appendages.

**Glaucous.** Covered with a bloom; bluish white or bluish gray.

**Glomerate.** In compact clusters.

**Glomerulate.** In small compact clusters.

**Glume.** A chaff-like bract; particularly one of the two empty bracts at the base of the spikelet in grasses.

**Granular, granulose.** Composed of or appearing as if covered by minute grains.

**Gymnospermous.** Bearing naked seeds, without an ovary.

**Gynophore.** The stipe of an ovary.

**Gynostegium.** The structure resulting from the union of stamens and pistil in Asclepiadaceae.

**Hastate.** Halberd-shaped; like an arrow-head, but with the basal lobes pointing outward nearly at right angles.

**Head.** A dense cluster or short dense spike of sessile or nearly sessile flowers.

**Heart-shaped;** see cordate.

**Heteromorphous.** Parts of different shape.

**Hilum.** The scar or point of attachment of the seed.

**Hirsute.** With rather coarse or stiff hairs.

**Hirtellous.** Minutely hirsute.

**Hispid.** Beset with rigid hairs or bristles.

**Hispidulous.** Minutely hispid.

**Hoary.** Covered with a close whitish or grayish white pubescence.

**Homogamous.** Bearing only one kind of flowers.

**Homomorphous.** Parts of like shape.

**Hybrid.** A plant resulting from a cross between two or more parents that are more or less unlike.

**Hypanthium.** The cup-shaped or tubular receptacle on which the perianth and the stamens are inserted.

**Hypogaeus.** Said of cotyledons remaining below ground.

**Hypogynous.** Borne on the receptacle beneath the ovary; said of stamens and petals.

**Hypostyle.** The free portion on the ventral side of the stone in Crataegus and Cotonaster, differing conspicuously in texture from the rest of the stone.

**Imbricate.** Overlapping, as shingles on a roof.

**Incised.** Sharply and more or less deeply and irregularly cut.

**Included.** Not protruding or exerted.

**Indehiscent.** Not opening.

**Inferior.** Beneath or below, as an inferior ovary, one that is below the perianth.

**Inflated.** Blown up; bladdery.

**Inflorescence.** The flowering part of the plant; mode of flower-bearing.

**Infra-.** In composition, below; as infra-stipular, below the stipules.

**Inserted.** Attached.

**Inter- or intra-.** In composition, between, as interpetiolar, between the petioles of opposite leaves like the stipules of many Rubiaceae.

**Internode.** The portion of the stem between two nodes.

**Intrastaminal.** See under extrastaminal.

**Introrse.** Facing inward toward the axis.

**Involucrel.** A secondary involucre.

**Involucre.** A whorl of bracts surrounding a flower-cluster or a single flower.

**Involute.** Rolled inward.

**Irregular flower.** Some parts different from other parts of the same whorl; usually applied to sygomorphous flowers.

**Keel.** A central ridge; the two anterior united petals of a papilionaceous flower.

**Laciniate.** Cut into narrow pointed lobes.

**Lamellate.** Having thin flat plates or a laterally flattened ridge, as lamellate pith, one consisting of thin transverse plates, also called chambered.

**Lanceolate.** Lance-shaped, about 4 times as long as wide and broadest below or about the middle.

**Leaf-cushion.** In Conifers the basal part of the leaf decurrent on the stem.

**Leaflet.** Part of a compound leaf.

**Legume.** The fruit of Leguminosae, consisting of a single carpel and dehiscent at maturity by one or two sutures.

# GLOSSARY

*Lemma*. The lower of the two bracts enclosing the flower in the Grasses.  
*Lepidote*. Beset with small scurfy scales.  
*Ligneous*. Woody.  
*Ligulate*. Provided with or resembling a ligule.  
*Ligule*. A strap-shaped organ; a usually scarious projection from the summit of the sheath in the Grasses.  
*Limb*. The expanded part of a petal, sepal or of the corolla.  
*Linear*. Long and narrow with nearly parallel margins.  
*Lip*. The divisions of a two-lipped corolla.  
*Lobe*. A segment of an organ, particularly if rounded.  
*Lobed*. Divided into or bearing lobes.  
*Lobulate*. Divided into small shallow lobes.  
*Locular*. In composition, having locules or cells, as bilocular, two-celled.  
*Locuticidal*. Dehiscent on the back of the cells of a capsule.  
*Lodicules*. Two or rarely 3 small hyaline scales at the base of the flower in Gramineae.  
*Lynate*. Pinnatifid with a large terminal lobe and small basal lobes.

*Macrostylous*. In dimorphous flowers the form with the longer style.  
*Marcescent*. Withering but persistent.  
*Medullary*. Pertaining to the pith or medulla.  
*Membranous*. Thin and rather soft.  
*-merous*. As 3-merous or 4-merous, with a *Mesocarp*. The middle layer of a pericarp.  
*Microgyle*. The orifice of the ovule and the whorl or whorls of 3 or 4 parts.  
*Microstylous*. In dimorphous flowers the form with the shorter style.  
*Midrib*. The central vein or rib of a leaf.  
*Monadelphous*. Stamens united in one group by their filaments.  
*Montiform*. Resembling a string of beads, as the legume of Sophora.  
*Monoecious*. With unisexual flowers of both sexes on the same plant.  
*Mucronate*. Tipped with a short abrupt point or mucro.  
*Mucronulate*. With a minute mucro.  
*Multinodal*; see p. 35.  
*Muricate*. Roughened with short hard points.  
*Mutic*. Said of the unarmed and obtuse umbo of the cone-scales in Pinus.

*Naked flower*. A flower without perianth.  
*Nectary*. A place or organ where sugar or nectar is secreted.  
*Nerve*. A slender unbranched rib or vein.  
*Nodal*. On or close to a node, relating to a node.  
*Node*. The place upon the stem which normally bears a leaf or leaves.  
*Nut*. An indehiscent one-seeded hard and bony fruit.  
*Nutlet*. A small nut or a small stone or stones of a drupaceous fruit.

*Ob-*. Latin prefix usually signifying inversion.  
*Obcordate*. Inversely heart-shaped.

*Obdiplostemonous* (flowers). With twice as many stamens as petals and the outer one opposite to the petals.  
*Ob lanceolate*. Lanceolate but broadest near the apex.  
*Oblique*. Unequal-sided.  
*Oblong*. About 3 times as long as wide and with nearly parallel sides.  
*Obovate*. Inversely ovate.  
*Obovoid*. Inversely egg-shaped.  
*Obsolete*. Not evident; rudimentary.  
*Ocrea*. A tubular stipule or a pair of stipules united into a sheath.  
*Odd-pinnate* (leaf). Pinnate with a terminal leaflet.  
*Orbicular*. Circular; round in outline.  
*Orthotropous* (ovule or seed). Erect with the micropyle at the apex.  
*Oval*. Broad-elliptic, about 1½ times as long as broad and round at the ends.  
*Ovary*. The ovule-bearing part of the pistil.  
*Ovate*. Having an outline like a hen's egg.  
*Ovoid*. An oval or ovate body.  
*Ovule*. The body which after fertilization becomes the seed.

*Palea*. The upper bract which with the lemma encloses the flower in Grasses.  
*Paleaceous*. Chafy.  
*Palmate* (leaf). Radiately lobed or divided, with 3 or more veins arising from one point.  
*Pandurate*. Fiddle-shaped; constricted about the middle.  
*Panicle*. A compound inflorescence of the racemose type with pediceled flowers.  
*Panicled, paniculate*. Borne in a panicle or resembling a panicle.  
*Papilionaceous* (corolla). Having a standard, wings and keel.  
*Papillose*. Bearing minute nipple-shaped projections.  
*Pappus*. The modified calyx-limb in Compositae; forming a crown of bristles, awns or scales.  
*Parietal*. Borne on or pertaining to the wall of a fruit.  
*Parted*. Cleft nearly but not quite to the base.  
*Pectinate*. Comb-like; pinnatifid with narrow, closely set segments.  
*Pedate*. Palmately divided with the lateral segments 2-cleft.  
*Pedice*. The stalk of a flower.  
*Pediceled or pedicellate*. Borne on a pedicef.  
*Peduncle*. The stalk of a flower-cluster; also used for the stalk of a solitary flower.  
*Peduncled or pedunculate*. Borne on a peduncle.  
*Peltate*. Shield-shaped; attached to its stalk inside the margin.  
*Pendulous*. Hanging.  
*Penninerved*. Nerves arising along a central midrib.  
*Perfect* (flower). Having both stamens and pistil; bisexual.  
*Perianth*. The floral envelope; commonly used when there is no clear distinction between calyx and corolla.  
*Pericarp*. The wall of the ripened ovary.  
*Perigynous*. Borne around the ovary and not at its base, as in flowers in which perianth and stamens are borne on a cup-shaped hypanthium.  
*Persistent*. Remaining attached; not falling off.

# GLOSSARY

*Petal.* One of the separate leaves of the corolla.  
*Petaloid.* Petal-like; resembling a petal in color and shape.  
*Petiole.* Leaf-stalk.  
*Petioled.* Having a petiole.  
*Petiolule.* Stalk of a leaflet.  
*Pilose.* With soft long straight hairs.  
*Pinna.* A primary division of a pinnate leaf.  
*Pinnate (leaf).* Compound, with the leaflets placed on each side of the rachis.  
*Pinnatifid.* Cleft or divided in a pinnate way.  
*Pinnatisect.* Cleft to the midrib in a pinnate way.  
*Pinnule.* A secondary pinna.  
*Pistil.* The seed-bearing organ of the flower consisting of ovary, style and stigma.  
*Pistillate.* Having a pistil and no stamens.  
*Pitted.* Marked with pits or small depressions.  
*Placenta.* Part of the ovary which bears the ovules.  
*Plicate.* Folded into plaits.  
*Plumose.* Feathery; furnished with long hairs, as the tail of the achene in some *Clematis*.  
*Pod.* A dry dehiscent fruit.  
*Pollen.* Spores or grains borne by the anther, usually granular.  
*Polygamous.* Bearing unisexual and bisexual flowers on the same plant.  
*Pome.* A fleshy fruit like the apple and the pear.  
*Posterior.* In an axillary flower the side nearest the axis.  
*Prickle.* A spine-like outgrowth from the bark or epidermis.  
*Procumbent.* Lying on the ground or trailing.  
*Prostrate.* Lying flat on the ground.  
*Pruinose.* Bloomy.  
*Puberulent or puberulous.* Minutely pubescent.  
*Pubescent.* Covered with hairs, particularly if short and soft.  
*Punctate.* With translucent or colored dots or depressions.  
*Pungent.* Termination in a rigid sharp point; acrid.  
*Pyriform.* Pear-shaped.

*Raceme.* A simple inflorescence of stalked flowers on a more or less elongated rachis.  
*Racemose.* In racemes or resembling a raceme.  
*Rachis.* An axis bearing flowers or leaflets.  
*Radiate.* Spreading from a common centre; with ray-flowers.  
*Radicle.* The portion of the embryo below the cotyledons.  
*Ray.* The branch of an umbel; the marginal flowers (ray-flowers) of an inflorescence if distinct; the strap-like part of the corolla of the ray-flowers in *Compositae*.  
*Receptacle.* The more or less expanded portion of an axis which bears the organs of a flower or the collected flowers of a head.  
*Recurved.* Curved downward or backward.  
*Reflexed.* Abruptly turned downward.  
*Regular (flower).* With the parts of each whorl alike.  
*Reniform.* Kidney-shaped.  
*Repend.* With a slightly sinuate margin.  
*Resin-ducts or resin-canals.* Canals in the plant-tissue containing resin.

*Retuse.* Slightly notched at the rounded apex.  
*Revolute.* Rolled backward; margin rolled toward the lower side.  
*Rib.* A primary or prominent vein in a leaf.  
*Rostrate.* Having a beak.  
*Rotate (corolla).* Wheel-shaped; with a flat and circular limb and without or with a very short tube.  
*Rufous.* Reddish brown.  
*Rugose.* Wrinkled.  
*Ruminant.* Appearing as if chewed. Said of albumen with deeply indented furrows.  
*Saccate.* Sac-shaped.  
*Sagittate.* Shaped like an arrow-head, with the basal lobes directed downward.  
*Salver-shaped (flower).* With a slender tube abruptly expanded in a flat limb.  
*Samara.* An indehiscent flattened fruit.  
*Scabrid.* Slightly rough to the touch.  
*Scabrous.* Rough to the touch.  
*Scale.* A minute leaf or bract, usually appressed or dry; minute gland-like flat appendages of the epidermis.  
*Scarious.* Thin and dry, not green.  
*Scobiform.* Having the appearance of saw-dust.  
*Seed.* The ripened ovule consisting of the embryo and its integuments.  
*Segment.* One of the parts of a leaf or other organ that is divided but not compound.  
*Sepal.* A division of the calyx.  
*Septicidal.* Dehiscing along or in the partitions.  
*Septifragal.* Dehiscing with the valves breaking away from the dissepiment.  
*Septum.* A partition.  
*Sessile.* Not stalked.  
*Setose.* Beset with bristles.  
*Sheath.* A tubular envelope.  
*Sheathing.* Enclosing as by a sheath.  
*Shrub.* A woody plant branched from the base.  
*Silky.* Covered with appressed fine and straight hairs.  
*Sinuate.* With a strongly wavy margin.  
*Sinus.* The recess between the lobes.  
*Smooth.* Without roughness; also used in the sense of glabrous.  
*Spatulate.* Gradually narrowed from a rounded summit.  
*Spicate.* Arranged in or resembling a spike.  
*Spadix.* A spike with fleshy axis.  
*Spike.* A simple inflorescence with the flowers sessile or nearly so on a common axis.  
*Spine.* A sharp-pointed woody outgrowth from the stem.  
*Spinescent.* Becoming spiny; with short spine-like branchlets.  
*Spor.* A sac-like or tubular extension of some part or parts of the perianth, usually nectariferous; a short branchlet with much shortened internodes, usually bearing a cluster of leaves.  
*Stamen.* The pollen-bearing male organ of the flower.  
*Staminode.* A sterile stamen or similar structure inserted between the corolla and the pistil.  
*Standard.* The upper broad petal of a papilionaceous flower.  
*Stellate.* Star-shaped; said of hairs with radiating branches or of a cluster of radiating hairs.

# GLOSSARY

**Stem.** The main axis of a plant.  
**Sterigmata.** The peg-like projections of the leaf-cushions in some Conifers, as in the Spruces.  
**Sterile.** Not fertile; a flower without or with rudimentary pistil, or stamens without fertile pollen.  
**Stigma.** The part of the pistil that receives the pollen.  
**Stipe.** The stalk of a pistil or similar organ.  
**Stipule.** Stipule of a leaflet.  
**Stipellate.** Furnished with stipels (stipellae).  
**Stipitate.** Having a stipe.  
**Stipular.** Belonging to the stipules.  
**Stipule.** An appendage of the base of the petiole, usually one on each side.  
**Stolon.** A subterranean stem; sucker.  
**Stoloniferous.** Bearing stolons or suckers.  
**Stoma (pl. stomata).** An orifice in the epidermis of a leaf.  
**Stomatic or stomatiferous.** Bearing stomata.  
**Stone.** The hard usually 1-seeded endocarp of a drupe.  
**Striate.** Marked with fine longitudinal lines.  
**Strict.** Very straight and upright.  
**Strigose.** Beset with appressed straight and stiff hairs.  
**Strobile.** A small cone.  
**Style.** The usually attenuate part of the pistil between the ovary and the stigma.  
**Stylopodium.** The disk-like expansion at the base of the style.  
**Subshrub.** An undershrub, a suffrutescent plant; also applied to a small low shrub.  
**Subulate.** Awl-shaped.  
**Suffrutescent.** Slightly woody; woody at the base.  
**Suffrutescent.** A perennial plant with only the lower part of the stem and of the branches woody and persistent.  
**Sulcate.** Grooved or furrowed.  
**Superior (ovary).** Borne above the insertion of the perianth and free from it.  
**Suture.** A line of splitting.  
**Symmetrical (flower).** Having the same number of parts in each whorl.  
**Syncarp.** A fleshy aggregate fruit.

**Tapering.** Gradually becoming smaller in diameter or width toward one end.  
**Tendril.** A coiling thread-like organ by which a plant grasps an object for support.  
**Terete.** Circular in transverse section.  
**Terrate.** In threes.  
**Tessellate.** Checkered; divided into little squares as the reticulation in certain bamboo leaves.  
**Testa.** The outer seed-coat.  
**Thyrse.** A compact narrow panicle.  
**Thyrseoid.** Like a thyrse.  
**Tomentose.** With dense woolly pubescence.  
**Tomentulose.** Closely and finely tomentose.  
**Tomentum.** A dense covering of matted hairs.

**Torus.** The receptacle of a flower bearing the ovaries.  
**Tortuous.** Twisted or bent.  
**Tree.** A woody plant with one main stem and at least 4 or 5 m. tall.  
**Tri-.** A Latin prefix signifying three or thrice, as trifoliate, with 3 leaflets.  
**Truncate.** Ending abruptly, as if cut off.  
**Tumid.** Swollen.  
**Turbinate.** Top-shaped; inversely conical.  
**Turgid.** Swollen.

**Umbel.** An inflorescence with pedicels or branches arising from the same point.  
**Umbellate.** Borne in umbels.  
**Umbelliform.** Umbel-like; resembling an umbel.  
**Umbo.** The parts of the apophysis of the cone-scales of Pinus, usually differing in color, which represents the exposed part of the conelet.  
**Umbrate.** Bearing an umbo or boss.  
**Undulate.** With wavy surface or margin.  
**Uninodal;** see p. 35.  
**Unisexual.** Of one sex, either staminate or pistillate.  
**Urceolate.** Ovoid or cylindric and contracted at the mouth; urn-shaped.

**Valvate.** Opening by valves; in aestivation, meeting by the edges without overlapping.  
**Vascular.** Furnished with vessels or ducts.  
**Veins.** Threads of fibro-vascular tissue in a leaf or similar organ; nerves, but especially the smaller branched nerves.  
**Velutinous.** Velvety.  
**Venation.** Arrangement of veins.  
**Ventral.** Relating to the inner face or part of an organ; the part nearer to the axis.  
**Vernation.** The arrangement of leaves in bud.  
**Versatile.** Relating to an anther attached near the middle and moving freely on its support.  
**Verticillate.** Disposed in a whorl.  
**Villous.** Bearing long and soft, usually curved or curly hairs.  
**Virgate.** Wand-like.

**Whorl.** An arrangement of three or more organs in a circle around the axis.  
**Wing.** A membranous or thin and dry expansion or appendage of an organ; one of the lateral petals of a papilionaceous flower.  
**Woolly.** Clothed with long and soft and curled or matted hairs.

**Zygomorphous or zygomorphic.** Capable of division into equal halves by only one plane.

## EXPLANATIONS OF AUTHORS' NAMES<sup>1</sup>

- ABEL—Clarke A...; 1780-1826. Gt. Br.  
 ADAMS—Johannes Michael Friedrich A...; 1780-1838. Russ.  
 ADAMS, J. W.—J. W. A...; contemp. Nurs. U. S. A.  
 ADANS.—Michel Adanson; 1727-1806. Fr.  
 AGARDE—Jacob Georg A...; 1813-1901. Swed.  
 AHBRENT—Leslie Walter Allan A...; 1903-. Gt. Br.  
 AIRY-SHAW—Herbert Kenneth A...-S...; 1902-. Gt. Br.  
 AIT.—William Aiton; 1731-1793. Gt. Br.  
 AIT. F.—William Townsend Aiton, the son; 1766-1849. Gt. Br.  
 AITCH.—James Edward Tiery Aitchison; 1836-1898. Gt. Br.  
 ALEF.—Friedrich Alefeld; 1820-1872. Germ.  
 ALL.—Carlo Allioni; 1725-1804. Ital.  
 ALLAN—Henry Howard A...; 1832-. N. Zeal.  
 ALPHAND—Jean Charles Adolphe A... (1875). Hort. Fr.  
 ALSTROEM—Clas A...; 1736-1794. Swed.  
 AMES, L. M.—Lawrence M. A...; 1900-. U. S. A.  
 ANDERS.—Nils Johan Andersson; 1821-1880. Swed.  
 ANDERS., E.—Edgar Anderson; 1897-. U. S. A.  
 ANDERS., G.—George Anderson; 17...-1817. Gt. Br.  
 ANDERS., T.—Thomas Anderson; 1832-1870. India.  
 ANDR.—Henry C. Andrews; 17...-1830. Gt. Br.  
 ANDR., D. M.—D. M. Andrews (1897-1938). Nurs. U. S. A.  
 ANDRÉ—Edouard A...; 1840-1911. Fr.  
 ANT.—Franz Antoine; 1815-1886. Austria.  
 ARCANO—Giovanni Arcangeli; 1840-1921. Ital.  
 ARBENS—H. A...; contemp. Nurs. Germ.  
 ARMSTR.—John B. Armstrong (1880-1885). N. Zeal.  
 ARN.—George Arnold Walker Arnott; 1799-1863. Gt. Br.  
 ARNOLD—Arnold (1785). Austria.  
 ARRHEN.—Johan Pehr Arrhenius; 1811-1889. Swed.  
 ASAMI—Yoshichi A... (1925-1927). Jap.  
 ASCHERS.—Paul Friedrich August Ascherson; 1834-1913. Germ.  
 ASHE—William Willard A...; 1872-1932. U. S. A.  
 ASSO—Ignacio Jordan de A... y del Rio; 1742-1814. Spain.  
 AUDEL.—J. B. C. F. Aublet; 1720-1773. Fr.  
 AUDR.—Audibert frères (1810-1830). Nurs. Fr.  
 AUDUB.—John James Audubon; 1785-1851. U. S. A.  
 AUTH.—authors; referring to usage by various authors.  
 BAAS-BECK.—Miss Baas-Becking (1918-1921). Holl.  
 BAR.—Charles Cardale Babington; 1808-1895. Gt. Br.  
 BARCOCK—Ernest Brown B...; 1877-. U. S. A.  
 BACKH.—James Backhouse; 1825-1890. Nurs. Gt. Br.  
 BAENITZ—Carl Gabriel B...; 1837-1913. Germ.  
 BAILEY—Liberty Hyde B...; 1858-. U. S. A.  
 BAILEY, C.—Charles B...; 1839-1924. Gt. Br.  
 BAILL.—Henri Ernest Baillon; 1827-1895. Fr.  
 BAKER—John Gilbert B...; 1834-1920. Gt. Br.  
 BAKER F.—Edmund Gilbert B..., the son; 1864-. Gt. Br.  
 BALDACC—Antonio B...; 1867-. Ital.  
 BALF.—John Hutton B...; 1808-1884. Gt. Br.  
 BALF. F.—Isaac Bailly B...; the son; 1853-1922. Gt. Br.  
 BALF. F. & WARD—I. B. Balfour.—Francis Kingdon Ward; 1885-. Gt. Br.  
 BALL—Carlton Roy B...; 1873-. U. S. A.  
 BALL, J.—John B...; 1818-1889. Gt. Br.  
 BANKS—Sir Joseph B...; 1743-1820. Gt. Br.  
 BARBIER—B... & fils (1900). Nurs. Fr.  
 BARRAT—Josef B...; 1797-1832. U. S. A.  
 BARRON—William B... (1852-1890). Nurs. Gt. Br.  
 BARTLET—Harley Harris B...; 1886-. U. S. A.  
 BARTL.—Friedrich Gottlieb Bartling; 1793-1875. Germ.  
 BARTR.—William Bartram; 1739-1823. U. S. A.  
 BAST.—Toussaint Bastard; 1784-1846. Fr.  
 BATAL.—Alexander Batalin; 1847-1898. Russ.  
 BATSCH—August Johann Georg Karl B...; 1761-1802. Germ.  
 BATT.—Jules Aimé Battandier; 1843-1922. Algiers.  
 BAUMANN—Charles (1830) & Constantin Auguste Napoléon B...; 1804-1884. Nurs. Fr.  
 BAUSCH—J. B. B... (1938). Holl.  
 BAYER—Johann Nepomuk B...; 1802-1870. Austria.  
 BEADLE—Chauncey Delos B...; 1866-. U. S. A.  
 BEAN—William Jackson B...; 1863-. Gt. Br.  
 BEAUV.—A. M. F. J. Palisot de Beauvois; 1755-1820. Fr.  
 BEBB—Michael Schuck B...; 1833-1895. U. S. A.  
 BECHST.—Johann Matthaeus Bechstein; 1757-1822. Germ.  
 BECK—Guenther B... von Mannagetta; 1856-1931. Austria.  
 BELJERINCK—Willem B...; 1831-. Holl.  
 BEISS.—Ludwig Beissner; 1833-1927. Germ.  
 BENN.—John Joseph Bennett; 1801-1876. Gt. Br.  
 BENN., A.—Alfred William Bennett; 1833-1902. Gt. Br.  
 BENTH.—George Bentham; 1800-1884. Gt. Br.  
 BENTH. & HOOK.—George Bentham.—J. D. Hooker (Hook. f.).  
 BERCHT.—FRIEDEL—Friedrich, Graf von Berchtold; 1781-1876; Austria.—Presl.

<sup>1</sup> The names are followed by the dates of birth and death; if these could not be ascertained, the period of their literary activity appears in parenthesis, or "contemp." (contemporary) is used if the author is living and the date of birth unknown. Following the dates, the country (mostly abbreviated) is given where the author resided during his active botanical career, rather than that of his birth, if different. In some cases "Nurs." or "Hort." is inserted after the dates to indicate that the authors are nurserymen (or seedsman) or horticultural writers.

## EXPLANATIONS OF AUTHORS' NAMES

- BERCKMANS—Prosper Jules Alphonse B...; 1830-1910. Nurs. U. S. A.
- BERG—Peter Jonas Bergius; 1730-1790. Swed.
- BERG, K.—Otto Karl B...; 1815-1866. Germ.
- BERGER—Alwin B...; 1871-1931. Germ., U. S. A.
- BERLAND—Jean Louis Berlandier; 1805-1851. Fr.
- BERNH.—Johann Jacob Bernhardt; 1774-1850. Germ.
- BERT.—Carlo Giuseppe Bertero; 1789-1831. Ital.
- BERTIN—Pierre B...; 1800-1891. Nurs. Fr.
- BESANT—J. W. B... (1927). Gt. Br.
- BESS.—Wilbald Swibert Joseph Gottlieb Besser; 1784-1842. Russ.
- BEST—George Newton B...; 1846-1926. U. S. A.
- BGE.—Alexander von Bunge; 1803-1890. Russ.
- BICKN.—Eugene Pintard Bicknell; 1859-1925. U. S. A.
- BIEB.—Friedrich August Marschall von Bieberstein; 1768-1826. Russ.
- BIGEL.—Jacob Bigelow; 1787-1879. U. S. A.
- BLIJHOUWER—Jan Tijts Pieter B...; 1898-. Holl.
- BILLIARD—L. C. B... (1861-1870). Nurs. Fr.
- BISCHOFF—Gottlieb Wilhelm B...; 1797-1854. Germ.
- BISS. & MOORE—James Bisset; 1843-1911. Gt. Br.—S. Moore.
- BISSELL—Charles Humphrey B...; 1857-1925. U. S. A.
- BITTER—George B...; 1873-1927. Germ.
- BL.—Karl Ludwig Blume; 1796-1862. Holl.
- BLAKE—Sydney Fay B...; 1892-. U. S. A.
- BLANCHARD—William Henry B...; 1850-1922. U. S. A.
- BLANKIN.—Joseph William Blankinship; 1862-. U. S. A.
- BLOM—Carl Wilding B...; 1835-. Swed.
- BLUFF & FINGERH.—Matthias Joseph B...; 1805-1837. Germ.—Karl Anton Fingerhut (1825-1932). Germ.
- BOBBINK & ATKINS—B... & A...; contemp. Nurs. U. S. A.
- BOCQ.—Henri Boequillon; 1834-1883. Fr.
- BOEHMER—Georg Rudolph B...; 1723-1803. Germ.
- BOEHMER—L[ouis] B... & Co. (1882-1908). Nurs. Jap.
- BOENN.—Clemens Maria Friedrich Boenninghausen; 1785-1864. Germ.
- BOIS—Desiré Georges Jean Marie B...; 1856-. Fr.
- BOISS.—Edmond Boissier; 1810-1886. Switz.
- BOISS. & BÜHSE—Boissier—Friedrich Alexander (Fedor Aleksandrovich) B...; 1834-1899. Russ.
- BOISS. & HOHENACKER—Boissier—Rudolph Friedrich H...; 1798-1874. Switz.
- BOISS. & HUET—Boissier—Alfred H... du Pavillon; 1829-1907. Switz.
- BOISS. & BAL.—Boissier—Benedict Balansa; 1825-1891. Fr.
- BOISS. & NOÉ—Boissier—Fr. Wilhelm N...; 18-. 1858. Germ.
- BOISS. & REUT.—Boissier—Georges François Reuter; 1805-1872. Switz.
- BOLLE—Karl August B...; 1821-1909. Germ.
- BONARD—Ernest B... (1864-1869). Hort. Fr.
- BONPL.—Aimé Jacques Alexandre Bonpland; 1773-1858. S. Am.
- BOOTH—J. B...; 1836-1908. Nurs. Germ.
- BORB.—Vincze töl Borbás; 1844-1905. Hung.
- BORKH.—Moritz Balthasar Borkhausen; 1760-1806. Germ.
- BORNET—Jean Baptiste Édouard B...; 1828-1911. Fr.
- BORNUELL.—Joseph Friedrich Nicolaus Bornmueller; 1862-. Germ.
- BORY—Jean Baptiste Geneviève Marcelin B... de St. Vincent; 1778-1846. Fr.
- BORY & CHAUB.—Bory—Louis Anastase Chaubard; 1785-1854. Fr.
- BOSC—Louis Augustin Guillaume B...; 1759-1823. Fr.
- BOSSE—J. F. W. B...; 1789-1864. Germ.
- BOUCHÉ—Carl David B...; 1809-1881. Germ.
- BOULENGER—George Albert B...; 1858-1937. Belg.
- BOULLU—A. B...; 1813-1904. Fr.
- BOUIGNY—Jean François Désiré B...; 1820-1834. Fr.
- BOWLES—Edward Augustus B...; 1865-. Gt. Br.
- BOYNT.—Frank Ellis Boynton; 1859-. U. S. A.
- BR.—A.—Alexander Braun; 1805-1877. Germ.
- BR.—H.—Heinrich Braun; 1851-1920. Austria.
- BR.—N. E.—Nicholas Edward Brown; 1849-1934. Gt. Br.
- BR.—P.—Patrick Brown; 1720-1790. Gt. Br.
- BR.—R.—Robert Brown; 1773-1858. Gt. Br.
- BRAND—August B...; 1863-1931. Germ.
- BRIDWELL—A. W. B... (1925). U. S. A.
- BRIOT—Charles B...; 1804-1888. Nurs. Fr.
- BRIQ.—John Isaac Briquet; 1872-1932. Switz.
- BRIT.—Nathaniel Lord Britton; 1859-1934. U. S. A.
- BRONGN.—Adolphe Théodore Brongniart; 1801-1876. Fr.
- BROT.—Felix de Avellar Brotero; 1744-1828. Portug.
- B. S. P.—N. L. Britton—Emerson Ellick Sterns; 1846-1926.—Justus Ferdinand Poggenberg; 1840-1893. U. S. A.
- BRUEGGER—Christian Georg B...; 1833-1899. Switz.
- BUCH.—HAM.—Francis Buchanan, later Lord Hamilton; 1762-1829. Gt. Br.
- BUCHAN.—John Buchanan; 18-. 1898. Gt. Br.
- BUCHHOLZ.—John Theodore B...; 1838-. U. S. A.
- BUCKL.—Samuel Botsford Buckley; 1809-1884. U. S. A.
- BULL.—William B...; 1828-1902. Nurs. Gt. Br.
- BULLEY—A. K. B... (1901). Gt. Br.

# INDEX

Latin synonyms are in italics or are indicated by italic numbers; if synonyms appear twice on the same page under different species, the numbers of the species are added in parentheses. Accepted Latin names of families are in small capitals. Subdivisions of genera in the forms of substantives are listed like genera; subdivisions in plural adjectival form are not listed.

- Holdtii, 511
- britzensis*, 511
- inermis*, 509
- intermedia*, 511
- Kelseyi, 510
- longiloba, 510
- luxurians, 511
- Margaretta, 510
- nana, 510
- neo-mexicana, 511, 511
- luxurians*, 511
- pallida, 510
- pauciflora, 511
- Pseudoacacia, 509
- amorphifolia*, 509
- angustifolia*, 509
- aurea*, 509
- Bessoniana*, 509
- coluteoides*, 509
- crispa*, 509
- Decaisneana*, 510
- dependens*, 509
- dissecta*, 509
- elegantissima*, 509
- erecta*, 509
- fastigiata*, 509
- heterophylla*, 509
- inermis*, 509
- linearis*, 509
- microphylla*, 509
- monophylla*, 509
- monophylla fastigiata*, 509
- monophylla pendula*, 509
- myrtifolia*, 509
- pendula*, 509
- purpurea*, 509
- pyramidalis*, 509
- Rehderii*, 509
- Rozynskyana*, 509
- semperflorens*, 509
- stricta*, 509
- tortuosa*, 509
- Ulriciana*, 509
- umbraculifera*, 509
- unifoliola*, 509
- Slavinii, 510
- speciosa*, 510
- spectabilis*, 509
- viscosa*, 511
- bella-rosea*, 511
- Robsonia, 510
- Robur, 165
- Rock-Rose, 645
- Rock-Rose Family, 644

## Rosa, 426

- acicularis, 439, 439
- Bourgeauiana, 439
- Engelmannii, 439
- nipponensis, 439
- agrestis, 435
- alba, 434
- incarnata*, 434
- odorata*, 451
- rubicunda*, 434
- suaveolens*, 434
- Alberti, 445
- alpina, 440
- ozyodon*, 440
- altaica, 430
- amblyotis, 440
- anemoneflora, 445
- anemonoides, 450
- arkansana, 439
- arnoldiana, 439
- arvensis, 443
- Aireshirea*, 448
- capreolata*, 448
- scandens*, 448
- Aschersoniana, 440
- Banksiae, 450
- albo-plena*, 450
- lutea*, 450
- luteo-plena*, 450
- lutescens*, 450
- normalis*, 450
- banksiopsis, 442
- Barbierana, 443
- Beggeriana, 445
- belgica*, 434
- bella, 443
- pallens*, 443
- berberifolia, 430
- bicolor, 432
- blanda, 440
- Willmottiana*, 437
- borboniana, 449
- borbonica, 450
- Bourgeauiana, 439
- Boursaultii, 440
- bracteata, 450, 448
- Xlaevigata*, 451
- britzensis*, 436
- Brownii, 446
- Bruantii, 439
- Brunonii, 446
- Xodorata*, 449
- burgundensis, 433
- burgundiaca, 433
- californica, 441
- nana*, 441
- plena*, 441
- calocarpa, 439
- calva, 445
- cathayensis*, 445
- Camellia, 450
- canina, 436
- exilis*, 436
- Froebeli*, 436
- capreolata, 443
- carolina, 437, 437
- alba*, 433

## Rosa carolina glandulosa, 437

- grandiflora, 437
- villosa, 437
- caryophyllacea, 435
- cathayensis, 445
- caudata, 442
- centifolia, 433
- albo-muscosa*, 433
- cristata*, 433
- muscosa*, 433
- parvifolia*, 433
- pomponia*, 433
- cerasocarpa, 447
- cherokeensis, 450
- chinensis, 449
- fragrans*, 449
- Manettii*, 449
- minima*, 449
- mutabilis*, 449
- semperflorens*, 449
- viridiflora*, 449
- cinnamomea, 440, 440
- davurica*, 440
- plena*, 440
- clinophylla, 451
- collina, 434
- coriifolia, 436
- Froebeli*, 436
- corymbifera, 436
- corymbulosa, 442
- crocantha, 447
- cymosa, 450
- dalmatica, 435
- damascena, 433
- trigintipetala*, 434
- variegata*, 434
- versicolor*, 434
- Davidi, 442
- elongata*, 442
- persetosa*, 442
- davurica, 440
- Dawsoniana, 445
- dijonensis, 433
- dilecta, 449
- Xlaevigata*, 450
- dumalis, 436
- dumetorum, 436
- Dupontii, 447
- Ecae, 431, 431
- Eglanteria, 435, 431
- duplex*, 435
- elegantula, 444
- elliptica, 435
- elymaica, 434
- Engelmannii, 439
- Ernesti, 446
- exilis, 436
- Farrerii, 431
- persetosa*, 431
- Fauriei, 447
- Fedtschenkoana, 444
- Fendleri, 441
- ferox, 435, 438
- ferruginea, 436
- filipes, 447
- floribunda, 446
